Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Development Processes and the Development Industry - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies The development industry as a system?

A. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. B. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. C. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. D. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission.

Answer: A. Explanation: The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. The remaining options belong to different chronology, actor or analytical categories.

Q2. Which chronology card should be filed under The development industry as a system?

A. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. B. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. C. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. D. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations.

Answer: B. Explanation: The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. The remaining options belong to different chronology, actor or analytical categories.

Q3. Which option preserves the source-bounded meaning of The development industry as a system?

A. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. B. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. C. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. D. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity.

Answer: C. Explanation: The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. The remaining options belong to different chronology, actor or analytical categories.

Q4. Which statement avoids a close-option trap about The development industry as a system?

A. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. B. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. C. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. D. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity.

Answer: D. Explanation: The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. The remaining options belong to different chronology, actor or analytical categories.

Q5. Which statement correctly identifies Public charitable trusts and the 1882 exclusion?

A. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. B. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. C. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. D. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity.

Answer: A. Explanation: A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. The remaining options belong to different chronology, actor or analytical categories.

Q6. Which chronology card should be filed under Public charitable trusts and the 1882 exclusion?

A. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. B. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. C. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. D. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity.

Answer: B. Explanation: A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. The remaining options belong to different chronology, actor or analytical categories.

Q7. Which option preserves the source-bounded meaning of Public charitable trusts and the 1882 exclusion?

A. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. B. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. C. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. D. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here.

Answer: C. Explanation: A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. The remaining options belong to different chronology, actor or analytical categories.

Q8. Which statement avoids a close-option trap about Public charitable trusts and the 1882 exclusion?

A. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. B. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. C. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. D. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts.

Answer: D. Explanation: A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. The remaining options belong to different chronology, actor or analytical categories.

Q9. Which statement correctly identifies Societies under the 1860 Act?

A. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. B. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. C. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. D. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here.

Answer: A. Explanation: A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. The remaining options belong to different chronology, actor or analytical categories.

Q10. Which chronology card should be filed under Societies under the 1860 Act?

A. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. B. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. C. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. D. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here.

Answer: B. Explanation: A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. The remaining options belong to different chronology, actor or analytical categories.

Q11. Which option preserves the source-bounded meaning of Societies under the 1860 Act?

A. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. B. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. C. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. D. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here.

Answer: C. Explanation: A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. The remaining options belong to different chronology, actor or analytical categories.

Q12. Which statement avoids a close-option trap about Societies under the 1860 Act?

A. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. B. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. C. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. D. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission.

Answer: D. Explanation: A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. The remaining options belong to different chronology, actor or analytical categories.

Q13. Which statement correctly identifies Section 8 companies under the Companies Act, 2013?

A. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. B. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. C. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. D. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity.

Answer: A. Explanation: A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly

by larger professionalised foundations and non-governmental organisations. The remaining options belong to different chronology, actor or analytical categories.

Q14. Which chronology card should be filed under Section 8 companies under the Companies Act, 2013?

A. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. B. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. C. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. D. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality.

Answer: B. Explanation: A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. The remaining options belong to different chronology, actor or analytical categories.

Q15. Which option preserves the source-bounded meaning of Section 8 companies under the Companies Act, 2013?

A. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. B. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. C. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. D. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality.

Answer: C. Explanation: A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. The remaining options belong to different chronology, actor or analytical categories.

Q16. Which statement avoids a close-option trap about Section 8 companies under the Companies Act, 2013?

A. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. B. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. C. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. D. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations.

Answer: D. Explanation: A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. The remaining options belong to different chronology, actor or analytical categories.

Q17. Which statement correctly identifies Corporate social responsibility as a statutory obligation?

A. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. B. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. C. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. D. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality.

Answer: A. Explanation: Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. The remaining options belong to different chronology, actor or analytical categories.

Q18. Which chronology card should be filed under Corporate social responsibility as a statutory obligation?

A. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. B. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. C. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. D. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded.

Answer: B. Explanation: Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. The remaining options belong to different chronology, actor or analytical categories.

Q19. Which option preserves the source-bounded meaning of Corporate social responsibility as a statutory obligation?

A. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. B. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. C. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. D. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion.

Answer: C. Explanation: Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. The remaining options belong to different chronology, actor or analytical categories.

Q20. Which statement avoids a close-option trap about Corporate social responsibility as a statutory obligation?

A. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. B. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. C. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. D. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity.

Answer: D. Explanation: Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. The remaining options belong to different chronology, actor or analytical categories.

Q21. Which statement correctly identifies Rule-based reporting distinct from the section?

A. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. B. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. C. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. D. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded.

Answer: A. Explanation: Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. The remaining options belong to different chronology, actor or analytical categories.

Q22. Which chronology card should be filed under Rule-based reporting distinct from the section?

A. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. B. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. C. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. D. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded.

Answer: B. Explanation: Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. The remaining options belong to different chronology, actor or analytical categories.

Q23. Which option preserves the source-bounded meaning of Rule-based reporting distinct from the section?

A. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. B. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. C. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. D. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion.

Answer: C. Explanation: Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. The remaining options belong to different chronology, actor or analytical categories.

Q24. Which statement avoids a close-option trap about Rule-based reporting distinct from the section?

A. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. B. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. C. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. D. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here.

Answer: D. Explanation: Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. The remaining options belong to different chronology, actor or analytical categories.

Q25. Which statement correctly identifies Multilateral and bilateral development finance?

A. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. B. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. C. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. D. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion.

Answer: A. Explanation: The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. The remaining options belong to different chronology, actor or analytical categories.

Q26. Which chronology card should be filed under Multilateral and bilateral development finance?

A. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. B. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. C. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. D. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government.

Answer: B. Explanation: The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. The remaining options belong to different chronology, actor or analytical categories.

Q27. Which option preserves the source-bounded meaning of Multilateral and bilateral development finance?

A. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. B. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. C. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. D. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government.

Answer: C. Explanation: The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. The remaining options belong to different chronology, actor or analytical categories.

Q28. Which statement avoids a close-option trap about Multilateral and bilateral development finance?

A. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. B. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. C. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. D. The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality.

Answer: D. Explanation: The World Bank, the Asian Development Bank, United Nations agencies and bilateral aid agencies fund government and non-government development programmes in India typically through project loans, grants and technical assistance, and the repository asserts the architecture only, naming no amount, portfolio, project or conditionality. The remaining options belong to different chronology, actor or analytical categories.

Q29. Which statement correctly identifies The foreign-contribution gate?

A. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. B. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. C. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. D. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded.

Answer: A. Explanation: The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. The remaining options belong to different chronology, actor or analytical categories.

Q30. Which chronology card should be filed under The foreign-contribution gate?

A. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. B. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. C. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. D. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion.

Answer: B. Explanation: The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. The remaining options belong to different chronology, actor or analytical categories.

Q31. Which option preserves the source-bounded meaning of The foreign-contribution gate?

A. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. B. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. C. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. D. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative.

Answer: C. Explanation: The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. The remaining options belong to different chronology, actor or analytical categories.

Q32. Which statement avoids a close-option trap about The foreign-contribution gate?

A. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. B. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. C. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. D. The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality.

Answer: D. Explanation: The Foreign Contribution (Regulation) Act, 2010 as amended in 2020 and administered by the Ministry of Home Affairs requires registration or case-specific prior permission before foreign contribution may be received, mandates a designated account at the State Bank of India main branch in New Delhi, limits the proportion of foreign contribution usable as administrative expense and restricts sub-granting between registered entities, so it is a structural precondition for donor-funded work at scale rather than a formality. The remaining options belong to different chronology, actor or analytical categories.

Q33. Which statement correctly identifies Four separate regulatory layers?

A. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. B. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. C. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. D. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative.

Answer: A. Explanation: Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. The remaining options belong to different chronology, actor or analytical categories.

Q34. Which chronology card should be filed under Four separate regulatory layers?

A. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. B. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. C. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. D. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government.

Answer: B. Explanation: Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. The remaining options belong to different chronology, actor or analytical categories.

Q35. Which option preserves the source-bounded meaning of Four separate regulatory layers?

A. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. B. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. C. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. D. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative.

Answer: C. Explanation: Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. The remaining options belong to different chronology, actor or analytical categories.

Q36. Which statement avoids a close-option trap about Four separate regulatory layers?

A. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. B. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. C. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. D. Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded.

Answer: D. Explanation: Incorporation before a state registrar or the Registrar of Companies, foreign-funding permission from the Ministry of Home Affairs, tax status under Sections 12A and 80G administered by the Income Tax Department, and government-grant identity through the NITI Aayog NGO Darpan unique identification are four distinct regulatory layers administered by four different authorities, and being registered is not being permitted, exempted or funded. The remaining options belong to different chronology, actor or analytical categories.

Q37. Which statement correctly identifies Donor-driven against demand-driven development?

A. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. B. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. C. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. D. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government.

Answer: A. Explanation: Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. The remaining options belong to different chronology, actor or analytical categories.

Q38. Which chronology card should be filed under Donor-driven against demand-driven development?

A. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. B. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. C. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. D. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo.

Answer: B. Explanation: Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. The remaining options belong to different chronology, actor or analytical categories.

Q39. Which option preserves the source-bounded meaning of Donor-driven against demand-driven development?

A. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. B. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. C. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. D. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion.

Answer: C. Explanation: Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. The remaining options belong to different chronology, actor or analytical

categories.

Q40. Which statement avoids a close-option trap about Donor-driven against demand-driven development?

A. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. B. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. C. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. D. Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion.

Answer: D. Explanation: Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion. The remaining options belong to different chronology, actor or analytical categories.

Q41. Which statement correctly identifies Accountability direction as the defining feature?

A. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. B. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. C. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. D. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion.

Answer: A. Explanation: The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. The

remaining options belong to different chronology, actor or analytical categories.

Q42. Which chronology card should be filed under Accountability direction as the defining feature?

A. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. B. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. C. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. D. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo.

Answer: B. Explanation: The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. The remaining options belong to different chronology, actor or analytical categories.

Q43. Which option preserves the source-bounded meaning of Accountability direction as the defining feature?

A. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. B. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. C. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. D. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion.

Answer: C. Explanation: The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. The remaining options belong to different chronology, actor or analytical categories.

Q44. Which statement avoids a close-option trap about Accountability direction as the defining feature?

A. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. B. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. C. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. D. The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government.

Answer: D. Explanation: The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government. The remaining options belong to different chronology, actor or analytical categories.

Q45. Which statement correctly identifies The funding-to-outcome causal chain?

A. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. B. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. C. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. D. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion.

Answer: A. Explanation: Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs

upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. The remaining options belong to different chronology, actor or analytical categories.

Q46. Which chronology card should be filed under The funding-to-outcome causal chain?

A. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. B. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. C. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. D. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion.

Answer: B. Explanation: Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. The remaining options belong to different chronology, actor or analytical categories.

Q47. Which option preserves the source-bounded meaning of The funding-to-outcome causal chain?

A. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. B. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. C. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. D. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity.

Answer: C. Explanation: Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. The remaining options belong to different chronology, actor or analytical categories.

Q48. Which statement avoids a close-option trap about The funding-to-outcome causal chain?

A. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. B. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. C. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. D. Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative.

Answer: D. Explanation: Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative. The remaining options belong to different chronology, actor or analytical categories.

Q49. Which statement correctly identifies The five-test evaluation grid?

A. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. B. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. C. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. D. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together.

Answer: A. Explanation: Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. The remaining options belong to different chronology, actor or analytical categories.

Q50. Which chronology card should be filed under The five-test evaluation grid?

A. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. B. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. C. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. D. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together.

Answer: B. Explanation: Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. The remaining options belong to different chronology, actor or analytical categories.

Q51. Which option preserves the source-bounded meaning of The five-test evaluation grid?

A. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. B. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. C. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. D. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together.

Answer: C. Explanation: Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. The remaining options belong to different chronology, actor or analytical categories.

Q52. Which statement avoids a close-option trap about The five-test evaluation grid?

A. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. B. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. C. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. D. Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo.

Answer: D. Explanation: Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo. The remaining options belong to different chronology, actor or analytical categories.

Q53. Which statement correctly identifies Substitution against complementarity?

A. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. B. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. C. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. D. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance.

Answer: A. Explanation: The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. The remaining options belong to different chronology, actor or analytical categories.

Q54. Which chronology card should be filed under Substitution against complementarity?

A. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. B. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. C. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. D. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance.

Answer: B. Explanation: The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. The remaining options belong to different chronology, actor or analytical categories.

Q55. Which option preserves the source-bounded meaning of Substitution against complementarity?

A. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. B. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. C. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. D. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution.

Answer: C. Explanation: The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. The remaining options belong to different chronology, actor or analytical categories.

Q56. Which statement avoids a close-option trap about Substitution against complementarity?

A. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. B. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. C. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. D. The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion.

Answer: D. Explanation: The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion. The remaining options belong to different chronology, actor or analytical categories.

Q57. Which statement correctly identifies Fragmentation and visible-need bias?

A. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. B. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. C. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. D. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution.

Answer: A. Explanation: Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. The remaining options belong to different chronology, actor or analytical categories.

Q58. Which chronology card should be filed under Fragmentation and visible-need bias?

A. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. B. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. C. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. D. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance.

Answer: B. Explanation: Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. The remaining options belong to different chronology, actor or analytical categories.

Q59. Which option preserves the source-bounded meaning of Fragmentation and visible-need bias?

A. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. B. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. C. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. D. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner.

Answer: C. Explanation: Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. The remaining options belong to different chronology, actor or analytical categories.

Q60. Which statement avoids a close-option trap about Fragmentation and visible-need bias?

A. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. B. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. C. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. D. Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity.

Answer: D. Explanation: Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity. The remaining options belong to different chronology, actor or analytical categories.

Q61. Which statement correctly identifies Multi-level planning under the neo-liberal paradigm?

A. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. B. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. C. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. D. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance.

Answer: A. Explanation: Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. The remaining options belong to different chronology, actor or analytical categories.

Q62. Which chronology card should be filed under Multi-level planning under the neo-liberal paradigm?

A. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. B. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. C. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. D. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution.

Answer: B. Explanation: Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. The remaining options belong to different chronology, actor or analytical categories.

Q63. Which option preserves the source-bounded meaning of Multi-level planning under the neo-liberal paradigm?

A. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. B. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. C. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. D. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner.

Answer: C. Explanation: Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. The remaining options belong to different chronology, actor or analytical categories.

Q64. Which statement avoids a close-option trap about Multi-level planning under the neo-liberal paradigm?

A. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. B. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. C. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. D. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together.

Answer: D. Explanation: Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together. The remaining options belong to different chronology, actor or analytical categories.

Q65. Which statement correctly identifies Four donor-distortion channels?

A. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. B. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. C. The audited 2024-2025 Mains ledger routes the 2025

General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. D. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution.

Answer: A. Explanation: Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. The remaining options belong to different chronology, actor or analytical categories.

Q66. Which chronology card should be filed under Four donor-distortion channels?

A. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. B. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. C. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. D. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity.

Answer: B. Explanation: Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. The remaining options belong to different chronology, actor or analytical categories.

Q67. Which option preserves the source-bounded meaning of Four donor-distortion channels?

A. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. B. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. C. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. D. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity.

Answer: C. Explanation: Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance. The remaining options belong to different chronology, actor or analytical categories.

Q68. Which statement avoids a close-option trap about Four donor-distortion channels?

A. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. B. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. C. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. D. Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance.

Answer: D. Explanation: Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so

dependence is a design property rather than an inherent property of external finance. The remaining options belong to different chronology, actor or analytical categories.

Q69. Which statement correctly identifies Distance between decision, information and execution?

A. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. B. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. C. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. D. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away.

Answer: A. Explanation: The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. The remaining options belong to different chronology, actor or analytical categories.

Q70. Which chronology card should be filed under Distance between decision, information and execution?

A. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. B. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. C. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. D. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts.

Answer: B. Explanation: The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. The remaining options belong to different chronology, actor or analytical categories.

Q71. Which option preserves the source-bounded meaning of Distance between decision, information and execution?

A. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. B. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. C. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. D. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity.

Answer: C. Explanation: The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. The remaining options belong to different chronology, actor or analytical categories.

Q72. Which statement avoids a close-option trap about Distance between decision, information and execution?

A. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. B. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. C. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. D. The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution.

Answer: D. Explanation: The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution. The remaining options belong to different chronology, actor or analytical categories.

Q73. Which statement correctly identifies No single unified regulator?

A. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. B. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity. C. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. D. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts.

Answer: A. Explanation: No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. The remaining options belong to different chronology, actor or analytical categories.

Q74. Which chronology card should be filed under No single unified regulator?

A. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. B. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. C. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. D. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity.

Answer: B. Explanation: No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. The remaining options belong to different chronology, actor or analytical categories.

Q75. Which option preserves the source-bounded meaning of No single unified regulator?

A. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. B. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. C. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. D. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts.

Answer: C. Explanation: No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. The remaining options belong to different chronology, actor or analytical categories.

Q76. Which statement avoids a close-option trap about No single unified regulator?

A. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. B. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. C. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. D. No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away.

Answer: D. Explanation: No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away. The remaining options belong to different chronology, actor or analytical categories.

Q77. Which statement correctly identifies Verified question ownership and one recorded routing conflict?

A. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. B. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. C. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts. D. The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity.

Answer: A. Explanation: The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. The remaining options belong to different chronology, actor or analytical categories.

Q78. Which chronology card should be filed under Verified question ownership and one recorded routing conflict?

A. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. B. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. C. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. D. A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts.

Answer: B. Explanation: The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community

participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. The remaining options belong to different chronology, actor or analytical categories.

Q79. Which option preserves the source-bounded meaning of Verified question ownership and one recorded routing conflict?

A. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. B. A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission. C. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. D. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity.

Answer: C. Explanation: The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. The remaining options belong to different chronology, actor or analytical categories.

Q80. Which statement avoids a close-option trap about Verified question ownership and one recorded routing conflict?

A. Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here. B. Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity. C. A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations. D. The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner.

Answer: D. Explanation: The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner. The remaining options belong to different chronology, actor or analytical categories.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

Three direct General Studies Paper-II Mains demands are routed to this topic across the audited ledgers and all three were confirmed word for word in the locally held OCR-searchable official question papers. The audited 2024-2025 ledger routes the 2025 demand on decision-making distant from the source of information and execution in contemporary development models to this Basic owner. The audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal paradigm of development planning and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and the Basic owner records that core routing supersedes the older Advanced pointer, so both are answered from the core file. One ownership conflict is recorded openly rather than resolved by assertion: the 2024 General Studies Paper-II demand on public charitable trusts and inclusive development is discussed at length in the text of this owner, but the audited 2024-2025 ledger routes that demand to the non-governmental organisations, self-help groups and civil-society owner, so it is solved there and only cross-referenced here. No official answer key or marking scheme is held locally for any routed demand, so every model solution below is an authored answer route rather than an official key, and no Preliminary demand is routed to this owner.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- FACT: 2024 Q6: "Public charitable trusts have the potential to make India's development more

inclusive as they relate to certain vital public issues. Comment." - build the answer around (a) the legal/flexibility advantage of trusts over routine state bureaucracy, (b) concrete vital-issue examples (health, education, disaster relief), and (c) a balanced caveat on accountability, scale and donor-driven risk, using the five-test grid in §13.5 and the counter-argument bank in §13.7 of this file.

- ANALYSIS: Use the development-industry framework as an opening paragraph whenever a question links

CSR, philanthropy or NGOs to inclusive development outcomes.

Recent PYQ Integration (2024-2025)

> **Status:** 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: `_PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2024-2025.md`.

- **Years represented:** 2025
- **Paper(s):** GS-II
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2025	GS-II	17	Decision-making distant from source in contemporary development models	Critically evaluate · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Decision-making distant from source in contemporary development models

> This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

10. PYQ-based analytical application

- FACT: 2024 Q6 rewards a conditional, not absolute, defence of charitable trusts' inclusive

potential: state the flexibility/targeting advantage, then explicitly qualify it with the accountability-substitution and donor-driven-design risks from this file for full marks.

- ANALYSIS: Where a question links CSR/philanthropy to specific sectoral outcomes (health,

education), apply the substitution-vs-complementarity framework to argue whether the intervention is filling a state capacity gap or genuinely adding value alongside it.

Historical PYQ Integration (2018-2023)

> **Status:** Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: `_PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md`.

- **Years represented:** 2019, 2022
- **Paper(s):** GS-II
- **Routed question demands:** 2

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2019	GS-II	16	Multi-level planning in the neo-liberal development paradigm	Discuss · 15 marks · 250 words	Routed to owning topic; word limit taken from the instruction block	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.
2022	GS-II	17	Dependence on donor agencies and community participation in development	Justify your answer · 15 marks · 250 words	Cross-cutting; development industry and participation both named in the stem	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Multi-level planning in the neo-liberal development paradigm
- Dependence on donor agencies and community participation in development

> The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

PYQ DEMAND CARD 1 - 2025 General Studies Paper-II

Demand: In contemporary development models, decision-making and problem-solving responsibilities are not located close to the source of information and execution defeating the objectives of development. Critically evaluate in 250 words for 15 marks.

Status: Routed to this Basic owner by the audited 2024-2025 Mains ledger and confirmed word for word in the locally held official 2025 General Studies Paper-II. No official answer key is held locally, so the model solution is an authored route.

Model solution: Critically evaluate requires a stated verdict on the soundness of the claim, so commit early: the statement is largely sound but incomplete, because it describes a real structural property of contemporary development models while treating distance as a single governmental defect rather than as a product of two distinct chains. Establish the first chain briefly - administrative centralisation, where entitlement and design decisions are taken at a tier that neither holds the local information nor carries out the work, and where District Planning Committee consolidation under Article 243ZD remains unevenly operational and the State Finance Commission route to fiscal capacity is weak. Then supply the development-industry chain that this owner holds and that most answers miss: a donor board, a corporate social responsibility committee or a multilateral appraisal team is institutionally and geographically remote from both the information and the execution, and its distance is reinforced by four named channels - the agenda channel that fixes the problem before local need is assessed, the metric channel that rewards countable outputs over slow participatory process, the cycle channel that imposes a project horizon on institutions needing years, and the accountability-substitution channel in which upward reporting replaces downward answerability. Name the consequence precisely: priority-setting moves from an accountable plan to a funder's theory of change, and the beneficiary who bears the outcome has neither an electoral nor a contractual sanction. Now supply the counter-evidence that critical evaluation demands. Distance is not always defeat: standard-setting, epidemiological judgment, procurement scale and cross-state equity are legitimately decided away from the point of execution, and the Kerala People's Plan Campaign of 1996 shows that proximity works only when funds, functions and functionaries move together rather than because the decision was taken locally. Conclude with a graded verdict and its condition: the statement holds wherever the decision-maker faces neither the information cost nor the consequence of being wrong, and it fails wherever the decision genuinely requires scale, so the corrective is subsidiarity applied by decision type - local for prioritisation, targeting and grievance, higher for standards and scale - together with convergence of external funding into the local plan. Assert no outlay, devolution percentage or donor portfolio figure.

PYQ DEMAND CARD 2 - 2019 General Studies Paper-II

Demand: In the context of neo-liberal paradigm of development planning, multi-level planning is expected to make operations cost-effective and remove many implementation blockages. Discuss in 250 words for 15 marks.

Status: Routed by the audited 2018-2023 Mains ledger to the Advanced owner with the word limit taken from the instruction block, and confirmed word for word in the locally held official 2019 General Studies Paper-II. The Basic owner answers it under core routing. No official answer key is held locally.

Model solution: Define the two terms separately before relating them, because the marks sit in the relation rather than in either definition. Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know. The neo-liberal paradigm is a policy orientation favouring market allocation, private provision and deregulation, with the state redefined from producer to regulator and enabler. State the tension as the spine of the answer: multi-level planning presumes genuine public planning authority at each tier, while the paradigm shifts allocation toward markets and contracted provision, which can hollow out the very planning function the lower tiers were meant to exercise. Because the directive is discuss, argue both directions. Supporting the expectation in the stem, decentralised planning fits the subsidiarity and efficiency logic of the paradigm, improves allocative fit to local need, and removes blockages by shortening the approval chain between the decision and the work. Undercutting it, competitive investment attraction pushes decisions upward to states and the Union, conditional and tied grants convert local planning into scheme execution, and private provision reduces the share of development that is actually decided in any plan at all. Name the institutional evidence rather than gesturing at decentralisation: the District Planning Committee under Article 243ZD is the constitutional consolidation mechanism though its operationalisation is uneven, the State Finance Commission is the fiscal precondition, and the Kerala People's Plan Campaign of 1996 is the strongest Indian demonstration that multi-level planning delivers when funds, functions and functionaries move together. Add the development-industry link owned by this file: as public planning contracts, donors, foundations and corporate social responsibility programmes occupy the vacated space, which relocates priority-setting from an accountable plan to a funder's theory of change. Conclude that the paradigm has not abolished multi-level planning but has changed what is planned, so tiers now largely allocate tied resources and coordinate non-state provision, and cost-effectiveness follows only where devolution is real. Quote no devolution percentage, plan outlay or growth statistic.

PYQ DEMAND CARD 3 - 2022 General Studies Paper-II

Demand: Do you agree with the view that increasing dependence on donor agencies for development reduces the importance of community participation in the development process? Justify your answer in 250 words for 15 marks.

Status: Routed by the audited 2018-2023 Mains ledger to the Advanced owner as a cross-cutting demand naming both the development industry and participation, and confirmed word for word in the locally held official 2022 General Studies Paper-II. The Basic owner answers it under core routing. No official answer key is held locally.

Model solution: Justify your answer penalises fence-sitting, so take an explicit and defensible position in the opening sentence: donor dependence and community participation are not automatically opposed, but donor funding systematically weakens participation wherever the funding cycle, the reporting metric and the exit plan are designed around the donor rather than the community. Then supply the mechanism rather than the sentiment, because the four channels are what convert an opinion into an argument. The agenda channel means donor priorities set the problem before local need is assessed. The metric channel means donor reporting rewards countable outputs, so participatory processes that are slow and hard to count are cut first. The cycle channel means project-based, time-bound grants mismatch the multi-year horizon that community institutions need to mature. The accountability-substitution channel means beneficiaries cannot vote out a trust or a corporate programme, so upward donor reporting substitutes for downward answerability. Concede the counter-evidence honestly, because a justified position must survive it: donor and corporate funding can finance exactly the participation that the state does not fund, including community mobilisers, the running cost of self-help group federations and social-audit facilitation, and public programmes themselves use the same community-institution logic. Then decide the case with the five-test grid rather than asserting it - additionality, need-fit, accountability, sustainability and federal or local fit - and note that a funder failing additionality and accountability is not legitimated by passing the other three. Name the correctives with the stage each fixes: convergence with the local plan instead of a parallel silo, community contribution and co-decision in project selection, hand-over and exit planning at the design stage, and disclosure of the funding source and programme cost. Conclude that dependence is a design property rather than an inherent property of external finance, since the same rupee can strengthen or displace participation depending on who sets the agenda and who receives the report. Name no donor's India spending, project budget or evaluation finding.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish the funding source, the legal vehicle and the implementing organisation in India's development industry, and explain why the distinction matters. Answer in about 150 words.

Model thesis: Separating the three layers is what allows an answer to say which actor sets the agenda, which one carries the disclosure duty and which one determines last-mile fidelity, and an answer that collapses them cannot locate the accountability failure it is being asked to evaluate.

Claim -> named evidence -> analysis -> qualification:

- The development industry is the ecosystem of bilateral and multilateral donors, public charitable trusts, private foundations and family philanthropy, corporate social responsibility programmes and implementing non-governmental organisations that collectively fund and deliver development alongside the state, so the analytical first move is to separate the funding source from the legal vehicle from the last-mile implementer instead of collapsing all three into the single word charity.
- A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts.
- A society is a voluntary association of persons registered under the Societies Registration Act, 1860 or its state variants for a charitable, literary, scientific or similar object, it is membership-based with general-body accountability, and it remains a very common legal form for Indian non-governmental organisations, though registration is neither tax exemption nor foreign-funding permission.

Qualified conclusion: Separating the three layers is what allows an answer to say which actor sets the agenda, which one carries the disclosure duty and which one determines last-mile fidelity, and an answer that collapses them cannot locate the accountability failure it is being asked to evaluate.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain why corporate social responsibility in India is a statutory obligation rather than philanthropy, and what follows for development outcomes. Answer in about 150 words.

Model thesis: Section 135 creates a bounded statutory minimum spend rather than a voluntary gift, which both prevents diversion and crowds funders into legible Schedule VII sectors, so the statutory character explains the pattern of what actually gets funded.

Claim -> named evidence -> analysis -> qualification:

- A Section 8 company is incorporated under the Companies Act, 2013 for promoting charitable objects and is prohibited from distributing profits or paying dividends to its members, so it carries board governance and Companies Act disclosure at a higher compliance cost, which is why it is used mainly by larger professionalised foundations and non-governmental organisations.
- Under Section 135 of the Companies Act, 2013 a company crossing the specified net worth, turnover or net profit thresholds must spend at least two per cent of the average net profits of the preceding financial years on activities listed in Schedule VII, so corporate social responsibility in India is a statutory minimum-spend obligation with a bounded activity list rather than voluntary corporate charity.
- Corporate social responsibility form CSR-2 reporting and rule-based impact-assessment requirements derive from the amended Companies (Corporate Social Responsibility Policy) Rules administered by the Ministry of Corporate Affairs rather than from Section 135 alone, so a compliance claim must cite the rule and the reporting year rather than the section, and no rupee threshold or national spend total is asserted here.

Qualified conclusion: Section 135 creates a bounded statutory minimum spend rather than a voluntary gift, which both prevents diversion and crowds funders into legible Schedule VII sectors, so the statutory character explains the pattern of what actually gets funded.

ORIGINAL MAINS 3 - 15 MARKS

Question: Examine the claim that public charitable trusts have the potential to make India's development more inclusive because they relate to vital public issues. Answer in about 250 words.

Model thesis: The potential is real precisely where the state is procedurally slow, but it becomes inclusion only under disclosed governance, need-based targeting and a beneficiary route to complain, none of which the charitable legal form supplies by itself.

Claim -> named evidence -> analysis -> qualification:

- A public charitable trust is a trust or endowment for a public charitable purpose governed through its trust deed, the applicable state public-trust or endowment law and general legal principles, and Section 1 of the Indian Trusts Act, 1882 expressly excludes public or private religious or charitable endowments, so that Act must never be cited as a uniform national incorporation statute for public charitable trusts.
- Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo.
- The defining feature of the development industry is not its funding but its accountability direction, because a trust, a foundation or a corporate programme reports upward to trustees, donors and regulators rather than downward to the people it serves, and a beneficiary who cannot vote out the funder has a structurally weaker corrective loop than an electorate has over an elected government.
- Multiple uncoordinated donors and corporate programmes operating in one geography can produce duplication and visible-need bias rather than an inclusive aggregate outcome, because the Schedule VII activity list and reputational incentives crowd funders into legible sectors such as school buildings and sanitation hardware while less legible needs such as mental health, care work, legal aid and disability access remain underfunded, so the failure is of convergence rather than of generosity.

Qualified conclusion: The potential is real precisely where the state is procedurally slow, but it becomes inclusion only under disclosed governance, need-based targeting and a beneficiary route to complain, none of which the charitable legal form supplies by itself.

ORIGINAL MAINS 4 - 15 MARKS

Question: Examine whether increasing dependence on donor agencies reduces the importance of community participation in development. Answer in about 250 words.

Model thesis: Dependence is a design property rather than an inherent property of external finance, because the same rupee strengthens or displaces participation depending on who sets the agenda, who defines the metric and who receives the report.

Claim -> named evidence -> analysis -> qualification:

- Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance.
- Donor-driven development is designed around the funder's theory of change and reporting metrics while demand-driven development is designed around locally articulated priority, and the two can converge but frequently diverge, especially where project-based time-bound funding cycles mismatch a long-term local need, so the tension is the standard evaluative counterpoint to any claim that external finance improves inclusion.
- Any non-state development intervention is judged on additionality, that is whether it adds capacity or substitutes for a public obligation the state still owes; need-fit, that is whether the intervention was chosen from disaggregated local exclusion data or from the funder's priority; accountability, that is whether a beneficiary can obtain records, complain and force correction; sustainability, that is who finances and operates the service after the grant cycle ends; and federal or local fit, that is whether it is converged with the district plan or runs as a parallel silo.
- Funding source sets the incentive frame before any need assessment through the project cycle, the founder priority or the Schedule VII compliance requirement; the legal vehicle then sets disclosure and governance quality, with trusts facing lighter external scrutiny than Section 8 companies; the implementing organisation sets last-mile fidelity through local social capital and capacity; accountability runs upward rather than downward; and the aggregate outcome is either converged and inclusive or fragmented and duplicative.

Qualified conclusion: Dependence is a design property rather than an inherent property of external finance, because the same rupee strengthens or displaces participation depending on who sets the agenda, who defines the metric and who receives the report.

ORIGINAL MAINS 5 - 20 MARKS

Question: Assess the place of multi-level planning in a development paradigm that favours market allocation and private provision. Answer in about 300 words.

Model thesis: The paradigm has not abolished multi-level planning but has changed its object, so lower tiers now largely allocate tied resources and coordinate non-state provision rather than determining development priorities, and the vacated priority-setting space is occupied by funders answerable to no local electorate.

Claim -> named evidence -> analysis -> qualification:

- Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together.

- The substitution thesis treats non-state development as filling gaps left by weak state capacity, so its growth is a symptom of state failure that may entrench the failure by relieving political pressure to fix delivery, while the complementarity thesis treats flexibility, speed, risk-taking and innovation as structurally easier outside government procurement and budget cycles and therefore a durable division of labour, and the additionality test resolves the choice case by case rather than by assertion.
- The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution.
- No single unified regulator supervises the development industry, because oversight is distributed across the Ministry of Corporate Affairs for companies and corporate social responsibility compliance, the Income Tax Department for tax-exempt entities, state registrars for societies and state public trusts, and the Ministry of Home Affairs for foreign funding, and this fragmentation is itself an analytical point about sector accountability rather than a detail to be assumed away.

Qualified conclusion: The paradigm has not abolished multi-level planning but has changed its object, so lower tiers now largely allocate tied resources and coordinate non-state provision rather than determining development priorities, and the vacated priority-setting space is occupied by funders answerable to no local electorate.

ORIGINAL MAINS 6 - 20 MARKS

Question: Assess the claim that in contemporary development models decision-making sits too far from the source of information and execution. Answer in about 300 words.

Model thesis: Distance is produced by a funding chain as much as by governmental centralisation, and it is corrected only where priority-setting, the reporting metric and the exit plan are relocated toward the tier that holds the information and carries out the work.

Claim -> named evidence -> analysis -> qualification:

- The 2025 General Studies Paper-II demand states that in contemporary development models decision-making and problem-solving responsibilities are not located close to the source of information and execution, and the development-industry half of the answer is that distance is created not only by governmental centralisation but by a funding chain in which the donor board, the corporate committee or the multilateral appraisal team is institutionally and geographically remote from both the information and the execution.
- Donor funding weakens community participation through four named channels - the agenda channel where donor priorities set the problem before local need is assessed, the metric channel where reporting rewards countable outputs so slow participatory processes are cut first, the cycle channel where project-based time-bound grants mismatch the multi-year horizon community institutions need, and the accountability-substitution channel where upward donor reporting replaces downward answerability - so dependence is a design property rather than an inherent property of external finance.
- Multi-level planning distributes plan formulation and resource decisions across Union, state, district and local tiers so that each tier plans what it is best placed to know, while the neo-liberal paradigm favours market allocation, private provision and deregulation with the state redefined from producer to regulator and enabler, and the institutional evidence for the Indian tier structure is the District Planning Committee under Article 243ZD whose operationalisation is uneven, the State Finance Commission as the fiscal precondition, and the Kerala People's Plan Campaign of 1996 as the strongest demonstration that the model works when funds, functions and functionaries move together.
- The audited 2024-2025 Mains ledger routes the 2025 General Studies Paper-II demand on decision-making distant from the source in contemporary development models to this Basic owner, while the audited 2018-2023 ledger routes the 2019 demand on multi-level planning in the neo-liberal development paradigm and the 2022 demand on dependence on donor agencies against community participation to the Advanced owner, and there is one open conflict recorded rather than resolved by assertion: the 2024 demand on public charitable trusts and inclusive development is claimed in the text of this owner but is routed by the audited 2024-2025 ledger to the non-governmental organisations owner.

Qualified conclusion: Distance is produced by a funding chain as much as by governmental centralisation, and it is corrected only where priority-setting, the reporting metric and the exit plan are relocated toward the tier that holds the information and carries out the work.
