ASCII MASTER FLOW — PANEL 1/12: Source-pathway map

POINT SOURCE -> identifiable pipe, drain or outfall
NON-POINT SOURCE -> diffuse catchment runoff
PATHWAY -> source to receiving water
MONITORING -> source sample versus catchment evidence
CONTROL -> tool must match the pathway
MUST REMEMBER: Water pollution links pollutant load, concentration, dissolved oxygen,...

ASCII MASTER FLOW — PANEL 2/12: Standard firewall

```
EFFLUENT STANDARD -> controls discharge from a source
WATER-QUALITY CRITERION -> describes receiving water
USE CLASS -> intended-water-use framework
UNIT AND SAMPLING -> belong to the exact indicator
RULE -> never exchange these values
```

ASCII MASTER FLOW — PANEL 3/12: Organic-pollution diagnostic

ORGANIC LOAD -> microbial decomposition
BOD -> oxygen demand during decomposition
DO -> oxygen remaining for aquatic life
FAECAL INDICATOR -> contamination warning
DIAGNOSIS -> use indicators together, not interchangeably

ASCII MASTER FLOW — PANEL 4/12: Eutrophication chain

NUTRIENT INPUT -> nitrogen or phosphorus enrichment
ALGAL GROWTH -> biomass increase
DECOMPOSITION -> oxygen demand
LOW OXYGEN -> ecological stress
BOUNDARY -> not identical to toxic industrial discharge

ASCII MASTER FLOW — PANEL 5/12: Institution and approval ladder

```
WATER ACT -> statutory pollution-control framework
CPCB -> national coordination and framework
SPCB OR PCC -> consent, monitoring and enforcement
CTE OR CTO -> source permission layer
ENVIRONMENTAL CLEARANCE -> separate prior-appraisal layer
```

ASCII MASTER FLOW — PANEL 6/12: Sewage quantity ledger

GENERATED -> total wastewater produced
SEWERED -> flow reaching a network
INSTALLED -> nameplate treatment capacity
ACTUALLY TREATED -> operating inflow and performance
REUSED OR DISCHARGED -> final pathway and quality
CLOSE DISTINCTION: BOD is not COD, sewage generation is not treatment capacity or actual...

ASCII MASTER FLOW — PANEL 7/12: Treatment-plant matrix

```
STP -> municipal or domestic sewage
ETP -> one establishment's industrial effluent
CETP -> common treatment for a group of units
INSTALLATION -> infrastructure output
COMPLIANT OPERATION -> separately verified performance
```

ASCII MASTER FLOW — PANEL 8/12: Regulator-mission firewall

```
CPCB OR SPCB -> statutory pollution-control role
RIVER MISSION -> project and basin coordination
NMCG -> Ganga mission implementation architecture
ULB -> sewerage service and local operation
RULE -> one actor never substitutes for all others
```

ASCII MASTER FLOW — PANEL 9/12: River-mission component wheel

SEWAGE INFRASTRUCTURE -> intercept and treat flow
INDUSTRIAL MONITORING -> source compliance
ECOLOGY -> biodiversity and riverbank measures
PUBLIC PARTICIPATION -> behaviour and accountability
VISIBLE WORK -> not itself a water-quality outcome

ASCII MASTER FLOW — PANEL 10/12: Programme-scope gate

```
GANGA QUESTION -> use notified Ganga architecture
OTHER RIVER -> identify applicable programme and state actors
NRCP -> wider river-conservation programme context
RESULT -> retain river, stretch and date
NO TRANSFER -> never move one mission result to another river
```

ASCII MASTER FLOW — PANEL 11/12: Performance and evidence chain

```
OUTLAY OR SANCTION -> input
EXPENDITURE -> financial activity
ASSET COMPLETED -> physical output
FLOW TREATED OR LOAD REDUCED -> operational result
RIVER QUALITY -> stretch-season-indicator outcome
```

ASCII MASTER FLOW — PANEL 12/12: Water answer spine

```
DIAGNOSE -> source, pathway and pollutant
MEASURE -> indicator, unit, location, season and sampling
REGULATE -> consent, effluent control and enforcement
TREAT -> sewer network, STP, ETP or CETP operation
JUDGE -> load and river outcome, with PYQ and live-data limits
EVIDENCE LIMIT: MECHANISM / STATUS / CAUSATION: Fix parameter, unit, sampling...
```
