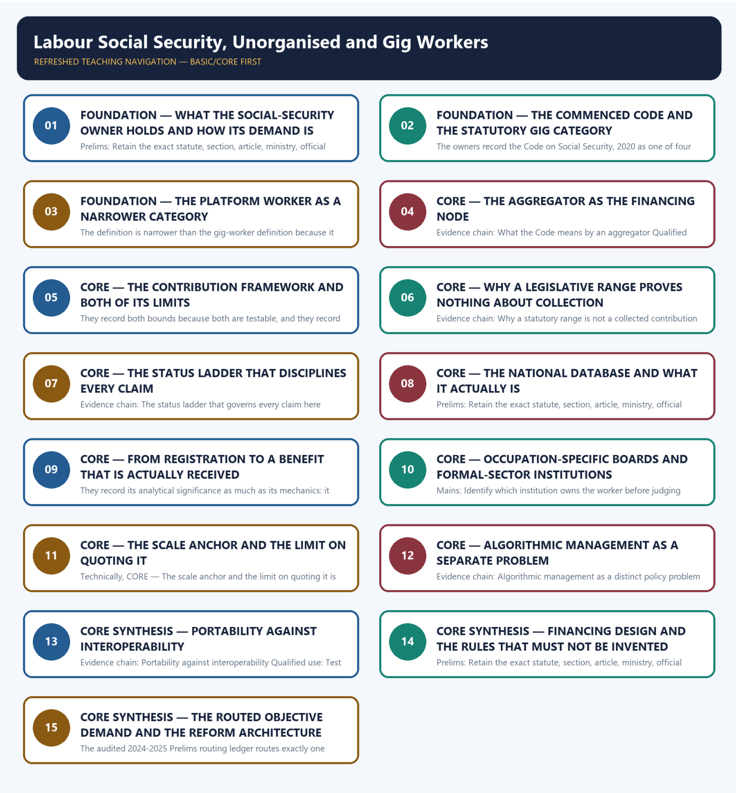
SOLVED PRACTICE WORKBOOK

Labour Social Security, Unorganised and Gig Workers - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing



Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Labour Social Security, Unorganised and Gig Workers - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies What this owner holds and how its routed demand is bounded?

A. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. B. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. C. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. D. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together.

Answer: A. Explanation: This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. The remaining options belong to different chronology, actor or analytical categories.

Q2. Which chronology card should be filed under What this owner holds and how its routed demand is bounded?

A. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. B. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. C. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. D. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive.

Answer: B. Explanation: This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. The remaining options belong to different chronology, actor or analytical categories.

Q3. Which option preserves the source-bounded meaning of What this owner holds and how its routed demand is bounded?

A. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. B. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. C. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025

Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. D. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.

Answer: C. Explanation: This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. The remaining options belong to different chronology, actor or analytical categories.

Q4. Which statement avoids a close-option trap about What this owner holds and how its routed demand is bounded?

A. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. B. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. C. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. D. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here.

Answer: D. Explanation: This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised

workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. The remaining options belong to different chronology, actor or analytical categories.

Q5. Which statement correctly identifies The Code on Social Security and its exact legal status?

A. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. B. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. C. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. D. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker.

Answer: A. Explanation: The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. The remaining options belong to different chronology, actor or analytical categories.

Q6. Which chronology card should be filed under The Code on Social Security and its exact legal status?

A. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. B. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. C. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. D. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application.

Answer: B. Explanation: The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. The remaining options belong to different chronology, actor or analytical categories.

Q7. Which option preserves the source-bounded meaning of The Code on Social Security and its exact legal status?

A. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. B. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. C. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. D. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.

Answer: C. Explanation: The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. The remaining options belong to different chronology, actor or analytical categories.

Q8. Which statement avoids a close-option trap about The Code on Social Security and its exact legal status?

A. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. B. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. C. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. D. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together.

Answer: D. Explanation: The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. The remaining options belong to different chronology, actor or analytical categories.

Q9. Which statement correctly identifies What the Code means by a gig worker?

A. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. B. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. C. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. D. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.

Answer: A. Explanation: The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. The remaining options belong to different chronology, actor or analytical categories.

Q10. Which chronology card should be filed under What the Code means by a gig worker?

A. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. B. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. C. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. D. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker.

Answer: B. Explanation: The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. The remaining options belong to different chronology, actor or analytical categories.

Q11. Which option preserves the source-bounded meaning of What the Code means by a gig worker?

A. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. B. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. C. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. D. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.

Answer: C. Explanation: The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. The remaining options belong to different chronology, actor or analytical categories.

Q12. Which statement avoids a close-option trap about What the Code means by a gig worker?

A. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. B. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. C. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. D. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive.

Answer: D. Explanation: The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. The remaining options belong to different chronology, actor or analytical categories.

Q13. Which statement correctly identifies What the Code means by a platform worker?

A. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. B. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. C. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. D. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.

Answer: A. Explanation: The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. The remaining options belong to different chronology, actor or analytical categories.

Q14. Which chronology card should be filed under What the Code means by a platform worker?

A. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. B. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. C. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. D. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic.

Answer: B. Explanation: The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. The remaining options belong to different chronology, actor or analytical categories.

Q15. Which option preserves the source-bounded meaning of What the Code means by a platform worker?

A. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. B. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. C. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. D. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument.

Answer: C. Explanation: The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. The remaining options belong to different chronology, actor or analytical categories.

Q16. Which statement avoids a close-option trap about What the Code means by a platform worker?

A. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. B. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. C. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. D. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application.

Answer: D. Explanation: The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. The remaining options belong to different chronology, actor or analytical categories.

Q17. Which statement correctly identifies What the Code means by an aggregator?

A. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. B. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. C. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. D. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic.

Answer: A. Explanation: The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. The remaining options belong to different chronology, actor or analytical categories.

Q18. Which chronology card should be filed under What the Code means by an aggregator?

A. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. B. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. C. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. D. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic.

Answer: B. Explanation: The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. The remaining options belong to different chronology, actor or analytical categories.

Q19. Which option preserves the source-bounded meaning of What the Code means by an aggregator?

A. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. B. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. C. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. D. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.

Answer: C. Explanation: The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. The remaining options belong to different chronology, actor or analytical categories.

Q20. Which statement avoids a close-option trap about What the Code means by an aggregator?

A. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. B. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. C. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. D. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker.

Answer: D. Explanation: The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. The remaining options belong to different chronology, actor or analytical categories.

Q21. Which statement correctly identifies The contribution framework in Section 114 and its exact numbers?

A. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. B. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. C. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. D. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument.

Answer: A. Explanation: The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. The remaining options belong to different chronology, actor or analytical categories.

Q22. Which chronology card should be filed under The contribution framework in Section 114 and its exact numbers?

A. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. B. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. C. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. D. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.

Answer: B. Explanation: The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. The remaining options belong to different chronology, actor or analytical categories.

Q23. Which option preserves the source-bounded meaning of The contribution framework in Section 114 and its exact numbers?

A. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. B. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. C. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. D. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.

Answer: C. Explanation: The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. The remaining options belong to different chronology, actor or analytical categories.

Q24. Which statement avoids a close-option trap about The contribution framework in Section 114 and its exact numbers?

A. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. B. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. C. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. D. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.

Answer: D. Explanation: The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. The remaining options belong to different chronology, actor or analytical categories.

Q25. Which statement correctly identifies Why a statutory range is not a collected contribution?

A. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. B. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. C. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. D. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument.

Answer: A. Explanation: The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. The remaining options belong to different chronology, actor or analytical categories.

Q26. Which chronology card should be filed under Why a statutory range is not a collected contribution?

A. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. B. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. C. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. D. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension.

Answer: B. Explanation: The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. The remaining options belong to different chronology, actor or analytical categories.

Q27. Which option preserves the source-bounded meaning of Why a statutory range is not a collected contribution?

A. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. B. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. C. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. D. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential.

Answer: C. Explanation: The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. The remaining options belong to different chronology, actor or analytical categories.

Q28. Which statement avoids a close-option trap about Why a statutory range is not a collected contribution?

A. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. B. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. C. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. D. The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic.

Answer: D. Explanation: The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. The remaining options belong to different chronology, actor or analytical categories.

Q29. Which statement correctly identifies The status ladder that governs every claim here?

A. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. B. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. C. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. D. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection.

Answer: A. Explanation: The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. The remaining options belong to different chronology, actor or analytical categories.

Q30. Which chronology card should be filed under The status ladder that governs every claim here?

A. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. B. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. C. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. D. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.

Answer: B. Explanation: The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. The remaining options belong to different chronology, actor or analytical categories.

Q31. Which option preserves the source-bounded meaning of The status ladder that governs every claim here?

A. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. B. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. C. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. D. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential.

Answer: C. Explanation: The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. The remaining options belong to different chronology, actor or analytical categories.

Q32. Which statement avoids a close-option trap about The status ladder that governs every claim here?

A. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. B. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. C. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. D. The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument.

Answer: D. Explanation: The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. The remaining options belong to different chronology, actor or analytical categories.

Q33. Which statement correctly identifies The national unorganised-worker database and what it is?

A. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. B. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. C. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. D. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.

Answer: A. Explanation: The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. The remaining options belong to different chronology, actor or analytical categories.

Q34. Which chronology card should be filed under The national unorganised-worker database and what it is?

A. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. B. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. C. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. D. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential.

Answer: B. Explanation: The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. The remaining options belong to different chronology, actor or analytical categories.

Q35. Which option preserves the source-bounded meaning of The national unorganised-worker database and what it is?

A. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. B. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. C. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. D. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected.

Answer: C. Explanation: The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. The remaining options belong to different chronology, actor or analytical categories.

Q36. Which statement avoids a close-option trap about The national unorganised-worker database and what it is?

A. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. B. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. C. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. D. The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection.

Answer: D. Explanation: The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. The remaining options belong to different chronology, actor or analytical categories.

Q37. Which statement correctly identifies Why registration is necessary but not sufficient?

A. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. B. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. C. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. D. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension.

Answer: A. Explanation: The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no

pension, health insurance or cash transfer automatically. The remaining options belong to different chronology, actor or analytical categories.

Q38. Which chronology card should be filed under Why registration is necessary but not sufficient?

A. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. B. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. C. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. D. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected.

Answer: B. Explanation: The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. The remaining options belong to different chronology, actor or analytical categories.

Q39. Which option preserves the source-bounded meaning of Why registration is necessary but not sufficient?

A. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. B. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. C. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. D. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards.

Answer: C. Explanation: The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. The remaining options belong to different chronology, actor or analytical categories.

Q40. Which statement avoids a close-option trap about Why registration is necessary but not sufficient?

A. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. B. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. C. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. D. The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.

Answer: D. Explanation: The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. The remaining options belong to different chronology, actor or analytical categories.

Q41. Which statement correctly identifies The voluntary contributory pension route for unorganised workers?

A. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. B. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. C. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. D. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential.

Answer: A. Explanation: The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. The remaining options belong to different chronology, actor or analytical categories.

Q42. Which chronology card should be filed under The voluntary contributory pension route for unorganised workers?

A. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. B. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. C. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. D. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by

2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected.

Answer: B. Explanation: The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. The remaining options belong to different chronology, actor or analytical categories.

Q43. Which option preserves the source-bounded meaning of The voluntary contributory pension route for unorganised workers?

A. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. B. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. C. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. D. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. Answer: C. Explanation: The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. The remaining options belong to different chronology, actor or analytical categories.

Q44. Which statement avoids a close-option trap about The voluntary contributory pension route for unorganised workers?

A. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. B. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. C. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. D. The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension.

Answer: D. Explanation: The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. The remaining options belong to different chronology, actor or analytical categories.

Q45. Which statement correctly identifies Occupation-specific welfare through the construction boards?

A. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. B. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. C. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. D. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards.

Answer: A. Explanation: The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. The remaining options belong to different chronology, actor or analytical categories.

Q46. Which chronology card should be filed under Occupation-specific welfare through the construction boards?

A. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. B. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. C. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. D. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected.

Answer: B. Explanation: The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. The remaining options belong to different chronology, actor or analytical categories.

Q47. Which option preserves the source-bounded meaning of Occupation-specific welfare through the construction boards?

A. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. B. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. C. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. D. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes.

Answer: C. Explanation: The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. The remaining options belong to different chronology, actor or analytical categories.

Q48. Which statement avoids a close-option trap about Occupation-specific welfare through the construction boards?

A. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. B. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. C. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. D. The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential.

Answer: D. Explanation: The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. The remaining options belong to different chronology, actor or analytical categories.

Q49. Which statement correctly identifies The formal-sector institutions that continue to deliver?

A. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. B. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. C. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. D. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected.

Answer: A. Explanation: The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. The remaining options belong to different chronology, actor or analytical categories.

Q50. Which chronology card should be filed under The formal-sector institutions that continue to deliver?

A. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. B. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. C. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. D. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.

Answer: B. Explanation: The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. The remaining options belong to different chronology, actor or analytical categories.

Q51. Which option preserves the source-bounded meaning of The formal-sector institutions that continue to deliver?

A. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. B. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. C. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. D. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining.

Answer: C. Explanation: The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. The remaining options belong to different chronology, actor or analytical categories.

Q52. Which statement avoids a close-option trap about The formal-sector institutions that continue to deliver?

A. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. B. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. D. The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected.

Answer: D. Explanation: The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing

whether that worker is protected. The remaining options belong to different chronology, actor or analytical categories.

Q53. Which statement correctly identifies The scale anchor and the boundary on using it?

A. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. B. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. C. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. D. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.

Answer: A. Explanation: The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. The remaining options belong to different chronology, actor or analytical categories.

Q54. Which chronology card should be filed under The scale anchor and the boundary on using it?

A. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. B. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. C. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. D. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes.

Answer: B. Explanation: The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. The remaining options belong to different chronology, actor or analytical categories.

Q55. Which option preserves the source-bounded meaning of The scale anchor and the boundary on using it?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. B. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. C. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. D. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.

Answer: C. Explanation: The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. The remaining options belong to different chronology, actor or analytical categories.

Q56. Which statement avoids a close-option trap about The scale anchor and the boundary on using it?

A. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. B. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. D. The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected.

Answer: D. Explanation: The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected. The remaining options belong to different chronology, actor or analytical categories.

Q57. Which statement correctly identifies Algorithmic management as a distinct policy problem?

A. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. B. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. C. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. D. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.

Answer: A. Explanation: The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. The remaining options belong to different chronology, actor or analytical categories.

Q58. Which chronology card should be filed under Algorithmic management as a distinct policy problem?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. B. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. C. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. D. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.

Answer: B. Explanation: The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is

not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. The remaining options belong to different chronology, actor or analytical categories.

Q59. Which option preserves the source-bounded meaning of Algorithmic management as a distinct policy problem?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. B. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. C. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. D. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched.

Answer: C. Explanation: The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. The remaining options belong to different chronology, actor or analytical categories.

Q60. Which statement avoids a close-option trap about Algorithmic management as a distinct policy problem?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. B. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. C. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. D. The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards.

Answer: D. Explanation: The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. The remaining options belong to different chronology, actor or analytical categories.

Q61. Which statement correctly identifies Portability against interoperability?

A. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. B. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. D.

The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.

Answer: A. Explanation: The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. The remaining options belong to different chronology, actor or analytical categories.

Q62. Which chronology card should be filed under Portability against interoperability?

A. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. B. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. C. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. D. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database.

Answer: B. Explanation: The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. The remaining options belong to different chronology, actor or analytical

categories.

Q63. Which option preserves the source-bounded meaning of Portability against interoperability?

A. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. B. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. C. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. D. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database.

Answer: C. Explanation: The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. The remaining options belong to different chronology, actor or analytical categories.

Q64. Which statement avoids a close-option trap about Portability against interoperability?

A. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. B. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. C. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. D. The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes.

Answer: D. Explanation: The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. The remaining options belong to different chronology, actor or analytical categories.

Q65. Which statement correctly identifies A universal floor against a contributory top-up?

A. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. B. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. C. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. D. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database.

Answer: A. Explanation: The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. The remaining options belong to different chronology, actor or analytical categories.

Q66. Which chronology card should be filed under A universal floor against a contributory top-up?

A. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. B. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. The remaining options belong to different chronology, actor or analytical categories.

Q67. Which option preserves the source-bounded meaning of A universal floor against a contributory top-up?

A. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. B. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. C. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. D. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together.

Answer: C. Explanation: The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. The remaining options belong to different chronology, actor or analytical categories.

Q68. Which statement avoids a close-option trap about A universal floor against a contributory top-up?

A. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. B. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General

Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. C. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. D. The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.

Answer: D. Explanation: The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. The remaining options belong to different chronology, actor or analytical categories.

Q69. Which statement correctly identifies The thresholds and the safeguards that must not be invented?

A. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. B. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. C. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. D. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here.

Answer: A. Explanation: The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. The remaining options belong to different chronology, actor or analytical categories.

Q70. Which chronology card should be filed under The thresholds and the safeguards that must not be invented?

A. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. B. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. C. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. D. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here.

Answer: B. Explanation: The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. The remaining options belong to different chronology, actor or analytical categories.

Q71. Which option preserves the source-bounded meaning of The thresholds and the safeguards that must not be invented?

A. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. B. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. C. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. D. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here.

Answer: C. Explanation: The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. The remaining options belong to different chronology, actor or analytical categories.

Q72. Which statement avoids a close-option trap about The thresholds and the safeguards that must not be invented?

A. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. B. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. C. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. D. The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining.

Answer: D. Explanation: The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining. The remaining options belong to different chronology, actor or analytical categories.

Q73. Which statement correctly identifies The 2024 objective demand and how it is covered?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. B. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here. C. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. D. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched.

Answer: A. Explanation: The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved

answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. The remaining options belong to different chronology, actor or analytical categories.**

Q74. Which chronology card should be filed under The 2024 objective demand and how it is covered?

A. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. B. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. C. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. D. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here.

Answer: B. Explanation: The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. The remaining options belong to different chronology, actor or analytical categories.

Q75. Which option preserves the source-bounded meaning of The 2024 objective demand and how it is covered?

A. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. B. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. D. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application.

Answer: C. Explanation: The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. The remaining options belong to different chronology, actor or analytical categories.

Q76. Which statement avoids a close-option trap about The 2024 objective demand and how it is covered?

A. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. B. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. C. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. D. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database.

Answer: D. Explanation: The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there. The Basic owner's generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, key or inferred answer letter for that question anywhere, and satisfies the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its three-thousand-rupee monthly pension after sixty and its statement-level distinction from a registration database. The remaining options belong to different chronology, actor or analytical categories.

Q77. Which statement correctly identifies The reform design the owners recommend and its costs?

A. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. B. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. C. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. D. This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here.

Answer: A. Explanation: The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does

not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. The remaining options belong to different chronology, actor or analytical categories.

Q78. Which chronology card should be filed under The reform design the owners recommend and its costs?

A. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. B. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. C. The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. D. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application.

Answer: B. Explanation: The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. The remaining options belong to different chronology, actor or analytical categories.

Q79. Which option preserves the source-bounded meaning of The reform design the owners recommend and its costs?

A. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. B. The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive. C. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. D. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application.

Answer: C. Explanation: The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. The remaining options belong to different chronology, actor or analytical categories.

Q80. Which statement avoids a close-option trap about The reform design the owners recommend and its costs?

A. The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application. B. The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. C. The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. D. The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched.

Answer: D. Explanation: The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. The

remaining options belong to different chronology, actor or analytical categories.

PYQS AND ANSWER PRACTICE

VERIFIED OBJECTIVE-DEMAND OWNERSHIP AUDIT

This owner's previous-year record is a verified objective ownership rather than a Mains ownership, and it is stated precisely together with the boundary of what is claimed. The audited 2024-2025 Prelims routing ledger routes exactly one demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension scheme for unorganised workers, and that ledger records expressly that although the official Set-A answer key is available locally the answer is not recorded there; the Basic owner's own generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question anywhere, and discharges the owner requirement by teaching the scheme's voluntary and contributory character, its matching-contribution structure, its monthly pension of three thousand rupees after the age of sixty subject to scheme conditions, and its statement-level distinction from a registration database. No Mains demand is claimed: the audited 2018-2023 and 2024-2025 Mains routing ledgers route no General Studies Paper II question to this owner, and both the Basic and the Advanced owner state expressly that the 2024 General Studies Paper III question on the Labour Codes is analysed in the Economy employment and labour-codes owner rather than here, so that demand is not reproduced, solved or counted as this owner's ownership and no year, paper, question number, directive, mark value or word limit is asserted for it. The 2021 General Studies Paper I demand on the gig economy and the empowerment of women is routed by the audited ledger to the Indian Society women and women's organisations owner and is likewise not claimed here. Because no solved Mains demand card is available, the package supplies six original Mains questions with model solutions and eighty original objective questions on a strict A -> B -> C -> D rotation, each model solution opening with its analytical claim so that the evidence which follows does argumentative rather than decorative work. The locally held OCR-searchable official General Studies papers were read only to confirm that no routed Mains demand for this owner appears in them; no question was invented from them, no marking scheme or page precision was imported and no official answer key is claimed for any question anywhere in this package.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: The 2024 GS-III question on Labour Codes is analysed in `Economy/basic/22` and `Economy/advanced/22`. For a GS-II social-security answer, first state the legal status correctly, then explain worker recognition, current delivery routes and the gap between a database/Code and actual protection.

Recent PYQ Integration (2024-2025)

> **Status:** 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: `_PYQ-ROUTING-PRELIMS-2024-2025.md`. **Answer-key rule:** The official 2024-2025 Prelims Set-A keys are present in the repository and CSAT Set-A keys are supplied; even so, no option or answer is recorded or inferred in this integration.

- **Years represented:** 2024
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2024	Prelims GS-I	100	Pradhan Mantri Shram Yogi Maan-dhan (PM-SYM pension for unorganised workers)	Objective question; official Set-A key available locally, answer not inferred	Key available locally (official Set-A answer key present); answer not recorded here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Pradhan Mantri Shram Yogi Maan-dhan (PM-SYM pension for unorganised workers)

> This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

10. PYQ-based analytical application

- ANALYSIS: For the 2024 GS-III Labour Codes question, use `Economy/advanced/22` for macro

reforms. Add this topic's advanced insight: evaluate each claimed reform through the status ladder and separate legal recognition from benefits, worker voice and outcomes.

ORIGINAL MAINS 1 - 10 MARKS

Question: Explain why commencement, scheme notification and benefit delivery must be distinguished when assessing the Code on Social Security, 2020. Answer in about 150 words.

Model thesis: Claim: the three are separate legal and administrative events with different actors, so treating them as one produces a status error that misstates what a worker currently holds. Named evidence: the Code's commencement on 21 November 2025; the final Central Rules of May 2026 for establishments in Central jurisdiction with State rules still relevant because labour is concurrent; the statutory definitions of gig worker, platform worker and aggregator; and Section 114's framework for a notified rate of at least one and not more than two per cent of annual turnover capped at five per cent of amounts paid or payable to gig and platform workers. Analysis: commencement is an act of the Central Government bringing provisions into force, notification supplies the operative rate and scheme, and delivery requires collection, registration, claims rules and grievance machinery, so a worker can be inside a commenced Code and outside every benefit at once. Qualification: the answer should correct both errors symmetrically, refusing to say the Codes remain merely enacted and refusing to say commencement created a universal levy, and should name the rung reached before asserting coverage.

Claim -> named evidence -> analysis -> qualification:

- The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together.
- The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker.
- The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.
- The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic.
- The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of

weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument.

Qualified conclusion: Claim: the three are separate legal and administrative events with different actors, so treating them as one produces a status error that misstates what a worker currently holds. Named evidence: the Code's commencement on 21 November 2025; the final Central Rules of May 2026 for establishments in Central jurisdiction with State rules still relevant because labour is concurrent; the statutory definitions of gig worker, platform worker and aggregator; and Section 114's framework for a notified rate of at least one and not more than two per cent of annual turnover capped at five per cent of amounts paid or payable to gig and platform workers. Analysis: commencement is an act of the Central Government bringing provisions into force, notification supplies the operative rate and scheme, and delivery requires collection, registration, claims rules and grievance machinery, so a worker can be inside a commenced Code and outside every benefit at once. Qualification: the answer should correct both errors symmetrically, refusing to say the Codes remain merely enacted and refusing to say commencement created a universal levy, and should name the rung reached before asserting coverage.

Demand decoding: The directive **explain** requires a direct position on “Explain why commencement, scheme notification and benefit delivery must be distinguished when…”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: the three are separate legal and administrative events with different actors, so treating them as one produces a status error that misstates what a worker currently holds. Named evidence: the Code's commencement on 21 November 2025; the final Central Rules of May 2026 for establishments in Central jurisdiction with State rules still relevant because labour is concurrent; the statutory definitions of gig worker, platform worker and aggregator; and Section 114's framework for a notified rate of at least one and not more than two per cent of annual turnover capped at five per cent of amounts paid or payable to gig and platform workers. Analysis: commencement is an act of the Central Government bringing provisions into force, notification supplies the operative rate and scheme, and delivery requires collection, registration, claims rules and grievance machinery, so a worker can be inside a commenced Code and outside every benefit at once. Qualification: the answer should correct both errors symmetrically, refusing to say the Codes remain merely enacted and refusing to say commencement created a universal levy, and should name the rung reached before asserting coverage.

Analytical body:

1. **Claim and named evidence:** The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
2. **Claim and named evidence:** The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
3. **Claim and named evidence:** The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per

cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

4. **Claim and named evidence:** The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
5. **Claim and named evidence:** The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

Counter-position / limit: A constitutional promise, prohibition, reservation provision, scheme catalogue, allocation, registration count or headline statistic cannot alone establish accessible implementation, adequate benefit, dignity, remedy or attributable outcome; test eligibility, institutions, frontline capacity, intersectionality, regional variation, grievance and evidence status.

Qualified conclusion: Claim: the three are separate legal and administrative events with different actors, so treating them as one produces a status error that misstates what a worker currently holds. Named evidence: the Code's commencement on 21 November 2025; the final Central Rules of May 2026 for establishments in Central jurisdiction with State rules still relevant because labour is concurrent; the statutory definitions of gig worker, platform worker and aggregator; and Section 114's framework for a notified rate of at least one and not more than two per cent of annual turnover capped at five per cent of amounts paid or payable to gig and platform workers. Analysis: commencement is an act of the Central Government bringing provisions into force, notification supplies the operative rate and scheme, and delivery requires collection, registration, claims rules and grievance machinery, so a worker can be inside a commenced Code and outside every benefit at once. Qualification: the answer should correct both errors symmetrically, refusing to say the Codes remain merely enacted and refusing to say commencement created a universal levy, and should name the rung reached before asserting coverage.

Executable exam-length answer / compression plan: For 10 marks, spend one-sixth of the time decoding the directive and drawing right/need -> institution -> eligibility -> delivery -> outcome -> remedy; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for dignity, accessibility, portability, grievance, denominator, fiscal and causal limits.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses named India-centric evidence and preserves legal, institutional, group, eligibility, implementation, fiscal, data and outcome distinctions.

How to improve this answer: For “Explain why commencement, scheme notification and benefit delivery must be distinguished when…”, replace the weakest scheme-catalogue point with one named rights-holder, duty-bearer, eligibility bottleneck, safeguard, grievance route, process/outcome indicator and source-status qualification.

ORIGINAL MAINS 2 - 10 MARKS

Question: Distinguish statutory recognition of a platform worker from operational social-security coverage, and explain what evidence would show the difference. Answer in about 150 words.

Model thesis: Claim: recognition establishes who may be covered while coverage requires a financed and administered promise, so the two must be evidenced separately. Named evidence: the platform-worker definition resting on access to organisations or individuals through an online platform for payment; the gig-worker definition resting on earning outside a traditional employer-employee relationship; the aggregator definition as the digital intermediary that the Code makes the financing node; Section 114's range and cap; and the owners' record that a rider engaged through two platforms may satisfy the definitions and still have no verified nationwide fund claim route. Analysis: the evidence that would settle the question is not the statutory text but a notified rate, a collection record, a registration and claims rule and a settled claim, and the absence of any one of them leaves the worker recognised and unprotected. Qualification: the answer should record that recognition is nevertheless a real advance, because it creates the legal category on which a future scheme can be built, and should not treat the design as empty merely because delivery is unevidenced.

Claim -> named evidence -> analysis -> qualification:

- The owners record the Code's statutory definition of a gig worker as a person who performs work or participates in a work arrangement and earns from activities outside the traditional employer-employee relationship, and they attach the decisive qualification that the definition gives statutory recognition within the Code and does not by itself guarantee a benefit. The examinable move is to treat the definition as the entry condition for a social-security architecture rather than as the architecture itself, because recognition tells you who may be covered while a notified scheme tells you what they receive.
- The owners record the Code's statutory definition of a platform worker as a person engaged in platform work outside a traditional employer-employee relationship, using an online platform to access organisations or individuals for specific services in exchange for payment. The definition is narrower than the gig-worker definition because it names the online platform as the means of access, and the owners keep the two apart deliberately, since an answer that uses the two terms interchangeably loses the distinction the Code drew between working outside a conventional employment relationship and working through an intermediating application.
- The owners record the Code's definition of an aggregator as a digital intermediary or marketplace that connects a service user with a service provider through an application or platform, and they record that the Code identifies aggregator categories for a social-security contribution architecture. The aggregator is therefore the financing node of the design rather than a worker category, and the examinable relationship is that the Code recognises the worker, names the aggregator and then attaches a contribution power to the aggregator rather than to the worker.
- The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.
- The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic.

Qualified conclusion: Claim: recognition establishes who may be covered while coverage requires a financed and administered promise, so the two must be evidenced separately. Named evidence: the platform-worker definition resting on access to organisations or individuals through an online platform for payment; the gig-worker definition resting on earning outside a traditional employer-employee relationship; the aggregator definition as the digital intermediary that the Code makes the financing node; Section 114's range and cap; and the owners' record that a rider engaged through two platforms may satisfy the definitions and still have no verified nationwide fund claim route. Analysis: the evidence that would settle the question is not the statutory text but a notified rate, a collection record, a registration and claims rule and a settled claim, and the absence of any one of them leaves the worker recognised and unprotected. Qualification: the answer should record that recognition is nevertheless a real advance, because it creates the legal category on which a future scheme can be built, and should not treat the design as empty merely because delivery is unevidenced.

Demand decoding: The directive **explain** requires a direct position on “Distinguish statutory recognition of a platform worker from operational social-security…”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: recognition establishes who may be covered while coverage requires a financed and administered promise, so the two must be evidenced separately. ORIGINAL MAINS 3 - 15 MARKS

Question: Critically examine the proposition that registration of an unorganised worker is necessary but not sufficient for social security. Answer in about 250 words.

Model thesis: Claim: the proposition is correct and can be proved step by step, because registration solves identification while every remaining barrier to a benefit lies downstream of it. Named evidence: the national unorganised-worker database launched in 2021 with a universal account number, recorded as a delivery and convergence tool rather than an entitlement; the separate age, income, occupation, contribution and documentation rules of each scheme; the voluntary contributory pension route with matching contributions and a monthly pension of three thousand rupees after sixty; the State construction welfare boards funded through the cess and delivering State-notified benefits to registered workers; the provident-fund and employee-insurance institutions covering workers whose establishments fall within the applicable statutes; and the recorded interruptions of bank access, documentation, awareness and State or platform data quality. Analysis: the contrast between a construction worker holding a State board benefit and a worker holding only a database entry shows that identification and entitlement sit in different institutions, so a rising registration total and a flat benefit-uptake rate are entirely compatible facts. Qualification: the examination should credit registration as the precondition for convergence and portability while refusing to treat a cumulative registration figure as a measure of protection.

Claim -> named evidence -> analysis -> qualification:

- The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection.
- The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.
- The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension.
- The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential.
- The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected.
- The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the

national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes.

Qualified conclusion: Claim: the proposition is correct and can be proved step by step, because registration solves identification while every remaining barrier to a benefit lies downstream of it. Named evidence: the national unorganised-worker database launched in 2021 with a universal account number, recorded as a delivery and convergence tool rather than an entitlement; the separate age, income, occupation, contribution and documentation rules of each scheme; the voluntary contributory pension route with matching contributions and a monthly pension of three thousand rupees after sixty; the State construction welfare boards funded through the cess and delivering State-notified benefits to registered workers; the provident-fund and employee-insurance institutions covering workers whose establishments fall within the applicable statutes; and the recorded interruptions of bank access, documentation, awareness and State or platform data quality. Analysis: the contrast between a construction worker holding a State board benefit and a worker holding only a database entry shows that identification and entitlement sit in different institutions, so a rising registration total and a flat benefit-uptake rate are entirely compatible facts. Qualification: the examination should credit registration as the precondition for convergence and portability while refusing to treat a cumulative registration figure as a measure of protection.

Demand decoding: The directive **critically examine** requires a direct position on “Critically examine the proposition that registration of an unorganised worker is necessary…”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: the proposition is correct and can be proved step by step, because registration solves identification while every remaining barrier to a benefit lies downstream of it. Named evidence: the national unorganised-worker database launched in 2021 with a universal account number, recorded as a delivery and convergence tool rather than an entitlement; the separate age, income, occupation, contribution and documentation rules of each scheme; the voluntary contributory pension route with matching contributions and a monthly pension of three thousand rupees after sixty; the State construction welfare boards funded through the cess and delivering State-notified benefits to registered workers; the provident-fund and employee-insurance institutions covering workers whose establishments fall within the applicable statutes; and the recorded interruptions of bank access, documentation, awareness and State or platform data quality. Analysis: the contrast between a construction worker holding a State board benefit and a worker holding only a database entry shows that identification and entitlement sit in different institutions, so a rising registration total and a flat benefit-uptake rate are entirely compatible facts. Qualification: the examination should credit registration as the precondition for convergence and portability while refusing to treat a cumulative registration figure as a measure of protection.

Analytical body:

1. **Claim and named evidence:** The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
2. **Claim and named evidence:** The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule ->

frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

3. **Claim and named evidence:** The owners record Pradhan Mantri Shram Yogi Maandhan, introduced in 2019, as a voluntary contributory pension route for eligible unorganised workers in which the worker and the Government make matching contributions and the enrollee receives a monthly pension of three thousand rupees after the age of sixty, subject to the scheme's conditions. They record its analytical significance as much as its mechanics: it demonstrates that a registry entry and a benefit enrolment are two separate administrative steps, because a worker recorded in the national database is not thereby enrolled in this pension. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
4. **Claim and named evidence:** The owners record the State welfare boards constituted under the Building and Other Construction Workers legal framework of 1996 as funded principally through the construction-welfare cess and as delivering State-notified benefits, including accident, education and pension support, to registered workers. They record that the benefit depends on registration, on cess administration and on State rules, and they correct the error that these boards disappeared on commencement of the Code, because the Code retains an occupation-specific cess and welfare architecture in which State implementation remains essential. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
5. **Claim and named evidence:** The owners record the Employees' Provident Fund Organisation and the Employees' State Insurance Corporation as the current implementing institutions for provident fund and employee insurance where the applicable legacy statutes cover the establishment or the worker, and they record that both remain central to implementation under the reorganised Code architecture. The examinable point is that India's social security is delivered by a set of institutions with different coverage tests rather than by one instrument, so an answer must identify which institution owns the worker in question before assessing whether that worker is protected. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
6. **Claim and named evidence:** The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

Counter-position / limit: A constitutional promise, prohibition, reservation provision, scheme catalogue, allocation, registration count or headline statistic cannot alone establish accessible implementation, adequate benefit, dignity, remedy or attributable outcome; test eligibility, institutions, frontline capacity, intersectionality, regional variation, grievance and evidence status.

Qualified conclusion: Claim: the proposition is correct and can be proved step by step, because registration solves identification while every remaining barrier to a benefit lies downstream of it. Named evidence: the national unorganised-worker database launched in 2021 with a universal account number, recorded as a delivery and convergence tool rather than an entitlement; the separate age, income, occupation, contribution and documentation rules of each scheme; the voluntary contributory pension route with matching contributions and a monthly pension of three thousand rupees after sixty; the State construction welfare boards funded through the cess and delivering State-notified benefits to registered workers; the provident-fund and employee-insurance institutions covering workers whose establishments fall within the applicable statutes; and the recorded interruptions of bank access, documentation, awareness and State or platform data quality. Analysis: the contrast between a construction worker holding a State board benefit and a worker holding only a database entry shows that identification and entitlement sit in different institutions, so a rising registration total and a flat benefit-uptake rate are entirely compatible facts. Qualification: the examination should credit registration as the precondition for convergence and portability while refusing to treat a cumulative registration figure as a measure of protection.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing right/need -> institution -> eligibility -> delivery -> outcome -> remedy; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for dignity, accessibility, portability, grievance, denominator, fiscal and causal limits.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses named India-centric evidence and preserves legal, institutional, group, eligibility, implementation, fiscal, data and outcome distinctions.

How to improve this answer: For “Critically examine the proposition that registration of an unorganised worker is necessary…”, replace the weakest scheme-catalogue point with one named rights-holder, duty-bearer, eligibility bottleneck, safeguard, grievance route, process/outcome indicator and source-status qualification.

ORIGINAL MAINS 4 - 15 MARKS

Question: Assess whether an aggregator-financed contribution can deliver adequate social security for gig and platform workers. Answer in about 250 words.

Model thesis: Claim: an aggregator contribution is the right financing node and an insufficient financing answer, because it addresses who pays without resolving incidence, coverage of irregular earners or the non-financial conditions of the work. Named evidence: Section 114's range of at least one and not more than two per cent of annual turnover with a cap of five per cent of amounts paid or payable to gig and platform workers; the owners' record that a legislative range is not a notified rate, a collection ledger, a fund balance or a paid claim; the incidence caution that a levy may be passed to workers or users so that transparency in payouts and periodic incidence analysis are required; the trade-off between a tax-financed universal floor that reduces exclusion and a contributory top-up that deepens cover while excluding volatile earners; and the 2022 estimate of 7.7 million gig workers in 2020-21 with a projection of 23.5 million by 2029-30 cited as a scenario. Analysis: the design is sound in placing the obligation on the party with the turnover and the data, but its adequacy depends on a notified rate, an auditable fund, a claims route that tolerates irregular work histories and a floor for those whose contributions cannot be regular. Qualification: the assessment must not assert a threshold rule that no official source supplies, and must record that financing cannot answer algorithmic deactivation, unpaid waiting time or unsafe work.

Claim -> named evidence -> analysis -> qualification:

- The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.
- The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic.
- The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel

earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. The discipline is that an estimate and a projection may be cited with their year and issuing body, and neither may be converted into a count of persons protected.

- The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.
- The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining.
- The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched.

Qualified conclusion: Claim: an aggregator contribution is the right financing node and an insufficient financing answer, because it addresses who pays without resolving incidence, coverage of irregular earners or the non-financial conditions of the work. Named evidence: Section 114's range of at least one and not more than two per cent of annual turnover with a cap of five per cent of amounts paid or payable to gig and platform workers; the owners' record that a legislative range is not a notified rate, a collection ledger, a fund balance or a paid claim; the incidence caution that a levy may be passed to workers or users so that transparency in payouts and periodic incidence analysis are required; the trade-off between a tax-financed universal floor that reduces exclusion and a contributory top-up that deepens cover while excluding volatile earners; and the 2022 estimate of 7.7 million gig workers in 2020-21 with a projection of 23.5 million by 2029-30 cited as a scenario. Analysis: the design is sound in placing the obligation on the party with the turnover and the data, but its adequacy depends on a notified rate, an auditable fund, a claims route that tolerates irregular work histories and a floor for those whose contributions cannot be regular. Qualification: the assessment must not assert a threshold rule that no official source supplies, and must record that financing cannot answer algorithmic deactivation, unpaid waiting time or unsafe work.

Demand decoding: The directive **assess** requires a direct position on “Assess whether an aggregator-financed contribution can deliver adequate social security for…”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: an aggregator contribution is the right financing node and an insufficient financing answer, because it addresses who pays without resolving incidence, coverage of irregular earners or the non-financial conditions of the work. Named evidence: Section 114's range of at least one and not more than two per cent of annual turnover with a cap of five per cent of amounts paid or payable to gig and platform workers; the owners' record that a legislative range is not a notified rate, a collection ledger, a fund balance or a paid claim; the incidence caution that a levy may be passed to workers or users so that transparency in payouts and periodic incidence analysis are required; the trade-off between a tax-financed universal floor that reduces exclusion and a contributory top-up that deepens cover while excluding volatile earners; and the 2022 estimate of 7.7 million gig workers in 2020-21 with a projection of 23.5 million by 2029-30 cited as a scenario. Analysis: the design is sound in placing the obligation on the party with the turnover and the data, but its adequacy depends on a notified rate, an auditable fund, a claims route that tolerates

irregular work histories and a floor for those whose contributions cannot be regular. Qualification: the assessment must not assert a threshold rule that no official source supplies, and must record that financing cannot answer algorithmic deactivation, unpaid waiting time or unsafe work.

Analytical body:

1. **Claim and named evidence:** The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
2. **Claim and named evidence:** The owners treat this as the central analytical discipline of the topic. A range stated in legislation is not evidence of a notified rate, a collection ledger, a fund balance or a paid claim, and calling an enacted range a current levy conceals the gap between legal design and a worker's actual protection. The owners record the correct answer move explicitly: state the source and its date, name the exact rung of the status ladder that has been reached, and only then make an implementation claim, because false certainty about financing is the most common and most costly error in this topic. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
3. **Claim and named evidence:** The owners record a single scale anchor for this topic: a 2022 report of the national policy think tank estimated 7.7 million gig workers in 2020-21 and projected 23.5 million by 2029-30. They immediately bound it, recording that the projection is a scenario rather than a worker registry or a current beneficiary count, and they record the parallel earlier statute, the Unorganised Workers' Social Security Act, 2008, as part of the legal background. ORIGINAL MAINS 5 - 20 MARKS

Question: Analyse the gap between legal recognition and effective protection for India's gig and platform workers, and identify where each corrective instrument must be applied. Answer in about 300 words.

Model thesis: Claim: the gap is not one gap but four, at recognition, financing, delivery and voice, and each rung has a different responsible authority, so an undifferentiated demand for better implementation cannot correct any of them. Named evidence: the commenced Code of 21 November 2025 with Central Rules of May 2026; the statutory definitions of gig worker, platform worker and aggregator; Section 114's range and cap; the status ladder of enacted, notified, commenced, collected and delivered; the national database of 2021 with its universal account number; the voluntary contributory pension route; the State construction welfare boards and the provident-fund and employee-insurance institutions; the registration-to-benefit interruptions of bank access, documentation, awareness and data quality; and the platform-power chain of ratings, task allocation, deactivation, income volatility, classification disputes and the absence of collective voice. Analysis: recognition is corrected by legislation and has largely been done, financing by a notified rate and an auditable fund, delivery by assisted enrolment, interoperable claims and portability that carries contribution records rather than only a card, and voice by an independent grievance route for deactivation and benefit disputes, so applying a delivery remedy to a voice problem leaves the worker exactly where they were. Qualification: the analysis should state the incidence, threshold, privacy and insurance-led cautions the owners record, and should avoid asserting any nationwide levy, fund balance or eligibility rule that the sources do not supply.

Claim -> named evidence -> analysis -> qualification:

- This owner holds the social-security half of the labour question rather than the labour-market half: statutory recognition of gig, platform and aggregator categories, the financing design attached to them, the registration and welfare-board routes that currently deliver protection, and the discipline that separates an enacted provision from a benefit a worker actually receives. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand here, question 100 of the 2024 Prelims General Studies Paper I on Pradhan Mantri Shram Yogi Maan-dhan, the pension route for unorganised workers, and it records that although the official Set-A key is available locally the answer is not recorded there, so this package states no option, key or answer letter for it. The owners also record that the 2024 General Studies Paper III demand on the Labour Codes is analysed in the Economy owner, so no Mains demand is claimed here.
- The owners record the Code on Social Security, 2020 as one of four Labour Codes and record its status precisely: it commenced on 21 November 2025, and final Central Rules were notified in May 2026 for establishments in Central jurisdiction, while State rules and specific scheme notifications remain relevant because labour is a concurrent subject. The owners correct two opposite errors in the same breath, that the Codes remain merely enacted, which is now wrong, and that commencement by itself activated every levy and benefit, which was never right; the correct statement names the commencement date, the rules date and the remaining scheme-level questions together.
- The owners record that Section 114 of the Code provides a statutory framework for a contribution rate to be notified by the Central Government of at least one per cent and not more than two per cent of an aggregator's annual turnover, subject to a cap of five per cent of the amount paid or payable by the aggregator to gig and platform workers. They record both bounds because both are testable, and they record the cap as a separate limit rather than as a restatement of the range, so an answer that quotes the turnover range without the payout cap has given only half of the statutory design.
- The owners set out the ladder in fixed order: enacted, then rules or scheme notified, then the provision commenced, then contribution collected, then benefit delivered, and they instruct that an answer name the rung it has reached before asserting anything about coverage. They extend the same ladder to the individual: recognition, registration, scheme matching, contribution, claim and receipt. The ladder is what converts a vague charge of weak implementation into a locatable failure, because each rung has a different responsible authority and a different corrective instrument.
- The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.
- The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards.
- The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the

national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes.

- The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched.

Qualified conclusion: Claim: the gap is not one gap but four, at recognition, financing, delivery and voice, and each rung has a different responsible authority, so an undifferentiated demand for better implementation cannot correct any of them. 6. **Claim and named evidence:** The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. **Analysis:** Connect

right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

7. **Claim and named evidence:** The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
8. **Claim and named evidence:** The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

Counter-position / limit: A constitutional promise, prohibition, reservation provision, scheme catalogue, allocation, registration count or headline statistic cannot alone establish accessible implementation, adequate benefit, dignity, remedy or attributable outcome; test eligibility, institutions, frontline capacity, intersectionality, regional variation, grievance and evidence status.

Qualified conclusion: Claim: the gap is not one gap but four, at recognition, financing, delivery and voice, and each rung has a different responsible authority, so an undifferentiated demand for better implementation cannot correct any of them. Named evidence: the commenced Code of 21 November 2025 with Central Rules of May 2026; the statutory definitions of gig worker, platform worker and aggregator; Section 114's range and cap; the status ladder of enacted, notified, commenced, collected and delivered; the national database of 2021 with its universal account number; the voluntary contributory pension route; the State construction welfare boards and the provident-fund and employee-insurance institutions; the registration-to-benefit interruptions of bank access, documentation, awareness and data quality; and the platform-power chain of ratings, task allocation, deactivation, income volatility, classification disputes and the absence of collective voice. Analysis: recognition is corrected by legislation and has largely been done, financing by a notified rate and an auditable fund, delivery by assisted enrolment, interoperable claims and portability that carries contribution records rather than only a card, and voice by an independent grievance route for deactivation and benefit disputes, so applying a delivery remedy to a voice problem leaves the worker exactly where they were. Qualification: the analysis should state the incidence, threshold, privacy and insurance-led cautions the owners record, and should avoid asserting any nationwide levy, fund balance or eligibility rule that the sources do not supply.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing right/need -> institution -> eligibility -> delivery -> outcome -> remedy; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for dignity, accessibility, portability, grievance, denominator, fiscal and causal limits.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses named India-centric evidence and preserves legal, institutional, group, eligibility, implementation, fiscal, data and outcome distinctions.

How to improve this answer: For "Analyse the gap between legal recognition and effective protection for India's gig and…", replace the weakest scheme-catalogue point with one named rights-holder, duty-bearer, eligibility bottleneck, safeguard, grievance route, process/outcome indicator and source-status qualification.

ORIGINAL MAINS 6 - 20 MARKS

Question: Evaluate the claim that platform-worker inclusion requires more than registration and more than insurance. Answer in about 300 words.

Model thesis: Claim: the claim is sustained, because registration answers identity and insurance answers a single realised risk, whereas the conditions that make platform work precarious are pay volatility, unilateral algorithmic decision-making and the absence of an adjudicatory forum. Named evidence: the database recorded as a convergence tool rather than an entitlement; the separate eligibility and enrolment step demonstrated by the voluntary contributory pension route; the platform-power chain in which ratings, incentives, task allocation and deactivation shape conditions without transparent human management; the record that income volatility makes regular contributions difficult; the record that social-security recognition does not settle employee or independent-contractor questions for all labour standards; the record that an application grievance channel is not collective bargaining or independent adjudication; the portability-against-interoperability distinction; and the insurance-led caution that hospitalisation or accident cover cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. Analysis: each additional requirement follows from a specific failure rather than from a general preference, so the corrective package is a notified and auditable financing route, portability that carries contribution records across States and platforms, assisted enrolment for those excluded digitally, and an independent forum for deactivation, and the last of these has no existing institutional home. Qualification: the evaluation should concede that a universal floor and a contributory top-up are both needed and both costly, and should record the privacy exposure that cross-platform portability creates.

Claim -> named evidence -> analysis -> qualification:

- The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection.
- The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically.
- The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards.
- The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes.

- The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome.
- The owners impose two prohibitions that objective questions are built to catch. A work-day or earnings threshold could simplify administration but would exclude highly casual workers, and no ninety-day or one-hundred-and-twenty-day national eligibility rule may be asserted unless an official operative rule supplies it. Insurance-led design is the second trap, because hospitalisation or accident cover alone cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. The owners also record that the Code's gig and platform definitions do not by themselves settle disputes about minimum wages, working time, dismissal or collective bargaining.
- The owners record a specific reform package rather than a general appeal for funds: publish provision-specific commencement and scheme status so that a reader can locate the rung reached; make fund receipts and claims auditable; offer assisted and offline enrolment so that digital exclusion does not become benefit exclusion; and create an independent grievance route for algorithmic deactivation and benefit disputes. They record the accompanying costs as part of the recommendation, that an aggregator levy may be shifted in incidence, that a simplifying threshold excludes casual workers, that portability creates privacy exposure and that insurance-led cover leaves the structural conditions of the work untouched.

Qualified conclusion: Claim: the claim is sustained, because registration answers identity and insurance answers a single realised risk, whereas the conditions that make platform work precarious are pay volatility, unilateral algorithmic decision-making and the absence of an adjudicatory forum. Named evidence: the database recorded as a convergence tool rather than an entitlement; the separate eligibility and enrolment step demonstrated by the voluntary contributory pension route; the platform-power chain in which ratings, incentives, task allocation and deactivation shape conditions without transparent human management; the record that income volatility makes regular contributions difficult; the record that social-security recognition does not settle employee or independent-contractor questions for all labour standards; the record that an application grievance channel is not collective bargaining or independent adjudication; the portability-against-interoperability distinction; and the insurance-led caution that hospitalisation or accident cover cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. Analysis: each additional requirement follows from a specific failure rather than from a general preference, so the corrective package is a notified and auditable financing route, portability that carries contribution records across States and platforms, assisted enrolment for those excluded digitally, and an independent forum for deactivation, and the last of these has no existing institutional home. Qualification: the evaluation should concede that a universal floor and a contributory top-up are both needed and both costly, and should record the privacy exposure that cross-platform portability creates.

Demand decoding: The directive **evaluate** requires a direct position on “Evaluate the claim that platform-worker inclusion requires more than registration and more…”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: the claim is sustained, because registration answers identity and insurance answers a single realised risk, whereas the conditions that make platform work precarious are pay volatility, unilateral algorithmic decision-making and the absence of an adjudicatory forum. Named evidence: the database recorded as a convergence tool rather than an entitlement; the separate eligibility and enrolment step demonstrated by the voluntary contributory pension route; the platform-power chain in which ratings, incentives, task allocation and deactivation shape conditions without transparent human management; the record that income volatility makes regular contributions difficult; the record that social-security recognition does not settle employee or independent-contractor questions for all labour standards; the record that an application grievance channel is not collective bargaining or independent adjudication; the portability-against-interoperability distinction; and the insurance-led caution that hospitalisation or accident cover cannot correct unstable pay, unpaid waiting time, unsafe work or arbitrary deactivation. Analysis: each additional requirement follows from a specific failure rather than from a general preference, so the corrective package is a notified and auditable financing route, portability that carries contribution records across States and platforms, assisted enrolment for those excluded digitally, and an independent forum for deactivation, and the last of these has no existing institutional home. Qualification: the evaluation should concede that a universal floor and a contributory top-up are both needed and both costly, and should record the privacy exposure that cross-platform portability creates.

Analytical body:

1. **Claim and named evidence:** The owners record e-Shram, launched in 2021 by the Ministry of Labour and Employment, as a national database and registration portal for unorganised workers that issues a card carrying a universal account number, and they record it as a delivery and convergence tool rather than an automatic pension, insurance or statutory gig-worker entitlement. They add the evidence discipline that a cumulative registration total changes continuously and is an administrative output rather than an entitlement count, so a headline registration figure cannot be offered as a measure of protection. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
2. **Claim and named evidence:** The owners set out the registration-to-benefit failure chain in four steps: the database records the worker's identity and account number; the worker must separately meet a scheme's age, income, occupation, contribution or documentation rules; bank access, documentation, awareness and State or platform data quality can interrupt a benefit even after registration; and the result is that a headline registration total can coexist with low insurance, pension or accident-cover uptake. The owners give the direct illustration that a registrant who does not separately meet a scheme's eligibility conditions receives no pension, health insurance or cash transfer automatically. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
3. **Claim and named evidence:** The owners record the platform-power failure chain as separate from the financing question: ratings, incentives, task allocation and deactivation shape working conditions without transparent human management; variable demand and unilateral incentive changes make regular contributions difficult for workers with irregular earnings; social-security recognition does not settle employee or independent-contractor questions for all labour standards; and an individual application grievance channel is not equivalent to collective bargaining or independent adjudication. They add that a platform describing a worker as a partner may not defeat a statutory definition while the label can still matter in a separate dispute about employment standards. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
4. **Claim and named evidence:** The owners distinguish a portable card from a portable benefit. A card carrying a universal account number can follow the worker, but benefits are genuinely portable only if contribution records, eligibility rules, claim settlement and grievance redress work across States, platforms and occupations. They give the contrast that a construction worker registered with a State board may receive that board's benefit while a worker registered only on the national database receives none, which is why a database must not be presented as a universal entitlement, and they record that cross-platform portability creates surveillance and privacy risk requiring purpose limitation, consent and notice, access and correction and non-digital assisted routes. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
5. **Claim and named evidence:** The owners set out the financing choice as a design trade-off rather than as a preference. Tax-financed basic protection reduces the exclusion of low and irregular earners but costs more and covers less deeply; contributory protection can deepen cover but may exclude workers whose earnings are volatile, which describes precisely the population the Code is trying to reach. The owners conclude that a credible

model for gig work usually needs both, and they add the incidence caution that an aggregator levy can finance protection but may be passed on to workers or users, so transparency in payouts and periodic incidence analysis are required before claiming a progressive outcome. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

6. **Claim and named evidence:** The owners impose two prohibitions that objective questions are built to catch.
