ASCII MASTER FLOW — PANEL 1/12: Classification design gate

```
PURPOSE -> comparison, explanation or planning
VARIABLES -> temperature, rain or water balance
METHOD -> thresholds, period, scale, interpolation
OUTPUT -> useful model with explicit limits
MUST REMEMBER: Köppen classification uses temperature and precipitation thresholds with
  seasonality letters; India must be mapped as regional climate regimes shaped by latitude,
  altitude, continentality, relief and monsoon circulation rather than memorised codes alone.
```

```

  seasonality letters; India must be mapped as regional climate regimes shaped by latitude,
  altitude, continentality, relief and monsoon circulation rather than memorised codes alone.
```

ASCII MASTER FLOW — PANEL 2/12: Koppen major groups

```
A -> tropical thermal regime
B -> dryness threshold first
C / D -> coldest-month convention matters
E -> warmest month below 10 C; H added later
```

ASCII MASTER FLOW — PANEL 3/12: Tropical code grammar

```
Af -> no dry season
Am -> monsoon short dry season logic
Aw / As -> dry winter / dry summer
RULE -> first letter climate, second rainfall
```

ASCII MASTER FLOW — PANEL 4/12: Dry-climate gate

```
TEMPERATURE + RAIN SEASON -> dryness threshold
PRECIPITATION BELOW THRESHOLD -> B group
DRIER -> BW desert
LESS DRY -> BS steppe; h/k thermal suffix
```

ASCII MASTER FLOW — PANEL 5/12: C-D threshold firewall

```
COLDEST MONTH -> C/D discriminator
CONVENTION 1 -> minus 3 C boundary
CONVENTION 2 -> 0 C boundary
ANSWER RULE -> state convention before mapping
```

ASCII MASTER FLOW — PANEL 6/12: Normal-to-trend ladder

```
NORMAL -> stated 30-year reference
ANOMALY -> observation minus normal
VARIABILITY -> spread and recurrence
TREND -> multi-period direction with uncertainty
```

ASCII MASTER FLOW — PANEL 7/12: Climate-boundary model

```
STATIONS / GRIDS -> measured variables
QUALITY CONTROL -> comparable records
INTERPOLATION + THRESHOLDS -> class map
GROUND REALITY -> transition, not wall
```

ASCII MASTER FLOW — PANEL 8/12: India control matrix

```
LATITUDE + ALTITUDE -> thermal structure
RELIEF -> uplift, rain shadow, cold barrier
SEA DISTANCE -> maritime / continental range
MONSOON + WDs + OCEAN -> seasonal variability
```

ASCII MASTER FLOW — PANEL 9/12: India code-map boundary

COMMON TYPES -> tropical, dry, subtropical, highland
EXACT CODE -> depends on dataset and threshold
BOUNDARY -> depends on scale and interpolation
RULE -> cite source, period and convention

ASCII MASTER FLOW — PANEL 10/12: Classification comparison

```
KOPPEN -> temperature + precipitation thresholds
TREWARTHA -> modified thermal zonation
THORNTHWAITE -> water balance + PET
CHOICE -> match method to question purpose
CLOSE DISTINCTION: A/B/C/D/E are major climate groups, second and third letters carry
  moisture/thermal meaning, and climate region differs from vegetation biome or agro-climatic
  zone even when boundaries broadly correlate.
```

```
CLOSE DISTINCTION: A/B/C/D/E are major climate groups, second and third letters carry
  moisture/thermal meaning, and climate region differs from vegetation biome or agro-climatic
  zone even when boundaries broadly correlate.
```

ASCII MASTER FLOW — PANEL 11/12: Planning overlay

```
CLIMATE TYPE -> long-period thermal-rain pattern
AGRO-CLIMATE -> crop and season context
AGRO-ECOLOGY -> soil + landform + growing period
RISK LAYER -> hazards, exposure and vulnerability
EVIDENCE LIMIT: Threshold classification simplifies transitional and highland mosaics; map
  answers should state dataset/scale and avoid treating a code boundary as a permanent
  administrative or ecological line.
```

```
EVIDENCE LIMIT: Threshold classification simplifies transitional and highland mosaics; map
  answers should state dataset/scale and avoid treating a code boundary as a permanent
  administrative or ecological line.
```

ASCII MASTER FLOW — PANEL 12/12: Climate answer spine

DEFINE -> purpose, variables and period
DECODE -> letters and thresholds
MAP -> India with transition caveat
COMPARE -> method, use, limitation and verdict
