ASCII MASTER FLOW — PANEL 1/12: Basin anatomy

```
RIDGELINE -> watershed / drainage divide
SLOPES -> runoff enters tributaries
TRIBUTARIES -> trunk stream -> outlet
BASIN RULE -> upstream change travels downstream
MUST REMEMBER: Fluvial systems connect rainfall-runoff, drainage-network organisation,
  erosion, transport, deposition, graded-profile adjustment and floodplain evolution to
  Himalayan antecedent rivers, Peninsular drainage and basin-scale interlink proposals.
```

ASCII MASTER FLOW — PANEL 2/12: River-work engine

```
ENERGY + DISCHARGE -> erosion capacity
LOAD SIZE + VOLUME -> transport demand
COMPETENCE FALLS -> deposition begins
FEEDBACK -> bed form alters velocity and load
```

ASCII MASTER FLOW — PANEL 3/12: Long-profile controls

```
UPLIFT / BASE LEVEL -> potential-energy change
ROCK + DISCHARGE -> local incision
SEDIMENT -> abrasion, transport and storage
GRADED CURVE -> moving dynamic balance
```

ASCII MASTER FLOW — PANEL 4/12: Meander-floodplain loop

OUTER BANK -> faster flow -> erosion
INNER BANK -> slower flow -> point bar
NECK CUTOFF -> ox-bow lake
OVERBANK SILT -> floodplain + natural levee

ASCII MASTER FLOW — PANEL 5/12: Drainage-pattern matrix

```
DENDRITIC -> uniform resistance
TRELLIS -> alternating resistant bands
RECTANGULAR -> joints and faults
RADIAL / CENTRIPETAL -> outward high / inward basin
```

ASCII MASTER FLOW — PANEL 6/12: Drainage-evolution firewall

```
ANTECEDENT -> river older than uplift
SUPERIMPOSED -> cover pattern inherited below
CAPTURE -> headward erosion diverts neighbour
FIELD CUES -> gorge / discordance / elbow-wind gap
```

ASCII MASTER FLOW — PANEL 7/12: India river-system contrast

```
HIMALAYAN -> high relief, mixed perennial inputs
PENINSULAR -> old shield, monsoon-dominant regime
EAST -> long rivers and major deltas
WEST -> Narmada-Tapi troughs + short Ghats streams
```

ASCII MASTER FLOW — PANEL 8/12: Source-course-mouth rail

```
INDUS -> Tibetan headwaters -> Arabian Sea
GANGA -> Devprayag name -> Bengal delta
BRAHMAPUTRA -> Tsangpo-Siang -> joined delta
PENINSULA -> Godavari-Krishna-Kaveri / Narmada-Tapi
```

ASCII MASTER FLOW — PANEL 9/12: Delta budget

```
INPUT -> basin sediment delivery
REMOVAL -> waves, tides and cyclone scour
VERTICAL -> compaction + relative sea level
CHANNELS -> distributary mobility or confinement
```

ASCII MASTER FLOW — PANEL 10/12: Transfer viability test

```
DONOR -> seasonal water after existing claims
RECIPIENT -> demand, soil, aquifer and delivery fit
CORRIDOR -> loss, energy, ecology and people
ALTERNATIVES -> recharge, efficiency, reuse, operations
CLOSE DISTINCTION: V-shaped valley, gorge, waterfall, meander, oxbow, levee, delta and
  alluvial fan occupy different energy and valley settings; drainage pattern differs from
  drainage basin, and river capture differs from planned diversion.
```

ASCII MASTER FLOW — PANEL 11/12: Ken-Betwa boundary

```
DIRECTION -> Ken basin to Betwa basin
STATUS -> official material says under implementation
LANDSCAPE -> Panna connectivity + downstream flow
RULE -> status is not measured outcome
EVIDENCE LIMIT: Interlinking effects are basin- and design-specific: transfer volume,
  seasonality, environmental flows, sediment, displacement, federal consent and climate
  uncertainty must qualify both drought-proofing and ecological-damage claims.
```

ASCII MASTER FLOW — PANEL 12/12: Basin answer spine

```
DEFINE + MAP -> basin and direction
EXPLAIN -> process, timing and sediment
ASSESS -> benefit mechanism against limits
VERDICT -> selective, adaptive and basin-wide
```
