

ASCII MASTER FLOW – PANEL 1/9: Food production: a regional mosaic

FORAGING -> MANAGEMENT -> DOMESTICATION -> MIXED FARMING -> SURPLUS/STORAGE

No universal package: polished stone, pottery, herding and crops appear in varied order.
Neolithic changes lifeways; Chalcolithic adds copper within stone-using economies.

ASCII MASTER FLOW – PANEL 2/9: Domestication evidence and causal debate

PLANTS: seed size/morphology change + weed ecology + storage + grinding tools

ANIMALS: morphology + age/sex kill profile + corrals/dung + herd demography

CAUSES: climate | population | risk buffering | social competition | niche construction

|

v

VERDICT: domestication needs converging biological and contextual evidence.

Rice presence alone does not prove cultivation; secure date and morphology matter.

ASCII MASTER FLOW – PANEL 3/9: Technology-settlement-social consequence chain

polished stone + microliths + bone tools + pottery

|

v

cultivation/herding -> houses -> storage -> longer residence -> accumulated property

|

+-----+-----+

|

craft/exchange growth

|

disease, labour load and dietary risk

+-----+-----+

v

household differentiation and settlement hierarchy become possible, not inevitable.

ASCII MASTER FLOW – PANEL 4/9: Indian Neolithic regional map

NORTH WEST: Mehgarh -> long farming/herding sequence before Harappan urbanism

KASHMIR: Burzahom, Gufkral -> pit dwellings, bone tools, agro-pastoralism

VINDHYA/MIDDLE GANGA: Koldihwa, Mahagara, Lahuradewa -> rice/date cautions

NORTH-EAST: shouldered celts and regional links; chronology remains uneven

SOUTH: Utnur, Piklihal, Tekkalakota, Hallur -> cattle, millets, ash mounds

RULE: attach each site to region + marker + chronological caution.

ASCII MASTER FLOW – PANEL 5/9: Ash mounds: formation-function debate

BURNT CATTLE DUNG + ENCLOSURE/SETTLEMENT CONTEXT → SOUTH INDIAN ASH MOUND

v

Repeated firing and cattle centrality are strong; one exclusive ritual meaning is not.
Use Utnur and related sites as a pastoral-landscape problem, not a curiosity list.

ASCII MASTER FLOW – PANEL 6/9: Chalcolithic cultures: region-site-marker matrix

CULTURE/ZONE	CORE SITES	HIGH-YIELD MARKERS
Ganeshwar-Jodhpura	Ganeshwar/Jodhpura	copper craft; Harappan contact
Ahar-Banas	Ahar, Balathal, Gilund	black-red ware; copper; farming
Kayatha	Kayatha	early Malwa sequence; rich deposits
Malwa	Navdatoli, Eran, Nagda	painted ware; large villages; spread
Jorwe	Inamgaon, Nevasa	Deccan hierarchy; Late Jorwe
OCP/Copper Hoards	upper Ganga sites	association varies; no ethnic label

ASCII MASTER FLOW – PANEL 7/9: Chalcolithic rural political economy

VILLAGE HOUSEHOLDS → crop/hand production → storage → craft work → exchange

Settlement hierarchy and differential burials may indicate inequality.
Most systems were regional and rural, not failed Harappan cities.

ASCII MASTER FLOW – PANEL 8/9: Decline, transformation and cultural labels

LATE JORWE/REGIONAL CHANGE: aridity + production stress + settlement reorganisation

|
v

some abandonment + smaller settlements + mobile strategies + local continuity

CAUTION 1: archaeological culture = material pattern, not a named people.

CAUTION 2: copper use does not displace stone or prove urbanisation.

CAUTION 3: Neolithic, Chalcolithic and Harappan worlds overlap and interact.

ASCII MASTER FLOW – PANEL 9/9: Neolithic-Chalcolithic answer architecture

10 MARKS: define phase -> process -> two regional sites -> evidence caution

15 MARKS: transition causes -> domestication proof -> technology/settlement -> comparison

20 MARKS: mosaic chronology -> regional map -> Chalcolithic matrix -> economy/society

-> ash-mound debate -> transformation -> qualified synthesis

Use triads: region + site + marker; never write an undifferentiated site catalogue.

CLOSE: food production reorganised time, labour and settlement through diverse paths.
