

COMPLETE LEARNING SESSION

Regional Development and Five Year Plans - Learner-v2 Complete Learning Session

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

LEARNING PATH

Deterministic fallback visual: move from precise concepts through argument and critique to exam application.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / SESSION INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Regional Development and Five Year Plans - Learner-v2 Complete Learning Session 6

SOURCE, PROGRESSION AND CURRENT-LINKAGE AUDIT 6

BASIC LEARNING SESSION 6

SESSION 1 - FOUNDATION - Regional development meaning	6
SESSION 2 - FOUNDATION - Why regions develop unevenly	7
SESSION 3 - FOUNDATION - Perroux growth pole logic	8
SESSION 4 - FOUNDATION - Core-periphery structure	9
SESSION 5 - CORE - Spread and backwash	10
SESSION 6 - CORE - Balanced versus unbalanced growth	11
SESSION 7 - CORE - Planning region criteria	12
SESSION 8 - CORE - Disparity versus diversity	14
SESSION 9 - CORE - National Planning Committee to Planning Commission	15
SESSION 10 - CORE - First Plan priorities	16
SESSION 11 - CORE - Second Plan shift	17
SESSION 12 - CORE - Annual Plans and the last cycle	18
SESSION 13 - SYNTHESIS - Why imbalance persisted	19
SESSION 14 - SYNTHESIS - NITI Aayog transition	20
SESSION 15 - SYNTHESIS - District and block targeting	21
COMPLETE BASIC OWNER EVIDENCE BANK	23

BASIC MCQS / REMEDIATION 29

Q1. Which statement correctly explains Regional development meaning?	29
Q2. Which option is the safest spatial interpretation of Regional development meaning?	29
Q3. Which statement preserves the process boundary for Regional development meaning?	29
Q4. Which option avoids the main UPSC trap concerning Regional development meaning?	30
Q5. Which statement correctly explains Regional planning unit?	30
Q6. Which option is the safest spatial interpretation of Regional planning unit?	30
Q7. Which statement preserves the process boundary for Regional planning unit?	30
Q8. Which option avoids the main UPSC trap concerning Regional planning unit?	30
Q9. Which statement correctly explains Uneven development drivers?	31

Q10. Which option is the safest spatial interpretation of Uneven development drivers?	31
Q11. Which statement preserves the process boundary for Uneven development drivers?	31
Q12. Which option avoids the main UPSC trap concerning Uneven development drivers?	31
Q13. Which statement correctly explains Perroux growth pole idea?	31
Q14. Which option is the safest spatial interpretation of Perroux growth pole idea?	32
Q15. Which statement preserves the process boundary for Perroux growth pole idea?	32
Q16. Which option avoids the main UPSC trap concerning Perroux growth pole idea?	32
Q17. Which statement correctly explains Friedmann core-periphery logic?	32
Q18. Which option is the safest spatial interpretation of Friedmann core-periphery logic?	32
Q19. Which statement preserves the process boundary for Friedmann core-periphery logic?	33
Q20. Which option avoids the main UPSC trap concerning Friedmann core-periphery logic?	33
Q21. Which statement correctly explains Myrdal spread and backwash?	33
Q22. Which option is the safest spatial interpretation of Myrdal spread and backwash?	33
Q23. Which statement preserves the process boundary for Myrdal spread and backwash?	33
Q24. Which option avoids the main UPSC trap concerning Myrdal spread and backwash?	34
Q25. Which statement correctly explains Balanced-unbalanced growth debate?	34
Q26. Which option is the safest spatial interpretation of Balanced-unbalanced growth debate?	34
Q27. Which statement preserves the process boundary for Balanced-unbalanced growth debate?	34
Q28. Which option avoids the main UPSC trap concerning Balanced-unbalanced growth debate?	34
Q29. Which statement correctly explains Planning region criteria?	35
Q30. Which option is the safest spatial interpretation of Planning region criteria?	35
Q31. Which statement preserves the process boundary for Planning region criteria?	35
Q32. Which option avoids the main UPSC trap concerning Planning region criteria?	35
Q33. Which statement correctly explains Disparity versus diversity?	35
Q34. Which option is the safest spatial interpretation of Disparity versus diversity?	36
Q35. Which statement preserves the process boundary for Disparity versus diversity?	36
Q36. Which option avoids the main UPSC trap concerning Disparity versus diversity?	36
Q37. Which statement correctly explains National Planning Committee 1938?	36
Q38. Which option is the safest spatial interpretation of National Planning Committee 1938?	36
Q39. Which statement preserves the process boundary for National Planning Committee 1938?	37
Q40. Which option avoids the main UPSC trap concerning National Planning Committee 1938?	37
Q41. Which statement correctly explains Planning Commission and First Plan?	37

Q42. Which option is the safest spatial interpretation of Planning Commission and First Plan?	37
Q43. Which statement preserves the process boundary for Planning Commission and First Plan?	37
Q44. Which option avoids the main UPSC trap concerning Planning Commission and First Plan?	38
Q45. Which statement correctly explains First Plan priorities?	38
Q46. Which option is the safest spatial interpretation of First Plan priorities?	38
Q47. Which statement preserves the process boundary for First Plan priorities?	38
Q48. Which option avoids the main UPSC trap concerning First Plan priorities?	38
Q49. Which statement correctly explains Second Plan heavy industry?	39
Q50. Which option is the safest spatial interpretation of Second Plan heavy industry?	39
Q51. Which statement preserves the process boundary for Second Plan heavy industry?	39
Q52. Which option avoids the main UPSC trap concerning Second Plan heavy industry?	39
Q53. Which statement correctly explains Annual Plans and last cycle?	39
Q54. Which option is the safest spatial interpretation of Annual Plans and last cycle?	40
Q55. Which statement preserves the process boundary for Annual Plans and last cycle?	40
Q56. Which option avoids the main UPSC trap concerning Annual Plans and last cycle?	40
Q57. Which statement correctly explains Balanced development remained incomplete?	40

Regional Development and Five Year Plans - Learner-v2

Complete Learning Session

Authoring-only generation: 2026-09-01. No PDF was rendered and no tracker or index was mutated.

SOURCE, PROGRESSION AND CURRENT-LINKAGE AUDIT

- **Generation date:** 2026-09-01.
- **Repository-first evidence:** the Basic owner is taught first and preserved in full; the Advanced owner is retained only in the optional final teaching block.
- **OCR evidence:** Repository Markdown was primary. The three required local Geography books were inspected as supplementary OCR/searchable evidence. No unsupported page precision, volatile figure or quotation was imported.
- **Qdrant:** not used; repository Markdown and available OCR context were sufficient.
- **PYQ integrity:** This topic has a verified direct routed demand: the 2024 GS-I question asking what regional disparity is, how it differs from diversity and how serious it is in India. The package therefore keeps the disparity-diversity distinction explicit and does not fabricate any additional direct PYQ.
- **Live-link boundary:** NITI Aayog dashboards, the Aspirational Districts programme and the SDG India Index are used only as dated anchors for the present planning style. No district ranking, fiscal outlay or state-gap figure is quoted here without an explicit source-year label.
- **Fact/inference discipline:** no current-affairs item, PYQ wording, figure or quotation is invented.

BASIC LEARNING SESSION

SESSION 1 - FOUNDATION - Regional development meaning

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Regional development meaning explains how Regional development meaning and Regional planning unit shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Regional development meaning is the source-bounded relation among Regional development meaning and Regional planning unit, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Regional development meaning must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- **Regional**
- **development**
- **meaning**
- **planning**
- **unit**

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Development must stay tied to a territorial unit, not only to GDP. - and conclude: Define region, development and regional planning before using theory.

VISUAL FIRST

REGIONAL DEVELOPMENT MEANING

01. Regional development meaning

|
v

02. Regional planning unit

BOUNDARY -> Development must stay tied to a territorial unit, not only to GDP.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. Regional planning applies development logic to a specific region rather than to the country as a whole.

NAMED EVIDENCE AND MECHANISM

- **Regional development meaning:** Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit.
- **Regional planning unit:** Regional planning applies development logic to a specific region rather than to the country as a whole.

EXAMINER CAUTION

- Development must stay tied to a territorial unit, not only to GDP.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Regional development meaning.
- **Mains:** Define region, development and regional planning before using theory.

MINI RECAP

- **Evidence chain:** Regional development meaning -> Regional planning unit
- **Qualified use:** Define region, development and regional planning before using theory.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS Regional development meaning planning unit	2. MECHANISM / ARGUMENT connect Regional development meaning and Regional planning unit through process, place and time	3. CONSEQUENCE / CONTRAST Define region, development and regional planning before using theory.	4. UPSC TRAP / ANSWER-USE Development must stay tied to a territorial unit, not only to GDP.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Regional development meaning converts physical process into a qualified spatial argument			

SESSION 2 - FOUNDATION - Why regions develop unevenly

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Why regions develop unevenly explains how Uneven development drivers shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Why regions develop unevenly is the source-bounded relation among Uneven development drivers, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Why regions develop unevenly must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- regions
- develop
- unevenly

- Uneven
- development
- drivers

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Do not attribute unevenness to one cause alone. - and conclude: List resource, transport, market, policy and historical drivers as a combined mechanism.

VISUAL FIRST

WHY REGIONS DEVELOP UNEVENLY

01. Uneven development drivers

BOUNDARY -> Do not attribute unevenness to one cause alone.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.

NAMED EVIDENCE AND MECHANISM

- **Uneven development drivers:** Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.

EXAMINER CAUTION

- Do not attribute unevenness to one cause alone.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Why regions develop unevenly.
- **Mains:** List resource, transport, market, policy and historical drivers as a combined mechanism.

MINI RECAP

- **Evidence chain:** Uneven development drivers
- **Qualified use:** List resource, transport, market, policy and historical drivers as a combined mechanism.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS regions develop unevenly Uneven development drivers	2. MECHANISM / ARGUMENT connect Uneven development drivers through process, place and time	3. CONSEQUENCE / CONTRAST List resource, transport, market, policy and historical drivers as a combined mechanism.	4. UPSC TRAP / ANSWER-USE Do not attribute unevenness to one cause alone.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Why regions develop unevenly converts physical process into a qualified spatial argument			

SESSION 3 - FOUNDATION - Perroux growth pole logic

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Perroux growth pole logic explains how Perroux growth pole idea shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Perroux growth pole logic is the source-bounded relation among Perroux growth pole idea, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Perroux growth pole logic must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- Perroux

- growth
- pole
- logic
- idea

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Growth poles can become enclaves if diffusion fails. - and conclude: Use propulsive nodes and outward linkage logic carefully.

VISUAL FIRST

PERROUX GROWTH POLE LOGIC

01. Perroux growth pole idea

BOUNDARY -> Growth poles can become enclaves if diffusion fails.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages.

NAMED EVIDENCE AND MECHANISM

- **Perroux growth pole idea:** Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages.

EXAMINER CAUTION

- Growth poles can become enclaves if diffusion fails.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Perroux growth pole logic.
- **Mains:** Use propulsive nodes and outward linkage logic carefully.

MINI RECAP

- **Evidence chain:** Perroux growth pole idea
- **Qualified use:** Use propulsive nodes and outward linkage logic carefully.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS Perroux growth pole logic idea	2. MECHANISM / ARGUMENT connect Perroux growth pole idea through process, place and time	3. CONSEQUENCE / CONTRAST Use propulsive nodes and outward linkage logic carefully.	4. UPSC TRAP / ANSWER-USE Growth poles can become enclaves if diffusion fails.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Perroux growth pole logic converts physical process into a qualified spatial argument			

SESSION 4 - FOUNDATION - Core-periphery structure

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Core-periphery structure explains how Friedmann core-periphery logic shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Core-periphery structure is the source-bounded relation among Friedmann core-periphery logic, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Core-periphery structure must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- Core-periphery

- structure
- Friedmann
- logic

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - A core is not automatically a benefactor to the periphery. - and conclude: Explain dominance, dependency and selective concentration.

VISUAL FIRST

CORE-PERIPHERY STRUCTURE

01. Friedmann core-periphery logic

BOUNDARY -> A core is not automatically a benefactor to the periphery.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Core-periphery logic explains how a strong core dominates and organises a weaker periphery.

NAMED EVIDENCE AND MECHANISM

- **Friedmann core-periphery logic:** Core-periphery logic explains how a strong core dominates and organises a weaker periphery.

EXAMINER CAUTION

- A core is not automatically a benefactor to the periphery.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Core-periphery structure.
- **Mains:** Explain dominance, dependency and selective concentration.

MINI RECAP

- **Evidence chain:** Friedmann core-periphery logic
- **Qualified use:** Explain dominance, dependency and selective concentration.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS Core-periphery structure Friedmann logic	2. MECHANISM / ARGUMENT connect Friedmann core-periphery logic through process, place and time	3. CONSEQUENCE / CONTRAST Explain dominance, dependency and selective concentration.	4. UPSC TRAP / ANSWER-USE A core is not automatically a benefactor to the periphery.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Core-periphery structure converts physical process into a qualified spatial argument			

SESSION 5 - CORE - Spread and backwash

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Spread and backwash explains how Myrdal spread and backwash shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Spread and backwash is the source-bounded relation among Myrdal spread and backwash, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Spread and backwash must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- Spread
- backwash

- Myrdal
- classification
- causation
- comparison

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Balanced development depends on which effect becomes stronger. - and conclude: Use Myrdal to show why inequality can widen under growth.

VISUAL FIRST

SPREAD AND BACKWASH

01. Myrdal spread and backwash

BOUNDARY -> Balanced development depends on which effect becomes stronger.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.

NAMED EVIDENCE AND MECHANISM

- **Myrdal spread and backwash:** Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.

EXAMINER CAUTION

- Balanced development depends on which effect becomes stronger.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Spread and backwash.
- **Mains:** Use Myrdal to show why inequality can widen under growth.

MINI RECAP

- **Evidence chain:** Myrdal spread and backwash
- **Qualified use:** Use Myrdal to show why inequality can widen under growth.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS Spread backwash Myrdal classification causation comparison	2. MECHANISM / ARGUMENT connect Myrdal spread and backwash through process, place and time	3. CONSEQUENCE / CONTRAST Use Myrdal to show why inequality can widen under growth.	4. UPSC TRAP / ANSWER-USE Balanced development depends on which effect becomes stronger.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Spread and backwash converts physical process into a qualified spatial argument			

SESSION 6 - CORE - Balanced versus unbalanced growth

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Balanced versus unbalanced growth explains how Balanced-unbalanced growth debate shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Balanced versus unbalanced growth is the source-bounded relation among Balanced-unbalanced growth debate, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Balanced versus unbalanced growth must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- **Balanced**
- **versus**
- **unbalanced**
- **growth**
- **Balanced-unbalanced**
- **debate**

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Do not make the debate sound like one settled answer. - and conclude: Use it as an evaluative paragraph after theory.

VISUAL FIRST

BALANCED VERSUS UNBALANCED GROWTH

01. Balanced-unbalanced growth debate

BOUNDARY -> Do not make the debate sound like one settled answer.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes.

NAMED EVIDENCE AND MECHANISM

- **Balanced-unbalanced growth debate:** The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes.

EXAMINER CAUTION

- Do not make the debate sound like one settled answer.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Balanced versus unbalanced growth.
- **Mains:** Use it as an evaluative paragraph after theory.

MINI RECAP

- **Evidence chain:** Balanced-unbalanced growth debate
- **Qualified use:** Use it as an evaluative paragraph after theory.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS Balanced versus unbalanced growth Balanced-unbalanced debate	2. MECHANISM / ARGUMENT connect Balanced-unbalanced growth debate through process, place and time	3. CONSEQUENCE / CONTRAST Use it as an evaluative paragraph after theory.	4. UPSC TRAP / ANSWER-USE Do not make the debate sound like one settled answer.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Balanced versus unbalanced growth converts physical process into a qualified spatial argument			

SESSION 7 - CORE - Planning region criteria

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Planning region criteria explains how Planning region criteria shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Planning region criteria is the source-bounded relation among Planning region criteria, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Planning region criteria must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- **Planning**
- **region**
- **criteria**
- **classification**
- **causation**
- **comparison**

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - A planning region must be functional and implementable together. - and conclude: Move from map coherence to real administrative viability.

VISUAL FIRST

PLANNING REGION CRITERIA

01. Planning region criteria

BOUNDARY -> A planning region must be functional and implementable together.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability.

NAMED EVIDENCE AND MECHANISM

- **Planning region criteria:** A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability.

EXAMINER CAUTION

- A planning region must be functional and implementable together.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Planning region criteria.
- **Mains:** Move from map coherence to real administrative viability.

MINI RECAP

- **Evidence chain:** Planning region criteria
- **Qualified use:** Move from map coherence to real administrative viability.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW | SUBTOPIC CLOSURE FLOW

1. KEY TERMS / DEFINITIONS

Planning | region | criteria |
classification | causation | comparison

2. MECHANISM / ARGUMENT

connect Planning region criteria
through process, place and time

3. CONSEQUENCE / CONTRAST

Move from map coherence to real
administrative viability.

4. UPSC TRAP / ANSWER-USE

A planning region must be functional
and implementable together.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Planning region criteria converts physical process into a qualified spatial argument

SESSION 8 - CORE - Disparity versus diversity

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Disparity versus diversity explains how Disparity versus diversity shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Disparity versus diversity is the source-bounded relation among Disparity versus diversity, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Disparity versus diversity must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- Disparity
- versus
- diversity
- classification
- causation
- comparison

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Difference of character is not the same as inequality of outcome. - and conclude: Use this distinction as the 2024 GS-I firewall.

VISUAL FIRST

DISPARITY VERSUS DIVERSITY

01. Disparity versus diversity

BOUNDARY -> Difference of character is not the same as inequality of outcome.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure.

NAMED EVIDENCE AND MECHANISM

- **Disparity versus diversity:** Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure.

EXAMINER CAUTION

- Difference of character is not the same as inequality of outcome.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Disparity versus diversity.
- **Mains:** Use this distinction as the 2024 GS-I firewall.

MINI RECAP

- **Evidence chain:** Disparity versus diversity
- **Qualified use:** Use this distinction as the 2024 GS-I firewall.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW | SUBTOPIC CLOSURE FLOW

1. KEY TERMS / DEFINITIONS

Disparity | versus | diversity | classification | causation | comparison

2. MECHANISM / ARGUMENT

connect Disparity versus diversity through process, place and time

3. CONSEQUENCE / CONTRAST

Use this distinction as the 2024 GS-I firewall.

4. UPSC TRAP / ANSWER-USE

Difference of character is not the same as inequality of outcome.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Disparity versus diversity converts physical process into a qualified spatial argument

SESSION 9 - CORE - National Planning Committee to Planning Commission

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: National Planning Committee to Planning Commission explains how National Planning Committee 1938 and Planning Commission and First Plan shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, National Planning Committee to Planning Commission is the source-bounded relation among National Planning Committee 1938 and Planning Commission and First Plan, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

National Planning Committee to Planning Commission must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- National
- Planning
- Committee
- Commission
- First
- Plan

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Pre-Independence planning imagination matters in the timeline. - and conclude: Trace the 1938 committee to the 1950 Planning Commission.

VISUAL FIRST

NATIONAL PLANNING COMMITTEE TO PLANNING COMMISSION

01. National Planning Committee 1938

|
v

02. Planning Commission and First Plan

BOUNDARY -> Pre-Independence planning imagination matters in the timeline.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Khullar traces Indian planning back to the National Planning Committee of 1938. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51.

NAMED EVIDENCE AND MECHANISM

- **National Planning Committee 1938:** Khullar traces Indian planning back to the National Planning Committee of 1938.
- **Planning Commission and First Plan:** The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51.

EXAMINER CAUTION

- Pre-Independence planning imagination matters in the timeline.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to National Planning Committee to Planning Commission.
- **Mains:** Trace the 1938 committee to the 1950 Planning Commission.

MINI RECAP

- **Evidence chain:** National Planning Committee 1938 -> Planning Commission and First Plan
- **Qualified use:** Trace the 1938 committee to the 1950 Planning Commission.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS National Planning Committee Commission First Plan	2. MECHANISM / ARGUMENT connect National Planning Committee 1938 and Planning Commission and First Plan through process, place and time	3. CONSEQUENCE / CONTRAST Trace the 1938 committee to the 1950 Planning Commission.	4. UPSC TRAP / ANSWER-USE Pre-Independence planning imagination matters in the timeline.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: National Planning Committee to Planning Commission converts physical process into a qualified spatial argument			

SESSION 10 - CORE - First Plan priorities

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: First Plan priorities explains how First Plan priorities shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, First Plan priorities is the source-bounded relation among First Plan priorities, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

First Plan priorities must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- **First**
- **Plan**
- **priorities**
- **classification**
- **causation**
- **comparison**

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Do not rewrite the First Plan as a heavy-industry plan. - and conclude: Stress irrigation, agriculture, refugee resettlement and power.

VISUAL FIRST

FIRST PLAN PRIORITIES

01. First Plan priorities

BOUNDARY -> Do not rewrite the First Plan as a heavy-industry plan.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking.

NAMED EVIDENCE AND MECHANISM

- **First Plan priorities:** The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking.

EXAMINER CAUTION

- Do not rewrite the First Plan as a heavy-industry plan.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to First Plan priorities.
- **Mains:** Stress irrigation, agriculture, refugee resettlement and power.

MINI RECAP

- **Evidence chain:** First Plan priorities
- **Qualified use:** Stress irrigation, agriculture, refugee resettlement and power.

CLOSING RECALL FLOW

1. KEY TERMS / DEFINITIONS First Plan priorities classification causation comparison	2. MECHANISM / ARGUMENT connect First Plan priorities through process, place and time	3. CONSEQUENCE / CONTRAST Stress irrigation, agriculture, refugee resettlement and power.	4. UPSC TRAP / ANSWER-USE Do not rewrite the First Plan as a heavy-industry plan.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: First Plan priorities converts physical process into a qualified spatial argument			

SESSION 11 - CORE - Second Plan shift

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Second Plan shift explains how Second Plan heavy industry shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Second Plan shift is the source-bounded relation among Second Plan heavy industry, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Second Plan shift must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- **Second**
- **Plan**
- **shift**
- **heavy**
- **industry**

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Heavy industry belongs to the Second Plan, not the First. - and conclude: Contrast agrarian recovery with the industrial base strategy.

VISUAL FIRST

SECOND PLAN SHIFT

01. Second Plan heavy industry

BOUNDARY -> Heavy industry belongs to the Second Plan, not the First.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base.

NAMED EVIDENCE AND MECHANISM

- **Second Plan heavy industry:** The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base.

EXAMINER CAUTION

- Heavy industry belongs to the Second Plan, not the First.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Second Plan shift.
- **Mains:** Contrast agrarian recovery with the industrial base strategy.

MINI RECAP

- **Evidence chain:** Second Plan heavy industry
- **Qualified use:** Contrast agrarian recovery with the industrial base strategy.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Second Plan shift converts physical process into a qualified spatial argument			

SESSION 12 - CORE - Annual Plans and the last cycle

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Annual Plans and the last cycle explains how Annual Plans and last cycle shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Annual Plans and the last cycle is the source-bounded relation among Annual Plans and last cycle, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Annual Plans and the last cycle must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- Annual
- Plans
- last
- cycle

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Five Year Plans were interrupted and then ended; they were not one uninterrupted chain. - and conclude: Use Annual Plans and the Twelfth Plan boundary to structure the timeline.

VISUAL FIRST

ANNUAL PLANS AND THE LAST CYCLE

01. Annual Plans and last cycle

BOUNDARY -> Five Year Plans were interrupted and then ended; they were not one uninterrupted chain.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle.

NAMED EVIDENCE AND MECHANISM

- **Annual Plans and last cycle:** India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle.

EXAMINER CAUTION

- Five Year Plans were interrupted and then ended; they were not one uninterrupted chain.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Annual Plans and the last cycle.
- **Mains:** Use Annual Plans and the Twelfth Plan boundary to structure the timeline.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Annual Plans and the last cycle converts physical process into a qualified spatial argument			

SESSION 13 - SYNTHESIS - Why imbalance persisted

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Why imbalance persisted explains how Balanced development remained incomplete shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, Why imbalance persisted is the source-bounded relation among Balanced development remained incomplete, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Why imbalance persisted must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- imbalance
- persisted
- Balanced
- development
- remained
- incomplete

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Planned development did not erase core-periphery outcomes automatically. - and conclude: Connect uneven irrigation, industry and governance capacity to persistent disparity.

VISUAL FIRST

WHY IMBALANCE PERSISTED

01. Balanced development remained incomplete

BOUNDARY -> Planned development did not erase core-periphery outcomes automatically.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era.

NAMED EVIDENCE AND MECHANISM

- **Balanced development remained incomplete:** Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era.

EXAMINER CAUTION

- Planned development did not erase core-periphery outcomes automatically.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to Why imbalance persisted.
- **Mains:** Connect uneven irrigation, industry and governance capacity to persistent disparity.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Why imbalance persisted converts physical process into a qualified spatial argument			

SESSION 14 - SYNTHESIS - NITI Aayog transition

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: NITI Aayog transition explains how NITI replacement date and NITI planning style shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, NITI Aayog transition is the source-bounded relation among NITI replacement date and NITI planning style, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

NITI Aayog transition must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- NITI
- Aayog
- transition

- replacement
- date
- planning

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - Replacing the Planning Commission changed style, not the need for regional planning. - and conclude: Contrast outlay logic with dashboards and cooperative federalism.

VISUAL FIRST

NITI AAYOG TRANSITION

01. NITI replacement date

|

v

02. NITI planning style

BOUNDARY -> Replacing the Planning Commission changed style, not the need for regional planning.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

The Planning Commission was replaced by NITI Aayog on 1 January 2015. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone.

NAMED EVIDENCE AND MECHANISM

- **NITI replacement date:** The Planning Commission was replaced by NITI Aayog on 1 January 2015.
- **NITI planning style:** The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone.

EXAMINER CAUTION

- Replacing the Planning Commission changed style, not the need for regional planning.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to NITI Aayog transition.
- **Mains:** Contrast outlay logic with dashboards and cooperative federalism.

MINI RECAP

- **Evidence chain:** NITI replacement date -> NITI planning style
- **Qualified use:** Contrast outlay logic with dashboards and cooperative federalism.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: NITI Aayog transition converts physical process into a qualified spatial argument			

SESSION 15 - SYNTHESIS - District and block targeting

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: District and block targeting explains how Aspirational Districts, SDG India Index 2023-24 and District and block targeting shape the examinable geography of Regional Development and Five Year Plans.

Technical definition: In geographical analysis, District and block targeting is the source-bounded relation among Aspirational Districts, SDG India Index 2023-24 and District and block targeting, classified by process, form, spatial setting, temporal change and human consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

District and block targeting must be explained as a process-to-pattern chain, not as an unconnected catalogue of landforms, places or schemes.

MUST-WRITE KEYWORDS

- District
- block
- targeting
- Aspirational
- Districts
- Index

How to use them: Define the process, locate its spatial expression, cite named evidence, apply this limit - State averages hide district and block disparities. - and conclude: End with Aspirational Districts, SDG India Index and the downward shift in scale.

VISUAL FIRST

DISTRICT AND BLOCK TARGETING

01. Aspirational Districts

|

v

02. SDG India Index 2023-24

|

v

03. District and block targeting

BOUNDARY -> State averages hide district and block disparities.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

NAMED EVIDENCE AND MECHANISM

- **Aspirational Districts:** NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts.
- **SDG India Index 2023-24:** The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators.
- **District and block targeting:** Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

EXAMINER CAUTION

- State averages hide district and block disparities.

EXAM LINK

- **Prelims:** Separate the agent, landform, location, status and scale attached to District and block targeting.
- **Mains:** End with Aspirational Districts, SDG India Index and the downward shift in scale.

MINI RECAP

- **Evidence chain:** Aspirational Districts -> SDG India Index 2023-24 -> District and block targeting
- **Qualified use:** End with Aspirational Districts, SDG India Index and the downward shift in scale.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW | SUBTOPIC CLOSURE FLOW

1. KEY TERMS / DEFINITIONS District block targeting Aspirational Districts Index	2. MECHANISM / ARGUMENT connect Aspirational Districts, SDG India Index 2023-24 and District and block targeting through process, place and time	3. CONSEQUENCE / CONTRAST End with Aspirational Districts, SDG India Index and the downward shift in scale.	4. UPSC TRAP / ANSWER-USE State averages hide district and block disparities.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: District and block targeting converts physical process into a qualified spatial argument			

COMPLETE BASIC OWNER EVIDENCE BANK

Subject: Geography · **Tier:** Must-Do (foundation + standard) · **GS Paper:** GS-I **Grounded in:** Majid Husain, *Indian & World Geography* + G.C. Leong for physical-region context + verified NITI/SDG current anchor. **FACT:** = from source book or official source · **ANALYSIS:** = inference / standard synthesis · **CURRENT:** = current affairs. *Companion:* advanced/29_Regional-Development-and-Five-Year-Plans.md.

1. What “regional development” means

FACT: Regional-development geography treats planning as a deliberate process of thinking through and implementing actions to achieve socio-economic goals. **FACT:** Regional planning is the application of that logic to a particular region rather than the country as a whole.

Term	Meaning
FACT: Region	Area with some degree of internal coherence
FACT: Development	Improvement in production, welfare, infrastructure and social capability
FACT: Planning	Coordinated attempt to match goals with means
FACT: Regional planning	Development planning focused on a specific territorial unit

2. Why regions develop unevenly

ANALYSIS: Growth-pole, core-periphery and spread/backwash models help explain uneven development.

ANALYSIS: Real-world variation comes from resource endowment, transport access, market size, state policy, technology and historical advantage.

Cause of unevenness	Geographic effect
ANALYSIS: Resource concentration	Mining, industry or irrigation clusters form
ANALYSIS: Transport advantage	Corridors outpace interior areas
ANALYSIS: Market size and urban nodes	Big centres attract capital and labour
ANALYSIS: Historical head start	Earlier industrial regions retain cumulative advantage
ANALYSIS: Policy neglect or conflict	Lagging regions fall further behind

3. Classical models worth remembering

Model	Core idea	Best use in UPSC
ANALYSIS: Growth pole theory	Development starts from dynamic nodes and diffuses outward	Explains industrial or metropolitan clustering
ANALYSIS: Core-periphery model	A strong core dominates a weaker periphery	Useful for regional imbalance
ANALYSIS: Spread and backwash effects	Growth can either diffuse benefits or drain resources from surrounding areas	Excellent for balanced-development answers
ANALYSIS: Balanced vs unbalanced growth	Debate between wide-based distribution and selective strategic concentration	Good evaluative paragraph

4. What makes a good planning region

FACT: A planning region requires coherence, practicality and ecological balance. **ANALYSIS:** In answer form, the safest features to mention are territorial contiguity, functional unity, economic viability, social acceptability and environmental sustainability.

Planning-region principle	Why it matters
ANALYSIS: Functional unity	Region should hang together through flows and linkages
ANALYSIS: Administrative manageability	Plan must be implementable
ANALYSIS: Economic viability	Region should support realistic development strategy
ANALYSIS: Ecological balance	Planning should not damage the resource base
ANALYSIS: Social acceptability	Regional identity and social needs affect success

5. Where Five-Year Plans fit conceptually

FACT: India's Five-Year Plans are an example of state-led planned development. **ANALYSIS:** In geography, the key point is not only targets and outlays but how planned development tries to reduce spatial inequality through irrigation, infrastructure, industrial location and service delivery.

6. Must-Know Facts (Prelims) and UPSC traps

- **FACT:** Regional development is about territorial balance, not just national GDP growth.
- **FACT:** Growth can spread outward or create backwash and dependency.
- **FACT:** Planning region is a functional idea, not merely a map-drawing exercise.
- **FACT:** Growth poles can accelerate development but may also widen inequality.
- **FACT:** Five-Year Plans are tools of planned development, not theories by themselves.
- **WRONG:** Balanced regional development means every place must grow at the same rate -> The real aim is reducing harmful disparities, not uniformity.
- **WRONG:** A strong core always benefits its periphery -> Backwash effects can intensify inequality.
- **WRONG:** Regional planning is only an administrative issue -> It is also economic, ecological and social.

7. Exam linkage

- **ANALYSIS:** Recurring UPSC theme: growth poles, regional imbalance and planning.
- **ANALYSIS:** GS-I answers improve when theory is tied to actual regions rather than explained abstractly.
- **ANALYSIS:** This topic also links strongly with urbanisation, migration and agrarian change.

8. CURRENT: Current link

CA Anchor - SDG-era regional inequality debate

CURRENT: News trigger: Current development reporting increasingly measures states and districts through territorial indicators, not just national averages, which keeps the regional-development lens alive even after the end of the old Five-Year Plan system.

Current fact	Static linkage
FACT: State and district rankings are common in present policy	Regional imbalance remains a live planning issue
ANALYSIS: Competitive federalism works like a new regional-comparison device	Development is increasingly benchmarked spatially

9. Mains angles

- Explain regional imbalance using growth pole and core-periphery ideas.
- Why is balanced regional development a geographic problem rather than only an economic one?

10. Probable Questions

Prelims-style concept prompt

- ANALYSIS: Which of the following statements about regional-development models is/are correct? (1) Growth pole theory says development starts from dynamic nodes and diffuses outward. (2) Balanced regional development means every place must grow at exactly the same rate. **Answer:** Only statement (1) is correct, because this file defines growth poles in diffusion terms and clearly notes that balanced development means reducing harmful disparities, not forcing uniform growth.

Probable Mains questions (10-15 marks)

- ANALYSIS: Explain regional imbalance with the help of growth pole, core-periphery and spread-backwash ideas. (15 marks)
- ANALYSIS: Discuss why a planning region must be functionally coherent, economically viable and ecologically balanced. (10 marks)

11. Study link

Geography -> Human Geography -> Regional Development Geography -> Human Geography -> Planning Regions & Spatial Inequality

12. Disparity, models and India's planning geography

Why this section exists: the file described regional-development models **without naming their authors**, omitted cumulative causation entirely, and - most seriously - did **not distinguish regional disparity from regional diversity**, although exactly that distinction has been examined. A named theorist and a precise definition are what convert this topic from description to analysis.

12.1 Disparity is not diversity

	Regional diversity	Regional disparity
ANALYSIS: What it describes	Difference in character - physical environment, language, culture, cropping pattern, cuisine, economic specialisation	Inequality in outcomes - income, productivity, employment, literacy, health, infrastructure and access to services
ANALYSIS: Value content	Neutral, or positive; a resource	Negative; a deficit measured against a normative standard
ANALYSIS: Measurement	Described and classified; not ranked	Ranked on comparable indicators, so a gap can be measured
ANALYSIS: Desirable response	Recognise, protect, accommodate; federal and linguistic accommodation	Reduce, converge; targeted investment and transfers
ANALYSIS: What happens if confused	Diversity is treated as a defect requiring homogenisation	Genuine inequality is excused as harmless variety

- ANALYSIS: **The relationship between them:** diversity becomes disparity when difference is **converted into disadvantage** - when a region's distinct resource base, location or history yields systematically lower incomes, weaker services and fewer opportunities. A hill region's distinct agriculture is diversity; its lower access to health care and markets is disparity.

- ANALYSIS: **The one-sentence formulation to use:** *diversity is difference without ranking; disparity is difference that can be ranked and that disadvantages one region relative to another on a common scale.*

12.2 The theorists, named

Theorist / model	Central mechanism	Policy implication	Limitation
ANALYSIS: Perroux - growth pole	Growth is not diffuse; it originates in propulsive industries clustered at particular nodes, and spreads through linkages	Deliberately create or strengthen growth nodes rather than spread investment thinly	The spread often fails to occur; a pole can remain an enclave with few local linkages
ANALYSIS: Boudeville	Reformulated the growth pole as a geographic rather than purely economic concept - a growth centre in real space	Makes the pole a planning instrument that can be located	Assumes linkages will form locally
ANALYSIS: Myrdal - circular and cumulative causation	An initial advantage attracts capital, skilled labour and enterprise, which strengthens the advantage, which attracts more; markets therefore increase rather than reduce regional inequality unless corrected	Deliberate state intervention is required; markets alone will not converge	Understates the conditions under which spread does occur
ANALYSIS: Myrdal - backwash and spread	Backwash: the core drains labour, capital and talent from the periphery. Spread: the core's demand for the periphery's food, raw materials and labour, and the diffusion of technology, benefit the periphery	Whether a region converges depends on which effect is stronger	The balance is hard to measure
ANALYSIS: Hirschman - polarisation and trickle-down	The same two forces under different names, with more optimism that trickle-down eventually dominates	Unbalanced growth can be deliberate; imbalance creates the pressures that induce complementary investment	Trickle-down may be slow, partial or politically obstructed
ANALYSIS: Friedmann - core-periphery	A dominant core organises a dependent periphery; over time an integrated system may emerge through intermediate centres	Build intermediate cities to restructure the space economy	Stage-based and somewhat deterministic
ANALYSIS: Rostow - stages of growth	Development proceeds through identifiable stages toward self-sustaining growth	Investment thresholds matter	Linear, Eurocentric and widely criticised as a general theory

- ANALYSIS: **The synthesis that answers most questions:** Myrdal's cumulative causation explains why disparities **persist and widen** without intervention; growth-pole theory explains what intervention was attempted; and the enclave problem explains why that intervention frequently failed to spread. Naming all three in sequence converts a list into an argument.

12.3 Why regions diverge - the mechanisms behind the models

Driver	How it produces divergence
ANALYSIS: Initial physical endowment	Fertile alluvium, minerals, ports, navigable rivers and level terrain lower production and transport costs
ANALYSIS: Historical legacy	Colonial port orientation, railway alignment and administrative centres created inherited advantages that persist
ANALYSIS: Agglomeration economies	Existing industry attracts more industry through shared labour, suppliers and services (32_Industries-and-Industrial-Regions.md)
ANALYSIS: Selective migration	The young, skilled and enterprising leave lagging regions, weakening them further - Myrdal's backwash in action (27_Migration-Theories-and-Patterns-India.md)
ANALYSIS: Capital mobility	Investment follows expected return, which is higher where infrastructure and markets already exist
ANALYSIS: Institutional and governance capacity	Ability to plan, spend, regulate and deliver varies sharply between states and districts, and determines whether transfers become outcomes
ANALYSIS: Connectivity	Access to markets, ports and corridors determines whether a resource endowment can be commercialised

12.4 Planning regions and India's spatial planning instruments

- ANALYSIS: **Types of planning region:**
 - a **formal / homogeneous** region, defined by uniformity of a chosen characteristic - a drought-prone belt, a tribal belt, a hill region;
 - a **functional / nodal** region, defined by interaction around a node - a city and its commuting and market hinterland, or a river basin;
 - an **administrative / programme** region, defined by the boundaries through which a policy is actually delivered - states, districts and blocks.
- ANALYSIS: **The permanent tension:** problems are formal or functional in shape - a drought belt, an aquifer, a basin, a metropolitan labour market - while **delivery is administrative**. Almost every failure of regional planning can be traced to that mismatch, and saying so is the single most transferable insight in this topic.
- ANALYSIS: **India's instruments, at a conceptual level:** the Five-Year Plan era used backward-area programmes, hill- and tribal-area sub-plans, and public-sector plant location as deliberate instruments of spatial balance; the current architecture emphasises **district- and block-level targeting on measured indicators**, industrial and freight corridors, and mission-mode schemes. Institutional detail on the Planning Commission-to-NITI transition, the Aspirational Districts and Blocks programmes and their dashboards is carried in advanced/29_Regional-Development-and-Five-Year-Plans.md; the **geographic** point retained here is that the unit of targeting has moved **downward in scale**, from state to district to block, because state averages conceal intra-state disparity.
- ANALYSIS: **The intra-state point:** disparity within states is often as large as disparity between them, which is precisely why sub-state targeting emerged. An answer that discusses only inter-state disparity is incomplete.

ANALYSIS: Factual caution: do **not** quote per-capita income ratios between states, a district count, a scheme outlay or an index rank from memory. Name the mechanism and the instrument type; attribute any figure to a named source with its date.

13. Answer architecture (10/15/20-mark support)

13.1 Directive decoding

If the question says	It is really asking for	Do not
"What is regional disparity? How does it differ from diversity? How serious is it in India?"	A precise definition, the ranked-versus-unranked distinction, the conversion mechanism, and then a graded severity judgement with indicators named	Treat the two terms as synonyms, or answer only the third part
"Examine the growth-pole strategy"	Perroux's propulsive-industry logic, Boudeville's spatial reformulation, and the enclave failure	Describe it approvingly without the failure record
"Why do regional inequalities persist?"	Myrdal's cumulative causation with backwash and spread, plus the seven divergence drivers	List poor regions
"Discuss planning regions"	The formal, functional and administrative typology and the delivery mismatch	Define "region" generically

13.2 Reusable 15-mark spine - regional disparity in India

- Thesis:** regional disparity in India is serious and, on several dimensions, **self-reinforcing**
- but it must first be separated from regional diversity, which is neither a problem nor a target of policy.
- Definition and distinction:** ranked inequality of outcomes versus unranked difference of character, and the mechanism by which difference becomes disadvantage.
- The measurement question:** disparity must be stated on named dimensions - income and productivity, employment structure, human development, infrastructure and service access - because a region can lag on one and lead on another.
- Why it persists:** cumulative causation, with backwash operating through selective migration and capital mobility, set against spread operating through demand and technology diffusion.
- The Indian pattern, stated carefully:** the historic contrast between the industrialised and irrigated west, north-west and south and parts of the north and east; strong **intra-state** disparity; and specific structural categories - hill and tribal districts, drought-prone belts, resource-rich but income-poor mineral districts, and border regions.
- What has been tried:** plan-era backward-area and sub-plan instruments and public-sector location; then corridor-led industrial policy; then indicator-based district and block targeting.
- Assessment - the graded verdict:** convergence on **social indicators** such as literacy and life expectancy has been more visible than convergence on **income and productivity**; and sub-state targeting has improved measurement and administrative attention without by itself changing the location of investment.
- What would actually change it:** connectivity and reliable power to lagging regions; institutional and fiscal capacity at state and district level so transfers become outcomes; human capital to make migration a choice rather than a necessity; and building **intermediate towns** so that opportunity is not concentrated only in a few metropolitan cores.
- Conclusion:** graded - disparity is serious enough to be a first-order policy problem, but it is a **development-strategy** problem rather than an inevitability, since regions with similar endowments have diverged sharply according to governance and connectivity.

13.3 Evidence units available in this file

Claim: markets left alone tend to widen rather than narrow regional inequality. **Evidence:** cumulative causation holds that an initial advantage attracts capital, skilled labour and enterprise, which strengthens that advantage; the corresponding backwash drains the same factors from lagging regions. **Significance:** it establishes the analytical case for deliberate spatial policy rather than reliance on growth alone. **Limitation:** spread effects are real - core demand for peripheral food, labour and raw materials, and technology diffusion, do transmit benefits - so the outcome is an empirical balance rather than a certainty.

Claim: the design of a planning region determines whether a policy can succeed. **Evidence:** problems arrive in formal or functional shapes - a drought belt, an aquifer, a river basin, a metropolitan labour market - while budgets and authority are organised administratively by state, district and block. **Significance:** it explains recurrent implementation failure without attributing it to intent, and it justifies basin- and cluster-based instruments. **Limitation:** administrative units carry democratic accountability and fiscal authority that functional regions lack, so they cannot simply be replaced.

BASIC MCQS / REMEDIATION

Q1. Which statement correctly explains Regional development meaning?

A. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. B. Regional planning applies development logic to a specific region rather than to the country as a whole. C. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. D. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages.

Answer: A. Explanation: Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. The other options describe different processes, locations, scales or governance categories.

Q2. Which option is the safest spatial interpretation of Regional development meaning?

A. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. B. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. C. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. D. Core-periphery logic explains how a strong core dominates and organises a weaker periphery.

Answer: B. Explanation: Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. The other options describe different processes, locations, scales or governance categories.

Q3. Which statement preserves the process boundary for Regional development meaning?

A. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. B. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. C. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. D. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.

Answer: C. Explanation: Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. The other options describe different processes, locations, scales or governance categories.

Q4. Which option avoids the main UPSC trap concerning Regional development meaning?

A. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. B. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. C. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. D. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit.

Answer: D. Explanation: Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. The other options describe different processes, locations, scales or governance categories.

Q5. Which statement correctly explains Regional planning unit?

A. Regional planning applies development logic to a specific region rather than to the country as a whole. B. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. C. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. D. Core-periphery logic explains how a strong core dominates and organises a weaker periphery.

Answer: A. Explanation: Regional planning applies development logic to a specific region rather than to the country as a whole. The other options describe different processes, locations, scales or governance categories.

Q6. Which option is the safest spatial interpretation of Regional planning unit?

A. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. B. Regional planning applies development logic to a specific region rather than to the country as a whole. C. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. D. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.

Answer: B. Explanation: Regional planning applies development logic to a specific region rather than to the country as a whole. The other options describe different processes, locations, scales or governance categories.

Q7. Which statement preserves the process boundary for Regional planning unit?

A. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. B. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. C. Regional planning applies development logic to a specific region rather than to the country as a whole. D. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes.

Answer: C. Explanation: Regional planning applies development logic to a specific region rather than to the country as a whole. The other options describe different processes, locations, scales or governance categories.

Q8. Which option avoids the main UPSC trap concerning Regional planning unit?

A. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. B. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. C. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. D. Regional planning applies development logic to a specific region rather than to the country as a whole.

Answer: D. Explanation: Regional planning applies development logic to a specific region rather than to the country as a whole. The other options describe different processes, locations, scales or governance categories.

Q9. Which statement correctly explains Uneven development drivers?

A. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. B. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. C. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. D. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.

Answer: A. Explanation: Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. The other options describe different processes, locations, scales or governance categories.

Q10. Which option is the safest spatial interpretation of Uneven development drivers?

A. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. B. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. C. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. D. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes.

Answer: B. Explanation: Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. The other options describe different processes, locations, scales or governance categories.

Q11. Which statement preserves the process boundary for Uneven development drivers?

A. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. B. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. C. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. D. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability.

Answer: C. Explanation: Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. The other options describe different processes, locations, scales or governance categories.

Q12. Which option avoids the main UPSC trap concerning Uneven development drivers?

A. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. B. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. C. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. D. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.

Answer: D. Explanation: Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. The other options describe different processes, locations, scales or governance categories.

Q13. Which statement correctly explains Perroux growth pole idea?

A. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. B. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. C. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. D. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes.

Answer: A. Explanation: Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. The other options describe different processes, locations, scales or governance categories.

Q14. Which option is the safest spatial interpretation of Perroux growth pole idea?

A. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. B. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. C. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. D. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability.

Answer: B. Explanation: Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. The other options describe different processes, locations, scales or governance categories.

Q15. Which statement preserves the process boundary for Perroux growth pole idea?

A. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. B. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. C. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. D. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure.

Answer: C. Explanation: Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. The other options describe different processes, locations, scales or governance categories.

Q16. Which option avoids the main UPSC trap concerning Perroux growth pole idea?

A. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. B. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. C. Khullar traces Indian planning back to the National Planning Committee of 1938. D. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages.

Answer: D. Explanation: Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. The other options describe different processes, locations, scales or governance categories.

Q17. Which statement correctly explains Friedmann core-periphery logic?

A. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. B. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. C. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. D. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability.

Answer: A. Explanation: Core-periphery logic explains how a strong core dominates and organises a weaker periphery. The other options describe different processes, locations, scales or governance categories.

Q18. Which option is the safest spatial interpretation of Friedmann core-periphery logic?

A. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. B. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. C. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. D. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure.

Answer: B. Explanation: Core-periphery logic explains how a strong core dominates and organises a weaker periphery. The other options describe different processes, locations, scales or governance categories.

Q19. Which statement preserves the process boundary for Friedmann core-periphery logic?

A. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. B. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. C. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. D. Khullar traces Indian planning back to the National Planning Committee of 1938.

Answer: C. Explanation: Core-periphery logic explains how a strong core dominates and organises a weaker periphery. The other options describe different processes, locations, scales or governance categories.

Q20. Which option avoids the main UPSC trap concerning Friedmann core-periphery logic?

A. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. B. Khullar traces Indian planning back to the National Planning Committee of 1938. C. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. D. Core-periphery logic explains how a strong core dominates and organises a weaker periphery.

Answer: D. Explanation: Core-periphery logic explains how a strong core dominates and organises a weaker periphery. The other options describe different processes, locations, scales or governance categories.

Q21. Which statement correctly explains Myrdal spread and backwash?

A. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. B. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. C. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. D. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure.

Answer: A. Explanation: Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. The other options describe different processes, locations, scales or governance categories.

Q22. Which option is the safest spatial interpretation of Myrdal spread and backwash?

A. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. B. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. C. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. D. Khullar traces Indian planning back to the National Planning Committee of 1938.

Answer: B. Explanation: Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. The other options describe different processes, locations, scales or governance categories.

Q23. Which statement preserves the process boundary for Myrdal spread and backwash?

A. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. B. Khullar traces Indian planning back to the National Planning Committee of 1938. C. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. D. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51.

Answer: C. Explanation: Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. The other options describe different processes, locations, scales or governance categories.

Q24. Which option avoids the main UPSC trap concerning Myrdal spread and backwash?

A. Khullar traces Indian planning back to the National Planning Committee of 1938. B. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. C. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. D. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.

Answer: D. Explanation: Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. The other options describe different processes, locations, scales or governance categories.

Q25. Which statement correctly explains Balanced-unbalanced growth debate?

A. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. B. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. C. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. D. Khullar traces Indian planning back to the National Planning Committee of 1938.

Answer: A. Explanation: The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. The other options describe different processes, locations, scales or governance categories.

Q26. Which option is the safest spatial interpretation of Balanced-unbalanced growth debate?

A. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. B. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. C. Khullar traces Indian planning back to the National Planning Committee of 1938. D. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51.

Answer: B. Explanation: The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. The other options describe different processes, locations, scales or governance categories.

Q27. Which statement preserves the process boundary for Balanced-unbalanced growth debate?

A. Khullar traces Indian planning back to the National Planning Committee of 1938. B. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. C. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. D. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking.

Answer: C. Explanation: The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. The other options describe different processes, locations, scales or governance categories.

Q28. Which option avoids the main UPSC trap concerning Balanced-unbalanced growth debate?

A. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. B. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. C. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. D. The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes.

Answer: D. Explanation: The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes. The other options describe different processes, locations, scales or governance categories.

Q29. Which statement correctly explains Planning region criteria?

A. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. B. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. C. Khullar traces Indian planning back to the National Planning Committee of 1938. D. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51.

Answer: A. Explanation: A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. The other options describe different processes, locations, scales or governance categories.

Q30. Which option is the safest spatial interpretation of Planning region criteria?

A. Khullar traces Indian planning back to the National Planning Committee of 1938. B. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. C. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. D. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking.

Answer: B. Explanation: A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. The other options describe different processes, locations, scales or governance categories.

Q31. Which statement preserves the process boundary for Planning region criteria?

A. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. B. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. C. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. D. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base.

Answer: C. Explanation: A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. The other options describe different processes, locations, scales or governance categories.

Q32. Which option avoids the main UPSC trap concerning Planning region criteria?

A. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. B. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. C. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. D. A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability.

Answer: D. Explanation: A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability. The other options describe different processes, locations, scales or governance categories.

Q33. Which statement correctly explains Disparity versus diversity?

A. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. B. Khullar traces Indian planning back to the National Planning Committee of 1938. C. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. D. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking.

Answer: A. Explanation: Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. The other options describe different processes, locations, scales or governance categories.

Q34. Which option is the safest spatial interpretation of Disparity versus diversity?

A. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. B. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. C. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. D. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base.

Answer: B. Explanation: Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. The other options describe different processes, locations, scales or governance categories.

Q35. Which statement preserves the process boundary for Disparity versus diversity?

A. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. B. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. C. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. D. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle.

Answer: C. Explanation: Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. The other options describe different processes, locations, scales or governance categories.

Q36. Which option avoids the main UPSC trap concerning Disparity versus diversity?

A. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. B. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. C. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. D. Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure.

Answer: D. Explanation: Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure. The other options describe different processes, locations, scales or governance categories.

Q37. Which statement correctly explains National Planning Committee 1938?

A. Khullar traces Indian planning back to the National Planning Committee of 1938. B. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. C. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. D. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base.

Answer: A. Explanation: Khullar traces Indian planning back to the National Planning Committee of 1938. The other options describe different processes, locations, scales or governance categories.

Q38. Which option is the safest spatial interpretation of National Planning Committee 1938?

A. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. B. Khullar traces Indian planning back to the National Planning Committee of 1938. C. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. D. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle.

Answer: B. Explanation: Khullar traces Indian planning back to the National Planning Committee of 1938. The other options describe different processes, locations, scales or governance categories.

Q39. Which statement preserves the process boundary for National Planning Committee 1938?

A. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. B. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. C. Khullar traces Indian planning back to the National Planning Committee of 1938. D. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era.

Answer: C. Explanation: Khullar traces Indian planning back to the National Planning Committee of 1938. The other options describe different processes, locations, scales or governance categories.

Q40. Which option avoids the main UPSC trap concerning National Planning Committee 1938?

A. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. B. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. C. The Planning Commission was replaced by NITI Aayog on 1 January 2015. D. Khullar traces Indian planning back to the National Planning Committee of 1938.

Answer: D. Explanation: Khullar traces Indian planning back to the National Planning Committee of 1938. The other options describe different processes, locations, scales or governance categories.

Q41. Which statement correctly explains Planning Commission and First Plan?

A. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. B. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. C. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. D. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle.

Answer: A. Explanation: The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. The other options describe different processes, locations, scales or governance categories.

Q42. Which option is the safest spatial interpretation of Planning Commission and First Plan?

A. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. B. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. C. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. D. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era.

Answer: B. Explanation: The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. The other options describe different processes, locations, scales or governance categories.

Q43. Which statement preserves the process boundary for Planning Commission and First Plan?

A. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. B. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. C. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. D. The Planning Commission was replaced by NITI Aayog on 1 January 2015.

Answer: C. Explanation: The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. The other options describe different processes, locations, scales or governance categories.

Q44. Which option avoids the main UPSC trap concerning Planning Commission and First Plan?

A. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. B. The Planning Commission was replaced by NITI Aayog on 1 January 2015. C. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. D. The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51.

Answer: D. Explanation: The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51. The other options describe different processes, locations, scales or governance categories.

Q45. Which statement correctly explains First Plan priorities?

A. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. B. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. C. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. D. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era.

Answer: A. Explanation: The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. The other options describe different processes, locations, scales or governance categories.

Q46. Which option is the safest spatial interpretation of First Plan priorities?

A. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. B. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. C. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. D. The Planning Commission was replaced by NITI Aayog on 1 January 2015.

Answer: B. Explanation: The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. The other options describe different processes, locations, scales or governance categories.

Q47. Which statement preserves the process boundary for First Plan priorities?

A. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. B. The Planning Commission was replaced by NITI Aayog on 1 January 2015. C. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. D. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone.

Answer: C. Explanation: The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. The other options describe different processes, locations, scales or governance categories.

Q48. Which option avoids the main UPSC trap concerning First Plan priorities?

A. The Planning Commission was replaced by NITI Aayog on 1 January 2015. B. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. C. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. D. The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking.

Answer: D. Explanation: The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking. The other options describe different processes, locations, scales or governance categories.

Q49. Which statement correctly explains Second Plan heavy industry?

A. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. B. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. C. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. D. The Planning Commission was replaced by NITI Aayog on 1 January 2015.

Answer: A. Explanation: The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. The other options describe different processes, locations, scales or governance categories.

Q50. Which option is the safest spatial interpretation of Second Plan heavy industry?

A. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. B. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. C. The Planning Commission was replaced by NITI Aayog on 1 January 2015. D. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone.

Answer: B. Explanation: The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. The other options describe different processes, locations, scales or governance categories.

Q51. Which statement preserves the process boundary for Second Plan heavy industry?

A. The Planning Commission was replaced by NITI Aayog on 1 January 2015. B. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. C. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. D. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts.

Answer: C. Explanation: The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. The other options describe different processes, locations, scales or governance categories.

Q52. Which option avoids the main UPSC trap concerning Second Plan heavy industry?

A. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. B. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. C. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. D. The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base.

Answer: D. Explanation: The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base. The other options describe different processes, locations, scales or governance categories.

Q53. Which statement correctly explains Annual Plans and last cycle?

A. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. B. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. C. The Planning Commission was replaced by NITI Aayog on 1 January 2015. D. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone.

Answer: A. Explanation: India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. The other options describe different processes, locations, scales or governance categories.

Q54. Which option is the safest spatial interpretation of Annual Plans and last cycle?

A. The Planning Commission was replaced by NITI Aayog on 1 January 2015. B. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. C. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. D. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts.

Answer: B. Explanation: India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. The other options describe different processes, locations, scales or governance categories.

Q55. Which statement preserves the process boundary for Annual Plans and last cycle?

A. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. B. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. C. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. D. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators.

Answer: C. Explanation: India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. The other options describe different processes, locations, scales or governance categories.

Q56. Which option avoids the main UPSC trap concerning Annual Plans and last cycle?

A. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. B. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. C. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. D. India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle.

Answer: D. Explanation: India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle. The other options describe different processes, locations, scales or governance categories.

Q57. Which statement correctly explains Balanced development remained incomplete?

A. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. B. The Planning Commission was replaced by NITI Aayog on 1 January 2015. C. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. D. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts.

Answer: A. Explanation: Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. The other options describe different processes, locations, scales or governance categories.

Q58. Which option is the safest spatial interpretation of Balanced development remained incomplete?

A. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. B. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. C. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. D. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators.

Answer: B. Explanation: Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. The other options describe different processes, locations, scales or governance categories.

Q59. Which statement preserves the process boundary for Balanced development remained incomplete?

A. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. B. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. C. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. D. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

Answer: C. Explanation: Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. The other options describe different processes, locations, scales or governance categories.

Q60. Which option avoids the main UPSC trap concerning Balanced development remained incomplete?

A. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. B. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. C. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. D. Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era.

Answer: D. Explanation: Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era. The other options describe different processes, locations, scales or governance categories.

Q61. Which statement correctly explains NITI replacement date?

A. The Planning Commission was replaced by NITI Aayog on 1 January 2015. B. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. C. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. D. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators.

Answer: A. Explanation: The Planning Commission was replaced by NITI Aayog on 1 January 2015. The other options describe different processes, locations, scales or governance categories.

Q62. Which option is the safest spatial interpretation of NITI replacement date?

A. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. B. The Planning Commission was replaced by NITI Aayog on 1 January 2015. C. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. D. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

Answer: B. Explanation: The Planning Commission was replaced by NITI Aayog on 1 January 2015. The other options describe different processes, locations, scales or governance categories.

Q63. Which statement preserves the process boundary for NITI replacement date?

A. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. B. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. C. The Planning Commission was replaced by NITI Aayog on 1 January 2015. D. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit.

Answer: C. Explanation: The Planning Commission was replaced by NITI Aayog on 1 January 2015. The other options describe different processes, locations, scales or governance categories.

Q64. Which option avoids the main UPSC trap concerning NITI replacement date?

A. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. B. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. C. Regional planning applies development logic to a specific region rather than to the country as a whole. D. The Planning Commission was replaced by NITI Aayog on 1 January 2015.

Answer: D. Explanation: The Planning Commission was replaced by NITI Aayog on 1 January 2015. The other options describe different processes, locations, scales or governance categories.

Q65. Which statement correctly explains NITI planning style?

A. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. B. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. C. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. D. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

Answer: A. Explanation: The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. The other options describe different processes, locations, scales or governance categories.

Q66. Which option is the safest spatial interpretation of NITI planning style?

A. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. B. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. C. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. D. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit.

Answer: B. Explanation: The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. The other options describe different processes, locations, scales or governance categories.

Q67. Which statement preserves the process boundary for NITI planning style?

A. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. B. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. C. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. D. Regional planning applies development logic to a specific region rather than to the country as a whole.

Answer: C. Explanation: The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. The other options describe different processes, locations, scales or governance categories.

Q68. Which option avoids the main UPSC trap concerning NITI planning style?

A. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. B. Regional planning applies development logic to a specific region rather than to the country as a whole. C. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. D. The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone.

Answer: D. Explanation: The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone. The other options describe different processes, locations, scales or governance categories.

Q69. Which statement correctly explains Aspirational Districts?

A. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. B. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. C. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. D. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit.

Answer: A. Explanation: NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. The other options describe different processes, locations, scales or governance categories.

Q70. Which option is the safest spatial interpretation of Aspirational Districts?

A. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. B. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. C. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. D. Regional planning applies development logic to a specific region rather than to the country as a whole.

Answer: B. Explanation: NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. The other options describe different processes, locations, scales or governance categories.

Q71. Which statement preserves the process boundary for Aspirational Districts?

A. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. B. Regional planning applies development logic to a specific region rather than to the country as a whole. C. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. D. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.

Answer: C. Explanation: NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. The other options describe different processes, locations, scales or governance categories.

Q72. Which option avoids the main UPSC trap concerning Aspirational Districts?

A. Regional planning applies development logic to a specific region rather than to the country as a whole. B. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. C. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. D. NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts.

Answer: D. Explanation: NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts. The other options describe different processes, locations, scales or governance categories.

Q73. Which statement correctly explains SDG India Index 2023-24?

A. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. B. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. C. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. D. Regional planning applies development logic to a specific region rather than to the country as a whole.

Answer: A. Explanation: The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. The other options describe different processes, locations, scales or governance categories.

Q74. Which option is the safest spatial interpretation of SDG India Index 2023-24?

A. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. B. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. C. Regional planning applies development logic to a specific region rather than to the country as a whole. D. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.

Answer: B. Explanation: The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. The other options describe different processes, locations, scales or governance categories.

Q75. Which statement preserves the process boundary for SDG India Index 2023-24?

A. Regional planning applies development logic to a specific region rather than to the country as a whole. B. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. C. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. D. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages.

Answer: C. Explanation: The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. The other options describe different processes, locations, scales or governance categories.

Q76. Which option avoids the main UPSC trap concerning SDG India Index 2023-24?

A. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. B. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. C. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. D. The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators.

Answer: D. Explanation: The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators. The other options describe different processes, locations, scales or governance categories.

Q77. Which statement correctly explains District and block targeting?

A. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. B. Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit. C. Regional planning applies development logic to a specific region rather than to the country as a whole. D. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.

Answer: A. Explanation: Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. The other options describe different processes, locations, scales or governance categories.

Q78. Which option is the safest spatial interpretation of District and block targeting?

A. Regional planning applies development logic to a specific region rather than to the country as a whole. B. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. C. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. D. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages.

Answer: B. Explanation: Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. The other options describe different processes, locations, scales or governance categories.

Q79. Which statement preserves the process boundary for District and block targeting?

A. Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development. B. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. C. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. D. Core-periphery logic explains how a strong core dominates and organises a weaker periphery.

Answer: C. Explanation: Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. The other options describe different processes, locations, scales or governance categories.

Q80. Which option avoids the main UPSC trap concerning District and block targeting?

A. Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages. B. Core-periphery logic explains how a strong core dominates and organises a weaker periphery. C. Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions. D. Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

Answer: D. Explanation: Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity. The other options describe different processes, locations, scales or governance categories.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

This topic has a verified direct routed demand: the 2024 GS-I question asking what regional disparity is, how it differs from diversity and how serious it is in India. The package therefore keeps the disparity-diversity distinction explicit and does not fabricate any additional direct PYQ.

PYQ DEMAND CARD 1 - 2024 GS-I

Demand: What is regional disparity? How does it differ from diversity? How serious is the issue of regional disparity in India?

Status: Verified direct PYQ routed inside the Advanced owner for Geography Topic 29.

Model solution: Regional disparity means ranked inequality among regions in income, productivity, infrastructure, literacy, health and opportunity, whereas regional diversity means unranked difference of character such as language, ecology or cropping pattern. India shows serious disparity because growth, irrigation, industry, services and governance capacity have clustered unevenly across states, districts and metropolitan corridors, and intra-state inequality often rivals interstate inequality. A balanced answer should therefore separate diversity from disparity, explain why markets and historical head starts concentrate development, and conclude that planning has changed in form but regional imbalance remains a first-order problem.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish regional disparity from regional diversity. Answer in about 150 words.

Model thesis: Diversity is unranked difference, while disparity is ranked inequality; the distinction matters because policy should protect diversity but reduce disparity.

Claim -> named evidence -> analysis -> qualification:

- Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit.
- Regional planning applies development logic to a specific region rather than to the country as a whole.
- Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure.

Qualified conclusion: Diversity is unranked difference, while disparity is ranked inequality; the distinction matters because policy should protect diversity but reduce disparity.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain why planning regions need more than mere contiguity. Answer in about 150 words.

Model thesis: A planning region is viable only when functional, economic, administrative, ecological and social criteria align well enough for implementation.

Claim -> named evidence -> analysis -> qualification:

- A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability.

Qualified conclusion: A planning region is viable only when functional, economic, administrative, ecological and social criteria align well enough for implementation.

ORIGINAL MAINS 3 - 15 MARKS

Question: Use growth-pole, core-periphery and spread-backwash ideas to explain regional imbalance. Answer in about 250 words.

Model thesis: Regional imbalance persists because development clusters in propulsive nodes, dominant cores drain surrounding regions, and spread effects remain weaker than backwash in many settings.

Claim -> named evidence -> analysis -> qualification:

- Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.
- Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages.
- Core-periphery logic explains how a strong core dominates and organises a weaker periphery.
- Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.
- The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes.

Qualified conclusion: Regional imbalance persists because development clusters in propulsive nodes, dominant cores drain surrounding regions, and spread effects remain weaker than backwash in many settings.

ORIGINAL MAINS 4 - 15 MARKS

Question: Trace the major spatial priorities of India's First and Second Five Year Plans. Answer in about 250 words.

Model thesis: The First Plan stressed irrigation, agriculture, refugee resettlement and power, while the Second Plan shifted toward heavy industry and the public-sector industrial base.

Claim -> named evidence -> analysis -> qualification:

- The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51.
- The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking.
- The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base.

Qualified conclusion: The First Plan stressed irrigation, agriculture, refugee resettlement and power, while the Second Plan shifted toward heavy industry and the public-sector industrial base.

ORIGINAL MAINS 5 - 20 MARKS

Question: Why did balanced regional development remain an incomplete achievement in India despite successive plans? Answer in about 300 words.

Model thesis: Regional disparity persisted because irrigation, industry, markets, connectivity and governance capacity remained uneven, so backwash forces often beat spread effects even under planned development.

Claim -> named evidence -> analysis -> qualification:

- Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.
- Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.
- Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era.
- Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

Qualified conclusion: Regional disparity persisted because irrigation, industry, markets, connectivity and governance capacity remained uneven, so backwash forces often beat spread effects even under planned development.

ORIGINAL MAINS 6 - 20 MARKS

Question: Has India moved from planning by Five Year Plans to planning by dashboards? Analyse. Answer in about 300 words.

Model thesis: India's planning style has changed from centralised plan documents to mission platforms, district dashboards and territorial benchmarking, but the core geographic problem of regional imbalance remains.

Claim -> named evidence -> analysis -> qualification:

- India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle.
- The Planning Commission was replaced by NITI Aayog on 1 January 2015.
- The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone.
- NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts.
- The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators.
- Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

Qualified conclusion: India's planning style has changed from centralised plan documents to mission platforms, district dashboards and territorial benchmarking, but the core geographic problem of regional imbalance remains.

OPTIONAL ADVANCED DEPTH - NOT REQUIRED FOR A CORE ANSWER

Subject: Geography · **Tier:** Advanced (India-applied) · **GS Paper:** GS-I & GS-II **Grounded in:** D.R. Khullar, *India: A Comprehensive Geography* + Majid Husain, *Geography of India* + distinct verified NITI/PIB current anchor. **FACT:** = from source book or official source · **ANALYSIS:** = inference / standard synthesis · **CURRENT:** = current affairs. **Companion:** basic/29_Regional-Development-and-Five-Year-Plans.md.

1. India's planning architecture: a quick timeline

FACT: Khullar traces Indian planning back to pre-Independence thought and the 1938 National Planning Committee. **FACT:** He notes that the Planning Commission was created after Independence and that Five-Year Plans became the principal planning device.

Year / phase	Event	Spatial significance
FACT: 1938	National Planning Committee	Pre-Independence planning imagination begins
FACT: 1950-51	Planning Commission set up; First Five-Year Plan launched	Centralised planning framework starts
FACT: 1966-69	Annual Plans	Disruption after wars, drought and macro stress
FACT: 2012-17	Twelfth Plan	Last Five-Year Plan cycle
FACT: 1 Jan 2015	Government replaced Planning Commission with NITI Aayog	Shift from plan-outlay regime to think-tank / cooperative-federal architecture
ANALYSIS: Post-2017	No new Five-Year Plan cycle	More index-based, mission-based and state-compared policy framework

2. What the early plans tried to do geographically

FACT: Khullar says the First Plan had to cope with Partition, refugee resettlement, food shortage, inflation and regional imbalance. FACT: He notes that irrigation, agriculture and power projects received top priority and that problem areas such as the Damodar Valley were identified early.

Plan phase	Dominant spatial thrust
FACT: First Plan	Irrigation, agriculture, refugee resettlement, power, initial resource-region thinking
FACT: Second Plan	Heavy industry and public-sector industrial base
FACT: Third Plan onward	Self-reliance, employment, more explicit concern with balanced regional development
ANALYSIS: Later plan era	Backward-area focus, infrastructure corridors, hill/tribal/drought-prone interventions

3. Why regional imbalance persisted

FACT: Khullar explicitly lists failure to achieve balanced regional development as one of the major shortcomings of Five-Year Plans. ANALYSIS: The broad reasons are familiar: uneven irrigation, selective Green Revolution gains, industrial concentration, metro dominance, differential state capacity and transport connectivity gaps.

Persistent imbalance	Geographic expression
ANALYSIS: Agrarian inequality	Irrigated northwest/west outpaced many rainfed belts
ANALYSIS: Industrial concentration	Port and corridor regions pulled ahead
ANALYSIS: Metro concentration	Capital, services and talent clustered in a few large nodes
ANALYSIS: Interior lag	Many tribal, hill and east-central districts remained infrastructure-poor

4. Planning Commission versus NITI Aayog: the geography angle

Dimension	Planning Commission era	NITI-era tendency
FACT: Basic style	Centralised plan formulation and outlay logic	Think-tank, policy coordination, competitive and cooperative federalism
FACT: Spatial reading	Large plan-period national framework	Mission mode, dashboards, state and district benchmarking
ANALYSIS: Strength	Long horizon and public-investment direction	Faster comparison, data dashboards, targeted programme monitoring
ANALYSIS: Limitation	Often top-down and weak on local differentiation	May benchmark well but still depend on state capacity for delivery

ANALYSIS: Cross-link: use the **Economy** folder for detailed macro-plan strategy and the **Polity** folder for institutional design; this file keeps the spatial-development lens.

5. Current regional-development architecture

FACT: NITI Aayog's **Aspirational Districts Programme** was launched in **January 2018** for **112 districts**. FACT: It uses convergence, collaboration and competition, with dashboard-based monitoring. FACT: The **SDG India Index 2023-24**, released in July 2024, gave India an overall score of **71**, up from **66** in 2020-21.

Current programme / index	Verified point	Geographic relevance
FACT: Aspirational Districts Programme	112 districts; launched Jan 2018	District-scale regional targeting
FACT: Aspirational Blocks Programme	Added later to deepen sub-district targeting	Finer-grained territorial planning
FACT: SDG India Index 2023-24	India score 71; 32 States/UTs in front-runner category	Development is now benchmarked territorially
FACT: Dashboard/periodic evaluation	ADP/ABP are monitored through territorial indicators	Shift from allocation alone to outcomes

6. Debate: did India move from “plans” to “indices”?

- ANALYSIS: One interpretation says India has moved from centralised Five-Year Plans to more flexible mission-based and state-compared governance.
- ANALYSIS: Another says the underlying issue remains the same: how to reduce regional imbalance in lagging districts, small towns, tribal belts and infrastructure-poor interiors.
- ANALYSIS: A good Mains answer should therefore treat NITI as a change in planning style, not the end of planning geography.

7. Must-Know Facts (Prelims) and UPSC traps

- FACT: The Planning Commission was replaced by NITI Aayog on 1 January 2015.
- FACT: The Twelfth Plan was the last Five-Year Plan cycle.
- FACT: Balanced regional development remained an explicit concern but an incomplete achievement.
- FACT: Aspirational Districts Programme targets districts, not states as a whole.
- FACT: SDG India Index is a territorial-development benchmarking tool.
- WRONG: NITI Aayog is simply the Planning Commission with a new name -> The institutional style and policy mechanism changed significantly.
- WRONG: Ending Five-Year Plans ended planning -> Planning continues through missions, indices, state coordination and targeted programmes.
- WRONG: Regional imbalance is only about poor states -> It also exists within states, between districts and between metros and hinterlands.

8. Exam linkage

- ANALYSIS: Recurring UPSC theme: balanced regional development, Planning Commission versus NITI Aayog, and district-level targeting.
- ANALYSIS: GS-I can take the spatial-inequality angle; GS-II can take the institutional-governance angle.
- ANALYSIS: Good answers avoid rewriting macroeconomic plan history and instead stress territorial outcomes.
- FACT: **2024 GS-I direct PYQ**: “What is regional disparity? How does it

differ from diversity? How serious is the issue of regional disparity in India?” Route the definition/distinction here; exact audit: . . /README .md.

9. CURRENT: Current link

CA Anchor - Aspirational Districts and territorial dashboards

CURRENT: **News trigger:** NITI's Aspirational Districts/Blocks dashboards keep district and block outcomes at the centre of regional planning, distinct from the basic file's broad SDG-era inequality lens.

Current fact	Static concept	Answer use
FACT: India score 71 in SDG India Index 2023-24	Regional development is now measured through territorial indicators	Good opening line
FACT: 112 Aspirational Districts since 2018	Lagging-region targeting remains central	Good district-scale example
FACT: Indicator-based monitoring	Outcomes matter alongside allocation	Useful evaluative point
ANALYSIS: Planning has shifted from plan documents to dashboards and mission platforms	New form of regional planning	Strong conclusion

10. Mains angles

- Critically examine whether Five-Year Plans succeeded in balanced regional development in India.
- Compare the spatial logic of the Planning Commission era with the NITI Aayog era.
- How do Aspirational Districts and SDG-style benchmarking reshape the idea of regional planning in India?

11. Probable Questions

Prelims-style concept prompt

- ANALYSIS: Which of the following statements about India's planning transition is/are correct? (1) The Twelfth Plan was the last Five-Year Plan cycle. (2) The Planning Commission was replaced by NITI Aayog on 1 January 2015.
Answer: Both statements are correct, because this file places the Twelfth Plan as the final cycle and gives 1 January 2015 as the date of institutional replacement.

Probable Mains questions (10-15 marks)

- ANALYSIS: Critically examine why balanced regional development remained an incomplete achievement despite successive Five-Year Plans. (15 marks)
- ANALYSIS: Compare the spatial logic of the Planning Commission era with the dashboard-, mission- and district-benchmarking approach of the NITI Aayog era. (10 marks)

12. Study link

Geography -> Human Geography -> Regional Development in India Geography -> Human Geography -> Planning Geography + Aspirational Districts

CONSOLIDATED REGISTER NOTES

COMPLETE TOPIC ASCII MASTER FLOW DIAGRAM

ASCII MASTER FLOW - PANEL 1/12: Diversity versus disparity

DIVERSITY -> difference of character: language, ecology, culture, crops
DISPARITY -> ranked inequality: income, literacy, health, infrastructure
POLICY -> diversity is accommodated; disparity is reduced
TRAP -> treating inequality as harmless variety is a direct exam error

ASCII MASTER FLOW - PANEL 2/12: Uneven development drivers

RESOURCE ENDOWMENT -> minerals, fertile land, ports or irrigation cluster growth
TRANSPORT + MARKET -> corridors and urban nodes outpace interiors
HISTORICAL HEAD START -> earlier centres keep cumulative advantage
STATE CAPACITY -> policy and governance decide whether lagging regions catch up

ASCII MASTER FLOW - PANEL 3/12: Growth pole mechanism

PROPULSIVE NODE -> dynamic industry or city becomes the growth pole
LINKAGES -> suppliers, labour and markets cluster around the pole
SPREAD EFFECT -> benefits diffuse outward if linkages deepen locally
LIMIT -> a pole may remain an enclave without regional diffusion

ASCII MASTER FLOW - PANEL 4/12: Core-periphery and backwash

CORE -> capital, services, infrastructure and decision power concentrate
PERIPHERY -> labour, raw materials and demand are organised around the core
BACKWASH -> talent and capital drain outward toward the core
SPREAD -> technology and demand may diffuse, but not automatically

ASCII MASTER FLOW - PANEL 5/12: Planning region criteria

FUNCTIONAL UNITY -> flows and linkages hold the region together
ADMINISTRATIVE MANAGEABILITY -> policy must actually be implementable
ECONOMIC + ECOLOGICAL VIABILITY -> strategy and resource base must align
SOCIAL ACCEPTABILITY -> regional identity and needs affect success

ASCII MASTER FLOW - PANEL 6/12: Indian planning timeline

1938 -> National Planning Committee begins the planning imagination
1950-51 -> Planning Commission set up and First Plan launched
1966-69 -> Annual Plans after war, drought and macro stress
2012-17 / 2015 -> Twelfth Plan last cycle; NITI replaces Planning Commission

ASCII MASTER FLOW - PANEL 7/12: First versus Second Plan

FIRST PLAN -> irrigation, agriculture, refugee resettlement, power
SECOND PLAN -> heavy industry and public-sector industrial base
SPATIAL LOGIC -> agrarian recovery first, industrial concentration next
TRAP -> do not swap the priorities of the two plans

ASCII MASTER FLOW - PANEL 8/12: Why imbalance persisted

UNEVEN IRRIGATION -> Green Revolution gains stayed regionally selective
INDUSTRIAL CONCENTRATION -> ports, metros and corridors pulled ahead
CONNECTIVITY + GOVERNANCE GAPS -> interiors remained infrastructure-poor
OUTCOME -> balanced regional development stayed incomplete

ASCII MASTER FLOW - PANEL 9/12: Planning Commission versus NITI

PLANNING COMMISSION -> centralised plan formulation and outlay logic
NITI AAYOG -> think-tank coordination, competitive and cooperative federalism
PLAN DOCUMENTS -> long-horizon allocation framework
DASHBOARDS -> indicator monitoring and mission-mode comparison

ASCII MASTER FLOW - PANEL 10/12: District and block targeting ladder

STATE AVERAGE -> useful but hides internal inequality
DISTRICT TARGETING -> Aspirational Districts brings lagging districts into focus
BLOCK TARGETING -> scale moves further downward where district averages still hide gaps
GEOGRAPHIC LESSON -> intra-state disparity is a first-order planning problem

ASCII MASTER FLOW - PANEL 11/12: SDG-style benchmarking

SDG INDIA INDEX 2023-24 -> overall India score 71
TERRITORIAL INDICATORS -> development is ranked spatially, not only nationally
CURRENT STYLE -> dashboards complement missions and programme convergence
SAFE USE -> planning changed form, but not the geography of disparity

ASCII MASTER FLOW - PANEL 12/12: Regional development answer spine

DEFINE -> disparity versus diversity and the meaning of regional planning
EXPLAIN -> growth pole, core-periphery, spread and backwash
TRACE -> 1938 committee, First Plan, Second Plan, NITI transition
QUALIFY -> district dashboards matter because state averages conceal disparity

Regional Development and Five Year Plans: PROCESS, FORM AND LOCATION LEDGER

1. **Regional development meaning:** Regional development treats planning as the deliberate improvement of production, welfare, infrastructure and social capability in a defined territorial unit.
2. **Regional planning unit:** Regional planning applies development logic to a specific region rather than to the country as a whole.
3. **Uneven development drivers:** Resource endowment, transport access, market size, state policy, technology and historical advantage all contribute to uneven regional development.
4. **Perroux growth pole idea:** Perroux's growth-pole idea says development begins in propulsive nodes or industries and then diffuses outward through linkages.
5. **Friedmann core-periphery logic:** Core-periphery logic explains how a strong core dominates and organises a weaker periphery.
6. **Myrdal spread and backwash:** Myrdal's spread and backwash effects show that growth can either diffuse benefits outward or drain labour, capital and talent from surrounding regions.
7. **Balanced-unbalanced growth debate:** The balanced-versus-unbalanced growth debate asks whether development should be spread widely or strategically concentrated in selected nodes.
8. **Planning region criteria:** A planning region should combine functional unity, administrative manageability, economic viability, ecological balance and social acceptability.
9. **Disparity versus diversity:** Regional diversity means unranked difference of character, while regional disparity means ranked inequality of outcomes such as income, literacy, health or infrastructure.
10. **National Planning Committee 1938:** Khullar traces Indian planning back to the National Planning Committee of 1938.
11. **Planning Commission and First Plan:** The Planning Commission was set up in 1950 and the First Five Year Plan launched the centralised planning framework in 1950-51.
12. **First Plan priorities:** The First Plan prioritised irrigation, agriculture, refugee resettlement, power and early resource-region thinking.

13. **Second Plan heavy industry:** The Second Plan shifted emphasis towards heavy industry and the public-sector industrial base.
14. **Annual Plans and last cycle:** India moved to Annual Plans in 1966-69 after war, drought and macro stress, and the Twelfth Plan was the last Five Year Plan cycle.
15. **Balanced development remained incomplete:** Khullar explicitly treats the failure to achieve balanced regional development as a major shortcoming of the Five Year Plan era.
16. **NITI replacement date:** The Planning Commission was replaced by NITI Aayog on 1 January 2015.
17. **NITI planning style:** The NITI era stresses think-tank coordination, cooperative and competitive federalism, dashboards and mission-mode monitoring rather than plan outlay alone.
18. **Aspirational Districts:** NITI Aayog launched the Aspirational Districts Programme in January 2018 for 112 districts.
19. **SDG India Index 2023-24:** The SDG India Index 2023-24 gave India an overall score of 71 and shows development benchmarking through territorial indicators.
20. **District and block targeting:** Current planning geography pushes targeting downward from state averages to districts and blocks because intra-state disparity is often as serious as interstate disparity.

Regional Development and Five Year Plans: CLOSE-OPTION FIREWALLS

- Do not confuse regional diversity with regional disparity.
- Do not treat growth poles as a guarantee of spread effects.
- Do not say a strong core always benefits its periphery.
- Do not describe planning regions as only administrative map units.
- Do not reduce regional imbalance to poor states alone; districts matter too.
- Do not forget the National Planning Committee in the pre-Independence planning timeline.
- Do not swap the First Plan's agrarian priority with the Second Plan's heavy-industry emphasis.
- Do not say Five Year Plans ended all planning in India.
- Do not misdate the replacement of the Planning Commission by NITI Aayog.
- Do not treat district dashboards as the same thing as plan outlays.
- Do not quote state rankings or income gaps from memory without a source-year label.
- Do not invent a direct PYQ beyond the verified 2024 regional-disparity demand.

Regional Development and Five Year Plans: MAP-AND-ANSWER SPINE

DEFINE -> DRAW OR LOCATE -> EXPLAIN THE PROCESS -> NAME EVIDENCE
 -> COMPARE THE CLOSE ALTERNATIVE -> ADD HUMAN/CURRENT LINK
 -> QUALIFY SCALE, STATUS AND UNCERTAINTY -> GIVE A GRADED VERDICT

Regional Development and Five Year Plans: VERIFIED CURRENT-LINK BOUNDARY

NITI Aayog dashboards, the Aspirational Districts programme and the SDG India Index are used only as dated anchors for the present planning style. No district ranking, fiscal outlay or state-gap figure is quoted here without an explicit source-year label.
