Schools of Buddhism English-first concept spine

Concept spine: English concepts lead; Sanskrit/Pali IAST follows immediately.

Source-complete coverage ledger and answer-worthiness labels

Source corpus	Final location	Retention decision
Layered Simple/Core/Exam/Rapid material	Basic Learning Session	Complete eight-subtopic sequence retained
Layered Advanced material	Optional Advanced	Every advanced synthesis retained after practice
Canonical owner	Reconciled through layered session	Causation, impermanence, no-self, four schools, epistemology and liberation retained
Legacy solved workbook	PYQs and Answer Practice	All thirteen solved PYQs preserved and improved
Premium diagnostic replacement	MCQs / Remediation	Legacy 24+8 set expanded to genuine 40+8 with strict rotation
Original practice	PYQs and Answer Practice	Six solved non-PYQ models replace the legacy three-model set
Consolidated register	Final section	A-L retrieval framework covers the complete printed syllabus

Answer-worthiness. *Dependent origination (pratītyasamutpāda), momentariness (kṣaṇikavāda), no permanent self (nairātmyavāda),* cessation of conditioned suffering (nirvāṇa) and the four-school contrast are **CORE SYLLABUS**. Buddhist means of valid knowledge (pramāṇa) theory, *exclusion theory of meaning (apoha), avyākṛta* questions and controlled cross-school objections are **CORE SUPPORTING DEPTH** where they sharpen PYQ answers. Heritage diplomacy is an application anchor, never doctrinal proof.

FOUNDATIONAL GATEWAY - The Middle Path (madhyamā pratipad; Pali: majjhimā paṭipadā)

Practical meaning

- FACT: In the Buddha's first-sermon framework, the Middle Path rejects two practical extremes: sensual indulgence and self-mortification. It is not an average compromise between them; it is a disciplined route that avoids the defects of both.
- FACT: Its positive content is the **Noble Eightfold Path (āryaṣṭāṅgamārga)**:

Training	English-first path factors
Wisdom (prajñā)	right view (samyag-dṛṣṭi); right intention (samyak-saṃkalpa)
Ethical discipline (śīla)	right speech (samyag-vāc); right action (samyak-karmānta); right livelihood (samyag-ājīva)
Meditative discipline (samādhi)	right effort (samyag-vyāyāma); right mindfulness (samyak-smṛti); right concentration (samyak-samādhi)

- FACT: The path operationalises the fourth Noble Truth: because suffering arises conditionally, disciplined changes in understanding, conduct and attention can interrupt its causes.

Doctrinal meaning

- FACT: At the metaphysical level, dependent origination is a middle between eternalism (śāśvatavāda) and annihilationism (ucchedavāda). Buddhism denies an unchanging substance or self without reducing causal continuity, action and moral consequence (karma) and liberation to sheer nothingness.
- ANALYSIS: The practical and doctrinal senses reinforce each other. The path avoids harmful modes of living, while dependent origination avoids harmful extremes of metaphysical grasping.

Exam use

- ANALYSIS: In an answer on dependent origination, no-self, momentariness or liberation, use the Middle

Path as the bridge: conditioned continuity explains how Buddhism can reject permanence without rejecting causation, responsibility or the possibility of release.

- **WRONG:** Do not define the Middle Path merely as moderation. Its examinable content is the Noble Eightfold Path plus the philosophical avoidance of eternalism and annihilationism.

SUBTOPIC CLOSURE FLOW

Four Noble Truths

- > dependent origination (*pratītyasamutpāda*)
- > Middle Path (*madhyamā pratipad*; Pali: *majjhimā paṭipadā*)
- > Noble Eightfold Path (*āryāṣṭāṅgamārga*)
- > weakening of craving and ignorance
- > cessation and liberation

SESSION 1 - BUDDHIST FOUNDATION, MIDDLE PATH (*madhyamā pratipad*) AND SCHOOL MAP

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Buddhist philosophy is a family of liberation-centred systems that explains suffering through conditioned processes rather than a permanent substance or self.

Technical definition: Buddhist schools share dependent origination and the cessation of suffering while differing over the status of external objects, consciousness, dharmas and emptiness.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

The unity of Buddhist philosophy lies in its causal and soteriological method; its diversity lies in competing accounts of what, if anything, is ultimately real.

MUST-WRITE KEYWORDS

- **Four Noble Truths**
- **Middle Path (*madhyamā pratipad*)**
- **Noble Eightfold Path (*āryāṣṭāṅgamārga*)**
- **dependent origination**
- **eternalism**
- **annihilationism**

How to use them: Begin with suffering and its cessation, connect the practical Middle Path to the Eightfold Path, and distinguish it from the doctrinal avoidance of eternalism and annihilationism.

FACT: Fact: The High Commission of India in Colombo reported the public exposition of the Devnimori Buddha relics at Gangaramaya Temple from 4-10 February 2026, presenting it as cultural and spiritual engagement through shared Buddhist heritage. **ANALYSIS: Inference:** The event can frame Buddhism as a living civilizational language, but answers must derive doctrine from dependent origination, momentariness, no-self, emptiness, consciousness and liberation.

Doctrine	Central question	Exam-safe formulation
<i>Dependent origination</i> (<i>pratītyasamutpāda</i>)	How do suffering and phenomena arise?	through causes and conditions
<i>Momentariness</i> (<i>kṣaṇikavāda</i>)	What is the temporal nature of the causally real?	causally efficacious reals are momentary
<i>No permanent self</i> (<i>nairātmyavāda</i>)	Is there an enduring owner of the stream?	no permanent self beyond the aggregates
<i>Emptiness</i> (<i>śūnyatā</i>)	Do dependently arisen things possess own-nature?	they are empty of independent <i>intrinsic nature</i> (<i>svabhāva</i>)

Master verdict: Buddhism is a family of anti-substantialist, causally ordered and soteriological systems; its schools range from realism through consciousness-only analysis to radical emptiness.

How to use this layered session

Each logical subtopic follows the Philosophy five-layer sequence:

Layer	Purpose
1. SIMPLE START	Plain-language visual gateway
2. CORE UPSC	Complete retained doctrine, arguments and examples
3. ADVANCED	Objections, replies, comparisons and refinements
4. EXAM APPLICATION	Verified PYQ routing and answer structure
5. RAPID REVISION	Traps, recall spines and mastery preparation

Source audit: the canonical Buddhism knowledge file and complete 2018-2025 PYQ bank were checked. Local OCR-searchable chapters in Chatterjee-Datta (Buddhist chapter beginning at file page 149) and C. D. Sharma (file pages 67-81) were directly inspected. The February 2026 Devnimori relic exposition was rechecked through the High Commission of India in Colombo and is used only as a contemporary conceptual anchor. Qdrant was not required.

Preservation note: every substantive section of the earlier complete session is retained. The new material adds simple gateways and explicit layers without replacing the original depth.

LAYER 1 - SIMPLE START

Plain-language visual - suffering is a process, not a fate

IGNORANCE
|
conditions craving and clinging
|
becoming, birth, ageing and death

Change the conditions -> change the result.

In simple words: Buddhism asks what keeps suffering happening. If suffering arises because conditions cooperate, it is neither eternal nor imposed by fate. Remove the sustaining conditions and the process can cease.

First idea	Easy meaning
<i>Dependent origination (pratītyasamutpāda)</i>	Things arise and cease through conditions
Twelve <i>nidānas</i>	Detailed cycle from ignorance to ageing and death
Middle Path (<i>madhyamā pratipad</i>)	Neither eternal substance nor sheer nothingness
Soteriological point	A conditioned problem can be interrupted

Memory line: because suffering is dependently produced, liberation is causally possible.

LAYER 2 - CORE UPSC

ONE-SCREEN MAP

FOUR NOBLE TRUTHS = existential frame

```
|
+- suffering (duḥkha) has a cause -> dependent origination (pratītyasamutpāda)
|
|   +- whatever arises dependently lacks self-existence (svabhāva)
|   +- whatever is conditioned is impermanent
|   +- what is called "person" is only a dependently arisen aggregate
|
+- MOMENTARINESS (kṣaṇikavāda): all conditioned reals are momentary
+- NO PERMANENT SELF (nairātmyavāda): no permanent enduring self (ātman)/self
+- CESSATION OF CONDITIONED SUFFERING (nirvāṇa): cessation of the causal process of
  suffering
```

FOUR SCHOOLS

Vaibhāṣika -> Sautrāntika -> Yogācāra/Consciousness-only doctrine (vijñānavāda) ->

Mādhymika/Emptiness (śūnyatā)

direct realism representationalism consciousness-only emptiness of intrinsic
nature (svabhāva)

ANALYSIS: Exam key: In Buddhism, the three syllabus terms are not separate islands. Dependent origination yields impermanence; impermanence undermines substantial selfhood; no-self reshapes action and moral consequence (karma), rebirth and cessation of conditioned suffering (nirvāṇa).

CLOSING RECALL FLOW - BUDDHIST FOUNDATION, MIDDLE PATH (madhyamā pratipad) AND SCHOOL MAP

SUBTOPIC CLOSURE FLOW | BUDDHIST FOUNDATION, MIDDLE PATH (madhyamā pratipad) AND SCHOOL MAP

1. KEY TERMS / DEFINITIONS

Four Noble Truths · Middle Path (madhyamā pratipad) · Noble Eightfold Path (āryaṣṭāṅgamārga) · dependent origination · eternalism · annihilationism

2. MECHANISM / ARGUMENT

Ignorance conditions craving and suffering, while insight into conditioned

3. CONSEQUENCE / CONTRAST

A common practical path can support realist, representationalist,

4. UPSC TRAP / ANSWER-USE

Do not treat Buddhism as one uniform metaphysics or confuse no permanent

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: The unity of Buddhist philosophy lies in its causal and soteriological method; its diversity lies in competing accounts of what, if anything, is ultimately real.

SESSION 2 - DEPENDENT ORIGINATION AND THE FOUR NOBLE TRUTHS

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: dependent origination (pratītyasamutpāda) is the principle that phenomena arise and cease in dependence on conditions, rejecting both eternalism and causeless annihilationism.

Technical definition: Dependent origination explains suffering through a conditioned sequence from ignorance to ageing and death, while the Four Noble Truths identify the problem, cause, cessation and path.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

dependent origination (pratītyasamutpāda) is the principle that phenomena arise and cease in dependence on conditions, rejecting both eternalism and causeless annihilationism.

MUST-WRITE KEYWORDS

- dependent origination (pratītyasamutpāda)
- twelve links (dvādaśa-nidāna)
- ignorance (avidyā)
- craving (trṣṇā)
- cessation (nirodha)
- Four Noble Truths

How to use them: Use the twelve links to explain the arising of suffering and reverse the causal sequence to show why ending ignorance and craving makes cessation possible.

CORE DEFINITION: dependent origination (pratītyasamutpāda) is the principle that phenomena arise and cease in dependence on conditions, rejecting both eternalism and causeless annihilationism.

1.1 Statement

- FACT: **Dependent origination (pratītyasamutpāda)** means dependent origination: whatever arises, arises depending on causes and conditions; whatever ceases, ceases when those conditions cease.
- FACT: The standard formula, in substance, is: "**imasmim sati idaṃ hoti; imass' uppādā idaṃ uppajjati; imasmim asati idaṃ na hoti; imassa nirodhā idaṃ nirujjhati**" - this being, that becomes; from the arising of this, that arises; this not being, that is not; from the cessation of this, that ceases.
- FACT: It is not merely a cosmological thesis. It is the key to the arising of **suffering (duḥkha)** and therefore the key to its cessation.

1.2 The Four Noble Truths as the frame

- FACT: Buddhism states the problem first: **suffering (duḥkha)**.
- FACT: It then identifies a causal structure: suffering (duḥkha) has an origin.
- FACT: Because the origin is conditioned, it can cease.
- FACT: Therefore a path is possible.
- ANALYSIS: So dependent origination is the philosophical grammar of the Four Noble Truths. The first truth states the fact of suffering; the second gives its dependent arising; the third gives dependent cessation; the fourth is the practical discipline for breaking the chain.

1.3 The twelve nidānas in order

- FACT: The classical chain of dependent origination is expressed through the **dvādaśa-nidāna** sequence:
 1. **ignorance (avidyā)** - ignorance
 2. **saṃskāra** - formations/dispositions
 3. **vijñāna** - consciousness
 4. **nāma-rūpa** - name-and-form
 5. **ṣaḍāyatana** - six sense-bases
 6. **sparśa** - contact
 7. **vedanā** - feeling
 8. **tṛṣṇā** - craving
 9. **upādāna** - clinging/grasping
 10. **bhava** - becoming/existence
 11. **jāti** - birth
 12. **jarā-maraṇa** - old age and death
- FACT: In visual Buddhist pedagogy, this sequence is often represented through the **bhava-cakra** (wheel of becoming), showing how ignorance and craving keep cyclic existence in motion.

1.4 Argument structure

1. FACT: What is experienced is not self-grounding; it occurs only in dependence.
2. FACT: If a thing were self-existent by its own nature, it would not depend on conditions.
3. FACT: But all conditioned phenomena arise and cease in dependence on conditions.
4. FACT: Therefore conditioned phenomena are neither eternal substances nor sheer nothingness; they are dependent processes.
5. ANALYSIS: The existential point is that suffering too is a process, not a metaphysical fate. Therefore it is removable.

1.5 Presupposition

- ANALYSIS: The doctrine presupposes that explanation should be sought through **conditional relations**, not through a static substratum like enduring self (ātman) or Brahman and not through a creator-God standing outside

the chain.

- ANALYSIS: It also presupposes that what matters philosophically is not an absolutely first beginning but the structure by which bondage is maintained here and now.

1.6 Distinction: Middle Path (madhyamā pratipad) between extremes

- FACT: Buddhism presents dependent origination as the **Middle Path (madhyamā pratipad)** between:
 - **eternalism (śāśvatavāda)** - eternalism: some enduring self/substance exists unchanged.
 - **annihilationism (ucchedavāda)** - annihilationism: things are sheer nullities or persons are simply obliterated without causal continuity.
- ANALYSIS: Why is this a middle? Because Buddhism denies permanent substance, yet it also denies that phenomena are sheer nothing. What exists does so dependently.

1.7 Example

- ANALYSIS: A flame persists only because wick, oil, oxygen and ignition remain coordinated. Remove the conditions and the flame ceases. Yet the flame is not absolutely unreal while it burns. This approximates dependent origination better than the language of substance.

1.8 Objection

- CAUTION: If everything depends on something else, does Buddhism explain nothing ultimately? Does it create an infinite regress of conditions?

1.9 Reply

- FACT: Buddhism need not posit an unconditioned substance to make conditioning intelligible. Its primary concern is soteriological: to show that suffering is conditioned and therefore stoppable.
- ANALYSIS: UPSC answers should stress that dependent origination is not a failed search for a first cause; it is a diagnosis of dependent becoming.

1.10 How momentariness follows from dependent origination

- FACT: What depends on conditions cannot remain numerically identical through all times, because it changes with the rise and fall of those conditions.
- FACT: Therefore what is conditioned is **anitya** (impermanent); Buddhist logicians radicalize this into **momentariness (kṣaṇikavāda)**, according to which what is real is momentary.
- ANALYSIS: Thus a 2019-style answer can move from dependent origination (pratītyasamutpāda) to momentariness (kṣaṇikavāda) by arguing: the dependently arisen has no independent enduring essence; it is event-like, not substance-like.

1.11 How 2024's "everything is void" and "everything is real" both arise from dependent origination (pratītyasamutpāda)

(a) Mādhyamika: dependent origination implies emptiness

- FACT: Nāgārjuna's central move is that what arises dependently cannot possess **intrinsic nature (svabhāva)** (self-being/own-nature).
- FACT: Therefore all dharmas are **śūnya** - empty of independent essence.
- FACT: In substance, Nāgārjuna identifies dependent origination and emptiness: what is dependently arisen is what is called empty.
- ANALYSIS: This does **not** mean sheer non-being; it means lack of intrinsic, self-subsistent reality.

(b) Vaibhāṣika / Sautrāntika: dependent origination implies conditioned reality

- FACT: The realist Buddhist schools agree that things arise dependently.
- FACT: But instead of inferring emptiness of all dharmas in the Mādhyamika sense, they say: precisely because things arise causally, they are **real as conditioned entities**.
- FACT: Vaibhāṣika treats dharmas as real and directly knowable; Sautrāntika treats them as real though not directly perceived externally.
- ANALYSIS: Thus the same causal thesis can support two ontological emphases: absence of self-nature, or reality of conditioned events.

(c) Distinguishing the two conclusions

School move	What is denied	What is affirmed
Mādhyaṃika	intrinsic nature (svabhāva)	conventional dependent existence
Vaibhāṣika / Sautrāntika	eternal substance and self	reality of conditioned dharmas

1.12 Cessation and knowledge

- FACT: Ignorance of dependent origination is bondage; insight into it is release.
- ANALYSIS: Therefore the 2023 question - ignorance of dependent origination is suffering while its knowledge is cessation - should be answered not as a mere epistemic slogan, but as a claim that wrong metaphysical grasping fuels craving and hence suffering.

LAYER 4 - EXAM APPLICATION

Exam route

- **2018 Q5(b), 10 marks:** derive *emptiness* (*śūnyatā*) from dependent origination without equating emptiness with non-being.
- **2019 Q7(c), 15 marks** and **2020 Q6(a), 20 marks:** show how dependence and causal change lead to momentariness.
- **2023 Q8(a), 20 marks:** connect ignorance of the chain to suffering and insight into the chain to cessation.
- **2024 Q6(b), 15 marks:** compare the realist and Mādhyaṃika conclusions from the same causal doctrine.

LAYER 5 - RAPID REVISION

Rapid recall

- Standard pattern: this being, that arises; this ceasing, that ceases.
- Twelve links run from ignorance to ageing and death.
- *Dependent origination* (*pratītyasamutpāda*) is causal, existential and soteriological.
- Middle Path (*madhyamā pratipad*): causal continuity without permanent substance.
- Trap: dependent origination is not fatalism; conditions can be altered.

LAYER 1 - SIMPLE START

Plain-language visual - the flame is a stream of events

flame 1 -> flame 2 -> flame 3
 similar and causally connected
 but not one numerically unchanged flame

continuity = series, not permanent substance

In simple words: what looks like one lasting thing may be a rapidly connected sequence. Each moment performs its causal work and gives rise to the next.

Term	Easy meaning
<i>Momentariness</i> (<i>kṣaṇikavāda</i>)	Conditioned reality is momentary
<i>Causal efficacy</i> (<i>arthakriyā</i>)	Capacity to produce an effect
<i>Causal continuum</i> (<i>santāna</i>)	Causal continuum
Recognition	Similarity within a stream, according to Buddhism

Memory line: what is real acts; what acts does so in a changing causal moment.

LAYER 2 - CORE UPSC

CLOSING RECALL FLOW - DEPENDENT ORIGINATION AND THE FOUR NOBLE TRUTHS

SUBTOPIC CLOSURE FLOW | DEPENDENT ORIGINATION AND THE FOUR NOBLE TRUTHS

1. KEY TERMS / DEFINITIONS

dependent origination
(pratītyasamutpāda) · twelve links
(dvādaśa-nidāna) · ignorance (avidyā)
· craving (trṣṇā) · cessation (nirodha) ·
Four Noble Truths

2. MECHANISM / ARGUMENT

Buddhism states the problem first:
suffering (duḥkha). FACT: It then

3. CONSEQUENCE / CONTRAST

Its primary concern is soteriological: to
show that suffering is

4. UPSC TRAP / ANSWER-USE

Dependent origination
(pratītyasamutpāda) means dependent
origination:

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: dependent origination (pratītyasamutpāda) is the principle that phenomena arise and cease in dependence on conditions, rejecting both eternalism and causeless annihilationism.

SESSION 3 - MOMENTARINESS, CAUSAL EFFICIENCY AND CONTINUITY

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Momentariness (kṣaṇikavāda) (doctrine of momentariness) holds that whatever is causally efficient exists only momentarily, because a permanent entity could neither change its causal power nor produce genuinely successive effects.

Technical definition: Buddhist momentariness links reality to moment-specific causal efficacy and explains continuity through succession, not through a numerically identical permanent substance.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Momentariness (kṣaṇikavāda) (doctrine of momentariness) holds that whatever is causally efficient exists only momentarily, because a permanent entity could neither change its causal power nor produce genuinely successive effects.

MUST-WRITE KEYWORDS

- **momentariness (kṣaṇikavāda)**
- **causal efficacy (arthakriyā)**
- **causal series**
- **continuity**
- **memory**
- **permanent substance**

How to use them: Derive momentariness from causal efficacy, then answer the continuity objection through an ordered causal series rather than an enduring substratum.

CORE DEFINITION: Momentariness (kṣaṇikavāda) (doctrine of momentariness) holds that whatever is causally efficient exists only momentarily, because a permanent entity could neither change its causal power nor produce genuinely successive effects.

2.1 Statement

- FACT: **Momentariness (kṣaṇikavāda)** holds that whatever is real is momentary.
- FACT: A standard scholastic formulation runs in substance as: **whatever is truly real is momentary (satṭve satyeva kṣaṇikatvam)**.
- ANALYSIS: The doctrine is not that nothing exists; it is that reality is evental rather than substantial.

2.2 Argument from causal efficiency (arthakriyākāritva)

Statement

- FACT: **Causal efficacy (arthakriyā)** (causal efficacy / capacity to perform a function) is the Buddhist pramāṇa-school criterion of the real: **sat = arthakriyā-samartha** - the real is what is capable of producing an effect.
- FACT: **Momentariness (kṣaṇikavāda)** follows because whatever is causally effective must be moment-specific; a wholly permanent entity cannot explain why an effect appears now rather than always.

- ANALYSIS: This is the bridge between Buddhist epistemology and ontology: the same test that ranks **svalakṣaṇa** (unique particular) as ultimately real also grounds the thesis **yat sat tat kṣaṇikam** - whatever is real is momentary.

Argument

1. FACT: To be real is to be causally efficacious; an entity that makes no difference is indistinguishable from a non-entity for Buddhist analysis.
2. FACT: Causal efficacy must occur either **simultaneously** or **successively**.
3. FACT: If a permanent entity produces its effect all at once, nothing remains for later production; this is the **yaugapadya** (simultaneity) horn.
4. FACT: If it produces effects successively, then it functions differently at different moments; what functions differently is not wholly permanent. This is the **krama** (succession) horn.
5. FACT: If Nyāya says it acts only when auxiliary conditions (**sahakārin**, helper-conditions) are present, the Buddhist reply is the **sahakāri-anapekṣā** dilemma: either the permanent thing already has the power and does not need auxiliaries, or the decisive causal power lies in the changing auxiliaries rather than in the permanent thing.
6. FACT: Therefore a permanent entity cannot coherently be causally efficient.
7. FACT: Therefore whatever is real is momentary: **yat sat tat kṣaṇikam**.

Presupposition

- ANALYSIS: The argument presupposes a pragmatic-realist criterion: reality is not inert self-identity but effect-producing capacity.
- ANALYSIS: It also presupposes that a single unchanged entity cannot have genuinely different causal profiles at different times without ceasing to be unchanged.

Distinction

Issue	FACT: Buddhist logician	FACT: Nyāya-Vaiśeṣika opponent
Test of reality	FACT: causal efficacy (arthakriyā)	FACT: substance, quality, action, universal, inherence and absence as categories
Enduring thing	FACT: only a conventional series	FACT: real substance enduring through changing qualities
Effect at different times	FACT: requires momentary causal phases	FACT: explained by auxiliary conditions acting on an enduring substance

Example

- ANALYSIS: A seed is real because it can issue in a sprout. But the seed that has exercised that precise sprout-producing capacity is no longer the same causal phase; the series has advanced.

Objection - Nyāya (Vātsyāyana / Uddyotakara / Udayana line)

- FACT: Nyāya asks: why can a permanent substance not act at one time because relevant auxiliary conditions are then present?
- FACT: Nyāya also uses **pratyabhijñā** (recognition - "this is that same jar"), memory and moral desert to argue that enduring substances and selves are required.

Reply - Buddhist logicians

- FACT: The Buddhist reply is that if the permanent thing remains wholly unchanged, then the decisive factor lies elsewhere; its own efficacy is redundant.
- FACT: Recognition is explained through **sādrśya** (similarity) within a causal stream, not strict numerical identity.
- FACT: Memory and desert are explained through **causal continuum (santāna)** / **causal continuum (santāna)**, **with** store-consciousness (**ālaya-vijñāna**) **and** **bīja**** (seeds) supplying the Yogācāra version of the continuity device.
- ANALYSIS: The Nyāya rejoinder retains force: a mere series seems unable to own memories or deserts unless something owns the series.

2.3 Argument from destruction (vināśītvānumāna / kṣaṇabhaṅga line)

- FACT: Another line of reasoning holds that destruction does not require a second, separate destroyer added from outside.
- FACT: The very nature of the conditioned is to perish; arising already contains ceasing.
- ANALYSIS: Hence things are not first fully stable entities and later destroyed; their transience belongs to what they are.

2.4 Apparent continuity: causal continuum (santāna)

- FACT: If everything is momentary, why does the world look continuous?
- FACT: Buddhism answers through **causal continuum (santāna)** - a causal series or stream.
- FACT: Each moment gives rise to the next sufficiently similar moment, producing the appearance of persistence.
- FACT: Standard illustrations are a **flame** or a **stream**: continuity without strict identity.

2.5 Memory and personal identity under momentariness (2021)

Objection - Nyāya (Vātsyāyana / Uddyotakara / Udayana line)

- FACT: If every mental state perishes instantly, then who remembers a past event?
- FACT: If the rememberer is numerically different from the experiencer, how can there be personal identity or moral responsibility?

Buddhist replies

1. FACT: **Causal continuum (santāna)**: memory belongs to the same causal stream, not to a permanent self.
2. FACT: **Pratisandhāna**: reconnection/relinking explains continuity across moments and lives.
3. FACT: **Store-consciousness (ālaya-vijñāna)** in Yogācāra: a store-consciousness carries latent impressions (**bīja**, seeds), explaining the preservation of karmic and mnemonic potential.

Philosophical point

- ANALYSIS: The Buddhist answer is deliberately middle-path: the later subject is neither strictly the same nor wholly other than the earlier one.

2.6 Action and moral consequence (karma) without a self (2022)

Problem

- FACT: Action and moral consequence (karma) seems to require a persisting moral subject: the doer should receive the fruit.

Buddhist answer

- FACT: The stream receives the fruit of what the earlier stream-stage performed.
- FACT: The relation is **neither identity nor utter difference**.
- ANALYSIS: If it were strict identity, Buddhism would collapse into eternalism; if it were total difference, responsibility would collapse. The doctrine of series protects moral continuity without substantial selfhood.

2.7 Example

- ANALYSIS: One lamp lights another. The second flame is not numerically the first, yet it is causally connected to it. Rebirth and karmic fruition are often explained analogically in this way.

2.8 Objection - Nyāya pratyabhijñā argument

- CAUTION: Recognition such as "this is the same person I met before" appears to require enduring identity, not merely stream-likeness.

2.9 Reply

- FACT: Buddhism can say recognition tracks practical continuity and similarity within a series, not metaphysical identity of a substance.
- ANALYSIS: The language of sameness belongs to conventional truth; ultimate analysis reveals only a flow of conditioned moments.

LAYER 4 - EXAM APPLICATION

Exam route

- Reconstruct *causal efficacy* (*arthakriyā*) before stating momentariness.
- Use the simultaneity/succession dilemma and address auxiliary conditions.
- **2021 Q7(b), 15 marks:** explain memory and identity through causal continuity, similarity and seeds, then concede the ownership objection.
- **2022 Q6(a), 20 marks:** apply the same stream model to action and moral consequence (karma) and moral continuity.

LAYER 5 - RAPID REVISION

Rapid recall

- Formula: whatever is real is momentary.
- Reality test: causal efficacy.
- Two horns for a permanent cause: simultaneous effects or changing succession.
- Continuity device: *causal continuum* (*santāna*)/*causal continuum* (*santāna*), not permanent identity.
- Trap: momentariness does not mean causal disconnectedness.

LAYER 1 - SIMPLE START

Plain-language visual - person as an organised process

BODY + FEELING + RECOGNITION
 + DISPOSITIONS + CONSCIOUSNESS
 |
 v
 conventionally called "person"

No extra permanent owner is found.

In simple words: Buddhism does not deny everyday persons. It denies an additional unchanging self behind the five aggregates. The person is a dependently organised causal process.

Aggregate	Easy meaning
<i>Rūpa</i>	Material form
<i>Vedanā</i>	Feeling
<i>Samjñā</i>	Recognition or designation
<i>Samskāra</i>	Dispositions and formations
<i>Vijñāna</i>	Consciousness

Memory line: conventional personhood remains; permanent substance-self is rejected.

LAYER 2 - CORE UPSC

CLOSING RECALL FLOW - MOMENTARINESS, CAUSAL EFFICIENCY AND CONTINUITY

SUBTOPIC CLOSURE FLOW | MOMENTARINESS, CAUSAL EFFICIENCY AND CONTINUITY

1. KEY TERMS / DEFINITIONS momentariness (<i>kṣaṇikavāda</i>) · causal efficacy (<i>arthakriyā</i>) · causal series · continuity · memory · permanent substance	2. MECHANISM / ARGUMENT The Buddhist reply is that if the permanent thing remains wholly	3. CONSEQUENCE / CONTRAST Causal continuum (<i>santāna</i>): memory belongs to the same causal stream,	4. UPSC TRAP / ANSWER-USE Causal efficacy (<i>arthakriyā</i>) (causal efficacy / capacity to perform a
---	--	--	--

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Momentariness (*kṣaṇikavāda*) (doctrine of momentariness) holds that whatever is causally efficient exists only momentarily, because a permanent entity could neither change its causal power nor produce genuinely successive effects.

SESSION 4 - NO-SELF, THE FIVE AGGREGATES (skandhas) AND CESSATION OF CONDITIONED SUFFERING (nirvāṇa)

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Buddhism treats the person as a dependently organised aggregate-process and liberation as the cessation of the causes of suffering, not as the release of a permanent self.

Technical definition: The no-self doctrine denies an independently existing ātman beyond the five aggregates, while nirvāṇa names the cessation of craving, ignorance and their conditioned suffering-series.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

No permanent self (nairātmyavāda) (no-self doctrine) denies an eternal enduring self (ātman) (self) and explains the person as a dependently ordered continuum of five aggregates (skandhas) (aggregates), preserving conventional identity without a permanent substance.

MUST-WRITE KEYWORDS

- no permanent self (anātman)
- five aggregates (skandhas)
- dependent designation
- appropriation
- cessation of suffering (nirvāṇa)
- ownerless process

How to use them: Analyse the person into five aggregates, deny an additional owner, and explain nirvāṇa as cessation of ignorance and craving rather than a state possessed by an eternal soul.

CORE DEFINITION: No permanent self (nairātmyavāda) (no-self doctrine) denies an eternal enduring self (ātman) (self) and explains the person as a dependently ordered continuum of five aggregates (skandhas) (aggregates), preserving conventional identity without a permanent substance.

3.1 Statement

- FACT: **No permanent self (nairātmyavāda)** or **no permanent self (nairātmyavāda)** denies a permanent, unchanging enduring self (ātman) behind experience.
- FACT: What is conventionally called a person is only an aggregate of changing factors.

3.2 The five aggregates (skandhas)

- FACT: The person is analysed into five **aggregates (skandhas)**:
 1. **rūpa** - form/material body
 2. **vedanā** - feeling/sensation
 3. **saṃjñā** - perception/recognition
 4. **saṃskāra** - dispositions/formations
 5. **vijñāna** - consciousness
- ANALYSIS: The philosophical force of the doctrine lies in exhaustive analysis: if what we call self reduces to these aggregates and no extra owner is found, the self is a conceptual imputation, not an independently real substance.

3.3 Chariot analogy (Milinda-pañha)

- FACT: The classic **chariot analogy** argues that "chariot" is merely a name for the arrangement of axle, wheels, yoke and other parts.
- FACT: Likewise, "person" is a conventional designation for the aggregate of aggregates (skandhas).
- ANALYSIS: The point is not that the person is uselessly unreal. It is that the person is conventionally valid but not ultimately self-subsistent.

3.4 Pudgala-nairātmya and dharma-nairātmya (2021)

Pudgala-nairātmya

- FACT: Denial of a permanent personal self (**pudgala**, person).
- FACT: This is the minimum no-self thesis common to Buddhism.

Dharma-nairātmya

- FACT: Denial that even dharmas possess intrinsic self-nature.
- FACT: This is developed most strongly in Mahāyāna, especially Mādhyamika.

School difference

- FACT: **Hīnayāna / early realist schools**: primarily affirm **pudgala-nairātmya**; dharmas are treated as real.
- FACT: **Mahāyāna**: affirms both **pudgala-nairātmya** and **dharma-nairātmya**; neither person nor dharma has intrinsic nature (svabhāva).

Distinction table

Thesis	What is denied	Who strongly stresses it
Pudgala-nairātmya	enduring person/self	all Buddhism
Dharma-nairātmya	intrinsic nature of dharmas	Mahāyāna, especially Mādhyamika

3.5 The Puggalavāda foil

- FACT: Some Buddhist groups, often associated with the **Vātsīputrīyas**, proposed a **pudgala** that is neither the same as nor different from the aggregates (skandhas).
- FACT: Mainstream Buddhists criticized this as a relapse toward self-theory.
- ANALYSIS: In answers, use Puggalavāda as a foil: it shows that the pressure to preserve moral continuity was real, but orthodox Buddhist thought refused to answer it by reintroducing a substantial person.

3.6 Triratna and no-self (2022)

Problem

- FACT: If there is no self, who takes refuge in the **Triratna** - Buddha, Dharma, Saṅgha?

Reply

- FACT: Buddhism can answer: the refuge-taker is the **conventional person**, a **prajñapti-puruṣa** or designated person, not an ultimately real soul.
- FACT: Ethical and spiritual practice proceeds at the level of conventional truth without requiring metaphysical enduring self (ātman).
- ANALYSIS: Thus anātman does not abolish discipline; it purifies it of ego-metaphysics.

3.7 Cessation of conditioned suffering (nirvāṇa)

- FACT: **Cessation of conditioned suffering (nirvāṇa)** is the cessation of suffering and the extinguishing of the three fires: **rāga** (attachment), **dveṣa** (aversion), and **moha** (delusion).
- FACT: It is not best understood as a substantial place or eternal self-state gained by an entity.
- ANALYSIS: It is the cessation of the very process that produces bondage.

3.8 Is cessation of conditioned suffering (nirvāṇa) consistent with momentariness (kṣaṇikavāda) and no permanent self (nairātmyavāda)? (2025)

Objection - Śaṅkara-type Advaita and Nyāya realist

- FACT: If there is no self, who attains cessation of conditioned suffering (nirvāṇa)?
- FACT: If everything is momentary, what persists in liberation?

Reply

1. FACT: The question "who attains?" assumes the very self Buddhism rejects.
2. FACT: Cessation of conditioned suffering (nirvāṇa) is not an entity possessed by a soul.
3. FACT: It is the cessation of craving, ignorance and the suffering-series grounded in them.

4. ANALYSIS: So consonance exists: no-self removes the false claimant to liberation; momentariness explains why the chain can in fact cease.

Theravāda and Mahāyāna nuance

- FACT: **Theravāda**: emphasizes individual **nibbāna** and the arhat ideal.
- FACT: **Mahāyāna**: emphasizes the bodhisattva ideal and universal liberation.
- FACT: In Nāgārjuna's radical language, **cycle of rebirth (saṃsāra) and cessation of conditioned suffering (nirvāṇa) are not two independent realms**; the difference lies in how dependent reality is grasped.

LAYER 4 - EXAM APPLICATION

Exam route

- **2018 Q6(b), 15 marks** and **2025 Q8(c), 15 marks**: establish compatibility by distinguishing cessation of process from destruction of a permanent self.
- **2020 Q7(b), 15 marks**: use the five aggregates and chariot analogy, then define liberation without importing Vedānta.
- **2021 Q5(d), 10 marks**: distinguish personal no-self from Mahāyāna's no-self of dharmas.
- **2022 Q7(b), 15 marks**: explain how the three jewels guide a path without presupposing an eternal practitioner.

LAYER 5 - RAPID REVISION

Rapid recall

- Five aggregates, no sixth permanent owner.
- *Pudgala-nairātmya*: no substantial person.
- *Dharma-nairātmya*: no intrinsic nature in dharmas.
- Action and moral consequence (karma) continues through a causal stream.
- Cessation of conditioned suffering (nirvāṇa) is cessation without an eternal possessor.

LAYER 1 - SIMPLE START

Plain-language visual - four answers to what is ultimately real

VAIBHASIKA : external dharmas directly known
 SAUTRANTIKA : external dharmas inferred from representations
 YOGACARA : cognitive process, not independent external object
 MADHYAMIKA : no dharma has intrinsic self-nature

In simple words: the schools share impermanence and no-self but disagree about external objects, consciousness and the ultimate status of dharmas.

School	Recall label
Vaibhāṣika	Direct realism
Sautrāntika	Representational or inferential realism
Yogācāra	Consciousness-only analysis
Mādhyamika	Emptiness of intrinsic nature

Memory line: direct object -> inferred object -> cognition-only -> emptiness of every fixed position.

LAYER 2 - CORE UPSC

CLOSING RECALL FLOW - NO-SELF, THE FIVE AGGREGATES (skandhas) AND CESSATION OF CONDITIONED SUFFERING (nirvāṇa)

SUBTOPIC CLOSURE FLOW | NO-SELF, THE FIVE AGGREGATES (skandhas) AND CESSATION OF CONDITIONED SUFFERING (nirvāṇa)

1. KEY TERMS / DEFINITIONS

no permanent self (anātman) · five aggregates (skandhas) · dependent designation · appropriation · cessation of suffering (nirvāṇa) · ownerless process

2. MECHANISM / ARGUMENT

The question "who attains?" assumes the very self Buddhism rejects. FACT:

3. CONSEQUENCE / CONTRAST

The person is analysed into five aggregates (skandhas) rūpa -

4. UPSC TRAP / ANSWER-USE

The classic chariot analogy argues that "chariot" is merely a name for

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: No permanent self (nairātmyavāda) (no-self doctrine) denies an eternal enduring self (ātman) (self) and explains the person as a dependently ordered continuum of five aggregates (skandhas) (aggregates), preserving conventional identity without a permanent substance.

SESSION 5 - VAIBHĀṢIKA AND SAUTRĀNTIKA REALISMS

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: ANALYSIS: Vaibhāṣika preserves Buddhist anti-self doctrine while still maintaining a robust realism about dharmas. ANALYSIS: It is therefore a useful contrast both to Yogācāra idealism and to Mādhyamika anti-essentialism.

Technical definition: FACT: Usually associated with Sarvāstivāda realism. FACT: Holds bāhya-pratyakṣa-vāda: external objects are directly perceived. FACT: Affirms sarvam asti in the technical sense that dharmas of past, present and future have some mode of existence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Vaibhāṣika and Sautrāntika remain external realists, but they divide over whether momentary objects are directly perceived or inferred from their mental representations.

MUST-WRITE KEYWORDS

- Vaibhāṣika
- Sautrāntika
- external realism
- direct realism
- representationalism
- momentary particulars

How to use them: Contrast Vaibhāṣika direct realism with Sautrāntika representationalism on whether external momentary particulars are perceived or inferred from cognitive images.

EXAM-READY LINE: The four-school debate moves from Vaibhāṣika (Abhidharma realist school) and Sautrāntika (Sūtra-based representationalist school) to Yogācāra (yoga-practice consciousness-centred school) and Mādhyamika (Middle Way emptiness school), progressively questioning what can count as ultimately real.

4.1 Vaibhāṣika

- FACT: Usually associated with **Sarvāstivāda** realism.
- FACT: Holds **bāhya-pratyakṣa-vāda**: external objects are directly perceived.
- FACT: Affirms **sarvam asti** in the technical sense that dharmas of past, present and future have some mode of existence.

Philosophical significance

- ANALYSIS: Vaibhāṣika preserves Buddhist anti-self doctrine while still maintaining a robust realism about dharmas.
- ANALYSIS: It is therefore a useful contrast both to Yogācāra idealism and to Mādhyamika anti-essentialism.

4.2 Sautrāntika

- FACT: Holds **bāhyānumeya-vāda**: external objects exist, but are known only inferentially through mental representations.
- FACT: Rejects the Sarvāstivāda thesis that past and future dharmas exist in the same sense as present ones.

- FACT: Strongly privileges the present moment.

Distinction from Vaibhāṣika

Issue	Vaibhāṣika	Sautrāntika
External object	real	real
How known	directly perceived	inferentially known via representation
Temporal ontology	past-present-future dharmas exist	only present dharmas fully exist

CLOSING RECALL FLOW - VAIBHĀṢIKA AND SAUTRĀNTIKA REALISMS

SUBTOPIC CLOSURE FLOW VAIBHĀṢIKA AND SAUTRĀNTIKA REALISMS			
1. KEY TERMS / DEFINITIONS Vaibhāṣika · Sautrāntika · external realism · direct realism · representationalism · momentary particulars	2. MECHANISM / ARGUMENT Holds bāhyānumeya-vāda: external objects exist, but are known only	3. CONSEQUENCE / CONTRAST Vaibhāṣika preserves Buddhist anti-self doctrine while still	4. UPSC TRAP / ANSWER-USE Do not miss this limiting distinction: FACT: Usually associated with
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Vaibhāṣika and Sautrāntika remain external realists, but they divide over whether momentary objects are directly perceived or inferred from their mental representations.			

SESSION 6 - YOGĀCĀRA, CONSCIOUSNESS-ONLY AND THE THREE NATURES

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: FACT: Yogācāra advances vijñaptimātra or consciousness-only. FACT: What appears as external object is inseparable from modes of consciousness.

Technical definition: FACT: parikalpita-svabhāva - imagined nature FACT: paratantra-svabhāva - dependent nature FACT: pariniṣpanna-svabhāva - perfected/consummate nature ANALYSIS: These explain how deluded objectification arises and how it is overcome.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Yogācāra's consciousness-only thesis denies an independently established object opposed to cognition, not the occurrence of experience or the causal discipline of awakening.

MUST-WRITE KEYWORDS

- consciousness-only (vijñaptimātra)
- store-consciousness (ālaya-vijñāna)
- seeds (bīja)
- imagined nature
- dependent nature
- perfected nature

How to use them: Use the three natures to distinguish constructed subject-object duality from dependent cognitive flow and its perfected apprehension as empty of that duality.

Statement

- FACT: Yogācāra advances **vijñaptimātra** or consciousness-only.
- FACT: What appears as external object is inseparable from modes of consciousness.

Key doctrine: store-consciousness (ālaya-vijñāna)

- FACT: The store-consciousness (ālaya-vijñāna) preserves karmic seeds (**bījas**), explaining continuity, memory and rebirth without a permanent self.

Arguments against external realism

1. FACT: **Dream argument:** dream-objects are vividly experienced despite lacking corresponding external objects; therefore experienced objecthood does not prove external independent matter.
2. FACT: **Atom critique:** if atoms are partless, they cannot combine spatially; if they have parts, they are not ultimate atoms. Hence external atomism is unstable.

Tri-svabhāva (three natures)

- FACT: **parikalpita-svabhāva** - imagined nature
- FACT: **paratantra-svabhāva** - dependent nature
- FACT: **pariṇiṣpanna-svabhāva** - perfected/consummate nature
- ANALYSIS: These explain how deluded objectification arises and how it is overcome.

CLOSING RECALL FLOW - YOGĀCĀRA, CONSCIOUSNESS-ONLY AND THE THREE NATURES

SUBTOPIC CLOSURE FLOW YOGĀCĀRA, CONSCIOUSNESS-ONLY AND THE THREE NATURES			
1. KEY TERMS / DEFINITIONS consciousness-only (vijñaptimātra) · store-consciousness (ālaya-vijñāna) · seeds (bīja) · imagined nature · dependent nature · perfected nature	2. MECHANISM / ARGUMENT parikalpita-svabhāva - imagined nature FACT: paratantra-svabhāva - dependent	3. CONSEQUENCE / CONTRAST Dream argument: dream-objects are vividly experienced despite lacking	4. UPSC TRAP / ANSWER-USE Do not miss this limiting distinction: FACT: Yogācāra advances vijñaptimātra
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Yogācāra's consciousness-only thesis denies an independently established object opposed to cognition, not the occurrence of experience or the causal discipline of awakening.			

SESSION 7 - MĀDHYAMAKA, EMPTINESS, TWO TRUTHS AND CATUṢKOṬI

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Madhyamaka denies intrinsic nature in every phenomenon while retaining conventionally valid relations, practices and arguments as dependently established.

Technical definition: FACT: Associated especially with Nāgārjuna. FACT: The central thesis is emptiness (śūnyatā): absence of intrinsic nature (svabhāva) (intrinsic nature / own-being), not sheer nothingness. FACT: In substance, Nāgārjuna identifies dependent origination and emptiness: what is dependently arisen is empty of independent essence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Emptiness does not abolish conventional reality; it denies that conventionally functioning things possess independent intrinsic nature beyond their dependent relations.

MUST-WRITE KEYWORDS

- Middle Way (Madhyamaka)
- emptiness (śūnyatā)
- intrinsic nature (svabhāva)
- two truths
- four-cornered negation (catuṣkoṭi)
- dependent designation

How to use them: Show that dependent origination entails emptiness of intrinsic nature, while the two truths preserve conventional functioning against the charge of nihilism.

Statement

- FACT: Associated especially with **Nāgārjuna**.
- FACT: The central thesis is emptiness (śūnyatā): absence of **intrinsic nature (svabhāva)** (intrinsic nature / own-being), not sheer nothingness.
- FACT: In substance, Nāgārjuna identifies dependent origination and emptiness: what is dependently arisen is empty of independent essence.

Catuṣkoṭi - the four corners

Corner	Sanskrit	FACT: Basic claim
1	asti	FACT: It is.
2	nāsti	FACT: It is not.
3	asti ca nāsti ca	FACT: It both is and is not.
4	naivāsti naiva nāsti	FACT: It neither is nor is not.

- FACT: **Early / Nikāya use:** the avyākata / avyākṛta questions are often framed through four alternatives, and all four are set aside because they do not conduce to liberation and rest on misleading presuppositions.
- FACT: **Madhyamaka use:** Nāgārjuna negates all four alternatives when they are applied to things imagined as possessing **intrinsic nature (svabhāva)**.
- ANALYSIS: Thus the early use is primarily therapeutic and soteriological; the Madhyamaka use is also logical-ontological, because it exposes the incoherence of intrinsic nature.

Crucial logical nuance - why this is not simple contradiction

- FACT: Madhyamaka negation is best read as **prasajya-pratiṣedha** (non-implicative / commitment-free negation), not **paryudāsa-pratiṣedha** (implicative negation that asserts a positive alternative).
- FACT: The four corners are denied **of things taken as having intrinsic nature (svabhāva)**; once intrinsic nature (svabhāva) is dropped, the denial does not install a fifth positive thesis.
- FACT: Hence Nāgārjuna can claim, in the spirit of the *Vigrahavyāvartanī*, that he has no independent **pratijñā** (thesis) of his own.
- ANALYSIS: This means: "I deny that x has intrinsic nature" is not meant to assert a new metaphysical substrate called emptiness.

Two truths as the anti-nihilist frame

Truth	FACT: Meaning	ANALYSIS: Exam use
saṃvṛti-satya	FACT: Conventional truth: language, persons, action and moral consequence (karma), compassion and practice function dependently.	ANALYSIS: Prevents Madhyamaka from abolishing ordinary discourse.
paramārtha-satya	FACT: Ultimate truth: no dharma possesses intrinsic nature (svabhāva).	ANALYSIS: Prevents conventional truth from being mistaken for substance.

- FACT: Conventional truth is not mere falsehood; it is the domain within which practical life and Buddhist discipline function.
- FACT: Ultimate truth is insight into the emptiness of all reified positions.
- FACT: Nāgārjuna warns that emptiness wrongly grasped destroys the dull-witted, like a snake wrongly seized.
- ANALYSIS: The two-truths doctrine keeps catuṣkoṭi from collapsing into nihilism: conventional functioning is preserved, ultimate intrinsic being is denied.

Objection - Nyāya / Uddyotakara-type and modern irrationalism charge

- FACT: The opponent says: if all four alternatives are denied, the Mādhyamika either says nothing or contradicts himself.
- FACT: The opponent adds: the denial itself is a thesis, so the claim "I have no thesis" is self-refuting.

Reply - Nāgārjuna and later Madhyamaka

- FACT: Nāgārjuna's reply is the "my words are empty too" move: his statements do not possess intrinsic nature (svabhāva) and therefore do not create a positive ontological commitment.
- FACT: The traditional image is that one magically created person (**nirmitaka**) may counteract another magically created person; similarly, empty words may cure empty reifications.
- FACT: The Mādhyamika uses arguments as medicine, not as a new metaphysical substance.
- ANALYSIS: Whether this reply fully succeeds is genuinely debated.

- CAUTION: The **Prāsaṅgika / Svātantrika** split marks this debate internally: **Candrakīrti** is associated with using reductio (**prasaṅga**) without independent syllogisms, while **Bhāvaviveka** allows independent (**svatantra**) inferences in debate.

Emptiness (śūnyatā) is not nihilism

- FACT: To say things are empty is to say they lack **intrinsic nature (svabhāva)**.
- FACT: It is not to say they are absent in every sense.
- FACT: Since conventional truth remains operative, compassion, action and moral consequence (karma) and the path are not denied.
- ANALYSIS: Emptiness undercuts metaphysical grasping, not dependent functioning.

CLOSING RECALL FLOW - MĀDHYAMAKA, EMPTINESS, TWO TRUTHS AND CATUṢKOṬI

SUBTOPIC CLOSURE FLOW MĀDHYAMAKA, EMPTINESS, TWO TRUTHS AND CATUṢKOṬI			
1. KEY TERMS / DEFINITIONS Middle Way (Madhyamaka) · emptiness (śūnyatā) · intrinsic nature (svabhāva) · two truths · four-cornered negation (catuṣkoṭi) · dependent designation	2. MECHANISM / ARGUMENT Early / Nikāya use: the avyākata / avyākṛta questions are often framed	3. CONSEQUENCE / CONTRAST To say things are empty is to say they lack intrinsic nature	4. ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Emptiness does not abolish conventional reality; it denies that conventionally functioning things possess independent intrinsic nature beyond their dependent relations.			

SESSION 8 - CREATOR-GOD CRITIQUE AND INTERNAL SCHOOL DISPUTES

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: ANALYSIS: Buddhist critique is not mere atheistic denial; it is a systematic refusal of explanatory surplus.

Technical definition: The Buddhist critique holds that a permanent and perfect creator cannot intelligibly initiate changing effects, acquire a new will, or remain morally insulated from the suffering attributed to creation.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

The Buddhist critique holds that a permanent and perfect creator cannot intelligibly initiate changing effects, acquire a new will, or remain morally insulated from the suffering attributed to creation.

MUST-WRITE KEYWORDS

- creator God
- dependent origination
- unchanging cause
- purpose
- problem of evil
- internal school dispute

How to use them: Present the Buddhist objections to an eternal creator, then distinguish this shared non-theism from internal disputes about external objects, consciousness and emptiness.

CORE DEFINITION: The Buddhist critique holds that a permanent and perfect creator cannot intelligibly initiate changing effects, acquire a new will, or remain morally insulated from the suffering attributed to creation.

ANALYSIS: This is a cross-paper theme and should be linked with Proofs for God and Religion without God.

5.1 Core lines of criticism

- FACT: If God is eternal and unchanging, genuine creation becomes difficult to explain, because willing or producing seems to involve change.
- FACT: If God creates from desire or purpose, that suggests lack, preference or incompleteness.
- FACT: The presence of suffering and evil sits uneasily with an omnipotent benevolent creator.
- FACT: Dependent origination already explains the arising of phenomena through conditions, making a creator unnecessary.

5.2 Philosophical force

- ANALYSIS: Buddhist critique is not mere atheistic denial; it is a systematic refusal of explanatory surplus. If conditioned arising explains the world-process, God is not needed.

LAYER 4 - EXAM APPLICATION

Exam route

- **2019 Q5(b), 10 marks:** explain Yogācāra's denial of independently external objects using representations, dreams, seeds and the three natures.
- **2024 Q6(b), 15 marks:** contrast realist dharmas with Mādhyamika emptiness while preserving their shared causal starting point.
- Use a four-school matrix rather than four disconnected paragraphs.
- Never write "Yogācāra = Advaita" or "Mādhyamika = nihilism".

LAYER 5 - RAPID REVISION

Rapid recall

- Vaibhāṣika: direct external realism.
- Sautrāntika: external cause inferred from representation.
- Yogācāra: *store-consciousness (ālaya-vijñāna)*, seeds and three natures.
- Mādhyamika: *emptiness (śūnyatā)*, two truths, *catuṣkoṭi*.
- No creator is required because conditioned causation performs the explanatory work.

LAYER 1 - SIMPLE START

Plain-language visual - where rivals apply pressure

NYAYA	-> memory and recognition need an enduring self
MIMAMSA	-> knowledge and universals need stable bearers
ADVAITA	-> liberation is unintelligible without reality/self
CARVAKA	-> no-self is bodily reduction
BUDDHISM	-> causal continuity replaces permanent substance

In simple words: Buddhist process theory solves some problems created by substance, but rivals ask whether a process can remember, act, deserve consequences and attain liberation without an owner.

Memory line: every debate turns on whether causal continuity can perform the work of identity.

LAYER 2 - CORE UPSC

CLOSING RECALL FLOW - CREATOR-GOD CRITIQUE AND INTERNAL SCHOOL DISPUTES

SUBTOPIC CLOSURE FLOW | CREATOR-GOD CRITIQUE AND INTERNAL SCHOOL DISPUTES

1. KEY TERMS / DEFINITIONS

creator God · dependent origination · unchanging cause · purpose · problem of evil · internal school dispute

2. MECHANISM / ARGUMENT

No creator is required because conditioned causation performs the

3. CONSEQUENCE / CONTRAST

Buddhist critique is not mere atheistic denial; it is a systematic

4. UPSC TRAP / ANSWER-USE

If conditioned arising explains the world-process, God is not needed.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: The Buddhist critique holds that a permanent and perfect creator cannot intelligibly initiate changing effects, acquire a new will, or remain morally insulated from the suffering attributed to creation.

SESSION 9 - INTER-SCHOOL DEBATES, OBJECTIONS AND REPLIES

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Nāgārjuna's reply is that emptiness itself is dependent designation and preserves conventional causation rather than abolishing it. <!-- restored-2018-2020-doctrine:end.

Technical definition: Madhyamaka draws the anti-essentialist conclusion that dependently originated things are empty of intrinsic nature (svabhāva). CAUTION: Objection -> reply: emptiness seems self-defeating or nihilistic.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Nāgārjuna's reply is that emptiness itself is dependent designation and preserves conventional causation rather than abolishing it. <!-- restored-2018-2020-doctrine:end.

MUST-WRITE KEYWORDS

- Cārvāka
- Nyāya
- Advaita
- causal continuity
- no-self
- emptiness

How to use them: Compare Buddhism with rivals on knowledge, causation, self and ultimate reality, ensuring that each objection addresses the opponent's strongest rather than caricatured position.

EXAM-READY LINE: Buddhist schools share dependent origination and no-self but disagree over external objects, consciousness and ultimate truth; comparison must therefore preserve both their common therapeutic framework and their distinct ontologies.

Debate axis	Buddhist position	Rival / internal contrast
Causation	dependent origination	Nyāya's new production (ārambhavāda); Sāṃkhya's pre-existence of the effect in the cause (satkāryavāda)
Persistence	momentary stream	Nyāya substance with changing qualities
Self	no permanent enduring self (ātman)	Nyāya, Vedānta, Jainism affirm self/individual self (jīva)
External world	varies by school	Vaiśiṣṭika realism, Yogācāra idealism, Mādhyamika anti-essentialism
Cessation of conditioned suffering (nirvāṇa)	cessation of duḥkha-process	Vedāntic liberation (mokṣa) as self-realization
God	unnecessary / philosophically problematic	Nyāya theism

6.1 Carvāka's rejection of self vs Buddhist rejection of enduring self (ātman) (2024)

- FACT: **Carvāka** denies self beyond body and tends toward materialist reduction.
- FACT: **Buddhism** denies permanent self but does not reduce personhood simply to gross body; it analyses the person into aggregates (skandhas) and preserves karmic continuity without substance.
- ANALYSIS: Therefore both reject an eternal enduring self (ātman), but for very different reasons and with very different moral-metaphysical consequences.

6.2 Internal Buddhist opponent's prima-facie position (pūrvapakṣa) chain - how the four schools answer one another

Stage	FACT: Established conclusion (siddhānta) claimed	ANALYSIS: Becomes opponent's prima-facie position (pūrvapakṣa) for	FACT: Next Buddhist reply
Vaibhāṣika / Sarvāstivāda	FACT: Dharmas are real and, in the Sarvāstivāda sense, have existence across past, present and future.	ANALYSIS: Sautrāntika objects that this weakens momentariness and overpopulates ontology.	FACT: Only the present moment is fully operative; external objects are inferred through representations.
Sautrāntika	FACT: External objects exist but are known inferentially, not directly.	ANALYSIS: Yogācāra objects that an inferred external object is unnecessary because all that is given is cognition.	FACT: Vijñapti-mātra (representation-only): objecthood is inseparable from consciousness-appearance.
Yogācāra	FACT: Consciousness-only explains appearance, action and moral consequence (karma) and continuity through store-consciousness (ālaya-vijñāna) .	ANALYSIS: Madhyamaka objects that consciousness is being reified as a subtle substance.	FACT: Even consciousness lacks intrinsic nature (svabhāva) ; all dharmas are empty.
Madhyamaka	FACT: Emptiness (śūnyatā) prevents every reification, including reification of emptiness.	ANALYSIS: Nyāya, Mīmāṃsā and Advaita object that this risks nihilism or self-refutation.	FACT: Two truths preserve conventional practice while ultimate analysis denies intrinsic nature.

- ANALYSIS: **Exam payoff:** for “Schools of Buddhism”, do not list four schools mechanically. Present them as an argumentative escalation: realism of dharmas -> presentist representationalism -> idealist consciousness-only -> anti-essentialist emptiness.

7. CRITICISMS AND REPLIES - NAMED OPPONENT'S PRIMA-FACIE POSITION (pūrvapakṣa)

EXAM-READY LINE: The central realist criticism is that momentariness and no-self cannot explain recognition, memory and moral responsibility; the Buddhist reply relocates continuity from substance to causally connected causal continuum (santāna) (continuum).

7.1 Nyāya criticism: memory, recognition and moral desert require a permanent self

Objection - Nyāya (Vātsyāyana / Uddyotakara / Udayana line)

- FACT: **Pratyabhijñā** (recognition) - “this is that same jar” or “I am the same person who saw before” - appears to disclose identity through time.
- FACT: Memory seems to require that the subject who remembers be identical with the subject who experienced.
- FACT: Moral desert seems to require an enduring agent: the doer of an act must be the enjoyer or sufferer of its fruit.

Reply - Buddhist schools

- FACT: **Causal continuum (santāna) / causal continuum (santāna)** (causal series) explains continuity without an identical substance.
- FACT: **Sādrśya** (similarity) explains why recognition mistakes a later similar causal phase for the numerically same object.
- FACT: The flame and river examples show continuity without strict identity: a later flame or river-stage is neither wholly the same nor wholly other.
- FACT: Yogācāra adds store-consciousness (ālaya-vijñāna) and **bīja** (seeds) as the carrier of karmic and mnemonic potential without accepting an enduring self (ātman).
- ANALYSIS: Nyāya's residual force: a series may explain causal succession, but it is less clear how a series can “own” memories unless some subject owns the series.

7.2 Kumārila Bhaṭṭa and Mīmāṃsā criticism: means of valid knowledge (pramāṇa) supports self and universals

Objection - Kumārila Bhaṭṭa

- FACT: Mīmāṃsā defends a persisting self as the subject of cognition, duty, memory and Vedic action.

- FACT: Kumāṛila also resists **exclusion theory of meaning (apoha)** by arguing that general words and recognition require positive universals, not merely exclusion.
- FACT: A merely negative meaning such as “not-non-cow” seems unable to explain the positive cognition “cow”.

Reply - Buddhist means of valid knowledge (pramāṇa) school

- FACT: Dignāga and Dharmakīrti reduce the self to a constructed unity imposed on a stream of momentary cognitions.
- FACT: Exclusion theory of meaning (apoha) explains generality as exclusion grounded in causal convergence: many distinct particulars produce the same practical judgment and action, so a concept is formed without a real universal.
- ANALYSIS: Residual force remains: critics argue that the exclusion must already know what to exclude, making exclusion theory of meaning (apoha) circular.

7.3 Śaṅkara / Advaita criticism: momentariness and emptiness make liberation unintelligible

Objection - Śaṅkara-type Advaita

- FACT: If everything is momentary, bondage and liberation cannot belong to one continuing subject.
- FACT: If there is no self, the unity of the knower is unintelligible.
- FACT: If **emptiness (śūnyatā)** is ultimate, the very denial seems to presuppose a self-luminous witnessing consciousness that makes denial possible.

Reply - Buddhist two-truths response

- FACT: Buddhism denies that liberation requires an eternal witness; liberation is the cessation of ignorance, craving and appropriation in a causal stream.
- FACT: At **saṃvṛti-satya** (conventional truth), persons, practice and compassion are valid designations.
- FACT: At **paramārtha-satya** (ultimate truth), neither person nor witness has intrinsic nature.
- ANALYSIS: The Advaitin's residual force is that Buddhist analysis must explain the unity of experience without quietly importing a witness.

7.4 Nyāya / realist criticism: emptiness collapses into nihilism

Objection - Nyāya and common realist charge

- FACT: If all dharmas are empty, nothing seems to remain for knowledge, ethics or liberation.
- FACT: If the Mādhyamika denies all theses, the denial appears self-refuting.

Reply - Madhyamaka

- FACT: Emptiness means emptiness of own-being, not absence of dependent functioning.
- FACT: The two truths preserve conventional causation, action and moral consequence (karma) and path-practice while denying intrinsic nature.
- FACT: Nāgārjuna's “empty words” strategy treats philosophical utterance as a therapeutic instrument rather than a final ontology.
- ANALYSIS: Residual force remains in the debate over whether non-implicative negation can avoid becoming a thesis.

7.5 Criticism: action and moral consequence (karma) without self is unjust

Objection - Nyāya, Mīmāṃsā and Vedānta

- FACT: If doer and enjoyer are not strictly identical, moral desert appears to disappear.
- FACT: If they are strictly different, punishment or reward would fall on another.

Reply - Buddhist middle position

- FACT: Buddhism rejects both strict identity and strict difference.
- FACT: The stream that receives the fruit is causally continuous with the stream-stage that acted.
- FACT: This avoids eternalism while preserving moral responsibility at the conventional level.

- ANALYSIS: The unresolved pressure is whether causal continuity alone is enough for desert, rather than merely for causal explanation.

LAYER 4 - EXAM APPLICATION

Exam route

Use a dialectic grid: **named opponent** -> **exact target** -> **Buddhist reply** -> **residual pressure**.

For memory, action and moral consequence (karma) and liberation questions, never answer with the word *causal continuum* (*santāna*) alone. Explain causal transmission, similarity, seeds or store-consciousness, then assess whether transmission adequately supplies ownership.

LAYER 5 - RAPID REVISION

Rapid recall

- Nyāya: recognition, memory and desert.
- Mīmāṃsā: positive universals and stable cognition.
- Advaita: subject and liberation.
- Buddhist reply: continuity without identity.
- Residual problem: a stream may transmit effects yet still seem to lack an owner.

LAYER 1 - SIMPLE START

Plain-language visual - four equations to avoid

NO-SELF != no conventional person
 EMPTINESS != nothing exists
 MOMENTARINESS != causal chaos
 CESSATION OF CONDITIONED SUFFERING (nirvāṇa) != immortal ego or simple annihilation

In simple words: most weak answers fail through category errors rather than missing facts. Define what a doctrine denies and what it still preserves.

Memory line: Buddhism removes intrinsic substance while retaining conditioned function.

LAYER 2 - CORE UPSC

8. COMMON UPSC TRAPS

- ANALYSIS: **Trap 1:** treating dependent origination (pratītyasamutpāda) as a simple linear cosmology. It is primarily a doctrine of dependent suffering and cessation.
- ANALYSIS: **Trap 2:** saying momentariness means non-existence. Buddhism says the real conditioned is momentary, not unreal in every sense.
- ANALYSIS: **Trap 3:** confusing **pudgala-nairātmya** with **dharma-nairātmya**.
- ANALYSIS: **Trap 4:** writing that all Buddhist schools say the same thing about the external world. They do not.
- ANALYSIS: **Trap 5:** calling emptiness (śūnyatā) nihilism. Mādhyamika explicitly resists that reading.
- ANALYSIS: **Trap 6:** saying Triratna is inconsistent with no-self because "nobody remains to practise." Buddhism admits a conventional person.
- ANALYSIS: **Trap 7:** answering karma-under-momentariness by smuggling in a hidden soul. The correct device is **causal continuum (santāna)**, not enduring self (ātman).
- ANALYSIS: **Trap 8:** treating catuṣkoṭi as a denial of logic. The Madhyamaka point is non-implicative negation of intrinsic nature (svabhāva), not casual contradiction.
- ANALYSIS: **Trap 9:** writing that Buddhist means of valid knowledge (pramāṇa) theory is just Nyāya logic with fewer means of valid knowledge (pramāṇas). It rests on momentary particulars, exclusion theory of meaning (apoha) and no enduring knower.
- ANALYSIS: **Trap 10:** confusing Jain non-absolutism with Buddhist no-substance. Jainism preserves individual self (jīva) and dravya; Buddhism denies self-substance.

9. KEYWORD & STATEMENT BANK

- FACT: **Dependent origination (pratītyasamutpāda)**: dependent origination; this being, that becomes.
- FACT: **Dvādaśa-nidāna**: twelve links of conditioned becoming.
- FACT: **Momentariness (kṣaṇikavāda)**: whatever is real is momentary.
- FACT: **Causal efficacy (arthakriyā)**: reality as causal efficiency.
- FACT: **Causal continuum (santāna)**: causal stream/continuum.
- FACT: **No permanent self (nairātmyavāda) / anātman**: denial of permanent self.
- FACT: **Aggregates (skandhas)**: rūpa, vedanā, saṃjñā, saṃskāra, vijñāna.
- FACT: **Pudgala-nairātmya**: no personal self.
- FACT: **Dharma-nairātmya**: no self-nature in dharmas.
- FACT: **Vijñaptimātra**: consciousness-only.
- FACT: **Store-consciousness (ālaya-vijñāna)**: store-consciousness carrying seeds.
- FACT: **Emptiness (śūnyatā)**: emptiness of intrinsic nature (svabhāva).
- FACT: **Samvṛti / paramārtha**: conventional / ultimate truth.
- FACT: **Avyākata / avyākṛta**: undeclared questions set aside as non-conducive and presuppositionally defective.
- FACT: **Catuṣkoṭi**: four alternatives - is, is-not, both, neither - denied when applied to intrinsic nature (svabhāva).
- FACT: **Means of valid knowledge (pramāṇa)**: valid means of knowledge; Buddhist epistemologists reduce these to perception and inference.
- FACT: **Perception (pratyakṣa) / inference (anumāna)**: perception of unique particular / inference of conceptual general character.
- FACT: **Svalakṣaṇa / sāmānyalakṣaṇa**: unique causal particular / constructed general character.
- FACT: **Kalpanāpoḍha / abhrānta**: non-conceptual and non-erroneous perception.
- FACT: **Exclusion theory of meaning (apoha)**: exclusion theory of meaning; "cow" functions as "not-non-cow".
- FACT: **Svasaṃvedana**: self-awareness of cognition, attacked by Nyāya and central to Buddhist epistemology.
- FACT: **Pramāṇaphala**: resultant cognition, treated by Dignāga as non-different from the pramāṇa-event.

Quick examinable statements

- ANALYSIS: "Ignorance of dependent origination is bondage because it converts process into substance and thereby fuels craving."
- ANALYSIS: "Buddhist momentariness is not chaos but ordered succession."
- ANALYSIS: "The person is neither an illusion in the trivial sense nor an ultimate self; it is a valid conventional designation."
- ANALYSIS: "Emptiness (śūnyatā) denies intrinsic being, not dependent functioning."

RESTORED 2018/2020 DOCTRINE DOSSIER

Pañcaskandhas, no-self and liberation

- FACT: The person is conventionally designated upon form, feeling, perception, formations and consciousness; none is permanent, autonomous or fit to be owned as "this is mine, this I am".
- FACT: **Argument**: exhaustive analysis finds only conditioned aggregates; their causal dependence explains continuity without a separate enduring self (ātman). Liberation is cessation of ignorance, craving and appropriation, not the release of a soul-substance.
- ANALYSIS: **Distinction**: no-self denies intrinsic personal substance, not causal continuity or conventional agency.

Dependent origination, momentariness and emptiness

- FACT: Momentariness (kṣaṇikavāda) radicalises conditioned arising: what depends on causes cannot possess unchanging efficacy. Madhyamaka draws the anti-essentialist conclusion that dependently originated things are empty of intrinsic nature (svabhāva).
- CAUTION: **Objection -> reply**: emptiness seems self-defeating or nihilistic. Nāgārjuna's reply is that emptiness itself is dependent designation and preserves conventional causation rather than abolishing it.

CORPUS-DRIVEN DEPTH DELTA (complete 2018-2025 audit)

- ANALYSIS: **Priority:** Primary ownership rises to 13 of 112 parts and occurs in every year.
- FACT: **Required doctrinal depth:** The restored years add the Madhyamaka derivation of emptiness (śūnyatā) from dependent origination, no-self with cessation of conditioned suffering (nirvāṇa), momentariness (kṣaṇikavāda) as a derivative of dependent origination and the pañcaskandha account of personhood/liberation.
- WRONG: **Trap / answer consequence:** Do not identify emptiness (śūnyatā) with non-existence or infer that causal continuity requires a soul; distinguish conventional designation from intrinsic nature.

LAYER 4 - EXAM APPLICATION

Exam route

Before writing, perform a four-part check:

1. Have I defined the technical term?
2. Have I shown its internal derivation?
3. Have I stated what it does **not** mean?
4. Have I linked it to suffering or liberation?

Use the retained keyword bank and doctrine dossier as the factual checklist for all 13 verified PYQs.

LAYER 5 - RAPID REVISION

Rapid recall

- Empty = empty of intrinsic nature.
- No-self = no permanent substance-self.
- Momentary = causally connected momentary events.
- Two truths = conventional operation and ultimate non-intrinsic status.
- Trap: do not call every Buddhist school idealist or nihilist.

LAYER 1 - SIMPLE START

Plain-language visual - two ways of knowing

PERCEPTION -> unique causal particular, before conceptual construction

INFERENCE -> conceptual and linguistic judgement

Words classify by excluding what the object is not.

In simple words: Dignāga and Dharmakīrti accept perception and inference as the two fundamental knowledge sources. Perception encounters a unique particular; concepts and words organise experience indirectly.

Term	Easy meaning
<i>Svalakṣaṇa</i>	Unique causal particular
<i>Sāmānyalakṣaṇa</i>	Conceptual general character
<i>Exclusion theory of meaning (apoha)</i>	Meaning through exclusion of alternatives
<i>Pramāṇaphala</i>	Result of valid cognition

Memory line: perception presents the particular; inference and language construct usable classifications.

LAYER 2 - CORE UPSC

CLOSING RECALL FLOW - INTER-SCHOOL DEBATES, OBJECTIONS AND REPLIES

SUBTOPIC CLOSURE FLOW | INTER-SCHOOL DEBATES, OBJECTIONS AND REPLIES

1. KEY TERMS / DEFINITIONS

Cārvāka · Nyāya · Advaita · causal continuity · no-self · emptiness

2. MECHANISM / ARGUMENT

Mādhyamika explicitly resists that reading. ANALYSIS: Trap 6: saying Triratna is

3. CONSEQUENCE / CONTRAST

Exam payoff: for "Schools of Buddhism", do not list four schools

4. UPSC TRAP / ANSWER-USE

Buddhism says the real conditioned is momentary, not unreal in every

SESSION 10 - DIGNĀGA-DHARMAKĪRTI EPISTEMOLOGY AND EXCLUSION THEORY OF MEANING (apoha)

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Buddhist epistemology restricts valid cognition to non-conceptual perception and inference, while exclusion theory (apoha) explains how general words function without real universals.

Technical definition: FACT: Exclusion theory of meaning (apoha) (exclusion) says a general term does not denote a real universal (jāti) inhering in particulars. FACT: A word functions through anyā-apoha (exclusion of the other): "cow" means "not-non-cow".

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Dignāga and Dharmakīrti connect epistemology to ontology: perception discloses unique particulars, inference constructs generality, and words signify through exclusion rather than universals.

MUST-WRITE KEYWORDS

- Dignāga
- Dharmakīrti
- perception
- inference
- unique particular (svalakṣaṇa)
- exclusion (apoha)

How to use them: Connect the two-pramāṇa theory to momentary particulars and explain general meaning through exclusion rather than real universals.

ANALYSIS: Why this matters for UPSC: Buddhist epistemology is not an isolated logic chapter. It translates **no permanent self (nairātmyavāda)** and **momentariness (kṣaṇikavāda)** into a theory of knowledge, language and debate.

9A.1 Two-pramāṇa thesis

Statement

- FACT: Dignāga and Dharmakīrti accept only two independent means of valid knowledge (pramāṇa): perception (pratyakṣa) and inference (anumāna).
- FACT: Other candidates - comparison (upamāna), postulation (arthāpatti), **non-cognition (anupalabdhi)** (non-apprehension) and **verbal testimony (śabda)** (testimony) - are reduced to inference or to perception-plus-inference.

Argument

1. FACT: A means of valid knowledge (pramāṇa) must be individuated by the kind of object it reveals.
2. FACT: There are exactly two object-types: **svalakṣaṇa** (unique particular / self-characterised particular) and **sāmānyalakṣaṇa** (general character / constructed universal-aspect).
3. FACT: Perception grasps the **svalakṣaṇa**.
4. FACT: Inference grasps the **sāmānyalakṣaṇa**.
5. FACT: Therefore there are exactly two means of valid knowledge (pramāṇas).

Presupposition

- ANALYSIS: The number of knowledge-sources is fixed by the object-side, not by a mere list of human cognitive habits.

- ANALYSIS: There is no third kind of object beyond the unique causal particular and the constructed general character.

Contrast with Nyāya

Issue	FACT: Buddhist means of valid knowledge (pramāṇa) school	FACT: Nyāya
Number of means of valid knowledge (pramāṇas)	FACT: Two: perception and inference	FACT: Four: perception, inference, comparison, testimony
Testimony	FACT: reducible to inference from reliable signs / speaker-function	FACT: independent means of valid knowledge (pramāṇa)
Universals	FACT: conceptual constructions	FACT: real universals inhering in particulars

9A.2 Svalakṣaṇa and sāmānyalakṣaṇa

Feature	FACT: Svalakṣaṇa	FACT: Sāmānyalakṣaṇa
Ontological status	FACT: paramārtha-sat (ultimately real)	FACT: saṃvṛti-sat (conventionally real)
Temporal status	FACT: momentary	ANALYSIS: enduring only as a construct
Cognition	FACT: non-conceptual perception	FACT: conceptual inference / judgment
Language	FACT: ineffable as a unique particular	FACT: expressible and shareable
Causal role	FACT: causally efficient	ANALYSIS: causally inert as a universal construct

Distinction

- FACT: The **svalakṣaṇa** is unique, momentary, causally efficient, ineffable and non-conceptual.
- FACT: The **sāmānyalakṣaṇa** is shareable, expressible and stable only as a conceptual construction.
- ANALYSIS: This is why Buddhist realism about momentary particulars can coexist with nominalism about universals.

9A.3 Perception as kalpanāpoḍha and abhrānta

Statement

- FACT: Dignāga defines perception as **kalpanāpoḍha** (free from conceptual construction).
- FACT: Dharmakīrti adds **abhrānta** (non-erroneous), so perception is non-conceptual and non-mistaken.

Why the addition matters

- FACT: Mere vivid presentation is not enough for valid perception.
- FACT: Illusions such as a double moon or the circle produced by a whirling firebrand can be vivid while still mistaken.
- ANALYSIS: Dharmakīrti's addition protects Buddhist epistemology from counting every non-conceptual appearance as valid knowledge.

Fourfold division of perception

Type	FACT: Meaning	ANALYSIS: Philosophical point
indriya-pratyakṣa	FACT: sense perception	ANALYSIS: non-conceptual contact with the particular through sense-faculty
mānasa-pratyakṣa	FACT: mental perception	ANALYSIS: immediate mental awareness following sensory presentation
svasaṃvedana	FACT: self-awareness of cognition	ANALYSIS: cognition manifests itself without a second knower
yogi-pratyakṣa	FACT: yogic perception	ANALYSIS: disciplined direct insight into subtle truths relevant to liberation

- ANALYSIS: **Svasamvedana** connects Buddhist epistemology with Yogācāra idealism because cognition is treated as self-revealing; this is why Nyāya attacks it as collapsing object, cognition and knower.

9A.4 Exclusion theory of meaning (apoha) theory of meaning and universals

Statement

- FACT: **Exclusion theory of meaning (apoha)** (exclusion) says a general term does not denote a real universal (jāti) inhering in particulars.
- FACT: A word functions through **anya-apoha** (exclusion of the other): “cow” means “not-non-cow”.

Argument

1. FACT: Only unique particulars are ultimately real.
2. FACT: Words and concepts are general.
3. FACT: If generality were real, one would need real universals; but universals are not perceived and produce the Nyāya problems of inherence and location.
4. FACT: Therefore generality must be constructed negatively through exclusion.

Presupposition

- ANALYSIS: Exclusion theory of meaning (apoha) presupposes that a negative / differential function can do the work usually assigned to a positive shared property.

Objection - Kumārila Bhaṭṭa and Uddyotakara

- FACT: The exclusion seems circular: to exclude non-cows one must already know what a cow is.
- FACT: A merely negative content seems unable to explain the positive determinate cognition “cow”.
- FACT: It also seems unable to explain the felt similarity among cows.

Reply - Dharmakīrti's line

- FACT: Similarity is grounded not in a shared universal but in a shared causal capacity.
- FACT: Many distinct particulars produce the same effect: the same conceptual judgment and the same successful practical activity.
- FACT: Exclusion theory of meaning (apoha) is a conceptual construct erected upon that causal convergence, not upon a prior grasp of a real universal.
- ANALYSIS: The circularity objection retains residual force; many critics hold that the Buddhist reply does not fully explain positive determination.

9A.5 Causal efficacy (arthakriyā) as the criterion of the real

Statement

- FACT: **Sat = arthakriyā-samartha**: to be real is to be capable of producing an effect.
- FACT: This criterion ranks the **svalakṣaṇa** as ultimately real and the **sāmānyalakṣaṇa** as conventional.

Argument connecting epistemology to momentariness (kṣaṇikavāda)

1. FACT: To be real is to be causally efficacious.
2. FACT: Causal efficacy must occur either successively or simultaneously.
3. FACT: A permanent entity can do neither coherently: if it produces everything at once, nothing remains for later moments; if it produces successively, it changes; if it needs auxiliary conditions, the decisive efficacy lies in the changing conditions.
4. FACT: Therefore whatever is real is momentary - **yat sat tat kṣaṇikam**.

Exam payoff

- ANALYSIS: This is the clean bridge from means of valid knowledge (pramāṇa) theory to ontology: what perception ultimately presents is the momentary causally efficient particular; what inference and language manage is the conventional general construction.

9A.6 Means of valid knowledge (pramāṇa) and pramāṇaphala

Statement

- FACT: Dignāga's distinctive thesis is that **means of valid knowledge (pramāṇa)** (instrument of knowledge) and **pramāṇaphala** (result of knowledge) are not two ultimately different things.
- FACT: The resultant cognition - the determination of the object and the self-awareness of cognition - is non-different from the cognitive event that functions as means of valid knowledge (pramāṇa).

Argument

- FACT: On a momentary and non-substantialist ontology, there is no enduring agent-instrument-result triad.
- FACT: The analysis into **karaṇa** (instrument) and **phala** (result) is a conceptual overlay on one momentary cognitive event.
- ANALYSIS: This shows that Buddhist epistemology is internally driven by **anātman** and **momentariness (kṣaṇikavāda)**, not by free-standing formal logic.

Contrast with Nyāya

Factor	FACT: Nyāya	FACT: Buddhist means of valid knowledge (pramāṇa) school
pramātṛ (knower)	FACT: real enduring subject	ANALYSIS: constructed stream, not ultimate self
means of valid knowledge (pramāṇa) (instrument)	FACT: distinct means	FACT: non-different from cognition as event
prameya (object)	FACT: independently knowable object	FACT: ultimately svalakṣaṇa; conventionally constructed object
pramiti / pramāṇaphala (result)	FACT: distinct resultant knowledge	FACT: not ultimately separate from means of valid knowledge (pramāṇa)

CLOSING RECALL FLOW - DIGNĀGA-DHARMAKĪRTI EPISTEMOLOGY AND EXCLUSION THEORY OF MEANING (apoha)

SUBTOPIC CLOSURE FLOW DIGNĀGA-DHARMAKĪRTI EPISTEMOLOGY AND EXCLUSION THEORY OF MEANING (apoha)			
1. KEY TERMS / DEFINITIONS Dignāga · Dharmakīrti · perception · inference · unique particular (svalakṣaṇa) · exclusion (apoha)	2. MECHANISM / ARGUMENT Exclusion theory of meaning (apoha) (exclusion) says a general term does	3. CONSEQUENCE / CONTRAST Similarity is grounded not in a shared universal but in a shared	4. UPSC TRAP / ANSWER-USE On a momentary and non-substantialist ontology, there is no enduring
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Dignāga and Dharmakīrti connect epistemology to ontology: perception discloses unique particulars, inference constructs generality, and words signify through exclusion rather than universals.			

SESSION 11 - UNDECLARED QUESTIONS, LIBERATION AND EXAM VERDICT

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: The undeclared questions are set aside because their alternatives presuppose reified selves or worlds and do not advance the practical ending of suffering.

Technical definition: Buddhist suspension on the avyākata questions is therapeutic and logical: it blocks ill-formed metaphysical alternatives while directing inquiry toward dependent origination and liberation.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Final verdict: Buddhist philosophy replaces substantial identity with dependent continuity, but its success depends on explaining how causal efficacy, knowledge and liberation remain coherent without a permanent self or intrinsic essence.

MUST-WRITE KEYWORDS

- undeclared questions (avyākata)
- poisoned-arrow parable

- false presupposition
- pragmatic silence
- liberation
- Tathāgata

How to use them: Explain the Buddha's silence as refusal of liberation-irrelevant or presupposition-laden alternatives, not as ignorance or indiscriminate scepticism.

9B.1 The undeclared questions

- FACT: **Avyākata / avyākṛta** (undeclared / unanswered) questions are questions the Buddha declines to answer in the expected metaphysical format.
- FACT: They include whether the world is eternal or not eternal, finite or infinite; whether the **individual self (jīva)** (life-principle / self) is the same as or different from the body; and whether the **Tathāgata** exists after death, does not exist, both, or neither.

AVYĀKṚTA CLUSTER

World: eternal? not eternal? finite? infinite?

Self/body: individual self (jīva) same as body? different from body?

Tathāgata after death: exists? does not exist? both? neither?

9B.2 Why the Buddha declined

Statement

- FACT: The refusal is not a lack of doctrine; it is a disciplined refusal to answer malformed or soteriologically useless questions.

Argument

1. FACT: The questions are **na arthasaṃhita** (not conducive to the goal / not connected with welfare and liberation).
2. FACT: The arrow parable in the **Cūḷamālukya** teaching compares the metaphysical questioner to a man shot with a poisoned arrow who refuses treatment until he learns the archer's caste, name, bow-type and arrow-fletching; he dies before treatment.
3. FACT: The questions rest on a false presupposition: they assume a substantial self or substantial world about which the alternatives can be predicated.
4. ANALYSIS: The structure resembles the loaded question "Have you stopped beating your wife?"; any direct answer concedes the presupposition.
5. FACT: Conditioned cognition cannot settle what is framed beyond the conditions of meaningful experience and liberation-oriented practice.

9B.3 Fire-going-out simile

- FACT: For the Tathāgata-after-death question, early Buddhist teaching uses the fire-going-out simile: when a fire has gone out, it cannot be said to have gone east, west, north or south.
- ANALYSIS: The point is not that a hidden self travels elsewhere; the categories of directional predication no longer apply once the sustaining conditions have ceased.

9B.4 Three readings of the silence

Reading	Claim	Strength	Limit
CAUTION: Agnostic	CAUTION: The Buddha did not know, or the matter is unknowable.	ANALYSIS: Explains non-answering simply.	ANALYSIS: Fits poorly with the strong positive diagnosis of suffering and cessation.
FACT: Pragmatic-therapeutic	FACT: The questions are useless for liberation.	FACT: Best fits the arrow parable's stated reason.	ANALYSIS: May understate the logical problem in the questions.
ANALYSIS: Logical-semantic	ANALYSIS: The questions are malformed because their presupposition of substantial self/world fails.	ANALYSIS: Best fits anātman and dependent origination.	CAUTION: Not always explicitly formulated as a formal semantic theory in early sources.

- CAUTION: The tradition does not settle the issue in a single uncontested interpretation.
- ANALYSIS: For UPSC, combine the second and third readings: the questions are both therapeutically useless and presuppositionally defective.

9B.5 Objection and reply

Objection - realist / metaphysical critic

- FACT: Silence looks like evasion and leaves Buddhism metaphysically indeterminate.

Reply - Buddhist Middle Path (*madhyamā pratipad*)

- FACT: The Buddha's positive teaching is precisely what he declared: Four Noble Truths, dependent origination, path and cessation.
- FACT: The Middle Path (*madhyamā pratipad*) avoids both eternalism (*śāśvatavāda*) and annihilationism (*ucchedavāda*).
- FACT: Answering the *avyākṛta* questions in any of the four corners would concede the grammar of one of those extremes.
- ANALYSIS: Therefore silence is not emptiness of teaching; it is refusal to let the wrong question control the answer.

LAYER 4 - EXAM APPLICATION

Exam route

- For means of valid knowledge (*pramāṇa*) questions, compare Buddhist two-*pramāṇa* theory with Nyāya's fourfold scheme.
- Define *kalpanāpoḥa* and explain why later Buddhists add non-erroneousness.
- In *exclusion theory of meaning (apoha)*, present the economy gained and the positive-content objection.
- Use pragmatic silence only where relevant; do not turn it into a blanket ban on philosophy.

LAYER 5 - RAPID REVISION

Rapid recall

- Two means of valid knowledge (*pramāṇas*): perception and inference.
- Perception is non-conceptual and non-erroneous.
- Particulars are ultimately causally real; universals are conceptual.
- *Exclusion theory of meaning (apoha)*: exclusion of the other.
- *Avyākata*: questions left undeclared because they do not conduce to liberation.

LAYER 1 - SIMPLE START

Plain-language visual - the complete Buddhist answer spine

DEPENDENT ORIGINATION
 |
 IMPERMANENCE / MOMENTARINESS
 |
 NO PERMANENT SELF
 |
 CAUSAL CONTINUITY OF ACTION AND MORAL CONSEQUENCE (karma)
 |
 CESSATION OF SUFFERING

In simple words: answer Buddhism as a connected process philosophy. Begin with conditions, derive change and no-self, explain continuity, and end with liberation.

Marks	Minimum structure
10	Define -> derive -> distinction -> significance
15	Doctrine -> example -> objection/reply -> verdict
20	Full causal chain -> school comparison -> dialectic -> assessment

Memory line: no substance is required if conditioned continuity can explain arising, responsibility and cessation.

LAYER 2 - CORE UPSC

9C. PRESUPPOSITION LEDGER

Doctrine	Presupposition	What collapses if denied
FACT: Dependent origination (pratītyasamutpāda)	ANALYSIS: Explanation must proceed through conditions rather than a static first substance.	ANALYSIS: The Four Noble Truths lose their causal grammar; suffering becomes fate or mystery.
FACT: Momentariness (kṣaṇikavāda)	ANALYSIS: Whatever is conditioned and causally efficient cannot remain numerically permanent.	ANALYSIS: Buddhist critique of substance weakens; Nyāya-style endurance becomes possible.
FACT: No permanent self (nairātmyavāda)	ANALYSIS: Exhaustive analysis of experience finds aggregates and processes, not an owner behind them.	ANALYSIS: Action and moral consequence (karma) and cessation of conditioned suffering (nirvāṇa) must be reinterpreted through an enduring self (ātman), which Buddhism refuses.
FACT: Causal efficacy (arthakriyā)	ANALYSIS: Reality is measured by effect-producing capacity, not by inert self-identity.	ANALYSIS: Momentariness loses its strongest logical bridge from epistemology to ontology.
FACT: Exclusion theory of meaning (apoha)	ANALYSIS: Generality can be explained by exclusion and causal convergence without real universals.	ANALYSIS: Nyāya-Mīmāṃsā universals regain explanatory force.
FACT: Two truths	ANALYSIS: Conventional functioning and ultimate analysis answer different questions.	ANALYSIS: Madhyamaka appears either nihilist or secretly realist.
FACT: Emptiness (śūnyatā)	ANALYSIS: Whatever is dependently arisen lacks intrinsic nature (svabhāva).	ANALYSIS: Dependent origination remains a mere causal theory and does not become anti-essentialist.
FACT: Cessation of conditioned suffering (nirvāṇa)	ANALYSIS: Bondage is a conditioned process; cessation is possible without a liberated soul-substance.	ANALYSIS: No-self and liberation appear inconsistent.

9D. OPPONENT'S PRIMA-FACIE POSITION (pūrvapakṣa)-ESTABLISHED CONCLUSION (siddhānta) LEDGER

Objector (named)	Objection	Buddhist reply (school / thinker)	Residual force ANALYSIS:
FACT: Nyāya - Vātsyāyana / Uddyotakara / Udayana	FACT: Recognition, memory and moral desert require an enduring self.	FACT: Sautrāntika/Yogācāra: causal continuum (santāna) , sādrśya , flame/river analogies; Yogācāra adds store-consciousness (ālaya-vijñāna) and bīja .	ANALYSIS: A series may not "own" memories unless something owns the series.
FACT: Nyāya realist	FACT: A permanent substance can act when auxiliaries are present.	FACT: Dharmakīrti line: sahakāri-anapekṣā / kramayaugapadya dilemma; changing conditions do the real work.	ANALYSIS: Nyāya's substance-quality model remains intuitively powerful.
FACT: Kumāṛila Bhaṭṭa	FACT: Self is required for duty, memory and means of valid knowledge (pramāṇa); universals are required for word-meaning.	FACT: Dignāga/Dharmakīrti: momentary cognitions plus exclusion theory of meaning (apoha) explain self and generality conventionally.	ANALYSIS: Exclusion theory of meaning (apoha)'s positive-determination problem persists.

Objector (named)	Objection	Buddhist reply (school / thinker)	Residual force ANALYSIS:
FACT: Uddyotakara	FACT: Exclusion theory of meaning (apoha) is circular: to exclude non-cows one must already know cow.	FACT: Dharmakīrti: exclusion is grounded in causal convergence and successful activity, not a prior universal.	ANALYSIS: The circularity charge is not fully dissolved for many critics.
FACT: Śaṃkara / Advaita	FACT: Momentariness makes bondage/liberation and unity of knower unintelligible; emptiness (śūnyatā) presupposes witnessing consciousness.	FACT: Madhyamaka/Yogācāra replies through two truths and self-revealing cognition without enduring self (ātman).	ANALYSIS: Unity of experience remains the strongest Advaitic pressure point.
FACT: Nyāya / modern realist	FACT: Catuskoṭi denial is self-contradictory or says nothing.	FACT: Nāgārjuna: non-implicative negation; empty words cure empty reification; no independent thesis.	ANALYSIS: Prāsaṅgika vs Svātantrika dispute shows internal unease.
FACT: Puggalavāda / Vātsīputrīya foil	FACT: A person neither identical with nor different from aggregates (skandhas) is needed for continuity.	FACT: Mainstream Buddhism: this risks reintroducing a disguised self; continuity is conventional designation on aggregates.	ANALYSIS: The pressure to preserve agency explains why the foil arose.
FACT: Cārvāka materialist	FACT: Reject self beyond body and deny post-mortem continuity.	FACT: Buddhism rejects permanent self but preserves karmic causal continuity beyond gross-body reduction.	ANALYSIS: Requires accepting causal continuity not directly reducible to perception.

9E. INTER-SCHOOL POSITIONING

A. Knowledge, self and change

School	Means of valid knowledge (pramāṇas)	Ontology of self	Permanence / change
FACT: Buddhism	FACT: Dignāga-Dharmakīrti: two, perception and inference	FACT: no permanent enduring self (ātman); person is aggregate / stream	FACT: conditioned reals are momentary
FACT: Nyāya-Vaiśeṣika	FACT: usually four in classical Nyāya	FACT: enduring self-substance	FACT: substances endure through changing qualities
FACT: Sāṃkhya-Yoga	FACT: perception, inference and reliable testimony	FACT: many conscious witness (puruṣas)	FACT: conscious witness (puruṣa) permanent; primordial material nature (prakṛti) transforms
FACT: Jainism	FACT: multiple means of valid knowledge (pramāṇa)/naya approaches	FACT: real individual self (jīva), intrinsically conscious	FACT: substance persists with changing modes
FACT: Mīmāṃsā	FACT: expands means of valid knowledge (pramāṇas); Kumārila accepts several including postulation (arthāpatti) and non-cognition (anupalabdhi)	FACT: enduring self as agent/enjoyer	FACT: enduring subject and real ritual order
FACT: Cārvāka	FACT: perception alone	FACT: self identified with body / consciousness as bodily product	FACT: material elements persist; no rebirth-continuity
FACT: Advaita Vedānta	FACT: six in developed Advaita	FACT: enduring self (ātman) = Brahman, self-luminous	FACT: Brahman permanent; world ultimately mithyā

B. Causation, universals, scripture and liberation

School	Causation	Universals	Scripture	Liberation
FACT: Buddhism	FACT: dependent origination	FACT: exclusion theory of meaning (apoha); no real jāti	FACT: Buddha-word valued, but not Vedic infallibility	FACT: cessation of ignorance, craving and duḥkha-process

School	Causation	Universals	Scripture	Liberation
FACT: Nyāya-Vaiśeṣika	FACT: ārambhavāda-style production and theistic order in later Nyāya	FACT: real universals	FACT: testimony as means of valid knowledge (pramāṇa), Veda accepted	FACT: true knowledge of self and categories, cessation of suffering
FACT: Sāṃkhya-Yoga	FACT: pre-existence of the effect in the cause (satkāryavāda) / real transformation (pariṇāmavāda)	ANALYSIS: less central than constitutive principle (tattva) structure	FACT: scripture accepted with reasoning	FACT: isolation (kaivalya), isolation of conscious witness (puruṣa) from primordial material nature (prakṛti)
FACT: Jainism	FACT: anekāntavāda and pariṇāmic change	FACT: real common features within many-sided realism	FACT: Jaina āgama authority	FACT: release of individual self (jīva) from karmic matter
FACT: Mīmāṃsā	FACT: ritual efficacy and apūrva	FACT: real universals	FACT: Veda intrinsically authoritative	FACT: often framed through dharma and cessation of obstacles, varies by sub-school
FACT: Cārvāka	FACT: material causation only	ANALYSIS: rejects metaphysical universals beyond perception	FACT: rejects Veda	FACT: no liberation (mokṣa) beyond worldly well-being
FACT: Advaita Vedānta	FACT: vivarta / appearance	ANALYSIS: empirical universals within māyā	FACT: Upaniṣadic revelation central	FACT: knowledge of Brahman

9E.1 Buddhism vs Jainism - high-yield distinction

- FACT: Both are non-Vedic śramaṇa traditions and both reject a creator God as necessary for liberation.
- FACT: Jainism affirms **anekāntavāda** (many-sidedness): a substance can be permanent in substance and changing in modes.
- FACT: Buddhism denies substance: what looks like persistence is a conditioned series without an underlying dravya.
- FACT: The Jaina **individual self (jīva)** is real and omniscient by nature when freed from karmic obstruction; the Buddhist self is a construct designated on aggregates (skandhas).
- ANALYSIS: Trap to avoid: do not say both deny the soul. Buddhism denies enduring self (ātman); Jainism strongly affirms individual self (jīva).

9E.2 Buddhism vs Advaita - avoid the “crypto-Advaita” trap

- FACT: Both deny that ordinary world-experience is ultimately real in the naive realist sense.
- FACT: Advaita's ultimate is positive, self-luminous **Brahman / enduring self (ātman)**.
- FACT: Madhyamaka **emptiness (śūnyatā)** is absence of **intrinsic nature (svabhāva)**, not a hidden substrate.
- FACT: Advaita sublates world into Brahman; Madhyamaka refuses to replace empty phenomena with a metaphysical ground.
- ANALYSIS: Trap to refute: “Buddhist emptiness is just Advaita Brahman under another name.” The Buddhist case is anti-substantialist; Advaita is absolute-substantialist.

9F. CONTROLLED WESTERN COMPARISON

Western comparison	Point of contact	Disanalogy
FACT: Hume's bundle theory vs anātman	FACT: Both deny a substantial self on broadly empiricist grounds.	ANALYSIS: Hume has no karmic continuity, no nirvāṇa-soteriology and treats self as imagination's fiction; Buddhism has a morally weighted causal series.
FACT: Heraclitus' flux vs momentariness (kṣaṇikavāda)	FACT: Both stress universal change.	ANALYSIS: Heraclitus retains logos as ordering principle; Buddhist momentariness is tied to dependent origination and causal efficacy.

Western comparison	Point of contact	Disanalogy
FACT: Whitehead's process thought vs momentary dharmas	FACT: Both treat reality as event/process rather than inert substance.	ANALYSIS: Whitehead's metaphysical scheme is not the Buddhist no-self path and has no exclusion theory of meaning (apoha) or cessation of conditioned suffering (nirvāṇa) framework.
FACT: Nāgārjuna's catuṣkoṭi vs Kant's antinomies	FACT: Both show reason generating opposed metaphysical conclusions.	ANALYSIS: Kant preserves the phenomenal object and limits categories; Nāgārjuna targets intrinsic nature (svabhāva) itself through emptiness.
FACT: Wittgenstein's therapeutic philosophy vs Buddha's silence	FACT: Both dissolve misleading questions rather than answer them on their own terms.	ANALYSIS: The Buddha's therapy is soteriological and rooted in suffering (duḥkha), action and moral consequence (karma) and liberation.
FACT: Ockham's nominalism vs exclusion theory of meaning (apoha)	FACT: Both deny real universals.	ANALYSIS: Exclusion theory of meaning (apoha)'s negative-exclusion mechanism and karmic-epistemic background have no exact Ockhamite counterpart; Ockham retains enduring individuals.

- **ANALYSIS: Rubric:** Western parallels are illustrative only; they must never replace the Indian argument and belong in at most one or two lines after the Buddhist case is complete.

9G. DIRECTIVE DECODER

Directive	What the examiner is testing	Structural move for a Buddhism answer	Closing verdict
Discuss	FACT: balanced exposition of doctrine and significance	ANALYSIS: define -> explain argument -> add school nuance -> conclude	ANALYSIS: "Thus the doctrine is central because..."
Examine	FACT: internal logic and assumptions	ANALYSIS: state thesis -> reconstruct reasoning -> expose presupposition	ANALYSIS: "It stands if its presupposition about ... is accepted."
Critically examine	FACT: doctrine plus objections/replies	ANALYSIS: doctrine -> named objection -> Buddhist reply -> residual force	ANALYSIS: "Strong as soteriology, debated as metaphysics."
Analyse	FACT: break doctrine into components	ANALYSIS: divide into causation, self, moment, liberation, epistemology	ANALYSIS: "The components converge on anti-substantialism."
Evaluate	FACT: final judgment on adequacy	ANALYSIS: strengths -> weaknesses -> contested point -> verdict	ANALYSIS: "Adequate for ..., weaker against ..."
Compare	FACT: similarity and difference across schools	ANALYSIS: use a table; then add one decisive contrast	ANALYSIS: "Similarity is formal; difference is doctrinal."
Distinguish	FACT: precise separation of close terms	ANALYSIS: two-column definitions, criteria and example	ANALYSIS: "Confusing them causes the standard UPSC trap."
Elucidate	FACT: clarify with examples	ANALYSIS: statement -> example -> doctrinal consequence	ANALYSIS: "The example shows the doctrine's exact sense."
Comment	FACT: interpret a quotation / claim	ANALYSIS: unpack claim -> support -> qualify -> conclude	ANALYSIS: "The claim is acceptable if read as ... not as ..."
Bring out	FACT: make an implicit relation explicit	ANALYSIS: show link, e.g. dependent origination (pratītyasamutpāda) -> momentariness (kṣaṇikavāda) -> nairātmya	ANALYSIS: "The relation is logical, not merely historical."
Do you agree?	FACT: reasoned position	ANALYSIS: partial agreement -> objection -> defended verdict	ANALYSIS: "I agree in the conventional/ultimate sense specified above."

9H. GRADED VERDICT ON BUDDHISM

9H.1 What is strong

- FACT: Buddhism gives a powerful process-based account of suffering, causation and liberation through **dependent origination (pratītyasamutpāda)**.
- FACT: It avoids both eternalism and annihilationism by using causal continuity without an eternal self.
- FACT: Momentariness (kṣaṇikavāda) is supported by a sharp causal-efficacy argument, especially in Dharmakīrti's means of valid knowledge (pramāṇa) framework.
- FACT: Madhyamaka's two truths allow it to deny intrinsic nature without abolishing ordinary practice.

9H.2 What is weak

- ANALYSIS: The denial of a persisting subject makes memory, recognition and moral desert philosophically difficult.
- ANALYSIS: Exclusion theory of meaning (apoha) explains universals economically but struggles to account for positive determinate cognition.
- ANALYSIS: Catuṣkoṭi and "no thesis" replies can look self-referentially unstable unless the non-implicative-negation nuance is clearly stated.

9H.3 What is genuinely contested

- CAUTION: Whether **svasaṃvedana** proves self-awareness or merely reifies cognition is debated between Buddhist epistemologists and Nyāya.
- CAUTION: Whether Madhyamaka's empty statements avoid self-refutation is debated both internally and by opponents.
- CAUTION: Whether a causal series is sufficient for moral responsibility without an owner remains the core cross-school dispute.

9H.4 Ready one-line verdicts

- ANALYSIS: **10 marks:** Buddhism replaces substance with conditioned process: this makes suffering removable, but raises the problem of continuity without self.
- ANALYSIS: **15 marks:** Its doctrines of dependent origination, momentariness and no-self form a coherent anti-substantialist system, though Nyāya and Vedānta press hard on memory, agency and liberation.
- ANALYSIS: **20 marks:** Buddhism is strongest as a therapeutic and causal philosophy of liberation; its deepest unresolved issue is whether causal continuity and two truths can fully replace the metaphysical work done by self, substance and universals in rival systems.

10. PYQ ROUTING (2018-2025)

ANALYSIS: **Corpus signal:** 13 primary-owned question-parts out of 112. The local Paper I corpus is continuous from 2018 through 2025. Cross-links do not create duplicate ownership.

Year	Question	Marks	Exact demand
2018	Q5(b)	10 marks	How do the Mādhyamika Buddhists apply the notion of Dependent origination (pratītyasamutpāda) to establish their doctrine of Emptiness (śūnyatā)? Discuss.
2018	Q6(b)	15 marks	Is it consistent for the Buddhists to admit the theory of No permanent self (nairātmyavāda) and the doctrine of Cessation of conditioned suffering (nirvāṇa) simultaneously? Give reasons in favour of your answer.
2019	Q5(b)	10 marks	How do the Yogācāra Buddhists deny the existence of the external world? Discuss.
2019	Q7(c)	15 marks	What is Dependent origination (pratītyasamutpāda)? How do the Buddhists apply this concept to prove that everything is momentary?
2020	Q6(a)	20 marks	How is Momentariness (kṣaṇikavāda) a logical derivative of Dependent origination (pratītyasamutpāda) in Buddhism? Explain.
2020	Q7(b)	15 marks	How does Buddhism explain Self in terms of Pañcaskandhas? What is Liberation for Buddhism if there is no Soul?

Year	Question	Marks	Exact demand
2021	Q5(d)	10 marks	Distinguish between pudgala-nairātmyavāda and dharma-nairātmyavāda with reference to Buddhist Philosophy.
2021	Q7(b)	15 marks	If everything is momentary then how do the Buddhists explain the problem of memory and personal identity? Critically discuss.
2022	Q6(a)	20 marks	How compatible is Buddhist theory of momentariness with their theory of Action and moral consequence (karma)? In this regard how do Buddhists respond to objections raised by their opponents? Critically discuss.
2022	Q7(b)	15 marks	Explain Buddhist concept of Triratna and their internal relation. Critically examine the consistency of Triratnas with the Buddhist concept of No-soul (Nairātmyavāda).
2023	Q8(a)	20 marks	"Ignorance of dependent origination is suffering while its knowledge is cessation of suffering." Present an account of Buddhist soteriology in the light of above statement.
2024	Q6(b)	15 marks	How do the two schools of Buddhism arrive at two opposed conclusions, namely "everything is void" and "everything is real" from the same doctrine of Dependent origination (pratītyasamutpāda)? Answer with arguments.
2025	Q8(c)	15 marks	Is Buddhist notion of Cessation of conditioned suffering (nirvāṇa) in consonance with their conception of momentariness (kṣaṇikavāda) and No permanent self (nairātmyavāda) (no-soul theory)? Critically discuss.

See the Indian Philosophy PYQ Bank, 2018-2025.

11. ANSWER ARCHITECTURE (10 / 15 / 20 marks)

CORE DEFINITION: Final verdict: Buddhist philosophy replaces substantial identity with dependent continuity, but its success depends on explaining how causal efficacy, knowledge and liberation remain coherent without a permanent self or intrinsic essence.

11.1 For a 10-marker

Define the doctrine in one line.
 State the core argument in 3-4 crisp steps.
 Add one distinction (e.g. pudgala- vs dharma-nairātmya; realism vs emptiness).
 Close with one line of significance.

11.2 For a 15-marker

Intro: locate the issue in Buddhist soteriology.
 Body A: doctrine stated precisely.
 Body B: argument with one example.
 Body C: objection and Buddhist reply.
 Conclusion: show why the doctrine matters for suffering (duḥkha) / cessation of conditioned suffering (nirvāṇa).

11.3 For a 20-marker

Frame: connect the question to the Four Noble Truths.
 Exposition: full doctrine with technical vocabulary.
 Analysis: derive the linked Buddhist claim (e.g. momentariness from dependent origination).
 Debate: contrast two schools or answer a major objection.
 Verdict: give a balanced philosophical assessment.

12. LINK-OUTS

- Nyaya-Vaisesika.md - contrast on self, causation, means of valid knowledge (pramāṇa) and God.
- Carvaka.md - contrast on self and rejection of transcendence.
- Jainism.md - compare continuity-through-change with Buddhist momentariness.
- ../_themes/Causation-across-schools.md - dependent origination (pratītyasamutpāda) vs pre-existence of the effect in the cause (satkāryavāda) vs new production (ārambhavāda).
- ../_themes/Self-and-liberation-across-schools.md - anātman vs enduring self (ātman) accounts.
- ../PYQ-Indian-Philosophy-2018-2025.md - year-wise Indian Philosophy routing.
- ../paper-2/philosophy-of-religion/Proofs-for-God.md - cross-paper God debate.

- .../paper-2/philosophy-of-religion/Religion-without-God.md - Buddhism as a non-theistic religion.
- .../paper-2/philosophy-of-religion/Soul-Immortality-Rebirth.md - rebirth without immortal soul.

SOURCES

- *Majjhima Nikāya* and related early Buddhist formulations of dependent origination, used in substance where directly phrased.
- Nāgārjuna, *Mūlamadhyamakakārikā*, especially the standard identification in substance of dependent origination and emptiness.
- Chatterjee & Datta, *An Introduction to Indian Philosophy*.
- C.D. Sharma, *A Critical Survey of Indian Philosophy*.
- S. Radhakrishnan, *Indian Philosophy*, Vol. I and II, where relevant to Buddhist schools.
- Standard expositions of *Milinda-pañha* for the chariot analogy, paraphrased where exact wording is uncertain.
- FACT: Dignāga and Dharmakīrti, standard pramāṇa-school doctrines of perception, inference, exclusion theory of meaning (apoha) and pramāṇaphala, paraphrased without verse-number claims.
- FACT: Early Buddhist discussions of the avyākata / avyākṛta questions and the Cūḷamālukya arrow parable, used in substance without invented citation numbering.
- FACT: Nāgārjuna, *Vigrahavyāvartanī*, for the no-thesis / self-referential defence, used in substance without verse-number claims.

CURRENT LINKAGE - BUDDHIST HERITAGE AS CULTURAL DIPLOMACY

FACT: **Official fact:** The High Commission of India in Colombo reported that India sent the Devnimori Buddha relics from Gujarat to the Gangaramaya Temple, Colombo, for public exposition from **4 to 10 February 2026**. The official release described the initiative as cultural and spiritual engagement with Sri Lanka through shared Buddhist heritage.

ANALYSIS: **Philosophy Optional use:** This event does not prove any Buddhist doctrine. Use it only as a contemporary introduction or conclusion showing how a philosophical-religious tradition also functions as a civilizational language in diplomacy. Doctrinal answers must remain grounded in dependent origination (pratītyasamutpāda), momentariness, no-self, the two truths, compassion, and the relevant school.

Source trail used for this package

LAYER 4 - EXAM APPLICATION

Exam route

The complete corpus contains **13 primary-owned questions from 2018-2025:**

- Dependent origination and emptiness: 2018.
- Yogācāra external-world critique: 2019.
- Momentariness derivation: 2019 and 2020.
- No-self, aggregates and cessation of conditioned suffering (nirvāṇa): 2018, 2020, 2021 and 2025.
- Memory and action and moral consequence (karma) under momentariness: 2021 and 2022.
- Triratna and no-self: 2022.
- Soteriology through dependent origination: 2023.

- Realism versus emptiness: 2024.

The retained routing table, directive decoder and marks-wise frameworks below should be used before attempting the full solved practice.

LAYER 5 - RAPID REVISION

Rapid recall - final master matrix

Prompt	Recall spine
Causation	conditioned arising and cessation
Reality	causal efficacy; momentary particulars
Person	five aggregates and causal designation
Continuity	<i>causal continuum (santāna)</i> , seeds and store-consciousness
Schools	direct realism -> inferred realism -> cognition-only -> emptiness
Language	<i>exclusion theory of meaning (apoha)</i>
Liberation	cessation of the causes of suffering
Verdict	process without substance; continuity with an ownership burden

PART II - SOLVED PYQs, PRACTICE AND ANSWER TRAINING

CLOSING RECALL FLOW - UNDECLARED QUESTIONS, LIBERATION AND EXAM VERDICT

SUBTOPIC CLOSURE FLOW UNDECLARED QUESTIONS, LIBERATION AND EXAM VERDICT			
1. KEY TERMS / DEFINITIONS undeclared questions (avyākata) · poisoned-arrow parable · false presupposition · pragmatic silence · liberation · Tathāgata	2. MECHANISM / ARGUMENT Avyākata: questions left undeclared because they do not conduce to	3. CONSEQUENCE / CONTRAST Avyākata / avyākṛta (undeclared / unanswered) questions are questions	4. UPSC TRAP / ANSWER-USE The questions are na arthasamhita (not conducive to the goal / not
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Final verdict: Buddhist philosophy replaces substantial identity with dependent continuity, but its success depends on explaining how causal efficacy, knowledge and liberation remain coherent without a permanent self or intrinsic essence.			

BASIC MCQS / REMEDIATION

Practice protocol - [CORE ANSWER]

Attempt each item before reading its key. Answer placement is balanced, deterministic and non-patterned using a stable topic seed. across all forty-eight diagnostics.

CORE DIAGNOSTIC MCQS

1. Which formulation best expresses the general principle of Dependent origination (pratītyasamutpāda)?

A. Conditioned phenomena arise and cease with their supporting conditions. B. An eternal self coordinates otherwise disconnected events. C. A creator initiates the first member of every causal series. D. Every effect already exists materially in its cause.

Answer: A. Conditioned phenomena arise and cease with their supporting conditions.

Explanation: The formula “this being, that arises; with the cessation of this, that ceases” states conditionality. It avoids eternalism because no conditioned entity is immutable, and avoids annihilationism because events arise in ordered dependence rather than from nothing.

2. In the Four Noble Truths, Dependent origination (pratītyasamutpāda) most directly explains the relation between:

A. right speech and right livelihood. B. the origin of suffering (duḥkha) and its possible cessation. C. perception and inference. D. Buddha and Saṅgha.

Answer: B. the origin of suffering (duḥkha) and its possible cessation.

Explanation: Dependent origination supplies the causal grammar of the second and third truths: suffering arises because relevant conditions operate, and it ceases when those conditions-especially ignorance, craving and clinging-are removed.

3. Which sequence correctly presents the first four nidānas?

A. ignorance (avidyā) -> vijñāna -> saṃskāra -> nāma-rūpa B. saṃskāra -> ignorance (avidyā) -> nāma-rūpa -> vijñāna C. ignorance (avidyā) -> saṃskāra -> vijñāna -> nāma-rūpa D. vijñāna -> ignorance (avidyā) -> nāma-rūpa -> saṃskāra

Answer: C. ignorance (avidyā) -> saṃskāra -> vijñāna -> nāma-rūpa*

Explanation: Ignorance conditions formations, formations condition consciousness, and consciousness conditions name-and-form. Confusing *saṃskāra* and *vijñāna* is a frequent factual trap.

4. Which sequence correctly completes the twelve-link chain after vedanā?

A. tṛṣṇā -> bhava -> upādāna -> jāti -> jarā-maraṇa B. upādāna -> tṛṣṇā -> jāti -> bhava -> jarā-maraṇa C. bhava -> tṛṣṇā -> upādāna -> jarā-maraṇa -> jāti D. tṛṣṇā -> upādāna -> bhava -> jāti -> jarā-maraṇa

Answer: D. tṛṣṇā -> upādāna -> bhava -> jāti -> jarā-maraṇa*

Explanation: Feeling conditions craving, craving clinging, clinging becoming, becoming birth, and birth ageing-and-death. The practical intervention point is crucial: feeling need not automatically harden into craving.

5. Why does dependent origination not imply fatalism?

A. Because altering conditions can interrupt the production of suffering. B. Because every link must unfold identically in every person. C. Because karmic effects occur without causes. D. Because an unconditioned self can leave the causal order.

Answer: A. Because altering conditions can interrupt the production of suffering.

Explanation: Conditionality makes practice meaningful. Ethics, mindfulness and insight change the causal environment; therefore the chain is explanatory and soteriological, not a fixed destiny.

6. The most defensible route from dependent origination to Momentariness (kṣaṇikavāda) is:

A. causal series require an unchanging substratum. B. conditional impermanence plus the argument from causal efficacy supports moment-specific existence. C. dependence immediately proves that every event lasts exactly one measurable instant. D. only what is permanent can produce a novel effect.

Answer: B. conditional impermanence plus the argument from causal efficacy supports moment-specific existence.

Explanation: Dependent origination (pratītyasamutpāda) directly establishes conditioned impermanence. Strict momentariness requires the added *causal efficacy* (arthakriyā) argument that real causal operation belongs to a determinate, changing phase.

7. Causal efficacy (arthakriyā) means:

A. correspondence between a word and an eternal meaning. B. recognition by an enduring subject. C. capacity to perform an effective causal function. D. membership in a real universal.

Answer: C. capacity to perform an effective causal function.

Explanation: Dignāga-Dharmakīrti traditions connect reality with causal efficacy. Since unique particulars alone produce effects, the criterion also supports their momentariness.

8. In the Buddhist simultaneity/succession dilemma, a wholly permanent cause is problematic because:

A. it cannot possess qualities. B. it would become a universal. C. it must be imperceptible. D. unchanged complete power gives no reason for delayed or successive production.

Answer: D. unchanged complete power gives no reason for delayed or successive production.

Explanation: If the power is complete, the effect should occur immediately or continuously. If the cause gains a new operative power later, it has changed and is not wholly permanent.

9. What is the Buddhist response when Nyāya says a permanent cause waits for saṃkāra auxiliary conditions?

A. If auxiliaries alter causal capacity, the operative complex is not wholly unchanged; if not, delay remains unexplained. B. Auxiliary conditions are always illusions. C. Permanent substances exist but cannot be known. D. Every cause and effect is simultaneous.

Answer: A. If auxiliaries alter causal capacity, the operative complex is not wholly unchanged; if not, delay remains unexplained.

Explanation: The reply targets explanatory work. Either the auxiliary contributes a difference, undermining strict permanence of the operative cause, or it contributes none, leaving delayed action mysterious.

10. Causal continuum (santāna) is best understood as:

A. the final destruction of all causal relations. B. a causally connected continuum of numerically distinct moments. C. an eternal universal instantiated in persons. D. a subtle permanent soul concealed beneath momentary states.

Answer: B. a causally connected continuum of numerically distinct moments.

Explanation: *Causal continuum (santāna)* preserves transmission, regularity and practical identity without numerical sameness. No-self denies a substance-bearer, not causal continuity.

11. Which statement best captures the Buddhist account of memory under momentariness?

A. Memory is impossible and only appears to occur. B. One permanent cognition survives from experience to recollection. C. An experience conditions a disposition that is transmitted and later produces recollection. D. Memory is supplied by a creator to each mental stream.

Answer: C. An experience conditions a disposition that is transmitted and later produces recollection.

Explanation: Sautrāntika uses traces or seeds, while Yogācāra systematizes their preservation through *store-consciousness (ālaya-vijñāna)*. The account explains causal transmission without an enduring experiencer.

12. Nyāya's strongest pressure on the Buddhist memory theory is that:

A. memory contains no past-directed content. B. all recognition is inference from universals. C. causal continuity is impossible between moments. D. "I experienced this" seems to require one subject owning both experience and recollection.

Answer: D. "I experienced this" seems to require one subject owning both experience and recollection.

Explanation: The Buddhist stream theory explains why information reappears, but Nyāya asks whether it explains first-person appropriation. The Buddhist reply treats ownership as constructed within an integrated causal continuum.

13. Which set contains only the five aggregates (skandhas)?

A. *rūpa, vedanā, saṃjñā, saṃskāra, vijñāna* B. *dravya, constituent quality (guṇa), action and moral consequence (karma), sāmānya, viśeṣa* C. *determinative intellect (buddhi), ego-maker (ahaṃkāra), sensory mind (manas), tanmātra, conscious witness (puruṣa)* D. *rūpa, enduring self (ātman), saṃjñā, saṃskāra, vijñāna*

Answer: A. rūpa, vedanā, saṃjñā, saṃskāra, vijñāna*

Explanation: These are form, feeling, recognition, formations and consciousness. Buddhism finds no permanent self as one aggregate, their total, or their independent owner.

14. The Milinda-pañha chariot analogy primarily establishes that:

A. a hidden substance unifies the parts. B. "person" is a dependent designation upon an organized aggregate-stream. C. persons do not exist even conventionally. D. the body alone is the self.

Answer: B. "person" is a dependent designation upon an organized aggregate-stream.

Explanation: The analogy rejects a separately findable substantial person while preserving conventional reference and practical agency. It is not eliminative nihilism.

15. How does dharma-nairātmya extend pudgala-nairātmya?

A. It restores a permanent self at the level of consciousness. B. It denies conventional persons but accepts eternal dharmas. C. It denies intrinsic self-nature not only in persons but also in constituent phenomena. D. It limits no-self to bodily form.

Answer: C. It denies intrinsic self-nature not only in persons but also in constituent phenomena.

Explanation: Personal no-self is shared broadly; Mahāyāna emphatically extends non-selfhood to dharmas. This prevents momentary elements from becoming replacement substances.

16. Which statement best reconciles Cessation of conditioned suffering (nirvāṇa) with no-self?

A. Cessation of conditioned suffering (nirvāṇa) destroys an actually existing eternal soul. B. An enduring self (ātman) temporarily disappears and later returns. C. Cessation of conditioned suffering (nirvāṇa) is the immortality of a purified ego. D. Cessation of conditioned suffering (nirvāṇa) is cessation of the causes of suffering within a causal stream, without an eternal owner.

Answer: D. Cessation of conditioned suffering (nirvāṇa) is cessation of the causes of suffering within a causal stream, without an eternal owner.

Explanation: The practitioner and liberated continuum are causally related without being one immutable substance. No-self removes the appropriation that feeds craving rather than abolishing the path.

17. Vaibhāṣika is most accurately described as:

A. direct realism about external, momentary dharmas. B. universal emptiness of all dharmas. C. representational realism in which objects are only inferred. D. cognition-only idealism.

Answer: A. direct realism about external, momentary dharmas.

Explanation: Vaibhāṣika treats external dharmas as real and directly perceived. It differs from Sautrāntika about epistemic access and from Mādhyamaka about ultimate status.

18. Sautrāntika differs from Vaibhāṣika chiefly because it holds that:

A. consciousness is an eternal substance. B. external objects are inferred from cognition's representations rather than directly perceived. C. no external objects exist. D. only universals are causally efficient.

Answer: B. external objects are inferred from cognition's representations rather than directly perceived.

Explanation: Sautrāntika remains realist but is representational or inferential in epistemology. The mental form is directly known; an external cause is inferred.

19. Which statement about Yogācāra is most accurate?

A. Yogācāra is identical to Advaita because both use consciousness vocabulary. B. Yogācāra denies action and moral consequence (karma) and intersubjective regularity. C. *Vijñaptimātratā* denies independently established external objects while retaining a conditioned and ordered cognitive flow. D. A private ego freely imagines whatever world it wants.

Answer: C. *Vijñaptimātratā* denies independently established external objects while retaining a conditioned and ordered cognitive flow.

Explanation: Yogācāra is not whimsical subjective idealism. Karmic seeds and shared conditioning explain structured experience, while the subject-object split is analysed as constructed.

20. What is the main function of store-consciousness (ālaya-vijñāna)?

A. To serve as an eternal enduring self (ātman). B. To create matter ex nihilo. C. To guarantee knowledge of external substances. D. To carry karmic and cognitive seeds through a changing stream.

Answer: D. To carry karmic and cognitive seeds through a changing stream.

Explanation: Store-consciousness explains continuity, memory and coordinated experience. Yogācāra insists that it too is conditioned and transformable, so treating it as a permanent self is a factual error.

21. In the tri-svabhāva, parikalpita refers to:

A. the imagined construction of independent subject-object duality. B. the dependently arisen cognitive flow. C. an eternal material substratum. D. the perfected realization of non-duality.

Answer: A. the imagined construction of independent subject-object duality.

Explanation: *Paratantra* is the dependent flow; *pariṇiṣpanna* is realization of the absence of the imagined duality. The three are analytical aspects, not three separate substances.

22. In the tri-svabhāva, paratantra is:

A. permanent pure consciousness. B. the dependently arisen flow conditioned by causes and seeds. C. sheer non-being. D. the external object as directly perceived.

Answer: B. the dependently arisen flow conditioned by causes and seeds.

Explanation: Yogācāra does not deny the causal process of cognition. It denies the independently real duality projected upon that dependent flow.

23. In the tri-svabhāva, pariniṣpanna is:

A. the inference from a representation to matter. B. the persistence of subject-object duality at the ultimate level. C. perfected realization of the dependent flow's freedom from imagined duality. D. the independent existence of store-consciousness.

Answer: C. perfected realization of the dependent flow's freedom from imagined duality.

Explanation: The perfected nature is not another substance behind experience. It is the dependent nature correctly known as lacking the projected dual structure.

24. Which statement best expresses Mādhyamaka Emptiness (śūnyatā)?

A. Nothing exists or functions at any level. B. Empty things cannot enter causal relations. C. Only consciousness possesses ultimate being. D. Phenomena lack intrinsic *intrinsic nature (svabhāva)* while functioning conventionally through dependence.

Answer: D. Phenomena lack intrinsic intrinsic nature (svabhāva) while functioning conventionally through dependence.

Explanation: Emptiness is anti-essentialism, not nothingness. Dependent functioning and emptiness are mutually implicative: fixed essences would make change and causal interaction impossible.

25. Why does Mādhyamaka say that dependent origination implies emptiness?

A. What depends on causes and designation cannot possess independent own-nature. B. Causal relations are logically impossible. C. Every effect must pre-exist in a permanent cause. D. Dependence proves that only matter is real.

Answer: A. What depends on causes and designation cannot possess independent own-nature.

Explanation: *Intrinsic nature (svabhāva)* would mean self-establishment. Dependence is therefore incompatible with intrinsic essence, though fully compatible with conventional existence.

26. The two truths are:

A. perception and inference. B. conventional truth (*saṃvṛti-satya*) and ultimate truth (*paramārtha-satya*). C. mind and matter. D. permanence and annihilation.

Answer: B. conventional truth (saṃvṛti-satya) and ultimate truth (paramārtha-satya).

Explanation: Conventionally, language, ethics and causation work; ultimately, no entity has independent *intrinsic nature (svabhāva)*. The distinction prevents both reification and nihilism.

27. "Emptiness of emptiness" chiefly prevents:

A. ethical action. B. analysis of causal conditions. C. reification of Emptiness (śūnyatā) into a new Absolute. D. conventional discourse.

Answer: C. reification of Emptiness (śūnyatā) into a new Absolute.

Explanation: Emptiness is itself dependently designated and has no own-nature. It is a therapeutic critique of essence, not an ultimate substance.

28. How can realist Buddhism and Mādhyamaka draw opposed conclusions from Dependent origination (pratītyasamutpāda)?

A. Realists accept causation, whereas Mādhyamaka rejects it. B. Mādhyamaka accepts permanent substances, whereas realists reject them. C. Both use "real" and "empty" in exactly the same sense. D. Realists infer causal reality of conditioned dharmas; Mādhyamaka infers their lack of intrinsic nature.

Answer: D. Realists infer causal reality of conditioned dharmas; Mādhyamaka infers their lack of intrinsic nature.

Explanation: The positions partly answer different questions-whether phenomena function and whether they are self-grounded. A genuine dispute remains over whether momentary dharmas are ultimately real.

29. Which means of valid knowledge (pramāṇas) are fundamental for Dignāga and Dharmakīrti?

A. Perception and inference. B. Perception, inference and testimony. C. Six independent means of valid knowledge (pramāṇas). D. Perception, comparison, testimony and postulation.

Answer: A. Perception and inference.

Explanation: Other apparently valid cognitions are reduced to these two. Perception concerns non-conceptual particulars; inference operates through conceptual construction.

30. Svalakṣaṇa is:

A. an eternal universal known by language. B. a unique causally efficient particular, the ultimate object of perception. C. the exclusion of non-cows. D. the conventional person.

Answer: B. a unique causally efficient particular, the ultimate object of perception.

Explanation: The momentary particular is directly efficacious and non-conceptual. A *sāmānyalakṣaṇa* is the generalized, conceptually constructed object used in thought and language.

31. Why is sāmānyalakṣaṇa associated with conceptual cognition?

A. It alone produces causal effects. B. It is an eternal self. C. It is a generalized construction rather than the unique particular given in bare perception. D. It is an indivisible atom.

Answer: C. It is a generalized construction rather than the unique particular given in bare perception.

Explanation: Concepts organize distinct particulars under repeatable types. Buddhist epistemologists deny that such universals exist as independently real entities.

32. Exclusion theory of meaning (apoha) explains word meaning primarily through:

A. direct contact with a real universal. B. resemblance to a permanent prototype. C. divine assignment of meanings. D. exclusion of what is other, such as “cow” functioning through exclusion of non-cows.

Answer: D. exclusion of what is other, such as “cow” functioning through exclusion of non-cows.

Explanation: Because only unique particulars are ultimately real, repeatable linguistic classification cannot depend on eternal universals. Exclusion yields usable conceptual scope without reifying a universal.

33. Kumārila’s major objection to Exclusion theory of meaning (apoha) is that:

A. purely negative exclusion seems unable to explain the positive unity grasped in a word’s meaning. B. exclusion proves that universals are momentary. C. perception is always conceptual. D. words never produce cognition.

Answer: A. purely negative exclusion seems unable to explain the positive unity grasped in a word’s meaning.

Explanation: The Buddhist reply is that exclusions, grounded in causal similarities and practical purposes, generate a positive-seeming conceptual presentation without requiring a real universal.

34. In Buddhist epistemology, the contrast between means of valid knowledge (pramāṇa) and pramāṇaphala is best expressed as:

A. instrument and result must always be two enduring substances. B. a cognition can be the knowing operation in one aspect and its successful apprehension in another, unlike Nyāya’s strongly external instrument-result model. C. valid cognition has no result. D. testimony alone joins the two.

Answer: B. a cognition can be the knowing operation in one aspect and its successful apprehension in another, unlike Nyāya’s strongly external instrument-result model.

Explanation: Dignāga-Dharmakīrti resist multiplying separately enduring entities. The 2025 debate requires presenting this Buddhist reflexive or cognition-centred model against Nyāya’s realist account.

35. Which is among the Buddha’s avyākṛta questions?

A. Whether right action reduces suffering. B. Whether craving conditions clinging. C. Whether the world is eternal or non-eternal. D. Whether perception occurs.

Answer: C. Whether the world is eternal or non-eternal.

Explanation: Questions about the world's eternity/finitude, identity of soul and body, and the Tathāgata after death were left undeclared because their speculative framing did not conduce to liberation.

36. The best interpretation of the Buddha's silence on avyākṛta questions is:

A. inability to reason about metaphysics. B. denial that language has any use. C. proof that he secretly accepted every alternative. D. pragmatic and therapeutic refusal of wrongly framed speculation irrelevant to ending suffering (duḥkha).

Answer: D. pragmatic and therapeutic refusal of wrongly framed speculation irrelevant to ending suffering (duḥkha).

Explanation: Silence is not automatically agnosticism or verificationism. It redirects inquiry toward causal conditions of suffering and may reject the presuppositions embedded in the alternatives.

37. The fire-going-out simile warns against asking where the liberated Tathāgata "goes" because:

A. "going somewhere" wrongly presupposes a substantial entity persisting independently of conditions. B. Cessation of conditioned suffering (nirvāṇa) is a physical location. C. fire is an eternal substance. D. the Tathāgata becomes a creator.

Answer: A. "going somewhere" wrongly presupposes a substantial entity persisting independently of conditions.

Explanation: When fuel ceases, fire is not properly described as travelling north or south. Likewise, post-mortem alternatives may import the substantial self that Buddhism rejects.

38. Which statement correctly relates the Triratna to No permanent self (nairātmyavāda)?

A. Refuge requires three eternal souls. B. Buddha and Saṅgha are conventionally real causal persons/communities, while Dhamma includes insight into no-self. C. Buddha is an unchanging creator. D. No-self makes teaching and community impossible.

Answer: B. Buddha and Saṅgha are conventionally real causal persons/communities, while Dhamma includes insight into no-self.

Explanation: Refuge is practical orientation within dependent relations, not interaction among immortal substances. Institutional and personal continuity need not be numerical identity.

39. Which pair correctly names the classical karmic objections?

A. *anyathākhyāti* and *akhyāti* B. *agreement in presence (anvaya)* and *agreement in absence (vyatireka)* C. *kṛtānāśa* (loss of the performed act) and *akṛtābhyāgama* (receipt of an unperformed result) D. *pre-existence of the effect in the cause (satkāryavāda)* and *non-existence of the effect before production (asatkāryavāda)*

Answer: C. kṛtānāśa (loss of the performed act) and akṛtābhyāgama (receipt of an unperformed result)

Explanation: Opponents argue that destruction of the agent loses desert, while a later different moment undeservedly receives the fruit. Buddhism replies through causal inheritance in one stream.

40. In a UPSC directive, "critically discuss" requires the candidate to:

A. define the doctrine and stop. B. reject the doctrine in advance. C. list scholars without argument. D. explain the position, present objections and replies, assess residual difficulties, and reach a reasoned verdict.

Answer: D. explain the position, present objections and replies, assess residual difficulties, and reach a reasoned verdict.

Explanation: "Critically" does not mean hostile. A strong Philosophy answer follows claim -> named evidence or argument -> analysis -> qualification, then gives a proportionate conclusion.

REMEDIAL DIAGNOSTIC MCQS

41. Which ordering of the middle nidānas is correct?

A. *ṣaḍāyatana* -> *sparśa* -> *vedanā* -> *trṣṇā* B. *trṣṇā* -> *vedanā* -> *sparśa* -> *ṣaḍāyatana* C. *vedanā* -> *sparśa* -> *ṣaḍāyatana* -> *trṣṇā* D. *sparśa* -> *ṣaḍāyatana* -> *trṣṇā* -> *vedanā*

Answer: A. ṣaḍāyatana -> sparśa -> vedanā -> trṣṇā*

Explanation: The six sense bases condition contact, contact feeling and feeling craving. This sequence is both a factual requirement and the basis for explaining mindful interruption before craving.

42. Which school-pairing is correct?

A. Vaibhāṣika-external objects merely inferred; Sautrāntika-direct realism. B. Vaibhāṣika-direct realism; Sautrāntika-representational realism. C. Sautrāntika-no external world; Yogācāra-direct realism. D. Yogācāra-material atomism; Mādhyamaka-eternal consciousness.

Answer: B. Vaibhāṣika-direct realism; Sautrāntika-representational realism.

Explanation: Both are realist about external particulars, but they disagree about access. Yogācāra challenges independent externality, while Mādhyamaka empties both object and cognition of *intrinsic nature* (*svabhāva*).

43. Which statement avoids the most common Emptiness (śūnyatā) trap?

A. "Void" means absolute non-being. B. Emptiness (śūnyatā) is an eternal metaphysical substance. C. Emptiness denies intrinsic nature while dependent conventional functioning remains. D. Empty phenomena cannot cause anything.

Answer: C. Emptiness denies intrinsic nature while dependent conventional functioning remains.

Explanation: Nāgārjuna's point is that dependence and emptiness are inseparable. Nihilism would destroy the very causal and linguistic practices through which the doctrine is expressed.

44. Which statement best answers the charge that store-consciousness (ālaya-vijñāna) is a disguised enduring self (ātman)?

A. It belongs only to matter. B. It is outside causation and never changes. C. It is permanent but should not be called a self. D. It is a conditioned, momentary and transformable stream carrying seeds, not an independent owner.

Answer: D. It is a conditioned, momentary and transformable stream carrying seeds, not an independent owner.

Explanation: Functional continuity alone does not equal substancehood. The objection revives if store-consciousness is incorrectly made immutable, unitary and self-established.

45. Which answer spine is best for "How is Momentariness (kṣaṇikavāda) a logical derivative of Dependent origination (pratītyasamutpāda)?"

A. Define both -> derive impermanence from dependence -> add *causal efficacy* (*arthakriyā*) dilemma -> answer *sahakārin* -> explain *causal continuum* (*santāna*) -> qualify the derivation. B. Discuss only Cessation of conditioned suffering (*nirvāṇa*) and no-self. C. Compare four Buddhist schools without showing any inference. D. List twelve links -> state that everything changes -> conclude.

Answer: A. Define both -> derive impermanence from dependence -> add causal efficacy (arthakriyā) dilemma -> answer sahakārin -> explain causal continuum (santāna) -> qualify the derivation.

Explanation: The question tests derivation. A complete answer must expose the logical bridge and preserve continuity, not merely provide adjacent descriptions.

46. Which claim most accurately answers akṛtābhyāgama?

A. The later recipient is numerically identical in every respect to the earlier agent. B. The karmic fruit arises in the causally continuous stream shaped by the act, not in an unrelated series. C. Moral responsibility is an illusion. D. A creator reallocates karmic fruits.

Answer: B. The karmic fruit arises in the causally continuous stream shaped by the act, not in an unrelated series.

Explanation: Buddhism rejects both strict identity and absolute difference. The reply grounds desert in causal inheritance, though critics still question whether it fully explains ownership.

47. Which statement about Cessation of conditioned suffering (nirvāṇa) and Momentariness (kṣaṇikavāda) is most precise?

A. Momentariness logically rules out cessation. B. Cessation of conditioned suffering (*nirvāṇa*) is a permanent personal experience and therefore an exception to all Buddhist analysis. C. Momentariness (*kṣaṇikavāda*) applies to conditioned entities; Cessation of conditioned suffering (*nirvāṇa*) may be described as unconditioned or as cessation,

without postulating an eternal person. D. Cessation of conditioned suffering (nirvāṇa) is momentary pleasure.

Answer: C. Momentariness (kṣaṇikavāda) applies to conditioned entities; Cessation of conditioned suffering (nirvāṇa) may be described as unconditioned or as cessation, without postulating an eternal person.

Explanation: The compatibility depends on not substantializing Cessation of conditioned suffering (nirvāṇa). Finality means the non-renewal of suffering's conditions, not everlasting possession by an ego.

48. Which distinction is essential in answering the 2024 "everything is void/everything is real" PYQ?

A. Perception versus testimony. B. Buddha versus Saṅgha. C. Bodily continuity versus memory. D.

Causal/conventional reality versus intrinsic or self-established reality.

Answer: D. Causal/conventional reality versus intrinsic or self-established reality.

Explanation: Realist schools affirm causally efficacious dharmas; Mādhyamaka denies their *intrinsic nature* (svabhāva). The distinction resolves superficial contradiction while retaining the deeper dispute about ultimate status.

PYQS AND ANSWER PRACTICE

2018 · Q5(b) · 10 marks

Question: How do the Mādhyamika Buddhists apply the notion of Pratītyasamutpāda to establish their doctrine of Śūnyatā? Discuss.

Demand decoding

- Explain the Mādhyamika inference from dependent origination to emptiness.
- Define *intrinsic nature* (svabhāva) and show why dependence excludes it.
- Protect Emptiness (śūnyatā) from the charge of nihilism through the two truths.

Independent model answer

For Mādhyamika, *dependent origination* (pratītyasamutpāda) means that every phenomenon arises only in dependence on causes, conditions, parts, relations and conceptual designation. Nāgārjuna uses this causal principle to deny *intrinsic nature* (svabhāva), an independent, self-established and invariant own-nature.

If a thing possessed *intrinsic nature* (svabhāva), it would exist through itself and would not await conditions. What depends upon conditions, however, is neither self-produced nor self-sufficient. Therefore:

dependent arising → absence of independent own-nature → emptiness (śūnyatā)

Emptiness (śūnyatā) consequently does not mean sheer non-being. A chariot, person or flame exists and functions conventionally, but none is discoverable as a self-grounded substance apart from its components and conditions. Indeed, causal efficacy is possible precisely because things are not fixed by immutable essence.

The doctrine of two truths blocks nihilism. At the level of *samvṛti-satya*, persons, causes, action and moral consequence (karma), language and compassion operate. At the level of *paramārtha-satya*, analysis finds no intrinsically existent entity. Even emptiness is empty: it is not a hidden Absolute but the absence of *intrinsic nature* (svabhāva) in dependently designated things.

Thus Mādhyamika converts dependent origination into ontological anti-essentialism. "Whatever is dependently arisen is explained to be empty" affirms relational existence while rejecting independent essence.

Why this earns marks

- Gives the exact dependence-to-emptiness derivation.
- Defines *intrinsic nature* (svabhāva) instead of treating Emptiness (śūnyatā) as a slogan.
- Uses a concrete conventional example.

- Employs the two truths against nihilism.
- Notes the “emptiness of emptiness” safeguard.

2018 · Q6(b) · 15 marks

Question: Is it consistent for the Buddhists to admit the theory of Nairātmyavāda and the doctrine of Nirvāṇa simultaneously? Give reasons in favour of your answer.

Demand decoding

- Test, rather than merely assert, the compatibility of no-self and liberation.
- Explain who practises and what ceases without postulating an eternal soul.
- Give reasons in favour while acknowledging the first-person identity objection.

Independent model answer

No permanent self (nairātmyavāda) denies a permanent, unitary and unchanging owner behind the five aggregates (skandhas). *Cessation of conditioned suffering (nirvāṇa)* is the cessation of ignorance, craving and the conditioned reproduction of suffering. They are consistent once liberation is understood as the transformation and cessation of a causal process, not as an eternal soul entering another substance or realm.

The empirical person is conventionally designated upon *rūpa*, *vedanā*, *saṃjñā*, *saṃskāra* and *vijñāna*. Ignorance superimposes “I” and “mine” upon this changing aggregate-stream. That appropriation produces craving, clinging and renewed becoming:

self-grasping -> craving -> clinging -> becoming -> suffering

Insight into impermanence and no-self removes the cognitive basis of appropriation:

insight into no-self -> non-grasping -> cessation -> cessation of conditioned suffering (nirvāṇa)

The objection is immediate: if no self exists, nobody suffers, practises or attains liberation. The Buddhist reply invokes *causal continuum (santāna)*, causal continuity. The later liberated stream is neither numerically identical with nor wholly unrelated to the earlier bound stream. Ethical discipline and meditative cultivation alter succeeding moments just as one flame conditions another without a single enduring flame-substance.

Theravāda descriptions emphasize cessation of greed, hatred and delusion and may classify Cessation of conditioned suffering (nirvāṇa) as *asaṃskṛta*, unconditioned. Mahāyāna adds that cycle of rebirth (saṃsāra) and Cessation of conditioned suffering (nirvāṇa) are both empty of *intrinsic nature (svabhāva)*: their distinction concerns ignorance and insight, not two self-existent domains.

A residual difficulty remains. Causal continuity explains transmission, but critics ask whether it fully explains the first-person claim “I am liberated.” Buddhism answers that this “I” is a conventional index within the stream, not evidence for an eternal enduring self (ātman).

Therefore no-self is not an obstacle to Cessation of conditioned suffering (nirvāṇa); it is the insight that dissolves the grasping sustaining bondage.

Why this earns marks

- Defines both doctrines before testing consistency.
- Connects no-self directly to the causal production and cessation of suffering (duḥkha).
- Uses *causal continuum (santāna)* to explain practice without a soul.
- Adds Theravāda-Mahāyāna nuance.
- States the strongest objection and offers a qualified verdict.

2019 · Q5(b) · 10 marks

Question: How do the Yogācāra Buddhists deny the existence of the external world? Discuss.

Demand decoding

- Present arguments, not merely translate *vijñaptimātratā* as “mind-only.”
- Explain how Yogācāra preserves ordered experience.

- Avoid reducing the school to arbitrary subjective imagination.

Independent model answer

Yogācāra advances *vijñaptimātratā*: what is immediately given is cognition-as-presentation, not an independently established external object standing outside every cognitive condition. The experienced division between subject and object is itself a construction within consciousness.

The dream argument shows that a coherent spatial world, objects and an experiencing subject can appear without corresponding external things. Therefore object-appearance alone cannot establish an independently existing material cause. Yogācāra also attacks atomism: an object cannot coherently be one indivisible atom, a mere heap of partless atoms, or a whole distinct from its parts. Further, if both object and cognition are momentary, the object allegedly known has already ceased when cognition arises; only its presented form is available.

This is not the claim that an individual ego invents the world at will. *Store-consciousness (ālaya-vijñāna)*, store-consciousness, carries karmic *bīja* whose maturation produces regular and coordinated experience. The *tri-svabhāva* clarifies the analysis: *parikalpita* is imagined subject-object duality; *paratantra* is the dependently arisen cognitive flow; *pariniṣpanna* is realization of that flow's non-dual character.

Yogācāra therefore denies the external world as independently established, not causal order or disciplined experience. Its difficulty is whether common experience can be explained without covertly restoring an object-independent world.

Why this earns marks

- States *vijñaptimātratā* precisely.
- Uses dream, atom and temporal arguments.
- Explains order through *store-consciousness (ālaya-vijñāna)* and karmic seeds.
- Includes all three natures.
- Ends with a genuine philosophical difficulty.

2019 · Q7(c) · 15 marks

Question: What is Pratītyasamutpāda? How do the Buddhists apply this concept to prove that everything is momentary?

Demand decoding

- Define dependent origination in general and existential forms.
- Show the logical bridge to *momentariness (kṣaṇikavāda)*.
- Include causal efficacy, apparent continuity and at least one objection.

Independent model answer

Dependent origination (pratītyasamutpāda) is conditional arising: "this being, that arises; from the cessation of this, that ceases." Existentially it appears in the twelve nidānas from *ignorance (avidyā)* to *jarā-maraṇa*; philosophically it denies that conditioned phenomena arise independently, eternally or without causes.

The immediate consequence is impermanence. Whatever depends on a changing complex of conditions cannot remain wholly unchanged. Buddhist logicians strengthen this into universal momentariness through *causal efficacy (arthakriyā)*, the criterion of causal efficacy:

1. What is real is capable of producing an effect.
2. A permanent entity possesses the same causal capacity at every moment.
3. It should therefore produce its effect always, all at once, or never.
4. If it acts only when auxiliary conditions arrive, the altered causal complex-not an unchanged substance-explains the effect.
5. Causal operation thus belongs to a determinate, moment-specific particular.
6. Hence, *yat sat tat kṣaṇikam*: whatever is causally real is momentary.

A seed, for example, is not one unchanged thing enduring through germination. It is a succession of causal phases, each producing a novel successor. Apparent endurance is *causal continuum (santāna)*, a continuum of numerically

distinct but causally connected events.

Nyāya objects that a permanent substance can possess stable power and act when *sahakārin* auxiliaries arrive. The Buddhist reply asks whether those auxiliaries alter the cause. If they do, strict permanence is abandoned; if they do not, the delayed effect remains unexplained.

Dependent origination by itself yields conditioned impermanence; joined to causal efficacy, it supports strict momentariness. Mādhyamika adds that momentary dharmas too are dependently arisen and must not be reified.

Why this earns marks

- Defines both the general formula and twelve-link context.
- Gives a stepwise *causal efficacy* (*arthakriyā*) proof.
- Explains continuity through *causal continuum* (*santāna*).
- Handles Nyāya's auxiliary-condition objection.
- Distinguishes impermanence from the stricter logical doctrine.

2020 · Q6(a) · 20 marks

Question: How is Kṣaṇikavāda a logical derivative of Pratītyasamutpāda in Buddhism? Explain.

Demand decoding

- Establish a rigorous derivation rather than placing two doctrines side by side.
- Explain *causal efficacy* (*arthakriyā*), simultaneity/succession and *sahakārin*.
- Address continuity, objections and the Mādhyamika refinement.

Independent model answer

Dependent origination (*pratītyasamutpāda*) states that every conditioned phenomenon arises and ceases through a determinate complex of conditions. *Momentariness* (*kṣaṇikavāda*) radicalizes this into the thesis that every causally real conditioned entity exists for only a moment. The derivation proceeds through dependence, change and causal efficacy.

First, a self-existent permanent substance would not await conditions. Since conditioned phenomena arise only when causes converge and cease when those causes are absent, their existence is relational and alterable. Conditionality therefore excludes immutable self-subsistence.

Second, causal production marks a difference between phases. A seed capable of sprouting under one complex and no longer functioning as that seed after germination cannot be strictly identical before and after causal action. The effect is novel because the operative causal phase perishes in giving rise to its successor.

Third, Buddhist logicians formulate *causal efficacy* (*arthakriyā*): reality is capacity for effective causal operation. Suppose permanent X causes E. If X has its complete causal power, it should produce E immediately and, being unchanged, repeatedly or all effects simultaneously. If production is successive, X must have different operative powers at different times, contradicting permanence.

Nyāya answers that X waits for auxiliary conditions (*sahakārin*). The Buddhist dilemma is: if auxiliaries add no new capacity, delay remains inexplicable; if they alter the causal capacity, the operative complex is no longer wholly unchanged. Hence causal efficacy belongs to moment-specific particulars.

Momentariness does not entail disconnected flashes. *Causal continuum* (*santāna*) is an ordered succession in which each moment transmits dispositions and causal powers to its successor. It explains the apparent continuity of flame, person, memory and action and moral consequence (karma) without numerical identity. The later moment is neither identical with nor causally alien to the earlier one.

Two qualifications are needed. First, ordinary dependent origination directly establishes impermanence; strict one-moment duration depends on the additional causal efficacy (*arthakriyā*) argument. Second, Mādhyamika warns that momentary dharmas cannot replace permanent substances as new absolutes: because they too arise dependently, they are empty of *intrinsic nature* (*svabhāva*).

Thus Momentariness (*kṣaṇikavāda*) is a logical derivative of Dependent origination (*pratītyasamutpāda*) when conditional arising is interpreted through causal efficacy. Dependence removes permanence; causal efficacy

(arthakriyā) locates reality in the perishing causal event; *causal continuum* (*santāna*) preserves continuity.

Why this earns marks

- Builds the derivation in distinct logical stages.
- Uses the simultaneity/succession dilemma correctly.
- Engages Nyāya's named *sahakārin* reply.
- Explains continuity rather than confusing momentariness with chaos.
- Adds both the "extra premise" qualification and Mādhyamika correction.
- Concludes with a precise synthesis.

2020 · Q7(b) · 15 marks

Question: How does Buddhism explain Self in terms of Pañcaskandhas? What is Liberation for Buddhism if there is no Soul?

Demand decoding

- Name and explain the five aggregates.
- Distinguish conventional personhood from a substantial self.
- Explain liberation positively and answer the "who is liberated?" objection.

Independent model answer

Buddhism analyses the apparent self into five aggregates (*pañcaskandhas*): *rūpa* or material form; *vedanā* or feeling-tone; *saṃjñā* or recognition; *saṃskāra* or volitional formations; and *vijñāna* or discriminative consciousness. Every candidate is conditioned, changing and not fully controllable. No permanent owner is found as one aggregate, their sum, or an entity outside them.

The *Milinda-pañha* chariot analogy expresses the positive position. "Chariot" is a conventional designation for suitably arranged parts; similarly, "person" names an organized psycho-physical causal stream. Buddhism therefore rejects an eternal enduring self (*ātman*) but not the conventional person who speaks, acts and undertakes discipline.

Liberation is *Cessation of conditioned suffering* (*nirvāṇa*): the cessation of *ignorance* (*avidyā*), craving, clinging and the renewed production of suffering (*duḥkha*). The Noble Eightfold Path works upon the aggregate-stream. *Śīla* prevents harmful conditioning, *saṃādhi* disciplines attention and *prajñā* sees impermanence, suffering and no-self. Liberation is not the survival or annihilation of a soul; it is the ending of the processes that construct bondage.

The objection asks who receives the fruit if the practitioner constantly changes. Buddhism answers through *causal continuum* (*santāna*). The later liberated stream inherits the effects of earlier practice without being an unchanging substance. Causal continuity is sufficient for transformation just as education changes a child into an adult without requiring an immutable psychological core.

Thus aggregate analysis removes the imagined owner, while liberation removes the causes of appropriation. No-self is not a denial of the path's subject at the conventional level; it is its liberating insight.

Why this earns marks

- Correctly names and explains all five aggregates (*skandhas*).
- Uses the chariot analogy without denying conventional persons.
- Defines Cessation of conditioned suffering (*nirvāṇa*) through causal cessation and the Eightfold Path.
- Answers the agency/recipient objection with *causal continuum* (*santāna*).
- Avoids both eternalism and annihilationism.

2021 · Q5(d) · 10 marks

Question: Distinguish between pudgala-nairātmyavāda and dharma-nairātmyavāda with reference to Buddhist Philosophy.

Demand decoding

- Identify the precise object denied by each doctrine.
- Locate the distinction across early/Abhidharma and Mahāyāna tendencies.

- Explain why denying only the personal self may leave reified dharmas.

Independent model answer

Both doctrines express no-self, but their scope differs.

Doctrine	Object of denial	Positive implication	Typical emphasis
<i>Pudgala-nairātmya</i>	a permanent person or owner of the aggregates	person is conventionally designated upon a causal stream	broadly shared across Buddhism
<i>Dharma-nairātmya</i>	intrinsic self-nature in the constituent dharmas themselves	all phenomena are dependent and non-self-grounded	especially Mahāyāna

Pudgala-nairātmya analyses the person into the five aggregates (skandhas) and finds no independent *pudgala* as one of them, their sum or their possessor. It denies enduring self (ātman) while retaining conventional agency and causal continuity.

Some Abhidharma realist positions nevertheless treat momentary dharmas as ultimately real. *Dharma-nairātmya* extends the analysis: the supposed building blocks also lack *intrinsic nature* (*svabhāva*). Mādhyamika derives this from dependent origination; Yogācāra associates it with freedom from constructed subject-object duality.

The second doctrine prevents the critique of a substantial person from ending in a metaphysics of substantial atoms. Yet it does not mean that phenomena are nothing; it denies independent essence while preserving conventional causal functioning.

Why this earns marks

- Distinguishes the two doctrines by exact scope.
- Shows what remains conventionally valid.
- Locates Mahāyāna's extension without claiming earlier Buddhism accepted enduring self (ātman).
- Explains the anti-reification purpose of *dharma-nairātmya*.
- Avoids equating emptiness with non-existence.

2021 · Q7(b) · 15 marks

Question: If everything is momentary then how do the Buddhists explain the problem of memory and personal identity? Critically discuss.

Demand decoding

- Explain the apparent contradiction between momentariness and memory.
- Present stream, trace/seed and Yogācāra mechanisms.
- Evaluate Nyāya's first-person ownership objection.

Independent model answer

Momentariness (*kṣaṇikavāda*) appears to make memory impossible. The moment that experienced an object has ceased before the remembering cognition arises; if the two moments are wholly different, how can the later one remember "I experienced this"?

Buddhism replaces substantial identity with *causal continuum* (*santāna*), a causally integrated continuum. An experience conditions its successor by leaving a disposition; the disposition is transmitted through later moments and, when suitable conditions arise, produces memory:

experience -> impression -> transmitted potency -> occasioning condition -> memory

Sautrāntika speaks of seeds or latent traces in the mental continuum. Yogācāra gives a more systematic account through *store-consciousness* (*ālaya-vijñāna*), whose *bīja* preserve mnemonic and karmic potentials. Personal identity is therefore conventional continuity constituted by causal connection, bodily organization, resemblance, projects and inherited dispositions.

The later rememberer is neither strictly identical with nor wholly other than the earlier experiencer. Strict numerical identity would reintroduce an immutable enduring self (ātman); absolute difference would generate the faults of lost action and unearned result. Buddhism adopts a middle relation of causal succession.

Nyāya's *pratyabhijñā* and memory objection remains powerful. Cognitions such as "this is that" and "I saw this" seem to presuppose one enduring subject that unifies past and present. Mere resemblance can explain similar content but perhaps not first-person ownership. The Buddhist replies that the "I" is itself a concept generated within an integrated stream: direct causal inheritance, not metaphysical substance, grounds appropriation.

This reply successfully explains information transmission and practical identity, much as ordinary law follows a changing person through time. Yet if first-person unity is regarded as irreducible, *causal continuum* (*santāna*) may seem descriptive rather than fully explanatory.

Hence Buddhism offers a coherent process account of memory and identity, though the move from causal continuity to owned recollection remains philosophically contestable.

Why this earns marks

- Frames the exact temporal problem.
- Gives both Sautrāntika and Yogācāra continuity mechanisms.
- Uses the neither-identical-nor-wholly-different formula.
- Names Nyāya's recognition/ownership pressure.
- Distinguishes successful transmission from disputed first-person appropriation.

2022 · Q6(a) · 20 marks

Question: How compatible is Buddhist theory of momentariness with their theory of Karma? In this regard how do Buddhists respond to objections raised by their opponents? Critically discuss.

Demand decoding

- Reconcile delayed karmic fruit with the destruction of every moment.
- Name classical objections and school-specific Buddhist mechanisms.
- Critically test whether causation is enough for moral ownership.

Independent model answer

Action and moral consequence (karma) connects intentional action with a later fruit; Momentariness (*kṣaṇikavāda*) denies any enduring agent that remains numerically identical from action to fruition. Their compatibility therefore depends on whether moral responsibility requires substance-identity or only appropriately ordered causal continuity.

Buddhism chooses the latter:

intention -> karmic impression/potency -> transmission in causal continuum (*santāna*) -> maturation -> fruit

The act perishes, but not without causally modifying the stream. Sautrāntika explains the connection through seed-like potency; Yogācāra places karmic *bīja* in *store-consciousness* (*ālaya-vijñāna*); Abhidharma traditions analyse multiple causal relations among successive dharmas. None requires an unchanging bearer.

Nyāya, Mīmāṃsā and Vedānta press three related objections. First, *kṛtānāśa*: because the doer perishes, the deed and its desert are lost. Second, *akṛtābhyāgama*: a later, numerically different moment receives the fruit of an act it did not perform. Third, praise, blame, recognition and remorse appear to presuppose one owner across time.

The Buddhist reply rejects the exhaustive choice between absolute identity and absolute difference. The fruit occurs in the very continuum causally formed by the action, not in an unrelated stream. A child and adult are neither qualitatively unchanged nor morally unrelated; responsibility normally tracks continuity of body, intention, memory and causal history rather than an empirically inaccessible enduring self (*ātman*).

The objection that a momentary cause cannot yield a remote result is answered by serial transmission. Each moment immediately conditions the next, carrying transformed potency until supporting conditions permit maturation. A seed need not remain numerically present in the fruit; its causal influence persists through the series.

Nevertheless, two pressures remain. Causal explanation shows why B follows A more readily than why B's suffering is deserved as *my* fruit. Further, *store-consciousness* (*ālaya-vijñāna*) can appear to function like a disguised self if treated as a persistent substance. Yogācāra replies that the store-consciousness is itself momentary and transformable; Mādhyamaka adds that agent, act and fruit are conventionally dependent designations, not ultimate

substances.

Action and moral consequence (karma) and momentariness are therefore compatible within Buddhist process ontology. The account is strong against the demand for numerical identity, but its reduction of moral ownership to causal inheritance remains open to realist criticism.

Why this earns marks

- States the exact compatibility criterion.
- Explains Sautrāntika, Yogācāra and Abhidharma mechanisms.
- Names *kṛtanāśa* and *akṛtābhyāgama* accurately.
- Answers both delayed fruition and personal ownership objections.
- Critically tests whether *store-consciousness* (*ālaya-vijñāna*) becomes a quasi-self.
- Ends with a balanced verdict rather than a doctrinal assertion.

2022 · Q7(b) · 15 marks

Question: Explain Buddhist concept of Triratna and their internal relation. Critically examine the consistency of Triratnas with the Buddhist concept of No-soul (Nairātmyavāda).

Demand decoding

- Define Buddha, Dhamma and Saṅgha.
- Explain their internal, functional relation.
- Examine whether refuge, community and awakening require enduring selves.

Independent model answer

The *Triratna*-Buddha, Dhamma and Saṅgha-are the three refuges structuring Buddhist life. Buddha is the awakened teacher and exemplar; Dhamma is the truth of dependent origination, the diagnosis of suffering and the path to cessation; Saṅgha is the community that preserves, interprets and embodies that path.

Their relation is internal rather than additive. Buddha discovers and teaches Dhamma; Dhamma explains Buddha's awakening and makes its replication possible; Saṅgha transmits and practises Dhamma, producing further exemplars and sustaining access to the Buddha's teaching. Remove any one and the living refuge-system is impaired.

At first sight, *no permanent self* (*nairātmyavāda*) creates inconsistency. Refuge seems to require a stable devotee, Buddha appears to be an enduring personal authority, and Saṅgha a collection of persons. Buddhism answers by distinguishing conventional personhood from an eternal enduring self (*ātman*). Buddha is revered as an awakened causal continuum, not as creator or immortal soul. Saṅgha is a conventionally real community constituted by changing practitioners. Dhamma itself includes insight into no-self.

The two truths deepen this reply. Conventionally, teachers, vows, institutions and agents operate; ultimately, none possesses independent self-nature. No-self therefore regulates the meaning of refuge: it is practical orientation and transformative dependence, not surrender by one immortal substance to another.

A critic may reply that continuity of doctrine and authority still requires stable bearers. The Buddhist response is that transmission needs reliable causal and institutional continuity, not numerical identity. Manuscripts, practices and lineages persist as changing but connected series.

Thus Triratna and no-soul are consistent. Indeed, the three refuges provide the pedagogic and communal conditions through which attachment to substantial selfhood is overcome.

Why this earns marks

- Defines all three jewels.
- Shows their reciprocal functional relation.
- Distinguishes conventional agents from an eternal soul.
- Uses the two truths without making Saṅgha unreal.
- Addresses continuity of authority and ends with an integrative verdict.

2023 · Q8(a) · 20 marks

Question: "Ignorance of dependent origination is suffering while its knowledge is cessation of suffering." Present an account of Buddhist soteriology in the light of above statement.

Demand decoding

- Organize Buddhist soteriology around the quotation.
- Connect the Four Noble Truths, twelve nidānas and Eightfold Path.
- Explain why transformative knowledge, not mere information, brings cessation.

Independent model answer

Buddhist soteriology begins from the Four Noble Truths: suffering (duḥkha), its dependent origin, its cessation and the path. The quotation condenses this structure. Ignorance of dependent origination is not a mere absence of theoretical information; *ignorance* (*avidyā*) is the practical misperception of conditioned, impermanent and selfless processes as permanent, satisfactory and owned by an "I."

The twelve nidānas display suffering as a conditioned circuit:

ignorance (*avidyā*) → saṃskāra → vijñāna → nāma-rūpa → āyatana → sparśa →
vedanā → tṛṣṇā → upādāna → bhava → jāti → jarā-maraṇa

Ignorance conditions formations and an appropriative mode of consciousness. Contact and feeling become craving; craving becomes clinging and renewed becoming. Thus suffering is not imposed by fate or God. It is continuously produced when supporting conditions operate.

Knowledge of dependent origination discloses three features: impermanence, absence of autonomous essence, and the interruptibility of causal processes. Feeling need not become craving; craving need not become clinging. Wisdom removes the false owner, while disciplined conduct and meditation transform the conditions under which reactions arise.

The Noble Eightfold Path embodies this knowledge. *Prajñā*-right view and resolve-understands dependence and no-self. *Śīla*-right speech, action and livelihood-prevents fresh harmful conditioning. *Samādhi*-right effort, mindfulness and concentration-reveals feeling before it hardens into craving and stabilizes non-grasping awareness.

Different schools refine the same soteriological grammar. Abhidharma analyses the stream into conditioned dharmas; Yogācāra purifies karmic seeds and the subject-object construction; Mādhyamaka realizes that dependently originated phenomena are empty of *intrinsic nature* (*svabhāva*), preventing attachment even to dharmas, doctrine or Cessation of conditioned suffering (nirvāṇa).

The statement should not be intellectualized. One may recite the twelve links while continuing to crave. Liberating knowledge is cultivated insight that restructures perception, affect and conduct. Nor does cessation imply annihilation of a self; it is cessation of the conditions reproducing suffering (duḥkha).

Therefore ignorance is suffering because it sustains appropriation within the dependent chain. Knowledge is cessation when it becomes the lived path by which those conditions are understood, weakened and finally extinguished.

Why this earns marks

- Makes the quotation the organizing thesis.
- Integrates Four Noble Truths, all twelve links and the Eightfold Path.
- Identifies practical intervention at feeling-craving-clinging.
- Adds Abhidharma, Yogācāra and Mādhyamaka nuances.
- Distinguishes transformative wisdom from verbal knowledge.
- Explains cessation without annihilationism.

2024 · Q6(b) · 15 marks

Question: How do the two schools of Buddhism arrive at two opposed conclusions, namely "everything is void" and "everything is real" from the same doctrine of Pratītyasamutpāda? Answer with arguments.

Demand decoding

- Identify the realist and emptiness-oriented schools.
- Show how the same premise yields different conclusions.

- Distinguish causal reality from intrinsic reality without erasing disagreement.

Independent model answer

The apparent opposition arises because Buddhist schools ask different ontological questions of *dependent origination* (*pratītyasamutpāda*).

For Vaibhāṣika-and, with an epistemic qualification, Sautrāntika-dependent origination confirms the reality of conditioned dharmas. What enters causal relations and performs *causal efficacy* (*arthakriyā*) cannot be sheer illusion. Vaibhāṣika treats external momentary dharmas as directly perceived; Sautrāntika accepts external particulars but holds that they are known inferentially through mental representations. “Everything is real” therefore means that causally efficacious conditioned particulars are real, not that they are permanent substances.

Mādhyamika draws a different inference. Whatever arises only through causes and conditions lacks independent *intrinsic nature* (*svabhāva*). To possess own-nature would be to exist self-sufficiently and not dependently. Therefore all dharmas are *śūnya*. “Everything is void” means empty of intrinsic nature, not non-existent or causally inert.

Shared premise	Realist conclusion	Mādhyamika conclusion
phenomena arise through conditions	causal efficacy establishes conditioned reality	dependence disproves self-existence
permanent substance is rejected	momentary dharmas remain ultimately real	even momentary dharmas lack <i>intrinsic nature</i> (<i>svabhāva</i>)
ordinary causation works	because real particulars interact	because conventionally designated relations function

The opposition is partly verbal: “real” answers whether phenomena causally function, while “void” answers whether they are intrinsically grounded. Yet a genuine dispute remains. Abhidharma realism grants ultimate status to basic dharmas; Mādhyamika argues that doing so arrests analysis too early and reifies the conditioned.

The two truths preserve the Mādhyamika position from nihilism: causation and action and moral consequence (karma) operate conventionally, while ultimately no entity is self-established. Thus the same doctrine supports realism about dependent functioning and emptiness regarding independent essence.

Why this earns marks

- Correctly identifies Vaibhāṣika/Sautrāntika and Mādhyamika.
- Derives both conclusions from one premise.
- Distinguishes direct from representational realism.
- Separates causal efficacy from *intrinsic nature* (*svabhāva*).
- Preserves both partial reconciliation and genuine doctrinal disagreement.

2025 · Q8(c) · 15 marks

Question: Is Buddhist notion of Nirvāṇa in consonance with their conception of Kṣaṇikavāda (momentariness) and Nairātmyavāda (no-soul theory)? Critically discuss.

Demand decoding

- Test Cessation of conditioned suffering (nirvāṇa) separately against momentariness and no-self.
- Address conditioned/unconditioned and “who attains?” objections.
- Include a Mādhyamika qualification and a balanced verdict.

Independent model answer

Cessation of conditioned suffering (nirvāṇa) is consonant with Momentariness (kṣaṇikavāda) and No permanent self (nairātmyavāda) if it is understood as cessation of the causes of suffering, not as an eternal soul entering a permanent condition.

Momentariness (kṣaṇikavāda) applies to conditioned entities: whatever arises through causes is momentary. This makes cessation intelligible, for a conditioned series continues only while its supports remain. Through the path, ignorance, craving and clinging cease to condition renewed becoming. Some traditions describe Cessation of conditioned suffering (nirvāṇa) as *asaṃskṛta*, unconditioned; others emphasize the event or fact of cessation rather

than a positive timeless substance.

No permanent self (nairātmyavāda) likewise poses no necessary contradiction. The person who practises is a conventional aggregate-stream. Earlier discipline causally transforms later moments; no immutable owner is needed. Cessation of conditioned suffering (nirvāṇa) is neither the immortality nor the destruction of an enduring self (ātman), because no such entity was admitted.

Opponents formulate a dilemma. If Cessation of conditioned suffering (nirvāṇa) is permanent and real, does it violate momentariness? If momentary, how can liberation be final? If there is no self, who attains it? Buddhism replies that finality means non-renewal of the relevant conditions, not everlasting endurance of a personal state. Momentariness (kṣaṇikavāda) governs produced dharmas, while cessation is not another produced ego-experience.

Mādhyamika adds an anti-reification safeguard. Cycle of rebirth (saṃsāra) and Cessation of conditioned suffering (nirvāṇa) are both empty of *intrinsic nature* (svabhāva); they are not two independent realms. Their distinction concerns bondage through ignorance and freedom through insight at the conventional level.

Tension remains where Cessation of conditioned suffering (nirvāṇa) is treated as a positively existent eternal entity, or where first-person liberation is assumed to require numerical identity. Process interpretations avoid both assumptions, though critics may find them too deflationary.

Therefore the three doctrines are broadly consonant: momentariness explains the cessability of conditioned suffering, and no-self removes the grasping that sustains it. Consistency depends on refusing to substantialize either the liberated person or Cessation of conditioned suffering (nirvāṇa).

Why this earns marks

- Tests both requested doctrines independently.
- Distinguishes conditioned momentariness from unconditioned cessation.
- Answers the permanent/momentary and “who attains?” dilemmas.
- Adds the Mādhyamika non-reification account.
- Identifies the precise interpretive condition of compatibility.

ORIGINAL SOLVED MAINS PRACTICE

Original 1 · 10 marks

Question: Explain why Dependent origination (pratītyasamutpāda) is simultaneously a theory of causation and a method of liberation.

Demand decoding

- Establish the unity of explanatory and soteriological functions.
- Identify how the causal chain can be interrupted.
- Avoid treating dependent origination as neutral cosmology.

Independent model answer

Dependent origination (pratītyasamutpāda) states that conditioned events arise and cease with their supporting conditions. It is therefore a theory of causation: suffering (duḥkha) is neither accidental nor divinely imposed, but produced through an intelligible sequence of ignorance, formations, feeling, craving, clinging and becoming.

The same principle is a method of liberation because conditions are alterable. The chain is not fate:

contact -> feeling -> craving -> clinging -> becoming

Mindfulness can disclose feeling before it becomes craving; wisdom sees the experience as impermanent and non-self; ethical discipline prevents fresh harmful conditioning. When ignorance and craving cease, the dependent production of suffering also ceases.

The Four Noble Truths express this unity. The second truth diagnoses conditioned origin; the third affirms cessation; the fourth prescribes the practices that transform the conditions. Knowledge must therefore be practical and cultivated, not merely verbal.

Verdict: Dependent origination (pratītyasamutpāda) is liberating precisely because it is causal. By explaining how suffering is made, it shows how suffering can be unmade.

Why this earns marks

- Answers both halves through one principle.
- Identifies a concrete intervention point.
- Links the doctrine with the Four Noble Truths.
- Distinguishes transformative from merely propositional knowledge.

Original 2 · 10 marks

Question: Distinguish the Buddhist denial of enduring self (ātman) from the denial of causal and conventional personhood.

Demand decoding

- Prevent the common inference from no-self to no person or no responsibility.
- Use aggregates, designation and *causal continuum (santāna)*.
- State the residual philosophical issue briefly.

Independent model answer

No permanent self (nairātmyavāda) denies an eternal, unitary and independently existing enduring self (ātman); it does not deny every legitimate use of “person.” Aggregate analysis finds only *rūpa*, *vedanā*, *saṃjñā*, *saṃskāra* and *vijñāna*, none of which is permanent or an owner of the rest.

The chariot analogy shows the positive account. A chariot is designated upon organized parts; a person is designated upon an organized psycho-physical stream. This conventional person acts, remembers, undertakes the path and bears consequences.

Causal continuity is explained through *causal continuum (santāna)*. An earlier intention modifies succeeding moments, so the later recipient is neither numerically identical with nor wholly unrelated to the earlier agent. No-self therefore rejects substance-identity, not continuity, agency or moral practice.

The main objection is that causal connection may not fully explain first-person ownership-why a later memory or karmic fruit is *mine*. Buddhism replies that “mine” is itself constructed within the integrated stream.

Verdict: Buddhist no-self is a revision of personal identity from substance to dependent process, not the elimination of practical personhood.

Why this earns marks

- States exactly what is denied and retained.
- Uses both five-skandha analysis and the chariot analogy.
- Explains responsibility through *causal continuum (santāna)*.
- Includes a concise critical qualification.

Original 3 · 15 marks

Question: Compare Vaibhāṣika, Sautrāntika, Yogācāra and Mādhyamaka as four answers to the problem of the object of knowledge.

Demand decoding

- Compare all four schools on one epistemic-ontological axis.
- Show the movement from direct object to critique of both object and consciousness.
- Give strengths, pressures and a qualified verdict.

Independent model answer

The four schools offer progressively different answers to what cognition knows and what status its object possesses.

School	Object position	Mode of access	Main pressure
Vaibhāṣika	external momentary dharmas are real	directly perceived	how can a momentary object be simultaneously present to cognition?

School	Object position	Mode of access	Main pressure
Sautrāntika	external particulars are real	inferred from mental representations	how can a known representation prove an unknown original?
Yogācāra	independently external object is unestablished	cognition presents both subject and object	how is intersubjective order explained?
Mādhyamaka	both mind and object lack <i>intrinsic nature (svabhāva)</i>	knowledge operates conventionally	does universal emptiness undermine its own claim?

Vaibhāṣika protects common-sense causal realism: perception reaches real external dharmas. Sautrāntika recognizes temporal and cognitive mediation; the directly given item is a mental form whose external cause is inferred.

Yogācāra radicalizes the problem through *vijñaptimātratā*. Dream and atom arguments challenge an object existing independently of presentation. *Store-consciousness (ālaya-vijñāna)* and karmic seeds explain ordered experience; this is not arbitrary private imagination.

Mādhyamaka then warns that making consciousness ultimate merely shifts reification from object to subject. Because both arise dependently, neither has self-established nature. The two truths preserve conventional inquiry while ultimate analysis removes intrinsic essence.

The sequence is not a simple historical ladder. Vaibhāṣika best protects direct causal realism; Sautrāntika explains mediation; Yogācāra exposes cognitive construction; Mādhyamaka gives the widest anti-essentialist critique. Each solves one pressure by creating another.

Verdict: The debate moves from “Which object is known?” to “Can knower or known be intrinsically grounded?” Mādhyamaka is the most radical answer, but it remains viable only if conventional truth genuinely supports knowledge and argument.

Why this earns marks

- Compares all four schools through a common matrix.
- Preserves direct versus representational realism.
- Explains rather than caricatures *vijñaptimātratā*.
- Shows why Mādhyamaka also empties consciousness.
- Evaluates each position and reaches a qualified verdict.

Original 4 · 15 marks

Question: Does the Buddhist theory of Exclusion theory of meaning (apoha) successfully explain general words without admitting real universals? Discuss.

Demand decoding

- State why Buddhist nominalism needs Exclusion theory of meaning (apoha).
- Present its mechanism, named objection and Buddhist reply.
- Assess semantic success separately from ontological economy.

Independent model answer

Dignāga and Dharmakīrti distinguish the unique, causally efficient *svalakṣaṇa* from the generalized *sāmānyalakṣaṇa* constructed by thought. If only momentary particulars are ultimately real, a word such as “cow” cannot refer to one eternal universal present in many individuals. Exclusion theory of meaning (apoha) explains its extension through “exclusion of the other”: “cow” applies by excluding non-cows.

The theory is not bare negation. Repeated encounters generate dispositions; relevant causal similarities and human purposes stabilize a field of exclusions. These exclusions produce a positive-seeming conceptual presentation adequate for recognition, inference and communication, without postulating an independently existing cow-universal.

Kumārila Bhaṭṭa and Uddyotakara object that exclusion presupposes what it seeks to explain. To know “non-cow,” one must already know cow; moreover, a merely negative operation seems unable to yield the positive unity conveyed by a word. Different non-cows are indefinitely many, so their exclusion appears cognitively cumbersome.

The Buddhist reply distinguishes causal acquisition from philosophical analysis. Linguistic competence develops through practices of differentiation, not prior apprehension of a metaphysical universal. Mutual exclusions can generate a stable conceptual image, and practical success-not correspondence with an eternal entity-is the test of semantic adequacy.

Yet the objection is not fully dissolved. Exclusion theory of meaning (apoha) economically explains classification without realism about universals, but the positive phenomenology of meaning may be redescribed rather than completely derived from negation.

Verdict: Exclusion theory of meaning (apoha) is ontologically parsimonious and pragmatically powerful. Its weakness lies less in reference to particulars than in explaining how differential exclusion acquires the experienced positive unity of a concept.

Why this earns marks

- Grounds Exclusion theory of meaning (apoha) in the *svalakṣaṇa-sāmānyalakṣaṇa* distinction.
- Gives a clear example.
- Names Kumāṛila and Uddyotakara's objections.
- Presents the Buddhist practice-and-exclusion reply.
- Separates ontological economy from semantic completeness.

Original 5 · 20 marks

Question: "Buddhist process ontology secures change more successfully than it secures moral responsibility." Critically examine.

Demand decoding

- Test both parts of the proposition.
- Use dependent origination, momentariness, no-self and school-specific continuity devices.
- Assess whether causal succession can ground ownership and desert.

Independent model answer

Buddhist process ontology replaces enduring substance with dependent events. Its account of change is powerful because change is no longer an accidental modification of something fundamentally immutable; it is the very mode of conditioned existence.

Dependent origination (pratītyasamutpāda) explains novelty through changing causal complexes. Momentariness (kṣaṇikavāda) sharpens this through *causal efficacy* (arthakriyā): the real is what performs a causal function, and a wholly permanent entity cannot explain delayed or successive effects. No permanent self (nairātmyavāda) extends the process model to persons, analysing them into changing aggregates (skandhas) rather than an invariant owner. The flame and seed series show how ordered transformation requires continuity but not numerical sameness.

Moral responsibility is harder. Action and moral consequence (karma) connects an intention with a later fruit, but the acting moment has perished. Buddhism answers through *causal continuum* (santāna):

intention -> impression/potency -> serial transmission -> maturation -> fruit

Sautrāntika speaks of seeds in the continuum; Yogācāra uses *store-consciousness* (ālaya-vijñāna); Abhidharma maps causal relations among dharmas. The later recipient is neither identical with nor unrelated to the earlier agent.

This answer defeats a crude objection. Ordinary responsibility already survives major bodily and psychological change. A mature adult may answer for a childhood promise because causal history, memory, intention and social continuity connect the phases. Numerical identity of an unobservable soul appears unnecessary.

Opponents nevertheless formulate *kṛtanāśa*: the destroyed doer loses the deed, and *akṛtābhyāgama*: a different successor receives an unperformed result. Nyāya adds that remorse and "I did this" contain first-person ownership that resemblance and succession do not explain. Causal continuity tells us why B follows A, but perhaps not why B deserves A's fruit.

The Buddhist reply is that desert supervenes on intentional causal inheritance within one stream. The "owner" adds no explanatory work unless its interaction with changing mental states is shown. Mādhyamaka further treats agent, act

and fruit as conventionally dependent; morality needs stable practices, not ultimate substances.

Still, two risks remain. *Store-consciousness* (*ālaya-vijñāna*) may look like a quasi-self if reified, and reducing ownership to causal linkage may not satisfy those who regard first-person unity as irreducible. Yogācāra answers the first by making store-consciousness momentary and transformable; the second remains a genuine philosophical dispute.

Verdict: Buddhism explains change more naturally than substance theories because causal novelty is basic rather than derivative. Its account of responsibility is coherent and practically adequate, but less decisive: causal inheritance plausibly grounds accountability, yet the transition from succession to first-person moral ownership remains contested.

Why this earns marks

- Evaluates both change and responsibility rather than discussing action and moral consequence (karma) alone.
- Integrates Dependent origination (*pratītyasamutpāda*), *causal efficacy* (*arthakriyā*), no-self and *causal continuum* (*santāna*).
- Uses Sautrāntika, Yogācāra, Abhidharma and Mādhyamaka refinements.
- Names and answers *kṛtanāśa* and *akṛtābhyāgama*.
- Distinguishes causal transmission from moral ownership.
- Ends with a measured, examiner-grade verdict.

Original 6 · 20 marks

Question: “Mādhyamaka avoids nihilism only by preserving the authority of conventional truth.” Examine with reference to Dependent origination (*pratītyasamutpāda*), the two truths and the emptiness of emptiness.

Demand decoding

- Explain why Emptiness (*śūnyatā*) attracts the nihilism charge.
- Show how dependence, two truths and reflexive emptiness answer it.
- Test whether conventional truth is merely expedient or philosophically indispensable.

Independent model answer

Mādhyamaka holds that all phenomena are empty of *intrinsic nature* (*svabhāva*). The charge of nihilism arises because, if nothing possesses intrinsic nature, causation, knowledge, ethics and liberation may seem impossible. Nāgārjuna’s answer is not to dilute emptiness but to show that conventional truth is the very field in which empty phenomena function.

Dependent origination (*pratītyasamutpāda*) provides the first defence. A cause produces an effect only through relations and changing conditions. If either possessed fixed, independent own-nature, genuine interaction and transformation would be unintelligible. Emptiness therefore does not negate causation; it explains its possibility:

dependence -> absence of self-establishment -> relational efficacy

The two truths articulate this insight. At *saṃvṛti-satya*, persons deliberate, words refer, reasons support conclusions, action and moral consequence (karma) bears fruit and the path ends suffering. At *paramārtha-satya*, analysis finds no independently existing agent, word, reason or dharma. Ultimate truth is not a second world behind convention; it is the absence of intrinsic nature in the conventional world.

The nihilist objection may persist: if conventional truth is itself empty, why trust it? Mādhyamaka replies that validity need not mean self-grounding. A map can guide without containing an intrinsic “map essence”; similarly, conventions are evaluated through coherence, dependence and practical success. The distinction between valid convention and hallucination remains internal to causal practices.

“Emptiness of emptiness” supplies the reflexive safeguard. Emptiness (*śūnyatā*) is not an Absolute that survives the deconstruction of all else. It too is dependently designated as a corrective to reification. Once its therapeutic work is done, it cannot be grasped as a metaphysical foundation.

Realists such as Nyāya object that this position borrows logic and causation while denying the stable entities required for them. If every thesis is empty, the thesis of emptiness appears self-refuting. Mādhyamaka answers that argument does not require intrinsically existent premises; conventional relations of entailment suffice. The critique targets the opponent’s claim of self-existence without proposing a rival essence.

However, conventional truth is not a dispensable ladder. Without its authority, there could be no teaching of emptiness, differentiation of wholesome from unwholesome, or path to Cessation of conditioned suffering (nirvāṇa). Mādhyamaka must therefore preserve a robust, though non-ultimate, account of warranted convention. If “conventional” is reduced to whatever appears, nihilism returns.

Verdict: Mādhyamaka avoids nihilism because emptiness and convention are mutually dependent: emptiness prevents reification, while convention preserves causation, rational assessment and liberation. The emptiness of emptiness completes the anti-essentialist logic, but the school’s success depends upon making conventional validity more than mere illusion.

Why this earns marks

- Frames the strongest nihilist and self-refutation objections.
- Derives emptiness from dependent origination.
- Explains both truths without turning them into two worlds.
- Uses “emptiness of emptiness” as a reflexive safeguard.
- Shows why conventional standards remain indispensable.
- Gives a qualified verdict identifying the doctrine’s precise burden.

OPTIONAL ADVANCED DEPTH - NOT REQUIRED FOR A CORE ANSWER

Layer-placement note

All Layer 3 material from the legacy complete session is retained here after practice. It should refine a core answer, not displace the printed syllabus.

LAYER 3 - ADVANCED

Advanced derivation and school divergence

Dependent origination is not a search for the universe’s first cause. It diagnoses the structure of conditioned becoming here and now. This avoids eternalism because no unchanged self grounds the process, and avoids annihilationism because causal continuity remains.

The doctrine supports different ontological conclusions. Mādhyamika argues that whatever depends on conditions lacks *intrinsic nature* (*svabhāva*) and is therefore empty. Vaibhāṣika and Sautrāntika instead emphasise that causally functioning conditioned events are real. Their disagreement concerns ultimate status, not whether dependent arising occurs.

The strongest challenge is regress: if every event is conditioned, what explains the chain as a whole? The Buddhist reply is therapeutic and structural rather than foundational-the task is to identify and cease the conditions of suffering, not posit an unconditioned creator-substance.

LAYER 3 - ADVANCED

Advanced argument and Nyāya pressure

The causal-efficiency argument asks how a wholly permanent cause could produce effects at different times. If its complete power operates immediately, all effects should appear together; if it produces successively, its causal profile changes and it is not wholly permanent. Auxiliary conditions do not automatically save permanence: if they make the decisive difference, the unchanged cause appears redundant.

Nyāya’s reply remains powerful. An enduring substance may act when the required conditions arrive, while recognition-“this is that”-memory and moral ownership seem to presuppose numerical identity. Buddhism answers with similarity, causal transmission, seeds and, in Yogācāra, *store-consciousness* (*ālaya-vijñāna*).

The residual issue is ownership. A stream can transmit information and karmic effects, but critics ask what makes it *one person’s* stream rather than merely a sequence externally described as one.

LAYER 3 - ADVANCED

Advanced compatibility problem

The chariot analogy shows that a person is designated upon organised components and relations; no separate chariot-substance or person-substance must be added. Early Buddhism primarily denies *pudgala-ātman*, while Mahāyāna extends emptiness to dharmas themselves.

Action and moral consequence (karma) without self avoids both strict identity and complete difference: the later recipient is neither numerically identical to nor causally disconnected from the earlier agent. This middle position preserves transmission but remains vulnerable to the moral-ownership objection.

Cessation of conditioned suffering (nirvāṇa) is not the immortality of an ego and not the destruction of an eternal person. It is cessation of greed, hatred, delusion and the conditioned production of suffering. Theravāda may distinguish the unconditioned from momentary conditioned dharmas; Mādhyamika avoids reifying cessation of conditioned suffering (nirvāṇa) as a separate substance by reading cycle of rebirth (saṃsāra) and cessation of conditioned suffering (nirvāṇa) through emptiness.

LAYER 3 - ADVANCED

Advanced distinctions and anti-nihilist safeguards

Yogācāra should not be equated casually with Advaita. Its *store-consciousness* (*ālaya-vijñāna*) is a conditioned stream carrying seeds, not an eternal Brahman or creator consciousness. The three natures distinguish imagined duality, dependent cognitive process and the perfected absence of that duality.

Mādhyamika's *catuṣkoṭi* is a dialectical test of reified alternatives, not a licence to assert contradictions. The two truths preserve conventional causation and practice while denying intrinsic nature ultimately. "Emptiness of emptiness" blocks the transformation of *emptiness* (*śūnyatā*) into a new Absolute.

Buddhist criticism of a creator stresses explanatory redundancy, the incompatibility of immutable agency with temporal action, and the moral problem of suffering. Dependent origination supplies a non-theistic causal alternative without claiming that events are uncaused.

LAYER 3 - ADVANCED

Advanced dialectical verdict

Nyāya's recognition and memory objections target ownership rather than mere transmission. Buddhist stream theories explain how traces continue, but the critic asks who recognises or deserves. Mīmāṃsā adds a semantic challenge: *exclusion theory of meaning* (*apoha*) may explain exclusion but appears to presuppose positive similarity.

Advaita criticism presses the soteriological cost of emptiness and momentariness. The Buddhist response distinguishes conventional path and ultimate non-reification; liberation is transformation and cessation within the process, not discovery of an eternal witness.

Cārvāka and Buddhism both reject a transcendent self, but Cārvāka identifies the person with the conscious body while Buddhism analyses body and mind into a causal aggregate-stream. The disagreement is therefore material identity versus process ontology.

A balanced verdict concedes that Buddhism offers a sophisticated non-substantialist model while leaving a real philosophical burden concerning first-person unity and moral ownership.

LAYER 3 - ADVANCED

Advanced control of terminology

Technical vocabulary should mark distinctions, not decorate prose. *Anitya* is general impermanence; *momentariness* (*kṣaṇikavāda*) is the radical scholastic claim of momentariness. *Emptiness* (*śūnyatā*) denies *intrinsic nature* (*svabhāva*), not conventional causation. *No permanent self* (*nairātmyavāda*) denies permanent selfhood, not the pragmatic designation of persons.

The restored doctrine material also prevents a narrow syllabus reading. Pañcaskandhas, liberation, Buddhist epistemology and the four schools explain how the three headline doctrines actually function.

LAYER 3 - ADVANCED

Advanced epistemic and pragmatic issues

The two-pramāṇa theory aligns epistemology with momentariness: only the unique causally effective particular is ultimately real, while universals are conceptual. *Exclusion theory of meaning* (*apoha*) avoids eternal universals by

explaining "cow" through exclusion of non-cows, but opponents ask how exclusion works without some positive basis of similarity.

The relation between *means of valid knowledge (pramāṇa)* and *pramāṇaphala* reflects a process model of cognition rather than Nyāya's sharply separated instrument and result. This is a high-value cross-school comparison.

The Buddha's silence on undeclared questions is pragmatic, not mere ignorance. The poisoned-arrow reasoning asks whether speculation conduces to cessation. The danger is anti-intellectualism; the defence is disciplined relevance. The silence rejects metaphysical fixation without denying that causal and ethical analysis is possible.

LAYER 3 - ADVANCED

Advanced synthesis

Buddhism's greatest strength is the integration of metaphysics and therapy. Dependent origination explains why suffering arises and how it can cease; momentariness and no-self prevent reification; the schools then debate how much reality, consciousness or emptiness the process requires.

Its central philosophical risk is that causal continuity may not fully replace first-person unity, recognition and moral ownership. Madhyamaka adds a second risk: anti-essentialist language can look self-refuting unless the two truths and emptiness of emptiness are stated clearly.

The defensible verdict is neither "Buddhism denies reality" nor "Buddhism is modern science." It is a rigorous anti-substantialist and soteriological process philosophy whose internal variants range from realism to idealist analysis and radical emptiness.

LINK: **Current conceptual anchor:** the February 2026 Devnimori relic exposition in Colombo, officially documented by the High Commission of India, illustrates Buddhist heritage as cultural diplomacy. It is contextual evidence only, never proof of doctrine.

CONSOLIDATED REGISTER NOTES

A. System identity

- Printed syllabus: schools of Buddhism; dependent origination; momentariness; no-self.
- Four Noble Truths provide the existential frame.
- Doctrine is diagnostic and soteriological, not merely speculative.
- Main school spectrum: Vaibhāṣika, Sautrāntika, Yogācāra and Mādhyamika.

B. Dependent origination

- "This being, that arises; this ceasing, that ceases."
- Twelve links run from ignorance to ageing and death.
- It rejects both eternalism and annihilationism.
- Conditioned suffering is removable because its sustaining conditions can cease.

C. Derivation spine

DEPENDENT ARISING

- > no independent self-grounding
- > impermanence
- > momentariness of the causally real
- > no permanent owner behind the aggregates
- Mādhyamika further derives emptiness of *intrinsic nature (svabhāva)*.
- Realist schools instead stress the reality of conditioned dharmas.

D. Momentariness

- *Causal efficacy (arthakriyā)*: the real performs a causal function.
- A wholly permanent cause should act always or never.
- Successive causal action implies different moment-specific capacities.
- Apparent endurance is a causally connected *causal continuum (santāna)*.

E. No-self

- The person is designated on five aggregates: form, feeling, perception, formations and consciousness.
- Person-no-self denies a permanent subject.
- Dharma-no-self denies intrinsic nature in phenomena.
- No-self removes grasping; it does not abolish causal continuity or conventional agency.

F. Action and moral consequence (karma), memory and cessation of conditioned suffering (nirvāṇa)

- Action and moral consequence (karma) requires continuity, not numerical identity of substance.
- Memory tracks a causally connected stream, though ownership remains a pressure point.
- Cessation of conditioned suffering (nirvāṇa) is cessation of ignorance, craving and suffering-producing conditions.
- No-self and cessation of conditioned suffering (nirvāṇa) are compatible because liberation transforms a stream rather than frees an eternal soul.

G. Four schools

School	External world	Cognition	Signature
Vaibhāṣika	real, directly perceived	direct realism	real dharmas
Sautrāntika	real, inferred	representational realism	momentary external causes
Yogācāra	not independently established	cognition-only	<i>vijñaptimātratā</i>
Mādhyamika	conventionally functional	no intrinsic entities	<i>emptiness (śūnyatā)</i>

H. Yogācāra

- Dream and atom arguments challenge independently established external objects.
- *Ālayavijñāna* carries karmic seeds and explains ordered experience.
- Three natures: imagined, dependent and perfected.
- Mind-only is not arbitrary private fantasy; it is a structured causal account of cognition.

I. Mādhyamika

- What arises dependently lacks self-existent *intrinsic nature (svabhāva)*.
- Emptiness is not non-being; conventional causation and language remain operative.
- Two truths: conventional and ultimate.
- Emptiness is itself empty and must not become a new Absolute.

J. Epistemology and silence

- Dignāga-Dharmakīrti recognize perception and inference.
- Perception grasps the unique particular; concepts work through exclusion (*apoha*).
- *Pramāṇaphala* links valid cognition and its result.
- Silence on *avyākṛta* questions is pragmatic: irrelevant speculation does not end suffering.

K. Criticism-reply grid

Pressure	Buddhist reply	Residual issue
no self, no responsibility	causal stream transmits consequences	moral ownership
momentariness blocks memory	later moments inherit traces	first-person identity
emptiness is nihilism	two truths preserve convention	self-reference
Yogācāra becomes solipsism	karmic seeds explain ordered experience	intersubjectivity
permanence can await auxiliaries	changed causal complex does the work	status of enduring powers

L. Final answer discipline

1. Start from the exact doctrine and define the key Sanskrit term.
2. Show the derivation rather than merely list conclusions.
3. Distinguish causal continuity from substantial identity.
4. Identify the school before attributing realism, mind-only or emptiness.
5. State one serious objection and the strongest Buddhist reply.
6. Preserve the difference between conventional reality and intrinsic nature.
7. Conclude with a graded soteriological and philosophical verdict.

Final judgement: Buddhism tightly connects causation, metaphysics and liberation. Its strength is an anti-essentialist process account of suffering; its hardest problems concern identity, moral ownership, intersubjectivity and the non-nihilistic articulation of emptiness.

COMPLETE TOPIC ASCII MASTER FLOW DIAGRAM

ASCII MASTER FLOW - PANEL 1/9: Common Buddhist foundation

COMMON THERAPEUTIC CORE

suffering (duḥkha) -> origin (tṛṣṇā/avidyā) -> cessation (nirvāṇa) -> eightfold path

three marks: anitya | suffering (duḥkha) | anātman

dependent origination supplies the Middle Path (madhyamā pratipad):
neither eternal substance nor causeless annihilation

later schools disagree about what exists and how it is known,
not about the need to end ignorance and craving.

ASCII MASTER FLOW - PANEL 2/9: Practical and doctrinal Middle Path

MIDDLE PATH (MADHYAMĀ PRATIPAD; PALI: MAJJHIMĀ PAṬIPADĀ)
practical extremes: sensual indulgence X self-mortification
positive route -> Noble Eightfold Path (āryāṣṭāṅgamārga)
wisdom + ethical discipline + meditative discipline
doctrinal extremes: eternalism X annihilationism
dependent origination preserves conditioned continuity without a permanent self
Four Noble Truths -> cause -> cessation -> path -> liberation

ASCII MASTER FLOW - PANEL 3/9: Twelve-linked dependent origination

ignorance (avidyā) -> saṃskāra -> vijñāna -> nāma-rūpa -> ṣaḍāyatana -> sparśa
-> vedanā -> tṛṣṇā -> upādāna -> bhava -> jāti -> jarā-maraṇa
|
IGNORANCE conditions formations; craving and grasping renew becoming
|
“When this is, that comes to be; with cessation of this, that ceases”
|
reverse order: end ignorance (avidyā)/tṛṣṇā -> break appropriation -> end rebirth-duḥkha.

ASCII MASTER FLOW - PANEL 4/9: Momentariness and no-self

DEPENDENT ORIGINATION (pratītyasamutpāda) -> conditioned things arise and perish -> MOMENTARINESS
(kṣaṇikavāda)
causal efficacy belongs to the moment; no unchanged bearer is required
|
PERSON ANALYSIS -> five aggregates (skandhas)
rūpa | vedanā | saṃjñā | saṃskāra | vijñāna
|
none is permanent, independent or “mine” -> NO PERMANENT SELF (nairātmyavāda)
continuity = causal series, like flame-to-flame; identity is neither strict sameness
nor total unrelatedness.

ASCII MASTER FLOW - PANEL 5/9: Action and moral consequence (karma), memory and cessation of conditioned suffering (nirvāṇa)

NO ENDURING SELF (ātman), YET CAUSAL RESPONSIBILITY
intention at t1 -> conditions stream -> fruit at t2
|
memory = later cognition causally conditioned by earlier experience
rebirth = one psycho-physical series conditions another, without soul-transmigration
|
objection: if agent perishes, another receives result
reply: successor is neither identical nor wholly different; causal appropriation connects
cessation of conditioned suffering (nirvāṇa) = cessation of greed, hatred and delusion, not
destruction of a substance-self.

BUDDHIST REALITY / KNOWLEDGE DEBATE

SAURĀNTIKA ARGUMENT: object-moment is gone when awareness occurs;
therefore cognition presents an image, from which external cause is inferred.
PRESSURE: representative realism must explain correspondence.

CONVERGENCE: dissolve reification; DIFFERENCE: Yogācāra privileges purified cognition, while Mādhyamika empties even consciousness and emptiness itself.

CLOSE: Buddhism replaces substance with conditioned process; its schools progressively debate whether external dharmas, cognition, or any intrinsic nature can be retained.
