

COMPLETE LEARNING SESSION

Growth, Development, HDI, IHDI and MPI - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / SESSION INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

ECONOMY DEEP-REVIEW CORE CONTROL	34
BASIC MCQS / REMEDIATION	35
Q1. Which statement correctly identifies Growth versus development?	35
Q2. Which option preserves the accounting or regulatory boundary of Growth versus development?	35
Q3. Which statement uses Growth versus development without losing its vintage, basket or legal status?	35
Q4. Which option avoids the standard UPSC close-option trap about Growth versus development?	35
Q5. Which statement correctly identifies Capability approach?	36
Q6. Which option preserves the accounting or regulatory boundary of Capability approach?	36

Q7. Which statement uses Capability approach without losing its vintage, basket or legal status?	36
Q8. Which option avoids the standard UPSC close-option trap about Capability approach?	36
Q9. Which statement correctly identifies HDI architecture?	37
Q10. Which option preserves the accounting or regulatory boundary of HDI architecture?	37
Q11. Which statement uses HDI architecture without losing its vintage, basket or legal status?	37
Q12. Which option avoids the standard UPSC close-option trap about HDI architecture?	37
Q13. Which statement correctly identifies IHDI inequality adjustment?	38
Q14. Which option preserves the accounting or regulatory boundary of IHDI inequality adjustment?	38
Q15. Which statement uses IHDI inequality adjustment without losing its vintage, basket or legal status?	38
Q16. Which option avoids the standard UPSC close-option trap about IHDI inequality adjustment?	38
Q17. Which statement correctly identifies MPI purpose?	39
Q18. Which option preserves the accounting or regulatory boundary of MPI purpose?	39
Q19. Which statement uses MPI purpose without losing its vintage, basket or legal status?	39
Q20. Which option avoids the standard UPSC close-option trap about MPI purpose?	39
Q21. Which statement correctly identifies Social capital?	40
Q22. Which option preserves the accounting or regulatory boundary of Social capital?	40
Q23. Which statement uses Social capital without losing its vintage, basket or legal status?	40
Q24. Which option avoids the standard UPSC close-option trap about Social capital?	40
Q25. Which statement correctly identifies Growth-resource channel?	41
Q26. Which option preserves the accounting or regulatory boundary of Growth-resource channel?	41
Q27. Which statement uses Growth-resource channel without losing its vintage, basket or legal status?	41
Q28. Which option avoids the standard UPSC close-option trap about Growth-resource channel?	41
Q29. Which statement correctly identifies Composition of growth?	42
Q30. Which option preserves the accounting or regulatory boundary of Composition of growth?	42
Q31. Which statement uses Composition of growth without losing its vintage, basket or legal status?	42
Q32. Which option avoids the standard UPSC close-option trap about Composition of growth?	42
Q33. Which statement correctly identifies Public-service conversion?	43
Q34. Which option preserves the accounting or regulatory boundary of Public-service conversion?	43
Q35. Which statement uses Public-service conversion without losing its vintage, basket or legal status?	43
Q36. Which option avoids the standard UPSC close-option trap about Public-service conversion?	43
Q37. Which statement correctly identifies Institutional division?	44
Q38. Which option preserves the accounting or regulatory boundary of Institutional division?	44

Q39. Which statement uses Institutional division without losing its vintage, basket or legal status?	44
Q40. Which option avoids the standard UPSC close-option trap about Institutional division?	44
Q41. Which statement correctly identifies Kerala-Bihar comparison?	45
Q42. Which option preserves the accounting or regulatory boundary of Kerala-Bihar comparison?	45
Q43. Which statement uses Kerala-Bihar comparison without losing its vintage, basket or legal status?	45
Q44. Which option avoids the standard UPSC close-option trap about Kerala-Bihar comparison?	45
Q45. Which statement correctly identifies National MPI targeting?	46
Q46. Which option preserves the accounting or regulatory boundary of National MPI targeting?	46
Q47. Which statement uses National MPI targeting without losing its vintage, basket or legal status?	46
Q48. Which option avoids the standard UPSC close-option trap about National MPI targeting?	46
Q49. Which statement correctly identifies Aspirational Districts lesson?	47
Q50. Which option preserves the accounting or regulatory boundary of Aspirational Districts lesson?	47
Q51. Which statement uses Aspirational Districts lesson without losing its vintage, basket or legal status?	47
Q52. Which option avoids the standard UPSC close-option trap about Aspirational Districts lesson?	47
Q53. Which statement correctly identifies MGNREGA conversion role?	48
Q54. Which option preserves the accounting or regulatory boundary of MGNREGA conversion role?	48
Q55. Which statement uses MGNREGA conversion role without losing its vintage, basket or legal status?	48
Q56. Which option avoids the standard UPSC close-option trap about MGNREGA conversion role?	48
Q57. Which statement correctly identifies Nutrition and schooling interventions?	49
Q58. Which option preserves the accounting or regulatory boundary of Nutrition and schooling interventions?	49
Q59. Which statement uses Nutrition and schooling interventions without losing its vintage, basket or legal status?	49
Q60. Which option avoids the standard UPSC close-option trap about Nutrition and schooling interventions?	50
Q61. Which statement correctly identifies Kudumbashree and SHGs?	50
Q62. Which option preserves the accounting or regulatory boundary of Kudumbashree and SHGs?	50
Q63. Which statement uses Kudumbashree and SHGs without losing its vintage, basket or legal status?	50
Q64. Which option avoids the standard UPSC close-option trap about Kudumbashree and SHGs?	51
Q65. Which statement correctly identifies MPI incidence?	51
Q66. Which option preserves the accounting or regulatory boundary of MPI incidence?	51
Q67. Which statement uses MPI incidence without losing its vintage, basket or legal status?	52
Q68. Which option avoids the standard UPSC close-option trap about MPI incidence?	52
Q69. Which statement correctly identifies MPI intensity?	52
Q70. Which option preserves the accounting or regulatory boundary of MPI intensity?	52

Q71. Which statement uses MPI intensity without losing its vintage, basket or legal status?	53
Q72. Which option avoids the standard UPSC close-option trap about MPI intensity?	53
Q73. Which statement correctly identifies Income-poverty contrast?	53
Q74. Which option preserves the accounting or regulatory boundary of Income-poverty contrast?	53
Q75. Which statement uses Income-poverty contrast without losing its vintage, basket or legal status?	54
Q76. Which option avoids the standard UPSC close-option trap about Income-poverty contrast?	54
Q77. Which statement correctly identifies Composite and benchmark caution?	54
Q78. Which option preserves the accounting or regulatory boundary of Composite and benchmark caution?	54
Q79. Which statement uses Composite and benchmark caution without losing its vintage, basket or legal status?	55

Growth, Development, HDI, IHDI and MPI - Learner-v2

Complete Learning Session

Authoring-only generation: 2026-09-03. No PDF was rendered and no tracker or index was mutated.

SOURCE, PROGRESSION AND CURRENT-LINKAGE AUDIT

- **Generation date:** 2026-09-03.
- **Repository-first evidence:** the Basic owner is taught first and preserved in full; the Advanced owner is retained only in the optional final teaching block.
- **OCR evidence:** Repository Markdown was primary. OCR-searchable local official General Studies papers were used only to confirm printed routed demands. No answer key, marking scheme, unsupported page precision or current macroeconomic statistic was inferred from them.
- **Qdrant:** not used; repository Markdown and available OCR context were sufficient.
- **PYQ integrity:** The audited ledgers route 2020 GS-II on incidence and intensity of poverty, 2024 GS-III on social-service expenditure and inclusive growth, and 2025 GS-III on HDI versus IHDI here. Objective routes on GNP per capita, Ease of Doing Business, social capital and 2026 MPI methodology remain answer-letter free.
- **Live-link boundary:** The UNDP HDI page was substantively retrievable on 2026-09-03 and is used only for its HDI dimensions, geometric-mean construction and stated limits. No live India rank, score, IHDI loss, MPI headcount or poverty estimate was taken from it.
- **Fact/inference discipline:** no current-affairs item, PYQ wording, figure or quotation is invented.

LIVE OFFICIAL-SOURCE ATTEMPT LOG

The checks below were made on 2026-09-03. Substantive official text is used only for the proposition it actually supports; binary files, dynamic shells, stubs and undated dashboard snippets are recorded but not converted into current claims.

- <https://hdr.undp.org/data-center/human-development-index#/indicies/HDI> - retrieved 2026-09-03; the official UNDP page substantively states that HDI uses health, education and standard-of-living dimensions aggregated by a geometric mean and also states that HDI does not capture inequality, poverty, security or empowerment.

BASIC LEARNING SESSION

DEEP-REVIEW LEARNING CONTRACT

Control	Binding rule for this package
Syllabus boundary	Complete Economy Basic/Core is answer-complete before optional Advanced depth.
Formula boundary	Formula, numerator, denominator, unit, stock/flow, nominal/real, base year, level/rate and accounting identity are explicit.
Institutional boundary	Constitution, statute, delegated rule, regulator mandate, policy, recommendation, scheme and implementation outcome remain distinct.
Transmission method	Shock or instrument -> prices/quantities/balance sheets/incentives -> institution and market response -> output, employment, distribution, stability and external effect -> lag and trade-off.
Current-data method	Source -> release date -> reference period -> unit/denominator -> provisional/revised/final status; incompatible Budget, Survey or statistical vintages are never mixed.
Programme-status method	Announced -> approved -> notified/guidelines issued -> funded -> operational -> utilised -> output -> outcome are separate stages.
External/WTO method	Agreement text, member category, box, limit, notification, consultation, dispute and ruling are qualified without invented thresholds.
Causal method	Accounting identity, chronology and correlation are not promoted into behavioural or causal claims without mechanism, counterfactual and alternatives.
Answer balance	Model answers balance growth, distribution, stability, sustainability and federal dimensions with India-centric evidence.
Practice contract	Every solved item has demand decoding, a detailed examiner-grade model, executable timed/compression plan, marks rationale and answer-specific improvement.
Approval	This immutable successor remains approved: false pending explicit approval.

Canonical Basic/Core owner:

upsc-ai-kit\knowledge\Economy\basic\02_Growth-Development-HDI-IHDI-and-MPI.md

Substantive canonical provenance owner: upsc-ai-kit\knowledge\Economy\02_Growth-Development-HDI-IHDI-and-MPI_Learner-V2-Complete-Topic-Package.md **Optional Advanced owner:**

upsc-ai-kit\knowledge\Economy\advanced\02_Growth-Development-HDI-IHDI-and-MPI.md **Official syllabus mapping:** upsc-ai-kit\knowledge\Economy\OFFICIAL-UPSC-SYLLABUS-MAPPING.md

EVIDENCE, PYQ AND CURRENT-STATUS CONTROL

- Every data-heavy table states unit, denominator, geography, reference period and source/status.
- GDP/GVA, gross/net, domestic/national, nominal/real and level/rate distinctions remain exact.
- Monetary, fiscal and external chains state intermediaries, balance-sheet channels, lags, leakages and trade-offs.
- Budget and Economic Survey editions are never mixed; BE, RE, Actual, advance/provisional/revised/final estimates remain labelled.
- Scheme and programme claims distinguish announcement, approval, notification, operation, coverage, utilisation and measured outcome.
- WTO boxes, limits, de minimis, special treatment, notifications and disputes are qualified from authoritative rules.
- PYQ wording is preserved only where verified; reconstructed or routed demands remain labelled.
- **Current-status note, rechecked 2026-09-06:** volatile rates, estimates, scheme status, trade rules and institutional claims retain official source, release date, reference period and revision status.

Generation-local live/current sources:

- <https://hdr.undp.org/data-center/human-development-index#/indicies/HDI> - retrieved 2026-09-03; the official UNDP page substantively states that HDI uses health, education and standard-of-living dimensions aggregated by a geometric mean and also states that HDI does not capture inequality, poverty, security or empowerment.

Refreshed teaching navigation

Distinct embedded teaching-navigation image. The separate continuous Cārvāka-style flowchart package remains an independent at-a-glance artifact.

SESSION 1 - FOUNDATION - Growth, development and substantive freedom

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Growth, development and substantive freedom explains how Growth versus development and Capability approach fit into one examinable economic mechanism.

Technical definition: In Economy analysis, Growth, development and substantive freedom separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Growth, development and substantive freedom must be read through Growth versus development and Capability approach, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- Growth
- development
- substantive
- freedom
- versus
- Capability

How to use them: Define Growth, development, substantive; attach freedom to its named source, period and status; then qualify the answer with this limit: Do not infer development from nominal or aggregate GDP growth alone.

VISUAL FIRST

GROWTH, DEVELOPMENT AND SUBSTANTIVE FREEDOM

01. Growth versus development

|
v

02. Capability approach

BOUNDARY -> Do not infer development from nominal or aggregate GDP growth alone.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.

NAMED EVIDENCE AND MECHANISM

- Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.
- Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.

EXAMINER CAUTION

- Do not infer development from nominal or aggregate GDP growth alone.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

MINI RECAP

- **Mechanism chain:** Growth versus development -> Capability approach
- **Qualified use:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS Growth development substantive freedom versus Capability	2. MECHANISM / ARGUMENT connect Growth versus development and Capability approach through accounting, incentives and transmission	3. CONSEQUENCE / CONTRAST Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.	4. UPSC TRAP / ANSWER-USE Do not infer development from nominal or aggregate GDP growth alone.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Growth, development and substantive freedom converts a precise economic distinction into a qualified conclusion			

SESSION 2 - FOUNDATION - HDI dimensions and geometric aggregation

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: HDI dimensions and geometric aggregation explains how HDI architecture fit into one examinable economic mechanism.

Technical definition: In Economy analysis, HDI dimensions and geometric aggregation separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

HDI dimensions and geometric aggregation must be read through HDI architecture, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- dimensions
- geometric
- aggregation
- architecture
- UNDP's
- mean

How to use them: Define dimensions, geometric, aggregation; attach architecture to its named source, period and status; then qualify the answer with this limit: Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.

VISUAL FIRST

HDI DIMENSIONS AND GEOMETRIC AGGREGATION

01. HDI architecture

BOUNDARY -> Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

NAMED EVIDENCE AND MECHANISM

- UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

EXAMINER CAUTION

- Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

MINI RECAP

- **Mechanism chain:** HDI architecture
- **Qualified use:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS dimensions geometric aggregation architecture UNDP's mean	2. MECHANISM / ARGUMENT connect HDI architecture through accounting, incentives and transmission	3. CONSEQUENCE / CONTRAST Compare average achievement with inequality and overlapping deprivation before judging inclusion.	4. UPSC TRAP / ANSWER-USE Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: HDI dimensions and geometric aggregation converts a precise economic distinction into a qualified conclusion			

SESSION 3 - FOUNDATION - How IHDI exposes inequality

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: How IHDI exposes inequality explains how IHDI inequality adjustment fit into one examinable economic mechanism.

Technical definition: In Economy analysis, How IHDI exposes inequality separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

How IHDI exposes inequality must be read through IHDI inequality adjustment, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- IHDI
- exposes
- inequality
- adjustment
- discounts
- each

How to use them: Define IHDI, exposes, inequality; attach adjustment to its named source, period and status; then qualify the answer with this limit: Do not treat IHDI as a separate welfare basket; it inequality-adjusts the HDI dimensions.

VISUAL FIRST

HOW IHDI EXPOSES INEQUALITY

01. IHDI inequality adjustment

BOUNDARY -> Do not treat IHDI as a separate welfare basket; it inequality-adjusts the HDI dimensions.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

NAMED EVIDENCE AND MECHANISM

- IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

EXAMINER CAUTION

- Do not treat IHDI as a separate welfare basket; it inequality-adjusts the HDI dimensions.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

MINI RECAP

- **Mechanism chain:** IHDI inequality adjustment
- **Qualified use:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW | SUBTOPIC CLOSURE FLOW

1. KEY TERMS / DEFINITIONS

IHDI | exposes | inequality | adjustment | discounts | each

2. MECHANISM / ARGUMENT

connect IHDI inequality adjustment through accounting, incentives and transmission

3. CONSEQUENCE / CONTRAST

End with disaggregated outcomes, service quality and employment-intensive productivity growth.

4. UPSC TRAP / ANSWER-USE

Do not treat IHDI as a separate welfare basket; it inequality-adjusts the HDI dimensions.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: How IHDI exposes inequality converts a precise economic distinction into a qualified conclusion

SESSION 4 - CORE - What multidimensional poverty measures

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: What multidimensional poverty measures explains how MPI purpose fit into one examinable economic mechanism.

Technical definition: In Economy analysis, What multidimensional poverty measures separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

What multidimensional poverty measures must be read through MPI purpose, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- What
- multidimensional
- poverty
- measures
- purpose
- identifies

How to use them: Define What, multidimensional, poverty; attach measures to its named source, period and status; then qualify the answer with this limit: Do not reduce MPI to an income poverty-line headcount.

VISUAL FIRST

WHAT MULTIDIMENSIONAL POVERTY MEASURES

01. MPI purpose

BOUNDARY -> Do not reduce MPI to an income poverty-line headcount.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

NAMED EVIDENCE AND MECHANISM

- MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

EXAMINER CAUTION

- Do not reduce MPI to an income poverty-line headcount.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.

- **Mains:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

MINI RECAP

- **Mechanism chain:** MPI purpose
- **Qualified use:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS What multidimensional poverty measures purpose identifies	2. MECHANISM / ARGUMENT connect MPI purpose through accounting, incentives and transmission	3. CONSEQUENCE / CONTRAST Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.	4. UPSC TRAP / ANSWER-USE Do not reduce MPI to an income poverty-line headcount.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: What multidimensional poverty measures converts a precise economic distinction into a qualified conclusion			

SESSION 5 - CORE - Social capital as a development resource

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Social capital as a development resource explains how Social capital fit into one examinable economic mechanism.

Technical definition: In Economy analysis, Social capital as a development resource separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Social capital as a development resource must be read through Social capital, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- **Social**
- **capital**
- **development**
- **resource**
- **Trust**
- **norms**

How to use them: Define Social, capital, development; attach resource to its named source, period and status; then qualify the answer with this limit: Do not merge incidence H with intensity A; they answer how many and how deprived.

VISUAL FIRST

SOCIAL CAPITAL AS A DEVELOPMENT RESOURCE

01. Social capital

BOUNDARY -> Do not merge incidence H with intensity A; they answer how many and how deprived.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

NAMED EVIDENCE AND MECHANISM

- Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

EXAMINER CAUTION

- Do not merge incidence H with intensity A; they answer how many and how deprived.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

MINI RECAP

- **Mechanism chain:** Social capital
- **Qualified use:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS Social capital development resource Trust norms	2. MECHANISM / ARGUMENT connect Social capital through accounting, incentives and transmission	3. CONSEQUENCE / CONTRAST Compare average achievement with inequality and overlapping deprivation before judging inclusion.	4. UPSC TRAP / ANSWER-USE Do not merge incidence H with intensity A; they answer how many and how deprived.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Social capital as a development resource converts a precise economic distinction into a qualified conclusion			

SESSION 6 - CORE - Growth resources, composition and jobs

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Growth resources, composition and jobs explains how Growth-resource channel and Composition of growth fit into one examinable economic mechanism.

Technical definition: In Economy analysis, Growth resources, composition and jobs separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Growth resources, composition and jobs must be read through Growth-resource channel and Composition of growth, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- Growth
- resources
- composition

- jobs
- Growth-resource
- channel

How to use them: Define Growth, resources, composition; attach jobs to its named source, period and status; then qualify the answer with this limit: Do not compare poverty lines across PPP revisions without stating the price basis.

VISUAL FIRST

GROWTH RESOURCES, COMPOSITION AND JOBS

01. Growth-resource channel

|

v

02. Composition of growth

BOUNDARY -> Do not compare poverty lines across PPP revisions without stating the price basis.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

NAMED EVIDENCE AND MECHANISM

- Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.
- Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

EXAMINER CAUTION

- Do not compare poverty lines across PPP revisions without stating the price basis.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

MINI RECAP

- **Mechanism chain:** Growth-resource channel -> Composition of growth
- **Qualified use:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS Growth resources composition jobs Growth-resource channel	2. MECHANISM / ARGUMENT connect Growth-resource channel and Composition of growth through accounting, incentives and transmission	3. CONSEQUENCE / CONTRAST End with disaggregated outcomes, service quality and employment-intensive productivity growth.	4. UPSC TRAP / ANSWER-USE Do not compare poverty lines across PPP revisions without stating the price basis.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Growth resources, composition and jobs converts a precise economic distinction into a qualified conclusion			

SESSION 7 - CORE - Public services as conversion channels

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Public services as conversion channels explains how Public-service conversion fit into one examinable economic mechanism.

Technical definition: In Economy analysis, Public services as conversion channels separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Public services as conversion channels must be read through Public-service conversion, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- **Public**
- **services**
- **conversion**
- **channels**
- **Public-service**
- **Nutrition**

How to use them: Define Public, services, conversion; attach channels to its named source, period and status; then qualify the answer with this limit: Do not treat a dashboard ranking gain as proof of durable transformation.

VISUAL FIRST

PUBLIC SERVICES AS CONVERSION CHANNELS

01. Public-service conversion

BOUNDARY -> Do not treat a dashboard ranking gain as proof of durable transformation.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

NAMED EVIDENCE AND MECHANISM

- Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

EXAMINER CAUTION

- Do not treat a dashboard ranking gain as proof of durable transformation.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

MINI RECAP

- **Mechanism chain:** Public-service conversion
- **Qualified use:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW | SUBTOPIC CLOSURE FLOW

1. KEY TERMS / DEFINITIONS

Public | services | conversion | channels | Public-service | Nutrition

2. MECHANISM / ARGUMENT

connect Public-service conversion through accounting, incentives and transmission

3. CONSEQUENCE / CONTRAST

Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

4. UPSC TRAP / ANSWER-USE

Do not treat a dashboard ranking gain as proof of durable transformation.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Public services as conversion channels converts a precise economic distinction into a qualified conclusion

SESSION 8 - CORE - Who produces each development index

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Who produces each development index explains how Institutional division fit into one examinable economic mechanism.

Technical definition: In Economy analysis, Who produces each development index separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Who produces each development index must be read through Institutional division, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- produces
- each
- development
- index
- Institutional
- division

How to use them: Define produces, each, development; attach index to its named source, period and status; then qualify the answer with this limit: Do not assume welfare access guarantees service quality or productive employment.

VISUAL FIRST

WHO PRODUCES EACH DEVELOPMENT INDEX

01. Institutional division

BOUNDARY -> Do not assume welfare access guarantees service quality or productive employment.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

NAMED EVIDENCE AND MECHANISM

- UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

EXAMINER CAUTION

- Do not assume welfare access guarantees service quality or productive employment.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.

- **Mains:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

MINI RECAP

- **Mechanism chain:** Institutional division
- **Qualified use:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Who produces each development index converts a precise economic distinction into a qualified conclusion			

SESSION 9 - CORE - State variation and the Kerala-Bihar lesson

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: State variation and the Kerala-Bihar lesson explains how Kerala-Bihar comparison fit into one examinable economic mechanism.

Technical definition: In Economy analysis, State variation and the Kerala-Bihar lesson separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

State variation and the Kerala-Bihar lesson must be read through Kerala-Bihar comparison, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- **State**
- **variation**
- **Kerala-Bihar**
- **lesson**
- **comparison**
- **familiar**

How to use them: Define State, variation, Kerala-Bihar; attach lesson to its named source, period and status; then qualify the answer with this limit: Do not copy one state's development path mechanically across different histories and capacities.

VISUAL FIRST

STATE VARIATION AND THE KERALA-BIHAR LESSON

01. Kerala-Bihar comparison

BOUNDARY -> Do not copy one state's development path mechanically across different histories and capacities.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.

NAMED EVIDENCE AND MECHANISM

- The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.

EXAMINER CAUTION

- Do not copy one state's development path mechanically across different histories and capacities.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

MINI RECAP

UPSC TRAP / ANSWER-USE Do not copy one state's development path mechanically across different histories and capacities.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: State variation and the Kerala-Bihar lesson converts a precise economic distinction into a qualified conclusion			

SESSION 10 - CORE - National MPI and household targeting

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: National MPI and household targeting explains how National MPI targeting fit into one examinable economic mechanism.

Technical definition: In Economy analysis, National MPI and household targeting separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

National MPI and household targeting must be read through National MPI targeting, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- **National**
- **household**

- targeting
- NITI
- Aayog's
- uses

How to use them: Define National, household, targeting; attach NITI to its named source, period and status; then qualify the answer with this limit: Do not treat social capital as a substitute for infrastructure, markets or public finance.

VISUAL FIRST

NATIONAL MPI AND HOUSEHOLD TARGETING

01. National MPI targeting

BOUNDARY -> Do not treat social capital as a substitute for infrastructure, markets or public finance.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

NAMED EVIDENCE AND MECHANISM

- NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

EXAMINER CAUTION

- Do not treat social capital as a substitute for infrastructure, markets or public finance.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

MINI RECAP

CONSEQUENCE / CONTRAST Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.	4. UPSC TRAP / ANSWER-USE Do not treat social capital as a substitute for infrastructure, markets or public finance.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: National MPI and household targeting converts a precise economic distinction into a qualified conclusion			

SESSION 11 - CORE - District targeting and MGNREGA protection

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: District targeting and MGNREGA protection explains how Aspirational Districts lesson and MGNREGA conversion role fit into one examinable economic mechanism.

Technical definition: In Economy analysis, District targeting and MGNREGA protection separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

District targeting and MGNREGA protection must be read through Aspirational Districts lesson and MGNREGA conversion role, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- District
- targeting
- MGNREGA
- protection
- Aspirational
- Districts

How to use them: Define District, targeting, MGNREGA; attach protection to its named source, period and status; then qualify the answer with this limit: Do not use an international poverty benchmark as India's official domestic poverty line.

VISUAL FIRST

DISTRICT TARGETING AND MGNREGA PROTECTION

01. Aspirational Districts lesson

|
v

02. MGNREGA conversion role

BOUNDARY -> Do not use an international poverty benchmark as India's official domestic poverty line.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

NAMED EVIDENCE AND MECHANISM

- The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.
- MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

EXAMINER CAUTION

- Do not use an international poverty benchmark as India's official domestic poverty line.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

MINI RECAP

- **Mechanism chain:** Aspirational Districts lesson -> MGNREGA conversion role
- **Qualified use:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

UPSC TRAP / ANSWER-USE Do not use an international poverty benchmark as India's official domestic poverty line.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: District targeting and MGNREGA protection converts a precise economic distinction into a qualified conclusion			

SESSION 12 - CORE - Nutrition and schooling capability channels

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Nutrition and schooling capability channels explains how Nutrition and schooling interventions fit into one examinable economic mechanism.

Technical definition: In Economy analysis, Nutrition and schooling capability channels separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Nutrition and schooling capability channels must be read through Nutrition and schooling interventions, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- Nutrition
- schooling
- capability
- channels
- interventions
- ICDS

How to use them: Define Nutrition, schooling, capability; attach channels to its named source, period and status; then qualify the answer with this limit: Do not let average HDI conceal caste, gender, tribal, regional or district inequality.

VISUAL FIRST

NUTRITION AND SCHOOLING CAPABILITY CHANNELS

01. Nutrition and schooling interventions

BOUNDARY -> Do not let average HDI conceal caste, gender, tribal, regional or district inequality.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

NAMED EVIDENCE AND MECHANISM

- ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

EXAMINER CAUTION

- Do not let average HDI conceal caste, gender, tribal, regional or district inequality.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

MINI RECAP

- **Mechanism chain:** Nutrition and schooling interventions
- **Qualified use:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

CLOSING RECALL FLOW

UPSC TRAP / ANSWER-USE Do not let average HDI conceal caste, gender, tribal, regional or district inequality.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Nutrition and schooling capability channels converts a precise economic distinction into a qualified conclusion			

SESSION 13 - CORE SYNTHESIS - Women's networks and collective agency

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Women's networks and collective agency explains how Kudumbashree and SHGs fit into one examinable economic mechanism.

Technical definition: In Economy analysis, Women's networks and collective agency separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Women's networks and collective agency must be read through Kudumbashree and SHGs, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- **Women's**
- **networks**
- **collective**
- **agency**
- **Kudumbashree**
- **SHGs**

How to use them: Define Women's, networks, collective; attach agency to its named source, period and status; then qualify the answer with this limit: Do not infer development from nominal or aggregate GDP growth alone.

VISUAL FIRST

WOMEN'S NETWORKS AND COLLECTIVE AGENCY

01. Kudumbashree and SHGs

BOUNDARY -> Do not infer development from nominal or aggregate GDP growth alone.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

NAMED EVIDENCE AND MECHANISM

- Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

EXAMINER CAUTION

- Do not infer development from nominal or aggregate GDP growth alone.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

MINI RECAP

- **Mechanism chain:** Kudumbashree and SHGs
- **Qualified use:** Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.

CLOSING RECALL FLOW

1. KEY TERMS / DEFINITIONS Women's networks collective agency Kudumbashree SHGs	2. MECHANISM / ARGUMENT connect Kudumbashree and SHGs through accounting, incentives and transmission	3. CONSEQUENCE / CONTRAST Treat growth as the resource base and institutions, jobs and public services as the conversion mechanism.	4. UPSC TRAP / ANSWER-USE Do not infer development from nominal or aggregate GDP growth alone.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: Women's networks and collective agency converts a precise economic distinction into a qualified conclusion			

SESSION 14 - CORE SYNTHESIS - MPI incidence and intensity

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: MPI incidence and intensity explains how MPI incidence and MPI intensity fit into one examinable economic mechanism.

Technical definition: In Economy analysis, MPI incidence and intensity separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

MPI incidence and intensity must be read through MPI incidence and MPI intensity, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- incidence
- intensity
- proportion

- people
- identified
- multidimensionally

How to use them: Define incidence, intensity, proportion; attach people to its named source, period and status; then qualify the answer with this limit: Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.

VISUAL FIRST

MPI INCIDENCE AND INTENSITY

01. MPI incidence

|

v

02. MPI intensity

BOUNDARY -> Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

NAMED EVIDENCE AND MECHANISM

- In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.
- In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

EXAMINER CAUTION

- Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

MINI RECAP

- **Mechanism chain:** MPI incidence -> MPI intensity
- **Qualified use:** Compare average achievement with inequality and overlapping deprivation before judging inclusion.

CLOSING RECALL FLOW

SUBTOPIC CLOSURE FLOW SUBTOPIC CLOSURE FLOW			
1. KEY TERMS / DEFINITIONS incidence intensity proportion people identified multidimensionally	2. MECHANISM / ARGUMENT connect MPI incidence and MPI intensity through accounting, incentives and transmission	3. CONSEQUENCE / CONTRAST Compare average achievement with inequality and overlapping deprivation before judging inclusion.	4. UPSC TRAP / ANSWER-USE Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.
ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM: MPI incidence and intensity converts a precise economic distinction into a qualified conclusion			

SESSION 15 - CORE SYNTHESIS - Income poverty, composite limits and PPP vintage

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Income poverty, composite limits and PPP vintage explains how Income-poverty contrast and Composite and benchmark caution fit into one examinable economic mechanism.

Technical definition: In Economy analysis, Income poverty, composite limits and PPP vintage separates the concept and accounting boundary from its unit, coverage, price basis, base year or basket, estimate vintage, institutional or legal source, crop and geography scope, eligibility, implementation stage, stock-flow boundary, transmission channel and distributional or stability consequence.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Income poverty, composite limits and PPP vintage must be read through Income-poverty contrast and Composite and benchmark caution, with the formula or legal perimeter stated before the policy inference.

MUST-WRITE KEYWORDS

- Income
- poverty
- composite
- vintage
- Income-poverty
- contrast

How to use them: Define Income, poverty, composite; attach vintage to its named source, period and status; then qualify the answer with this limit: Do not treat IHDI as a separate welfare basket; it inequality-adjusts the HDI dimensions.

VISUAL FIRST

INCOME POVERTY, COMPOSITE LIMITS AND PPP VINTAGE

01. Income-poverty contrast

|
v

02. Composite and benchmark caution

BOUNDARY -> Do not treat IHDI as a separate welfare basket; it inequality-adjusts the HDI dimensions.

This topic-specific rail fixes the evidence sequence and its exam boundary before analysis.

CORE EXPLANATION

An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

NAMED EVIDENCE AND MECHANISM

- An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.
- HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

EXAMINER CAUTION

- Do not treat IHDI as a separate welfare basket; it inequality-adjusts the HDI dimensions.

EXAM LINK

- **Prelims:** Preserve the exact formula, territorial or resident boundary, price basis, base year, index basket, eligible counterparty, institution and legal status; never upgrade a projection into an actual or a regulatory direction into a universal rule.
- **Mains:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

MINI RECAP

- **Mechanism chain:** Income-poverty contrast -> Composite and benchmark caution
- **Qualified use:** End with disaggregated outcomes, service quality and employment-intensive productivity growth.

CLOSING RECALL FLOW

COMPLETE BASIC OWNER EVIDENCE BANK

Subject: Economy | **Tier:** Must-Do (foundation) | **GS Paper:** GS-III + Prelims. **Core area:** Inclusive growth and human development. **Grounded in:** Ramesh Singh, relevant chapters; Economic Survey 2025-26; audited UPSC Economy PYQs (2024-2026 Prelims and 2024-2025 Mains). **FACT:** = source-grounded | **ANALYSIS:** = analytical linkage | **CURRENT:** = current Survey/current-affairs hook. *Companion:*
.. /advanced/02_Growth-Develo pment -HDI -IHDI -and -MPI .md.

1. Visual foundation

1. REAL GROWTH
|
v
2. PUBLIC AND PRIVATE RESOURCES
|
v
3. HEALTH, EDUCATION AND PRODUCTIVE JOBS
|
v
4. CAPABILITY EXPANSION
|
v
5. DEVELOPMENT

Core proposition: Treat growth as the resource base, employment and public services as conversion channels, and IHDI/MPI as tests of distribution and deprivation.

2. Essential definitions

Concept	Exam-ready meaning
FACT: Economic growth	Sustained quantitative increase in real output or real income.
FACT: Economic development	Growth plus structural change, capability expansion and better distribution.
FACT: Capability approach (Amartya Sen)	Development means expanding substantive freedoms and real opportunities to lead the kinds of lives people value, not merely raising income.
FACT: HDI	UNDP composite of health, education and standard of living.
FACT: IHDI	HDI discounted for inequality within each of its three dimensions.
FACT: MPI	Deprivation measure using overlapping deficits in health, education and living standards.
FACT: Social capital	Trust, norms and networks that help cooperation, collective action and development outcomes beyond private income alone.

3. Topic mechanism

1. Real productivity and output growth enlarge household incomes, profits and the tax base.
2. The composition of growth determines whether new income reaches labour-intensive sectors, lagging regions and vulnerable groups.
3. Public revenue and household income finance nutrition, health, schooling, housing and risk protection.
4. Better health and education raise capabilities, employability and intergenerational mobility.
5. HDI records average achievement, IHDI exposes unequal distribution, and MPI identifies overlapping household deprivations.

4. Institutions and policy tools

- FACT: **UNDP**: publishes HDI and IHDI and co-presents the global MPI in its human-development reporting.
- FACT: **Oxford Poverty and Human Development Initiative (OPHI)**: co-develops the global MPI methodology used in international comparison.
- FACT: **NITI Aayog**: tracks India's national MPI and supports state- and district-level development comparisons.
- FACT: **MoSPI**: supplies national accounts and social statistics needed to read growth beside welfare outcomes.
- FACT: **Union, state and local governments**: deliver the health, education, nutrition, water and housing services behind capability gains.

5. Indian applications and examples

- ANALYSIS: **Claim**: Growth and development can diverge sharply across Indian states. **Named evidence/example**: The familiar Kerala-Bihar contrast in Indian policy discourse shows that strong social indicators and human-development outcomes do not move one-for-one with income or industrial scale alone. **Why it supports the claim**: It demonstrates why per-capita output is only a starting point; public health, schooling and state capacity change the conversion of income into capabilities. **Limit/status caution**: State comparisons are path-dependent because demography, migration, historical social reform and remittances affect outcomes.
- ANALYSIS: **Claim**: Average poverty or income measures can miss overlapping household deprivation. **Named evidence/example**: NITI Aayog's national Multidimensional Poverty Index uses health, education and living-standard indicators drawn from household evidence such as NFHS-based deprivation mapping. **Why it supports the claim**: It identifies whether the same household faces simultaneous deficits in nutrition, schooling, sanitation, housing or basic amenities, making policy more targeted than an income line alone. **Limit/status caution**: MPI depends on chosen indicators and survey periodicity; it cannot by itself capture every urban

service-quality gap or sudden economic shock.

- ANALYSIS: **Claim:** State averages can hide severe district-level divergence. **Named evidence/example:** The Aspirational Districts Programme was created precisely because national and state growth narratives were not enough to identify lagging districts in health, education, agriculture and basic infrastructure. **Why it supports the claim:** It proves that development assessment must descend below state averages when answering inter-regional inequality questions. **Limit/status caution:** Dashboard improvement or ranking movement does not automatically establish durable structural transformation.
- ANALYSIS: **Claim:** Employment programmes can convert growth resources into minimum social protection and capability support. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation. **Why it supports the claim:** It shows that inclusive growth is not only about output expansion; labour absorption and income security matter when households need to protect nutrition, schooling and resilience. **Limit/status caution:** It is primarily a protection instrument, not a substitute for long-term productivity growth or formal job creation.
- ANALYSIS: **Claim:** Human development requires direct investment in nutrition and schooling, not income growth alone. **Named evidence/example:** ICDS and PM POSHAN (Mid-Day Meal) represent named Indian capability-building interventions in early childhood and school participation. **Why it supports the claim:** They illustrate Amartya Sen's insight that real freedom expands through nutrition, health and educational access that improve what people are able to do and become. **Limit/status caution:** Higher attendance or service access does not automatically ensure learning quality, health quality or later employability.
- ANALYSIS: **Claim:** Social capital is a development resource, not a decorative concept. **Named evidence/example:** Kudumbashree and the broader self-help-group model later scaled through NRLM show how organised women's networks can support savings, credit, local problem-solving and agency. **Why it supports the claim:** They demonstrate that trust, participation and collective action help convert state schemes into durable capability gains. **Limit/status caution:** Social capital complements but cannot replace infrastructure, markets, public finance or formal institutional capacity.

5A. MPI methodology: incidence and intensity of poverty

- FACT: **MPI formula:** $MPI = H \times A$, where **H (headcount ratio / incidence)** is the proportion of the population identified as multidimensionally poor (deprived in at least one-third of the weighted indicators), and **A (intensity of poverty)** is the average proportion of weighted indicators in which the poor are deprived, averaged only across the poor. **Significance:** This decomposition separates *how many* people are poor (H) from *how deprived* the poor are (A) - two dimensions a single income-based headcount cannot distinguish. **Limitation:** Both H and A depend on the chosen deprivation cutoff (one-third weighted-indicator threshold) and indicator weights; changing either alters both numbers without any real change in living conditions.
- ANALYSIS: **Claim:** Incidence and intensity can move in different directions, and this divergence is the precise analytical demand behind the 2020 GS-II Mains question. **Evidence:** A region can reduce the *number* of multidimensionally poor households (falling H) while the poor who remain face deeper, more concentrated deprivation (rising or stagnant A) - for instance if the easiest-to-lift households exit poverty first while the hardest-to-reach households remain deprived across more indicators. **Significance:** This is why "incidence and intensity of poverty against income-based measurement" (2020 GS-II, 15 marks) requires the H x A decomposition rather than a single poverty-reduction number. **Limitation:** Distinguishing whether H or A changed requires household-level panel or repeated cross-sectional data; a single survey round cannot show whether the same households moved out of poverty or different households entered and exited.
- FACT: **Claim:** An income-based poverty line records only whether income or consumption crosses a threshold, so it cannot show the composition or overlap of deprivation the way MPI's H x A structure can. **Evidence:** An income/consumption poverty headcount ratio answers only "how many are below the line," while it is blind to whether the poor face simultaneous nutrition, schooling, sanitation or housing deficits, or only one, and blind to how deeply deprived they are. **Significance:** This is the core reason NITI Aayog's national MPI complements rather than replaces the income-poverty ratio, and it is the analytical basis for the 2020 GS-II "against income-based measurement" contrast. **Limitation:** MPI does not price deprivation in monetary terms, so it cannot substitute for income-poverty analysis when the adequacy of a monetary transfer needs to be assessed.

6A. Limitations and trade-offs

- ANALYSIS: A fast-growth phase can still be job-poor or regionally concentrated, so GDP expansion may widen capability gaps unless labour-intensive sectors and public services also improve.
- ANALYSIS: **HDI is an average**: it can show progress even when gender, caste, tribal or district-level deprivation remains deep; that is why IHDI and MPI matter for balance.
- ANALYSIS: **IHDI and MPI are choice-dependent composites**: indicator selection, weights and survey periodicity shape the picture, so they guide policy but do not replace sector-wise diagnosis.
- ANALYSIS: Welfare expansion can reduce measured deprivation quickly, but without productivity, learning quality and decent jobs, gains may remain shallow or fiscally difficult to sustain.
- ANALYSIS: Inter-state comparison is useful, but historical social reform, migration, remittances, demography and administrative capacity mean one state's model cannot be copied mechanically elsewhere.
- ANALYSIS: Per-capita or human-development progress can coexist with ecological stress, urban exclusion and unpaid care burdens, so development assessment must stay broader than headline composites.

6. Must-Know Facts for Prelims

- FACT: HDI uses life expectancy, education and GNI per capita; it is not an income-only index.
- FACT: IHDI equals HDI when there is no inequality and falls below HDI as inequality rises.
- FACT: MPI is household-level and multidimensional; it is not computed from income alone.
- FACT: $MPI = H$ (incidence/headcount ratio) $\times A$ (intensity of poverty, the average deprivation share among the poor); incidence and intensity can move differently, which is why income-based poverty alone misses the composition of deprivation.
- FACT: In standard MPI presentations, the three dimensions are health, education and living standards, with household indicators such as nutrition, child mortality, years of schooling, school attendance, cooking fuel, sanitation, drinking water, electricity, housing and assets.
- FACT: Global MPI is associated with UNDP and OPHI, while NITI Aayog publishes India's national MPI for domestic policy use.
- FACT: Growth is necessary for fiscal capacity but does not guarantee development or inclusion.
- FACT: GNP/GDP per capita alone does not connote development because it can hide distribution, capability failure, unpaid work and ecological costs.
- FACT: Per-capita income is an average and can hide distribution, unpaid work and ecological costs.
- FACT: Amartya Sen's capability approach shifts the focus from commodities or income alone to the substantive freedoms people can actually exercise.
- FACT: Social capital matters in development because trust, norms and networks can improve cooperation, local participation and scheme effectiveness.
- FACT: The former World Bank Ease of Doing Business index tracked the business-regulation environment - such as starting a business, construction permits, electricity, property registration, credit, taxes, trade, contract enforcement and insolvency - not human development or inclusive growth.
- FACT: The 2025 Mains PYQ directly asked why IHDI is a better indicator of inclusive growth.
- FACT: HDI records average achievement; IHDI adjusts for inequality; MPI identifies overlapping household deprivation, so they answer different exam questions.

7. UPSC traps

- WRONG: HDI and IHDI measure identical outcomes. -> IHDI adjusts each HDI dimension for inequality.
- WRONG: MPI is another poverty-line headcount. -> It identifies simultaneous non-income deprivations.
- WRONG: A high GDP growth rate proves inclusive growth. -> Employment, distribution and access must also improve.
- WRONG: HDI directly measures political freedom. -> Its three formal dimensions are health,

education and income.

- WRONG: Development can be inferred from nominal GDP. -> Real, per-capita and social indicators are required.

8. CURRENT: Economic Survey 2025-26 / current anchor

- CURRENT: NITI MPI fell from 55.3% in 2005-06 to 14.96% in 2019-21 and was estimated at 11.28% in 2022-23.
- CURRENT: Extreme poverty was 5.3% in 2022-23 using the revised World Bank USD 3/day line.
- CURRENT: The Survey treats education, health, skills and productive employment as a connected human-capital system.

ANALYSIS: Interpretation caution: The Survey attributes the USD 3.00 line to the World Bank's June 2025 revision at **2021 PPP prices** and says the resulting estimates are not directly comparable with older poverty lines. It is an international benchmark, not India's official domestic poverty line. Composite indices also cannot display every intra-state, gender, caste or quality-of-service gap.

9. PYQ application

- ANALYSIS: 2025 GS-III: Distinguish HDI and IHDI and explain why IHDI better reflects inclusive growth.
- ANALYSIS: 2024 GS-III: Examine whether post-reform social-service expenditure has supported inclusive growth.
- ANALYSIS: 2020 GS-II: Analyse the incidence and intensity of poverty against income-based measurement - answer with the $MPI = H \times A$ decomposition in **5A** and the reasoning why income-only measurement cannot separate how many are poor from how deeply they are poor.

10. Mains angles

- ANALYSIS: Growth is an instrument; development is the expansion of capabilities, dignity and resilience.
- ANALYSIS: Use a five-part answer: income, jobs, health, education and distribution, followed by sustainability.
- ANALYSIS: Recommend disaggregated outcomes, quality public services and employment-intensive productivity growth.

Answer thesis: Treat growth as the resource base, employment and public services as conversion channels, and IHDI/MPI as tests of distribution and deprivation.

11. Probable questions

- ANALYSIS: **Prelims:** Which dimensions enter HDI, IHDI and MPI, and how do their units of analysis differ?
- ANALYSIS: **Mains (10 marks):** Why does IHDI reveal aspects of inclusive growth that HDI cannot?
- ANALYSIS: **Mains (15 marks):** Economic growth expands resources, but institutions determine whether it becomes human development. Discuss.

11A. Answer architecture (10/15/20-mark support)

Directive decoder

- ANALYSIS: **Discuss:** define growth, development and the relevant index first, then show how growth becomes capability expansion through jobs and public services.
- ANALYSIS: **Examine / Analyse:** break the answer into mechanism, measurement and Indian variation - how HDI, IHDI and MPI reveal what GDP or per-capita averages miss.

- ANALYSIS: **Critically examine / Evaluate:** after the main case for human-development indicators, add limits of composites, inter-state comparability issues and quality-versus-access cautions from **6A**.
- ANALYSIS: **Compare / Justify:** for prompts such as *HDI vs IHDI* or *growth vs development*, compare unit, focus, what each captures, and conclude why the broader or inequality-adjusted measure is more suitable for inclusive-growth questions.

Evidence chain: Kerala-Bihar contrast + NITI Aayog national MPI + Aspirational Districts Programme + MGNREGA + ICDS/PM POSHAN + Kudumbashree/SHG social-capital example.

Counter-evidence: Use **6A. Limitations and trade-offs** to show why averages, composites and welfare gains need balance through quality, productivity and distribution cautions.

10/15/20-mark scaling:

- ANALYSIS: **10 marks:** thesis + 2-3 evidence units + one sharp distinction (for example, HDI vs IHDI).
- ANALYSIS: **15 marks:** thesis + 4-5 evidence units across state variation, MPI mechanics and capability approach + one counter-dimension.
- ANALYSIS: **20 marks:** thesis + 5-6 evidence units spanning growth, distribution, capability, institutions and district variation + balanced conclusion using **6A**.

Reasoned verdict template: ANALYSIS: *India's experience shows that growth is necessary but not sufficient; development becomes credible only when rising output is converted into health, education, dignity and reduced multidimensional deprivation across regions and groups.*

2026 PYQ Integration

Status: 2026 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2026.md. **Answer-key rule:** The 2026 Prelims and CSAT Set-A keys held locally are **provisional**; no option or answer is recorded or inferred in this integration.

- **Year represented:** 2026
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2026	Prelims GS-I	100	Multidimensional Poverty Index methodology, indicators, and institutional comparison	Objective question; provisional 2026 Set-A key present locally, answer not inferred	Provisional 2026 Set-A key present locally (Ans - ■2026-■GS1-■Provisional); key is provisional - no answer letter recorded or inferred here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Multidimensional Poverty Index methodology, indicators, and institutional comparison

This block integrates the 2026 examinable demand and paper metadata. It is kept separate from the 2018-2023 and 2024-2025 blocks and does not convert a provisionally-keyed, answer-free objective question into a solved answer.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS3-GS4-2024-2025.md.

- **Years represented:** 2025
- **Paper(s):** GS-III
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2025	GS-III	1	HDI versus IHDI as an indicator of inclusive growth	Distinguish · 10 marks · 150 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- HDI versus IHDI as an indicator of inclusive growth

This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md, _PYQ-ROUTING-PRELIMS-2018-2023.md. **Answer-key rule:** The official 2018-2023 Prelims/CSAT keys are not held locally; no option or answer has been inferred.

- **Years represented:** 2018, 2019, 2020
- **Paper(s):** GS-II, Prelims GS-I
- **Routed question demands:** 4

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2018	Prelims GS-I	48	GNP per capita not connoting economic development conditions	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2019	Prelims GS-I	77	World Bank Ease of Doing Business Index components	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2019	Prelims GS-I	80	Social capital concept in national development economics	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2020	GS-II	16	Incidence and intensity of poverty against income-based measurement	Analyse · 15 marks · 250 words	Economy route terminates in answer-complete Core	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- GNP per capita not connoting economic development conditions
- World Bank Ease of Doing Business Index components
- Social capital concept in national development economics

- Incidence and intensity of poverty against income-based measurement

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

Semantic-completeness ownership and PYQ control

- **Official syllabus/index and owned core:** Development expands capabilities, health, education, income security, agency and sustainability; HDI combines dimension indices geometrically, IHDI discounts inequality, and MPI counts overlapping deprivations using stated indicators and cut-offs.
- **Indispensable distinction and prerequisite taxonomy:** Growth is not development, per-capita average is not distribution, HDI is not IHDI, income poverty is not multidimensional poverty, and an index rank change is not automatically a welfare gain.
- **Mechanism, implementation and evidence control:** Name publisher, edition/release date, reference year and methodology; compare levels with levels and ranks with ranks, preserve denominator and uncertainty, and do not infer causation from cross-country association.
- **FACT: Verified current fact (official sources rechecked 5 September 2026):**

Rechecked 6 September 2026 against the listed official publisher or regulator source. The UNDP HDI page was substantively retrievable on 2026-09-06 and is used only for its HDI dimensions, geometric-mean construction and stated limits. No live India rank, score, IHDI loss, MPI headcount or poverty estimate was taken from it. Sources: <https://hdr.undp.org/data-center/human-development-index#/indicies/HDI>

- **ANALYSIS: Analytical inference:** institutional design, allocation, a portal, a registration, a report, a training completion, a disposal count or a ranking can support a causal argument only after authority, capacity, incentives, distribution, implementation, grievance, outcome and alternative explanations are tested.
- **Canonical and cross-owner boundary:** this Economy owner teaches the authority-to-delivery-to-remedy chain. Detailed constitutional doctrine stays with Polity; sector entitlement design stays with Social Justice; macro-fiscal doctrine stays with Economy; ethics theory stays with Ethics. Cross-owner evidence may be routed but is not silently duplicated or re-owned.
- **Four-ledger hostile audit:** literal syllabus, indispensable prerequisites, standard public-administration/economy taxonomy and complete verified PYQ demands were checked for absent concepts, institutions, mechanisms, classifications, exceptions, comparisons, criticisms, current status, answer architecture and dependent artifacts.
- **Verified PYQ ownership, 2018-2026:** The audited ledgers route 2020 GS-II on incidence and intensity of poverty, 2024 GS-III on social-service expenditure and inclusive growth, and 2025 GS-III on HDI versus IHDI here. Objective routes on GNP per capita, Ease of Doing Business, social capital and 2026 MPI methodology remain answer-letter free.

ECONOMY DEEP-REVIEW CORE CONTROL

- **Must remember:** Development expands capabilities, health, education, income security, agency and sustainability; HDI combines dimension indices geometrically, IHDI discounts inequality, and MPI counts overlapping deprivations using stated indicators and cut-offs.
- **Close distinction:** Growth is not development, per-capita average is not distribution, HDI is not IHDI, income poverty is not multidimensional poverty, and an index rank change is not automatically a welfare gain.
- **Formula / status / evidence / causal limit:** Name publisher, edition/release date, reference year and methodology; compare levels with levels and ranks with ranks, preserve denominator and uncertainty, and do not infer causation from cross-country association.

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Growth versus development?

A. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.

Answer: A. Explanation: Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q2. Which option preserves the accounting or regulatory boundary of Growth versus development?

A. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

Answer: B. Explanation: Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q3. Which statement uses Growth versus development without losing its vintage, basket or legal status?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. C. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. D. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

Answer: C. Explanation: Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q4. Which option avoids the standard UPSC close-option trap about Growth versus development?

A. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. B. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. C. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. D. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

Answer: D. Explanation: Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q5. Which statement correctly identifies Capability approach?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: A. Explanation: Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q6. Which option preserves the accounting or regulatory boundary of Capability approach?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. C. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: B. Explanation: Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q7. Which statement uses Capability approach without losing its vintage, basket or legal status?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

Answer: C. Explanation: Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q8. Which option avoids the standard UPSC close-option trap about Capability approach?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. D. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.

Answer: D. Explanation: Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q9. Which statement correctly identifies HDI architecture?

A. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. D. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

Answer: A. Explanation: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q10. Which option preserves the accounting or regulatory boundary of HDI architecture?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. C. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. D. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Answer: B. Explanation: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q11. Which statement uses HDI architecture without losing its vintage, basket or legal status?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: C. Explanation: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q12. Which option avoids the standard UPSC close-option trap about HDI architecture?

A. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: D. Explanation: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q13. Which statement correctly identifies IHDI inequality adjustment?

A. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. B. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. C. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: A. Explanation: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q14. Which option preserves the accounting or regulatory boundary of IHDI inequality adjustment?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. D. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

Answer: B. Explanation: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q15. Which statement uses IHDI inequality adjustment without losing its vintage, basket or legal status?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. D. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

Answer: C. Explanation: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q16. Which option avoids the standard UPSC close-option trap about IHDI inequality adjustment?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

Answer: D. Explanation: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q17. Which statement correctly identifies MPI purpose?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. C. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: A. Explanation: MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q18. Which option preserves the accounting or regulatory boundary of MPI purpose?

A. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. B. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

Answer: B. Explanation: MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q19. Which statement uses MPI purpose without losing its vintage, basket or legal status?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. C. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. D. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

Answer: C. Explanation: MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q20. Which option avoids the standard UPSC close-option trap about MPI purpose?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

Answer: D. Explanation: MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q21. Which statement correctly identifies Social capital?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

Answer: A. Explanation: Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q22. Which option preserves the accounting or regulatory boundary of Social capital?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. C. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. D. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

Answer: B. Explanation: Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q23. Which statement uses Social capital without losing its vintage, basket or legal status?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. C. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. D. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.

Answer: C. Explanation: Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q24. Which option avoids the standard UPSC close-option trap about Social capital?

A. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. B. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: D. Explanation: Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q25. Which statement correctly identifies Growth-resource channel?

A. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. B. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: A. Explanation: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q26. Which option preserves the accounting or regulatory boundary of Growth-resource channel?

A. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: B. Explanation: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q27. Which statement uses Growth-resource channel without losing its vintage, basket or legal status?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. C. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: C. Explanation: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q28. Which option avoids the standard UPSC close-option trap about Growth-resource channel?

A. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Answer: D. Explanation: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q29. Which statement correctly identifies Composition of growth?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.

Answer: A. Explanation: Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q30. Which option preserves the accounting or regulatory boundary of Composition of growth?

A. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. B. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: B. Explanation: Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q31. Which statement uses Composition of growth without losing its vintage, basket or legal status?

A. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. B. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. C. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: C. Explanation: Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q32. Which option avoids the standard UPSC close-option trap about Composition of growth?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. D. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

Answer: D. Explanation: Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q33. Which statement correctly identifies Public-service conversion?

A. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: A. Explanation: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q34. Which option preserves the accounting or regulatory boundary of Public-service conversion?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: B. Explanation: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q35. Which statement uses Public-service conversion without losing its vintage, basket or legal status?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

Answer: C. Explanation: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q36. Which option avoids the standard UPSC close-option trap about Public-service conversion?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

Answer: D. Explanation: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q37. Which statement correctly identifies Institutional division?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. C. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. D. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.

Answer: A. Explanation: UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q38. Which option preserves the accounting or regulatory boundary of Institutional division?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: B. Explanation: UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q39. Which statement uses Institutional division without losing its vintage, basket or legal status?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. C. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. D. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

Answer: C. Explanation: UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q40. Which option avoids the standard UPSC close-option trap about Institutional division?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: D. Explanation: UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q41. Which statement correctly identifies Kerala-Bihar comparison?

A. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. D. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.

Answer: A. Explanation: The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q42. Which option preserves the accounting or regulatory boundary of Kerala-Bihar comparison?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. C. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

Answer: B. Explanation: The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q43. Which statement uses Kerala-Bihar comparison without losing its vintage, basket or legal status?

A. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. B. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: C. Explanation: The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q44. Which option avoids the standard UPSC close-option trap about Kerala-Bihar comparison?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.

Answer: D. Explanation: The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity

matter. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q45. Which statement correctly identifies National MPI targeting?

A. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

Answer: A. Explanation: NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q46. Which option preserves the accounting or regulatory boundary of National MPI targeting?

A. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

Answer: B. Explanation: NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q47. Which statement uses National MPI targeting without losing its vintage, basket or legal status?

A. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. B. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. C. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: C. Explanation: NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q48. Which option avoids the standard UPSC close-option trap about National MPI targeting?

A. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. B. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. C. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: D. Explanation: NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q49. Which statement correctly identifies Aspirational Districts lesson?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. C. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. D. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

Answer: A. Explanation: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q50. Which option preserves the accounting or regulatory boundary of Aspirational Districts lesson?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. C. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: B. Explanation: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q51. Which statement uses Aspirational Districts lesson without losing its vintage, basket or legal status?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: C. Explanation: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q52. Which option avoids the standard UPSC close-option trap about Aspirational Districts lesson?

A. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. B. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. C. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. D. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.

Answer: D. Explanation: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q53. Which statement correctly identifies MGNREGA conversion role?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: A. Explanation: MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q54. Which option preserves the accounting or regulatory boundary of MGNREGA conversion role?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. C. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: B. Explanation: MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q55. Which statement uses MGNREGA conversion role without losing its vintage, basket or legal status?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. C. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. D. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.

Answer: C. Explanation: MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q56. Which option avoids the standard UPSC close-option trap about MGNREGA conversion role?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or

formal jobs.

Answer: D. Explanation: MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q57. Which statement correctly identifies Nutrition and schooling interventions?

A. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. B. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: A. Explanation: ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q58. Which option preserves the accounting or regulatory boundary of Nutrition and schooling interventions?

A. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.

Answer: B. Explanation: ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q59. Which statement uses Nutrition and schooling interventions without losing its vintage, basket or legal status?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: C. Explanation: ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q60. Which option avoids the standard UPSC close-option trap about Nutrition and schooling interventions?

A. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. B. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

Answer: D. Explanation: ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q61. Which statement correctly identifies Kudumbashree and SHGs?

A. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. B. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.

Answer: A. Explanation: Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q62. Which option preserves the accounting or regulatory boundary of Kudumbashree and SHGs?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: B. Explanation: Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q63. Which statement uses Kudumbashree and SHGs without losing its vintage, basket or legal status?

A. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: C. Explanation: Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q64. Which option avoids the standard UPSC close-option trap about Kudumbashree and SHGs?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: D. Explanation: Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q65. Which statement correctly identifies MPI incidence?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: A. Explanation: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q66. Which option preserves the accounting or regulatory boundary of MPI incidence?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

Answer: B. Explanation: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q67. Which statement uses MPI incidence without losing its vintage, basket or legal status?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: C. Explanation: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q68. Which option avoids the standard UPSC close-option trap about MPI incidence?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. C. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. D. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.

Answer: D. Explanation: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q69. Which statement correctly identifies MPI intensity?

A. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: A. Explanation: In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q70. Which option preserves the accounting or regulatory boundary of MPI intensity?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

Answer: B. Explanation: In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q71. Which statement uses MPI intensity without losing its vintage, basket or legal status?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: C. Explanation: In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q72. Which option avoids the standard UPSC close-option trap about MPI intensity?

A. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. B. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: D. Explanation: In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q73. Which statement correctly identifies Income-poverty contrast?

A. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. B. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. C. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: A. Explanation: An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q74. Which option preserves the accounting or regulatory boundary of Income-poverty contrast?

A. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: B. Explanation: An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q75. Which statement uses Income-poverty contrast without losing its vintage, basket or legal status?

A. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. B. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: C. Explanation: An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q76. Which option avoids the standard UPSC close-option trap about Income-poverty contrast?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.

Answer: D. Explanation: An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q77. Which statement correctly identifies Composite and benchmark caution?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

Answer: A. Explanation: HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q78. Which option preserves the accounting or regulatory boundary of Composite and benchmark caution?

A. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. B. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

Answer: B. Explanation: HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The other options belong to different measures, vintages,

baskets, instruments, institutions or legal perimeters.

Q79. Which statement uses Composite and benchmark caution without losing its vintage, basket or legal status?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: C. Explanation: HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q80. Which option avoids the standard UPSC close-option trap about Composite and benchmark caution?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: D. Explanation: HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

The audited ledgers route 2020 GS-II on incidence and intensity of poverty, 2024 GS-III on social-service expenditure and inclusive growth, and 2025 GS-III on HDI versus IHDI here. Objective routes on GNP per capita, Ease of Doing Business, social capital and 2026 MPI methodology remain answer-letter free.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: 2025 GS-III: Distinguish HDI and IHDI and explain why IHDI better reflects inclusive growth.
- ANALYSIS: 2024 GS-III: Examine whether post-reform social-service expenditure has supported inclusive growth.
- ANALYSIS: 2020 GS-II: Analyse the incidence and intensity of poverty against income-based measurement - answer with the $MPI = H \times A$ decomposition in **5A** and the reasoning why income-only measurement cannot separate how many are poor from how deeply they are poor.

2026 PYQ Integration

Status: 2026 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2026.md. **Answer-key rule:** The 2026 Prelims and CSAT Set-A keys held locally are **provisional**; no option or answer is recorded or inferred in this integration.

- **Year represented:** 2026
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2026	Prelims GS-I	100	Multidimensional Poverty Index methodology, indicators, and institutional comparison	Objective question; provisional 2026 Set-A key present locally, answer not inferred	Provisional 2026 Set-A key present locally (Ans - ■2026-■GS1-■Provisional); key is provisional - no answer letter recorded or inferred here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Multidimensional Poverty Index methodology, indicators, and institutional comparison

This block integrates the 2026 examinable demand and paper metadata. It is kept separate from the 2018-2023 and 2024-2025 blocks and does not convert a provisionally-keyed, answer-free objective question into a solved answer.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS3-GS4-2024-2025.md.

- **Years represented:** 2025
- **Paper(s):** GS-III
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2025	GS-III	1	HDI versus IHDI as an indicator of inclusive growth	Distinguish · 10 marks · 150 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- HDI versus IHDI as an indicator of inclusive growth

This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md, _PYQ-ROUTING-PRELIMS-2018-2023.md. **Answer-key rule:** The official 2018-2023 Prelims/CSAT keys are not held locally; no option or answer has been inferred.

- **Years represented:** 2018, 2019, 2020
- **Paper(s):** GS-II, Prelims GS-I

- Routed question demands: 4

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2018	Prelims GS-I	48	GNP per capita not connoting economic development conditions	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2019	Prelims GS-I	77	World Bank Ease of Doing Business Index components	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2019	Prelims GS-I	80	Social capital concept in national development economics	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2020	GS-II	16	Incidence and intensity of poverty against income-based measurement	Analyse · 15 marks · 250 words	Economy route terminates in answer-complete Core	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- GNP per capita not connoting economic development conditions
- World Bank Ease of Doing Business Index components
- Social capital concept in national development economics
- Incidence and intensity of poverty against income-based measurement

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

10. PYQ-based analytical application

- ANALYSIS: 2025 GS-III: Distinguish HDI and IHDI and explain why IHDI better reflects inclusive growth.
- ANALYSIS: 2024 GS-III: Examine whether post-reform social-service expenditure has supported inclusive growth.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2020
- **Paper(s):** GS-II
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2020	GS-II	16	Incidence and intensity of poverty against income-based measurement	Analyse · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Incidence and intensity of poverty against income-based measurement

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

PYQ DEMAND CARD 1 - 2020 GS-II

Demand: Analyse incidence and intensity of poverty against income-based measurement.

Status: Verified routed Mains demand; original model solution.

Model solution: MPI incidence: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **MPI intensity:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Income-poverty contrast:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 1 - 2020 GS-II", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: MPI incidence: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **MPI intensity:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Income-poverty contrast:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Analytical body:

1. **Claim and named evidence:** Demand: Analyse incidence and intensity of poverty against income-based measurement. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Status: Verified routed Mains demand; original model solution. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: MPI incidence: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **MPI intensity:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Income-poverty contrast:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis ->

qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "PYQ DEMAND CARD 1 - 2020 GS-II", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

PYQ DEMAND CARD 2 - 2024 GS-III

Demand: Examine whether social-service expenditure has supported inclusive growth.

Status: Verified routed Mains demand; original model solution.

Model solution: Growth-resource channel: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Public-service conversion: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **MGNREGA conversion role:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Nutrition and schooling interventions:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 2 - 2024 GS-III", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Growth-resource channel: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Public-service conversion:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **MGNREGA conversion role:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Nutrition and schooling interventions:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Analytical body:

1. **Claim and named evidence:** Demand: Examine whether social-service expenditure has supported inclusive growth. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Status: Verified routed Mains demand; original model solution. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Growth-resource channel: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Public-service conversion: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **MGNREGA conversion role:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Nutrition and schooling interventions:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "PYQ DEMAND CARD 2 - 2024 GS-III", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

PYQ DEMAND CARD 3 - 2025 GS-III

Demand: Distinguish HDI and IHDI and explain why IHDI better indicates inclusive growth.

Status: Verified routed Mains demand; original model solution.

Model solution: HDI architecture: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **IHDI inequality adjustment:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Composite and benchmark caution:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 3 - 2025 GS-III", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: HDI architecture: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **IHDI inequality adjustment:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Composite and benchmark caution:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Analytical body:

1. **Claim and named evidence:** Demand: Distinguish HDI and IHDI and explain why IHDI better indicates inclusive growth. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

2. **Claim and named evidence:** Status: Verified routed Mains demand; original model solution. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: HDI architecture: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **IHDI inequality**

adjustment: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Composite and benchmark caution:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "PYQ DEMAND CARD 3 - 2025 GS-III", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish economic growth from economic development. Answer in about 150 words.

Model thesis: Claim: Growth versus development. **Named evidence/example:** Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Capability approach. **Named evidence/example:** Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

- Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.
- Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Qualified conclusion: Claim: Growth versus development. **Named evidence/example:** Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Capability approach. **Named evidence/example:** Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **answer** requires a direct position on "Distinguish economic growth from economic development. Answer in about 150 words.", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Growth versus development. **Named evidence/example:** Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Capability approach. **Named evidence/example:** Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "Why does IHDI reveal dimensions of inclusive growth that HDI misses? Answer in about 150...", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 3 - 15 MARKS

Question: Explain the MPI incidence-intensity framework and its advantage over an income headcount. Answer in about 250 words.

Model thesis: Claim: MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI incidence. **Named evidence/example:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI intensity. **Named evidence/example:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

- In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.
- In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.
- An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.

Qualified conclusion: Claim: MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI incidence. **Named evidence/example:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI intensity. **Named evidence/example:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **explain** requires a direct position on "Explain the MPI incidence-intensity framework and its advantage over an income headcount....", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI incidence. **Named evidence/example:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI intensity. **Named evidence/example:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise

beyond the source.

Analytical body:

1. **Claim and named evidence:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI incidence. **Named evidence/example:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI intensity. **Named evidence/example:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "Explain the MPI incidence-intensity framework and its advantage over an income headcount....", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 4 - 15 MARKS

Question: Growth expands resources, but institutions determine human development. Discuss. Answer in about 250 words.

Model thesis: Claim: Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Public-service conversion. **Named evidence/example:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Institutional division. **Named evidence/example:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.
- Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.
- Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.
- UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Qualified conclusion: Claim: Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than

generalise beyond the source. **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Public-service conversion. **Named evidence/example:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Institutional division. **Named evidence/example:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **discuss** requires a direct position on "Growth expands resources, but institutions determine human development. Discuss. Answer in...", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Public-service conversion. **Named evidence/example:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Institutional division. **Named evidence/example:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** Connect the

identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

3. **Claim and named evidence:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

4. **Claim and named evidence:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Claim: Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Public-service conversion. **Named evidence/example:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Institutional division. **Named evidence/example:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 5 - 20 MARKS

Question: Assess India's growth-to-capability conversion using jobs, public services and local variation. Answer in about 300 words.

Model thesis: **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Kerala-Bihar comparison. **Named evidence/example:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Aspirational Districts lesson. **Named evidence/example:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MGNREGA conversion role. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Nutrition and schooling interventions. **Named evidence/example:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.
- The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.
- The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.
- MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.
- ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

Qualified conclusion: **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Kerala-Bihar comparison. **Named evidence/example:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** This identifies the economic

mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Aspirational Districts lesson. **Named evidence/example:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MGNREGA conversion role. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Nutrition and schooling interventions. **Named evidence/example:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **assess** requires a direct position on "Assess India's growth-to-capability conversion using jobs, public services and local...", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Kerala-Bihar comparison. **Named evidence/example:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Aspirational Districts lesson. **Named evidence/example:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MGNREGA conversion role. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Nutrition and schooling interventions. **Named evidence/example:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
5. **Claim and named evidence:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Claim: Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Kerala-Bihar comparison. **Named evidence/example:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Aspirational Districts lesson. **Named evidence/example:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MGNREGA conversion role. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:**

This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Nutrition and schooling interventions. **Named evidence/example:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "Assess India's growth-to-capability conversion using jobs, public services and local...", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 6 - 20 MARKS

Question: Critically evaluate composite development indices for inclusive-growth policy. Answer in about 300 words.

Model thesis: **Claim:** HDI architecture. **Named evidence/example:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** IHDI inequality adjustment. **Named evidence/example:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composite and benchmark caution. **Named evidence/example:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.
- IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.
- MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.
- An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.
- HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Qualified conclusion: Claim: HDI architecture. **Named evidence/example:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: IHDI inequality adjustment. **Named evidence/example:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: Composite and benchmark caution. **Named evidence/example:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **evaluate** requires a direct position on "Critically evaluate composite development indices for inclusive-growth policy. Answer in...", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: HDI architecture. **Named evidence/example:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: IHDI inequality adjustment. **Named evidence/example:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage,

base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composite and benchmark caution. **Named evidence/example:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
5. **Claim and named evidence:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal

constraints.

Qualified conclusion: Claim: HDI architecture. **Named evidence/example:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** IHDI inequality adjustment. **Named evidence/example:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composite and benchmark caution. **Named evidence/example:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "Critically evaluate composite development indices for inclusive-growth policy. Answer in...", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

OPTIONAL ADVANCED DEPTH - NOT REQUIRED FOR A CORE ANSWER

Subject: Economy | **Tier:** Advanced | **GS Paper:** GS-III + Prelims. **Core area:** Inclusive growth and human development. **Grounded in:** Ramesh Singh, relevant chapters; Economic Survey 2025-26; audited UPSC Economy PYQs (2024-2026 Prelims and 2024-2025 Mains). **FACT:** = source-grounded | **ANALYSIS:** = inference/analysis | **CURRENT:** = current Survey/current-affairs hook. *Companion:*
../basic/02_Growth-Development-HDI-IHDI-and-MPI.md.

1. Architecture

Analytical claim: Treat growth as the resource base, employment and public services as conversion channels, and IHDI/MPI as tests of distribution and deprivation.

2. Concepts and distinctions

Concept	Precise meaning
FACT: Economic growth	Sustained quantitative increase in real output or real income.
FACT: Economic development	Growth plus structural change, capability expansion and better distribution.
FACT: HDI	UNDP composite of health, education and standard of living.
FACT: IHDI	HDI discounted for inequality within each of its three dimensions.
FACT: MPI	Deprivation measure using overlapping deficits in health, education and living standards.

3. Detailed transmission

1. Real productivity and output growth enlarge household incomes, profits and the tax base.
2. The composition of growth determines whether new income reaches labour-intensive sectors, lagging regions and vulnerable groups.
3. Public revenue and household income finance nutrition, health, schooling, housing and risk protection.
4. Better health and education raise capabilities, employability and intergenerational mobility.
5. HDI records average achievement, IHDI exposes unequal distribution, and MPI identifies overlapping household deprivations.

Deeper analytical layers

- ANALYSIS: Separate the level of human achievement from its distribution: HDI reports the former, IHDI penalises unequal attainment.
- ANALYSIS: MPI can reveal deprivations hidden by consumption poverty and permits dimension-wise policy targeting.
- ANALYSIS: Inclusive growth has process, outcome and opportunity dimensions; redistribution alone cannot substitute for productive inclusion.
- ANALYSIS: Capability expansion depends on service quality, not merely budget allocations or physical access.
- ANALYSIS: Demographic transition changes the policy mix from basic access towards learning, health quality, care and employability.
- ANALYSIS: A dashboard should combine output, jobs, distribution, capabilities, resilience and environmental sustainability.

4. Institutional architecture

- FACT: **UNDP**: publishes HDI, IHDI and global MPI methodology and reports.
- FACT: **NITI Aayog**: tracks India's national MPI and supports state-level development comparisons.
- FACT: **MoSPI**: supplies national accounts and social statistics needed to read growth beside welfare outcomes.
- FACT: **Union, state and local governments**: deliver the health, education, nutrition, water and housing services behind capability gains.

5. Indian applications and boundary cases

- ANALYSIS: Two states with similar per-capita income can differ sharply in life expectancy, schooling and multidimensional poverty.
- ANALYSIS: School enrolment can improve HDI-related access while weak learning outcomes limit actual capability formation.
- ANALYSIS: A household above an income poverty line may still face simultaneous sanitation, nutrition and schooling deprivation.

6. Limitations and trade-offs

- ANALYSIS: Fast growth can finance welfare, yet growth concentrated in capital-intensive enclaves may weakly reduce poverty.
- ANALYSIS: Targeted transfers reduce immediate deprivation but universal public goods can build longer-term capabilities.
- ANALYSIS: Composite indices simplify comparison but hide internal variation, weights and data lags.
- ANALYSIS: National averages conceal state, gender, caste, rural-urban and disability gaps.
- ANALYSIS: Outcome measurement improves accountability but must avoid teaching or governing only to the indicator.

ANALYSIS: **Boundary condition**: Composite indices aid comparison but cannot display every intra- state, gender, caste or quality-of-service gap.

7. Must-Know Facts for Advanced Prelims

- FACT: HDI uses life expectancy, education and GNI per capita; it is not an income-only index.
- FACT: IHDI equals HDI when there is no inequality and falls below HDI as inequality rises.
- FACT: MPI is household-level and multidimensional; it is not computed from income alone.
- FACT: Growth is necessary for fiscal capacity but does not guarantee development or inclusion.
- FACT: Per-capita income is an average and can hide distribution, unpaid work and ecological costs.
- FACT: The 2025 Mains PYQ directly asked why IHDI is a better indicator of inclusive growth.

8. Advanced Prelims traps

- WRONG: HDI and IHDI measure identical outcomes. -> IHDI adjusts each HDI dimension for inequality.
- WRONG: MPI is another poverty-line headcount. -> It identifies simultaneous non-income deprivations.
- WRONG: A high GDP growth rate proves inclusive growth. -> Employment, distribution and access must also improve.
- WRONG: HDI directly measures political freedom. -> Its three formal dimensions are health,

education and income.

- WRONG: Development can be inferred from nominal GDP. -> Real, per-capita and social indicators are required.

9. CURRENT: Survey 2025-26 analytical application

Verified current anchor	Topic-specific analytical use
CURRENT: NITI MPI fell from 55.3% in 2005-06 to 14.96% in 2019-21 and was estimated at 11.28% in 2022-23.	Use the fall to show broad deprivation reduction, then test whether state and social-group gaps persist.
CURRENT: Extreme poverty was 5.3% in 2022-23 using the revised World Bank USD 3/day line.	It is a 2021-PPP international benchmark, not India's domestic poverty line; do not compare it mechanically with older-line estimates.
CURRENT: The Survey treats education, health, skills and productive employment as a connected human-capital system.	Link education, health, skills and jobs as sequential capability investments rather than separate schemes.

10. PYQ-based analytical application

- ANALYSIS: 2025 GS-III: Distinguish HDI and IHDI and explain why IHDI better reflects inclusive growth.
- ANALYSIS: 2024 GS-III: Examine whether post-reform social-service expenditure has supported inclusive growth.

11. Mains-ready framework

Central thesis: Treat growth as the resource base, employment and public services as conversion channels, and IHDI/MPI as tests of distribution and deprivation.

1. Define **Economic growth** and distinguish it from **Economic development**.
2. The composition of growth determines whether new income reaches labour-intensive sectors, lagging regions and vulnerable groups.
3. UNDP: publishes HDI, IHDI and global MPI methodology and reports.
4. Fast growth can finance welfare, yet growth concentrated in capital-intensive enclaves may weakly reduce poverty.
5. Recommend disaggregated outcomes, quality public services and employment-intensive productivity growth.

12. Probable questions

- ANALYSIS: **Prelims:** Which dimensions enter HDI, IHDI and MPI, and how do their units of analysis differ?
- ANALYSIS: **Mains (10 marks):** Why does IHDI reveal aspects of inclusive growth that HDI cannot?
- ANALYSIS: **Mains (15 marks):** Economic growth expands resources, but institutions determine whether it becomes human development. Discuss.

13. Study links

- FACT: Foundation companion: `../basic/02_Growth-Development-HDI-IHDI-and-MPI.md`.
- FACT: `01_National-Income-GDP-GVA-and-Measurement.md` - output and per-capita measures.
- FACT: `22_Employment-Labour-Codes-Skills-and-Demographic-Dividend.md` - productive inclusion through jobs.
- FACT: `23_Poverty-Inequality-Social-Sector-and-Inclusive-Growth.md` - distribution, poverty and public services.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2020
- **Paper(s):** GS-II
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2020	GS-II	16	Incidence and intensity of poverty against income-based measurement	Analyse · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Incidence and intensity of poverty against income-based measurement

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

CONSOLIDATED REGISTER NOTES

Growth, Development, HDI, IHDI and MPI: RAPID MEASURE, INSTITUTION AND VINTAGE MAP

1. **Growth versus development:** Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.
2. **Capability approach:** Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.
3. **HDI architecture:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.
4. **IHDI inequality adjustment:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.
5. **MPI purpose:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.
6. **Social capital:** Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.
7. **Growth-resource channel:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.
8. **Composition of growth:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.
9. **Public-service conversion:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.
10. **Institutional division:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.
11. **Kerala-Bihar comparison:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.
12. **National MPI targeting:** NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

13. **Aspirational Districts lesson:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.
14. **MGNREGA conversion role:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.
15. **Nutrition and schooling interventions:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.
16. **Kudumbashree and SHGs:** Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.
17. **MPI incidence:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.
18. **MPI intensity:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.
19. **Income-poverty contrast:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.
20. **Composite and benchmark caution:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Growth, Development, HDI, IHDI and MPI: BASE-YEAR, BASKET, INSTRUMENT AND LEGAL-STATUS TRAPS

- Do not infer development from nominal or aggregate GDP growth alone.
- Do not say HDI directly measures political freedom; its formal dimensions are health, education and income.
- Do not treat IHDI as a separate welfare basket; it inequality-adjusts the HDI dimensions.
- Do not reduce MPI to an income poverty-line headcount.
- Do not merge incidence H with intensity A; they answer how many and how deprived.
- Do not compare poverty lines across PPP revisions without stating the price basis.
- Do not treat a dashboard ranking gain as proof of durable transformation.
- Do not assume welfare access guarantees service quality or productive employment.
- Do not copy one state's development path mechanically across different histories and capacities.
- Do not treat social capital as a substitute for infrastructure, markets or public finance.
- Do not use an international poverty benchmark as India's official domestic poverty line.
- Do not let average HDI conceal caste, gender, tribal, regional or district inequality.

Growth, Development, HDI, IHDI and MPI: ANSWER-WRITING SPINE

DEFINE THE MEASURE OR INSTITUTION AND FIX ITS COVERAGE

- > STATE FORMULA, PRICE BASIS, BASE YEAR, BASKET OR LEGAL POWER
- > NAME THE PERIOD, ESTIMATE VINTAGE AND ISSUING BODY
- > TRACE THE TRANSMISSION OR ACCOUNTING RECONCILIATION
- > ADD ONE INDIA-SPECIFIC EVIDENCE UNIT AND ITS LIMIT
- > TEST DISTRIBUTION, OUTPUT, PRICE OR FINANCIAL-STABILITY EFFECTS
- > CONCLUDE WITH A GRADED VERDICT, NOT A TIMELESS NUMBER

Growth, Development, HDI, IHDI and MPI: LIVE-SOURCE AND ESTIMATE-STATUS BOUNDARY

The UNDP HDI page was substantively retrievable on 2026-09-03 and is used only for its HDI dimensions, geometric-mean construction and stated limits. No live India rank, score, IHDI loss, MPI headcount or poverty estimate was taken from it.

COMPLETE TOPIC ASCII MASTER FLOW DIAGRAM

ASCII MASTER FLOW - PANEL 1/12: Growth is the input, not the verdict

REAL OUTPUT GROWTH
-> income + profits + fiscal capacity
-> jobs + public services + household investment
DEVELOPMENT ONLY IF capabilities broaden
MUST REMEMBER: Development expands capabilities, health, education, income security,...

ASCII MASTER FLOW - PANEL 2/12: Capability conversion

RESOURCES
-> health + education + nutrition
-> substantive freedoms
LIMIT -> income can rise without conversion

ASCII MASTER FLOW - PANEL 3/12: HDI three-dimension frame

HEALTH -> life expectancy
EDUCATION -> expected + mean years of schooling
LIVING STANDARD -> GNI per capita
AGGREGATION -> geometric mean

ASCII MASTER FLOW - PANEL 4/12: HDI-to-IHDI discount

HDI -> average achievement
INEQUALITY WITHIN EACH DIMENSION
-> achievement discounted
ZERO INEQUALITY -> IHDI equals HDI

ASCII MASTER FLOW - PANEL 5/12: MPI household lens

HEALTH | EDUCATION | LIVING STANDARDS
HOUSEHOLD -> overlapping deficits
NOT AN INCOME-ONLY CLASSIFICATION
USE -> composition and targeting

ASCII MASTER FLOW - PANEL 6/12: H times A formula

H -> incidence: how many are poor
A -> intensity: how deprived the poor are
 $MPI = H \times A$
TRAP -> H and A can move differently
CLOSE DISTINCTION: Growth is not development, per-capita average is not distribution, HDI...

ASCII MASTER FLOW - PANEL 7/12: Income line versus MPI

INCOME LINE -> monetary threshold
MPI -> weighted deprivation overlap
INCOME -> transfer adequacy
MPI -> sectoral composition of deprivation

ASCII MASTER FLOW - PANEL 8/12: Institutions map

UNDP -> HDI and IHDI
UNDP + OPHI -> global MPI
NITI AAYOG -> national MPI
GOVERNMENTS -> service delivery

ASCII MASTER FLOW - PANEL 9/12: Below-state diagnosis

NATIONAL AVERAGE
-> STATE DIVERGENCE
-> DISTRICT DIVERGENCE
RULE -> ranking change is not transformation

ASCII MASTER FLOW - PANEL 10/12: Protection versus transformation

MGNREGA -> wage floor + rural assets
ICDS / PM POSHAN -> nutrition + schooling
SHGs -> savings + agency + networks
LIMIT -> productivity and decent jobs remain necessary

ASCII MASTER FLOW - PANEL 11/12: Composite-index limits

AVERAGE -> can hide distribution
WEIGHTS -> shape results
SURVEY TIMING -> misses sudden shocks
QUALITY -> may differ from access

ASCII MASTER FLOW - PANEL 12/12: Inclusive-growth answer spine

DEFINE growth and development
TRACE jobs + services + capabilities
COMPARE HDI / IHDI / MPI
QUALIFY with inequality, quality and ecology
EVIDENCE LIMIT: FORMULA / STATUS / CAUSATION: Name publisher, edition/release date,...
