

ASCII MASTER FLOW – PANEL 1/12: Migratory-species gate

MOVEMENT OBSERVED -> ask whether it crosses national jurisdiction

PATTERN -> significant proportion crosses cyclically and predictably

YES -> CMS migratory-species test may be met

NO -> mobility alone does not establish CMS status

VERIFY -> use the taxon and current Appendix record

MUST REMEMBER: CMS conserves migratory species across range states through appendices and...

ASCII MASTER FLOW – PANEL 2/12: Range geography

BREEDING SITE -> life-cycle stage

PASSAGE AND STOPOVER -> temporary habitat and route link

WINTERING OR FEEDING SITE -> another life-cycle stage

OVERFLIGHT OR WATER ROUTE -> also within Convention range

RULE -> conserve the connected circuit, not only endpoints

ASCII MASTER FLOW – PANEL 3/12: Range State map

STATE A -> breeding jurisdiction

STATE B -> passage or stopover jurisdiction

STATE C -> wintering jurisdiction

FLAG STATE -> relevant taking beyond national limits where applicable

CMS TASK -> coordinate every material jurisdiction

ASCII MASTER FLOW – PANEL 4/12: Appendix I duty chain

ENDANGERED MIGRATORY SPECIES -> Appendix I

HABITAT -> conserve and restore where feasible and appropriate

OBSTACLES -> prevent, remove, compensate for or minimize

TAKING -> prohibit subject to narrow Convention exceptions

EXCEPTION -> precise content plus space-and-time limits

ASCII MASTER FLOW – PANEL 5/12: Appendix II cooperation chain

UNFAVOURABLE STATUS OR SIGNIFICANT BENEFIT -> Appendix II

RANGE STATES -> endeavour to conclude AGREEMENTS

WHOLE RANGE -> agreement design objective

COORDINATION -> habitat, monitoring, information and threats

RULE -> cooperation route is not Appendix I duplication

ASCII MASTER FLOW – PANEL 6/12: Dual-listing matrix

APPENDIX I -> endangered status and immediate protection duties

APPENDIX II -> international-cooperation and agreement route

BOTH -> expressly possible under Article IV

NOT HIERARCHY -> functions overlap without cancelling each other

ANSWER -> state each consequence separately

CLOSE DISTINCTION: Appendix I and II have distinct consequences, CMS is not CITES, range...

ASCII MASTER FLOW – PANEL 7/12: Instrument-status ladder

APPENDIX -> Convention listing status

AGREEMENT -> identify exact binding instrument

MOU -> identify exact non-binding instrument

ACTION PLAN -> planned measures under its adopting authority

CONCERTED ACTION -> priority cooperative work between COPs

ASCII MASTER FLOW – PANEL 8/12: AGREEMENT design rail

SCOPE -> whole migratory range

ACCESS -> open to relevant Range States

SCIENCE -> status review, research and information exchange

HABITAT -> network, restoration and obstacle response

GOVERNANCE -> authority, monitoring, reporting and coordination

ASCII MASTER FLOW – PANEL 9/12: Central Asian Flyway firewall

FLYWAY -> ecological migration geography

INITIATIVE -> COP14 cooperation arrangement

COORDINATING UNIT -> official release locates it in India

AGREEMENT OR MOU -> not inferred

OUTCOME -> not inferred from institutional adoption

ASCII MASTER FLOW – PANEL 10/12: Plan-versus-outcome gate

COP14 -> Samarkand, February 2024

STRATEGIC PLAN -> 2024-2032 direction and targets

INITIATIVE -> Central Asian Flyway coordination step

MONITORING -> needed for implementation evidence

RULE -> adoption is an output, not species recovery

ASCII MASTER FLOW – PANEL 11/12: Threat-location matrix

ROUTE-WIDE -> habitat network, taking and shared data
DOMESTIC -> power line, wetland loss or local enforcement
LOCAL SUCCESS -> Doyang or Pangti stopover protection
LIMIT -> one repaired link does not prove whole-route safety
RESPONSE -> match institution to threat location

ASCII MASTER FLOW – PANEL 12/12: PYQ and convention spine

DEFINE -> migratory species, range and Range State

CLASSIFY -> Appendix I, II or both

NAME -> Agreement, MOU, Action Plan or Concerted Action

APPLY -> Amur Falcon answer-free route-and-community concept

SEPARATE -> CMS, CITES, Ramsar and current-listing evidence

EVIDENCE LIMIT: MECHANISM / STATUS / CAUSATION: Verify membership, appendix, taxon, range...
