EXTRA

SUBORDINATE ENRICHMENT — ONLY AFTER THE COMPLETE CORE

OPTIONAL ADVANCED ENRICHMENT | INNOVATION VERSUS PRIVACY | THE LAW AIMS TO PROTECT PERSONAL DATA WHILE AVOIDING | BOARD DESIGN AND INDEPENDENCE | THE BOARD IS A DIGITALLY FUNCTIONING ADJUDICATOR, NOT A | THE STRONGEST CRITIQUE IS THEREFORE STRUCTURAL (COMPOSITION, TENURE, APPOINTMENT) | ENFORCEMENT ASYMMETRY | THE STATE IS BOTH THE LARGEST PROCESSOR OF PERSONAL

OPTIONAL SCIENTIFIC / ENGINEERING DEPTH

- CAUTION: Innovation versus privacy: the law aims to protect personal data while avoiding a blanket anti-innovation posture.
- CAUTION: Board design and independence: the Board is a digitally functioning adjudicator, not a full-spectrum regulator — it
- The strongest critique is therefore structural (composition, tenure, appointment) rather than merely capacity-based.
- CAUTION: Enforcement asymmetry: the State is both the largest processor of personal data in India and the entity

READINESS, UNIT OR STATUS LIMIT

- A privacy regime whose principal risk-holder can opt out by notification is analytically incomplete, whatever its private-sector provisions.
- CAUTION: The RTI amendment (s.44(3)) by substituting RTI s.8(1)(j) with a broad exemption for "information which relates to
- This pits privacy against transparency — a genuine rights-versus-rights conflict, not a technical amendment, and the most likely
- CAUTION: Cross-border transfer model: India did not adopt an absolute data-localisation model in the reviewed Act text

COMPARATIVE TECHNOLOGY / GOVERNANCE NUANCE

- instead it retained a notification-based restriction power — lighter than the 2019 Bill, but creating regulatory uncertainty because
- CAUTION: What the Act omits: no separate class of sensitive personal data, no explicit right to data
- portability or erasure-by-design, no statutory data-breach compensation to individuals, no framework for non-personal data , and no
- algorithmic-decision safeguard — the last being the visible seam where DPDP meets AI governance (Topic 09).

OPTIONAL STATUS — This optional depth is unnecessary for a competent core answer; use it only for added nuance after the complete core has been written.
