

SOLVED PRACTICE WORKBOOK

Defence Indigenisation: Atmanirbhar and Procurement - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Defence Indigenisation: Atmanirbhar and Procurement	
REFRESHED TEACHING NAVIGATION — BASIC/CORE FIRST	
01	FOUNDATION — R&D ACQUISITION PRODUCTION AND SUSTAINMENT CHAIN Indigenous design means control of system architecture and
02	FOUNDATION — INDIGENOUS DESIGN MANUFACTURE AND CONTENT Read Indigenous design manufacture and content as a sequence:
03	FOUNDATION — DAP 2020 PURPOSE AND ACQUISITION SCHEMES Mechanism chain: Buy-ladder boundary Qualified use: Define the
04	CORE — FIVE-RUNG BUY PREFERENCE LADDER Mechanism chain: Indian-IDDM boundary Qualified use: Present all
05	CORE — INDIAN-IDDM AND INDIAN-VENDOR LOGIC Mechanism chain: Buy-Make boundary Qualified use: Explain why
06	CORE — TECHNOLOGY-TRANSFER MANUFACTURE PATHWAYS Mechanism chain: AoN-order boundary - PIL-family boundary
07	CORE — AON RFP TRIALS CONTRACT DELIVERY AND INDUCTION Mechanism chain: Notification-achievement boundary Qualified use:
08	CORE — SERVICES AND DPSU POSITIVE-LIST FAMILIES Read Services and DPSU positive-list families as a sequence: identify
09	CORE — SRIJAN STAGE TRACKING AND EVIDENCE LIMITS Mechanism chain: DPSU-private boundary Qualified use: Use portal
10	CORE — DPSU PRIVATE PRIME MSME AND STARTUP ECOSYSTEM The Ordnance Factory Board was corporatised in 2021 into seven
11	CORE — OFB CORPORATISATION AND SEVEN DPSUS iDEX and ADITI operate through the Defence Innovation Organisation
12	CORE — IDEX ADITI AND TECHNOLOGY DEVELOPMENT FUND Defence FDI policy distinguishes the automatic route up to 74 percent
13	CORE SYNTHESIS — DEFENCE CORRIDORS AND PLACE-BASED CLUSTERING Read Defence corridors and place-based clustering as a sequence:
14	CORE SYNTHESIS — FDI OFFSETS EXPORTS AND TECHNOLOGY ABSORPTION Mechanism chain: Lifecycle-indigenisation boundary - Export-scale
15	CORE SYNTHESIS — LIFECYCLE SELF-RELIANCE AND VOLATILE-NUMBER AUDIT Read Lifecycle self-reliance and volatile-number audit as a sequence:

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Defence Indigenisation: Atmanirbhar and Procurement - Solved Practice Workbook 5

BASIC MCQS / REMEDIATION 5

Q1. Which statement correctly identifies R&D-procurement boundary?	5
Q2. Which option preserves the technical boundary of R&D-procurement boundary?	5
Q3. Which statement uses R&D-procurement boundary without changing its institution, unit or status?	5
Q4. Which option avoids the standard UPSC close-option trap about R&D-procurement boundary?	6
Q5. Which statement correctly identifies Design-manufacture-content boundary?	6
Q6. Which option preserves the technical boundary of Design-manufacture-content boundary?	6
Q7. Which statement uses Design-manufacture-content boundary without changing its institution, unit or status?	6
Q8. Which option avoids the standard UPSC close-option trap about Design-manufacture-content boundary?	7
Q9. Which statement correctly identifies DAP-procedure boundary?	7
Q10. Which option preserves the technical boundary of DAP-procedure boundary?	7
Q11. Which statement uses DAP-procedure boundary without changing its institution, unit or status?	8
Q12. Which option avoids the standard UPSC close-option trap about DAP-procedure boundary?	8
Q13. Which statement correctly identifies Buy-ladder boundary?	8
Q14. Which option preserves the technical boundary of Buy-ladder boundary?	8
Q15. Which statement uses Buy-ladder boundary without changing its institution, unit or status?	9
Q16. Which option avoids the standard UPSC close-option trap about Buy-ladder boundary?	9
Q17. Which statement correctly identifies Indian-IDDM boundary?	9
Q18. Which option preserves the technical boundary of Indian-IDDM boundary?	10
Q19. Which statement uses Indian-IDDM boundary without changing its institution, unit or status?	10
Q20. Which option avoids the standard UPSC close-option trap about Indian-IDDM boundary?	10
Q21. Which statement correctly identifies Buy-Make boundary?	10
Q22. Which option preserves the technical boundary of Buy-Make boundary?	11
Q23. Which statement uses Buy-Make boundary without changing its institution, unit or status?	11
Q24. Which option avoids the standard UPSC close-option trap about Buy-Make boundary?	11
Q25. Which statement correctly identifies AoN-order boundary?	12
Q26. Which option preserves the technical boundary of AoN-order boundary?	12
Q27. Which statement uses AoN-order boundary without changing its institution, unit or status?	12

Q28. Which option avoids the standard UPSC close-option trap about AoN-order boundary?	12
Q29. Which statement correctly identifies PIL-family boundary?	13
Q30. Which option preserves the technical boundary of PIL-family boundary?	13
Q31. Which statement uses PIL-family boundary without changing its institution, unit or status?	13
Q32. Which option avoids the standard UPSC close-option trap about PIL-family boundary?	14
Q33. Which statement correctly identifies Notification-achievement boundary?	14
Q34. Which option preserves the technical boundary of Notification-achievement boundary?	14
Q35. Which statement uses Notification-achievement boundary without changing its institution, unit or status?	14
Q36. Which option avoids the standard UPSC close-option trap about Notification-achievement boundary?	15
Q37. Which statement correctly identifies SRIJAN-stage boundary?	15
Q38. Which option preserves the technical boundary of SRIJAN-stage boundary?	15
Q39. Which statement uses SRIJAN-stage boundary without changing its institution, unit or status?	16
Q40. Which option avoids the standard UPSC close-option trap about SRIJAN-stage boundary?	16
Q41. Which statement correctly identifies DPSU-private boundary?	16
Q42. Which option preserves the technical boundary of DPSU-private boundary?	16
Q43. Which statement uses DPSU-private boundary without changing its institution, unit or status?	17
Q44. Which option avoids the standard UPSC close-option trap about DPSU-private boundary?	17
Q45. Which statement correctly identifies OFB-corporatisation boundary?	17
Q46. Which option preserves the technical boundary of OFB-corporatisation boundary?	18
Q47. Which statement uses OFB-corporatisation boundary without changing its institution, unit or status?	18
Q48. Which option avoids the standard UPSC close-option trap about OFB-corporatisation boundary?	18
Q49. Which statement correctly identifies iDEX-TDF boundary?	19
Q50. Which option preserves the technical boundary of iDEX-TDF boundary?	19
Q51. Which statement uses iDEX-TDF boundary without changing its institution, unit or status?	19
Q52. Which option avoids the standard UPSC close-option trap about iDEX-TDF boundary?	19
Q53. Which statement correctly identifies Corridor-category boundary?	20
Q54. Which option preserves the technical boundary of Corridor-category boundary?	20
Q55. Which statement uses Corridor-category boundary without changing its institution, unit or status?	20
Q56. Which option avoids the standard UPSC close-option trap about Corridor-category boundary?	21
Q57. Which statement correctly identifies FDI-route boundary?	21
Q58. Which option preserves the technical boundary of FDI-route boundary?	21
Q59. Which statement uses FDI-route boundary without changing its institution, unit or status?	21

Q60. Which option avoids the standard UPSC close-option trap about FDI-route boundary?	22
Q61. Which statement correctly identifies Offsets-boundary?	22
Q62. Which option preserves the technical boundary of Offsets-boundary?	22
Q63. Which statement uses Offsets-boundary without changing its institution, unit or status?	23
Q64. Which option avoids the standard UPSC close-option trap about Offsets-boundary?	23
Q65. Which statement correctly identifies Lifecycle-indigenisation boundary?	23
Q66. Which option preserves the technical boundary of Lifecycle-indigenisation boundary?	23
Q67. Which statement uses Lifecycle-indigenisation boundary without changing its institution, unit or status?	24
Q68. Which option avoids the standard UPSC close-option trap about Lifecycle-indigenisation boundary?	24
Q69. Which statement correctly identifies Export-scale boundary?	24
Q70. Which option preserves the technical boundary of Export-scale boundary?	25
Q71. Which statement uses Export-scale boundary without changing its institution, unit or status?	25
Q72. Which option avoids the standard UPSC close-option trap about Export-scale boundary?	25
Q73. Which statement correctly identifies Platform-status boundary?	25
Q74. Which option preserves the technical boundary of Platform-status boundary?	26
Q75. Which statement uses Platform-status boundary without changing its institution, unit or status?	26
Q76. Which option avoids the standard UPSC close-option trap about Platform-status boundary?	26
Q77. Which statement correctly identifies Volatile-number boundary?	27
Q78. Which option preserves the technical boundary of Volatile-number boundary?	27
Q79. Which statement uses Volatile-number boundary without changing its institution, unit or status?	27
Q80. Which option avoids the standard UPSC close-option trap about Volatile-number boundary?	27

Defence Indigenisation: Atmanirbhar and Procurement - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies R&D-procurement boundary?

A. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. B. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. C. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. D. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery.

Answer: A. Explanation: Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q2. Which option preserves the technical boundary of R&D-procurement boundary?

A. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. B. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. C. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. D. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery.

Answer: B. Explanation: Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q3. Which statement uses R&D-procurement boundary without changing its institution, unit or status?

A. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. B. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. C. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. D. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India.

Answer: C. Explanation: Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q4. Which option avoids the standard UPSC close-option trap about R&D-procurement boundary?

A. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. B. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. C. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. D. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.

Answer: D. Explanation: Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q5. Which statement correctly identifies Design-manufacture-content boundary?

A. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. B. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. C. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. D. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery.

Answer: A. Explanation: Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q6. Which option preserves the technical boundary of Design-manufacture-content boundary?

A. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. B. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. C. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. D. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway.

Answer: B. Explanation: Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q7. Which statement uses Design-manufacture-content boundary without changing its institution, unit or status?

A. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. B. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. C. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. D. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation;

request for proposal, trials, negotiation, contract, delivery and induction remain later stages.

Answer: C. Explanation: Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q8. Which option avoids the standard UPSC close-option trap about Design-manufacture-content boundary?

A. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. B. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. C. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. D. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two.

Answer: D. Explanation: Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q9. Which statement correctly identifies DAP-procedure boundary?

A. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. B. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. C. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. D. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India.

Answer: A. Explanation: Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q10. Which option preserves the technical boundary of DAP-procedure boundary?

A. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. B. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. C. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. D. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India.

Answer: B. Explanation: Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q11. Which statement uses DAP-procedure boundary without changing its institution, unit or status?

A. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. B. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. C. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. D. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India.

Answer: C. Explanation: Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q12. Which option avoids the standard UPSC close-option trap about DAP-procedure boundary?

A. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. B. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. C. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. D. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery.

Answer: D. Explanation: Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q13. Which statement correctly identifies Buy-ladder boundary?

A. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. B. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. C. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. D. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages.

Answer: A. Explanation: The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q14. Which option preserves the technical boundary of Buy-ladder boundary?

A. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. B. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. C. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. D. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India.

Answer: B. Explanation: The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q15. Which statement uses Buy-ladder boundary without changing its institution, unit or status?

A. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. B. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. C. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. D. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages.

Answer: C. Explanation: The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q16. Which option avoids the standard UPSC close-option trap about Buy-ladder boundary?

A. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. B. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. C. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. D. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway.

Answer: D. Explanation: The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q17. Which statement correctly identifies Indian-IDDM boundary?

A. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. B. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. C. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. D. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India.

Answer: A. Explanation: Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q18. Which option preserves the technical boundary of Indian-IDDM boundary?

A. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. B. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. C. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. D. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN.

Answer: B. Explanation: Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q19. Which statement uses Indian-IDDM boundary without changing its institution, unit or status?

A. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. B. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. C. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. D. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content.

Answer: C. Explanation: Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q20. Which option avoids the standard UPSC close-option trap about Indian-IDDM boundary?

A. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. B. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. C. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. D. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India.

Answer: D. Explanation: Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q21. Which statement correctly identifies Buy-Make boundary?

A. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. B. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. C. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. D. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content.

Answer: A. Explanation: Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q22. Which option preserves the technical boundary of Buy-Make boundary?

A. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. B. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. C. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. D. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction.

Answer: B. Explanation: Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q23. Which statement uses Buy-Make boundary without changing its institution, unit or status?

A. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. B. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. C. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. D. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them.

Answer: C. Explanation: Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q24. Which option avoids the standard UPSC close-option trap about Buy-Make boundary?

A. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. B. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. C. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. D. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India.

Answer: D. Explanation: Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q25. Which statement correctly identifies AoN-order boundary?

A. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. B. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. C. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. D. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction.

Answer: A. Explanation: Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q26. Which option preserves the technical boundary of AoN-order boundary?

A. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. B. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. C. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. D. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them.

Answer: B. Explanation: Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q27. Which statement uses AoN-order boundary without changing its institution, unit or status?

A. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. B. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. C. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. D. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them.

Answer: C. Explanation: Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q28. Which option avoids the standard UPSC close-option trap about AoN-order boundary?

A. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. B. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. C. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. D. Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages.

Answer: D. Explanation: Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q29. Which statement correctly identifies PIL-family boundary?

A. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. B. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. C. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. D. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction.

Answer: A. Explanation: Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q30. Which option preserves the technical boundary of PIL-family boundary?

A. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. B. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. C. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. D. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction.

Answer: B. Explanation: Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q31. Which statement uses PIL-family boundary without changing its institution, unit or status?

A. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. B. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. C. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. D. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them.

Answer: C. Explanation: Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q32. Which option avoids the standard UPSC close-option trap about PIL-family boundary?

A. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. B. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. C. IDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. D. Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN.

Answer: D. Explanation: Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q33. Which statement correctly identifies Notification-achievement boundary?

A. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. B. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. C. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. D. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution.

Answer: A. Explanation: A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q34. Which option preserves the technical boundary of Notification-achievement boundary?

A. IDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. B. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. C. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. D. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution.

Answer: B. Explanation: A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q35. Which statement uses Notification-achievement boundary without changing its institution, unit or status?

A. IDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. B. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. C. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. D. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts.

Answer: C. Explanation: A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q36. Which option avoids the standard UPSC close-option trap about Notification-achievement boundary?

A. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. B. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. C. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. D. A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content.

Answer: D. Explanation: A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q37. Which statement correctly identifies SRIJAN-stage boundary?

A. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. B. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. C. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. D. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them.

Answer: A. Explanation: SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q38. Which option preserves the technical boundary of SRIJAN-stage boundary?

A. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. B. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. C. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. D. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution.

Answer: B. Explanation: SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q39. Which statement uses SRIJAN-stage boundary without changing its institution, unit or status?

A. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. B. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. C. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. D. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts.

Answer: C. Explanation: SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q40. Which option avoids the standard UPSC close-option trap about SRIJAN-stage boundary?

A. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. B. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. C. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. D. SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction.

Answer: D. Explanation: SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q41. Which statement correctly identifies DPSU-private boundary?

A. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. B. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. C. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. D. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts.

Answer: A. Explanation: DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q42. Which option preserves the technical boundary of DPSU-private boundary?

A. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. B. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. C. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. D. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category.

Answer: B. Explanation: DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q43. Which statement uses DPSU-private boundary without changing its institution, unit or status?

A. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. B. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. C. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. D. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts.

Answer: C. Explanation: DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q44. Which option avoids the standard UPSC close-option trap about DPSU-private boundary?

A. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. B. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. C. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. D. DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them.

Answer: D. Explanation: DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q45. Which statement correctly identifies OFB-corporatisation boundary?

A. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. B. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. C. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. D. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category.

Answer: A. Explanation: The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q46. Which option preserves the technical boundary of OFB-corporatisation boundary?

A. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. B. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. C. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. D. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer.

Answer: B. Explanation: The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q47. Which statement uses OFB-corporatisation boundary without changing its institution, unit or status?

A. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. B. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. C. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. D. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer.

Answer: C. Explanation: The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q48. Which option avoids the standard UPSC close-option trap about OFB-corporatisation boundary?

A. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. B. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. C. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. D. The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution.

Answer: D. Explanation: The Ordnance Factory Board was corporatised in 2021 into seven DPSUs; organisational restructuring changes accountability architecture but does not by itself prove higher productivity, quality or order execution. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q49. Which statement correctly identifies iDEX-TDF boundary?

A. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. B. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. C. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. D. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts.

Answer: A. Explanation: iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q50. Which option preserves the technical boundary of iDEX-TDF boundary?

A. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. B. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. C. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. D. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence.

Answer: B. Explanation: iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q51. Which statement uses iDEX-TDF boundary without changing its institution, unit or status?

A. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. B. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. C. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. D. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer.

Answer: C. Explanation: iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q52. Which option avoids the standard UPSC close-option trap about iDEX-TDF boundary?

A. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. B. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. C. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. D. iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category.

Answer: D. Explanation: iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q53. Which statement correctly identifies Corridor-category boundary?

A. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. B. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. C. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. D. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer.

Answer: A. Explanation: The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q54. Which option preserves the technical boundary of Corridor-category boundary?

A. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. B. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. C. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. D. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality.

Answer: B. Explanation: The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q55. Which statement uses Corridor-category boundary without changing its institution, unit or status?

A. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. B. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. C. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. D. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status.

Answer: C. Explanation: The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q56. Which option avoids the standard UPSC close-option trap about Corridor-category boundary?

A. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. B. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. C. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. D. The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts.

Answer: D. Explanation: The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q57. Which statement correctly identifies FDI-route boundary?

A. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. B. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. C. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. D. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer.

Answer: A. Explanation: Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q58. Which option preserves the technical boundary of FDI-route boundary?

A. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. B. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. C. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. D. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence.

Answer: B. Explanation: Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q59. Which statement uses FDI-route boundary without changing its institution, unit or status?

A. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. B. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. C. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. D. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status.

Answer: C. Explanation: Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q60. Which option avoids the standard UPSC close-option trap about FDI-route boundary?

A. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. B. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. C. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. D. Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption.

Answer: D. Explanation: Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q61. Which statement correctly identifies Offsets-boundary?

A. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. B. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. C. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. D. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status.

Answer: A. Explanation: Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q62. Which option preserves the technical boundary of Offsets-boundary?

A. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. B. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. C. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. D. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality.

Answer: B. Explanation: Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q63. Which statement uses Offsets-boundary without changing its institution, unit or status?

A. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. B. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. C. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. D. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.

Answer: C. Explanation: Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q64. Which option avoids the standard UPSC close-option trap about Offsets-boundary?

A. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. B. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. C. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. D. Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer.

Answer: D. Explanation: Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q65. Which statement correctly identifies Lifecycle-indigenisation boundary?

A. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. B. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. C. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. D. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status.

Answer: A. Explanation: Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q66. Which option preserves the technical boundary of Lifecycle-indigenisation boundary?

A. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. B. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. C. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. D. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.

Answer: B. Explanation: Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q67. Which statement uses Lifecycle-indigenisation boundary without changing its institution, unit or status?

A. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. B. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. C. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. D. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.

Answer: C. Explanation: Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q68. Which option avoids the standard UPSC close-option trap about Lifecycle-indigenisation boundary?

A. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. B. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. C. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. D. Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence.

Answer: D. Explanation: Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q69. Which statement correctly identifies Export-scale boundary?

A. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. B. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. C. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. D. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.

Answer: A. Explanation: Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q70. Which option preserves the technical boundary of Export-scale boundary?

A. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. B. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. C. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. D. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two.

Answer: B. Explanation: Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q71. Which statement uses Export-scale boundary without changing its institution, unit or status?

A. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. B. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. C. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. D. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.

Answer: C. Explanation: Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q72. Which option avoids the standard UPSC close-option trap about Export-scale boundary?

A. The DAP preference ladder includes Buy Indian-IDDMM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. B. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. C. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. D. Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality.

Answer: D. Explanation: Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q73. Which statement correctly identifies Platform-status boundary?

A. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. B. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. C. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. D. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two.

Answer: A. Explanation: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q74. Which option preserves the technical boundary of Platform-status boundary?

A. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. B. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. C. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. D. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.

Answer: B. Explanation: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q75. Which statement uses Platform-status boundary without changing its institution, unit or status?

A. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. B. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. C. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. D. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two.

Answer: C. Explanation: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q76. Which option avoids the standard UPSC close-option trap about Platform-status boundary?

A. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. B. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. C. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. D. An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status.

Answer: D. Explanation: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q77. Which statement correctly identifies Volatile-number boundary?

A. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. B. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. C. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. D. Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.

Answer: A. Explanation: Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q78. Which option preserves the technical boundary of Volatile-number boundary?

A. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. B. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. C. Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. D. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery.

Answer: B. Explanation: Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q79. Which statement uses Volatile-number boundary without changing its institution, unit or status?

A. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. B. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. C. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. D. Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery.

Answer: C. Explanation: Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

Q80. Which option avoids the standard UPSC close-option trap about Volatile-number boundary?

A. Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. B. The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. C. Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. D. Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines.

Answer: D. Explanation: Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The other options change the scientific category, institutional owner, measurement, mission rung or operating status.

PYQS AND ANSWER PRACTICE

AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

Audited ledgers route recent fighter-generation, aircraft-role and Indian-manufacture objective concepts here. They are used to teach design, manufacture and status discrimination; no answer letter, production figure or operational claim is invented.

PYQ DEMAND CARD 1 - 2024 Prelims GS-I

Demand: Assess claims that Rafale, MiG-29 and Tejas Mk1 are fifth-generation fighters.

Status: Verified routed objective concept; no answer letter is asserted in this package.

Model solution: Platform-status boundary: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Demand decoding: Treat "PYQ DEMAND CARD 1 - 2024 Prelims GS-I" as a mechanism, category, institution, unit, date and status problem.

Detailed examiner-grade model answer:

Introduction and thesis: Platform-status boundary: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Analytical body:

- 1. Claim and named evidence:** Demand: Assess claims that Rafale, MiG-29 and Tejas Mk1 are fifth-generation fighters. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
- 2. Claim and named evidence:** Status: Verified routed objective concept; no answer letter is asserted in this package. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: Platform-status boundary: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Executable exam-length answer / compression plan: Identify the object and actor; trace the technical mechanism; fix the measurement and platform; test each statement against source date, status rung and closest exception.

Why this earns marks: It prevents organisation, platform, process, application, regulatory role, target and observed outcome from being conflated.

How to improve this answer: For “PYQ DEMAND CARD 1 - 2024 Prelims GS-I”, explain why the nearest distractor fails on mechanism, platform, unit, institution, legal status, maturity or date.

PYQ DEMAND CARD 2 - 2025 Prelims GS-I

Demand: Match Dornier-228, IL-76 and C-17 with aircraft roles.

Status: Verified routed objective concept; the solution preserves role labels and does not invent payload figures.

Model solution: Platform-status boundary: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Demand decoding: Treat “PYQ DEMAND CARD 2 - 2025 Prelims GS-I” as a mechanism, category, institution, unit, date and status problem.

Detailed examiner-grade model answer:

Introduction and thesis: Platform-status boundary: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Analytical body:

1. **Claim and named evidence:** Demand: Match Dornier-228, IL-76 and C-17 with aircraft roles. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
2. **Claim and named evidence:** Status: Verified routed objective concept; the solution preserves role labels and does not invent payload figures. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: Platform-status boundary: An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Executable exam-length answer / compression plan: Identify the object and actor; trace the technical mechanism; fix the measurement and platform; test each statement against source date, status rung and closest exception.

Why this earns marks: It prevents organisation, platform, process, application, regulatory role, target and observed outcome from being conflated.

How to improve this answer: For “PYQ DEMAND CARD 2 - 2025 Prelims GS-I”, explain why the nearest distractor fails on mechanism, platform, unit, institution, legal status, maturity or date.

PYQ DEMAND CARD 3 - 2026 Prelims GS-I

Demand: Assess Indian manufacture of fighter aircraft, tanks and submarines.

Status: Provisional routed concept; no answer letter or platform-status claim is inferred.

Model solution: Design-manufacture-content boundary: Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Lifecycle-indigenisation boundary:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Platform-status boundary:** An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Demand decoding: Treat “PYQ DEMAND CARD 3 - 2026 Prelims GS-I” as a mechanism, category, institution, unit, date and status problem.

Detailed examiner-grade model answer:

Introduction and thesis: Design-manufacture-content boundary: Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Lifecycle-indigenisation boundary:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Platform-status boundary:** An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Analytical body:

1. **Claim and named evidence:** Demand: Assess Indian manufacture of fighter aircraft, tanks and submarines. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
2. **Claim and named evidence:** Status: Provisional routed concept; no answer letter or platform-status claim is inferred. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: Design-manufacture-content boundary: Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Lifecycle-indigenisation boundary:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Platform-status boundary:** An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Volatile-number boundary:** Procurement values, delivery schedules, indigenous-content percentages, positive-list

counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

Executable exam-length answer / compression plan: Identify the object and actor; trace the technical mechanism; fix the measurement and platform; test each statement against source date, status rung and closest exception.

Why this earns marks: It prevents organisation, platform, process, application, regulatory role, target and observed outcome from being conflated.

How to improve this answer: For “PYQ DEMAND CARD 3 - 2026 Prelims GS-I”, explain why the nearest distractor fails on mechanism, platform, unit, institution, legal status, maturity or date.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish indigenous design, domestic manufacture and indigenous content. Answer in about 150 words.

Model thesis: Claim: R&D-procurement boundary. **Named evidence/example:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Design-manufacture-content boundary. **Named evidence/example:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Claim -> named evidence -> analysis -> qualification:

- Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.
- Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two.
- Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence.

Qualified conclusion: Claim: R&D-procurement boundary. **Named evidence/example:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Design-manufacture-content boundary. **Named evidence/example:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary,

institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Demand decoding: The directive **answer** requires a direct position on "Distinguish indigenous design, domestic manufacture and indigenous content. Answer in about...", each clause, the exact technical mechanism, named Indian institution, dated status, application, risk and qualification.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** R&D-procurement boundary. **Named evidence/example:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Design-manufacture-content boundary. **Named evidence/example:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Analytical body:

1. **Claim and named evidence:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
2. **Claim and named evidence:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
3. **Claim and named evidence:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: **Claim:** R&D-procurement boundary. **Named evidence/example:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Design-manufacture-content boundary. **Named evidence/example:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves

the other two. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Executable exam-length answer / compression plan: For 10 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism -> system/institution -> application/status -> risk/outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, date, actor, platform, approval/test/deployment rung and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains science rather than listing schemes, uses India-centric evidence and preserves technical, institutional, regulatory and maturity distinctions.

How to improve this answer: For "Distinguish indigenous design, domestic manufacture and indigenous content. Answer in about...", replace the weakest catalogue point with one exact mechanism, named mission/institution/platform, dated status, measurable boundary, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain why Acceptance of Necessity is not a defence order. Answer in about 150 words.

Model thesis: Claim: DAP-procedure boundary. **Named evidence/example:** Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** AoN-order boundary. **Named evidence/example:** Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Claim -> named evidence -> analysis -> qualification:

- Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery.
- Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages.

Qualified conclusion: Claim: DAP-procedure boundary. **Named evidence/example:** Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** AoN-order boundary. **Named evidence/example:** Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Demand decoding: The directive **explain** requires a direct position on "Explain why Acceptance of Necessity is not a defence order. Answer in about 150 words.", each clause, the exact technical mechanism, named Indian institution, dated status, application, risk and qualification.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** DAP-procedure boundary. **Named evidence/example:** Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** AoN-order boundary. **Named evidence/example:** Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Analytical body:

1. **Claim and named evidence:** Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
2. **Claim and named evidence:** Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: **Claim:** DAP-procedure boundary. **Named evidence/example:** Defence Acquisition Procedure 2020 structures capital-acquisition categories and process; it is a procurement rulebook, not a weapon programme, contract, budget appropriation or proof of delivery. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** AoN-order boundary. **Named evidence/example:** Acceptance of Necessity is Defence Acquisition Council in-principle approval of the requirement and categorisation; request for proposal, trials, negotiation, contract, delivery and induction remain later stages. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Executable exam-length answer / compression plan: For 10 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism -> system/institution -> application/status -> risk/outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, date, actor, platform, approval/test/deployment rung and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains science rather than listing schemes, uses India-centric evidence and preserves technical, institutional, regulatory and maturity distinctions.

How to improve this answer: For "Explain why Acceptance of Necessity is not a defence order. Answer in about 150 words.", replace the weakest catalogue point with one exact mechanism, named mission/institution/platform, dated status, measurable boundary, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 3 - 15 MARKS

Question: Compare the five DAP Buy pathways and their localisation logic. Answer in about 250 words.

Model thesis: Claim: Buy-ladder boundary. **Named evidence/example:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Indian-IDDM boundary. **Named evidence/example:** Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-Make boundary. **Named evidence/example:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Claim -> named evidence -> analysis -> qualification:

- The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway.
- Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India.
- Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India.

Qualified conclusion: Claim: Buy-ladder boundary. **Named evidence/example:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Indian-IDDM boundary. **Named evidence/example:** Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-Make boundary. **Named evidence/example:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Demand decoding: The directive **compare** requires a direct position on "Compare the five DAP Buy pathways and their localisation logic. Answer in about 250 words.", each clause, the exact technical mechanism, named Indian institution, dated status, application, risk and qualification.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Buy-ladder boundary. **Named evidence/example:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Indian-IDDM boundary. **Named evidence/example:** Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-Make boundary. **Named evidence/example:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Analytical body:

1. **Claim and named evidence:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
2. **Claim and named evidence:** Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
3. **Claim and named evidence:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: **Claim:** Buy-ladder boundary. **Named evidence/example:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Indian-IDDM boundary. **Named evidence/example:** Buy Indian-IDDM gives priority to an Indian vendor offering an indigenously designed, developed and manufactured product with prescribed indigenous content; the label must not be reduced to assembly in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-Make boundary. **Named evidence/example:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism -> system/institution -> application/status -> risk/outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, date, actor, platform, approval/test/deployment rung and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains science rather than listing schemes, uses India-centric evidence and preserves technical, institutional, regulatory and maturity distinctions.

How to improve this answer: For “Compare the five DAP Buy pathways and their localisation logic. Answer in about 250 words.”, replace the weakest catalogue point with one exact mechanism, named mission/institution/platform, dated status, measurable boundary, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 4 - 15 MARKS

Question: Explain how positive lists and SRIJAN shape demand without proving achievement. Answer in about 250 words.

Model thesis: Claim: PIL-family boundary. **Named evidence/example:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Notification-achievement boundary. **Named evidence/example:** A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** SRIJAN-stage boundary. **Named evidence/example:** SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Claim -> named evidence -> analysis -> qualification:

- Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN.
- A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content.
- SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction.

Qualified conclusion: Claim: PIL-family boundary. **Named evidence/example:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Notification-achievement boundary. **Named evidence/example:** A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** SRIJAN-stage boundary. **Named evidence/example:** SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Demand decoding: The directive **explain** requires a direct position on “Explain how positive lists and SRIJAN shape demand without proving achievement. Answer in...”, each clause, the exact technical mechanism, named Indian

institution, dated status, application, risk and qualification.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** PIL-family boundary. **Named evidence/example:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Notification-achievement boundary. **Named evidence/example:** A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** SRIJAN-stage boundary. **Named evidence/example:** SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Analytical body:

1. **Claim and named evidence:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
2. **Claim and named evidence:** A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
3. **Claim and named evidence:** SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: **Claim:** PIL-family boundary. **Named evidence/example:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Notification-achievement boundary. **Named evidence/example:** A positive-list notification creates a demand signal and item-specific deadline; it is not proof that every listed item has been indigenised, ordered, delivered or produced with complete domestic content. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** SRIJAN-stage boundary. **Named evidence/example:** SRIJAN is a public implementation portal for DPSU indigenisation items and stages such as expression of interest, request for proposal, trials and indigenised status; a portal stage is not a contract or service induction. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy

implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism -> system/institution -> application/status -> risk/outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, date, actor, platform, approval/test/deployment rung and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains science rather than listing schemes, uses India-centric evidence and preserves technical, institutional, regulatory and maturity distinctions.

How to improve this answer: For "Explain how positive lists and SRIJAN shape demand without proving achievement. Answer in...", replace the weakest catalogue point with one exact mechanism, named mission/institution/platform, dated status, measurable boundary, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 5 - 20 MARKS

Question: Evaluate India's defence-indigenisation ecosystem through procurement, firms, innovation and corridors. Answer in about 300 words.

Model thesis: Claim: R&D-procurement boundary. **Named evidence/example:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-ladder boundary. **Named evidence/example:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** PIL-family boundary. **Named evidence/example:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN.

Analysis: This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** DPSU-private boundary. **Named evidence/example:** DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** iDEX-TDF boundary. **Named evidence/example:** iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Corridor-category boundary. **Named evidence/example:** The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Claim -> named evidence -> analysis -> qualification:

- Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains.
- The DAP preference ladder includes Buy Indian-IDD, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway.
- Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN.
- DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them.
- iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category.
- The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts.
- Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence.

Qualified conclusion: Claim: R&D-procurement boundary. **Named evidence/example:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-ladder boundary. **Named evidence/example:** The DAP preference ladder includes Buy Indian-IDD, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** PIL-family boundary. **Named evidence/example:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** DPSU-private boundary. **Named evidence/example:** DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** iDEX-TDF boundary. **Named evidence/example:** iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Corridor-category boundary. **Named evidence/example:** The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and

verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Demand decoding: The directive **evaluate** requires a direct position on "Evaluate India's defence-indigenisation ecosystem through procurement, firms, innovation and...", each clause, the exact technical mechanism, named Indian institution, dated status, application, risk and qualification.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** R&D-procurement boundary. **Named evidence/example:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-ladder boundary. **Named evidence/example:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** PIL-family boundary. **Named evidence/example:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN.

Analysis: This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** DPSU-private boundary. **Named evidence/example:** DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** iDEX-TDF boundary. **Named evidence/example:** iDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Corridor-category boundary. **Named evidence/example:** The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Analytical body:

1. **Claim and named evidence:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
2. **Claim and named evidence:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** Connect mechanism -> named system/institution -> application or

implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

3. **Claim and named evidence:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
4. **Claim and named evidence:** DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
5. **Claim and named evidence:** IDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
6. **Claim and named evidence:** The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
7. **Claim and named evidence:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: **Claim:** R&D-procurement boundary. **Named evidence/example:** Defence R&D creates and validates technology, while procurement selects a category, vendor and contract route and production converts the design into repeatable serviceable equipment; these are linked but distinct policy chains. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-ladder boundary. **Named evidence/example:** The DAP preference ladder includes Buy Indian-IDDM, Buy Indian, Buy and Make Indian, Buy Global-Manufacture in India and Buy Global; each category creates a different design, vendor and local-production pathway. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** PIL-family boundary. **Named evidence/example:** Services Positive Indigenisation Lists concern platforms and equipment restricted for import after notified dates, while DPSU lists concern components, subsystems and materials for domestic sourcing and are tracked through SRIJAN. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** DPSU-private boundary. **Named evidence/example:** DPSUs can provide sovereign integration and legacy production depth while private firms, startups and MSMEs add competition and specialised innovation; indigenisation is not an either-or choice between them. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** IDEX-TDF boundary. **Named evidence/example:** IDEX and ADITI operate through the Defence Innovation Organisation for startups and deep-tech

challenges, while the DRDO Technology Development Fund supports industry-led technology development; neither is a procurement category. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Corridor-category boundary. **Named evidence/example:** The Uttar Pradesh and Tamil Nadu defence industrial corridors are place-based cluster and investment instruments, not DAP acquisition categories, positive lists or contracts. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism -> system/institution -> application/status -> risk/outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, date, actor, platform, approval/test/deployment rung and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains science rather than listing schemes, uses India-centric evidence and preserves technical, institutional, regulatory and maturity distinctions.

How to improve this answer: For "Evaluate India's defence-indigenisation ecosystem through procurement, firms, innovation and...", replace the weakest catalogue point with one exact mechanism, named mission/institution/platform, dated status, measurable boundary, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 6 - 20 MARKS

Question: Assess Atmanirbhar defence through design control, technology absorption, lifecycle support and exports. Answer in about 300 words.

Model thesis: Claim: Design-manufacture-content boundary. **Named evidence/example:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-Make boundary. **Named evidence/example:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** FDI-route boundary. **Named evidence/example:** Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Offsets-boundary. **Named evidence/example:** Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system

boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Export-scale boundary. **Named evidence/example:** Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Platform-status boundary. **Named evidence/example:** An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Volatile-number boundary. **Named evidence/example:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Claim -> named evidence -> analysis -> qualification:

- Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two.
- Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India.
- Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption.
- Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer.
- Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence.
- Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality.
- An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status.
- Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines.

Qualified conclusion: **Claim:** Design-manufacture-content boundary. **Named evidence/example:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-Make boundary. **Named evidence/example:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** FDI-route boundary. **Named evidence/example:** Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal

technology absorption. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Offsets-boundary. **Named evidence/example:** Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Export-scale boundary. **Named evidence/example:** Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Platform-status boundary. **Named evidence/example:** An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Volatile-number boundary. **Named evidence/example:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Demand decoding: The directive **assess** requires a direct position on “Assess Atmanirbhar defence through design control, technology absorption, lifecycle support...”, each clause, the exact technical mechanism, named Indian institution, dated status, application, risk and qualification.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Design-manufacture-content boundary. **Named evidence/example:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-Make boundary. **Named evidence/example:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** FDI-route boundary. **Named evidence/example:** Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Offsets-boundary. **Named evidence/example:** Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. **Analysis:** This fixes the scientific process, system

boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Export-scale boundary. **Named evidence/example:** Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Platform-status boundary. **Named evidence/example:** An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Volatile-number boundary. **Named evidence/example:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Analytical body:

1. **Claim and named evidence:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
2. **Claim and named evidence:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
3. **Claim and named evidence:** Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
4. **Claim and named evidence:** Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
5. **Claim and named evidence:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.
6. **Claim and named evidence:** Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway ->

public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

7. **Claim and named evidence:** An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

8. **Claim and named evidence:** Procurement values, delivery schedules, indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. **Analysis:** Connect mechanism -> named system/institution -> application or implementation pathway -> public or strategic consequence. **Qualification:** State platform, unit, source/date/status, maturity, regulatory limit, uncertainty, exception or residual risk.

Counter-position / limit: A launch, test, target, budget, capacity, approval, contract, dataset, benchmark or prototype cannot alone establish deployment, induction, commercial operation, safety, inclusion or observed outcome; test mechanism, status, scale and evidence.

Qualified conclusion: Claim: Design-manufacture-content boundary. **Named evidence/example:** Indigenous design means control of system architecture and intellectual property, domestic manufacture means production in India, and indigenous content is a contract-value share; none automatically proves the other two. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Buy-Make boundary. **Named evidence/example:** Buy and Make Indian uses an Indian vendor with production after transfer of technology from a foreign original-equipment manufacturer, while Buy Global-Manufacture in India begins with a global vendor and specified manufacture in India. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** FDI-route boundary. **Named evidence/example:** Defence FDI policy distinguishes the automatic route up to 74 percent from government approval beyond 74 percent up to 100 percent under stated conditions; foreign investment does not automatically equal technology absorption. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Offsets-boundary. **Named evidence/example:** Offsets are reciprocal industrial obligations on foreign vendors, but DAP 2020 narrowed their use for specified government-to-government, inter-governmental and single-vendor routes; offset discharge is not proof of critical technology transfer. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Lifecycle-indigenisation boundary. **Named evidence/example:** Real self-reliance includes maintenance, repair, overhaul, spares, upgrades, testing standards and configuration control after delivery; domestic assembly without lifecycle capability leaves strategic dependence. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Export-scale boundary. **Named evidence/example:** Defence exports can widen production runs, learning and diplomatic reach, but export value does not by itself prove indigenous design, imported-subsystem independence or lifecycle support quality. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Platform-status boundary. **Named evidence/example:** An indigenous programme, domestic production line, signed contract, delivered unit and operational service fleet are different claims; fighter, tank and submarine examples must preserve design origin and status. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary. **Claim:** Volatile-number boundary. **Named evidence/example:** Procurement values, delivery schedules,

indigenous-content percentages, positive-list counts, production totals and export totals require dated official sources and cannot be carried forward from headlines. **Analysis:** This fixes the scientific process, system boundary, institution, application and verified capability rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, unit, institution, system category, legal character and development-to-deployment status boundary.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism -> system/institution -> application/status -> risk/outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, date, actor, platform, approval/test/deployment rung and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains science rather than listing schemes, uses India-centric evidence and preserves technical, institutional, regulatory and maturity distinctions.

How to improve this answer: For "Assess Atmanirbhar defence through design control, technology absorption, lifecycle support...", replace the weakest catalogue point with one exact mechanism, named mission/institution/platform, dated status, measurable boundary, implementation constraint and answer-specific qualification.
