

SOLVED PRACTICE WORKBOOK

Wildlife Protection Act and Schedules - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Wildlife Protection Act and Schedules - Solved Practice Workbook 5

BASIC MCQS / REMEDIATION 5

Q1. Which statement correctly identifies Legal vintage first?	5
Q2. Which option preserves the ecological boundary of Legal vintage first?	5
Q3. Which statement uses Legal vintage first without changing its scale, parameter or status?	5
Q4. Which option avoids the standard UPSC close-option trap about Legal vintage first?	5
Q5. Which statement correctly identifies Six schedules to four?	6
Q6. Which option preserves the ecological boundary of Six schedules to four?	6
Q7. Which statement uses Six schedules to four without changing its scale, parameter or status?	6
Q8. Which option avoids the standard UPSC close-option trap about Six schedules to four?	6
Q9. Which statement correctly identifies Schedule I?	7
Q10. Which option preserves the ecological boundary of Schedule I?	7
Q11. Which statement uses Schedule I without changing its scale, parameter or status?	7
Q12. Which option avoids the standard UPSC close-option trap about Schedule I?	7
Q13. Which statement correctly identifies Schedule II?	8
Q14. Which option preserves the ecological boundary of Schedule II?	8
Q15. Which statement uses Schedule II without changing its scale, parameter or status?	8
Q16. Which option avoids the standard UPSC close-option trap about Schedule II?	8
Q17. Which statement correctly identifies Schedule III?	9
Q18. Which option preserves the ecological boundary of Schedule III?	9
Q19. Which statement uses Schedule III without changing its scale, parameter or status?	9
Q20. Which option avoids the standard UPSC close-option trap about Schedule III?	9
Q21. Which statement correctly identifies Schedule IV?	10
Q22. Which option preserves the ecological boundary of Schedule IV?	10
Q23. Which statement uses Schedule IV without changing its scale, parameter or status?	10
Q24. Which option avoids the standard UPSC close-option trap about Schedule IV?	10
Q25. Which statement correctly identifies Species placement discipline?	11
Q26. Which option preserves the ecological boundary of Species placement discipline?	11
Q27. Which statement uses Species placement discipline without changing its scale, parameter or status?	11

Q28. Which option avoids the standard UPSC close-option trap about Species placement discipline?	11
Q29. Which statement correctly identifies Vermin time point?	12
Q30. Which option preserves the ecological boundary of Vermin time point?	12
Q31. Which statement uses Vermin time point without changing its scale, parameter or status?	12
Q32. Which option avoids the standard UPSC close-option trap about Vermin time point?	12
Q33. Which statement correctly identifies Hunting prohibition?	13
Q34. Which option preserves the ecological boundary of Hunting prohibition?	13
Q35. Which statement uses Hunting prohibition without changing its scale, parameter or status?	13
Q36. Which option avoids the standard UPSC close-option trap about Hunting prohibition?	13
Q37. Which statement correctly identifies Permit and exception?	14
Q38. Which option preserves the ecological boundary of Permit and exception?	14
Q39. Which statement uses Permit and exception without changing its scale, parameter or status?	14
Q40. Which option avoids the standard UPSC close-option trap about Permit and exception?	14
Q41. Which statement correctly identifies Dangerous or beyond recovery route?	15
Q42. Which option preserves the ecological boundary of Dangerous or beyond recovery route?	15
Q43. Which statement uses Dangerous or beyond recovery route without changing its scale, parameter or status?	15
Q44. Which option avoids the standard UPSC close-option trap about Dangerous or beyond recovery route?	15
Q45. Which statement correctly identifies CITES Management Authority?	16
Q46. Which option preserves the ecological boundary of CITES Management Authority?	16
Q47. Which statement uses CITES Management Authority without changing its scale, parameter or status?	16
Q48. Which option avoids the standard UPSC close-option trap about CITES Management Authority?	16
Q49. Which statement correctly identifies CITES Scientific Authority?	17
Q50. Which option preserves the ecological boundary of CITES Scientific Authority?	17
Q51. Which statement uses CITES Scientific Authority without changing its scale, parameter or status?	17
Q52. Which option avoids the standard UPSC close-option trap about CITES Scientific Authority?	17
Q53. Which statement correctly identifies Chapter VB trade architecture?	18
Q54. Which option preserves the ecological boundary of Chapter VB trade architecture?	18
Q55. Which statement uses Chapter VB trade architecture without changing its scale, parameter or status?	18
Q56. Which option avoids the standard UPSC close-option trap about Chapter VB trade architecture?	18
Q57. Which statement correctly identifies Invasive alien species?	19
Q58. Which option preserves the ecological boundary of Invasive alien species?	19
Q59. Which statement uses Invasive alien species without changing its scale, parameter or status?	19

Q60. Which option avoids the standard UPSC close-option trap about Invasive alien species?	19
Q61. Which statement correctly identifies WCCB statutory role?	20
Q62. Which option preserves the ecological boundary of WCCB statutory role?	20
Q63. Which statement uses WCCB statutory role without changing its scale, parameter or status?	20
Q64. Which option avoids the standard UPSC close-option trap about WCCB statutory role?	20
Q65. Which statement correctly identifies State and Chief Wildlife Warden?	21
Q66. Which option preserves the ecological boundary of State and Chief Wildlife Warden?	21
Q67. Which statement uses State and Chief Wildlife Warden without changing its scale, parameter or status?	21
Q68. Which option avoids the standard UPSC close-option trap about State and Chief Wildlife Warden?	21
Q69. Which statement correctly identifies NBWL and NTCA?	22
Q70. Which option preserves the ecological boundary of NBWL and NTCA?	22
Q71. Which statement uses NBWL and NTCA without changing its scale, parameter or status?	22
Q72. Which option avoids the standard UPSC close-option trap about NBWL and NTCA?	22
Q73. Which statement correctly identifies Science, law and trade?	23
Q74. Which option preserves the ecological boundary of Science, law and trade?	23
Q75. Which statement uses Science, law and trade without changing its scale, parameter or status?	23
Q76. Which option avoids the standard UPSC close-option trap about Science, law and trade?	23
Q77. Which statement correctly identifies Audited PYQ vintage boundary?	24
Q78. Which option preserves the ecological boundary of Audited PYQ vintage boundary?	24
Q79. Which statement uses Audited PYQ vintage boundary without changing its scale, parameter or status?	24
Q80. Which option avoids the standard UPSC close-option trap about Audited PYQ vintage boundary?	24

Wildlife Protection Act and Schedules - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Legal vintage first?

A. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. B. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. C. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. D. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act.

Answer: A. Explanation: Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q2. Which option preserves the ecological boundary of Legal vintage first?

A. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. B. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. C. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. D. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.

Answer: B. Explanation: Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q3. Which statement uses Legal vintage first without changing its scale, parameter or status?

A. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. B. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. C. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. D. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act.

Answer: C. Explanation: Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q4. Which option avoids the standard UPSC close-option trap about Legal vintage first?

A. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. B. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. C. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. D. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act.

Answer: D. Explanation: Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q5. Which statement correctly identifies Six schedules to four?

A. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. B. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. C. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. D. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.

Answer: A. Explanation: The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q6. Which option preserves the ecological boundary of Six schedules to four?

A. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. B. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. C. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. D. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI.

Answer: B. Explanation: The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q7. Which statement uses Six schedules to four without changing its scale, parameter or status?

A. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. B. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. C. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. D. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification.

Answer: C. Explanation: The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q8. Which option avoids the standard UPSC close-option trap about Six schedules to four?

A. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. B. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. C. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. D. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point.

Answer: D. Explanation: The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q9. Which statement correctly identifies Schedule I?

A. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. B. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. C. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. D. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act.

Answer: A. Explanation: Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q10. Which option preserves the ecological boundary of Schedule I?

A. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. B. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. C. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. D. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI.

Answer: B. Explanation: Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q11. Which statement uses Schedule I without changing its scale, parameter or status?

A. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. B. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. C. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. D. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals.

Answer: C. Explanation: Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q12. Which option avoids the standard UPSC close-option trap about Schedule I?

A. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. B. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. C. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. D. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.

Answer: D. Explanation: Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q13. Which statement correctly identifies Schedule II?

A. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. B. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. C. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. D. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI.

Answer: A. Explanation: Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q14. Which option preserves the ecological boundary of Schedule II?

A. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. B. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. C. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. D. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals.

Answer: B. Explanation: Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q15. Which statement uses Schedule II without changing its scale, parameter or status?

A. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. B. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. C. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. D. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification.

Answer: C. Explanation: Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q16. Which option avoids the standard UPSC close-option trap about Schedule II?

A. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. B. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. C. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. D. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act.

Answer: D. Explanation: Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q17. Which statement correctly identifies Schedule III?

A. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. B. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. C. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. D. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals.

Answer: A. Explanation: Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q18. Which option preserves the ecological boundary of Schedule III?

A. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. B. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. C. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. D. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission.

Answer: B. Explanation: Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q19. Which statement uses Schedule III without changing its scale, parameter or status?

A. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. B. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. C. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. D. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary.

Answer: C. Explanation: Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q20. Which option avoids the standard UPSC close-option trap about Schedule III?

A. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. B. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. C. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. D. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI.

Answer: D. Explanation: Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q21. Which statement correctly identifies Schedule IV?

A. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. B. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. C. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. D. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals.

Answer: A. Explanation: Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q22. Which option preserves the ecological boundary of Schedule IV?

A. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. B. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. C. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. D. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary.

Answer: B. Explanation: Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q23. Which statement uses Schedule IV without changing its scale, parameter or status?

A. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. B. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. C. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. D. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary.

Answer: C. Explanation: Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q24. Which option avoids the standard UPSC close-option trap about Schedule IV?

A. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. B. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. C. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. D. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II.

Answer: D. Explanation: Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q25. Which statement correctly identifies Species placement discipline?

A. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. B. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. C. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. D. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals.

Answer: A. Explanation: Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q26. Which option preserves the ecological boundary of Species placement discipline?

A. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. B. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. C. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. D. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary.

Answer: B. Explanation: Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q27. Which statement uses Species placement discipline without changing its scale, parameter or status?

A. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. B. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. C. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. D. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.

Answer: C. Explanation: Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q28. Which option avoids the standard UPSC close-option trap about Species placement discipline?

A. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. B. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. C. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. D. Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification.

Answer: D. Explanation: Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q29. Which statement correctly identifies Vermin time point?

A. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. B. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. C. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. D. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision.

Answer: A. Explanation: The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q30. Which option preserves the ecological boundary of Vermin time point?

A. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. B. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. C. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. D. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.

Answer: B. Explanation: The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q31. Which statement uses Vermin time point without changing its scale, parameter or status?

A. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. B. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. C. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. D. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision.

Answer: C. Explanation: The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q32. Which option avoids the standard UPSC close-option trap about Vermin time point?

A. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. B. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. C. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. D. The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals.

Answer: D. Explanation: The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q33. Which statement correctly identifies Hunting prohibition?

A. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. B. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. C. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. D. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.

Answer: A. Explanation: The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q34. Which option preserves the ecological boundary of Hunting prohibition?

A. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. B. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. C. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. D. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.

Answer: B. Explanation: The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q35. Which statement uses Hunting prohibition without changing its scale, parameter or status?

A. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. B. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. C. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. D. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.

Answer: C. Explanation: The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q36. Which option avoids the standard UPSC close-option trap about Hunting prohibition?

A. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. B. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. C. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. D. The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission.

Answer: D. Explanation: The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q37. Which statement correctly identifies Permit and exception?

A. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. B. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. C. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. D. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority.

Answer: A. Explanation: Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q38. Which option preserves the ecological boundary of Permit and exception?

A. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. B. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. C. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. D. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.

Answer: B. Explanation: Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q39. Which statement uses Permit and exception without changing its scale, parameter or status?

A. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. B. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. C. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. D. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision.

Answer: C. Explanation: Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q40. Which option avoids the standard UPSC close-option trap about Permit and exception?

A. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. B. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. C. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. D. Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary.

Answer: D. Explanation: Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q41. Which statement correctly identifies Dangerous or beyond recovery route?

A. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. B. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. C. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. D. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.

Answer: A. Explanation: The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q42. Which option preserves the ecological boundary of Dangerous or beyond recovery route?

A. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. B. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. C. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. D. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority.

Answer: B. Explanation: The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q43. Which statement uses Dangerous or beyond recovery route without changing its scale, parameter or status?

A. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. B. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. C. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. D. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation.

Answer: C. Explanation: The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q44. Which option avoids the standard UPSC close-option trap about Dangerous or beyond recovery route?

A. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. B. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. C. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. D. The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision.

Answer: D. Explanation: The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q45. Which statement correctly identifies CITES Management Authority?

A. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. B. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. C. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. D. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery.

Answer: A. Explanation: The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q46. Which option preserves the ecological boundary of CITES Management Authority?

A. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. B. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. C. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. D. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision.

Answer: B. Explanation: The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q47. Which statement uses CITES Management Authority without changing its scale, parameter or status?

A. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. B. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. C. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. D. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation.

Answer: C. Explanation: The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q48. Which option avoids the standard UPSC close-option trap about CITES Management Authority?

A. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. B. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. C. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. D. The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.

Answer: D. Explanation: The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q49. Which statement correctly identifies CITES Scientific Authority?

A. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. B. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. C. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. D. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation.

Answer: A. Explanation: The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q50. Which option preserves the ecological boundary of CITES Scientific Authority?

A. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. B. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. C. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. D. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision.

Answer: B. Explanation: The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q51. Which statement uses CITES Scientific Authority without changing its scale, parameter or status?

A. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. B. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. C. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. D. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities.

Answer: C. Explanation: The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q52. Which option avoids the standard UPSC close-option trap about CITES Scientific Authority?

A. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. B. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. C. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. D. The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority.

Answer: D. Explanation: The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q53. Which statement correctly identifies Chapter VB trade architecture?

A. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. B. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. C. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. D. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation.

Answer: A. Explanation: The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q54. Which option preserves the ecological boundary of Chapter VB trade architecture?

A. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. B. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. C. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. D. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation.

Answer: B. Explanation: The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q55. Which statement uses Chapter VB trade architecture without changing its scale, parameter or status?

A. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. B. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. C. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. D. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities.

Answer: C. Explanation: The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q56. Which option avoids the standard UPSC close-option trap about Chapter VB trade architecture?

A. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. B. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. C. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. D. The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery.

Answer: D. Explanation: The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q57. Which statement correctly identifies Invasive alien species?

A. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. B. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. C. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. D. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation.

Answer: A. Explanation: The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q58. Which option preserves the ecological boundary of Invasive alien species?

A. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. B. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. C. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. D. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities.

Answer: B. Explanation: The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q59. Which statement uses Invasive alien species without changing its scale, parameter or status?

A. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. B. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. C. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. D. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct.

Answer: C. Explanation: The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q60. Which option avoids the standard UPSC close-option trap about Invasive alien species?

A. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. B. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. C. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. D. The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision.

Answer: D. Explanation: The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q61. Which statement correctly identifies WCCB statutory role?

A. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. B. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. C. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. D. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities.

Answer: A. Explanation: MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q62. Which option preserves the ecological boundary of WCCB statutory role?

A. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. B. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. C. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. D. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key.

Answer: B. Explanation: MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q63. Which statement uses WCCB statutory role without changing its scale, parameter or status?

A. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. B. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. C. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. D. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct.

Answer: C. Explanation: MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q64. Which option avoids the standard UPSC close-option trap about WCCB statutory role?

A. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. B. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. C. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. D. MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation.

Answer: D. Explanation: MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q65. Which statement correctly identifies State and Chief Wildlife Warden?

A. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. B. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. C. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. D. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct.

Answer: A. Explanation: State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q66. Which option preserves the ecological boundary of State and Chief Wildlife Warden?

A. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. B. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. C. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. D. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key.

Answer: B. Explanation: State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q67. Which statement uses State and Chief Wildlife Warden without changing its scale, parameter or status?

A. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. B. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. C. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. D. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key.

Answer: C. Explanation: State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q68. Which option avoids the standard UPSC close-option trap about State and Chief Wildlife Warden?

A. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. B. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. C. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. D. State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB.

Answer: D. Explanation: State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q69. Which statement correctly identifies NBWL and NTCA?

A. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. B. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. C. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. D. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct.

Answer: A. Explanation: NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q70. Which option preserves the ecological boundary of NBWL and NTCA?

A. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. B. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. C. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. D. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act.

Answer: B. Explanation: NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q71. Which statement uses NBWL and NTCA without changing its scale, parameter or status?

A. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. B. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. C. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. D. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.

Answer: C. Explanation: NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q72. Which option avoids the standard UPSC close-option trap about NBWL and NTCA?

A. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. B. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. C. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. D. NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities.

Answer: D. Explanation: NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q73. Which statement correctly identifies Science, law and trade?

A. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. B. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. C. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. D. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act.

Answer: A. Explanation: IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q74. Which option preserves the ecological boundary of Science, law and trade?

A. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. B. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. C. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. D. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.

Answer: B. Explanation: IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q75. Which statement uses Science, law and trade without changing its scale, parameter or status?

A. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. B. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. C. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. D. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act.

Answer: C. Explanation: IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q76. Which option avoids the standard UPSC close-option trap about Science, law and trade?

A. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. B. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. C. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. D. IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct.

Answer: D. Explanation: IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q77. Which statement correctly identifies Audited PYQ vintage boundary?

A. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. B. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. C. Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. D. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.

Answer: A. Explanation: Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q78. Which option preserves the ecological boundary of Audited PYQ vintage boundary?

A. The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. B. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. C. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. D. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act.

Answer: B. Explanation: Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q79. Which statement uses Audited PYQ vintage boundary without changing its scale, parameter or status?

A. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. B. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. C. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. D. Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.

Answer: C. Explanation: Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q80. Which option avoids the standard UPSC close-option trap about Audited PYQ vintage boundary?

A. Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. B. Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI. C. Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. D. Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key.

Answer: D. Explanation: Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

PYQS AND ANSWER PRACTICE

VERIFIED OBJECTIVE-ONLY PYQ OWNERSHIP AUDIT

Audited ledgers route the 2020 old Schedule VI plant demand, 2022 protected-animal provisions and 2024 Indian Flying Fox vermin framing. They remain answer-free objective demands. The package fixes the legal time point and does not infer a species placement, penalty, notification or option key.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: Recurring Prelims pattern: identify the correct number of schedules post-2022 and match the CITES-alignment feature to Schedule IV specifically.
- ANALYSIS: Mains linkage: the domestic-law-to-international-obligation alignment (Schedule IV/ CITES) is used to argue for coherent, enforceable wildlife-trade governance.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2024-2025.md. **Answer-key rule:** The official 2024-2025 Prelims Set-A keys are present in the repository and CSAT Set-A keys are supplied; even so, no option or answer is recorded or inferred in this integration.

- **Years represented:** 2024
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2024	Prelims GS-I	20	Indian Flying Fox 'vermin' category under the Wild Life (Protection) Act, 1972	Objective question; official Set-A key available locally, answer not inferred	Key available locally (official Set-A answer key present); answer not recorded here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Indian Flying Fox 'vermin' category under the Wild Life (Protection) Act, 1972

This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2018-2023.md. **Answer-key rule:** The official 2018-2023 Prelims/CSAT keys are not held locally; no option or answer has been inferred.

- **Years represented:** 2020, 2022
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 2

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2020	Prelims GS-I	81	Schedule VI Wildlife Protection Act plant species implications	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2022	Prelims GS-I	89	Indian wildlife protection laws and protected animal provisions	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Schedule VI Wildlife Protection Act plant species implications
- Indian wildlife protection laws and protected animal provisions

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

10. PYQ-based analytical application

- ANALYSIS: Prelims statement-based questions on the 2022 amendment typically test the schedule-count change and the CITES-alignment feature - apply the "four schedules, Schedule IV mirrors CITES" rule to eliminate incorrect options quickly.
- ANALYSIS: Mains answers should connect the 2022 amendment explicitly to India's CITES compliance narrative (Topic 09) and to enforcement-capacity critique, rather than describing it as an isolated domestic legal change.

ORIGINAL MAINS 1 - 10 MARKS

Question: Explain the post-2022 four-schedule structure. Answer in about 150 words.

Model thesis: Claim: Legal vintage first. **Named evidence/example:** Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Six schedules to four.

Named evidence/example: The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule I.

Named evidence/example: Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule II.

Named evidence/example: Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule III. **Named evidence/example:** Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Schedule IV. **Named evidence/example:** Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act.
- The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point.
- Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.
- Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act.
- Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI.
- Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II.

Qualified conclusion: Claim: Legal vintage first. **Named evidence/example:** Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Six schedules to four. **Named evidence/example:** The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule I.

Named evidence/example: Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule II.

Named evidence/example: Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule III. **Named evidence/example:** Post-2022 Schedule III is the specified plant schedule; it is not a third animal-protection tier and replaces the function of old Schedule VI.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Schedule IV. **Named evidence/example:** Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 2 - 10 MARKS

Question: Distinguish Schedule IV trade control from animal protection tiers. Answer in about 150 words.

Model thesis: **Claim:** Schedule I. **Named evidence/example:** Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule II. **Named evidence/example:** Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule IV. **Named evidence/example:** Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Science, law and trade. **Named evidence/example:** IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule.
- Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act.
- Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II.
- IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct.

Qualified conclusion: **Claim:** Schedule I. **Named evidence/example:** Under the post-2022 owner framework, Schedule I lists animals receiving the greatest degree of protection; no species placement is assumed without the current schedule. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule II. **Named evidence/example:** Schedule II lists animals receiving a lesser degree of protection than Schedule I, while still remaining protected under the Act. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Schedule IV. **Named evidence/example:** Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Science, law and trade. **Named evidence/example:** IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 3 - 15 MARKS

Question: Explain hunting prohibition and narrow statutory exceptions. Answer in about 250 words.

Model thesis: Claim: Hunting prohibition. **Named evidence/example:** The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Permit and exception. **Named evidence/example:** Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary. **Analysis:**

This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim

examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:**

Dangerous or beyond recovery route. **Named evidence/example:** The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on

schedule and provision. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem,

trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** State and Chief Wildlife Warden. **Named evidence/example:** State wildlife

departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their

jurisdiction must not be assigned to WCCB. **Analysis:** This identifies the ecological mechanism, system boundary,

state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary

rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission.
- Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary.
- The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision.
- State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB.

Qualified conclusion: Claim: Hunting prohibition. **Named evidence/example:** The Act's baseline is prohibition of hunting protected wild animals; a legal exception must be traced to its statutory condition, authority and written permission. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Permit and exception. **Named evidence/example:** Scientific, educational, collection or management purposes do not create a free-standing right to hunt; the applicable permit and statutory conditions remain necessary.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Dangerous or beyond recovery route. **Named evidence/example:** The owner records narrow action where an animal is dangerous to human life or disabled or diseased beyond recovery, with the competent authority depending on schedule and provision. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and

causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than

generalise beyond the owner. **Claim:** State and Chief Wildlife Warden. **Named evidence/example:** State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their

jurisdiction must not be assigned to WCCB. **Analysis:** This identifies the ecological mechanism, system boundary,

state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's

ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 4 - 15 MARKS

Question: Explain CITES alignment through Schedule IV and the two authorities. Answer in about 250 words.

Model thesis: **Claim:** Schedule IV. **Named evidence/example:** Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: CITES Management Authority. **Named evidence/example:** The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CITES

Scientific Authority. **Named evidence/example:** The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Chapter VB trade architecture. **Named evidence/example:** The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II.
- The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens.
- The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority.
- The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery.

Qualified conclusion: **Claim:** Schedule IV. **Named evidence/example:** Post-2022 Schedule IV covers CITES-listed scheduled specimens for international trade regulation; it is not a higher protection rung than Schedule I or II.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: CITES Management Authority. **Named evidence/example:** The post-2022 framework requires a Management Authority for permits and certificates in international trade in scheduled specimens. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CITES

Scientific Authority. **Named evidence/example:** The Scientific Authority advises on the conservation consequences of trade; it performs a different function from the permit-issuing Management Authority. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Chapter VB trade architecture. **Named evidence/example:** The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery. **Analysis:** This identifies the

ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 5 - 20 MARKS

Question: Assess the 2022 amendment as treaty-alignment and enforcement reform. Answer in about 300 words.

Model thesis: Claim: Six schedules to four. **Named evidence/example:** The Wildlife Protection Amendment Act 2022 restructured the earlier six schedules into four; an older PYQ may still test the law in force at its own time point.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Species placement discipline. **Named evidence/example:** Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Chapter VB trade architecture. **Named evidence/example:** The 2022 amendment inserted a dedicated international-trade chapter for scheduled specimens, translating CITES obligations into domestic legal machinery.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Invasive alien species. **Named evidence/example:** The amendment empowered the Central Government to regulate or prohibit the import, trade, possession or proliferation of invasive alien species under the applicable provision. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** WCCB statutory role. **Named evidence/example:** MoEFCC's retrievable page states that WCCB was constituted under section 38Y and lists section 38Z functions including intelligence, coordination, capacity and international cooperation. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** NBWL and NTCA. **Named evidence/example:** NBWL and NTCA exercise protected-area and tiger-specific roles under their respective provisions; they do not replace the Chief Wildlife Warden or CITES authorities. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 6 - 20 MARKS

Question: Why must wildlife-law answers be time-sensitive and jurisdiction-specific? Answer in about 300 words.

Model thesis: Claim: Legal vintage first. **Named evidence/example:** Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Species placement discipline. **Named evidence/example:** Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: Vermin time point. **Named evidence/example:** The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim: State and Chief Wildlife Warden. **Named evidence/example:** State wildlife departments and the Chief Wildlife Warden perform on-ground authorisation and enforcement functions; their jurisdiction must not be assigned to WCCB. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage,

taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Science, law and trade. **Named evidence/example:** IUCN category assesses extinction risk, Wildlife Protection Act schedules create domestic legal consequences, and CITES regulates international trade; the three systems are related but distinct. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Audited PYQ vintage boundary. **Named evidence/example:** Routed demands cover old Schedule VI plant implications, protected-animal provisions and a 2024 Indian Flying Fox vermin question; each must be answered at its legal time point without inferring an option key. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- Every answer must identify whether it uses the pre-2022 six-schedule structure or the post-2022 four-schedule structure of the Wildlife Protection Act.
- Exact species-to-schedule placement can change through the applicable legal process and must be checked against the current consolidated schedule or notification.
- The old Schedule V vermin list was omitted in 2022; the owner records a central notification route for a specified area and period and excludes Schedule I animals.
