

SOLVED PRACTICE WORKBOOK

Forest Governance CAMPA and Green India Mission - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Forest Governance CAMPA and Green India Mission - Solved Practice Workbook 5

BASIC MCQS / REMEDIATION 5

Q1. Which statement correctly identifies Diversion approval first?	5
Q2. Which option preserves the ecological boundary of Diversion approval first?	5
Q3. Which statement uses Diversion approval first without changing its scale, parameter or status?	5
Q4. Which option avoids the standard UPSC close-option trap about Diversion approval first?	6
Q5. Which statement correctly identifies CAMPA trigger?	6
Q6. Which option preserves the ecological boundary of CAMPA trigger?	6
Q7. Which statement uses CAMPA trigger without changing its scale, parameter or status?	6
Q8. Which option avoids the standard UPSC close-option trap about CAMPA trigger?	7
Q9. Which statement correctly identifies NPV distinction?	7
Q10. Which option preserves the ecological boundary of NPV distinction?	7
Q11. Which statement uses NPV distinction without changing its scale, parameter or status?	8
Q12. Which option avoids the standard UPSC close-option trap about NPV distinction?	8
Q13. Which statement correctly identifies CAF Act architecture?	8
Q14. Which option preserves the ecological boundary of CAF Act architecture?	8
Q15. Which statement uses CAF Act architecture without changing its scale, parameter or status?	9
Q16. Which option avoids the standard UPSC close-option trap about CAF Act architecture?	9
Q17. Which statement correctly identifies National authority boundary?	9
Q18. Which option preserves the ecological boundary of National authority boundary?	10
Q19. Which statement uses National authority boundary without changing its scale, parameter or status?	10
Q20. Which option avoids the standard UPSC close-option trap about National authority boundary?	10
Q21. Which statement correctly identifies State authority boundary?	11
Q22. Which option preserves the ecological boundary of State authority boundary?	11
Q23. Which statement uses State authority boundary without changing its scale, parameter or status?	11
Q24. Which option avoids the standard UPSC close-option trap about State authority boundary?	12
Q25. Which statement correctly identifies Fund-flow discipline?	12
Q26. Which option preserves the ecological boundary of Fund-flow discipline?	12
Q27. Which statement uses Fund-flow discipline without changing its scale, parameter or status?	12

Q28. Which option avoids the standard UPSC close-option trap about Fund-flow discipline?	13
Q29. Which statement correctly identifies Permitted-use boundary?	13
Q30. Which option preserves the ecological boundary of Permitted-use boundary?	13
Q31. Which statement uses Permitted-use boundary without changing its scale, parameter or status?	14
Q32. Which option avoids the standard UPSC close-option trap about Permitted-use boundary?	14
Q33. Which statement correctly identifies Compensation limit?	14
Q34. Which option preserves the ecological boundary of Compensation limit?	15
Q35. Which statement uses Compensation limit without changing its scale, parameter or status?	15
Q36. Which option avoids the standard UPSC close-option trap about Compensation limit?	15
Q37. Which statement correctly identifies Site and tenure due diligence?	16
Q38. Which option preserves the ecological boundary of Site and tenure due diligence?	16
Q39. Which statement uses Site and tenure due diligence without changing its scale, parameter or status?	16
Q40. Which option avoids the standard UPSC close-option trap about Site and tenure due diligence?	17
Q41. Which statement correctly identifies Output versus outcome?	17
Q42. Which option preserves the ecological boundary of Output versus outcome?	17
Q43. Which statement uses Output versus outcome without changing its scale, parameter or status?	18
Q44. Which option avoids the standard UPSC close-option trap about Output versus outcome?	18
Q45. Which statement correctly identifies GIM policy identity?	18
Q46. Which option preserves the ecological boundary of GIM policy identity?	19
Q47. Which statement uses GIM policy identity without changing its scale, parameter or status?	19
Q48. Which option avoids the standard UPSC close-option trap about GIM policy identity?	19
Q49. Which statement correctly identifies GIM official targets?	20
Q50. Which option preserves the ecological boundary of GIM official targets?	20
Q51. Which statement uses GIM official targets without changing its scale, parameter or status?	20
Q52. Which option avoids the standard UPSC close-option trap about GIM official targets?	21
Q53. Which statement correctly identifies GIM ecosystem scope?	21
Q54. Which option preserves the ecological boundary of GIM ecosystem scope?	21
Q55. Which statement uses GIM ecosystem scope without changing its scale, parameter or status?	22
Q56. Which option avoids the standard UPSC close-option trap about GIM ecosystem scope?	22
Q57. Which statement correctly identifies GIM convergence?	22
Q58. Which option preserves the ecological boundary of GIM convergence?	23
Q59. Which statement uses GIM convergence without changing its scale, parameter or status?	23

Q60. Which option avoids the standard UPSC close-option trap about GIM convergence?	23
Q61. Which statement correctly identifies Mission-versus-CAMPA?	23
Q62. Which option preserves the ecological boundary of Mission-versus-CAMPA?	24
Q63. Which statement uses Mission-versus-CAMPA without changing its scale, parameter or status?	24
Q64. Which option avoids the standard UPSC close-option trap about Mission-versus-CAMPA?	24
Q65. Which statement correctly identifies Forest-law vintage?	25
Q66. Which option preserves the ecological boundary of Forest-law vintage?	25
Q67. Which statement uses Forest-law vintage without changing its scale, parameter or status?	25
Q68. Which option avoids the standard UPSC close-option trap about Forest-law vintage?	25
Q69. Which statement correctly identifies Green-credit boundary?	26
Q70. Which option preserves the ecological boundary of Green-credit boundary?	26
Q71. Which statement uses Green-credit boundary without changing its scale, parameter or status?	26
Q72. Which option avoids the standard UPSC close-option trap about Green-credit boundary?	27
Q73. Which statement correctly identifies Audited PYQ ownership?	27
Q74. Which option preserves the ecological boundary of Audited PYQ ownership?	27
Q75. Which statement uses Audited PYQ ownership without changing its scale, parameter or status?	27
Q76. Which option avoids the standard UPSC close-option trap about Audited PYQ ownership?	28
Q77. Which statement correctly identifies Live-data boundary?	28
Q78. Which option preserves the ecological boundary of Live-data boundary?	28
Q79. Which statement uses Live-data boundary without changing its scale, parameter or status?	29
Q80. Which option avoids the standard UPSC close-option trap about Live-data boundary?	29

Forest Governance CAMPA and Green India Mission - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Diversion approval first?

A. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. B. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. C. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. D. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework.

Answer: A. Explanation: Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q2. Which option preserves the ecological boundary of Diversion approval first?

A. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. B. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. C. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. D. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical.

Answer: B. Explanation: Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q3. Which statement uses Diversion approval first without changing its scale, parameter or status?

A. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. B. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. C. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. D. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.

Answer: C. Explanation: Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q4. Which option avoids the standard UPSC close-option trap about Diversion approval first?

A. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. B. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. C. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. D. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance.

Answer: D. Explanation: Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q5. Which statement correctly identifies CAMPA trigger?

A. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. B. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. C. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. D. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.

Answer: A. Explanation: When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q6. Which option preserves the ecological boundary of CAMPA trigger?

A. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. B. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. C. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. D. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration.

Answer: B. Explanation: When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q7. Which statement uses CAMPA trigger without changing its scale, parameter or status?

A. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. B. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. C. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. D. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.

Answer: C. Explanation: When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q8. Which option avoids the standard UPSC close-option trap about CAMPA trigger?

A. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. B. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. C. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. D. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval.

Answer: D. Explanation: When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q9. Which statement correctly identifies NPV distinction?

A. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. B. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. C. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. D. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.

Answer: A. Explanation: Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q10. Which option preserves the ecological boundary of NPV distinction?

A. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. B. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. C. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. D. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.

Answer: B. Explanation: Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q11. Which statement uses NPV distinction without changing its scale, parameter or status?

A. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. B. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. C. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. D. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage.

Answer: C. Explanation: Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q12. Which option avoids the standard UPSC close-option trap about NPV distinction?

A. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. B. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. C. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. D. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical.

Answer: D. Explanation: Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q13. Which statement correctly identifies CAF Act architecture?

A. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. B. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. C. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. D. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.

Answer: A. Explanation: The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q14. Which option preserves the ecological boundary of CAF Act architecture?

A. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. B. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. C. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. D. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage.

Answer: B. Explanation: The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q15. Which statement uses CAF Act architecture without changing its scale, parameter or status?

A. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. B. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. C. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. D. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record.

Answer: C. Explanation: The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q16. Which option avoids the standard UPSC close-option trap about CAF Act architecture?

A. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. B. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. C. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. D. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework.

Answer: D. Explanation: The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q17. Which statement correctly identifies National authority boundary?

A. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. B. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. C. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. D. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration.

Answer: A. Explanation: The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q18. Which option preserves the ecological boundary of National authority boundary?

A. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. B. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. C. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. D. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage.

Answer: B. Explanation: The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q19. Which statement uses National authority boundary without changing its scale, parameter or status?

A. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. B. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. C. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. D. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record.

Answer: C. Explanation: The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q20. Which option avoids the standard UPSC close-option trap about National authority boundary?

A. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. B. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. C. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. D. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.

Answer: D. Explanation: The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q21. Which statement correctly identifies State authority boundary?

A. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. B. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. C. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. D. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage.

Answer: A. Explanation: State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q22. Which option preserves the ecological boundary of State authority boundary?

A. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. B. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. C. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. D. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence.

Answer: B. Explanation: State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q23. Which statement uses State authority boundary without changing its scale, parameter or status?

A. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. B. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. C. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. D. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty.

Answer: C. Explanation: State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q24. Which option avoids the standard UPSC close-option trap about State authority boundary?

A. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. B. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. C. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. D. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration.

Answer: D. Explanation: State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q25. Which statement correctly identifies Fund-flow discipline?

A. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. B. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. C. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. D. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence.

Answer: A. Explanation: An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q26. Which option preserves the ecological boundary of Fund-flow discipline?

A. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. B. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. C. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. D. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence.

Answer: B. Explanation: An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q27. Which statement uses Fund-flow discipline without changing its scale, parameter or status?

A. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. B. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. C. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. D. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence.

Answer: C. Explanation: An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q28. Which option avoids the standard UPSC close-option trap about Fund-flow discipline?

A. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. B. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. C. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. D. An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage.

Answer: D. Explanation: An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q29. Which statement correctly identifies Permitted-use boundary?

A. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. B. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. C. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. D. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence.

Answer: A. Explanation: CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q30. Which option preserves the ecological boundary of Permitted-use boundary?

A. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. B. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. C. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. D. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute.

Answer: B. Explanation: CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q31. Which statement uses Permitted-use boundary without changing its scale, parameter or status?

A. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. B. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. C. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. D. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute.

Answer: C. Explanation: CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q32. Which option avoids the standard UPSC close-option trap about Permitted-use boundary?

A. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. B. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. C. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. D. CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record.

Answer: D. Explanation: CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q33. Which statement correctly identifies Compensation limit?

A. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. B. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. C. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. D. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty.

Answer: A. Explanation: A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q34. Which option preserves the ecological boundary of Compensation limit?

A. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. B. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. C. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. D. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute.

Answer: B. Explanation: A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q35. Which statement uses Compensation limit without changing its scale, parameter or status?

A. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. B. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. C. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. D. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel.

Answer: C. Explanation: A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q36. Which option avoids the standard UPSC close-option trap about Compensation limit?

A. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. B. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. C. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. D. A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence.

Answer: D. Explanation: A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q37. Which statement correctly identifies Site and tenure due diligence?

A. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. B. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. C. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. D. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute.

Answer: A. Explanation: Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q38. Which option preserves the ecological boundary of Site and tenure due diligence?

A. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. B. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. C. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. D. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements.

Answer: B. Explanation: Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q39. Which statement uses Site and tenure due diligence without changing its scale, parameter or status?

A. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. B. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. C. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. D. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements.

Answer: C. Explanation: Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q40. Which option avoids the standard UPSC close-option trap about Site and tenure due diligence?

A. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. B. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. C. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. D. Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty.

Answer: D. Explanation: Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q41. Which statement correctly identifies Output versus outcome?

A. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. B. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. C. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. D. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements.

Answer: A. Explanation: Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q42. Which option preserves the ecological boundary of Output versus outcome?

A. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. B. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. C. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. D. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements.

Answer: B. Explanation: Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q43. Which statement uses Output versus outcome without changing its scale, parameter or status?

A. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. B. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. C. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. D. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation.

Answer: C. Explanation: Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q44. Which option avoids the standard UPSC close-option trap about Output versus outcome?

A. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. B. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. C. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. D. Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence.

Answer: D. Explanation: Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q45. Which statement correctly identifies GIM policy identity?

A. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. B. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. C. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. D. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel.

Answer: A. Explanation: The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q46. Which option preserves the ecological boundary of GIM policy identity?

A. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. B. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. C. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. D. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation.

Answer: B. Explanation: The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q47. Which statement uses GIM policy identity without changing its scale, parameter or status?

A. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. B. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. C. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. D. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together.

Answer: C. Explanation: The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q48. Which option avoids the standard UPSC close-option trap about GIM policy identity?

A. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. B. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. C. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. D. The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute.

Answer: D. Explanation: The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q49. Which statement correctly identifies GIM official targets?

A. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. B. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. C. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. D. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel.

Answer: A. Explanation: The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q50. Which option preserves the ecological boundary of GIM official targets?

A. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. B. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. C. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. D. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation.

Answer: B. Explanation: The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q51. Which statement uses GIM official targets without changing its scale, parameter or status?

A. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. B. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. C. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. D. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together.

Answer: C. Explanation: The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q52. Which option avoids the standard UPSC close-option trap about GIM official targets?

A. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. B. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. C. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. D. The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements.

Answer: D. Explanation: The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q53. Which statement correctly identifies GIM ecosystem scope?

A. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. B. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. C. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. D. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme.

Answer: A. Explanation: The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q54. Which option preserves the ecological boundary of GIM ecosystem scope?

A. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. B. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. C. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. D. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme.

Answer: B. Explanation: The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q55. Which statement uses GIM ecosystem scope without changing its scale, parameter or status?

A. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. B. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. C. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. D. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together.

Answer: C. Explanation: The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q56. Which option avoids the standard UPSC close-option trap about GIM ecosystem scope?

A. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. B. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. C. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. D. The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel.

Answer: D. Explanation: The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q57. Which statement correctly identifies GIM convergence?

A. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. B. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. C. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. D. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme.

Answer: A. Explanation: MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q58. Which option preserves the ecological boundary of GIM convergence?

A. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. B. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. C. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. D. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred.

Answer: B. Explanation: MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q59. Which statement uses GIM convergence without changing its scale, parameter or status?

A. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. B. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. C. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. D. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred.

Answer: C. Explanation: MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q60. Which option avoids the standard UPSC close-option trap about GIM convergence?

A. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. B. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. C. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. D. MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation.

Answer: D. Explanation: MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q61. Which statement correctly identifies Mission-versus-CAMPA?

A. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. B. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. C. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. D. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate.

Answer: A. Explanation: CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q62. Which option preserves the ecological boundary of Mission-versus-CAMPA?

A. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. B. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. C. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. D. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred.

Answer: B. Explanation: CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q63. Which statement uses Mission-versus-CAMPA without changing its scale, parameter or status?

A. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. B. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. C. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. D. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance.

Answer: C. Explanation: CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q64. Which option avoids the standard UPSC close-option trap about Mission-versus-CAMPA?

A. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. B. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. C. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. D. CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme.

Answer: D. Explanation: CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q65. Which statement correctly identifies Forest-law vintage?

A. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. B. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. C. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. D. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred.

Answer: A. Explanation: The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q66. Which option preserves the ecological boundary of Forest-law vintage?

A. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. B. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. C. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. D. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred.

Answer: B. Explanation: The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q67. Which statement uses Forest-law vintage without changing its scale, parameter or status?

A. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. B. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. C. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. D. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval.

Answer: C. Explanation: The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q68. Which option avoids the standard UPSC close-option trap about Forest-law vintage?

A. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. B. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. C. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. D. The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records;

both must be stated together.

Answer: D. Explanation: The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q69. Which statement correctly identifies Green-credit boundary?

A. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. B. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. C. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. D. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted.

Answer: A. Explanation: A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q70. Which option preserves the ecological boundary of Green-credit boundary?

A. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. B. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. C. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. D. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval.

Answer: B. Explanation: A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q71. Which statement uses Green-credit boundary without changing its scale, parameter or status?

A. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. B. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. C. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. D. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical.

Answer: C. Explanation: A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q72. Which option avoids the standard UPSC close-option trap about Green-credit boundary?

A. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. B. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. C. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. D. A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate.

Answer: D. Explanation: A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q73. Which statement correctly identifies Audited PYQ ownership?

A. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. B. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. C. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. D. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval.

Answer: A. Explanation: Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q74. Which option preserves the ecological boundary of Audited PYQ ownership?

A. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. B. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. C. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. D. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance.

Answer: B. Explanation: Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q75. Which statement uses Audited PYQ ownership without changing its scale, parameter or status?

A. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. B. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. C. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. D. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical.

Answer: C. Explanation: Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q76. Which option avoids the standard UPSC close-option trap about Audited PYQ ownership?

A. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. B. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. C. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. D. Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred.

Answer: D. Explanation: Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q77. Which statement correctly identifies Live-data boundary?

A. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. B. Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. C. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. D. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval.

Answer: A. Explanation: Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q78. Which option preserves the ecological boundary of Live-data boundary?

A. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. B. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. C. When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. D. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical.

Answer: B. Explanation: Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q79. Which statement uses Live-data boundary without changing its scale, parameter or status?

A. Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. B. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. C. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. D. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.

Answer: C. Explanation: Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q80. Which option avoids the standard UPSC close-option trap about Live-data boundary?

A. State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. B. The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. C. The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. D. Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted.

Answer: D. Explanation: Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

PYQS AND ANSWER PRACTICE

AUDITED CAMPA, FOREST-POLICY AND COMMUNITY-CARBON PYQ OWNERSHIP

Audited ledgers route four objective demands: CAMPA in 2019, the New York Declaration on Forests and Tree City in 2021, and provisional 2026 Plan Vivo community forest carbon. No direct Mains demand or objective answer key is invented; the concepts are carried into practice.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: Recurring Prelims pattern: distinguish CAMPA's diversion-triggered, compensatory funding logic from the Green India Mission's broader climate-policy mandate.
- ANALYSIS: Mains linkage: CAMPA fund utilisation and quality-of-restoration critiques are used to argue for stronger monitoring of afforestation outcomes rather than a focus on quantity planted alone.

2026 PYQ Integration

Status: 2026 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2026.md. **Answer-key rule:** The 2026 Prelims and CSAT Set-A keys held locally are **provisional**; no option or answer is recorded or inferred in this integration.

- **Year represented:** 2026
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2026	Prelims GS-I	40	Plan Vivo certified REDD+ projects and community forest carbon conservation	Objective question; provisional 2026 Set-A key present locally, answer not inferred	Provisional 2026 Set-A key present locally (Ans - 2026 - GS1 - Provisional); key is provisional - no answer letter recorded or inferred here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Plan Vivo certified REDD+ projects and community forest carbon conservation

This block integrates the 2026 examinable demand and paper metadata. It is kept separate from the 2018-2023 and 2024-2025 blocks and does not convert a provisionally-keyed, answer-free objective question into a solved answer.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2018-2023.md. **Answer-key rule:** The official 2018-2023 Prelims/CSAT keys are not held locally; no option or answer has been inferred.

- **Years represented:** 2019, 2021
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 3

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2019	Prelims GS-I	68	Compensatory Afforestation Fund Management Planning Authority	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2021	Prelims GS-I	24	New York Declaration on Forests and deforestation	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2021	Prelims GS-I	97	Hyderabad recognition as Tree City of the World	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Compensatory Afforestation Fund Management Planning Authority
- New York Declaration on Forests and deforestation
- Hyderabad recognition as Tree City of the World

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

10. PYQ-based analytical application

- **ANALYSIS:** Prelims questions on CAMPA typically test the National/State CAF share-split logic and the NPV/compensatory-afforestation-cost payment trigger - apply these mechanics directly.
- **ANALYSIS:** Mains answers on "forest restoration policy" should explicitly engage the ecological-commensurability critique (Section 1) and the fund-utilisation-gap critique (Section 2) together, rather than describing CAMPA/GIM only descriptively.

ORIGINAL MAINS 1 - 10 MARKS

Question: Explain the sequence from forest-diversion approval to compensatory payments. Answer in about 150 words.

Model thesis: **Claim:** Diversion approval first. **Named evidence/example:** Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CAMPA trigger. **Named evidence/example:** When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** NPV distinction. **Named evidence/example:** Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance.
- When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval.
- Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical.

Qualified conclusion: **Claim:** Diversion approval first. **Named evidence/example:** Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CAMPA trigger. **Named evidence/example:** When an approved diversion carries compensatory conditions, the user agency pays the applicable compensatory-afforestation cost and Net Present Value; a fund flow does not itself grant diversion approval. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** NPV distinction. **Named evidence/example:** Net Present Value monetises specified foregone forest ecosystem services for the approval framework, while compensatory-afforestation cost finances plantation or restoration activity; the two payments are related but not identical. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 2 - 10 MARKS

Question: Distinguish the National and State Compensatory Afforestation Fund authorities. Answer in about 150 words.

Model thesis: **Claim:** CAF Act architecture. **Named evidence/example:** The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** National authority boundary. **Named evidence/example:** The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** State authority boundary. **Named evidence/example:** State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Fund-flow discipline. **Named evidence/example:** An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework.
- The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans.
- State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration.
- An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage.

Qualified conclusion: **Claim:** CAF Act architecture. **Named evidence/example:** The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** National authority boundary. **Named evidence/example:** The National Authority and National Fund perform central planning, coordination, monitoring and nationally assigned functions; they do not replace State Authorities as the ordinary executors of state plans. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** State authority boundary. **Named evidence/example:** State Authorities prepare and implement the applicable annual plans and use State Fund resources for permitted activities; a release or approved plan is not proof of completed ecological restoration. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Fund-flow discipline. **Named evidence/example:** An answer must trace user agency payment to the

applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 3 - 15 MARKS

Question: Explain why CAMPA performance must be tracked from accrual through ecological outcome. Answer in about 250 words.

Model thesis: **Claim:** Fund-flow discipline. **Named evidence/example:** An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Permitted-use boundary. **Named evidence/example:** CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Output versus outcome. **Named evidence/example:** Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Live-data boundary. **Named evidence/example:** Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage.
- CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record.
- Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence.
- Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted.

Qualified conclusion: **Claim:** Fund-flow discipline. **Named evidence/example:** An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Permitted-use boundary. **Named evidence/example:** CAMPA monies may support compensatory afforestation and other permitted forest, wildlife, regeneration, protection or infrastructure activities under the Act and Rules; no allocation or expenditure value is assumed without the dated record. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's

ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Output versus outcome. **Named evidence/example:** Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Live-data boundary. **Named evidence/example:** Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 4 - 15 MARKS

Question: Distinguish Green India Mission from CAMPA and classify the official GIM targets correctly. Answer in about 250 words.

Model thesis: Claim: GIM policy identity. **Named evidence/example:** The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM official targets. **Named evidence/example:** The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM ecosystem scope. **Named evidence/example:** The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM convergence. **Named evidence/example:** MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Mission-versus-CAMPA. **Named evidence/example:** CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute.
- The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements.

- The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel.
- MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation.
- CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme.

Qualified conclusion: Claim: GIM policy identity. **Named evidence/example:** The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM official targets. **Named evidence/example:** The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM ecosystem scope. **Named evidence/example:** The official page emphasises biodiversity, water, biomass, mangroves, wetlands, critical habitats, carbon storage, agroforestry, social forestry and urban or peri-urban tree cover; GIM is broader than compensating one diverted parcel. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM convergence. **Named evidence/example:** MoEFCC describes convergence with CAMPA and MGNREGS and a role for local communities; convergence is a planning approach, not automatic pooling of every fund or proof of implementation. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Mission-versus-CAMPA. **Named evidence/example:** CAMPA is diversion-triggered statutory compensation finance, whereas GIM is a broader mission with ecosystem-service objectives and multiple implementation channels; overlap in activity does not make them one programme. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 5 - 20 MARKS

Question: Critically examine the ecological equivalence and tenure assumptions in compensatory afforestation. Answer in about 300 words.

Model thesis: Claim: Compensation limit. **Named evidence/example:** A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Site and tenure due diligence. **Named evidence/example:** Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Output versus outcome. **Named evidence/example:**

Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Green-credit boundary. **Named evidence/example:** A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence.
- Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty.
- Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence.
- A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate.

Qualified conclusion: Claim: Compensation limit. **Named evidence/example:** A plantation cannot reproduce the structure, species composition, soil history, spatial location and accumulated services of a mature natural forest within the project accounting period; finance mitigates loss but does not prove ecological equivalence. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Site and tenure due diligence. **Named evidence/example:** Compensatory-afforestation land must be checked for ecological suitability, native-biome fidelity, existing use and recognised or pending forest rights; describing land as degraded does not make it rights-free or ecologically empty. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Output versus outcome. **Named evidence/example:** Money accrued, money spent, seedlings planted, area treated, canopy detected and ecosystem function restored are different metrics; none can be substituted for the next without monitoring evidence. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Green-credit boundary. **Named evidence/example:** A green credit for an eligible environmental action is not a carbon credit and is not proof that a diverted mature ecosystem has been replaced; action registration, carbon accounting and ecological outcome are separate. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

ORIGINAL MAINS 6 - 20 MARKS

Question: Build a current forest-governance answer integrating law, CAMPA, GIM and evidence limits. Answer in about 300 words.

Model thesis: Claim: Diversion approval first. **Named evidence/example:** Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CAF Act architecture. **Named evidence/example:** The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Fund-flow discipline. **Named evidence/example:** An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM policy identity. **Named evidence/example:** The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM official targets. **Named evidence/example:** The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Forest-law vintage. **Named evidence/example:** The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Audited PYQ ownership. **Named evidence/example:** Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Live-data boundary. **Named evidence/example:** Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance.

- The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework.
- An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage.
- The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute.
- The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements.
- The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together.
- Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred.
- Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted.

Qualified conclusion: Claim: Diversion approval first. **Named evidence/example:** Prior Central approval for specified non-forest use of covered forest land belongs to the forest-conservation statute; approval, rejection or exemption is a legal decision distinct from later compensatory-afforestation finance. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CAF Act architecture. **Named evidence/example:** The Compensatory Afforestation Fund Act, 2016 establishes National and State Compensatory Afforestation Funds and their authorities for receiving and using eligible monies under the statutory framework. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Fund-flow discipline. **Named evidence/example:** An answer must trace user agency payment to the applicable fund, authority, approved plan, release, expenditure, physical output and ecological outcome; each is a separate accounting or performance stage. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM policy identity. **Named evidence/example:** The Green India Mission is one of the original eight missions under the National Action Plan on Climate Change and combines adaptation and mitigation through forest and ecosystem restoration; it is not the CAMPA statute. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** GIM official targets. **Named evidence/example:** The retrieved MoEFCC page publishes mission targets of increasing forest or tree cover over 5 million hectares, improving quality over another 5 million hectares and enhancing forest-based livelihood income for about 3 million families; these are targets, not verified achievements. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Forest-law vintage. **Named evidence/example:** The Forest Conservation Amendment Act, 2023 renamed and altered the scope of the 1980 statute, while the Supreme Court's February 2024 interim direction preserved the broader Godavarman forest meaning pending State records; both must be stated together. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Audited PYQ ownership. **Named evidence/example:** Audited ledgers route 2019 CAMPA, 2021 New York Declaration on Forests, 2021 Tree City and provisional 2026 Plan Vivo community-carbon demands to Topic 12; no objective key is inferred.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Live-data boundary. **Named evidence/example:** Official CAMPA pages attempted on 2026-09-03 yielded HTTP 404 or DNS failure and the FSI page was a contact-only stub, so no fund, allocation, expenditure, afforestation-area, survival or outcome figure is asserted. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.
