PYQS AND ANSWER PRACTICE

AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

The three cards use exact V1 prompt wording from 2024-2025 and provide method-focused decoding only. No official model answer, author or unique canonical interpretation is claimed.

PYQ DEMAND CARD 1 - 2024-A3 Essay

Demand: There is no path to happiness, Happiness is the path.

Status: Exact V1 wording, including the printed comma and capitalised second Happiness.

Model solution: **Content-word inventory:** Decoding begins by identifying every content word and stating its plain meaning before extending the sentence. **Relation or operator:** The prompt's operative relation may be causal, comparative, conditional, definitional, paradoxical or process-versus-outcome. **Literal layer:** The literal layer records what the sentence says before metaphorical extension and prevents the essay from losing textual contact. **Operative tension:** A usable decoding names the opposition or double pull inside the whole sentence, rather than writing generally on one keyword. **Hidden assumption:** A compressed proposition normally relies on an unstated premise that must be surfaced and tested before becoming a thesis. **Exception:** Universal wording is usually handled as a strong tendency with a defensible exception, not as an absolute law or an empty truism. **Thesis alternatives:** Drafting two or three possible theses exposes interpretive choice and prevents premature commitment to the first metaphorical association. **Printing-defect firewall:** Reproduce a V1 prompt as printed but interpret its evident sense; a typographical defect is not a secret philosophical signal. This is a method-focused decoding or application card, not an official UPSC model answer and not a claim that only one interpretation is valid.

PYQ DEMAND CARD 2 - 2025-B5 Essay

Demand: Muddy water is best cleared by leaving it alone.

Status: Exact V1 wording; the card decodes restraint versus intervention without claiming one official reading.

Model solution: **Literal layer:** The literal layer records what the sentence says before metaphorical extension and prevents the essay from losing textual contact. **Metaphorical layer:** A metaphor-carrying aphorism requires separating the image or vehicle from the idea or tenor it is used to illuminate. **Operative tension:** A usable decoding names the opposition or double pull inside the whole sentence, rather than writing generally on one keyword. **Scope:** The interpretation should state whether the claim operates at individual, institutional, state, global or civilisational scale and where it does not. **Counter-reading:** A serious alternative reading tests whether the preferred interpretation is textually faithful and more generative than its rival. **Mechanism:** The decoded relation needs a conceptual or causal mechanism explaining how one term bears on the other. **Counterexamples:** A counterexample identifies a limit or condition and should qualify the claim without replacing it with the opposite thesis. This is a method-focused decoding or application card, not an official UPSC model answer and not a claim that only one interpretation is valid.

PYQ DEMAND CARD 3 - 2024-B6 Essay

Demand: Nearly all men can stand adversity, but to test the character, give him power.

Status: Exact V1 wording; no author is attached because the paper prints none.

Model solution: **Free-standing proposition:** An unattributed philosophical prompt is treated as a proposition to interpret on its own words, not as a quotation-recall test. **Relation or operator:** The prompt's operative relation may be causal, comparative, conditional, definitional, paradoxical or process-versus-outcome. **Normative layer:** The normative layer asks what value, standard, duty or conception of a good life the proposition appears to affirm or question. **Operative tension:** A usable decoding names the opposition or double pull inside the whole sentence, rather than writing generally on one keyword. **Hidden assumption:** A compressed proposition normally relies on an unstated premise that must be surfaced and tested before becoming a thesis. **Exception:** Universal wording is usually handled as a strong tendency with a defensible exception, not as an absolute law or an empty truism. **Scale test:** A reading should be tested across scales and retained only where the prompt's own language can sustain the extension. **Attribution firewall:** Do not invent author attribution, a source text or intellectual biography when the paper prints none; prompt wording is sufficient warrant. This is a method-focused decoding or application card, not an official UPSC model answer and not a claim that only one interpretation is valid.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish literal, metaphorical and normative layers in philosophical prompts. Answer in about 150 words.

Model thesis: **Claim:** Literal layer. **Named evidence/example:** The literal layer records what the sentence says before metaphorical extension and prevents the essay from losing textual contact. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Metaphorical layer. **Named evidence/example:** A metaphor-carrying aphorism requires separating the image or vehicle from the idea or tenor it is used to illuminate. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Normative layer. **Named evidence/example:** The normative layer asks what value, standard, duty or conception of a good life the proposition appears to affirm or question. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.
