

SOLVED PRACTICE WORKBOOK

Brainstorming and Dimensional Expansion - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Brainstorming and Dimensional Expansion - Solved Practice Workbook 5

BASIC MCQS / REMEDIATION 5

Q1. Which option applies Divergent pass as an Essay-method distinction?	5
Q2. Which use of Divergent pass stays closest to the printed prompt?	5
Q3. Which statement preserves the strategy-versus-official-rule boundary for Divergent pass?	5
Q4. Which option avoids the standard Essay-method trap about Divergent pass?	5
Q5. Which option applies Actor axis as an Essay-method distinction?	6
Q6. Which use of Actor axis stays closest to the printed prompt?	6
Q7. Which statement preserves the strategy-versus-official-rule boundary for Actor axis?	6
Q8. Which option avoids the standard Essay-method trap about Actor axis?	6
Q9. Which option applies Scale axis as an Essay-method distinction?	6
Q10. Which use of Scale axis stays closest to the printed prompt?	7
Q11. Which statement preserves the strategy-versus-official-rule boundary for Scale axis?	7
Q12. Which option avoids the standard Essay-method trap about Scale axis?	7
Q13. Which option applies Time axis as an Essay-method distinction?	7
Q14. Which use of Time axis stays closest to the printed prompt?	7
Q15. Which statement preserves the strategy-versus-official-rule boundary for Time axis?	8
Q16. Which option avoids the standard Essay-method trap about Time axis?	8
Q17. Which option applies Domain axis as an Essay-method distinction?	8
Q18. Which use of Domain axis stays closest to the printed prompt?	8
Q19. Which statement preserves the strategy-versus-official-rule boundary for Domain axis?	8
Q20. Which option avoids the standard Essay-method trap about Domain axis?	9
Q21. Which option applies Causality axis as an Essay-method distinction?	9
Q22. Which use of Causality axis stays closest to the printed prompt?	9
Q23. Which statement preserves the strategy-versus-official-rule boundary for Causality axis?	9
Q24. Which option avoids the standard Essay-method trap about Causality axis?	9
Q25. Which option applies Distribution axis as an Essay-method distinction?	10
Q26. Which use of Distribution axis stays closest to the printed prompt?	10
Q27. Which statement preserves the strategy-versus-official-rule boundary for Distribution axis?	10

Q28. Which option avoids the standard Essay-method trap about Distribution axis?	10
Q29. Which option applies Direction axis as an Essay-method distinction?	10
Q30. Which use of Direction axis stays closest to the printed prompt?	11
Q31. Which statement preserves the strategy-versus-official-rule boundary for Direction axis?	11
Q32. Which option avoids the standard Essay-method trap about Direction axis?	11
Q33. Which option applies PESTLE boundary as an Essay-method distinction?	11
Q34. Which use of PESTLE boundary stays closest to the printed prompt?	11
Q35. Which statement preserves the strategy-versus-official-rule boundary for PESTLE boundary?	12
Q36. Which option avoids the standard Essay-method trap about PESTLE boundary?	12
Q37. Which option applies Cause-impact-response boundary as an Essay-method distinction?	12
Q38. Which use of Cause-impact-response boundary stays closest to the printed prompt?	12
Q39. Which statement preserves the strategy-versus-official-rule boundary for Cause-impact-response boundary?	12
Q40. Which option avoids the standard Essay-method trap about Cause-impact-response boundary?	13
Q41. Which option applies Value-institution-technology-environment pass as an Essay-method distinction?	13
Q42. Which use of Value-institution-technology-environment pass stays closest to the printed prompt?	13
Q43. Which statement preserves the strategy-versus-official-rule boundary for Value-institution-technology-environment pass?	13
Q44. Which option avoids the standard Essay-method trap about Value-institution-technology-environment pass?	14
Q45. Which option applies One-line claim test as an Essay-method distinction?	14
Q46. Which use of One-line claim test stays closest to the printed prompt?	14
Q47. Which statement preserves the strategy-versus-official-rule boundary for One-line claim test?	14
Q48. Which option avoids the standard Essay-method trap about One-line claim test?	14
Q49. Which option applies Mechanism test as an Essay-method distinction?	15
Q50. Which use of Mechanism test stays closest to the printed prompt?	15
Q51. Which statement preserves the strategy-versus-official-rule boundary for Mechanism test?	15
Q52. Which option avoids the standard Essay-method trap about Mechanism test?	15
Q53. Which option applies Evidence map as an Essay-method distinction?	15
Q54. Which use of Evidence map stays closest to the printed prompt?	16
Q55. Which statement preserves the strategy-versus-official-rule boundary for Evidence map?	16
Q56. Which option avoids the standard Essay-method trap about Evidence map?	16
Q57. Which option applies Limit map as an Essay-method distinction?	16
Q58. Which use of Limit map stays closest to the printed prompt?	16
Q59. Which statement preserves the strategy-versus-official-rule boundary for Limit map?	17

Q60. Which option avoids the standard Essay-method trap about Limit map?	17
Q61. Which option applies Prioritisation as an Essay-method distinction?	17
Q62. Which use of Prioritisation stays closest to the printed prompt?	17
Q63. Which statement preserves the strategy-versus-official-rule boundary for Prioritisation?	17
Q64. Which option avoids the standard Essay-method trap about Prioritisation?	18
Q65. Which option applies Clustering as an Essay-method distinction?	18
Q66. Which use of Clustering stays closest to the printed prompt?	18
Q67. Which statement preserves the strategy-versus-official-rule boundary for Clustering?	18
Q68. Which option avoids the standard Essay-method trap about Clustering?	18
Q69. Which option applies Redundancy removal as an Essay-method distinction?	19
Q70. Which use of Redundancy removal stays closest to the printed prompt?	19
Q71. Which statement preserves the strategy-versus-official-rule boundary for Redundancy removal?	19
Q72. Which option avoids the standard Essay-method trap about Redundancy removal?	19
Q73. Which option applies Convergent pass as an Essay-method distinction?	19
Q74. Which use of Convergent pass stays closest to the printed prompt?	20
Q75. Which statement preserves the strategy-versus-official-rule boundary for Convergent pass?	20
Q76. Which option avoids the standard Essay-method trap about Convergent pass?	20
Q77. Which option applies Argument sequence as an Essay-method distinction?	20
Q78. Which use of Argument sequence stays closest to the printed prompt?	20
Q79. Which statement preserves the strategy-versus-official-rule boundary for Argument sequence?	21
Q80. Which option avoids the standard Essay-method trap about Argument sequence?	21

Brainstorming and Dimensional Expansion - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which option applies Divergent pass as an Essay-method distinction?

A. Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. B. Replace Divergent pass with a familiar adjacent GS topic and maximise factual coverage. C. Treat Divergent pass as a compulsory UPSC formula even when it distorts the prompt. D. Use Divergent pass to add more headings or dimensions without testing coherence.

Answer: A. Explanation: Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q2. Which use of Divergent pass stays closest to the printed prompt?

A. Use Divergent pass while dropping the prompt's operator, qualifier or scale. B. Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. C. Apply Divergent pass only after drafting, when topic drift can no longer be prevented. D. Let a striking anecdote or quotation determine Divergent pass regardless of thesis fit.

Answer: B. Explanation: Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q3. Which statement preserves the strategy-versus-official-rule boundary for Divergent pass?

A. Support Divergent pass with an unverified statistic, attribution or current claim. B. Use Divergent pass to avoid stating a serious counter-case or qualification. C. Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. D. Present Divergent pass as an official marking rule rather than a pedagogical scaffold.

Answer: C. Explanation: Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q4. Which option avoids the standard Essay-method trap about Divergent pass?

A. Allow an exception discovered through Divergent pass to replace the central proposition. B. Maximise the number of outputs produced by Divergent pass, even if they repeat one claim. C. Silently tidy the printed prompt before applying Divergent pass to make it easier to answer. D. Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension.

Answer: D. Explanation: Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q5. Which option applies Actor axis as an Essay-method distinction?

A. Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. B. Use Actor axis to add more headings or dimensions without testing coherence. C. Replace Actor axis with a familiar adjacent GS topic and maximise factual coverage. D. Treat Actor axis as a compulsory UPSC formula even when it distorts the prompt.

Answer: A. Explanation: Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q6. Which use of Actor axis stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Actor axis regardless of thesis fit. B. Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. C. Apply Actor axis only after drafting, when topic drift can no longer be prevented. D. Use Actor axis while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q7. Which statement preserves the strategy-versus-official-rule boundary for Actor axis?

A. Present Actor axis as an official marking rule rather than a pedagogical scaffold. B. Use Actor axis to avoid stating a serious counter-case or qualification. C. Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. D. Support Actor axis with an unverified statistic, attribution or current claim.

Answer: C. Explanation: Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q8. Which option avoids the standard Essay-method trap about Actor axis?

A. Maximise the number of outputs produced by Actor axis, even if they repeat one claim. B. Silently tidy the printed prompt before applying Actor axis to make it easier to answer. C. Allow an exception discovered through Actor axis to replace the central proposition. D. Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism.

Answer: D. Explanation: Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q9. Which option applies Scale axis as an Essay-method distinction?

A. Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. B. Treat Scale axis as a compulsory UPSC formula even when it distorts the prompt. C. Use Scale axis to add more headings or dimensions without testing coherence. D. Replace Scale axis with a familiar adjacent GS topic and maximise factual coverage.

Answer: A. Explanation: Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q10. Which use of Scale axis stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Scale axis regardless of thesis fit. B. Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. C. Use Scale axis while dropping the prompt's operator, qualifier or scale. D. Apply Scale axis only after drafting, when topic drift can no longer be prevented.

Answer: B. Explanation: Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q11. Which statement preserves the strategy-versus-official-rule boundary for Scale axis?

A. Present Scale axis as an official marking rule rather than a pedagogical scaffold. B. Use Scale axis to avoid stating a serious counter-case or qualification. C. Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. D. Support Scale axis with an unverified statistic, attribution or current claim.

Answer: C. Explanation: Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q12. Which option avoids the standard Essay-method trap about Scale axis?

A. Silently tidy the printed prompt before applying Scale axis to make it easier to answer. B. Maximise the number of outputs produced by Scale axis, even if they repeat one claim. C. Allow an exception discovered through Scale axis to replace the central proposition. D. Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level.

Answer: D. Explanation: Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q13. Which option applies Time axis as an Essay-method distinction?

A. Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. B. Replace Time axis with a familiar adjacent GS topic and maximise factual coverage. C. Use Time axis to add more headings or dimensions without testing coherence. D. Treat Time axis as a compulsory UPSC formula even when it distorts the prompt.

Answer: A. Explanation: Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q14. Which use of Time axis stays closest to the printed prompt?

A. Use Time axis while dropping the prompt's operator, qualifier or scale. B. Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. C. Apply Time axis only after drafting, when topic drift can no longer be prevented. D. Let a striking anecdote or quotation determine Time axis regardless of thesis fit.

Answer: B. Explanation: Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q15. Which statement preserves the strategy-versus-official-rule boundary for Time axis?

A. Present Time axis as an official marking rule rather than a pedagogical scaffold. B. Support Time axis with an unverified statistic, attribution or current claim. C. Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. D. Use Time axis to avoid stating a serious counter-case or qualification.

Answer: C. Explanation: Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q16. Which option avoids the standard Essay-method trap about Time axis?

A. Maximise the number of outputs produced by Time axis, even if they repeat one claim. B. Silently tidy the printed prompt before applying Time axis to make it easier to answer. C. Allow an exception discovered through Time axis to replace the central proposition. D. Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections.

Answer: D. Explanation: Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q17. Which option applies Domain axis as an Essay-method distinction?

A. Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. B. Treat Domain axis as a compulsory UPSC formula even when it distorts the prompt. C. Replace Domain axis with a familiar adjacent GS topic and maximise factual coverage. D. Use Domain axis to add more headings or dimensions without testing coherence.

Answer: A. Explanation: Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q18. Which use of Domain axis stays closest to the printed prompt?

A. Apply Domain axis only after drafting, when topic drift can no longer be prevented. B. Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. C. Let a striking anecdote or quotation determine Domain axis regardless of thesis fit. D. Use Domain axis while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q19. Which statement preserves the strategy-versus-official-rule boundary for Domain axis?

A. Use Domain axis to avoid stating a serious counter-case or qualification. B. Present Domain axis as an official marking rule rather than a pedagogical scaffold. C. Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. D. Support Domain axis with an unverified statistic, attribution or current claim.

Answer: C. Explanation: Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q20. Which option avoids the standard Essay-method trap about Domain axis?

A. Maximise the number of outputs produced by Domain axis, even if they repeat one claim. B. Silently tidy the printed prompt before applying Domain axis to make it easier to answer. C. Allow an exception discovered through Domain axis to replace the central proposition. D. Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist.

Answer: D. Explanation: Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q21. Which option applies Causality axis as an Essay-method distinction?

A. Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. B. Use Causality axis to add more headings or dimensions without testing coherence. C. Replace Causality axis with a familiar adjacent GS topic and maximise factual coverage. D. Treat Causality axis as a compulsory UPSC formula even when it distorts the prompt.

Answer: A. Explanation: Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q22. Which use of Causality axis stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Causality axis regardless of thesis fit. B. Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. C. Apply Causality axis only after drafting, when topic drift can no longer be prevented. D. Use Causality axis while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q23. Which statement preserves the strategy-versus-official-rule boundary for Causality axis?

A. Support Causality axis with an unverified statistic, attribution or current claim. B. Use Causality axis to avoid stating a serious counter-case or qualification. C. Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. D. Present Causality axis as an official marking rule rather than a pedagogical scaffold.

Answer: C. Explanation: Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q24. Which option avoids the standard Essay-method trap about Causality axis?

A. Silently tidy the printed prompt before applying Causality axis to make it easier to answer. B. Allow an exception discovered through Causality axis to replace the central proposition. C. Maximise the number of outputs produced by Causality axis, even if they repeat one claim. D. Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them.

Answer: D. Explanation: Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q25. Which option applies Distribution axis as an Essay-method distinction?

A. Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. B. Use Distribution axis to add more headings or dimensions without testing coherence. C. Treat Distribution axis as a compulsory UPSC formula even when it distorts the prompt. D. Replace Distribution axis with a familiar adjacent GS topic and maximise factual coverage.

Answer: A. Explanation: Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q26. Which use of Distribution axis stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Distribution axis regardless of thesis fit. B. Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. C. Apply Distribution axis only after drafting, when topic drift can no longer be prevented. D. Use Distribution axis while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q27. Which statement preserves the strategy-versus-official-rule boundary for Distribution axis?

A. Use Distribution axis to avoid stating a serious counter-case or qualification. B. Present Distribution axis as an official marking rule rather than a pedagogical scaffold. C. Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. D. Support Distribution axis with an unverified statistic, attribution or current claim.

Answer: C. Explanation: Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q28. Which option avoids the standard Essay-method trap about Distribution axis?

A. Maximise the number of outputs produced by Distribution axis, even if they repeat one claim. B. Allow an exception discovered through Distribution axis to replace the central proposition. C. Silently tidy the printed prompt before applying Distribution axis to make it easier to answer. D. Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition.

Answer: D. Explanation: Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q29. Which option applies Direction axis as an Essay-method distinction?

A. Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. B. Treat Direction axis as a compulsory UPSC formula even when it distorts the prompt. C. Replace Direction axis with a familiar adjacent GS topic and maximise factual coverage. D. Use Direction axis to add more headings or dimensions without testing coherence.

Answer: A. Explanation: Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q30. Which use of Direction axis stays closest to the printed prompt?

A. Apply Direction axis only after drafting, when topic drift can no longer be prevented. B. Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. C. Let a striking anecdote or quotation determine Direction axis regardless of thesis fit. D. Use Direction axis while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q31. Which statement preserves the strategy-versus-official-rule boundary for Direction axis?

A. Support Direction axis with an unverified statistic, attribution or current claim. B. Use Direction axis to avoid stating a serious counter-case or qualification. C. Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. D. Present Direction axis as an official marking rule rather than a pedagogical scaffold.

Answer: C. Explanation: Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q32. Which option avoids the standard Essay-method trap about Direction axis?

A. Maximise the number of outputs produced by Direction axis, even if they repeat one claim. B. Silently tidy the printed prompt before applying Direction axis to make it easier to answer. C. Allow an exception discovered through Direction axis to replace the central proposition. D. Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction.

Answer: D. Explanation: Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q33. Which option applies PESTLE boundary as an Essay-method distinction?

A. PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. B. Treat PESTLE boundary as a compulsory UPSC formula even when it distorts the prompt. C. Use PESTLE boundary to add more headings or dimensions without testing coherence. D. Replace PESTLE boundary with a familiar adjacent GS topic and maximise factual coverage.

Answer: A. Explanation: PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q34. Which use of PESTLE boundary stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine PESTLE boundary regardless of thesis fit. B. PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. C. Use PESTLE boundary while dropping the prompt's operator, qualifier or scale. D. Apply PESTLE boundary only after drafting, when topic drift can no longer be prevented.

Answer: B. Explanation: PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q35. Which statement preserves the strategy-versus-official-rule boundary for PESTLE boundary?

A. Use PESTLE boundary to avoid stating a serious counter-case or qualification. B. Support PESTLE boundary with an unverified statistic, attribution or current claim. C. PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. D. Present PESTLE boundary as an official marking rule rather than a pedagogical scaffold.

Answer: C. Explanation: PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q36. Which option avoids the standard Essay-method trap about PESTLE boundary?

A. Silently tidy the printed prompt before applying PESTLE boundary to make it easier to answer. B. Maximise the number of outputs produced by PESTLE boundary, even if they repeat one claim. C. Allow an exception discovered through PESTLE boundary to replace the central proposition. D. PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge.

Answer: D. Explanation: PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q37. Which option applies Cause-impact-response boundary as an Essay-method distinction?

A. Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. B. Treat Cause-impact-response boundary as a compulsory UPSC formula even when it distorts the prompt. C. Use Cause-impact-response boundary to add more headings or dimensions without testing coherence. D. Replace Cause-impact-response boundary with a familiar adjacent GS topic and maximise factual coverage.

Answer: A. Explanation: Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q38. Which use of Cause-impact-response boundary stays closest to the printed prompt?

A. Apply Cause-impact-response boundary only after drafting, when topic drift can no longer be prevented. B. Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. C. Let a striking anecdote or quotation determine Cause-impact-response boundary regardless of thesis fit. D. Use Cause-impact-response boundary while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q39. Which statement preserves the strategy-versus-official-rule boundary for Cause-impact-response boundary?

A. Support Cause-impact-response boundary with an unverified statistic, attribution or current claim. B. Use Cause-impact-response boundary to avoid stating a serious counter-case or qualification. C. Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. D. Present Cause-impact-response boundary as an official marking rule rather than a pedagogical scaffold.

Answer: C. Explanation: Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q40. Which option avoids the standard Essay-method trap about Cause-impact-response boundary?

A. Allow an exception discovered through Cause-impact-response boundary to replace the central proposition. B. Silently tidy the printed prompt before applying Cause-impact-response boundary to make it easier to answer. C. Maximise the number of outputs produced by Cause-impact-response boundary, even if they repeat one claim. D. Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer.

Answer: D. Explanation: Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q41. Which option applies Value-institution-technology-environment pass as an Essay-method distinction?

A. Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. B. Use Value-institution-technology-environment pass to add more headings or dimensions without testing coherence. C. Replace Value-institution-technology-environment pass with a familiar adjacent GS topic and maximise factual coverage. D. Treat Value-institution-technology-environment pass as a compulsory UPSC formula even when it distorts the prompt.

Answer: A. Explanation: Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q42. Which use of Value-institution-technology-environment pass stays closest to the printed prompt?

A. Apply Value-institution-technology-environment pass only after drafting, when topic drift can no longer be prevented. B. Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. C. Use Value-institution-technology-environment pass while dropping the prompt's operator, qualifier or scale. D. Let a striking anecdote or quotation determine Value-institution-technology-environment pass regardless of thesis fit.

Answer: B. Explanation: Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q43. Which statement preserves the strategy-versus-official-rule boundary for Value-institution-technology-environment pass?

A. Present Value-institution-technology-environment pass as an official marking rule rather than a pedagogical scaffold. B. Use Value-institution-technology-environment pass to avoid stating a serious counter-case or qualification. C. Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. D. Support Value-institution-technology-environment pass with an unverified statistic, attribution or current claim.

Answer: C. Explanation: Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q44. Which option avoids the standard Essay-method trap about Value-institution-technology-environment pass?

A. Maximise the number of outputs produced by Value-institution-technology-environment pass, even if they repeat one claim. B. Allow an exception discovered through Value-institution-technology-environment pass to replace the central proposition. C. Silently tidy the printed prompt before applying Value-institution-technology-environment pass to make it easier to answer. D. Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs.

Answer: D. Explanation: Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q45. Which option applies One-line claim test as an Essay-method distinction?

A. State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. B. Replace One-line claim test with a familiar adjacent GS topic and maximise factual coverage. C. Treat One-line claim test as a compulsory UPSC formula even when it distorts the prompt. D. Use One-line claim test to add more headings or dimensions without testing coherence.

Answer: A. Explanation: State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q46. Which use of One-line claim test stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine One-line claim test regardless of thesis fit. B. State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. C. Use One-line claim test while dropping the prompt's operator, qualifier or scale. D. Apply One-line claim test only after drafting, when topic drift can no longer be prevented.

Answer: B. Explanation: State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q47. Which statement preserves the strategy-versus-official-rule boundary for One-line claim test?

A. Present One-line claim test as an official marking rule rather than a pedagogical scaffold. B. Use One-line claim test to avoid stating a serious counter-case or qualification. C. State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. D. Support One-line claim test with an unverified statistic, attribution or current claim.

Answer: C. Explanation: State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q48. Which option avoids the standard Essay-method trap about One-line claim test?

A. Allow an exception discovered through One-line claim test to replace the central proposition. B. Maximise the number of outputs produced by One-line claim test, even if they repeat one claim. C. Silently tidy the printed prompt before applying One-line claim test to make it easier to answer. D. State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels.

Answer: D. Explanation: State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q49. Which option applies Mechanism test as an Essay-method distinction?

A. A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. B. Treat Mechanism test as a compulsory UPSC formula even when it distorts the prompt. C. Replace Mechanism test with a familiar adjacent GS topic and maximise factual coverage. D. Use Mechanism test to add more headings or dimensions without testing coherence.

Answer: A. Explanation: A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q50. Which use of Mechanism test stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Mechanism test regardless of thesis fit. B. A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. C. Use Mechanism test while dropping the prompt's operator, qualifier or scale. D. Apply Mechanism test only after drafting, when topic drift can no longer be prevented.

Answer: B. Explanation: A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q51. Which statement preserves the strategy-versus-official-rule boundary for Mechanism test?

A. Present Mechanism test as an official marking rule rather than a pedagogical scaffold. B. Support Mechanism test with an unverified statistic, attribution or current claim. C. A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. D. Use Mechanism test to avoid stating a serious counter-case or qualification.

Answer: C. Explanation: A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q52. Which option avoids the standard Essay-method trap about Mechanism test?

A. Allow an exception discovered through Mechanism test to replace the central proposition. B. Maximise the number of outputs produced by Mechanism test, even if they repeat one claim. C. Silently tidy the printed prompt before applying Mechanism test to make it easier to answer. D. A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned.

Answer: D. Explanation: A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q53. Which option applies Evidence map as an Essay-method distinction?

A. Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. B. Treat Evidence map as a compulsory UPSC formula even when it distorts the prompt. C. Replace Evidence map with a familiar adjacent GS topic and maximise factual coverage. D. Use Evidence map to add more headings or dimensions without testing coherence.

Answer: A. Explanation: Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q54. Which use of Evidence map stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Evidence map regardless of thesis fit. B. Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. C. Use Evidence map while dropping the prompt's operator, qualifier or scale. D. Apply Evidence map only after drafting, when topic drift can no longer be prevented.

Answer: B. Explanation: Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q55. Which statement preserves the strategy-versus-official-rule boundary for Evidence map?

A. Present Evidence map as an official marking rule rather than a pedagogical scaffold. B. Use Evidence map to avoid stating a serious counter-case or qualification. C. Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. D. Support Evidence map with an unverified statistic, attribution or current claim.

Answer: C. Explanation: Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q56. Which option avoids the standard Essay-method trap about Evidence map?

A. Allow an exception discovered through Evidence map to replace the central proposition. B. Maximise the number of outputs produced by Evidence map, even if they repeat one claim. C. Silently tidy the printed prompt before applying Evidence map to make it easier to answer. D. Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall.

Answer: D. Explanation: Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q57. Which option applies Limit map as an Essay-method distinction?

A. Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. B. Treat Limit map as a compulsory UPSC formula even when it distorts the prompt. C. Replace Limit map with a familiar adjacent GS topic and maximise factual coverage. D. Use Limit map to add more headings or dimensions without testing coherence.

Answer: A. Explanation: Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q58. Which use of Limit map stays closest to the printed prompt?

A. Apply Limit map only after drafting, when topic drift can no longer be prevented. B. Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. C. Let a striking anecdote or quotation determine Limit map regardless of thesis fit. D. Use Limit map while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q59. Which statement preserves the strategy-versus-official-rule boundary for Limit map?

A. Use Limit map to avoid stating a serious counter-case or qualification. B. Present Limit map as an official marking rule rather than a pedagogical scaffold. C. Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. D. Support Limit map with an unverified statistic, attribution or current claim.

Answer: C. Explanation: Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q60. Which option avoids the standard Essay-method trap about Limit map?

A. Allow an exception discovered through Limit map to replace the central proposition. B. Silently tidy the printed prompt before applying Limit map to make it easier to answer. C. Maximise the number of outputs produced by Limit map, even if they repeat one claim. D. Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes.

Answer: D. Explanation: Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q61. Which option applies Prioritisation as an Essay-method distinction?

A. Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. B. Replace Prioritisation with a familiar adjacent GS topic and maximise factual coverage. C. Treat Prioritisation as a compulsory UPSC formula even when it distorts the prompt. D. Use Prioritisation to add more headings or dimensions without testing coherence.

Answer: A. Explanation: Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q62. Which use of Prioritisation stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Prioritisation regardless of thesis fit. B. Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. C. Apply Prioritisation only after drafting, when topic drift can no longer be prevented. D. Use Prioritisation while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q63. Which statement preserves the strategy-versus-official-rule boundary for Prioritisation?

A. Use Prioritisation to avoid stating a serious counter-case or qualification. B. Support Prioritisation with an unverified statistic, attribution or current claim. C. Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. D. Present Prioritisation as an official marking rule rather than a pedagogical scaffold.

Answer: C. Explanation: Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q64. Which option avoids the standard Essay-method trap about Prioritisation?

A. Silently tidy the printed prompt before applying Prioritisation to make it easier to answer. B. Allow an exception discovered through Prioritisation to replace the central proposition. C. Maximise the number of outputs produced by Prioritisation, even if they repeat one claim. D. Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job.

Answer: D. Explanation: Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q65. Which option applies Clustering as an Essay-method distinction?

A. Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. B. Treat Clustering as a compulsory UPSC formula even when it distorts the prompt. C. Use Clustering to add more headings or dimensions without testing coherence. D. Replace Clustering with a familiar adjacent GS topic and maximise factual coverage.

Answer: A. Explanation: Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q66. Which use of Clustering stays closest to the printed prompt?

A. Apply Clustering only after drafting, when topic drift can no longer be prevented. B. Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. C. Let a striking anecdote or quotation determine Clustering regardless of thesis fit. D. Use Clustering while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q67. Which statement preserves the strategy-versus-official-rule boundary for Clustering?

A. Present Clustering as an official marking rule rather than a pedagogical scaffold. B. Support Clustering with an unverified statistic, attribution or current claim. C. Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. D. Use Clustering to avoid stating a serious counter-case or qualification.

Answer: C. Explanation: Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q68. Which option avoids the standard Essay-method trap about Clustering?

A. Maximise the number of outputs produced by Clustering, even if they repeat one claim. B. Allow an exception discovered through Clustering to replace the central proposition. C. Silently tidy the printed prompt before applying Clustering to make it easier to answer. D. Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word.

Answer: D. Explanation: Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q69. Which option applies Redundancy removal as an Essay-method distinction?

A. Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. B. Use Redundancy removal to add more headings or dimensions without testing coherence. C. Treat Redundancy removal as a compulsory UPSC formula even when it distorts the prompt. D. Replace Redundancy removal with a familiar adjacent GS topic and maximise factual coverage.

Answer: A. Explanation: Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q70. Which use of Redundancy removal stays closest to the printed prompt?

A. Apply Redundancy removal only after drafting, when topic drift can no longer be prevented. B. Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. C. Use Redundancy removal while dropping the prompt's operator, qualifier or scale. D. Let a striking anecdote or quotation determine Redundancy removal regardless of thesis fit.

Answer: B. Explanation: Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q71. Which statement preserves the strategy-versus-official-rule boundary for Redundancy removal?

A. Support Redundancy removal with an unverified statistic, attribution or current claim. B. Use Redundancy removal to avoid stating a serious counter-case or qualification. C. Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. D. Present Redundancy removal as an official marking rule rather than a pedagogical scaffold.

Answer: C. Explanation: Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q72. Which option avoids the standard Essay-method trap about Redundancy removal?

A. Maximise the number of outputs produced by Redundancy removal, even if they repeat one claim. B. Silently tidy the printed prompt before applying Redundancy removal to make it easier to answer. C. Allow an exception discovered through Redundancy removal to replace the central proposition. D. Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function.

Answer: D. Explanation: Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q73. Which option applies Convergent pass as an Essay-method distinction?

A. After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. B. Replace Convergent pass with a familiar adjacent GS topic and maximise factual coverage. C. Use Convergent pass to add more headings or dimensions without testing coherence. D. Treat Convergent pass as a compulsory UPSC formula even when it distorts the prompt.

Answer: A. Explanation: After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q74. Which use of Convergent pass stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Convergent pass regardless of thesis fit. B. After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. C. Use Convergent pass while dropping the prompt's operator, qualifier or scale. D. Apply Convergent pass only after drafting, when topic drift can no longer be prevented.

Answer: B. Explanation: After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q75. Which statement preserves the strategy-versus-official-rule boundary for Convergent pass?

A. Support Convergent pass with an unverified statistic, attribution or current claim. B. Use Convergent pass to avoid stating a serious counter-case or qualification. C. After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. D. Present Convergent pass as an official marking rule rather than a pedagogical scaffold.

Answer: C. Explanation: After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q76. Which option avoids the standard Essay-method trap about Convergent pass?

A. Maximise the number of outputs produced by Convergent pass, even if they repeat one claim. B. Allow an exception discovered through Convergent pass to replace the central proposition. C. Silently tidy the printed prompt before applying Convergent pass to make it easier to answer. D. After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title.

Answer: D. Explanation: After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q77. Which option applies Argument sequence as an Essay-method distinction?

A. Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. B. Treat Argument sequence as a compulsory UPSC formula even when it distorts the prompt. C. Replace Argument sequence with a familiar adjacent GS topic and maximise factual coverage. D. Use Argument sequence to add more headings or dimensions without testing coherence.

Answer: A. Explanation: Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q78. Which use of Argument sequence stays closest to the printed prompt?

A. Let a striking anecdote or quotation determine Argument sequence regardless of thesis fit. B. Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. C. Apply Argument sequence only after drafting, when topic drift can no longer be prevented. D. Use Argument sequence while dropping the prompt's operator, qualifier or scale.

Answer: B. Explanation: Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q79. Which statement preserves the strategy-versus-official-rule boundary for Argument sequence?

A. Present Argument sequence as an official marking rule rather than a pedagogical scaffold. B. Support Argument sequence with an unverified statistic, attribution or current claim. C. Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. D. Use Argument sequence to avoid stating a serious counter-case or qualification.

Answer: C. Explanation: Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

Q80. Which option avoids the standard Essay-method trap about Argument sequence?

A. Maximise the number of outputs produced by Argument sequence, even if they repeat one claim. B. Allow an exception discovered through Argument sequence to replace the central proposition. C. Silently tidy the printed prompt before applying Argument sequence to make it easier to answer. D. Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis.

Answer: D. Explanation: Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. The other options convert a qualified writing method into an official formula, permit topic drift, or reward quantity without coherence and evidence safety.

PYQS AND ANSWER PRACTICE

AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

The three cards preserve exact V1 prompt wording from 2023-2025. Their models demonstrate brainstorming, filtering and sequencing rather than an official or complete model essay.

PYQ DEMAND CARD 1 - 2024-A2 Essay

Demand: The empires of the futures will be the empires of the mind.

Status: Exact V1 wording; used to generate and filter actor, scale, domain and evidence dimensions.

Model solution: Divergent pass: Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. **Actor axis:** Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. **Scale axis:** Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. **Domain axis:** Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. **Value-institution-technology-environment pass:** Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. **One-line claim test:** State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. **Mechanism test:** A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. **Evidence map:** Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. **Prioritisation:** Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. **Convergent pass:** After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. **Argument sequence:** Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. This is a method-focused decoding or application card, not an official UPSC model answer and not a claim that only one interpretation is valid.

PYQ DEMAND CARD 2 - 2025-A3 Essay

Demand: Thought finds a world and creates one also.

Status: Exact V1 wording; used to test double effects, time, scale and convergent clustering.

Model solution: **Scale axis:** Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. **Time axis:** Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. **Direction axis:** Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. **One-line claim test:** State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. **Mechanism test:** A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. **Limit map:** Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. **Clustering:** Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. **Convergent pass:** After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. **Argument sequence:** Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. This is a method-focused decoding or application card, not an official UPSC model answer and not a claim that only one interpretation is valid.

PYQ DEMAND CARD 3 - 2023-B5 Essay

Demand: Girls are weighed down by restrictions, boys with demands - two equally harmful disciplines.

Status: Exact V1 wording; used for actor, distribution, direction and redundancy tests.

Model solution: **Actor axis:** Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. **Distribution axis:** Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. **Direction axis:** Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. **One-line claim test:** State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. **Mechanism test:** A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. **Evidence map:** Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. **Limit map:** Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. **Prioritisation:** Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. **Clustering:** Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. **Argument sequence:** Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. This is a method-focused decoding or application card, not an official UPSC model answer and not a claim that only one interpretation is valid.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish divergent generation from convergent selection. Answer in about 150 words.

Model thesis: **Claim:** Divergent pass. **Named evidence/example:** Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Convergent pass. **Named evidence/example:** After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

Claim -> named evidence -> analysis -> qualification:

- Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension.

- After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title.

Qualified conclusion: Claim: Divergent pass. **Named evidence/example:** Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension.

Analysis: This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Convergent pass. **Named evidence/example:** After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain how actor, scale, time and domain axes generate candidate dimensions. Answer in about 150 words.

Model thesis: Claim: Actor axis. **Named evidence/example:** Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Scale axis. **Named evidence/example:** Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Time axis. **Named evidence/example:** Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Domain axis. **Named evidence/example:** Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

Claim -> named evidence -> analysis -> qualification:

- Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism.
- Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level.
- Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections.
- Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist.

Qualified conclusion: Claim: Actor axis. **Named evidence/example:** Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Scale axis. **Named evidence/example:** Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level.

Analysis: This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Time axis. **Named evidence/example:** Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. **Analysis:**

This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Domain axis. **Named evidence/example:** Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

ORIGINAL MAINS 3 - 15 MARKS

Question: Assess PESTLE and cause-impact-response as prompts rather than Essay templates. Answer in about 250 words.

Model thesis: **Claim:** Causality axis. **Named evidence/example:** Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** PESTLE boundary. **Named evidence/example:** PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Cause-impact-response boundary. **Named evidence/example:** Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Value-institution-technology-environment pass. **Named evidence/example:** Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

Claim -> named evidence -> analysis -> qualification:

- Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them.
- PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge.
- Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer.
- Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs.

Qualified conclusion: **Claim:** Causality axis. **Named evidence/example:** Generate immediate causes, structural causes, consequences, feedback loops and response choices where the decoded proposition supports them. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** PESTLE boundary. **Named evidence/example:** PESTLE or a comparable framework may jog recall, but it is not a compulsory Essay template and should disappear once prompt-specific claims emerge. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Cause-impact-response boundary. **Named evidence/example:** Cause-impact-response can organise an issue prompt, but each part must serve one thesis and must not collapse into a generic GS answer. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric,

compulsory formula or model answer. **Claim:** Value-institution-technology-environment pass. **Named evidence/example:** Values, institutions, technology and environment are useful cross-checks when they expose different mechanisms, actors or trade-offs. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

ORIGINAL MAINS 4 - 15 MARKS

Question: Design a claim-mechanism-evidence-limit filter for candidate dimensions. Answer in about 250 words.

Model thesis: **Claim:** One-line claim test. **Named evidence/example:** State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Mechanism test. **Named evidence/example:** A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Evidence map. **Named evidence/example:** Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Limit map. **Named evidence/example:** Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

Claim -> named evidence -> analysis -> qualification:

- State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels.
- A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned.
- Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall.
- Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes.

Qualified conclusion: **Claim:** One-line claim test. **Named evidence/example:** State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Mechanism test. **Named evidence/example:** A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Evidence map. **Named evidence/example:** Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Limit map. **Named evidence/example:** Attach a counter-case, exception or condition to each major dimension so breadth does not become a series of absolutes. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

ORIGINAL MAINS 5 - 20 MARKS

Question: Analyse prioritisation, clustering and redundancy removal in building a coherent brainstorm. Answer in about 300 words.

Model thesis: **Claim:** Prioritisation. **Named evidence/example:** Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Clustering. **Named evidence/example:** Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Redundancy removal. **Named evidence/example:** Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Convergent pass. **Named evidence/example:** After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Argument sequence. **Named evidence/example:** Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

Claim -> named evidence -> analysis -> qualification:

- Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job.
- Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word.
- Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function.
- After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title.
- Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis.

Qualified conclusion: **Claim:** Prioritisation. **Named evidence/example:** Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Clustering. **Named evidence/example:** Group related claims into paragraph clusters around one mechanism or scale movement instead of assigning one paragraph to every brainstormed word. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Redundancy removal. **Named evidence/example:** Delete a dimension when removing it costs only vocabulary rather than a distinct claim, mechanism or evidentiary function. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Convergent pass. **Named evidence/example:** After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. **Analysis:** This identifies the exact Essay-method move and shows

how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Argument sequence. **Named evidence/example:** Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

ORIGINAL MAINS 6 - 20 MARKS

Question: Apply the divergent-to-convergent method to a verified philosophical or hybrid prompt. Answer in about 300 words.

Model thesis: **Claim:** Divergent pass. **Named evidence/example:** Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Actor axis. **Named evidence/example:** Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Scale axis. **Named evidence/example:** Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Time axis. **Named evidence/example:** Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Domain axis. **Named evidence/example:** Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Distribution axis. **Named evidence/example:** Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Direction axis. **Named evidence/example:** Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** One-line claim test. **Named evidence/example:** State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Mechanism test. **Named evidence/example:** A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Evidence map. **Named evidence/example:** Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Prioritisation. **Named evidence/example:** Rank candidate dimensions by thesis relevance, mechanism

strength, evidence safety and capacity to add a new argumentative job. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Convergent pass. **Named evidence/example:** After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Argument sequence. **Named evidence/example:** Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.

Claim -> named evidence -> analysis -> qualification:

- Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension.
- Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism.
- Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level.
- Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections.
- Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist.
- Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition.
- Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction.
- State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels.
- A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned.
- Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall.
- Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job.
- After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title.
- Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis.

Qualified conclusion: Claim: Divergent pass. **Named evidence/example:** Begin by generating a broad pool of possible claims without yet deciding paragraph order, so early preference does not suppress a useful dimension. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Actor axis. **Named evidence/example:** Search across individual, family, community, institution, state and world actors, but keep only levels that change the claim or mechanism. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Scale axis. **Named evidence/example:** Test local, regional, national, global and civilisational scales without assuming that the same proposition operates identically at each level. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a

repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Time axis. **Named evidence/example:** Historical origin, present manifestation and plausible future trajectory are prompts for inquiry, not mandatory sections. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Domain axis. **Named evidence/example:** Material, political, economic, social, ethical, technological, ecological and cultural lenses are a search field, not a checklist. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Distribution axis. **Named evidence/example:** Ask who gains, loses, decides, bears cost or remains invisible; a distributional claim must still connect to the central proposition. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Direction axis. **Named evidence/example:** Test intended benefits, unintended consequences and double effects rather than assuming every dimension moves in one direction. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** One-line claim test. **Named evidence/example:** State each candidate dimension as one sentence; if two sentences make the same claim, one is redundant despite different labels. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Mechanism test. **Named evidence/example:** A dimension survives only if it explains how or why the prompt's relationship operates, not merely where the topic can be mentioned. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Evidence map. **Named evidence/example:** Attach a named, verifiable illustration to every kept dimension and park any angle dependent on unsafe recall. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Prioritisation. **Named evidence/example:** Rank candidate dimensions by thesis relevance, mechanism strength, evidence safety and capacity to add a new argumentative job. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Convergent pass. **Named evidence/example:** After divergence, cut to the strongest coherent set and reject angles that form parallel mini-essays under the same title. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer. **Claim:** Argument sequence. **Named evidence/example:** Order the final clusters so each raises, complicates or qualifies the stakes of the previous one and collectively earns the synthesis. **Analysis:** This identifies the exact Essay-method move and shows how it keeps the response tied to the printed proposition rather than an adjacent GS topic. **Qualification:** It remains a repository-audited writing scaffold, not an official UPSC rubric, compulsory formula or model answer.
