

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 1/14 - BOUNDARY AND CENTRAL THESIS	
+-----+	
-> Achaemenid incorporation and Alexander's campaign are distinct episodes in one north-west	
frontier.	
-> Achaemenid rule was longer and obligation-based; the Macedonian passage was brief and	
military.	
-> Neither conquered the whole subcontinent; later Seleucids and Indo-Greeks are successor	
histories.	
-> Answer line: limited conquest, selective adaptation and durable contact across a connected	
frontier.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 2/14 - EVIDENCE FIREWALL	
+-----+	
-> Behistun, DNA and XPh are contemporary royal claims; reliefs visualise imperial ideology.	
-> Herodotus is near-period Greek narrative; tribute units, ethnography and totals require	
caution.	
-> Arrian, Curtius, Diodorus, Plutarch and Justin are later and transmit lost earlier	
traditions.	
-> Claim is not exact border; detailed narrative is not eyewitness; circulation is not	
sovereignty.	
+-----+

+-----+	
PANEL 4/14 - ACHAEMENID CHRONOLOGY	
+-----+	
-> Cyrus II: possible eastern antecedent; no securely mapped Indian annexation.	
-> Darius I: Gandara at Behistun; Gandara and Hindush in DNa; Scylax report.	
-> c. 518/516 BCE is a textbook reconstruction, not a dated frontier charter.	
-> Xerxes: continued lists and contingents; later eastern control varied and weakened.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 5/14 - ROYAL LISTS AND HERODOTUS	
+-----+	
-> Naqsh-i Rostam and Persepolis programs order subject lands within royal ideology.	
-> Herodotus places Indians in the twentieth district and reports 360 talents of gold dust.	
-> Book 7 describes contingents; later Indian service could be mercenary, allied or mediated.	
-> Use for claim, wealth perception and obligation; reject modern audit and census readings.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 6/14 - ADMINISTRATION AND CONTACT	
+-----+	
-> Satrapal supervision could combine tribute, levies, routes and local intermediaries.	
-> Imperial Aramaic supplies the strongest context for right-to-left Kharoshthi.	
-> Coins, weights, artisans, vocabulary and artistic forms moved selectively through networks.	
-> No blanket Persianisation or wholesale Persian origin for punch-marked coins or Mauryan	
institutions.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 7/14 - ALEXANDER'S EASTWARD CAMPAIGN	
+-----+	
-> 327 BCE: Hindu Kush and highland campaigns, including debated Aornos identification.	
-> 326 BCE: Indus crossing, Ambhi at Taxila, Hydaspes battle against Porus.	
-> Then Chenab and Ravi zones; troops refuse advance at Hyphasis/Beas.	
-> The route stopped far short of the Ganga plain and did not equal conquest of India.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 8/14 - HYDASPES AND REGIONAL AGENCY	
+-----+	
-> Ambhi allied; Porus fought; highland communities and Malloi resisted.	
-> Greek sources describe feints, upstream crossing, cavalry manoeuvre and an elephant-centred	
line.	
-> Macedonian battlefield success was followed by Porus's restoration and enlargement.	
-> Tactics, casualty totals, speeches and the Porus medallion remain source-dependent.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 10/14 - INDUS DESCENT AND RETURN	
+-----+	
-> After Hyphasis the army returned to the Jhelum, assembled a fleet and descended the Indus.	
-> Malloi resistance seriously wounded Alexander; passed territory was not automatically	
pacified.	
-> Patala served delta reconnaissance and fleet preparation; channels and identifications need	
caution.	
-> Nearchus sailed west; Alexander crossed Gedrosia/Makran amid severe, uncertain losses.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 12/14 - ARRANGEMENTS AND FRAGMENTATION	
+-----+	
-> Porus, Ambhi and Abhisara remained local intermediaries under changing settlements.	
-> Philip, Peithon, Eudemus and other officers held shifting commands and garrisons.	
-> Greek-named settlements signalled presence but not durable pan-regional government.	
-> After 323 BCE succession conflict and local agency rapidly fragmented coherence.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 13/14 - CONSEQUENCES AND BOUNDARIES	
+-----+	
-> A political opening aided but did not cause Chandragupta's later Mauryan consolidation.	
-> Routes, coastal reconnaissance and Greek geographical knowledge were intensified, not	
invented.	
-> Later Indo-Greek coinage and Gandhara art cannot be attributed personally to Alexander.	
-> Immediate effect, indirect opportunity and later successor development must remain separate.	
+-----+	

Iranian and Macedonian Invasions — ASCII Master Flow Diagram

+-----+	
PANEL 14/14 - EXAM ANSWER SPINE	
+-----+	
-> Define two episodes -> draw the frontier map -> rank the sources.	
-> Explain Darius/Xerxes evidence -> trace Alexander to Beas and down the Indus.	
-> Compare duration, mechanism, local agency and legacy; expose map, number and causation traps.	
-> Verdict: limited territorial reach, variable control and lasting but selective contacts.	
+-----+
