

## SOLVED PRACTICE WORKBOOK

# Poverty and Developmental Issues - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

# CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

## Poverty and Developmental Issues - Solved Practice Workbook . . . . . 6

### BASIC MCQS / REMEDIATION . . . . . 6

|                                                                                                    |    |
|----------------------------------------------------------------------------------------------------|----|
| Q1. Which statement correctly identifies Capability deprivation? . . . . .                         | 6  |
| Q2. Which chronology card should be filed under Capability deprivation? . . . . .                  | 6  |
| Q3. Which option preserves the source-bounded meaning of Capability deprivation? . . . . .         | 6  |
| Q4. Which statement avoids a close-option trap about Capability deprivation? . . . . .             | 7  |
| Q5. Which statement correctly identifies Social exclusion? . . . . .                               | 7  |
| Q6. Which chronology card should be filed under Social exclusion? . . . . .                        | 8  |
| Q7. Which option preserves the source-bounded meaning of Social exclusion? . . . . .               | 8  |
| Q8. Which statement avoids a close-option trap about Social exclusion? . . . . .                   | 8  |
| Q9. Which statement correctly identifies The culture of poverty? . . . . .                         | 9  |
| Q10. Which chronology card should be filed under The culture of poverty? . . . . .                 | 9  |
| Q11. Which option preserves the source-bounded meaning of The culture of poverty? . . . . .        | 9  |
| Q12. Which statement avoids a close-option trap about The culture of poverty? . . . . .            | 10 |
| Q13. Which statement correctly identifies The structural critique? . . . . .                       | 10 |
| Q14. Which chronology card should be filed under The structural critique? . . . . .                | 10 |
| Q15. Which option preserves the source-bounded meaning of The structural critique? . . . . .       | 11 |
| Q16. Which statement avoids a close-option trap about The structural critique? . . . . .           | 11 |
| Q17. Which statement correctly identifies Short-horizon decision-making? . . . . .                 | 12 |
| Q18. Which chronology card should be filed under Short-horizon decision-making? . . . . .          | 12 |
| Q19. Which option preserves the source-bounded meaning of Short-horizon decision-making? . . . . . | 12 |
| Q20. Which statement avoids a close-option trap about Short-horizon decision-making? . . . . .     | 13 |
| Q21. Which statement correctly identifies The measurement boundary? . . . . .                      | 13 |
| Q22. Which chronology card should be filed under The measurement boundary? . . . . .               | 13 |
| Q23. Which option preserves the source-bounded meaning of The measurement boundary? . . . . .      | 14 |
| Q24. Which statement avoids a close-option trap about The measurement boundary? . . . . .          | 14 |
| Q25. Which statement correctly identifies Dated multidimensional anchor? . . . . .                 | 15 |
| Q26. Which chronology card should be filed under Dated multidimensional anchor? . . . . .          | 15 |
| Q27. Which option preserves the source-bounded meaning of Dated multidimensional anchor? . . . . . | 15 |

|                                                                                                              |    |
|--------------------------------------------------------------------------------------------------------------|----|
| Q28. Which statement avoids a close-option trap about Dated multidimensional anchor? . . . . .               | 16 |
| Q29. Which statement correctly identifies Persistence despite programmes? . . . . .                          | 16 |
| Q30. Which chronology card should be filed under Persistence despite programmes? . . . . .                   | 17 |
| Q31. Which option preserves the source-bounded meaning of Persistence despite programmes? . . . . .          | 17 |
| Q32. Which statement avoids a close-option trap about Persistence despite programmes? . . . . .              | 17 |
| Q33. Which statement correctly identifies Class-differentiated shock transmission? . . . . .                 | 18 |
| Q34. Which chronology card should be filed under Class-differentiated shock transmission? . . . . .          | 18 |
| Q35. Which option preserves the source-bounded meaning of Class-differentiated shock transmission? . . . . . | 18 |
| Q36. Which statement avoids a close-option trap about Class-differentiated shock transmission? . . . . .     | 19 |
| Q37. Which statement correctly identifies The development-livelihood conflict? . . . . .                     | 19 |
| Q38. Which chronology card should be filed under The development-livelihood conflict? . . . . .              | 20 |
| Q39. Which option preserves the source-bounded meaning of The development-livelihood conflict? . . . . .     | 20 |
| Q40. Which statement avoids a close-option trap about The development-livelihood conflict? . . . . .         | 20 |
| Q41. Which statement correctly identifies Two development conflicts kept apart? . . . . .                    | 21 |
| Q42. Which chronology card should be filed under Two development conflicts kept apart? . . . . .             | 21 |
| Q43. Which option preserves the source-bounded meaning of Two development conflicts kept apart? . . . . .    | 21 |
| Q44. Which statement avoids a close-option trap about Two development conflicts kept apart? . . . . .        | 22 |
| Q45. Which statement correctly identifies Two conservation designs? . . . . .                                | 22 |
| Q46. Which chronology card should be filed under Two conservation designs? . . . . .                         | 23 |
| Q47. Which option preserves the source-bounded meaning of Two conservation designs? . . . . .                | 23 |
| Q48. Which statement avoids a close-option trap about Two conservation designs? . . . . .                    | 23 |
| Q49. Which statement correctly identifies Reduction rather than elimination? . . . . .                       | 24 |
| Q50. Which chronology card should be filed under Reduction rather than elimination? . . . . .                | 24 |
| Q51. Which option preserves the source-bounded meaning of Reduction rather than elimination? . . . . .       | 24 |
| Q52. Which statement avoids a close-option trap about Reduction rather than elimination? . . . . .           | 25 |
| Q53. Which statement correctly identifies Three-actor comparative advantage? . . . . .                       | 25 |
| Q54. Which chronology card should be filed under Three-actor comparative advantage? . . . . .                | 25 |
| Q55. Which option preserves the source-bounded meaning of Three-actor comparative advantage? . . . . .       | 26 |
| Q56. Which statement avoids a close-option trap about Three-actor comparative advantage? . . . . .           | 26 |
| Q57. Which statement correctly identifies Complementary collaboration? . . . . .                             | 26 |
| Q58. Which chronology card should be filed under Complementary collaboration? . . . . .                      | 27 |
| Q59. Which option preserves the source-bounded meaning of Complementary collaboration? . . . . .             | 27 |

|                                                                                                           |           |
|-----------------------------------------------------------------------------------------------------------|-----------|
| Q60. Which statement avoids a close-option trap about Complementary collaboration? . . . . .              | 28        |
| Q61. Which statement correctly identifies Culture-only misdiagnosis? . . . . .                            | 28        |
| Q62. Which chronology card should be filed under Culture-only misdiagnosis? . . . . .                     | 28        |
| Q63. Which option preserves the source-bounded meaning of Culture-only misdiagnosis? . . . . .            | 29        |
| Q64. Which statement avoids a close-option trap about Culture-only misdiagnosis? . . . . .                | 29        |
| Q65. Which statement correctly identifies Structural intervention? . . . . .                              | 30        |
| Q66. Which chronology card should be filed under Structural intervention? . . . . .                       | 30        |
| Q67. Which option preserves the source-bounded meaning of Structural intervention? . . . . .              | 30        |
| Q68. Which statement avoids a close-option trap about Structural intervention? . . . . .                  | 31        |
| Q69. Which statement correctly identifies Conservation implementation contrast? . . . . .                 | 31        |
| Q70. Which chronology card should be filed under Conservation implementation contrast? . . . . .          | 32        |
| Q71. Which option preserves the source-bounded meaning of Conservation implementation contrast? . . . . . | 32        |
| Q72. Which statement avoids a close-option trap about Conservation implementation contrast? . . . . .     | 32        |
| Q73. Which statement correctly identifies Three standing trade-offs? . . . . .                            | 33        |
| Q74. Which chronology card should be filed under Three standing trade-offs? . . . . .                     | 33        |
| Q75. Which option preserves the source-bounded meaning of Three standing trade-offs? . . . . .            | 34        |
| Q76. Which statement avoids a close-option trap about Three standing trade-offs? . . . . .                | 34        |
| Q77. Which statement correctly identifies Verified direct Mains demands? . . . . .                        | 34        |
| Q78. Which chronology card should be filed under Verified direct Mains demands? . . . . .                 | 35        |
| Q79. Which option preserves the source-bounded meaning of Verified direct Mains demands? . . . . .        | 35        |
| Q80. Which statement avoids a close-option trap about Verified direct Mains demands? . . . . .            | 36        |

# Poverty and Developmental Issues - Solved Practice Workbook

## BASIC MCQS / REMEDIATION

### Q1. Which statement correctly identifies Capability deprivation?

A. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. B. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. C. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. D. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere.

**Answer: A. Explanation: Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. The remaining options belong to different chronology, actor or analytical categories.**

### Q2. Which chronology card should be filed under Capability deprivation?

A. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. B. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. C. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. D. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame.

**Answer: B. Explanation: Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. The remaining options belong to different chronology, actor or analytical categories.**

### Q3. Which option preserves the source-bounded meaning of Capability deprivation?

A. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. B. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. C. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. D. The

structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected.

**Answer: C. Explanation: Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q4. Which statement avoids a close-option trap about Capability deprivation?**

A. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. B. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. C. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. D. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold.

**Answer: D. Explanation: Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q5. Which statement correctly identifies Social exclusion?**

A. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. B. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. C. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. D. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere.

**Answer: A. Explanation: Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. The remaining options belong to different chronology, actor or analytical categories.**

## Q6. Which chronology card should be filed under Social exclusion?

A. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. B. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. C. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. D. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology.

**Answer: B. Explanation: Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. The remaining options belong to different chronology, actor or analytical categories.**

## Q7. Which option preserves the source-bounded meaning of Social exclusion?

A. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. B. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. C. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. D. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change.

**Answer: C. Explanation: Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. The remaining options belong to different chronology, actor or analytical categories.**

## Q8. Which statement avoids a close-option trap about Social exclusion?

A. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. B. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. C. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. D. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express.

**Answer: D. Explanation: Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. The remaining options belong to different**

**Q9. Which statement correctly identifies The culture of poverty?**

A. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. B. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. C. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. D. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame.

**Answer: A. Explanation: The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. The remaining options belong to different chronology, actor or analytical categories.**

**Q10. Which chronology card should be filed under The culture of poverty?**

A. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. B. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. C. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. D. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology.

**Answer: B. Explanation: The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. The remaining options belong to different chronology, actor or analytical categories.**

**Q11. Which option preserves the source-bounded meaning of The culture of poverty?**

A. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. B. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. C. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. D. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names.

**Answer: C. Explanation: The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. The remaining options belong to different chronology, actor or analytical categories.**

**Q12. Which statement avoids a close-option trap about The culture of poverty?**

A. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. B. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. C. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. D. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere.

**Answer: D. Explanation: The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. The remaining options belong to different chronology, actor or analytical categories.**

**Q13. Which statement correctly identifies The structural critique?**

A. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. B. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. C. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. D. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change.

**Answer: A. Explanation: The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. The remaining options belong to different chronology, actor or analytical categories.**

**Q14. Which chronology card should be filed under The structural critique?**

A. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. B. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. C. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index

belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. D. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names.

**Answer: B. Explanation: The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. The remaining options belong to different chronology, actor or analytical categories.**

#### Q15. Which option preserves the source-bounded meaning of The structural critique?

A. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. B. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. C. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. D. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change.

**Answer: C. Explanation: The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. The remaining options belong to different chronology, actor or analytical categories.**

#### Q16. Which statement avoids a close-option trap about The structural critique?

A. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. B. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. C. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. D. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected.

**Answer: D. Explanation: The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. The remaining options belong to different chronology, actor or analytical categories.**

### Q17. Which statement correctly identifies Short-horizon decision-making?

A. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. B. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. C. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. D. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology.

**Answer: A. Explanation: Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. The remaining options belong to different chronology, actor or analytical categories.**

### Q18. Which chronology card should be filed under Short-horizon decision-making?

A. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. B. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. C. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. D. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience.

**Answer: B. Explanation: Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. The remaining options belong to different chronology, actor or analytical categories.**

### Q19. Which option preserves the source-bounded meaning of Short-horizon decision-making?

A. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. B. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. C. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. D. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names.

**Answer: C. Explanation: Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being**

converted into blame. The remaining options belong to different chronology, actor or analytical categories.

**Q20. Which statement avoids a close-option trap about Short-horizon decision-making?**

A. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. B. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. C. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. D. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame.

**Answer: D. Explanation: Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. The remaining options belong to different chronology, actor or analytical categories.**

**Q21. Which statement correctly identifies The measurement boundary?**

A. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. B. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. C. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. D. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change.

**Answer: A. Explanation: The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. The remaining options belong to different chronology, actor or analytical categories.**

**Q22. Which chronology card should be filed under The measurement boundary?**

A. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. B. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. C. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. D. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery

weaknesses stop it from reaching or being usable by the household it names.

**Answer: B. Explanation: The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. The remaining options belong to different chronology, actor or analytical categories.**

**Q23. Which option preserves the source-bounded meaning of The measurement boundary?**

A. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. B. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. C. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. D. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic.

**Answer: C. Explanation: The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. The remaining options belong to different chronology, actor or analytical categories.**

**Q24. Which statement avoids a close-option trap about The measurement boundary?**

A. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. B. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. C. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. D. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology.

**Answer: D. Explanation: The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. The remaining options belong to different chronology, actor or analytical categories.**

### Q25. Which statement correctly identifies Dated multidimensional anchor?

A. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. B. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. C. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. D. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication.

**Answer: A. Explanation: The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. The remaining options belong to different chronology, actor or analytical categories.**

### Q26. Which chronology card should be filed under Dated multidimensional anchor?

A. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. B. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. C. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. D. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication.

**Answer: B. Explanation: The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. The remaining options belong to different chronology, actor or analytical categories.**

### Q27. Which option preserves the source-bounded meaning of Dated multidimensional anchor?

A. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. B. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. C. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. D. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone,

while the second physically relocates a community and is owned by the tribal-society topic.

**Answer: C. Explanation: The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. The remaining options belong to different chronology, actor or analytical categories.**

**Q28. Which statement avoids a close-option trap about Dated multidimensional anchor?**

A. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. B. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. C. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. D. The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change.

**Answer: D. Explanation: The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. The remaining options belong to different chronology, actor or analytical categories.**

**Q29. Which statement correctly identifies Persistence despite programmes?**

A. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. B. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. C. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. D. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication.

**Answer: A. Explanation: Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. The remaining options belong to different chronology, actor or analytical categories.**

### Q30. Which chronology card should be filed under Persistence despite programmes?

A. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. B. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. C. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. D. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic.

**Answer: B. Explanation: Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. The remaining options belong to different chronology, actor or analytical categories.**

### Q31. Which option preserves the source-bounded meaning of Persistence despite programmes?

A. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. B. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. C. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. D. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation.

**Answer: C. Explanation: Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. The remaining options belong to different chronology, actor or analytical categories.**

### Q32. Which statement avoids a close-option trap about Persistence despite programmes?

A. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. B. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. C. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. D. Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names.

**Answer: D. Explanation: Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. The**

remaining options belong to different chronology, actor or analytical categories.

**Q33. Which statement correctly identifies Class-differentiated shock transmission?**

A. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. B. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. C. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. D. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic.

**Answer: A. Explanation: Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. The remaining options belong to different chronology, actor or analytical categories.**

**Q34. Which chronology card should be filed under Class-differentiated shock transmission?**

A. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. B. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. C. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. D. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic.

**Answer: B. Explanation: Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. The remaining options belong to different chronology, actor or analytical categories.**

**Q35. Which option preserves the source-bounded meaning of Class-differentiated shock transmission?**

A. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. B. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. C. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service

access, so the shock is a channel structure rather than one uniform experience. D. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths.

**Answer: C. Explanation: Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. The remaining options belong to different chronology, actor or analytical categories.**

**Q36. Which statement avoids a close-option trap about Class-differentiated shock transmission?**

A. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. B. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. C. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. D. Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience.

**Answer: D. Explanation: Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. The remaining options belong to different chronology, actor or analytical categories.**

**Q37. Which statement correctly identifies The development-livelihood conflict?**

A. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. B. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. C. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. D. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic.

**Answer: A. Explanation: The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. The remaining options belong to different chronology, actor or analytical categories.**

### Q38. Which chronology card should be filed under The development-livelihood conflict?

A. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. B. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. C. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. D. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation.

**Answer: B. Explanation: The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. The remaining options belong to different chronology, actor or analytical categories.**

### Q39. Which option preserves the source-bounded meaning of The development-livelihood conflict?

A. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. B. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. C. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. D. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved.

**Answer: C. Explanation: The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. The remaining options belong to different chronology, actor or analytical categories.**

### Q40. Which statement avoids a close-option trap about The development-livelihood conflict?

A. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. B. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. C. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. D. The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication.

**Answer: D. Explanation: The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on**

which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. The remaining options belong to different chronology, actor or analytical categories.

**Q41. Which statement correctly identifies Two development conflicts kept apart?**

A. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. B. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. C. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. D. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation.

**Answer: A. Explanation: Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. The remaining options belong to different chronology, actor or analytical categories.**

**Q42. Which chronology card should be filed under Two development conflicts kept apart?**

A. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. B. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. C. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. D. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths.

**Answer: B. Explanation: Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. The remaining options belong to different chronology, actor or analytical categories.**

**Q43. Which option preserves the source-bounded meaning of Two development conflicts kept apart?**

A. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. B. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. C. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. D. The three-actor

comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths.

**Answer: C. Explanation: Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. The remaining options belong to different chronology, actor or analytical categories.**

**Q44. Which statement avoids a close-option trap about Two development conflicts kept apart?**

A. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. B. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. C. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. D. Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic.

**Answer: D. Explanation: Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. The remaining options belong to different chronology, actor or analytical categories.**

**Q45. Which statement correctly identifies Two conservation designs?**

A. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. B. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. C. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. D. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability.

**Answer: A. Explanation: Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. The remaining options belong to different chronology, actor or analytical categories.**

#### Q46. Which chronology card should be filed under Two conservation designs?

A. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. B. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. C. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. D. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths.

**Answer: B. Explanation: Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. The remaining options belong to different chronology, actor or analytical categories.**

#### Q47. Which option preserves the source-bounded meaning of Two conservation designs?

A. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. B. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. C. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. D. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation.

**Answer: C. Explanation: Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. The remaining options belong to different chronology, actor or analytical categories.**

#### Q48. Which statement avoids a close-option trap about Two conservation designs?

A. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. B. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. C. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. D. Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation.

**Answer: D. Explanation: Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the**

**Advanced owner labels participatory conservation vs exclusionary conservation. The remaining options belong to different chronology, actor or analytical categories.**

**Q49. Which statement correctly identifies Reduction rather than elimination?**

A. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. B. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. C. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. D. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation.

**Answer: A. Explanation: Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. The remaining options belong to different chronology, actor or analytical categories.**

**Q50. Which chronology card should be filed under Reduction rather than elimination?**

A. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. B. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. C. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. D. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability.

**Answer: B. Explanation: Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. The remaining options belong to different chronology, actor or analytical categories.**

**Q51. Which option preserves the source-bounded meaning of Reduction rather than elimination?**

A. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. B. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. C. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. D. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do.

**Answer: C. Explanation: Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. The remaining options belong to different chronology, actor or analytical categories.**

### Q52. Which statement avoids a close-option trap about Reduction rather than elimination?

A. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. B. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. C. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. D. Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved.

**Answer: D. Explanation: Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. The remaining options belong to different chronology, actor or analytical categories.**

### Q53. Which statement correctly identifies Three-actor comparative advantage?

A. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. B. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. C. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. D. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability.

**Answer: A. Explanation: The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. The remaining options belong to different chronology, actor or analytical categories.**

### Q54. Which chronology card should be filed under Three-actor comparative advantage?

A. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. B. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. C. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. D. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation.

**Answer: B. Explanation: The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. The remaining options belong to different chronology, actor or analytical categories.**

### Q55. Which option preserves the source-bounded meaning of Three-actor comparative advantage?

A. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. B. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. C. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. D. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved.

**Answer: C. Explanation: The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. The remaining options belong to different chronology, actor or analytical categories.**

### Q56. Which statement avoids a close-option trap about Three-actor comparative advantage?

A. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. B. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. C. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. D. The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths.

**Answer: D. Explanation: The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. The remaining options belong to different chronology, actor or analytical categories.**

### Q57. Which statement correctly identifies Complementary collaboration?

A. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. B. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. C. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal

explanation. D. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do.

**Answer: A. Explanation: Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q58. Which chronology card should be filed under Complementary collaboration?**

A. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. B. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. C. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. D. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns.

**Answer: B. Explanation: Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q59. Which option preserves the source-bounded meaning of Complementary collaboration?**

A. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. B. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. C. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. D. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner.

**Answer: C. Explanation: Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. The remaining options belong to different chronology, actor or analytical categories.**

### Q60. Which statement avoids a close-option trap about Complementary collaboration?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. B. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. C. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. D. Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability.

**Answer: D. Explanation: Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. The remaining options belong to different chronology, actor or analytical categories.**

### Q61. Which statement correctly identifies Culture-only misdiagnosis?

A. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. B. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. C. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. D. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do.

**Answer: A. Explanation: A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. The remaining options belong to different chronology, actor or analytical categories.**

### Q62. Which chronology card should be filed under Culture-only misdiagnosis?

A. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. B. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. C. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth

against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. D. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved.

**Answer: B. Explanation: A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. The remaining options belong to different chronology, actor or analytical categories.**

**Q63. Which option preserves the source-bounded meaning of Culture-only misdiagnosis?**

A. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. B. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. C. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. D. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner.

**Answer: C. Explanation: A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. The remaining options belong to different chronology, actor or analytical categories.**

**Q64. Which statement avoids a close-option trap about Culture-only misdiagnosis?**

A. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. B. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. C. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. D. A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation.

**Answer: D. Explanation: A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation. The remaining options belong to different chronology, actor or analytical categories.**

### Q65. Which statement correctly identifies Structural intervention?

A. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. B. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. C. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. D. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns.

**Answer: A. Explanation: A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. The remaining options belong to different chronology, actor or analytical categories.**

### Q66. Which chronology card should be filed under Structural intervention?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. B. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. C. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. D. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns.

**Answer: B. Explanation: A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. The remaining options belong to different chronology, actor or analytical categories.**

### Q67. Which option preserves the source-bounded meaning of Structural intervention?

A. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. B. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. C. A land-titling and

credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. D. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express.

**Answer: C. Explanation: A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q68. Which statement avoids a close-option trap about Structural intervention?**

A. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. B. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. C. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. D. A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do.

**Answer: D. Explanation: A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q69. Which statement correctly identifies Conservation implementation contrast?**

A. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. B. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. C. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. D. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner.

**Answer: A. Explanation: A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. The remaining options belong to different chronology, actor or analytical categories.**

### Q70. Which chronology card should be filed under Conservation implementation contrast?

A. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. B. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. C. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. D. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner.

**Answer: B. Explanation: A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. The remaining options belong to different chronology, actor or analytical categories.**

### Q71. Which option preserves the source-bounded meaning of Conservation implementation contrast?

A. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. B. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. C. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. D. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold.

**Answer: C. Explanation: A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. The remaining options belong to different chronology, actor or analytical categories.**

### Q72. Which statement avoids a close-option trap about Conservation implementation contrast?

A. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. B. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. C. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. D. A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved.

**Answer: D. Explanation: A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management**

rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. The remaining options belong to different chronology, actor or analytical categories.

**Q73. Which statement correctly identifies Three standing trade-offs?**

A. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. B. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. C. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. D. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner.

**Answer: A. Explanation: Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. The remaining options belong to different chronology, actor or analytical categories.**

**Q74. Which chronology card should be filed under Three standing trade-offs?**

A. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. B. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. C. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. D. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express.

**Answer: B. Explanation: Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. The remaining options belong to different chronology, actor or analytical categories.**

### Q75. Which option preserves the source-bounded meaning of Three standing trade-offs?

A. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. B. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. C. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. D. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere.

**Answer: C. Explanation: Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. The remaining options belong to different chronology, actor or analytical categories.**

### Q76. Which statement avoids a close-option trap about Three standing trade-offs?

A. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. B. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. C. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. D. Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns.

**Answer: D. Explanation: Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns. The remaining options belong to different chronology, actor or analytical categories.**

### Q77. Which statement correctly identifies Verified direct Mains demands?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. B. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. C. Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold. D. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete

explanation of poverty anywhere.

**Answer: A. Explanation: Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q78. Which chronology card should be filed under Verified direct Mains demands?**

A. Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. B. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. C. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. D. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere.

**Answer: B. Explanation: Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q79. Which option preserves the source-bounded meaning of Verified direct Mains demands?**

A. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. B. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. C. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. D. The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere.

**Answer: C. Explanation: Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand**

on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. The remaining options belong to different chronology, actor or analytical categories.

#### Q80. Which statement avoids a close-option trap about Verified direct Mains demands?

A. The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. B. The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. C. Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. D. Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner.

**Answer: D. Explanation: Four direct General Studies Paper-I demands are carried by this owner: the 2018 demand on the persistence of poverty despite eradication programmes worth 10 marks and the 2020 demand on the pandemic, class inequalities and poverty worth 10 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on government, non-governmental and private collaboration worth 10 marks whose ledger row names the Governance civil-society owner while this owner's table claims it, and the 2025 demand on sustainable growth against the needs of the poor worth 15 marks routed in the ledger to this Basic owner. The remaining options belong to different chronology, actor or analytical categories.**

## PYQS AND ANSWER PRACTICE

### VERIFIED PYQ OWNERSHIP AUDIT

Four direct General Studies Paper-I Mains demands are carried by this owner and each is recorded with its exact routing status. The 2018 Q9 demand on the persistence of poverty despite eradication programmes and the 2020 Q9 demand on the pandemic, class inequalities and poverty are routed in the audited 2018-2023 Mains ledger to the Advanced owner, while the Core owner's own answer-architecture table records that Core routing supersedes, so both are answered here from the Basic spine. The locally held official question papers for 2018 and 2020 are scanned images from which reliable text cannot be extracted, so the audited ledger's neutral demand rendering is used for those two years and no verbatim wording is claimed. The 2024 Q10 demand on collaboration between government, non-governmental organisations and the private sector is routed in the audited 2024-2025 ledger to the Governance civil-society owner while this owner's own table claims it as a core route, and that cross-owner conflict is recorded openly here. The 2025 Q19 demand on sustainable growth against the needs of the poor is routed in the same ledger to this Basic owner. The wording of the 2024 and 2025 demands was confirmed in the locally held official question papers for those years. No marking scheme, official key or model answer of the Union Public Service Commission is held locally, and none is reproduced or inferred.

**Demand decoding:** The directive **answer** requires a direct position on "VERIFIED PYQ OWNERSHIP AUDIT", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

**Detailed examiner-grade model answer:**

**Introduction and thesis:** The answer must resolve the sociological demand in “VERIFIED PYQ OWNERSHIP AUDIT”.

**Analytical body:**

1. **Claim and named evidence:** Define the central concept and separate it from the nearest social or legal category. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Trace the historical and institutional setting instead of assuming a timeless practice. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Explain the norm, incentive, network, power or agency mechanism producing the outcome. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** Use one named Indian community, movement, region, institution or source-dated dataset. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
5. **Claim and named evidence:** Qualify the pattern through intersectionality, regional variation, causation and implementation limits. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Counter-position / limit:** Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

**Qualified conclusion:** The answer must resolve the sociological demand in “VERIFIED PYQ OWNERSHIP AUDIT”.

**Executable exam-length answer / compression plan:** For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For “VERIFIED PYQ OWNERSHIP AUDIT”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

## OWNER PYQ LEDGER EXTRACTS

### 5. Indian applications and PYQ mapping

- **FACT: 2024 GS-I PYQ (10 marks, verbatim):** "In dealing with socio-economic issues of development, what kind of collaboration between government, NGOs and private sector would be most productive?" The expected answer: argue for a complementary collaboration model - government providing scale, regulation and last-mile accountability; NGOs providing grassroots trust, local knowledge and last-mile delivery; private sector providing efficiency, technology and resources - with clear role-division and joint monitoring to avoid duplication or accountability gaps.

- **FACT: 2025 GS-I PYQ (15 marks, verbatim):** "Achieving sustainable growth with emphasis on environmental protection could come into conflict with poor people's needs in a country like India. Comment." The expected answer: affirm the conflict is real (forest/land restrictions curtailing subsistence access), give concrete examples (protected-area displacement, restricted grazing/fuelwood collection), and argue the resolution lies in

participatory conservation models that give poor communities a stake and alternative livelihood support, rather than treating conservation and poverty alleviation as automatically compatible or automatically opposed.

- ANALYSIS: A forest-dependent household losing fuelwood-collection access due to a new protected area, without an alternative livelihood programme, illustrates the 2025 PYQ's conflict directly.

### 9. PYQ application

- FACT: **2024 GS-I (10 marks)**: structure around the three-actor comparative-advantage model (government scale/regulation, NGO grassroots trust, private efficiency/resources) with a clear role-division recommendation.

- FACT: **2025 GS-I (15 marks)**: affirm the conflict, give concrete forest/land-access examples, and recommend participatory conservation with alternative-livelihood support as the resolution direction.

### Recent PYQ Integration (2024-2025)

**Status:** 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: \_PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2024-2025.md.

- **Years represented:** 2025
- **Paper(s):** GS-I
- **Routed question demands:** 1

| Year | Paper | Q  | PYQ demand (neutral rendering)              | Directive / format             | Source status          | Owner requirement                                                                           |
|------|-------|----|---------------------------------------------|--------------------------------|------------------------|---------------------------------------------------------------------------------------------|
| 2025 | GS-I  | 19 | Sustainable growth versus needs of the poor | Comment · 15 marks · 250 words | Routed to owning topic | Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion. |

### What this owner must now support

- Sustainable growth versus needs of the poor

This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

### 10. PYQ-based analytical application

- FACT: **2024 GS-I (10 marks, verbatim)**: "In dealing with socio-economic issues of development, what kind of collaboration between government, NGOs and private sector would be most productive?" Analytical route: apply the complementary-versus-overlapping collaboration distinction, assign specific comparative advantages to each actor, and recommend joint monitoring to prevent accountability diffusion.

- FACT: **2025 GS-I (15 marks, verbatim)**: "Achieving sustainable growth with emphasis on environmental protection could come into conflict with poor people's needs in a country like India. Comment." Analytical route: affirm the conflict using the development-livelihood conflict chain, distinguish exclusionary from participatory conservation implementation, and argue severity is implementation-dependent, concluding with participatory co-management as the preferred resolution direction.

### Historical PYQ Integration (2018-2023)

**Status:** Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: \_PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2018, 2020
- **Paper(s):** GS-I
- **Routed question demands:** 2

| 2020 | GS-I  | 9 | COVID-19 pandemic, class inequalities and poverty in India | Comment · 10 marks · 150 words                   | Routed to owning topic | Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion. |

### What this owner must now support

- Persistence of poverty despite eradication programmes
- COVID-19 pandemic, class inequalities and poverty in India

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

### PYQ DEMAND CARD 1 - 2018 GS-I Q9

**Demand:** Audited ledger demand rendering: the persistence of poverty despite eradication programmes. Explain by giving reasons, 10 marks, 150 words.

**Status:** Routed in the audited 2018-2023 Mains ledger to the Advanced owner, with the Core owner recording that Core routing supersedes. The locally held official 2018 paper is a scanned image without reliable text extraction, so the ledger rendering is used and no verbatim wording is claimed.

**Model solution:** The directive asks for reasons, so the answer must be a chain of mechanisms and not a catalogue of programmes. Begin by fixing what persists: poverty is capability deprivation and social exclusion, so a household can cross an income threshold while remaining unable to be schooled, treated or heard, which is why a programme can succeed on its own indicator and fail on the condition it was created to end. Give the first reason as a conversion problem: coverage, access and use are three different things, and an entitlement that formally covers a household can still fail on distance, cost, documentation, information or last-mile delivery capacity. Give the second reason as an asset and market problem: without land, credit, secure tenure or a stable wage relation, a transfer smooths consumption without changing the household's opportunity set, so deprivation returns with the next shock. Give the third reason as exclusion: caste, gender, religion and region shape which households are reached first and which are reached last, and the same delivery system therefore produces unequal results without any explicit discrimination. Give the fourth reason as short horizons: chronic insecurity forces survival-first decisions that suppress investment in schooling and savings, and this is a consequence of constrained choice rather than a cultural failing, which is the point at which weak answers slide into blaming the poor. Add the measurement caution: the NITI Aayog discussion paper of 2024 estimated multidimensional poverty at 11.28 per cent in 2022-23 with about 24.8 crore exits between 2013-14 and 2022-23, and those are estimates for a stated period that neither prove nor disprove a particular programme's effect. Conclude that persistence is a conversion and exclusion problem, so convergence, accountability and asset access matter more than adding another announcement, and route poverty-line methodology to Economy and entitlement design to Social Justice.

**Demand decoding:** The directive **answer** requires a direct position on "PYQ DEMAND CARD 1 - 2018 GS-I Q9", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

### Detailed examiner-grade model answer:

**Introduction and thesis:** The directive asks for reasons, so the answer must be a chain of mechanisms and not a catalogue of programmes. Begin by fixing what persists: poverty is capability deprivation and social exclusion, so a household can cross an income threshold while remaining unable to be schooled, treated or heard, which is why a programme can succeed on its own indicator and fail on the condition it was created to end. Give the first reason as a conversion problem: coverage, access and use are three different things, and an entitlement that formally covers a household can still fail on distance, cost, documentation, information or last-mile delivery capacity. Give the second

reason as an asset and market problem: without land, credit, secure tenure or a stable wage relation, a transfer smooths consumption without changing the household's opportunity set, so deprivation returns with the next shock. Give the third reason as exclusion: caste, gender, religion and region shape which households are reached first and which are reached last, and the same delivery system therefore produces unequal results without any explicit discrimination. Give the fourth reason as short horizons: chronic insecurity forces survival-first decisions that suppress investment in schooling and savings, and this is a consequence of constrained choice rather than a cultural failing, which is the point at which weak answers slide into blaming the poor. Add the measurement caution: the NITI Aayog discussion paper of 2024 estimated multidimensional poverty at 11.28 per cent in 2022-23 with about 24.8 crore exits between 2013-14 and 2022-23, and those are estimates for a stated period that neither prove nor disprove a particular programme's effect. Conclude that persistence is a conversion and exclusion problem, so convergence, accountability and asset access matter more than adding another announcement, and route poverty-line methodology to Economy and entitlement design to Social Justice.

#### **Analytical body:**

1. **Claim and named evidence:** Demand: Audited ledger demand rendering: the persistence of poverty despite eradication programmes. Explain by giving reasons, 10 marks, 150 words. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Counter-position / limit:** Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

**Qualified conclusion:** The directive asks for reasons, so the answer must be a chain of mechanisms and not a catalogue of programmes. Begin by fixing what persists: poverty is capability deprivation and social exclusion, so a household can cross an income threshold while remaining unable to be schooled, treated or heard, which is why a programme can succeed on its own indicator and fail on the condition it was created to end. Give the first reason as a conversion problem: coverage, access and use are three different things, and an entitlement that formally covers a household can still fail on distance, cost, documentation, information or last-mile delivery capacity. Give the second reason as an asset and market problem: without land, credit, secure tenure or a stable wage relation, a transfer smooths consumption without changing the household's opportunity set, so deprivation returns with the next shock. Give the third reason as exclusion: caste, gender, religion and region shape which households are reached first and which are reached last, and the same delivery system therefore produces unequal results without any explicit discrimination. Give the fourth reason as short horizons: chronic insecurity forces survival-first decisions that suppress investment in schooling and savings, and this is a consequence of constrained choice rather than a cultural failing, which is the point at which weak answers slide into blaming the poor. Add the measurement caution: the NITI Aayog discussion paper of 2024 estimated multidimensional poverty at 11.28 per cent in 2022-23 with about 24.8 crore exits between 2013-14 and 2022-23, and those are estimates for a stated period that neither prove nor disprove a particular programme's effect. Conclude that persistence is a conversion and exclusion problem, so convergence, accountability and asset access matter more than adding another announcement, and route poverty-line methodology to Economy and entitlement design to Social Justice.

**Executable exam-length answer / compression plan:** For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For "PYQ DEMAND CARD 1 - 2018 GS-I Q9", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

## PYQ DEMAND CARD 2 - 2020 GS-I Q9

**Demand:** Audited ledger demand rendering: the COVID-19 pandemic, class inequalities and poverty in India. Comment, 10 marks, 150 words.

**Status:** Routed in the audited 2018-2023 Mains ledger to the Advanced owner, with the Core owner recording that Core routing supersedes. The locally held official 2020 paper is a scanned image without reliable text extraction, so the ledger rendering is used and no verbatim wording is claimed. No pandemic-period poverty, migration or employment figure is asserted anywhere in this package.

**Model solution:** Comment invites a considered judgement, so state the analytical position first: a shock is not itself an equaliser or a leveller, it is transmitted through pre-existing class positions, and the answer's task is to name the transmission channels rather than to assert a magnitude. Channel one is work. Precarious informal employment without contracts, notice or paid leave converts a suspension of activity directly into a loss of income, while secure salaried work converts it into an inconvenience. Channel two is housing and health. Dense, poorly serviced housing raises exposure and makes isolation impracticable, so the same public-health measure imposes very different costs by class. Channel three is savings and social protection. Thin buffers force distress borrowing or asset sale, and where entitlement is tied to place of registration rather than to the person, mobility itself becomes a reason for exclusion from relief. Channel four is services and connectivity. Where schooling, work and relief move to digital delivery, unequal device and internet access converts a temporary disruption into a durable learning and earnings loss. Add the relational layer: caste, gender and location intersect these channels, so aggregate statements conceal which group actually bore the cost. State the evidentiary limit explicitly, because it is part of a good comment: this package holds no pandemic-period poverty or migration figure and asserts none, and the NITI Aayog 2024 estimate covers 2022-23 rather than the shock period. Conclude that class inequality determined the depth of the shock more than the shock determined class inequality, and that the policy implication is portable entitlement, universal basic services and resilience for informal workers rather than a one-time relief narrative.

**Demand decoding:** The directive **answer** requires a direct position on "PYQ DEMAND CARD 2 - 2020 GS-I Q9", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

### Detailed examiner-grade model answer:

**Introduction and thesis:** Comment invites a considered judgement, so state the analytical position first: a shock is not itself an equaliser or a leveller, it is transmitted through pre-existing class positions, and the answer's task is to name the transmission channels rather than to assert a magnitude. Channel one is work. Precarious informal employment without contracts, notice or paid leave converts a suspension of activity directly into a loss of income, while secure salaried work converts it into an inconvenience. Channel two is housing and health. Dense, poorly serviced housing raises exposure and makes isolation impracticable, so the same public-health measure imposes very different costs by class. Channel three is savings and social protection. Thin buffers force distress borrowing or asset sale, and where entitlement is tied to place of registration rather than to the person, mobility itself becomes a reason for exclusion from relief. Channel four is services and connectivity. Where schooling, work and relief move to digital delivery, unequal device and internet access converts a temporary disruption into a durable learning and earnings loss. Add the relational layer: caste, gender and location intersect these channels, so aggregate statements conceal which group actually bore the cost. State the evidentiary limit explicitly, because it is part of a good comment: this package holds no pandemic-period poverty or migration figure and asserts none, and the NITI Aayog 2024 estimate covers 2022-23 rather than the shock period. Conclude that class inequality determined the depth of the shock more than the shock determined class inequality, and that the policy implication is portable entitlement, universal basic services and resilience for informal workers rather than a one-time relief narrative.

### Analytical body:

1. **Claim and named evidence:** Demand: Audited ledger demand rendering: the COVID-19 pandemic, class inequalities and poverty in India. Comment, 10 marks, 150 words. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Counter-position / limit:** Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power,

agency, intersectionality, region, period and evidence status.

**Qualified conclusion:** Comment invites a considered judgement, so state the analytical position first: a shock is not itself an equaliser or a leveller, it is transmitted through pre-existing class positions, and the answer's task is to name the transmission channels rather than to assert a magnitude. Channel one is work. Precarious informal employment without contracts, notice or paid leave converts a suspension of activity directly into a loss of income, while secure salaried work converts it into an inconvenience. Channel two is housing and health. Dense, poorly serviced housing raises exposure and makes isolation impracticable, so the same public-health measure imposes very different costs by class. Channel three is savings and social protection. Thin buffers force distress borrowing or asset sale, and where entitlement is tied to place of registration rather than to the person, mobility itself becomes a reason for exclusion from relief. Channel four is services and connectivity. Where schooling, work and relief move to digital delivery, unequal device and internet access converts a temporary disruption into a durable learning and earnings loss. Add the relational layer: caste, gender and location intersect these channels, so aggregate statements conceal which group actually bore the cost. State the evidentiary limit explicitly, because it is part of a good comment: this package holds no pandemic-period poverty or migration figure and asserts none, and the NITI Aayog 2024 estimate covers 2022-23 rather than the shock period. Conclude that class inequality determined the depth of the shock more than the shock determined class inequality, and that the policy implication is portable entitlement, universal basic services and resilience for informal workers rather than a one-time relief narrative.

**Executable exam-length answer / compression plan:** For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For "PYQ DEMAND CARD 2 - 2020 GS-I Q9", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

### PYQ DEMAND CARD 3 - 2024 GS-I Q10

**Demand:** In dealing with socio-economic issues of development, what kind of collaboration between government, NGOs and private sector would be most productive? (Answer in 150 words) 10 marks.

**Status:** Wording confirmed in the locally held official 2024 General Studies Paper-I. The audited 2024-2025 Mains ledger routes this row to the Governance civil-society owner while this owner's own answer-architecture table claims it; the conflict is recorded openly and this answer supplies the sociological role-division argument without claiming the Governance owner's institutional-mechanism material.

**Model solution:** Answer the word most productive directly by naming a form of collaboration rather than praising cooperation in general: the productive form is complementary, in which each actor performs the function it is best placed to perform under a single joint monitoring arrangement. Set out the comparative advantages. Government supplies regulatory authority, funding at scale, statutory backing and final accountability, none of which the other two can substitute. Non-governmental organisations supply grassroots trust, knowledge of community-specific constraints and last-mile delivery into households that a formal system reaches late or not at all. Private actors supply technology, logistics, efficiency and resources, particularly where delivery must scale or a supply chain must be built. Then state the failure mode, which is what converts this from a list into an argument: where roles are not divided, the same function is attempted twice, coverage still fails at the margin, and responsibility for a poor outcome is diffused across three actors so that none of them owns it. That is why joint monitoring, a single accountable outcome owner and transparent role definition matter more than the number of partners. Qualify the recommendation honestly: collaboration cannot substitute for the conversion factors that decide whether an entitlement is usable, namely schooling, information, distance and stigma, and no partnership arrangement should be credited with an outcome that this package cannot evidence. Conclude that the most productive collaboration is comparative-advantage division plus joint accountability, and route detailed civil-society and partnership-institution theory to the Governance owner rather than restating it.

**Demand decoding:** The directive **answer** requires a direct position on “PYQ DEMAND CARD 3 - 2024 GS-I Q10”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

**Detailed examiner-grade model answer:**

**Introduction and thesis:** Answer the word most productive directly by naming a form of collaboration rather than praising cooperation in general: the productive form is complementary, in which each actor performs the function it is best placed to perform under a single joint monitoring arrangement. Set out the comparative advantages. Government supplies regulatory authority, funding at scale, statutory backing and final accountability, none of which the other two can substitute. Non-governmental organisations supply grassroots trust, knowledge of community-specific constraints and last-mile delivery into households that a formal system reaches late or not at all. Private actors supply technology, logistics, efficiency and resources, particularly where delivery must scale or a supply chain must be built. Then state the failure mode, which is what converts this from a list into an argument: where roles are not divided, the same function is attempted twice, coverage still fails at the margin, and responsibility for a poor outcome is diffused across three actors so that none of them owns it. That is why joint monitoring, a single accountable outcome owner and transparent role definition matter more than the number of partners. Qualify the recommendation honestly: collaboration cannot substitute for the conversion factors that decide whether an entitlement is usable, namely schooling, information, distance and stigma, and no partnership arrangement should be credited with an outcome that this package cannot evidence. Conclude that the most productive collaboration is comparative-advantage division plus joint accountability, and route detailed civil-society and partnership-institution theory to the Governance owner rather than restating it.

**Analytical body:**

1. **Claim and named evidence:** Demand: In dealing with socio-economic issues of development, what kind of collaboration between government, NGOs and private sector would be most productive? (Answer in 150 words) 10 marks. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Counter-position / limit:** Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

**Qualified conclusion:** Answer the word most productive directly by naming a form of collaboration rather than praising cooperation in general: the productive form is complementary, in which each actor performs the function it is best placed to perform under a single joint monitoring arrangement. Set out the comparative advantages. Government supplies regulatory authority, funding at scale, statutory backing and final accountability, none of which the other two can substitute. Non-governmental organisations supply grassroots trust, knowledge of community-specific constraints and last-mile delivery into households that a formal system reaches late or not at all. Private actors supply technology, logistics, efficiency and resources, particularly where delivery must scale or a supply chain must be built. Then state the failure mode, which is what converts this from a list into an argument: where roles are not divided, the same function is attempted twice, coverage still fails at the margin, and responsibility for a poor outcome is diffused across three actors so that none of them owns it. That is why joint monitoring, a single accountable outcome owner and transparent role definition matter more than the number of partners. Qualify the recommendation honestly: collaboration cannot substitute for the conversion factors that decide whether an entitlement is usable, namely schooling, information, distance and stigma, and no partnership arrangement should be credited with an outcome that this package cannot evidence. Conclude that the most productive collaboration is comparative-advantage division plus joint accountability, and route detailed civil-society and partnership-institution theory to the Governance owner rather than restating it.

**Executable exam-length answer / compression plan:** For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**How to improve this answer:** For “PYQ DEMAND CARD 3 - 2024 GS-I Q10”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

### PYQ DEMAND CARD 4 - 2025 GS-I Q19

**Demand:** Achieving sustainable growth with emphasis on environmental protection could come into conflict with poor people's needs in a country like India. Comment. (Answer in 250 words) 15 marks.

**Status:** Wording confirmed in the locally held official 2025 General Studies Paper-I and routed in the audited 2024-2025 Mains ledger to this Basic owner.

**Model solution:** Affirm the conflict without surrendering to it, because comment rewards a graded judgement rather than either denial or despair. State the mechanism first: where a forest, wetland or grazing common is designated for strict protection, the households that depended on grazing, fuelwood or non-timber forest produce lose an alternative-free subsistence base, so the conservation objective is achieved and the livelihood cost is imposed at the same time on the poorest users. Distinguish this from the adjacent mechanism at once, because merging them is the commonest error: conservation restriction curtails access without moving anyone, whereas project-driven displacement physically relocates a community and is owned by the tribal-society topic. Now make the analytical move that the directive rewards: the severity of the conflict is a function of implementation design rather than an unavoidable law of development. Exclusionary conservation closes access entirely and transfers the whole adjustment cost to local users. Participatory conservation grants co-management rights, recognises use rights and supplies alternative livelihood such as value chains in non-timber produce or ecotourism in exchange for sustainable-use commitments, which substantially reduces the conflict. Keep the qualification honest: participatory design rarely eliminates the conflict, because some restriction on prior open access is normally still required, and it may be slower and permit more resource use than strict exclusion, which is a genuine effectiveness-against-equity trade-off rather than an administrative inconvenience. Add the deprivation frame: poverty here is capability deprivation and social exclusion, so an answer that measures only income loss understates what is removed. Conclude that sustainable growth conflicts with the needs of the poor whenever the poor bear the adjustment cost without voice or compensation, and that the resolution is participatory design, secure use rights and alternative livelihood rather than an assumption that conservation and poverty reduction are automatically compatible. Assert no displacement count, no protected-area figure and no poverty rate.

**Demand decoding:** The directive **answer** requires a direct position on “PYQ DEMAND CARD 4 - 2025 GS-I Q19”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

#### Detailed examiner-grade model answer:

**Introduction and thesis:** Affirm the conflict without surrendering to it, because comment rewards a graded judgement rather than either denial or despair. State the mechanism first: where a forest, wetland or grazing common is designated for strict protection, the households that depended on grazing, fuelwood or non-timber forest produce lose an alternative-free subsistence base, so the conservation objective is achieved and the livelihood cost is imposed at the same time on the poorest users. Distinguish this from the adjacent mechanism at once, because merging them is the commonest error: conservation restriction curtails access without moving anyone, whereas project-driven displacement physically relocates a community and is owned by the tribal-society topic. Now make the analytical move that the directive rewards: the severity of the conflict is a function of implementation design rather than an unavoidable law of development. Exclusionary conservation closes access entirely and transfers the whole adjustment cost to local users. Participatory conservation grants co-management rights, recognises use rights and supplies alternative livelihood such as value chains in non-timber produce or ecotourism in exchange for sustainable-use commitments, which substantially reduces the conflict. Keep the qualification honest: participatory design rarely eliminates the conflict, because some restriction on prior open access is normally still required, and it may be slower and permit more resource use than strict exclusion, which is a genuine effectiveness-against-equity trade-off rather than an administrative inconvenience. Add the deprivation frame: poverty here is capability deprivation and social exclusion, so an answer that measures only income loss understates what is removed. Conclude that sustainable growth conflicts with the needs of the poor whenever the poor bear the adjustment cost without voice or compensation, and that the resolution is participatory design, secure use rights and alternative livelihood rather than an assumption that conservation and poverty reduction are automatically compatible. Assert no displacement count,

no protected-area figure and no poverty rate.

### Analytical body:

1. **Claim and named evidence:** Demand: Achieving sustainable growth with emphasis on environmental protection could come into conflict with poor people's needs in a country like India. Comment. (Answer in 250 words) 15 marks. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Status: Wording confirmed in the locally held official 2025 General Studies Paper-I and routed in the audited 2024-2025 Mains ledger to this Basic owner. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Counter-position / limit:** Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

**Qualified conclusion:** Affirm the conflict without surrendering to it, because comment rewards a graded judgement rather than either denial or despair. State the mechanism first: where a forest, wetland or grazing common is designated for strict protection, the households that depended on grazing, fuelwood or non-timber forest produce lose an alternative-free subsistence base, so the conservation objective is achieved and the livelihood cost is imposed at the same time on the poorest users. Distinguish this from the adjacent mechanism at once, because merging them is the commonest error: conservation restriction curtails access without moving anyone, whereas project-driven displacement physically relocates a community and is owned by the tribal-society topic. Now make the analytical move that the directive rewards: the severity of the conflict is a function of implementation design rather than an unavoidable law of development. Exclusionary conservation closes access entirely and transfers the whole adjustment cost to local users. Participatory conservation grants co-management rights, recognises use rights and supplies alternative livelihood such as value chains in non-timber produce or ecotourism in exchange for sustainable-use commitments, which substantially reduces the conflict. Conclude that sustainable growth conflicts with the needs of the poor whenever the poor bear the adjustment cost without voice or compensation, and that the resolution is participatory design, secure use rights and alternative livelihood rather than an assumption that conservation and poverty reduction are automatically compatible. Assert no displacement count, no protected-area figure and no poverty rate.

**Executable exam-length answer / compression plan:** For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For "PYQ DEMAND CARD 4 - 2025 GS-I Q19", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

## ORIGINAL MAINS 1 - 10 MARKS

**Question:** Explain by giving reasons why poverty persists in India despite eradication programmes. Answer in about 150 words.

**Model thesis:** Poverty persists where coverage exists but access, capability and social recognition do not, so the reasons must be given as conversion and delivery mechanisms rather than as a list of schemes or a single income statistic.

**Claim -> named evidence -> analysis -> qualification:**

- Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names.
- Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold.
- Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express.
- The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology.

**Qualified conclusion:** Poverty persists where coverage exists but access, capability and social recognition do not, so the reasons must be given as conversion and delivery mechanisms rather than as a list of schemes or a single income statistic.

**Demand decoding:** The directive **explain** requires a direct position on "Explain by giving reasons why poverty persists in India despite eradication programmes....", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

**Detailed examiner-grade model answer:**

**Introduction and thesis:** Poverty persists where coverage exists but access, capability and social recognition do not, so the reasons must be given as conversion and delivery mechanisms rather than as a list of schemes or a single income statistic.

**Analytical body:**

1. **Claim and named evidence:** Persistence despite programmes is the gap between coverage, access and actual use, in which an entitlement exists on paper while asset deficits, exclusion, distance, information failure and last-mile delivery weaknesses stop it from reaching or being usable by the household it names. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

3. **Claim and named evidence:** Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or

legal-norm-versus-lived-outcome boundary.

4. **Claim and named evidence:** The measurement boundary of this owner is that the Tendulkar and Rangarajan poverty-line formulae and the construction of the multidimensional poverty index belong to Economy, while welfare entitlement and scheme detail belong to Social Justice, so a sociological answer explains deprivation mechanisms rather than restating another owner's methodology. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication.

**Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Counter-position / limit:** Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

**Qualified conclusion:** Poverty persists where coverage exists but access, capability and social recognition do not, so the reasons must be given as conversion and delivery mechanisms rather than as a list of schemes or a single income statistic.

**Executable exam-length answer / compression plan:** For a 10-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise three points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For "Explain by giving reasons why poverty persists in India despite eradication programmes....", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

## ORIGINAL MAINS 2 - 10 MARKS

**Question:** Discuss the collaboration between government, non-governmental organisations and the private sector that would be most productive for socio-economic development. Answer in about 150 words.

**Model thesis:** Productive collaboration divides roles by comparative advantage under joint monitoring, because each actor holds a different strength and undivided roles convert cooperation into duplication and diffused accountability.

**Claim -> named evidence -> analysis -> qualification:**

- The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths.
- Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability.
- Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns.

**Qualified conclusion:** Productive collaboration divides roles by comparative advantage under joint monitoring, because each actor holds a different strength and undivided roles convert cooperation into duplication and diffused accountability.

**Demand decoding:** The directive **discuss** requires a direct position on "Discuss the collaboration between government, non-governmental organisations and the private...", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

### Detailed examiner-grade model answer:

**Introduction and thesis:** Productive collaboration divides roles by comparative advantage under joint monitoring, because each actor holds a different strength and undivided roles convert cooperation into duplication and diffused accountability.

### Analytical body:

- 1. Claim and named evidence:** The three-actor comparative-advantage model holds that government supplies regulatory authority, funding at scale and final accountability, non-governmental organisations supply grassroots trust, local knowledge and last-mile delivery, and private actors supply technology, efficiency and resources, so no single actor ordinarily holds all three strengths. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
- 2. Claim and named evidence:** Complementary collaboration is a role division in which each actor performs the function it is best placed to perform under joint monitoring, and the Advanced owner contrasts it under the label complementary vs overlapping collaboration with an arrangement in which undivided roles produce duplication, coordination failure and diffused accountability. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
- 3. **Qualified conclusion:** Productive collaboration divides roles by comparative advantage under joint monitoring, because each actor holds a different strength and undivided roles convert cooperation into duplication and diffused accountability.

**Executable exam-length answer / compression plan:** For a 10-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise three points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For "Discuss the collaboration between government, non-governmental organisations and the private...", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

## ORIGINAL MAINS 3 - 15 MARKS

**Question:** Comment on the claim that a pandemic shock deepened class inequalities and poverty in India. Answer in about 250 words.

**Model thesis:** A shock becomes class-differentiated through named channels of work, housing, health exposure, savings and service access, so the defensible comment traces those channels and states its evidentiary limits instead of asserting a magnitude.

**Claim -> named evidence -> analysis -> qualification:**

- Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience.
- Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express.
- Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from an income threshold.
- The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change.

**Qualified conclusion:** A shock becomes class-differentiated through named channels of work, housing, health exposure, savings and service access, so the defensible comment traces those channels and states its evidentiary limits instead of asserting a magnitude.

**Demand decoding:** The directive **comment** requires a direct position on "Comment on the claim that a pandemic shock deepened class inequalities and poverty in India....", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

**Detailed examiner-grade model answer:**

**Introduction and thesis:** A shock becomes class-differentiated through named channels of work, housing, health exposure, savings and service access, so the defensible comment traces those channels and states its evidentiary limits instead of asserting a magnitude.

**Analytical body:**

1. **Claim and named evidence:** Class-differentiated shock transmission is the process by which a common shock produces unequal outcomes through precarious informal work and income loss, dense housing and health exposure, thin savings and social-protection portability, and unequal digital and service access, so the shock is a channel structure rather than one uniform experience. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Social exclusion is deprivation compounded by exclusion from social networks, institutions and opportunity structures on grounds of caste, gender, religion or region, and it is a relational condition that an aggregate income statistic cannot express. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Capability deprivation is the condition in which a person cannot achieve basic valued functionings such as being nourished, being educated, being healthy and participating in social life, which is why Amartya Sen's approach measures poverty directly against those freedoms rather than inferring them from

an income threshold. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

4. **Claim and named evidence:** The NITI Aayog discussion paper of 2024 titled Multidimensional Poverty in India since 2005-06 estimated multidimensional poverty at 11.28 per cent in 2022-23 and about 24.8 crore persons exiting multidimensional poverty between 2013-14 and 2022-23, and these are the paper's estimates for a stated period rather than a current headcount or evidence that a named programme caused the change. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Executable exam-length answer / compression plan:** For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For "Comment on the claim that a pandemic shock deepened class inequalities and poverty in India...", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

## ORIGINAL MAINS 4 - 15 MARKS

**Question:** Comment on the claim that achieving sustainable growth with environmental protection can conflict with the needs of the poor. Answer in about 250 words.

**Model thesis:** The conflict is real because restriction removes an alternative-free subsistence base, but its severity is set by whether design excludes communities or shares voice, livelihood and benefit with them.

**Claim -> named evidence -> analysis -> qualification:**

- The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication.
- Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic.
- Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation.
- Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved.
- A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved.

**Qualified conclusion:** The conflict is real because restriction removes an alternative-free subsistence base, but its severity is set by whether design excludes communities or shares voice, livelihood and benefit with them.

**Demand decoding:** The directive **comment** requires a direct position on “Comment on the claim that achieving sustainable growth with environmental protection can...”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

**Detailed examiner-grade model answer:**

**Introduction and thesis:** The conflict is real because restriction removes an alternative-free subsistence base, but its severity is set by whether design excludes communities or shares voice, livelihood and benefit with them.

**Analytical body:**

1. **Claim and named evidence:** The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Conservation restriction and project displacement are different mechanisms, a distinction the Advanced owner labels development-conservation conflict vs development-displacement conflict: the first curtails grazing, fuelwood or produce collection without moving anyone, while the second physically relocates a community and is owned by the tribal-society topic. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
5. **Claim and named evidence:** A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Counter-position / limit:** Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

**Qualified conclusion:** The conflict is real because restriction removes an alternative-free subsistence base, but its severity is set by whether design excludes communities or shares voice, livelihood and benefit with them.

**Executable exam-length answer / compression plan:** For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for

causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For “Comment on the claim that achieving sustainable growth with environmental protection can...”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

## ORIGINAL MAINS 5 - 20 MARKS

**Question:** Critically examine the culture-of-poverty thesis and its sociological critique. Answer in about 300 words.

**Model thesis:** The dispute is about the direction of causation rather than about whether coping behaviour exists, and because the answer decides whether policy corrects material conditions or attitudes, the critical verdict must favour structural intervention while refusing to deny lived adaptation.

**Claim -> named evidence -> analysis -> qualification:**

- The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere.
- The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services, so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected.
- Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame.
- A financial-literacy programme that assumes poor households merely need to be taught to plan better, while leaving income insecurity and asset exclusion untouched, illustrates the risk of treating a contested cultural account as a complete causal explanation.
- A land-titling and credit-access programme that directly expands a poor household's real opportunity set illustrates the capability-consistent alternative, because it changes what the household can subsequently do rather than what it is told to do.

**Qualified conclusion:** The dispute is about the direction of causation rather than about whether coping behaviour exists, and because the answer decides whether policy corrects material conditions or attitudes, the critical verdict must favour structural intervention while refusing to deny lived adaptation.

**Demand decoding:** The directive **critically examine** requires a direct position on “Critically examine the culture-of-poverty thesis and its sociological critique. Answer in...”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

**Detailed examiner-grade model answer:**

**Introduction and thesis:** The dispute is about the direction of causation rather than about whether coping behaviour exists, and because the answer decides whether policy corrects material conditions or attitudes, the critical verdict must favour structural intervention while refusing to deny lived adaptation.

**Analytical body:**

1. **Claim and named evidence:** The culture of poverty is Oscar Lewis's contested thesis that persistent poverty can generate values, attitudes and behaviour that are reproduced across generations, and it arose from particular ethnographic settings rather than as a complete explanation of poverty anywhere. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** The structural or institutional critique holds that the behaviours Lewis described are better read as rational adaptations to chronic insecurity, unequal land and credit access and weak public services,

so the direction of causation is the entire dispute and a policy that corrects culture while leaving material conditions untouched is misdirected. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

3. **Claim and named evidence:** Short-horizon decision-making is the prioritising of immediate survival over long-term investment in schooling or savings, and it is evidence of a constrained opportunity set rather than proof of an independent cultural cause, which is why coping behaviour must be described without being converted into blame. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

**Counter-position / limit:** Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

**Qualified conclusion:** The dispute is about the direction of causation rather than about whether coping behaviour exists, and because the answer decides whether policy corrects material conditions or attitudes, the critical verdict must favour structural intervention while refusing to deny lived adaptation.

**Executable exam-length answer / compression plan:** For a 20-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise six to eight points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

**Why this earns marks:** The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

**How to improve this answer:** For "Critically examine the culture-of-poverty thesis and its sociological critique. Answer in...", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

## ORIGINAL MAINS 6 - 20 MARKS

**Question:** Evaluate how conservation design decides whether environmental protection deepens or relieves poverty. Answer in about 300 words.

**Model thesis:** Design rather than intention determines the welfare sign of conservation, so the evaluation compares exclusionary and participatory implementation on livelihood, voice and ecological outcome and closes with an explicit effectiveness-against-equity trade-off.

**Claim -> named evidence -> analysis -> qualification:**

- Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation.

- Participatory design substantially reduces the conservation-livelihood conflict without eliminating it, because some restriction on prior open access is usually still required, so the honest verdict describes severity as a function of design rather than declaring the conflict solved.
- A protected-area notification that bans all local resource use without alternative livelihood provision illustrates the sharpest form of the conflict, while a community granted co-management rights and an alternative income stream illustrates the same conflict substantially, though not perfectly, resolved.
- Three trade-offs run through the topic: participatory conservation can be slower and may permit more resource use than strict exclusion, distributing roles across three actors improves capability matching while diffusing accountability if outcomes fail, and structural reforms such as land access and schooling quality address root causes but show results far more slowly than transfers or awareness campaigns.
- The development-livelihood conflict is the tension that arises when environmental conservation or sustainable-development measures restrict access to land, forest or water resources on which poor communities directly depend for subsistence, and it is a genuine trade-off rather than a failure of communication.

**Qualified conclusion:** Design rather than intention determines the welfare sign of conservation, so the evaluation compares exclusionary and participatory implementation on livelihood, voice and ecological outcome and closes with an explicit effectiveness-against-equity trade-off.

**Demand decoding:** The directive **evaluate** requires a direct position on “Evaluate how conservation design decides whether environmental protection deepens or relieves...”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

#### **Detailed examiner-grade model answer:**

**Introduction and thesis:** Design rather than intention determines the welfare sign of conservation, so the evaluation compares exclusionary and participatory implementation on livelihood, voice and ecological outcome and closes with an explicit effectiveness-against-equity trade-off.

#### **Analytical body:**

1. **Claim and named evidence:** Exclusionary conservation restricts local access entirely in order to protect an ecosystem while participatory conservation gives local communities a formal stake, co-management rights and alternative livelihood support in exchange for sustainable-use commitments, a design choice the Advanced owner labels participatory conservation vs exclusionary conservation. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
