Urbanisation: Problems and Remedies - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Large-city migrant pull?

A. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. B. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. C. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. D. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies.

Answer: A. Explanation: Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. The remaining options belong to different chronology, actor or analytical categories.

Q2. Which chronology card should be filed under Large-city migrant pull?

A. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. B. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. C. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. D. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem.

Answer: B. Explanation: Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. The remaining options belong to different chronology, actor or analytical categories.

Q3. Which option preserves the source-bounded meaning of Large-city migrant pull?

A. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. B. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. C. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. D. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a

self-evident description.

Answer: C. Explanation: Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. The remaining options belong to different chronology, actor or analytical categories.

Q4. Which statement avoids a close-option trap about Large-city migrant pull?

A. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. B. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. C. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. D. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation.

Answer: D. Explanation: Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. The remaining options belong to different chronology, actor or analytical categories.

Q5. Which statement correctly identifies Agglomeration economies?

A. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. B. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. C. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. D. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant.

Answer: A. Explanation: Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. The remaining options belong to different chronology, actor or analytical categories.

Q6. Which chronology card should be filed under Agglomeration economies?

A. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. B. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. C. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. D. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies.

Answer: B. Explanation: Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. The remaining options belong to different chronology, actor or analytical categories.

Q7. Which option preserves the source-bounded meaning of Agglomeration economies?

A. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. B. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. C. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. D. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate.

Answer: C. Explanation: Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. The remaining options belong to different chronology, actor or analytical categories.

Q8. Which statement avoids a close-option trap about Agglomeration economies?

A. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. B. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. C. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. D. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output.

Answer: D. Explanation: Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. The remaining options belong to different chronology, actor or analytical categories.

Q9. Which statement correctly identifies Chain migration?

A. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. B. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. C. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. D. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description.

Answer: A. Explanation: Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next

migrants from that same region, so city-size concentration compounds over time rather than remaining constant. The remaining options belong to different chronology, actor or analytical categories.

Q10. Which chronology card should be filed under Chain migration?

A. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. B. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. C. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. D. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description.

Answer: B. Explanation: Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. The remaining options belong to different chronology, actor or analytical categories.

Q11. Which option preserves the source-bounded meaning of Chain migration?

A. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. B. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. C. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. D. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description.

Answer: C. Explanation: Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. The remaining options belong to different chronology, actor or analytical categories.

Q12. Which statement avoids a close-option trap about Chain migration?

A. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. B. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. C. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. D. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant.

Answer: D. Explanation: Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. The remaining options belong to different chronology, actor or analytical categories.

Q13. Which statement correctly identifies The developing-country condition?

A. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. B. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. C. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. D. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem.

Answer: A. Explanation: The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. The remaining options belong to different chronology, actor or analytical categories.

Q14. Which chronology card should be filed under The developing-country condition?

A. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. B. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. C. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. D. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description.

Answer: B. Explanation: The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. The remaining options belong to different chronology, actor or analytical categories.

Q15. Which option preserves the source-bounded meaning of The developing-country condition?

A. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. B. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. C. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. D. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation.

Answer: C. Explanation: The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. The remaining options belong to different chronology, actor or analytical categories.

Q16. Which statement avoids a close-option trap about The developing-country condition?

A. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. B. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. C. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. D. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies.

Answer: D. Explanation: The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. The remaining options belong to different chronology, actor or analytical categories.

Q17. Which statement correctly identifies The housing-supply lag?

A. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. B. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. C. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. D. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate.

Answer: A. Explanation: The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. The remaining options belong to different chronology, actor or analytical categories.

Q18. Which chronology card should be filed under The housing-supply lag?

A. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. B. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. C. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. D. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter.

Answer: B. Explanation: The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. The remaining options belong to different chronology, actor or analytical categories.

Q19. Which option preserves the source-bounded meaning of The housing-supply lag?

A. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. B. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. C. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. D. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation.

Answer: C. Explanation: The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. The remaining options belong to different chronology, actor or analytical categories.

Q20. Which statement avoids a close-option trap about The housing-supply lag?

A. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. B. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. C. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. D. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem.

Answer: D. Explanation: The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. The remaining options belong to different chronology, actor or analytical categories.

Q21. Which statement correctly identifies What a slum is?

A. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. B. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. C. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. D. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation.

Answer: A. Explanation: A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. The remaining options belong to different chronology, actor or analytical categories.

Q22. Which chronology card should be filed under What a slum is?

A. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. B. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. C. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. D. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation.

Answer: B. Explanation: A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. The remaining options belong to different chronology, actor or analytical categories.

Q23. Which option preserves the source-bounded meaning of What a slum is?

A. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. B. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. C. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. D. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas.

Answer: C. Explanation: A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. The remaining options belong to different chronology, actor or analytical categories.

Q24. Which statement avoids a close-option trap about What a slum is?

A. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas. B. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. C. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. D. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description.

Answer: D. Explanation: A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. The remaining options belong to different chronology, actor or analytical categories.

Q25. Which statement correctly identifies Informal settlement as a joint outcome?

A. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. B. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. C. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. D. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter.

Answer: A. Explanation: Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. The remaining options belong to different chronology, actor or analytical categories.

Q26. Which chronology card should be filed under Informal settlement as a joint outcome?

A. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. B. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. C. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. D. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation.

Answer: B. Explanation: Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. The remaining options belong to different chronology, actor or analytical categories.

Q27. Which option preserves the source-bounded meaning of Informal settlement as a joint outcome?

A. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. B. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. C. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. D. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas.

Answer: C. Explanation: Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. The remaining options belong to different chronology, actor or analytical categories.

Q28. Which statement avoids a close-option trap about Informal settlement as a joint outcome?

A. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. B. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. C. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. D. Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate.

Answer: D. Explanation: Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate. The remaining options belong to different chronology, actor or analytical categories.

Q29. Which statement correctly identifies Tenure insecurity?

A. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. B. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. C. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. D. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas.

Answer: A. Explanation: Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. The remaining options belong to different chronology, actor or analytical categories.

Q30. Which chronology card should be filed under Tenure insecurity?

A. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. B. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. C. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. D. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit.

Answer: B. Explanation: Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. The remaining options belong to different chronology, actor or analytical categories.

Q31. Which option preserves the source-bounded meaning of Tenure insecurity?

A. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. B. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. C. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. D. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas.

Answer: C. Explanation: Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. The remaining options belong to different chronology, actor or analytical categories.

Q32. Which statement avoids a close-option trap about Tenure insecurity?

A. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. B. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. C. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. D. Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter.

Answer: D. Explanation: Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. The remaining options belong to different chronology, actor or analytical categories.

Q33. Which statement correctly identifies Urban alienation and anomie?

A. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. B. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. C. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. D. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas.

Answer: A. Explanation: Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. The remaining options belong to different chronology, actor or analytical categories.

Q34. Which chronology card should be filed under Urban alienation and anomie?

A. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. B. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. C. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. D. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas.

Answer: B. Explanation: Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. The remaining options belong to different chronology, actor or analytical categories.

Q35. Which option preserves the source-bounded meaning of Urban alienation and anomie?

A. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. B. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. C. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. D. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit.

Answer: C. Explanation: Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. The remaining options belong to different chronology, actor or analytical categories.

Q36. Which statement avoids a close-option trap about Urban alienation and anomie?

A. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. B. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. C. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. D. Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation.

Answer: D. Explanation: Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation. The remaining options belong to different chronology, actor or analytical categories.

Q37. Which statement correctly identifies The rural-urban continuum?

A. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. B. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. C. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. D. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit.

Answer: A. Explanation: The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. The remaining options belong to different chronology, actor or analytical categories.

Q38. Which chronology card should be filed under The rural-urban continuum?

A. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. B. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. C. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. D. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed.

Answer: B. Explanation: The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. The remaining options belong to different chronology, actor or analytical categories.

Q39. Which option preserves the source-bounded meaning of The rural-urban continuum?

A. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. B. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. C. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. D. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design.

Answer: C. Explanation: The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. The remaining options belong to different chronology, actor or analytical categories.

Q40. Which statement avoids a close-option trap about The rural-urban continuum?

A. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. B. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. C. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. D. The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation.

Answer: D. Explanation: The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation. The remaining options belong to different chronology, actor or analytical categories.

Q41. Which statement correctly identifies Distributive justice in the city?

A. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. B. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. C. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. D. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design.

Answer: A. Explanation: Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. The remaining options belong to different chronology, actor or analytical categories.

Q42. Which chronology card should be filed under Distributive justice in the city?

A. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. B. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. C. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. D. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design.

Answer: B. Explanation: Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas. The remaining options belong to different chronology, actor or analytical categories.

Q43. Which option preserves the source-bounded meaning of Distributive justice in the city?

A. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. B. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. C. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas. D. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design.

Answer: C. Explanation: Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas. The remaining options belong to different chronology, actor or analytical categories.

Q44. Which statement avoids a close-option trap about Distributive justice in the city?

A. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. B. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. C. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. D. Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas.

Answer: D. Explanation: Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas. The remaining options belong to different chronology, actor or analytical categories.

Q45. Which statement correctly identifies Procedural justice in planning?

A. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. B. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. C. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. D. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed.

Answer: A. Explanation: Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. The remaining options belong to different chronology, actor or analytical categories.

Q46. Which chronology card should be filed under Procedural justice in planning?

A. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. B. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. C. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. D. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie.

Answer: B. Explanation: Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. The remaining options belong to different chronology, actor or analytical categories.

Q47. Which option preserves the source-bounded meaning of Procedural justice in planning?

A. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. B. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. C. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. D. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie.

Answer: C. Explanation: Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. The remaining options belong to different chronology, actor or analytical categories.

Q48. Which statement avoids a close-option trap about Procedural justice in planning?

A. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. B. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. C. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. D. Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit.

Answer: D. Explanation: Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. The remaining options belong to different chronology, actor or analytical categories.

Q49. Which statement correctly identifies The smart city under a social lens?

A. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. B. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. C. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. D. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design.

Answer: A. Explanation: A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. The remaining options belong to different chronology, actor or analytical categories.

Q50. Which chronology card should be filed under The smart city under a social lens?

A. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. B. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. C. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. D. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective.

Answer: B. Explanation: A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. The remaining options belong to different chronology, actor or analytical categories.

Q51. Which option preserves the source-bounded meaning of The smart city under a social lens?

A. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. B. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. C. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. D. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie.

Answer: C. Explanation: A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. The remaining options belong to different chronology, actor or analytical categories.

Q52. Which statement avoids a close-option trap about The smart city under a social lens?

A. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. B. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. C. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. D. A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed.

Answer: D. Explanation: A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. The remaining options belong to different chronology, actor or analytical categories.

Q53. Which statement correctly identifies Two smart-city designs?

A. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. B. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. C. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. D. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work.

Answer: A. Explanation: Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. The remaining options belong to different chronology, actor or analytical categories.

Q54. Which chronology card should be filed under Two smart-city designs?

A. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. B. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. C. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. D. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie.

Answer: B. Explanation: Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels

exclusionary smart-city design vs inclusive smart-city design. The remaining options belong to different chronology, actor or analytical categories.

Q55. Which option preserves the source-bounded meaning of Two smart-city designs?

A. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. B. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. C. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. D. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success.

Answer: C. Explanation: Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. The remaining options belong to different chronology, actor or analytical categories.

Q56. Which statement avoids a close-option trap about Two smart-city designs?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. B. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. C. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. D. Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design.

Answer: D. Explanation: Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. The remaining options belong to different chronology, actor or analytical categories.

Q57. Which statement correctly identifies Upgrading against clearance?

A. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. B. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. C. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. D. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective.

Answer: A. Explanation: In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. The remaining options belong to different chronology, actor or analytical categories.

Q58. Which chronology card should be filed under Upgrading against clearance?

A. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. B. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. C. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. D. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success.

Answer: B. Explanation: In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. The remaining options belong to different chronology, actor or analytical categories.

Q59. Which option preserves the source-bounded meaning of Upgrading against clearance?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. B. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. C. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. D. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth

alone is not a measure of urban success.

Answer: C. Explanation: In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. The remaining options belong to different chronology, actor or analytical categories.

Q60. Which statement avoids a close-option trap about Upgrading against clearance?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. B. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. C. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. D. In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work.

Answer: D. Explanation: In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. The remaining options belong to different chronology, actor or analytical categories.

Q61. Which statement correctly identifies Density, crime and causal restraint?

A. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. B. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. C. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. D. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity.

Answer: A. Explanation: Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. The remaining options belong to different chronology, actor or analytical categories.

Q62. Which chronology card should be filed under Density, crime and causal restraint?

A. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. B. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. C. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. D. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner.

Answer: B. Explanation: Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. The remaining options belong to different chronology, actor or analytical categories.

Q63. Which option preserves the source-bounded meaning of Density, crime and causal restraint?

A. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. B. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. C. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. D. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation.

Answer: C. Explanation: Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. The remaining options belong to different chronology, actor or analytical categories.

Q64. Which statement avoids a close-option trap about Density, crime and causal restraint?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. B. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. C. Large-city migrant pull is the tendency of large cities to

attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. D. Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie.

Answer: D. Explanation: Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie. The remaining options belong to different chronology, actor or analytical categories.

Q65. Which statement correctly identifies The dated urbanisation anchor?

A. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. B. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. C. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. D. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner.

Answer: A. Explanation: The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. The remaining options belong to different chronology, actor or analytical categories.

Q66. Which chronology card should be filed under The dated urbanisation anchor?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. B. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. C. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. D. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity.

Answer: B. Explanation: The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. The remaining options belong to different chronology, actor or analytical

Q67. Which option preserves the source-bounded meaning of The dated urbanisation anchor?

A. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. B. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. C. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. D. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output.

Answer: C. Explanation: The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. The remaining options belong to different chronology, actor or analytical categories.

Q68. Which statement avoids a close-option trap about The dated urbanisation anchor?

A. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. B. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. C. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. D. The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective.

Answer: D. Explanation: The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. The remaining options belong to different chronology, actor or analytical categories.

Q69. Which statement correctly identifies Agglomeration benefit against congestion cost?

A. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. B. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. C. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. D. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the

new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner.

Answer: A. Explanation: The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. The remaining options belong to different chronology, actor or analytical categories.

Q70. Which chronology card should be filed under Agglomeration benefit against congestion cost?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. B. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. C. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. D. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation.

Answer: B. Explanation: The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. The remaining options belong to different chronology, actor or analytical categories.

Q71. Which option preserves the source-bounded meaning of Agglomeration benefit against congestion cost?

A. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. B. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. C. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. D. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation.

Answer: C. Explanation: The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. The remaining options belong to different chronology, actor or analytical categories.

Q72. Which statement avoids a close-option trap about Agglomeration benefit against congestion cost?

A. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. B. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. C. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. D. The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success.

Answer: D. Explanation: The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. The remaining options belong to different chronology, actor or analytical categories.

Q73. Which statement correctly identifies Tier-2 growth and consumption?

A. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. B. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. C. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. D. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output.

Answer: A. Explanation: Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. The remaining options belong to different chronology, actor or analytical categories.

Q74. Which chronology card should be filed under Tier-2 growth and consumption?

A. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. B. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. C. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. D. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant.

Answer: B. Explanation: Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. The remaining options belong to different chronology, actor or analytical categories.

Q75. Which option preserves the source-bounded meaning of Tier-2 growth and consumption?

A. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. B. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. C. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. D. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant.

Answer: C. Explanation: Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. The remaining options belong to different chronology, actor or analytical categories.

Q76. Which statement avoids a close-option trap about Tier-2 growth and consumption?

A. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. B. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. C. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. D. Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity.

Answer: D. Explanation: Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. The remaining options belong to different chronology, actor or analytical categories.

Q77. Which statement correctly identifies Verified direct Mains demands?

A. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. B. Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. C. Agglomeration economies

are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. D. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant.

Answer: A. Explanation: Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. The remaining options belong to different chronology, actor or analytical categories.

Q78. Which chronology card should be filed under Verified direct Mains demands?

A. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. B. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. C. Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. D. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies.

Answer: B. Explanation: Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. The remaining options belong to different chronology, actor or analytical categories.

Q79. Which option preserves the source-bounded meaning of Verified direct Mains demands?

A. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. B. Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. C. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. D. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem.

Answer: C. Explanation: Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. The remaining options belong to different chronology, actor or analytical categories.

Q80. Which statement avoids a close-option trap about Verified direct Mains demands?

A. The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. B. The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. C. A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. D. Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner.

Answer: D. Explanation: Four direct General Studies Paper-I demands are carried by this owner: the 2022 demand on Tier-2 city growth, the new middle class and the culture of consumption worth 10 marks and the 2023 demand on whether urbanisation leads to segregation or marginalisation of the poor worth 15 marks, both routed in the audited 2018-2023 ledger to the Advanced owner with Core routing superseding, the 2024 demand on why large cities attract more migrants worth 10 marks whose ledger row names the Geography migration owner while this owner's table claims it, and the 2025 demand on smart cities, urban poverty and distributive justice worth 10 marks routed in the ledger to this Basic owner. The remaining options belong to different chronology, actor or analytical categories.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

Four direct General Studies Paper-I Mains demands are carried by this owner and each is recorded with its exact routing status. The 2022 Q9 demand on Tier-2 city growth, the new middle class and the culture of consumption and the 2023 Q18 demand on whether urbanisation leads to segregation or marginalisation of the poor are routed in the audited 2018-2023 Mains ledger to the Advanced owner, while the Core owner's own answer-architecture table records that Core routing supersedes, so both are answered here from the Basic spine. The locally held official question papers for 2022 and 2023 are scanned images from which reliable text cannot be extracted, so the audited ledger's neutral demand rendering is used for those two years and no verbatim wording is claimed. The 2024 Q5 demand on why large cities attract more migrants than smaller towns is routed in the audited 2024-2025 ledger to the Geography migration owner while this owner's own table claims it as a core route, and that cross-owner conflict is stated openly here rather than resolved by an unsupported analytical claim. The 2025 Q8 demand on smart cities, urban poverty and distributive justice is routed in the same ledger to this Basic owner. The wording of the 2024 and 2025 demands was confirmed in the locally held official question papers for those years, including a printed spelling irregularity in the 2024 stem that is reproduced rather than silently corrected. No marking scheme, official key or model answer of the Union Public Service Commission is held locally, and none is reproduced or inferred.

Demand decoding: The directive **answer** requires a direct position on "VERIFIED PYQ OWNERSHIP AUDIT", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence,

constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The answer must resolve the sociological demand in “VERIFIED PYQ OWNERSHIP AUDIT”.

Analytical body:

1. **Claim and named evidence:** Define the central concept and separate it from the nearest social or legal category. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Trace the historical and institutional setting instead of assuming a timeless practice. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Explain the norm, incentive, network, power or agency mechanism producing the outcome. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** Use one named Indian community, movement, region, institution or source-dated dataset. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
5. **Claim and named evidence:** Qualify the pattern through intersectionality, regional variation, causation and implementation limits. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: The answer must resolve the sociological demand in “VERIFIED PYQ OWNERSHIP AUDIT”.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For “VERIFIED PYQ OWNERSHIP AUDIT”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

OWNER PYQ LEDGER EXTRACTS

5. Indian applications and PYQ mapping

- FACT: **2024 GS-I PYQ (10 marks, verbatim):** "Why do large cities tend to attract more migrants than smaller towns? Discuss in the light of conditions in developing countries." The expected answer: cite diverse and abundant job opportunities, agglomeration-driven wage premiums, denser information/social networks that lower job-search costs for migrants, and better access to services, and situate this within developing-country conditions where small towns often lack comparable formal-sector depth or infrastructure, making large-city pull structurally stronger than in more evenly developed economies.

- FACT: **2025 GS-I PYQ (10 marks, verbatim):** "How does smart city in India, address the

issues of urban poverty and distributive justice?" The expected answer: explain that smart-city projects can improve service delivery (water, transport, digital governance) but risk concentrating benefits in designated smart-city zones or higher-income areas unless deliberately extended to slum and informal-settlement upgrading, arguing that genuine distributive justice requires explicit pro-poor design, not an assumption that technological upgrading automatically benefits all residents equally.

- ANALYSIS: A smart-city area with upgraded digital services adjacent to an unconnected informal settlement illustrates the distributive-justice gap the 2025 PYQ probes.

9. PYQ application

- FACT: **2024 GS-I (10 marks)**: cite job diversity, agglomeration wages and information-network density as the pull mechanism, framed explicitly within developing-country conditions where smaller towns lack comparable formal-sector depth.

- FACT: **2025 GS-I (10 marks)**: argue smart cities can improve service delivery but require deliberate pro-poor design to achieve genuine distributive justice, rather than assuming automatic benefit-sharing.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2024-2025.md.

- **Years represented:** 2025
- **Paper(s):** GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2025	GS-I	8	Smart cities addressing urban poverty and distributive justice	Discuss · 10 marks · 150 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Smart cities addressing urban poverty and distributive justice

This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

10. PYQ-based analytical application

- FACT: **2024 GS-I (10 marks, verbatim)**: "Why do large cities tend to attract more migrants than smaller towns? Discuss in the light of conditions in developing countries." Analytical route: apply the agglomeration-economies-versus-wage-differential distinction, explain the self-reinforcing migrant-network effect, and situate the explanation explicitly within developing-country conditions (limited small-town formal-sector depth).

- FACT: **2025 GS-I (10 marks, verbatim)**: "How does smart city in India, address the issues of urban poverty and distributive justice?" Analytical route: apply the exclusionary-versus-inclusive smart-city design distinction, trace the smart-city distributive-justice causal chain, and conclude that genuine urban-poverty impact requires deliberate targeting of informal settlements, not passive infrastructure upgrading alone.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2022	GS-I	9	Tier 2 city growth, new middle class and culture of consumption	How is it related · 10 marks · 150 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.
2023	GS-I	18	Urbanization and segregation or marginalization of the poor	Does it lead · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Tier 2 city growth, new middle class and culture of consumption
- Urbanization and segregation or marginalization of the poor

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

PYQ DEMAND CARD 1 - 2022 GS-I Q9

Demand: Audited ledger demand rendering: Tier 2 city growth, the new middle class and the culture of consumption. How is it related, 10 marks, 150 words.

Status: Routed in the audited 2018-2023 Mains ledger to the Advanced owner, with the Core owner recording that Core routing supersedes. The locally held official 2022 paper is a scanned image without reliable text extraction, so the ledger rendering is used and no verbatim wording is claimed.

Model solution: The directive asks for a relation, so the answer must supply a mechanism connecting three things rather than describing each in turn. Start with the growth term. Tier-2 city expansion draws on the same agglomeration logic as metropolitan growth, namely deeper labour markets, better job matching and denser information networks, but at a scale where housing and land costs remain lower than in the largest cities. Move to the class term. That combination supports a new salaried and self-employed middle class in services, education, health, logistics and construction-linked trades, whose defining feature is a relatively secure monthly income rather than an inherited asset base. Now supply the link the question is testing. Consumption becomes a culture rather than a set of purchases when organised retail, branded goods, credit availability and globalised media aspiration arrive together, so a household signals its new class position through visible expenditure precisely because that position is recent and not yet socially settled. Add the sociological qualification that separates a competent answer from a promotional one: the same city contains informal workers and informal settlements whose access to housing, services and tenure has not improved at the pace of retail expansion, so consumption growth measures the differentiation of the city rather than its shared prosperity. Add the standing trade-off that clustering brings congestion, housing-cost inflation and service strain along with productivity. Conclude that Tier-2 growth, the new middle class and consumption are causally linked through income security and aspiration, but that the relation is a description of stratification and not evidence of inclusive urban development. Assert no retail figure, income share or city-level statistic that this owner does not carry.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 1 - 2022 GS-I Q9”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The directive asks for a relation, so the answer must supply a mechanism connecting three things rather than describing each in turn. Start with the growth term. Tier-2 city expansion draws on the same agglomeration logic as metropolitan growth, namely deeper labour markets, better job matching and denser information networks, but at a scale where housing and land costs remain lower than in the largest cities. Move to the class term. That combination supports a new salaried and self-employed middle class in services, education, health, logistics and construction-linked trades, whose defining feature is a relatively secure monthly income rather than an inherited asset base. Now supply the link the question is testing. Consumption becomes a culture rather than a set of purchases when organised retail, branded goods, credit availability and globalised media aspiration arrive together, so

a household signals its new class position through visible expenditure precisely because that position is recent and not yet socially settled. Add the sociological qualification that separates a competent answer from a promotional one: the same city contains informal workers and informal settlements whose access to housing, services and tenure has not improved at the pace of retail expansion, so consumption growth measures the differentiation of the city rather than its shared prosperity. Add the standing trade-off that clustering brings congestion, housing-cost inflation and service strain along with productivity. Conclude that Tier-2 growth, the new middle class and consumption are causally linked through income security and aspiration, but that the relation is a description of stratification and not evidence of inclusive urban development. Assert no retail figure, income share or city-level statistic that this owner does not carry.

Analytical body:

1. **Claim and named evidence:** Demand: Audited ledger demand rendering: Tier 2 city growth, the new middle class and the culture of consumption. How is it related, 10 marks, 150 words. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: The directive asks for a relation, so the answer must supply a mechanism connecting three things rather than describing each in turn. Start with the growth term. Tier-2 city expansion draws on the same agglomeration logic as metropolitan growth, namely deeper labour markets, better job matching and denser information networks, but at a scale where housing and land costs remain lower than in the largest cities. Move to the class term. That combination supports a new salaried and self-employed middle class in services, education, health, logistics and construction-linked trades, whose defining feature is a relatively secure monthly income rather than an inherited asset base. Now supply the link the question is testing. Consumption becomes a culture rather than a set of purchases when organised retail, branded goods, credit availability and globalised media aspiration arrive together, so a household signals its new class position through visible expenditure precisely because that position is recent and not yet socially settled. Add the sociological qualification that separates a competent answer from a promotional one: the same city contains informal workers and informal settlements whose access to housing, services and tenure has not improved at the pace of retail expansion, so consumption growth measures the differentiation of the city rather than its shared prosperity. Add the standing trade-off that clustering brings congestion, housing-cost inflation and service strain along with productivity. Conclude that Tier-2 growth, the new middle class and consumption are causally linked through income security and aspiration, but that the relation is a description of stratification and not evidence of inclusive urban development. Assert no retail figure, income share or city-level statistic that this owner does not carry.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For “PYQ DEMAND CARD 1 - 2022 GS-I Q9”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

PYQ DEMAND CARD 2 - 2023 GS-I Q18

Demand: Audited ledger demand rendering: whether urbanisation leads to segregation or marginalisation of the poor. Does it lead, 15 marks, 250 words.

Status: Routed in the audited 2018-2023 Mains ledger to the Advanced owner, with the Core owner recording that Core routing supersedes. The locally held official 2023 paper is a scanned image without reliable text extraction, so the ledger rendering is used and no verbatim wording is claimed.

Model solution: Answer the does-it-lead form honestly: urbanisation does not produce segregation by itself, but the arrangements through which Indian cities grow reliably produce it unless they are deliberately corrected, so the verdict is conditional rather than deterministic. Trace the mechanism in order. Agglomeration pull brings inflow, formal affordable housing and basic services expand more slowly than that inflow, and the resulting housing-supply lag is filled through informal channels shaped by land prices, tenure rules, regulatory exclusion and planning choices. Because the resulting settlement lacks a recognised legal claim, formal water, sanitation and electricity connection is blocked, so a spatial concentration of low-income households becomes a concentration of service deprivation as well. That is marginalisation produced by design rather than by density. Distinguish segregation from diversity explicitly, because the two are frequently conflated: a mixed city is not a segregated one, and segregation is the systematic sorting of groups into unequal service and tenure conditions. Then show the reversal, because the directive rewards the counter-case. In-situ upgrading improves infrastructure and tenure where the settlement already stands and preserves access to central-city informal work, schooling and community networks, whereas clearance and peripheral relocation is administratively faster but severs livelihood access and reproduces the displacement and rehabilitation problem owned by the tribal-society topic. Add the second justice test: procedural exclusion from the planning process usually precedes distributive exclusion from its benefits, so participation is a remedy and not a courtesy. Keep the evidence bounded, since the urbanisation share available here is the United Nations World Urbanization Prospects 2025 projection of about 36 per cent urban in 2025 rather than Census data. Conclude that urbanisation leads to marginalisation wherever tenure, services and voice lag the inflow, and ceases to do so wherever they are extended, which makes the outcome a policy variable rather than an urban destiny.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 2 - 2023 GS-I Q18”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Answer the does-it-lead form honestly: urbanisation does not produce segregation by itself, but the arrangements through which Indian cities grow reliably produce it unless they are deliberately corrected, so the verdict is conditional rather than deterministic. Keep the evidence bounded, since the urbanisation share available here is the United Nations World Urbanization Prospects 2025 projection of about 36 per cent urban in 2025 rather than Census data. Conclude that urbanisation leads to marginalisation wherever tenure, services and voice lag the inflow, and ceases to do so wherever they are extended, which makes the outcome a policy variable rather than an urban destiny.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "PYQ DEMAND CARD 2 - 2023 GS-I Q18", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

PYQ DEMAND CARD 3 - 2024 GS-I Q5

Demand: Why do large cities tend to attract more migrants than smaller towns? Discuss in the light of conditions in developing countries. (Answer in 150 words) 10 marks. The stem is reproduced exactly as printed in the official paper, including its printed spelling irregularity.

Status: Wording confirmed in the locally held official 2024 General Studies Paper-I. The audited 2024-2025 Mains ledger routes this row to the Geography migration owner while this owner's own answer-architecture table claims it; the conflict is recorded openly and this answer supplies the urban-social mechanism without restating Ravenstein or Lee migration theory owned by Geography.

Model solution: Answer the why with a compound mechanism, because a single-cause answer is the trap this question sets. First, job diversity: a large city concentrates formal and informal employment across construction, manufacturing, logistics, domestic and personal services, retail and professional work, so a migrant with uncertain skills faces many possible matches rather than one. Second, agglomeration economies: clustering deepens the labour market, improves matching between worker and employer, generates knowledge spillovers and thickens supplier networks, and the wage premium that migrants perceive is an output of that clustering rather than an independent attraction. Third, information and kinship networks: an existing migrant population from the same region supplies referral chains, temporary lodging and knowledge of where work is available, which lowers the search cost and the

risk of the move, and because each cohort enlarges that network the concentration compounds over time. Now supply the developing-country condition the directive explicitly demands. Smaller towns in developing economies often lack comparable formal-sector industrial and service depth, comparable transport and utility infrastructure and comparable institutional depth, so the alternative destination does not offer a partial version of the same opportunity, which makes large-city pull structurally stronger than it is in more evenly developed economies. Close with the cost, because a discuss directive rewards balance: the same pull outruns affordable housing and basic services, producing tenure insecurity and informal settlement, so migration is rational for the household and simultaneously stressful for the receiving city. Keep the evidence bounded to the United Nations World Urbanization Prospects 2025 projection of about 36 per cent urban in 2025 and note that it is not Census data, and route formal migration theory and settlement classification to Geography.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 3 - 2024 GS-I Q5”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Keep the evidence bounded to the United Nations World Urbanization Prospects 2025 projection of about 36 per cent urban in 2025 and note that it is not Census data, and route formal migration theory and settlement classification to Geography.

Analytical body:

1. **Claim and named evidence:** Define the central concept and separate it from the nearest social or legal category. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Trace the historical and institutional setting instead of assuming a timeless practice. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Explain the norm, incentive, network, power or agency mechanism producing the outcome. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** Use one named Indian community, movement, region, institution or source-dated dataset. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
5. **Claim and named evidence:** Qualify the pattern through intersectionality, regional variation, causation and implementation limits. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism ->

differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: Answer the why with a compound mechanism, because a single-cause answer is the trap this question sets. First, job diversity: a large city concentrates formal and informal employment across construction, manufacturing, logistics, domestic and personal services, retail and professional work, so a migrant with uncertain skills faces many possible matches rather than one. Second, agglomeration economies: clustering deepens the labour market, improves matching between worker and employer, generates knowledge spillovers and thickens supplier networks, and the wage premium that migrants perceive is an output of that clustering rather than an independent attraction. Third, information and kinship networks: an existing migrant population from the same region supplies referral chains, temporary lodging and knowledge of where work is available, which lowers the search cost and the risk of the move, and because each cohort enlarges that network the concentration compounds over time. Now supply the developing-country condition the directive explicitly demands. Smaller towns in developing economies often lack comparable formal-sector industrial and service depth, comparable transport and utility infrastructure and comparable institutional depth, so the alternative destination does not offer a partial version of the same opportunity, which makes large-city pull structurally stronger than it is in more evenly developed economies. Close with the cost, because a discuss directive rewards balance: the same pull outruns affordable housing and basic services, producing tenure insecurity and informal settlement, so migration is rational for the household and simultaneously stressful for the receiving city. Keep the evidence bounded to the United Nations World Urbanization Prospects 2025 projection of about 36 per cent urban in 2025 and note that it is not Census data, and route formal migration theory and settlement classification to Geography.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "PYQ DEMAND CARD 3 - 2024 GS-I Q5", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

PYQ DEMAND CARD 4 - 2025 GS-I Q8

Demand: How does smart city in India, address the issues of urban poverty and distributive justice? (Answer in 150 words) 10 marks.

Status: Wording confirmed in the locally held official 2025 General Studies Paper-I and routed in the audited 2024-2025 Mains ledger to this Basic owner.

Model solution: Treat the how as a conditional question rather than an invitation to list features, because the examinable point is whether technology-led investment reaches the urban poor at all. Begin with what a smart city can genuinely do: technology-enabled service delivery can improve water metering and supply reliability, transport information and access, grievance redress and digital governance, and each of those is a real gain for a low-income household when it arrives where that household actually lives. Then state the structural risk with equal precision. Smart-city investment is frequently piloted or concentrated in designated zones for demonstration and investment-attraction purposes, and because informal settlements were already excluded from formal infrastructure before the intervention began, concentration without deliberate targeting bypasses exactly the residents whose deprivation the question names. That is the difference between exclusionary and inclusive design, and it is the analytical spine of the answer. Apply both justice tests. Distributive justice asks whether services and infrastructure are fairly shared across income groups rather than layered onto already-serviced areas. Procedural justice asks whether slum residents had a real voice in the planning decision, and exclusion from process usually precedes exclusion from benefit. Make the remedy executable: extend digital service access and connectivity into settlements,

pair it with tenure regularisation so that formal utility connection becomes legally possible, prefer in-situ upgrading over peripheral clearance so livelihood access to central-city work survives, and include ward-level participation so residents shape the design. Conclude that a smart city addresses urban poverty and distributive justice only where its design is explicitly pro-poor, and that technological upgrading is an instrument rather than a distributive outcome. Route scheme architecture and benefit claims to Social Justice and Governance, and assert no coverage figure or project-level statistic.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 4 - 2025 GS-I Q8”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

ORIGINAL MAINS 1 - 10 MARKS

Question: Discuss why large cities tend to attract more migrants than smaller towns in developing-country conditions. Answer in about 150 words.

Model thesis: Large cities pull migrants through job diversity, agglomeration matching and dense information networks rather than through wage level alone, and the pull is structurally sharper where smaller towns lack comparable formal-sector depth.

Claim -> named evidence -> analysis -> qualification:

- Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation.
- Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output.
- Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant.
- The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies.

Qualified conclusion: Large cities pull migrants through job diversity, agglomeration matching and dense information networks rather than through wage level alone, and the pull is structurally sharper where smaller towns lack comparable formal-sector depth.

Demand decoding: The directive **discuss** requires a direct position on “Discuss why large cities tend to attract more migrants than smaller towns in developing-...”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Large cities pull migrants through job diversity, agglomeration matching and dense information networks rather than through wage level alone, and the pull is structurally sharper where smaller towns lack comparable formal-sector depth.

Analytical body:

1. **Claim and named evidence:** Large-city migrant pull is the tendency of large cities to attract disproportionately more migrants than smaller towns because they offer a wider range of formal and informal jobs, agglomeration-driven wage premiums and denser service and information networks, so wage level alone is never a sufficient explanation. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** The developing-country condition that the migration demand names is that smaller towns often lack comparable formal-sector industrial and service depth and comparable infrastructure, which makes large-city pull structurally stronger than it is in more evenly developed economies. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: Large cities pull migrants through job diversity, agglomeration matching and dense information networks rather than through wage level alone, and the pull is structurally sharper where smaller towns lack comparable formal-sector depth.

Executable exam-length answer / compression plan: For a 10-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise three points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For “Discuss why large cities tend to attract more migrants than smaller towns in developing-...”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

ORIGINAL MAINS 2 - 10 MARKS

Question: Discuss how a smart city in India addresses the issues of urban poverty and distributive justice. Answer in about 150 words.

Model thesis: A smart city improves urban poverty and distributive justice only where its design deliberately extends services, tenure and voice into informal settlements, because concentrated demonstration investment otherwise widens the gap it was meant to close.

Claim -> named evidence -> analysis -> qualification:

- A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed.
- Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design.
- Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas.
- Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit.

Qualified conclusion: A smart city improves urban poverty and distributive justice only where its design deliberately extends services, tenure and voice into informal settlements, because concentrated demonstration investment otherwise widens the gap it was meant to close.

Demand decoding: The directive **discuss** requires a direct position on “Discuss how a smart city in India addresses the issues of urban poverty and distributive...”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: A smart city improves urban poverty and distributive justice only where its design deliberately extends services, tenure and voice into informal settlements, because concentrated demonstration investment otherwise widens the gap it was meant to close.

Analytical body:

1. **Claim and named evidence:** A smart city, read through a social lens, is an urban development model emphasising technology-enabled infrastructure and services whose social success depends on whether that infrastructure improves access for the urban poor rather than on the sophistication of the technology deployed. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Exclusionary smart-city design concentrates technology-enabled infrastructure in designated zones or better-off areas while inclusive smart-city design deliberately extends service upgrading, tenure-linked infrastructure and connectivity into informal settlements, a contrast the Advanced owner labels exclusionary smart-city design vs inclusive smart-city design. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

4. **Claim and named evidence:** Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: A smart city improves urban poverty and distributive justice only where its design deliberately extends services, tenure and voice into informal settlements, because concentrated demonstration investment otherwise widens the gap it was meant to close.

Executable exam-length answer / compression plan: For a 10-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise three points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For “Discuss how a smart city in India addresses the issues of urban poverty and distributive...”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

ORIGINAL MAINS 3 - 15 MARKS

Question: Examine whether urbanisation leads to the segregation or marginalisation of the urban poor. Answer in about 250 words.

Model thesis: Segregation is a produced outcome of land, tenure, service and planning arrangements rather than an inevitable trait of city size, so the answer must trace the mechanism and then show which design choices reverse it.

Claim -> named evidence -> analysis -> qualification:

- The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem.
- A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description.
- Informal settlement is simultaneously a market response to unmet affordable-housing demand and a governance outcome produced by land prices, tenure rules, regulatory exclusion and planning and service choices, so neither a market-only account nor a resident-blaming account is adequate.
- Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter.
- In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work.

Qualified conclusion: Segregation is a produced outcome of land, tenure, service and planning arrangements rather than an inevitable trait of city size, so the answer must trace the mechanism and then show which design choices reverse it.

Demand decoding: The directive **examine** requires a direct position on “Examine whether urbanisation leads to the segregation or marginalisation of the urban poor...”, all clauses, a sociological mechanism, historical trajectory,

intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Segregation is a produced outcome of land, tenure, service and planning arrangements rather than an inevitable trait of city size, so the answer must trace the mechanism and then show which design choices reverse it.

Analytical body:

1. **Claim and named evidence:** The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** A slum is a settlement identified under a particular legal, Census or local-government definition and is commonly associated with insecure tenure, inadequate services and overcrowding, so the category must always be cited with the definition and authority being used rather than as a self-evident description. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: Segregation is a produced outcome of land, tenure, service and planning arrangements rather than an inevitable trait of city size, so the answer must trace the mechanism and then show which design choices reverse it.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For “Examine whether urbanisation leads to the segregation or marginalisation of the urban poor...”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

ORIGINAL MAINS 4 - 15 MARKS

Question: Examine urban alienation and the weakening of community bonds as social consequences of rapid Indian urbanisation. Answer in about 250 words.

Model thesis: Anomie describes a real social-psychological consequence of density and anonymity, but it operates alongside continuing village linkage and cannot be extended into a general claim about urban disorder without evidence.

Claim -> named evidence -> analysis -> qualification:

- Urban alienation, described in urban sociology as anomie, is the weakening of social bonds and of a shared normative structure in dense and anonymous settings, associated with reduced informal community support and greater social isolation.
- The rural-urban continuum is the continuing structural and economic linkage between village and city through migration, remittance and circulation, and it operates at a different level from anomie, so a household can remain economically continuum-linked to its village while experiencing urban social isolation.
- Density or migration alone does not explain urban crime, because local inequality, policing practice, opportunity structure, reporting behaviour and social networks all confound the relationship, so any claim of this kind requires context-specific evidence rather than an appeal to urban anomie.
- Chain migration is the self-reinforcing process in which an existing migrant population from a region lowers the search cost, housing risk and job-referral uncertainty for the next migrants from that same region, so city-size concentration compounds over time rather than remaining constant.

Qualified conclusion: Anomie describes a real social-psychological consequence of density and anonymity, but it operates alongside continuing village linkage and cannot be extended into a general claim about urban disorder without evidence.

Demand decoding: The directive **examine** requires a direct position on “Examine urban alienation and the weakening of community bonds as social consequences of rapid...”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

ORIGINAL MAINS 5 - 20 MARKS

Question: Assess the relationship between Tier-2 city growth, the new middle class and the culture of consumption. Answer in about 300 words.

Model thesis: Tier-2 growth produces differentiated work, housing and consumption at the same time, so an assessment that reads organised retail as shared prosperity misses the informal worker and the informal settlement inside the same city.

Claim -> named evidence -> analysis -> qualification:

- Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity.
- The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success.
- Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-served, higher-income areas.
- The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective.

Qualified conclusion: Tier-2 growth produces differentiated work, housing and consumption at the same time, so an assessment that reads organised retail as shared prosperity misses the informal worker and the informal settlement inside the same city.

Demand decoding: The directive **assess** requires a direct position on “Assess the relationship between Tier-2 city growth, the new middle class and the culture of...”, all clauses, a sociological mechanism, historical trajectory,

intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Tier-2 growth produces differentiated work, housing and consumption at the same time, so an assessment that reads organised retail as shared prosperity misses the informal worker and the informal settlement inside the same city.

Analytical body:

1. **Claim and named evidence:** Growth in Tier-2 cities has been accompanied by a new salaried and self-employed middle class, organised retail and globalised consumption aspirations, and the sociological reading connects differentiated work and housing to differentiated consumption rather than treating retail expansion as evidence of shared prosperity. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Distributive justice in the urban context is the principle that the benefits of urban infrastructure and services should be fairly shared across income groups rather than concentrated in already-serviced, higher-income areas. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** The United Nations World Urbanization Prospects 2025 estimates India at about 36 per cent urban in 2025, and this is a projection-based United Nations Department of Economic and Social Affairs estimate rather than Census data, because Census 2011 remains India's last completed full count and Census 2027 is still prospective. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: Tier-2 growth produces differentiated work, housing and consumption at the same time, so an assessment that reads organised retail as shared prosperity misses the informal worker and the informal settlement inside the same city.

Executable exam-length answer / compression plan: For a 20-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise six to eight points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For “Assess the relationship between Tier-2 city growth, the new middle class and the culture of...”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

ORIGINAL MAINS 6 - 20 MARKS

Question: Evaluate the claim that urban investment becomes socially progressive only when tenure, services and voice follow the networks that attract people. Answer in about 300 words.

Model thesis: The networks that attract migrants also outrun formal housing and services, so investment becomes progressive only where tenure, connection and procedural voice are extended to the excluded rather than where visible infrastructure is concentrated.

Claim -> named evidence -> analysis -> qualification:

- Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output.
- The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem.
- Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter.
- Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit.
- In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work.
- The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success.

Qualified conclusion: The networks that attract migrants also outrun formal housing and services, so investment becomes progressive only where tenure, connection and procedural voice are extended to the excluded rather than where visible infrastructure is concentrated.

Demand decoding: The directive **evaluate** requires a direct position on “Evaluate the claim that urban investment becomes socially progressive only when tenure,...”, all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The networks that attract migrants also outrun formal housing and services, so investment becomes progressive only where tenure, connection and procedural voice are extended to the excluded rather than where visible infrastructure is concentrated.

Analytical body:

1. **Claim and named evidence:** Agglomeration economies are the compounding productivity and matching benefits that arise when many firms and workers cluster in one place, producing deeper labour markets, knowledge spillovers and denser supplier networks, of which the observable wage differential is only one output. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** The housing-supply lag is the gap between the pace of migrant inflow and the expansion of formal affordable housing and basic-service supply in the receiving city, and it is the mechanism that converts an economic success into a housing and service problem. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or

legal-norm-versus-lived-outcome boundary.

3. **Claim and named evidence:** Tenure insecurity is the absence of a recognised legal claim to occupied land or housing, and it blocks formal water, sanitation and electricity connection, which compounds health and social vulnerability well beyond the initial shortage of shelter. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** Procedural justice in planning is the principle that the communities affected by an urban decision, including residents of informal settlements, should have a real voice in the planning process, and exclusion from process frequently precedes exclusion from benefit. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
5. **Claim and named evidence:** In-situ upgrading is the improvement of infrastructure and tenure where a settlement already stands, which keeps livelihood, schooling and community networks intact, while clearance and peripheral relocation moves residents to a new site and reproduces the displacement and rehabilitation problem by severing access to central-city informal work. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
6. **Claim and named evidence:** The same clustering that raises productivity and attracts migrants also generates congestion, housing-cost inflation and service strain, so the mechanism that makes a large city attractive simultaneously degrades its liveability, which is why growth alone is not a measure of urban success. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: The networks that attract migrants also outrun formal housing and services, so investment becomes progressive only where tenure, connection and procedural voice are extended to the excluded rather than where visible infrastructure is concentrated.

Executable exam-length answer / compression plan: For a 20-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise six to eight points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For “Evaluate the claim that urban investment becomes socially progressive only when tenure,...”, replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.
