

ASCII MASTER FLOW – PANEL 1/12: Extraction became structural underdevelopment

COMPANY PLUNDER -> early direct extraction after conquest and Diwani

SYSTEMIC DRAIN -> home charges, remittances, profits, pensions and imperial costs

STRUCTURAL CHANGE -> revenue pressure, deindustrialisation and dependent trade

OUTCOME -> poverty and modernisation without autonomous development.

MUST REMEMBER: Drain, deindustrialisation, land-revenue pressure and famine vulnerability are related mechanisms, not interchangeable slogans; Dadabhai Naoroji and R.C. Dutt made specific economic arguments.

ASCII MASTER FLOW – PANEL 2/12: Three land-revenue systems compared

PERMANENT -> zamindari estate | fixed in perpetuity | Bengal-Bihar-Orissa

RYOTWARI -> individual ryot | periodic revision | Madras-Bombay

MAHALWARI -> village or mahal | periodic revision | north-west and Punjab

COMMON CORE -> cash demand and secure colonial revenue, with different risk carriers.

ASCII MASTER FLOW – PANEL 3/12: Commercialisation shifted risk downward

EXPORT DEMAND / PLANTER ADVANCE -> cash-crop commitment

REVENUE CALENDAR + CREDIT -> dependence on moneylender or planter

PRICE / HARVEST SHOCK -> cultivator bears the loss while claims remain due

RESULT -> indebtedness, land alienation and differentiated agrarian protest.

ASCII MASTER FLOW – PANEL 4/12: Indigo, Pabna and Deccan were not one movement

INDIGO 1859-60 -> European planters -> collective refusal to sow

PABNA FROM 1873 -> zamindars -> leagues, rent resistance and litigation

DECCAN 1875 -> moneylenders -> seizure and destruction of debt bonds

EXAM RULE -> match target, grievance and repertoire before comparing outcomes.

ASCI MASTER FLOW – PANEL 5/12: Deindustrialisation was a causal web

ENGLISH MECHANISATION -> cheaper factory cloth

TARIFF ASYMMETRY -> unequal access to British and Indian markets

COURT DECLINE -> lost elite demand for fine crafts

RAIL PENETRATION -> imports reach interior markets

RESULT -> uneven output and employment decline, not total craft extinction.

ASCII MASTER FLOW – PANEL 6/12: The 2024 how-far answer

NECESSARY CONDITION -> Industrial Revolution lowered British production costs

TRANSMISSION MECHANISMS -> tariffs, political power, court decline and rail access

VARIATION -> region, craft and timing prevent a total-extinction claim

VERDICT -> substantially responsible, but not sufficient without colonial policy.

ASCII MASTER FLOW – PANEL 7/12: Drain theory names channels, not an invented total

INDIAN REVENUE -> home charges and India Office costs

OFFICIAL INCOME -> salaries, pensions and private remittances

BRITISH CAPITAL -> profits, interest and guaranteed returns

IMPERIAL PROCUREMENT / WAR -> stores and external costs charged to India

RULE -> explain mechanism and significance; do not invent a percentage.

ASCII MASTER FLOW – PANEL 8/12: Export surplus could finance transfer

INDIAN EXPORTS EXCEED VISIBLE IMPORTS -> apparent trade surplus

COUNCIL-BILL MECHANISM -> sterling claims and rupee payments connect the accounts

HOME CHARGES / REMITTANCES -> surplus services external obligations

ANALYTICAL POINT -> a surplus need not mean resources remained available in India.

ASCII MASTER FLOW – PANEL 9/12: Infrastructure had a dual effect

IMPERIAL DESIGN -> troops, administration, raw-material export and import reach

FINANCING -> private British capital protected through the Guarantee System

UNINTENDED EFFECT -> market integration and later nationalist mobility

SAFE VERDICT -> modern infrastructure without autonomous developmental priority.

ASCII MASTER FLOW – PANEL 10/12: Colonial industrialisation was real but constrained

GROWTH -> plantations, jute, cotton, coal, mines and later steel

OWNERSHIP -> foreign capital remained powerful in key sectors

CONSTRAINTS -> finance, policy bias, technology and narrow domestic demand

VERDICT -> industry developed unevenly; deindustrialisation did not mean zero industry.

CLOSE DISTINCTION: Permanent, Ryotwari and Mahalwari settlements differed by region, assessment unit and intermediary structure; no one settlement covered all India or remained unchanged in practice.

ASCII MASTER FLOW – PANEL 11/12: Famine was shock plus structural amplification

CLIMATE / HARVEST SHOCK -> immediate scarcity risk

REVENUE RIGIDITY + COMMERCIALISATION -> weak household buffers

PRICE-LED TRANSPORT + LAISSEZ-FAIRE RELIEF -> entitlement failure

ADMINISTRATIVE DELAY -> mortality and distress deepen

RULE -> avoid both climate-only and export-only explanations.

EVIDENCE LIMIT: Nationalist, Marxist and revisionist scholarship must be tied to wage, trade, craft, revenue and mortality evidence, with regional variation and data limits made explicit.

ASCII MASTER FLOW – PANEL 12/12: Historiography and final synthesis

NATIONALIST -> drain and deindustrialisation explain poverty

STRUCTURAL -> dependent integration into world capitalism

REVISIONIST -> disputes scale and measurement, not all structural change

REGIONAL -> outcomes varied by place, sector and social group

SYNTHESIS -> extraction and transformation must be assessed together.
