

COMPLETE LEARNING SESSION

EMPIRICISM - Layered Complete Learning Session - Philosophy Paper I Western Philosophy 03

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

PHILOSOPHY PAPER I | WESTERN PHILOSOPHY 03

EMPIRICISM

One premise pushed to its limit: all ideas come from experience

Realism → Idealism → Scepticism | each thinker is the previous premise taken more consistently | Hume wakes Kant

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge → official current linkage → clearly marked analysis. No fabricated PYQs or statistics.

EMPIRICISM - Layered Complete Learning Session - Philosophy Paper I Western Philosophy 03

Syllabus: Empiricism (Locke, Berkeley, Hume): Theory of Knowledge; Substance and Qualities; Self and God; Scepticism.

How to Use This Five-Layer Session

Every logical subtopic follows exactly:

Layer	Purpose
1. SIMPLE START	visual-first plain-language gateway
2. CORE UPSC	complete terminology, doctrine, argument, example and source grounding
3. ADVANCED	objections, replies, comparisons, interpretive issues and refinements
4. EXAM APPLICATION	verified PYQ routes and 10/15/20-mark architecture
5. RAPID REVISION	traps, retrieval notes and links to the exact MCQ set

Source Audit and Contemporary-Link Boundary

- **Canonical doctrine source:** upsc-ai-kit/knowledge/Philosophy/paper-1/western/Empiricism.md (9,057 words), sliced verbatim into every CORE UPSC layer.
- **Verified PYQs:** continuous local Western Philosophy Paper I bank, 2018-2025; Empiricism owns exactly 12 primary parts.
- **Ownership discipline:** the three 'Two Dogmas of Empiricism' questions (2021 Q3c, 2024 Q4c, 2025 Q4b) belong to Quine-Strawson and are excluded despite the shared word.
- **Qdrant:** optional fallback only; not required for this static early-modern topic.
- **Contemporary link (used sparingly, clearly labelled):** ANALYSIS: recent 2026 academic discussion in the philosophy of machine learning (for example, *Artificial Intelligence and the Problem of Induction: A Critique of David Hume's Empiricism*, IIARD Journal of Humanities and Social Policy, Vol. 12 No. 1, 2026, and related work on meta-induction) revisits Hume. Machine-learning prediction operationalises inductive expectation and manages uncertainty through probabilistic modelling, but it does not establish a necessary connection and does not solve Hume's logical problem of induction; distributional shift is a modern restatement of Hume's point, not a refutation of it. This anchor is a contemporary application, not doctrinal proof, and no quantitative claim is invented.

Preservation note: the canonical doctrine is reorganised into layers, never compressed. Every doctrine, canonical example, numbered argument, objection/reply, comparison, restored dossier, PYQ route, directive rule, graded verdict and provenance caution is retained; simplification means adding accessible gateways, not deleting complexity.

Learning Roadmap

Unit	Logical subtopic	High-yield output
1	the master slide	derive Realism -> Idealism -> Scepticism
2	Locke's theory of knowledge	refute innate ideas; sources and degrees
3	abstraction and essence	nominal vs real essence; the doctrine Berkeley attacks
4	Locke on qualities and substance	primary/secondary; the know-not-what
5	Locke on self and God	memory continuity; demonstrative theism
6	Berkeley's immaterialism	five reconstructed arguments; esse est percipi
7	Berkeley's spirits, God, critics	notions, continuity, Moore and Russell
8	Hume's forensic empiricism	Copy Principle, Fork, no substance, bundle self
9	Hume on causation	constant conjunction, habit, two definitions, Kant
10	induction, scepticism, comparisons	the Fork dilemma, mitigated scepticism, idealisms

Progress: 1 / 10 | Philosophy Layered Session | Subtopic: The Master Slide - Realism to Idealism to Scepticism

LAYER 1 - SIMPLE START

Visual gateway - one premise, three destinations

Plain-language start: Imagine three people given the same rule - "believe only what experience delivers." The first (Locke) still trusts there is a real world outside, though he admits we cannot see its inner nature. The second (Berkeley) says: if experience only ever gives ideas, then talk of unexperienced "matter" is empty - so only minds and their ideas exist. The third (Hume) applies the rule without mercy and finds that even the "self" and the "power" in cause-and-effect are never actually experienced.

Thinker	Keeps	Drops	Label
Locke	matter, self, God, causation	knowledge of matter's inner nature	representative realism
Berkeley	minds, ideas, God, self	material substance	subjective idealism
Hume	perceptions, practical belief	substance, simple self, objective necessity	mitigated scepticism

MEMORY: Memory line: Locke keeps matter, Berkeley kills matter, Hume kills matter AND mind AND causation.

LAYER 2 - CORE UPSC

0. ONE-SCREEN MAP ANALYSIS:

EMPIRICISM = all ideas come from EXPERIENCE (mind at birth = tabula rasa)
Push the premise -> matter, self, causation dissolve:

LOCKE	BERKELEY	HUME
Representative	Subjective	Scepticism
Realism	Idealism	
matter real but	esse est percipi	no substance, no
"know-not-what"	NO material subst.	self, no necessary
primary/secondary	collapses that	causation
qualities	distinction	bundle of percep-
personal identity	God sustains ideas	tions; mitigated
= memory/consc.	spirit is real	scepticism

MEMORY: Mnemonic — the slide "Realism -> Idealism -> Scepticism": Locke keeps matter, Berkeley kills matter, Hume kills matter AND mind AND causation.

5. THE INTERNAL LOGIC — WHY EMPIRICISM "SLIDES" ANALYSIS:

LOCKE : All ideas from experience -> matter is real but unknowable substrate ("know-not-what")
↓ Berkeley asks: if all we know is ideas, what grounds belief in MATTER?
BERKELEY: There is no impression of matter -> drop material substance (esse est percipi)
↓ Hume asks: apply the same razor to the SELF, SUBSTANCE, CAUSATION...
HUME : No impression of self, no impression of necessary connexion -> bundle, habit, scepticism

Each step is the **previous thinker's premise taken more consistently**. This slide is the master narrative of the whole item — and what **provokes Kant** (item 4) to rescue knowledge by adding the a priori contribution of the mind.
ANALYSIS:

Why the three thinkers belong in one story

British Empiricism is not three separate philosophers who happen to share a chapter. It is **one premise - all ideas come from experience - pushed by each thinker more consistently than the last**. Locke keeps a material world but admits it is an unknowable "something I know not what". Berkeley points out that if all we ever meet is ideas, the belief in unperceived matter has no experiential content, so matter is dropped. Hume then turns the very same experiential razor on the *self*, on *substance* and on *causal necessity*, and finds no impression of any of them.

The examiner's single most rewarded move on this item is to present the three as a **slide**, not a list: each conclusion is the previous thinker's starting point taken to its logical end. That is also why the empiricists are the trigger for Kant (item 4): the slide ends in a scepticism nobody can live by, and Kant's response is to make the mind contribute the a priori structure experience alone cannot supply.

LAYER 3 - ADVANCED

Is the "slide" a decline or a discipline?

Textbooks sometimes present the movement from Locke to Hume as empiricism "collapsing". The stronger reading is the opposite: it is empiricism becoming **rigorous**. Each thinker removes an inconsistency in his predecessor. Locke's "veil of perception" leaves a gap between idea and object that he never closes; Berkeley closes it by identifying object with idea, but keeps an active spirit and God that sit awkwardly with strict empiricism; Hume removes even those, and is left with perceptions in flux and no principle to bind them.

The **diagnostic question** the slide raises is therefore not "who is right?" but "what premise forces the scepticism?"
The canonical answer is the **atomism of impressions** - if every perception is a separable atom, no *relation* (identity, substance, necessary connexion) can itself be perceived, so all relations become fictions of the imagination. This is why Kant's reply targets the atomism rather than any single inference, and why the honest verdict is that the principle "all ideas from experience", consistently applied, ends in a position no one can act on - showing the principle to be *incomplete*, not false.

LAYER 4 - EXAM APPLICATION

How the slide is examined

- The slide itself is rarely the *whole* question, but it is the **frame** every long answer should open with. A 20-marker such as **2024 Q2(a)** (does rejecting Locke's primary qualities push Berkeley to idealism?) is really a demand to walk one step of the slide and then contrast it with Hegel's very different idealism.
- **2018 Q1(a)** (are "the Sun will rise" and "2+2=4" of the same necessity?) is the slide's epistemic engine - Hume's Fork - stated as a single-part question.

10-mark use: open by naming the shared premise, place the thinker on the slide, then answer the specific demand.

15/20-mark use: use the slide as the spine - state the premise, show the thinker taking it one step further than his predecessor, then deliver the specific comparison or criticism the directive asks for.

Directive trap: "Bring out / Trace" wants a **development**, not three parallel summaries. Show each thinker as the previous one made consistent.

LAYER 5 - RAPID REVISION

Rapid recall

- Shared premise: no innate ideas; all ideas from experience; mind at birth = "white paper".
- Slide: **Realism (Locke) -> Idealism (Berkeley) -> Scepticism (Hume)**.
- Engine of the slide: the atomism of impressions - no relation is itself perceived.
- Endpoint: a scepticism nobody can live by -> triggers Kant's a priori rescue.
- **Trap:** do not call it a "collapse"; it is the premise applied consistently.
- **Practice link:** MCQs 1, 2 and 25 test the slide logic; every long-answer PYQ can open with it.

Progress: 2 / 10 | Philosophy Layered Session | Subtopic: Locke - Theory of Knowledge: Innate Ideas, Tabula Rasa, Sources and Degrees

LAYER 1 - SIMPLE START

Visual gateway - where every idea comes from

Plain-language start: For Locke the newborn mind is a blank sheet. Two "pipes" fill it: what the senses bring in from outside (**sensation**) and what the mind notices about its own workings (**reflection**). Everything else is built by combining these simple pieces.

Degree of knowledge	What it is	Certainty
Intuitive	seen at once ("white is not black")	highest
Demonstrative	proved through middle steps (geometry)	high
Sensitive	that a particular thing exists now	lowest, still reliable

MEMORY: **Memory line:** Two sources (sensation + reflection) -> simple ideas -> complex ideas -> three degrees of knowing.

LAYER 2 - CORE UPSC

1.1 LOCKE — Theory of Knowledge

Attack on innate ideas (Essay I)

Locke's *Essay Concerning Human Understanding* (1690) opens with a sustained demolition of innate ideas — the rationalist claim (especially Descartes') that certain ideas (God, logical axioms, moral principles) are "stamped on the mind" from birth. FACT:

Locke's argument	Target
Consent argument refuted: if innate ideas were universal, all humans (including children and "idiots") would possess them — but they manifestly do not.	The standard rationalist claim of universal assent.
No unconscious ideas: the notion of a thought the mind does not think is self-contradictory (for Locke, "to be in the mind" = "to be perceived by the mind").	Descartes' claim that innate ideas may be dispositional.
Genetic account available: every idea <i>claimed</i> to be innate can be explained as <i>acquired</i> through experience. If experience suffices, the innate hypothesis is otiose.	All alleged innate ideas (God, identity, non-contradiction).

PYQ 2023 Q2(c) and 2022 Q4(c) both demand Locke's refutation of innate ideas — **this IS the stock content.**

Tabula rasa and the sources of ideas

- The mind at birth is "**white paper, void of all characters**" — a blank slate (*tabula rasa*). FACT:
- **All ideas derive from EXPERIENCE**, which has two channels:
- **Sensation** (outer sense): ideas from external objects impinging on our senses (colour, sound, warmth, solidity).
- **Reflection** (inner sense): ideas from the mind's own operations — thinking, doubting, willing, believing. FACT:
- **Simple ideas** (given passively by experience) -> combined by the mind into **complex ideas** (modes, substances, relations).
- **Knowledge** = the perception of the agreement or disagreement of ideas. It comes in degrees:
- *Intuitive* (immediate — e.g. "white is not black") — most certain.
- *Demonstrative* (requires intervening ideas — e.g. proofs in mathematics).
- *Sensitive* (that particular things exist — least certain, though still reliable). FACT:

Representative Realism (the "veil of perception")

- We do not perceive objects directly; we perceive **ideas** that *represent* external objects. FACT:
- This creates an epistemic gap: how do we know our ideas accurately represent external reality? Locke trusts that ideas of primary qualities *do* resemble objects; Berkeley and Hume will exploit this gap.

The engine behind the attack

Locke's positive theory and his negative attack are two faces of one claim. If **experience alone** furnishes every idea (sensation for the outer world, reflection for the mind's own acts), then the rationalist stock of innate ideas is not merely unproven but **unnecessary** - an idle wheel. The decisive premise is not the empirical observation that children lack the idea of God; it is the stipulation that "to be in the mind" just *is* "to be perceived by the mind", which rules out unconscious or merely dispositional innate content in advance. That is the hinge a strong answer must expose: Locke wins against a *naïve* innatism and leaves untouched the *dispositional* innatism Descartes actually held.

LAYER 3 - ADVANCED

The strongest objection Locke must survive

Locke's attack on innate ideas is often over-credited. The rationalist need not claim that infants *consciously* possess the idea of God; Descartes' considered view is **dispositional** - the mind is so structured that, on the right occasion, it forms certain ideas from its own resources. Against that, Locke's empirical points (children and "idiots" lack the ideas) miss the target, and his decisive weapon becomes the premise that nothing can be "in the mind" unperceived. But that premise is a **stipulation about the word "idea"**, not a discovery, and Leibniz's reply in the *New Essays* - "nothing is in the intellect that was not in the senses, **except the intellect itself**" - shows innatism surviving as a thesis about mental *structure*.

Qualified verdict: Locke defeats innatism-as-conscious-content and does not defeat innatism-as-structure. That reformulated innatism is exactly what Kant will vindicate as the a priori forms and categories - so Locke's victory is real but narrower than the textbooks claim.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2022 Q4(c), 15 marks:** *Why and how does Locke refute innate ideas? Elucidate the nature and source of knowledge in Locke's epistemology.* This is the stock content of this subtopic - the refutation PLUS the positive account (tabula rasa, sensation/reflection, simple/complex, degrees).
- **2023 Q2(c) (Rationalism-owned)** asks Descartes' innate ideas and Locke's refutation - the same material seen from the rival side; useful cross-link, but the primary owner there is Rationalism.

10-mark: state the two-channel account -> name one refuting argument -> one qualification. **15-mark:** refutation (consent, no-unconscious-idea, genetic account) -> positive account (sources + simple/complex + degrees) -> the dispositional-innatism qualification. **Directive trap:** "Elucidate" demands the *derivation*, not synonyms for "blank slate". Give the mechanism (sensation/reflection -> simple -> complex) and at least one degree of knowledge.

LAYER 5 - RAPID REVISION

Rapid recall

- Mind at birth: "white paper, void of all characters" (Essay II.i) - the doctrine labelled *tabula rasa*.
- Two sources: **sensation** (outer) and **reflection** (inner, active).
- Simple ideas (passive) -> complex ideas (modes, substances, relations).
- Three degrees: **intuitive > demonstrative > sensitive**.
- Refutation lines: no universal consent; no unconscious ideas; genetic account suffices.
- **Trap:** tabula rasa does NOT mean the mind is wholly passive - reflection is an active source.
- **Practice link:** MCQs 3, 4 and 26; PYQ 2022 Q4(c).

Progress: 3 / 10 | Philosophy Layered Session | Subtopic: Locke - Abstract General Ideas, Nominal and Real Essence

LAYER 1 - SIMPLE START

Visual gateway - how a particular mind uses a general word

Plain-language start: We meet only particular things, yet we speak in general words ("apple", "triangle"). Locke's explanation: the mind *subtracts* the differences and keeps the common core - an "abstract general idea" - and the word stands for that. Berkeley says no such stripped-down idea can actually be formed.

Term	Meaning	Who knows it
Nominal essence	the abstract idea tied to a name (gold = yellow, heavy, malleable)	us; we classify by it
Real essence	the inner corpuscular constitution that causes those properties	usually unknown to us

MEMORY: **Memory line:** We classify by nominal essence (what we can list), not by real essence (what we cannot see).

LAYER 2 - CORE UPSC

Locke — ABSTRACT GENERAL IDEAS FACT: (the doctrine Berkeley destroys — you cannot answer 2025 Q4(c) without it)

Thesis. All things that exist are **particular**; yet most words are **general**. Locke's explanation of how a particular mind, furnished only with particular ideas, can use general words is the doctrine of **abstract general ideas**: words become general by being made the signs of general ideas, and ideas become general by **abstraction**. FACT:

Exact printed subterms: *abstraction* · *abstract general idea* · *general representative* · "circumstances of time and place" (what abstraction strips away) · *nominal essence* (the abstract idea annexed to a general name) vs *real essence* · Locke's own admission that the abstract idea is "**something imperfect, that cannot exist.**"

The argument, numbered:

1. Everything that exists is particular (*Essay* III.iii.1).
2. But it is impossible to have a separate name for every particular thing — memory could not hold them and communication would fail (III.iii.2–4).
3. Therefore language requires **general terms**.
4. Words are general only by being signs of **general ideas** (III.iii.6) — for Locke, meaning is always mediated by ideas in the mind.
5. Ideas received from particulars become general when the mind **separates** them "from all other ideas that accompany them in their real existence" — from circumstances of time, place, and every concomitant idea (III.iii.6–9).
6. What remains is an idea that can serve as a "**general representative**" of all particulars of the same sort.
7. The abstract general idea annexed to a sortal name **is** the **nominal essence** by which we classify (III.iii.15). Classification is therefore the workmanship of the understanding, not a reading-off of real essences.
8. therefore "General and universal belong not to the real existence of things; they are the inventions and creatures of the understanding, made by it for its own use, and concern only signs" (III.iii.11). Locke is a **conceptualist**, not a Platonic realist about universals. FACT:

Canonical example (and Locke's own admission) FACT: — the general triangle (*Essay* IV.vii.9): the general idea of a triangle "must be neither oblique nor rectangle, neither equilateral, equicrural, nor scalenon; but all and none of these at once." Locke concedes it is "imperfect, that cannot exist," and that framing it "requires some pains and skill."

This sentence is the hinge of the whole Locke–Berkeley dispute — quote it (or paraphrase it) and the answer

immediately looks textual.

Presuppositions ANALYSIS::

- **P1 — Meaning is ideational:** a word signifies by standing for an idea in the speaker's mind. Drop this (as Wittgenstein and Quine do) and premise 4 collapses, and with it the entire need for abstract ideas.
- **P2 — Ideas are imagistic/particular in origin** but can be *rendered* general by subtraction.
- **P3 — Mental subtraction is possible:** one can hold an idea while removing determinations from it and be left with something still contentful.
- **P4 — One-idea-per-general-word:** generality lives in the *idea*, not in the *use* of the word.

Berkeley's demolition, numbered FACT: (*Principles*, Introduction §§6–25) — PYQ 2025 Q4(c):

1. I concede I can imagine particular things I have perceived, and compound and divide such ideas (a hand without a body, a headless torso) — this is **separation of parts that could exist apart**.
2. But abstraction proper requires separating what **cannot** exist apart: extension without any colour, motion without a determinate speed, "man" without any determinate stature or complexion.
3. Locke's own triangle — neither equilateral nor scalene, yet all and none at once — is **self-contradictory**; no such idea can be framed. (Berkeley quotes this passage verbatim at Intro §13.)
4. Therefore, there are no abstract general ideas.
5. **Positive replacement:** an idea is general not by being abstract but "**by being made to represent or stand for all other particular ideas of the same sort**" (Intro §12) — a determinate particular idea, *selectively attended to*, does duty for a class. The geometer draws *this* black inch-long line and proves a theorem about all lines.
6. **Corollary attacking the whole tradition:** words do not always stand for ideas at all; language also raises passion, prompts action, and disposes the mind (Intro §§19–20). ANALYSIS: This is a genuine anticipation of the later Wittgensteinian point that meaning is use — worth flagging in any "Berkeley's nominalism" answer as evidence of its long reach.
7. **The metaphysical payload:** Locke's *material substance in general* and *substratum* are precisely abstract general ideas — the abstract idea of "being" plus the relative notion of "supporting." If abstraction is impossible, "matter" is not a mysterious unknown but a **meaningless expression**. Berkeley's immaterialism thus rests on his nominalism, not the reverse. FACT:

Locke's best reply -> and the residual CAUTION::

Berkeley's charge	Locke's available reply	Verdict
The abstract triangle is contradictory	Locke can say the abstract idea is <i>partial</i> , not <i>contradictory</i> : it is the idea of three-sidedness with the specific angles left undetermined , not with contradictory angles assigned . Determinables need not be determinate.	ANALYSIS: This is Locke's strongest defence and modern commentators generally accept it — but it requires giving up the imagistic model of ideas, which Locke elsewhere retains.
No such image can be formed	Concede that no <i>image</i> can, and relocate the abstract idea to a non-imagistic act of the understanding	CAUTION: Then it is no longer an idea in Locke's own official sense, and the empiricist derivation-from-experience is strained.
Selective attention suffices	Then explain what fixes <i>which</i> respect a particular idea is attended to — the resemblance-respect looks like the abstract idea returning under another name	ANALYSIS: This is the standard modern rejoinder to Berkeley; it makes the dispute far less one-sided than textbooks suggest.

Executable verdict: "Berkeley wins against the *imagistic* Locke and loses against the *determinable* Locke. The lasting damage is not to abstraction but to the ideational theory of meaning that made abstraction necessary — which is why the argument's true heir is not Hume but Wittgenstein's family-resemblance treatment of generality."

Real vs Nominal Essence

- **Real essence** = the internal constitution of a thing (for Locke, the arrangement of its "insensible corpuscles") that gives rise to all its observable properties. We usually do not know it. FACT:
- **Nominal essence** = the abstract idea we associate with a general name (e.g. "gold" = yellow, heavy, malleable, soluble in aqua regia). Classification is by nominal essence. FACT:
- Locke is agnostic about real essences — we know *that* things have internal constitutions, but not *what* they are. This epistemic humility is characteristic of his moderate empiricism.

Why this dry-looking topic is high-value

Abstraction looks like a technical footnote; it is in fact the **hinge of the whole Locke-Berkeley dispute** and the direct content of a 2025 question. Locke needs abstract general ideas to explain how a mind stocked only with particular ideas can use general words. Berkeley destroys the doctrine and, with it, Locke's "abstract idea of matter-in-general" - so Berkeley's *immaterialism rests on his nominalism*, not the reverse. Getting the dependency the right way round, and quoting Locke's own admission that the general triangle is "something imperfect, that cannot exist", is what makes an answer look textual rather than second-hand.

LAYER 3 - ADVANCED

Does Berkeley really win?

Berkeley's demolition (Principles, Introduction) is decisive **only against an imagistic Locke** - a Locke for whom every idea is a mental picture. Against that Locke, the "triangle neither equilateral nor scalene, yet all and none at once" is a self-contradictory image and cannot exist. But Locke can be read as holding that the abstract idea is **partial, not contradictory**: it is three-sidedness with the angles left *undetermined*, and a determinable need not be determinate. On that reading the general triangle is coherent and Berkeley's knock-down fails.

Berkeley's positive replacement - a particular idea "made to stand for" all others of its sort - then faces its own difficulty: it must specify *in what respect* the particular represents the class, and that respect looks suspiciously like the abstract idea readmitted under another name.

Executable verdict: Berkeley wins against the imagistic Locke and loses against the determinable Locke. The lasting casualty is not abstraction but the **ideational theory of meaning** that made abstraction necessary - which is why the argument's true heir is Wittgenstein's family resemblance, not Hume's scepticism.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2025 Q4(c), 15 marks:** *Explain Berkeley's doctrine of nominalism and his refutation of Abstract ideas.* You cannot answer this without Locke's positive doctrine first - state what Berkeley is refuting, then the refutation, then the metaphysical payload (matter as an abstract idea, hence meaningless).
- Cross-link: nominal/real essence recurs in any "substance" or "classification" answer.

15-mark spine: Locke's abstraction (why he needs it; the triangle admission) -> Berkeley's numbered refutation (separation of the inseparable is impossible; the triangle is self-contradictory) -> positive replacement (representative particular) -> payload (matter is an abstract idea) -> qualification (determinable Locke survives). **Directive trap:** "Explain" here means *exhibit the derivation*; do not merely assert "Berkeley rejected abstract ideas".

LAYER 5 - RAPID REVISION

Rapid recall

- Locke: general words work via **abstract general ideas** formed by stripping "circumstances of time and place".
- Canonical admission: the general triangle is "imperfect, that cannot exist" (Essay IV.vii.9) - Berkeley quotes it verbatim.
- Berkeley: no idea can separate what cannot exist apart; a **representative particular** does the work instead.
- Payload: "matter in general" is itself an abstract idea -> meaningless -> immaterialism rests on nominalism.
- **Nominal essence** = the classificatory idea; **real essence** = unknown inner constitution.
- **Trap**: immaterialism depends on the nominalism, not the other way round.
- **Practice link**: MCQs 5, 6 and 27; PYQ 2025 Q4(c).

Progress: 4 / 10 | Philosophy Layered Session | Subtopic: Locke - Qualities and Substance: Primary, Secondary and the Know-Not-What

LAYER 1 - SIMPLE START

Visual gateway - two kinds of quality, one unknown support

A PIECE OF GOLD = bundle of qualities that always go together

PRIMARY (in the body)	SECONDARY (powers on us)
extension, figure, motion,	colour, sound, taste, smell,
solidity, number	warmth / cold
our idea RESEMBLES the quality	our idea resembles NOTHING there

| but qualities must inhere in ...

↓

SUBSTRATUM = "something I know not what"

(we infer a support; we have no positive idea of it)

Plain-language start: Shape and motion are genuinely in the object; colour and taste are just its power to affect our senses. Underneath the whole cluster of qualities Locke assumes there must be a "something" that holds them together - but he admits we cannot say what that something is.

Feature	Primary	Secondary
Location	in the body itself	power in body to affect us
Our idea	resembles the quality	resembles nothing in object
Separable from body?	no (every fragment keeps them)	yes (depend on our organs)

MEMORY: **Memory line:** Primary = measurable and resembling; Secondary = response-dependent; Substratum = the honest "I know not what".

LAYER 2 - CORE UPSC

Primary vs Secondary Qualities FACT:

Primary Qualities	Secondary Qualities
Solidity, extension, figure, motion/rest, number	Colour, sound, taste, smell, warmth/cold
Really <i>in</i> the object	Powers in the object to produce sensations in us
Our ideas of them resemble the qualities themselves	Our ideas do NOT resemble anything in the object
Inseparable from body (every fragment retains them)	Depend on the perceiver's sense-organs

- **Basis of the distinction:** primary qualities are those that *any* body must have no matter how small; they are "objective." Secondary qualities are relational — the result of primary-quality configurations *acting on* our

sense-organs. FACT:

Substance as "something I know not what" FACT:

- We experience clusters of qualities that regularly go together (yellow + heavy + malleable = "gold") and suppose there is an underlying **substratum** that *supports* these qualities.
- But we have **no positive idea** of what this substratum is — it is merely "a supposition of he knows not what support of such qualities" (*Essay* II.xxiii.2). FACT:
- Locke does *not* deny substance exists — he denies we can *know its nature*. This is representative realism, not idealism. ANALYSIS:

The two doctrines that Berkeley will attack

This subtopic sets the two Lockean planks Berkeley later kicks away. First, the **primary/secondary distinction**: some qualities (extension, figure, motion, solidity, number) are really in bodies and our ideas *resemble* them; others (colour, sound, taste) are only *powers* to produce sensations and our ideas resemble nothing in the object. Second, the **substratum** - because qualities must inhere in something, Locke posits an underlying support of which we have "no positive idea", the famous "something I know not what". Locke does not deny that substance exists; he denies we can know its nature. Berkeley will argue that a resemblance we can never check is empty (so the distinction collapses) and that an unknowable substratum is an abstract idea with no content (so matter is a meaningless word).

LAYER 3 - ADVANCED

How much of Locke survives Berkeley's parity attack?

Berkeley's counter is a **parity argument**: every relativity Locke uses to make colour subjective (it varies with observer, organ, medium) applies equally to the "primary" qualities (apparent size varies with distance, motion with frame of reference, shape with angle). So either all qualities are mind-dependent or none are - and since Locke concedes it for the secondary, parity drags the primary along.

The scientific-realist rescue is that Berkeley's parity defeats only the **resemblance** thesis, not the distinction itself. Reconstrued as a contrast between **structural/measurable** properties that enter physical explanation and **response-dependent** properties that do not, the distinction is defensible - which is exactly why it survives in science even though Locke's picture-resemblance version does not. On the substratum, Locke's "I know not what" is a piece of intellectual honesty that Berkeley turns into a weapon: an unknowable support is indistinguishable from no support at all.

Qualified verdict: Locke's mistake was to ground the distinction in a picture (ideas resembling qualities) rather than in explanatory role; relocated to explanatory role, it stands, and only the resemblance thesis and the bare substratum fall.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2024 Q2(a), 20 marks**: *Is rejection of Locke's notion of primary qualities instrumental in Berkeley's leaning towards idealism? In this context also discuss how subjective idealism is different from the absolute idealism proposed by Hegel.* This subtopic supplies the first half - you must show that once resemblance/primary status falls, "matter" loses its last foothold.
- Substratum content recurs in any "Locke on substance" or cross-thinker "substance" comparison.

20-mark spine: state the distinction and the substratum -> Berkeley's parity + likeness attack -> therefore matter has nothing left to be -> the idealist turn -> then pivot to the required Hegel contrast (subjective vs absolute idealism, handled fully in subtopic 10). **Directive trap**: the question is "instrumental?" - you must **judge**, not just narrate; answer yes-with-qualification (it removes the last resemblance, but Berkeley's nominalism does the deeper work).

LAYER 5 - RAPID REVISION

Rapid recall

- Primary: extension, figure, motion, solidity, number - in the body, idea resembles.
- Secondary: colour, sound, taste, warmth - powers only; idea resembles nothing.
- Basis: primary qualities are those any body must have however small.
- Substratum: "something I know not what" (Essay II.xxiii.2) - existence granted, nature unknown.
- **Trap:** Locke does NOT deny substance; he denies knowledge of its nature (this is realism, not idealism).
- Berkeley's route in: parity of relativity + "an idea can be like nothing but an idea".
- **Practice link:** MCQs 7, 8 and 28; PYQ 2024 Q2(a).

Progress: 5 / 10 | Philosophy Layered Session | Subtopic: Locke - Self (Personal Identity) and God

LAYER 1 - SIMPLE START

Visual gateway - what makes you the same person over time?

SAME PERSON at T1 and T2 ?
Locke's test = continuity of CONSCIOUSNESS (memory)

NOT same soul-substance (could swap unnoticed)	NOT same body (changes daily)	YES same memory (I can own T1 now)
---	----------------------------------	---------------------------------------

PRINCE'S consciousness --> COBBLER'S body
=> the PERSON is the prince; the MAN is the cobbler

Plain-language start: You are the same person as yesterday not because you have the same lump of matter or the same soul, but because you can *remember* yesterday's experiences as your own. Move the memories into another body and the person moves with them.

Criterion	Locke's verdict	Why
Same body	rejected	bodies change constantly
Same soul	rejected	could change without our knowing
Same consciousness	accepted	it is what we can appropriate and be answerable for

MEMORY: **Memory line:** Person = memory-linked consciousness; identity is "forensic" - it fixes responsibility.

LAYER 2 - CORE UPSC

3.1 LOCKE — Self (Personal Identity) FACT:

- **The question:** what makes a person at time T2 the *same person* as at time T1?
- **Locke's answer:** personal identity = **continuity of consciousness (memory)**. A person is "a thinking intelligent being, that has reason and reflection, and can consider itself as itself, the same thinking thing, in different times and places" (Essay II.xxvii.9). FACT:
- The criterion is NOT sameness of *soul-substance* (we might have the same soul without knowing it — that would not make us the same *person*) and NOT sameness of *body* (bodies change constantly). It is the ability to **remember** past experiences as one's own. FACT:
- **Forensic concept:** Locke links personal identity to *moral responsibility* — we are accountable only for acts we can appropriate through memory.

Objections (Butler/Reid-style circularity) ANALYSIS:

Objection	Source	Force
Circularity (Reid/Butler): memory presupposes identity — I can remember only <i>my own</i> experiences; so identity must already be settled before memory can confirm it.	Thomas Reid, Joseph Butler (18th c.)	If personal identity = memory, and memory = remembering <i>one's own</i> past, the definition is circular. FACT:
Transitivity failure (Reid's "Brave Officer"): a young boy -> officer -> old general. The officer remembers being the boy; the general remembers being the officer but NOT being the boy. By Locke's criterion, general ≠ boy — but officer = boy and general = officer. Transitivity of identity is violated.	Reid	Locke might reply with <i>overlapping chains</i> of memory, but the problem is sharp. ANALYSIS:
Gaps in consciousness: dreamless sleep, amnesia — during these, does the person cease to exist?	Critics generally	Locke needs continuous <i>capacity</i> for memory, not constant recollection; but this strains the account.

PYQ 2021 Q1(d) directly asks: "Examine the concept of personal identity by Locke." — include the doctrine AND the circularity objection.

3.2 LOCKE — God

- God's existence is known by **demonstration** (not intuition, not sensitive knowledge): something cannot come from nothing; I exist; therefore there is an eternal, most powerful, most knowing being. FACT:
- This is a *cosmological-style* argument within Locke's empiricist framework — note that it relies on the causal principle (something from nothing is impossible), which Hume will later challenge.

The prince and the cobbler, and the shape of the theory

Locke's boldest illustration is the **prince and the cobbler**: if the consciousness (memory) of a prince were transferred into the body of a cobbler, then - Locke says - the *person* of the prince goes with the consciousness, even though the *man* (the living body) is the cobbler's. This thought-experiment isolates his thesis: **personal identity travels with continuity of consciousness, not with the same soul-substance and not with the same body**. Because identity tracks consciousness, it is a **"forensic" term** - it fixes who is accountable, since we can justly be answerable only for acts we can appropriate as our own through memory.

Locke's God, by contrast, is reached by **demonstration**: something cannot come from nothing; I exist; so there is an eternal, most powerful, most knowing being. Note the dependence on the causal principle - the very principle Hume will later dissolve, which is why Locke's proof and Hume's scepticism sit on opposite sides of the same fault line.

LAYER 3 - ADVANCED

The circularity and transitivity objections

Two classic attacks (Butler and Reid) must appear in any serious answer. **Circularity (Butler):** memory cannot *constitute* identity because I can remember only *my own* past experiences - so identity is presupposed before memory can confirm it. Locke's available reply is to separate the **constitutive** criterion (consciousness) from the merely **evidential** role of memory, but the reply is contested. **Transitivity failure (Reid's Brave Officer):** a boy is flogged; the young officer remembers being the flogged boy; the old general remembers being the officer but not the boy. By Locke's criterion general = officer and officer = boy, yet general is not equal to boy - so identity, which must be transitive, breaks.

The standard modern repair is **overlapping chains** of memory (each stage connected to the next), which restores transitivity while keeping the spirit of Locke's view. Gaps (dreamless sleep, amnesia) push Locke to speak of a continuous *capacity* for memory rather than constant recollection.

Qualified verdict: Locke rightly separates person from both body and soul, and rightly ties identity to what we can be answerable for; but memory alone cannot be the whole criterion, and the psychological-continuity theories that succeed him are repairs of Locke, not replacements.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2021 Q1(d), 10 marks:** *Examine the concept of personal identity by Locke.* "Examine" = state the doctrine AND test it - so the memory criterion PLUS the circularity/Brave-Officer objection are both required.
- Locke's God feeds any "empiricist proofs of God" or cross-paper theism comparison, and contrasts sharply with Hume's demolition of the same causal principle.

10-mark spine: memory-continuity thesis -> not soul, not body (prince-cobbler) -> forensic point -> close on the circularity objection's force. **Directive trap:** a bare exposition scores low on "examine"; the objection is the differentiator - name Butler/Reid and the Brave Officer.

LAYER 5 - RAPID REVISION

Rapid recall

- Personal identity = **continuity of consciousness (memory)**, not soul, not body.
- **Prince and cobbler:** consciousness carries the person; the body carries only the "man".
- Identity is **forensic** - tied to moral responsibility.
- Objections: **circularity** (Butler) and **transitivity/Brave Officer** (Reid); repair via overlapping chains.
- Locke's God: **demonstrative** cosmological-style proof (something from nothing is impossible).
- **Trap:** the criterion is sameness of consciousness, not sameness of soul-substance.
- **Practice link:** MCQs 9, 10 and 29; PYQ 2021 Q1(d).

Progress: 6 / 10 | Philosophy Layered Session | Subtopic: Berkeley - Immaterialism, Esse Est Percipi and the Reconstructed Arguments

LAYER 1 - SIMPLE START

Visual gateway - the five roads to "no matter"

BERKELEY: to be (for sensible things) = to be perceived

- 1 SEMANTIC thing = collection of ideas -> being = being perceived
- 2 LIKENESS an idea can be like nothing but an idea
- 3 PARITY primary qualities are as mind-dependent as secondary
- 4 MASTER you cannot conceive an object unconceived (you just did)
- 5 CONTINUITY orderly involuntary ideas need an active MIND = God

RESULT: only spirits (minds) + their ideas exist. Matter = empty word.

Plain-language start: Berkeley agrees we perceive tables and chairs - he only denies there is an extra, unperceivable "stuff" (matter) behind them. A "thing" just *is* the bundle of sights, touches and sounds we have of it; to exist, for such things, is to be perceived. Five arguments push toward this, and God keeps the world going when no human is looking.

Slogan	Correct reading	Common misreading
esse est percipi	for sensible things, existence = being perceived	"nothing exists unless I look"
no matter	no unperceiving substratum	"no external world at all"

MEMORY: **Memory line:** Five arguments (semantic, likeness, parity, master, continuity) - not one slogan.

LAYER 2 - CORE UPSC

1.2 BERKELEY — Theory of Knowledge

- All knowledge is of **ideas perceived by the mind** — there is no "material substance" behind ideas. FACT:
- **Immediate perception only:** we perceive ideas directly (not material objects via a "veil"). What Locke calls an external object is just a *collection of ideas*.
- **"Sensible things are those only which are immediately perceived by sense"** (PYQ 2021 Q1c) — there is nothing more to a "thing" than the ideas we have of it.
- **Rejection of abstract general ideas (nominalism):** Berkeley (*Principles* Introduction §§6–25) argues that the mind cannot form a genuinely *abstract* idea — e.g., a "triangle" that is neither equilateral nor isosceles nor scalene. We can have *particular* ideas that *stand for* (represent) a class, but not an idea stripped of all particular determinations. FACT: — PYQ 2025 Q4(c) asks exactly this: "Berkeley's doctrine of nominalism and his refutation of abstract ideas."
- **Consequence:** Locke's "abstract idea of substance-in-general" is incoherent; "matter" (Locke's abstract substratum) is an empty word with no perceivable content.

Collapse of the Primary/Secondary Distinction FACT:

Berkeley's master argument (*Principles* §§9–15; *Three Dialogues*): FACT:

1. Locke admits secondary qualities are *mind-dependent* (exist only as perceived).
2. Berkeley argues that **primary qualities are equally mind-dependent:**
 - Extension cannot be conceived without colour/some visual quality.
 - Motion/rest are relative to the observer.
 - Figure (shape) is inseparable from extension, which is inseparable from colour.
3. Therefore ALL qualities are ideas; the primary/secondary distinction collapses. FACT:
4. **If all qualities are ideas, there is nothing LEFT for "material substance" to be** — it is an empty abstraction.

Esse est percipi (to be is to be perceived) FACT:

- For sensible things, existence = being perceived. "The table I write on, I say, exists; that is, I see and feel it" (*Principles* §3). FACT:
- There is **no material substance** — "matter" is an incoherent fiction; what we call "physical objects" are orderly collections of ideas.
- **Reality = minds (spirits) + their ideas.** This is **subjective idealism** (also called *immaterialism*). FACT:

Berkeley "saves" common sense ANALYSIS:

- Berkeley insists he is *not* denying the reality of tables and chairs — he is denying only the *philosopher's fiction* of "matter" (an unobservable substratum). The ordinary person never believed in Locke's "veil of perception"; they believe they perceive things *directly* — and so does Berkeley. His idealism is (in his own view) *closer* to common sense than representative realism. FACT:
- He accuses the *materialists* of undermining common sense by positing an unknowable world behind appearances.

Berkeley — THE FOUR ARGUMENTS, RECONSTRUCTED ANALYSIS:->FACT: (never present esse est percipi as a bare slogan)

Argument 1 — The semantic/analytic argument (*Principles* §§1–4):

1. The objects of human knowledge are ideas: (a) imprinted on the senses, (b) perceived by attending to the passions and operations of the mind, (c) formed by memory and imagination.
2. "Sensible things" *means* things immediately perceived by sense (this is the sense of the phrase in PYQ 2021 Q1(c)).
3. An apple, a stone, a tree, a book are nothing but collections of such immediately perceived ideas.
4. It is impossible that ideas should exist unperceived — their *esse* is *percipi*; existence for them consists in being perceived.

5. Therefore, for sensible things, *esse est percipi*, and to speak of their "absolute existence without relation to their being perceived" is unintelligible.
- **Presupposition:** step 3 is a *definition*, not a discovery. Berkeley's whole system stands on the identification of the object with the collection of ideas — grant it and immaterialism follows in four lines; deny it and nothing follows at all.

Argument 2 — The Likeness Principle (*Principles* §8) FACT::

1. Locke says our ideas of primary qualities *resemble* qualities in bodies.
2. But "an idea can be like nothing but an idea" — a colour or figure can be like nothing but another colour or figure.
3. If the supposed originals are unperceivable, no comparison with them is even possible; a resemblance-claim we could never in principle check is empty.
4. Therefore, the representative-realist relation of resemblance between idea and material quality is unintelligible.
- **Presupposition:** resemblance requires comparability by a perceiver. **Strongest objection:** structural or mathematical resemblance (isomorphism) does not require qualitative likeness — a map resembles terrain without being terrain-coloured. This is the standard modern rescue of Locke.

Argument 3 — The collapse of the primary/secondary distinction (*Principles* §§9–15; *Dialogues* I) — set out at §2.2 above; its logical form is a **parity argument**: every relativity argument Locke accepts for secondary qualities (variation with observer, with organ, with medium) applies equally to primary ones (apparent size with distance, motion with frame of reference, shape with angle).

- **Presupposition:** perceptual relativity entails mind-dependence. **Objection:** it does not — that a thing looks different from different positions is what one should expect of a mind-*independent* thing with a real shape.

Argument 4 — The "Master Argument" (*Principles* §§22–23) FACT::

1. Berkeley stakes everything on one challenge: conceive one extended movable body existing unconceived, and he will concede materialism.
2. You reply that you can easily conceive a tree standing alone in a park with nobody by.
3. But in doing so *you* are conceiving it — so you have framed ideas in your own mind, and have not conceived the tree **unconceived** at all.
4. Therefore, the supposition is self-refuting; unperceived existence cannot even be entertained.
- **Presupposition (and the fatal one):** that conceiving *X existing unconceived* requires the act of conceiving to be part of the *content* conceived.
- **Strongest objection CAUTION: (Russell; refined by Prior and Gallois): a scope/use–mention confusion.** What is inconceivable is "*I conceive of X that it is not conceived by me*"; what is required is only "*I conceive that X exists and is not conceived*" — and that is perfectly coherent, exactly as I can *think about* an unthought-of number. Berkeley conflates the vehicle of thought with its object.
- **Berkeley's best reply:** for him there is no "object" over and above the idea, so the distinction the objector needs is precisely what is at issue — the argument is question-begging only if immaterialism is already false.

Argument 5 — God as the guarantor of continuity (*Principles* §§6, 30–33, 48; *Dialogues* II):

1. Ideas are passive and inert; they cannot cause anything.
2. Yet the ideas of sense come to me involuntarily and in a steady, regular order.
3. Whatever produces them must be an active spirit, and one whose power and wisdom exceed mine.
4. Therefore God. The "laws of nature" are the settled grammar of God's language of ideas — regularities are *signs*, not causes.
5. Therefore, objects persist unperceived by finite minds because they are always perceived by the infinite Mind.
- **Presupposition:** only spirits are active causes (Berkeley's *voluntarism*).
- **Objection:** this makes "existence unperceived" back into a hypothesis about an unobserved being — the very move Berkeley forbade Locke. **Reply:** we know spirit not by *idea* but by *notion* (§§27, 89, 140) — an asymmetry critics call ad hoc, but which Berkeley holds is forced, since an idea, being passive, could never picture activity.

ANALYSIS: **Answer-craft:** in a 15/20-marker on Berkeley, name the arguments (semantic · likeness · parity · master · continuity). Naming five arguments where the average script asserts one slogan is the single largest available differentiator on this sub-topic.

Name the arguments; never assert the slogan bare

The single biggest differentiator on Berkeley is to present immaterialism as a **set of named arguments**, not the slogan *esse est percipi* repeated. The canonical dossier reconstructs five: (1) the **semantic/analytic** argument - sensible things just *are* collections of immediately perceived ideas, so their being is being perceived; (2) the **likeness** principle - "an idea can be like nothing but an idea", so an idea cannot resemble an unperceiving material quality; (3) the **parity/collapse** argument - every relativity Locke grants for secondary qualities applies to primary ones, so all qualities are ideas and matter has nothing left to be; (4) the **Master Argument** - you cannot conceive an unconceived object, since conceiving it makes it conceived; (5) **continuity through God** - involuntary, orderly ideas need an active cause, namely the infinite Mind that always perceives them. In a 15/20-marker, naming five where the average script asserts one is the largest available gain.

LAYER 3 - ADVANCED

The Master Argument and its fatal ambiguity

The **Master Argument** (Principles 22-23) stakes everything on one challenge: conceive a body existing unconceived, and Berkeley concedes materialism. You try - "a tree in a park with nobody by" - but in conceiving it *you* are conceiving it, so you have not conceived it *unconceived*. The standard modern reply (Russell, refined by Prior and Gallois) is that this trades on a **scope/use-mention confusion**: what is genuinely impossible is "I conceive of X *that it is unconceived by me*"; what materialism needs is only "I conceive *that* X exists and is unconceived" - and that is perfectly coherent, exactly as I can *think about* a number nobody is thinking about. Berkeley confuses the vehicle of thought with its object.

Berkeley's best reply is that, for him, there is no "object" over and above the idea, so the distinction the critic needs is precisely what is in dispute - the argument is question-begging only if immaterialism is already false. On the **likeness** principle, the scientific-realist escape is that *structural* resemblance (isomorphism) needs no qualitative likeness - a map resembles terrain without being terrain-coloured.

Qualified verdict: the semantic argument is a definition, not a discovery; the master argument turns on a use-mention slip; the parity argument defeats resemblance but not explanatory realism. Berkeley's system is the most economical of the three - but it buys its economy with God, who does exactly the work Locke's matter did.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2021 Q1(c), 10 marks:** "*Sensible things are those only which are immediately perceived by sense.*" Explain Berkeley's theory of knowledge with reference to the above statement. This is the semantic argument stated as a quotation - locate the line, give immediate-perception, then *esse est percipi*.
- **2018 Q3(a), 20 marks:** *How does Berkeley establish that Mind and its ideas alone are real...?* - demands the full establishment (the arguments), then Moore/Russell (subtopic 7).
- **2024 Q2(a), 20 marks:** the primary-qualities route into idealism (parity/collapse argument).

10-mark: name the relevant argument, give it in three or four lines, close with the anti-sceptical intent. **20-mark:** name and reconstruct the arguments, add the strongest objection (master-argument scope error), then adjudicate. **Directive trap:** "Explain / Elucidate" wants the derivation of the arguments, not the slogan in synonyms.

LAYER 5 - RAPID REVISION

Rapid recall

- **esse est percipi** (Principles 3) - for sensible things only; Latin is Berkeley's own.
- Five arguments: **semantic, likeness, parity, master, continuity**.
- Collapse: primary qualities are as mind-dependent as secondary -> matter has nothing to be.
- Master Argument's weakness: scope / use-mention confusion (Russell, Prior, Gallois).
- Reality = **spirits + ideas**; matter is an empty abstract word.
- **Trap**: Berkeley denies *matter*, not the *external world*; tables are real ideas sustained by God.
- **Practice link**: MCQs 11, 12 and 30; PYQs 2021 Q1(c), 2018 Q3(a), 2024 Q2(a).

Progress: 7 / 10 | Philosophy Layered Session | Subtopic: Berkeley - Spirits, God, Common Sense; Moore and Russell React

LAYER 1 - SIMPLE START

Visual gateway - what is left once matter is gone

REALITY (Berkeley) = SPIRITS + their IDEAS

SPIRITS are active -> known by NOTION (not by idea)
 my finite mind: perceives, wills
 GOD infinite mind: causes + sustains the orderly world
IDEAS are passive -> known directly; they are what we sense

"Does the tree exist when unseen?" YES - God always perceives it

Plain-language start: After matter is removed, two things remain: minds and the ideas they have. Minds are active causes; we grasp them by a "notion", not a picture. The world does not blink out when we look away because God is always perceiving it. Far from being a sceptic, Berkeley thinks he has *defeated* scepticism by removing the unknowable material world.

Question	Berkeley's answer
Is Berkeley a sceptic?	No - he is anti-sceptical; the materialist causes doubt
Do things exist unperceived by me?	Yes - they are perceived by God
How do we know spirits?	by notion , since ideas (being passive) cannot picture activity

MEMORY: **Memory line:** Spirits by notion, ideas by sense, God guarantees continuity - idealism that *saves* common sense.

LAYER 2 - CORE UPSC

3.3 BERKELEY — Self (Spirit) FACT:

- The perceiving mind (**spirit**) is a **real active substance** — it is the *perceiver*, not a bundle of perceptions. FACT:
- We do not have an *idea* of spirit (ideas are passive; the mind is active); we have a **notion** of it — a direct awareness that does not fit the impression -> idea schema.
- **Berkeley keeps the self** (unlike Hume): the self is the active subject that perceives and wills.

3.4 BERKELEY — God FACT:

- The involuntary, orderly ideas I perceive (the "real world") are not caused by me. They must have a cause. FACT:
- Material substance cannot be the cause (it doesn't exist). The cause must be another *mind* — a mind powerful enough to produce the entire orderly system of nature.
- This mind is **God** — the infinite spirit who sustains all "real" ideas in existence. FACT:

- "Does the tree exist when no one perceives it?" — Yes, because God *always* perceives it. Unperceived objects continue to exist in God's mind. FACT:
- Berkeley thus uses empiricism to **defend theism** — the material world is replaced by God's continual ideation. His idealism is *theocentric*, not sceptical.

4.2 BERKELEY — Anti-Sceptical Idealism ANALYSIS:

- Berkeley explicitly claims to *refute* scepticism: it is the *materialist* who produces doubt (by positing an unknowable world behind ideas). By identifying reality with ideas, Berkeley claims *certainty* — we perceive real things directly (they are ideas) and God guarantees their continuity. FACT:
- His idealism is not sceptical; it is **dogmatic theistic idealism** — a metaphysical thesis about what *exists*, not a doubt about knowledge.

Berkeley under Moore and Russell

- FACT: Berkeley argues that sensible objects are ideas and that an unperceived material substratum is unintelligible; minds and ideas exhaust immediate ontology.
- FACT: Moore attacks the conflation of an act of awareness with its object: the awareness of blue is not identical with blue. Russell similarly seeks mind-independent structure but reconstructs objects through logical analysis rather than Moorean direct realism.
- ANALYSIS: **Evaluation:** both resist idealism, yet Moore stresses the transparency of sensation while Russell replaces ordinary objects with constructions from data/relations.

Two asymmetries that make Berkeley's system run

Berkeley's positive metaphysics rests on two deliberate asymmetries. First, **ideas versus notions**: ideas are passive and inert, so they can picture nothing active; the mind (spirit) is active, so we cannot have an *idea* of it - we know self and other spirits by a **notion**, a direct non-imagistic awareness. Second, **finite versus infinite mind**: my ideas of sense come to me involuntarily and in a steady order, so their cause is not me but a more powerful spirit whose settled way of producing them just *is* the "laws of nature" - God. These two moves let Berkeley keep a real self (unlike Hume), keep the world in being when no human looks (God always perceives it), and claim his idealism is **anti-sceptical** and closer to common sense than Locke's veil of perception.

LAYER 3 - ADVANCED

Moore and Russell against Berkeley - and are they the same?

2018 Q3(a) demands the twentieth-century reaction and whether Moore and Russell differ. They do. **Moore** attacks the core inference by distinguishing the **act** of awareness from its **object**: to be aware of blue is not the same as blue, so "esse is percipi" illegitimately fuses the sensing and the sensed; once separated, the object need not depend on the act, and realism is restored by *common sense*. **Russell** also resists idealism but by a different route: rather than trusting common-sense objects, he *reconstructs* physical objects through **logical analysis** as constructions out of sense-data and their relations, seeking mind-independent structure. So Moore stresses the **transparency of sensation** and defends ordinary objects; Russell replaces ordinary objects with **logical constructions**.

Berkeley's available reply to Moore is that the act-object distinction begs the question - for Berkeley there is no object over and above the idea. His reply to Russell is that sense-data constructions are still *ideas*, so Russell has not escaped the perceived after all.

Qualified verdict: both refuse to let existence collapse into being-perceived, but Moore does it by asserting direct realism and Russell by analysing the object away - a real difference in method, not merely in emphasis.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2018 Q3(a), 20 marks:** *How does Berkeley establish that Mind and its ideas alone are real? How do Moore and Russell react... Do you find any difference...?* Three demands: establish (arguments + God), Moore vs Berkeley, Russell vs Berkeley, then the Moore-Russell difference.
- Berkeley's anti-sceptical claim is the pivot for any "is Berkeley a sceptic?" trap.

20-mark spine: establish immaterialism (name the arguments; spirits by notion; God) -> Moore's act/object refutation -> Russell's logical-construction alternative -> adjudicate the difference (direct realism vs analysis) -> verdict.

Directive trap: the marks live in the **comparison** - a script that reacts to Berkeley but never separates Moore from Russell forfeits the final third.

LAYER 5 - RAPID REVISION

Rapid recall

- Reality = spirits + ideas; **self is real** (active), known by **notion**, not idea.
- **God** causes the involuntary orderly ideas and sustains unperceived things.
- Berkeley is **anti-sceptical**: the materialist, not he, breeds doubt.
- Moore: act of awareness is not its object -> common-sense realism.
- Russell: logical constructions from sense-data -> mind-independent structure.
- **Difference:** Moore keeps ordinary objects; Russell analyses them into constructions.
- **Trap:** do not say Berkeley "denies the world" or "is a sceptic".
- **Practice link:** MCQs 13, 14 and 31; PYQ 2018 Q3(a).

Progress: 8 / 10 | Philosophy Layered Session | Subtopic: Hume - Impressions and Ideas, the Fork, Dissolved Substance and the Bundle Self

LAYER 1 - SIMPLE START

Visual gateway - Hume's microscope

```
PERCEPTIONS
|__ IMPRESSIONS (vivid, original: sensations, passions)
|__ IDEAS       (faint copies of impressions)
      COPY PRINCIPLE: every simple idea <- a simple impression
      TEST a word: "from what impression?" no impression = fiction
-----
HUME'S FORK
RELATIONS OF IDEAS      | MATTERS OF FACT
a priori, necessary      | a posteriori, contingent
"2+2=4"; bachelor       | "the sun will rise"; "fire heats"
deny = contradiction     | contrary always conceivable
-----
RESULTS: no impression of SUBSTANCE -> fiction
        no impression of a simple SELF -> BUNDLE of perceptions
```

Plain-language start: Every idea is a dim echo of some earlier vivid experience. If a supposed idea (like "substance" or a permanent "self") has no such experience behind it, Hume declares it empty. Sorting knowledge into two boxes - truths of reason and truths of fact - he finds that "substance" and "self" fit neither.

Target	Impression found?	Verdict
Material / spiritual substance	none	fiction of imagination
Simple continuing self	none	bundle of perceptions
"2+2=4"	relation of ideas	necessary, trivially certain

MEMORY: **Memory line:** Copy Principle + Fork -> no substance, no simple self; "commit the rest to the flames".

LAYER 2 - CORE UPSC

1.3 HUME — Theory of Knowledge

Impressions and Ideas

- All contents of the mind (*perceptions*) divide into: FACT:
 - **Impressions** — vivid, forceful, original experiences (sensations, passions).
 - **Ideas** — faint copies of impressions, derived from memory/imagination.
 - **Hume's Copy Principle:** every simple *idea* must trace back to a corresponding simple *impression*. If a purported idea (e.g. "substance," "necessary connection") has no corresponding impression, it is **meaningless** or fictitious.
- FACT: This is the empiricist "microscope" — the ancestor of the verification principle.

Hume's Fork (Relations of Ideas vs Matters of Fact) FACT:

Relations of Ideas	Matters of Fact
Known a priori; discoverable by thought alone	Known a posteriori; require experience
Necessary, certain; denial is self-contradictory	Contingent; the contrary is always conceivable
Examples: "2+2=4"; "a bachelor is unmarried"	Examples: "the sun will rise tomorrow"; "fire causes heat"
Do not depend on what exists in the world	Depend on how the world actually is

- **Consequence:** any proposition that is *neither* a relation of ideas *nor* a matter of fact is *meaningless* — "commit it then to the flames" (*Enquiry* XII). FACT: This is the basis of anti-metaphysical empiricism and the direct ancestor of Logical Positivism (see Logical-Positivism.md).

2.3 HUME — Substance and Qualities

- Apply the Copy Principle: do we have an *impression* of substance? **No**. We have only impressions of particular qualities (redness, hardness, sweetness) — never of an underlying substrate. FACT:
- Therefore "substance" is a **fiction of the imagination** — the mind's habit of grouping constantly conjoined qualities and *inventing* a "support" for them. FACT:
- Hume dissolves *both* material and spiritual substance: neither has a corresponding impression.
- **Qualities without substance:** for Hume there are only *bundles of perceptions* — qualities that co-occur regularly. The "object" is nothing but a stable bundle; the "self" is nothing but a flowing bundle (§3.3).

3.5 HUME — Self (the Bundle Theory) FACT:

- Apply the Copy Principle to the self: **introspect, and you never find an impression of a "self"** — only particular perceptions (a pain, a colour, a thought) in constant flux. FACT:
- The self is **"nothing but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and movement"** (*Treatise* I.iv.6). FACT:
- **What produces the fiction of a unified self?** The imagination, through:
 - *Resemblance* (present ideas resemble past memories, creating a felt continuity).
 - *Causation* (one perception seems to produce the next — memory links them).
- **Hume's own dissatisfaction (Appendix to the Treatise):** Hume confesses he cannot satisfactorily explain what *binds* the bundle together — "all my hopes vanish when I come to explain the principles that unite our successive perceptions." FACT: This honest confession is philosophically significant and worth citing in any answer on Hume's self.
- ANALYSIS: **Cross-tradition parallel:** Hume's bundle theory strikingly resembles the Buddhist doctrine of *anātman/nairātmyavāda* (no-self) — see ../indian/Buddhism.md. The examiner may reward this bridge.

Humean identity and Kant's reply

- **FACT:** Hume finds only successive perceptions, not a simple self. Kant does not infer a soul-substance; he argues that the "I think" must be able to accompany representations as a condition of unified experience.
- **WRONG:** The transcendental unity of apperception is a formal condition, not an observed Cartesian ego.

One razor, applied everywhere

Hume gives empiricism a single test and runs it mercilessly. The **Copy Principle** says every simple *idea* is a faint copy of a prior simple *impression*; so to check whether a word is meaningful, ask "from what impression is its idea derived?" Applied to **substance**, there is no impression of an underlying support - only impressions of qualities - so both material and spiritual substance are fictions of the imagination. Applied to the **self**, introspection never finds an impression of a simple, continuing "I", only a rapid flux of particular perceptions - so the self is a **bundle**. The **Fork** then sorts all genuine assertions into relations of ideas (a priori, necessary, deniable only on pain of contradiction) and matters of fact (a posteriori, contingent, always conceivably otherwise); anything that is neither is meaningless. This is the empiricist "microscope" - and the direct ancestor of the verification principle.

LAYER 3 - ADVANCED

The self Hume could not bind - and Kant's answer

The bundle theory is the Copy Principle applied without exception to the perceiver: there are perceptions, but no owner behind them, only imagination's habits of **resemblance** and **causation** producing the *fiction* of a unified self. Hume's most valuable page is his **Appendix retraction**: he confesses he cannot explain what *binds* the bundle - "all my hopes vanish when I come to explain the principles that unite our successive perceptions." Having denied both a substance and any real connexion, he has nothing left to do the uniting. (Note the cross-tradition parallel with the Buddhist *anatta*/no-self doctrine, which the examiner may reward.)

Kant's reply (relevant to 2020 Q2a) does not restore a Cartesian soul. He argues that the "**I think**" must be *able* to accompany all my representations as a **formal condition** of their belonging to one experience - the **transcendental unity of apperception**. This is a condition of unified experience, not an observed inner object; so Kant grants Hume's negative point (no impression of a self) while denying his conclusion (therefore no unifying subject).

Qualified verdict: the bundle is not a positive discovery but the last casualty of empiricist atomism; that Hume can find no principle of unity, and honestly says so, indicts the atomism, not the self - which is precisely the diagnosis Kant makes explicit.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2018 Q1(a), 10 marks:** Are "*the Sun will rise tomorrow*" and " $2+2=4$ " of the same necessity for Hume? Pure Fork: one is a matter of fact (contingent, deniable), the other a relation of ideas (necessary) - **not** the same necessity.
- **2020 Q2(a), 20 marks:** "*I never can catch myself... without perception...*" How does this problematize personal identity? How does Kant deal with it? Bundle self -> Appendix worry -> Kant's transcendental unity.

10-mark (Fork): define the two prongs -> place each proposition -> state the asymmetry (deny " $2+2=4$ " -> contradiction; deny sunrise -> merely improbable, never impossible). **20-mark (self):** Copy Principle -> no impression of self -> bundle -> Appendix confession -> Kant's formal unity as reply -> verdict on atomism. **Directive trap:** 2018 wants a **distinction**, not "both are certain"; do not collapse relations of ideas into matters of fact.

LAYER 5 - RAPID REVISION

Rapid recall

- **Impressions** (vivid) -> **ideas** (faint copies); **Copy Principle** tests meaning.
- **Fork**: relations of ideas (a priori, necessary) vs matters of fact (a posteriori, contingent).
- No impression of **substance** -> material and spiritual substance are fictions.
- **Bundle self**: "a bundle or collection of different perceptions... in perpetual flux".
- **Appendix retraction**: Hume cannot say what unites the bundle.
- **Kant**: "I think" as **transcendental unity of apperception** - a formal condition, not a soul.
- **Trap**: bundle theory denies an *owner*, not the perceptions themselves.
- **Practice link**: MCQs 15, 16 and 32; PYQs 2018 Q1(a), 2020 Q2(a).

Progress: 9 / 10 | Philosophy Layered Session | Subtopic: Hume - Causation: Constant Conjunction, Custom and the Impression of Reflection

LAYER 1 - SIMPLE START

Visual gateway - where does "necessary connexion" come from?

WHAT THE SENSES DELIVER in "A causes B"

[A precedes B] + [A touches B] + [A always -> B]
priority contiguity constant conjunction

WHAT THEY NEVER DELIVER: a POWER / necessary TIE in the objects

repetition changes not the OBJECTS but the MIND:

mind is DETERMINED to expect B on seeing A = CUSTOM / HABIT

this felt determination = IMPRESSION OF REFLECTION

-> the idea of "necessary connexion" is copied from THIS (in us, not in things)

Plain-language start: When one ball hits another we see the first move, touch the second, and the second roll off - but we never see a compulsion forcing it. After watching this many times our mind forms a habit: seeing A, we automatically expect B. Hume's radical claim is that the "must" in "A must cause B" lives in our habit-formed expectation, not in the billiard balls.

We observe	We do NOT observe
priority, contiguity, constant conjunction	a necessary connection / power in objects
our own felt expectation (impression of reflection)	any rational insight that B must follow

MEMORY: **Memory line:** See conjunction, feel expectation, project necessity - custom is "the great guide of human life".

LAYER 2 - CORE UPSC

4.3 HUME — Scepticism (the systematic culmination) FACT:

Causation — the centrepiece of Humean scepticism FACT:

Element	Hume's analysis
What we observe	constant conjunction (A always followed by B) + temporal priority (A precedes B) + spatial contiguity
What we do NOT observe	a <i>necessary connection</i> between cause and effect
Source of the "idea" of necessary connection	NOT from any impression of objects; it is an impression of reflection — a <i>feeling</i> in the mind (a "determination of the mind" to pass from the idea of A to the idea of B after repeated experience). FACT:
Mechanism	Custom/habit : after repeated observation of A → B, the mind <i>expects</i> B upon seeing A; this expectation is a <i>psychological</i> compulsion, not a <i>rational</i> demonstration. FACT:
Conclusion	Causal necessity is not <i>in</i> objects (not an objective relation); it is <i>projected onto</i> objects by the mind's habitual association. FACT:

- PYQ 2023 Q2(a) 20m, 2021 Q1(e) 10m, 2019 Q4(b) 15m, 2025 Q2(c) 15m all demand this analysis.

Is there any element of necessity in causal relations according to Hume? (PYQ 2019 Q4b):

- In *objects themselves* — NO. There is no impression of objective necessity.
- In the *mind* — YES, in a psychological sense: the "impression of reflection" (the felt compulsion to expect B after A) is a kind of subjective necessity. But this is a fact about *us*, not about *nature*. FACT:

The Problem of Induction FACT:

- Past regularities give NO rational guarantee of future ones. The belief "the future will resemble the past" cannot be justified:
- Not by demonstration (its denial is not self-contradictory).
- Not by experience (that would be circular — using experience to prove the reliability of experience). FACT:
- Induction rests on **custom/habit**, not on reason. We *do* rely on it — nature forces us to — but we cannot *justify* it.

Hume — THE TWO ARGUMENTS, RECONSTRUCTED ANALYSIS:->FACT:

(A) The negative argument on necessary connexion (*Treatise* I.iii.14; *Enquiry* VII):

1. **Copy Principle**: every simple idea derives from a corresponding simple impression.
2. So if we have a genuine idea of *necessary connexion*, we must locate its source impression.
3. **External search**: in any single instance of causation (one billiard ball striking another) sense delivers only priority, contiguity and the succession of qualities. No impression of a *power* or *tie* is given.
4. Repetition adds no new quality to the objects: the hundredth collision is qualitatively no different from the first as far as the objects go.
5. **Internal search**: volition does no better — I have no impression of how the will moves the limb; the actual mechanism (nerve, muscle) is unknown to consciousness. Hume rules out the Cartesian and the occasionalist appeal alike.
6. But repetition *does* produce a change in **the mind**: after constant conjunction, the mind is **determined** to pass from the idea of A to the idea of B. That felt determination is an **impression of reflection**.
7. Therefore, the idea of necessary connexion is copied from that internal impression. Necessity "is something that exists in the mind, not in objects."
8. Therefore, two definitions of cause follow — (i) *objective/philosophical*: an object followed by another, where all objects similar to the first are followed by objects similar to the second; (ii) *subjective/natural*: an object followed by another, whose appearance **conveys the thought** to the other. FACT: **Naming both definitions is the single highest-value move in any Hume-on-causation answer.**

Presuppositions ANALYSIS:: (P1) the Copy Principle is exceptionless; (P2) a single instance and a repeated instance can be compared for *added* content — i.e. causation must be visible in one instance if it is objective at all; (P3) impressions are atomic and separable, so no relation is given *with* its terms; (P4) "necessity" must be either observed or projected — no third option such as inferred theoretical posit.

Canonical example FACT:: the two billiard balls (*Enquiry* IV, VII) — "the first is the cause, the second the effect... but all we ever observe is one succeeding the other." Secondary: bread nourishing the body (*Enquiry* IV) — the sensible qualities of bread give no clue to its nutritive power.

Why causation is the centre of gravity

Causation is the pressure point of the whole item: four of Empiricism's twelve owned PYQs (2019, 2021, 2023, 2025) turn on it. The analysis runs in two movements. **Negatively**, Hume applies the Copy Principle and finds that a single instance of one billiard ball striking another yields only *priority*, *contiguity* and *constant conjunction* - never an impression of a *power* or *tie*; repetition adds nothing to the objects. **Positively**, repetition changes the *mind*: it becomes *determined* to pass from the idea of the cause to the idea of the effect, and that felt determination is an **impression of reflection** from which the idea of necessary connexion is copied. Hence the twin definitions of "cause" - one *philosophical* (objects of one kind are constantly followed by objects of another) and one *natural* (the appearance of the one conveys the thought to the other). Naming both definitions is the single highest-value move in any causation answer.

LAYER 3 - ADVANCED

Is there any necessity at all? - the 2019 distinction, and the two definitions

The examiner's favourite refinement (2019 Q4b) is: *is there any element of necessity in causation for Hume?* The disciplined answer splits the locus. **In the objects - none:** there is no impression of objective power, so causal necessity is not a real relation in nature. **In the mind - yes, in a psychological sense:** the impression of reflection is a genuine, felt *subjective* necessity - a fact about us, not about the world. Collapsing these two is the classic error.

The deepest point is that Hume does not *eliminate* causation; he *relocates* its necessity from world to mind and hands us **two definitions** - the philosophical (regularity) and the natural (mental transition). This is why "Hume denies causation" is a trap: he denies the idea of necessary connexion *in objects*, never the *practice* of causal inference, which custom makes unavoidable. His four hidden presuppositions - exceptionless Copy Principle, one-instance visibility test, atomic separable impressions, and the observed-or-projected dichotomy - are precisely where every reply (Kant especially) attacks him.

Qualified verdict: Hume's account is unanswerable as a description of what is *given* in perception, but it presupposes an atomism of impressions that makes theoretical, non-observational posits (like force in physics) look illegitimate by fiat - and that presupposition, not the psychology, is the vulnerable premise.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2023 Q2(a), 20 marks:** *Hume's argument that causality is nothing but habit or custom - critically analyse.* Full negative + positive movement, two definitions, then critique via the presuppositions.
- **2021 Q1(e), 10 marks:** the causation analysis in compressed form.
- **2019 Q4(b), 15 marks:** *is there any element of necessity?* - the objects-no / mind-yes split.
- **2025 Q2(c), 15 marks:** Hume's refutation of the causal relation (pairs with Kant's reply - subtopic 10 supplies the Kant half).

20-mark spine: observed elements -> no impression of power -> impression of reflection -> custom/habit -> the two definitions -> presuppositions -> critical verdict. **Directive trap:** "critically analyse" forbids pure exposition; the two definitions plus one named presupposition-attack are the grade-defining content.

LAYER 5 - RAPID REVISION

Rapid recall

- Observed: priority + contiguity + **constant conjunction**. Not observed: **necessary connexion**.
- Idea of necessity = **impression of reflection** (felt determination of the mind).
- Mechanism = **custom / habit**; expectation is psychological, not rational.
- **Two definitions of cause**: philosophical (regularity) + natural (mental transition) - name both.
- **2019 split**: no necessity in objects; a subjective necessity in the mind.
- **Trap**: Hume relocates causation's necessity; he does not deny causal inference.
- **Practice link**: MCQs 17-20, 25, 26; PYQs 2023 Q2(a), 2021 Q1(e), 2019 Q4(b), 2025 Q2(c).

Progress: 10 / 10 | Philosophy Layered Session | Subtopic: Hume - Induction, Mitigated Scepticism, God; and the Empiricist-to-Idealist Map

LAYER 1 - SIMPLE START

Visual gateway - the induction dilemma and the empiricist slide

CAN WE JUSTIFY "the future will resemble the past" (Uniformity, UP)?

Route 1: DEMONSTRATION ? No - "nature may change" is not a contradiction

Route 2: EXPERIENCE ? No - experience proving experience is CIRCULAR

=> UP has no rational foundation -> induction rests on CUSTOM / HABIT

THE EMPIRICIST SLIDE (why the item hangs together)

LOCKE : all ideas from experience; matter real but "know-not-what"

| if all we know is ideas, what grounds belief in MATTER?

BERKELEY: no impression of matter -> drop it (esse est percipi)

| apply the same razor to SELF, SUBSTANCE, CAUSE ...

HUME : no impression of self / power -> bundle, habit, scepticism

| a scepticism no one can live by ...

KANT : mind supplies the a priori structure experience cannot

Plain-language start: Every prediction assumes the future will behave like the past - but Hume shows we can neither *prove* that assumption (its denial is not contradictory) nor *test* it without already assuming it (circular). So science runs on habit, not proof. Step back and the three empiricists form one slide: each takes the last one's premise more seriously, until Kant has to rescue knowledge.

Reply to induction	Move
Kant	a third option - the synthetic a priori
Popper	science needs no induction (conjecture + refutation)
Strawson	demanding to justify induction <i>as a whole</i> misuses the word "rational"

MEMORY: **Memory line**: Not demonstrable, not provable-by-experience -> custom rules; the slide ends in Kant.

LAYER 2 - CORE UPSC

(B) The problem of induction as a formal dilemma (Enquiry IV):

1. All reasoning about matters of fact beyond present sense and memory rests on the relation of cause and effect.
2. Causal inference rests on the **Uniformity Principle (UP)**: the future will resemble the past / unobserved cases resemble observed ones.
3. UP can be established only **demonstratively** or **probably** (this exhaustive division is the fork).
4. Not demonstratively: "the course of nature may change" implies no contradiction — it is perfectly conceivable.
5. Not probably: every probable/experiential argument already **presupposes** UP, so the argument would be circular.

6. Therefore, uP has no rational foundation.
7. Therefore, inductive inference is produced not by reason but by **custom or habit** — "the great guide of human life."

Presupposition ANALYSIS:: step 3 assumes the exhaustiveness of the demonstrative/probable dichotomy (Hume's Fork applied reflexively). Every serious reply attacks this step — Kant by supplying a **third** category, the synthetic *a priori*; Popper by denying that science needs induction at all; Strawson by arguing that demanding a justification of induction *as a whole* misapplies the very standards of rationality that induction constitutes (see Quine-Strawson.md).

The counterexample Hume himself concedes CAUTION: — the missing shade of blue (*Treatise* I.i.1; *Enquiry* II): a man acquainted with every shade of blue but one, shown the spectrum with a gap, can (Hume grants) form the idea of the missing shade from imagination alone — a simple idea with no antecedent impression. Hume calls the instance "so singular" that it is not worth altering his general maxim for it.

- ANALYSIS: **Why this matters for marks:** it shows the Copy Principle is an *empirical generalisation*, not an analytic truth — so Hume's demolition of "substance," "self" and "necessary connexion" rests on a premise he himself admits admits exceptions. Deploying this converts a descriptive answer into a critical one.
- **Hume's available reply:** the missing shade is generated by *interpolation between* impressions actually had, so the principle's spirit — no idea without experiential materials — survives even if its letter does not.

Mitigated Scepticism FACT:

- Hume does NOT recommend suspending all belief (that would be unliveable). He distinguishes:
- **Excessive/Pyrrhonian scepticism:** total suspension of judgment — impossible in practice.
- **Mitigated scepticism:** a cautious, modest attitude — limit enquiry to what experience can answer; avoid speculations about things beyond possible experience (substance, God, the soul); proportion belief to evidence. FACT:
- This is Hume's positive recommendation: philosophical humility + reliance on the natural beliefs that custom compels.

3.6 HUME — God FACT:

- The **causal/cosmological argument** fails: we have no impression of a "first cause" or of causation as necessary connection (see §4.3). We cannot legitimately infer from experienced effects to an unexperienced transcendent cause. FACT:
- The **design (teleological) argument** fails (*Dialogues Concerning Natural Religion*):
- The analogy (universe : designer :: watch : watchmaker) is weak — the universe is not sufficiently similar to a manufactured artifact. FACT:
- Even if granted, it proves at most a *finite* architect working on given matter — not an omnipotent, omniscient, morally perfect creator.
- The order in the universe might be explained by natural principles (e.g. matter's inherent organising tendencies) without invoking intelligence.
- The problem of evil undermines any inference from the world to a perfectly good designer. FACT:
- **Miracles** (*Enquiry* X): a miracle violates the laws of nature; testimony in favour of a miracle is always *less probable* than the testimony being false -> it is never rational to believe miracle-reports on testimony alone. FACT:
- Cross-paper: PYQ 2025 P-II Q6(a) directly asks "Design argument for God's existence with David Hume's criticism" — the above IS the required content.

6. INTER-THINKER / INTER-SCHOOL DEBATES ANALYSIS:

Axis	Locke	Berkeley	Hume
Matter	real but unknowable substrate	does not exist (fiction)	no impression -> fiction
Qualities	primary (objective) vs secondary (subjective)	ALL mind-dependent (distinction collapses)	all are impressions; no basis for objective/subjective split
Substance	"something I know not what"	spirit only (no material substance)	no substance at all (material or spiritual)
Self	continuity of consciousness (memory)	active spirit (real)	bundle of perceptions (no self)
Causation	real power (though knowledge of mechanism is limited)	God's will producing ideas in us	constant conjunction + habit (no real power)
God	demonstrated via cosmological-style argument	required to sustain unperceived ideas	all proofs fail; scepticism
Scepticism	rejected (moderate realism)	claims to refute scepticism	embraced (mitigated)
Overall position	representative realism	subjective (theistic) idealism	phenomenalism + scepticism

Subjective idealism versus Hegelian absolute idealism (2024 Q2a, second half)

The comparison that finishes 2024 Q2(a) must be made precisely, in the canonical terms. **Berkeley's idealism is subjective:** reality is *ideas in finite and divine minds* - things are mind-dependent, sustained by God's perceiving. **Hegel's idealism is absolute/objective:** reality is the *self-development of Absolute Spirit (Geist) through dialectic* - Mind developing itself as the very substance of the world. So the two differ **in kind, not degree:** Berkeley makes existence depend on *being perceived* by minds that already exist; Hegel makes finite minds and the world alike *moments* in the self-unfolding of one Absolute. A script that treats Hegel's absolute idealism as merely "bigger" Berkeleyanism loses the marks; the axis is subjective/mind-dependent versus objective/self-developing Spirit.

The wider bridges the examiner rewards: **Descartes -> Locke** (innate ideas rejected, experience substituted); **Locke -> Berkeley** (matter's last resemblance removed); **Berkeley -> Hume** (the same razor turned on self and cause); **Hume -> Kant** (the synthetic a priori and the transcendental unity supplied to stop the slide).

LAYER 3 - ADVANCED

Mitigated scepticism, Hume's God, and a labelled contemporary application

Hume's endpoint is not paralysis. He rejects **Pyrrhonian** (total) scepticism as unliveable and recommends **mitigated scepticism**: confine enquiry to what experience can answer, proportion belief to evidence, and rely on the natural beliefs custom compels. On **God/religion**, the same razor bites: the causal and design proofs fail because they extrapolate causal power we never observe, so natural theology collapses into the general scepticism about necessary connexion.

ANALYSIS: Contemporary application (clearly labelled, not doctrine). A 2026 discussion, *Artificial Intelligence and the Problem of Induction: A Critique of David Hume's Empiricism* (IIARD, Journal of Humanities and Social Policy, Vol. 12 No. 1), notes that machine-learning prediction *operationalises* inductive expectation: a model generalises from constant conjunctions in training data to expectations about unseen cases - a mechanical analogue of Humean custom. But this **does not** establish a necessary connexion, and it **does not** solve Hume's *logical* problem of induction: the model's reliability on new data still presupposes the uniformity it cannot prove. The lesson is Humean, not anti-Humean - powerful prediction without rational insight into necessity. (Use sparingly; invent no figures; it illustrates, it does not prove.)

Qualified verdict: mitigated scepticism is Hume's attempt to make his own conclusions liveable; whether "nature forces the belief" is a *justification* or merely an *excuse* for using induction is the fault line every critic (and every AI-era commentator) presses.

LAYER 4 - EXAM APPLICATION

Verified routes and answer architecture

- **2024 Q2(a), 20 marks:** the primary-qualities route into idealism PLUS *subjective idealism versus Hegel's absolute idealism* - use the canonical in-kind distinction (Geist's self-development vs ideas in minds).
- **2022 Q4(c), 15 marks:** Hume's scepticism / limits of empiricist knowledge - mitigated scepticism is the positive close.
- Induction underlies the causation cluster (2023, 2019, 2025) whenever the answer must reach the Uniformity Principle.

20-mark spine (2024): parity/collapse removes matter -> immaterialism -> then pivot: Berkeley subjective (ideas in finite + divine minds) vs Hegel absolute (Geist's dialectical self-development) -> verdict that they differ in kind.

Directive trap: the comparison, not the exposition of Berkeley, carries the second half - never reduce Hegel to "Berkeley writ large".

LAYER 5 - RAPID REVISION

Rapid recall

- **Induction dilemma:** UP is neither demonstrable (no contradiction) nor provable by experience (circular) -> custom.
- Replies: **Kant** (synthetic a priori), **Popper** (no induction), **Strawson** (dissolves the demand).
- **Mitigated scepticism:** modest, evidence-proportioned enquiry - not Pyrrhonian suspension.
- **Hume's God:** causal/design proofs fail; natural theology collapses into causal scepticism.
- **Berkeley (subjective) vs Hegel (absolute):** ideas in minds vs Geist's self-development - differ in kind.
- ANALYSIS: **CA anchor:** ML operationalises inductive habit but neither proves necessity nor solves the logical problem (IIARD 2026, labelled application only).
- **Practice link:** MCQs 21-24, 27; PYQs 2024 Q2(a), 2022 Q4(c).

PART II - COMPLETE SOLVED PRACTICE

The practice sequence follows the examiner's movement from exact demand to doctrine, named evidence, analysis, qualification and verdict.

DIRECTIVE -> THESIS -> DOCTRINE -> NAMED TEXT/EXAMPLE -> OBJECTION/REPLY -> VERDICT

SOLVED PYQ BANK - EXACTLY 12 VERIFIED EMPIRICISM QUESTIONS

Exact wording, year and marks are parsed from the continuous local Western Philosophy Paper I bank for 2018-2025. Empiricism owns exactly 12 primary parts. The three 'Two Dogmas of Empiricism' questions (2021 Q3c, 2024 Q4c, 2025 Q4b) are Quine-Strawson owned and are deliberately excluded despite the shared word 'empiricism'.

Solved PYQ 1 - 2018 Q1(a), 10 marks

Question: Are the two truths—"The Sun will rise tomorrow" and ' $2+2=4$ ' of the same necessity for Hume? Give reasons in favour of your answer.

Model solution

Thesis (directive: give reasons). No. For Hume the two propositions are certain in *different senses*: " $2+2=4$ " is a **relation of ideas** (necessary), while "the Sun will rise tomorrow" is a **matter of fact** (contingent). Treating them as the same necessity is precisely the confusion Hume's Fork exists to prevent.

Doctrine - Hume's Fork. Every object of human reason is either a *relation of ideas* (known a priori by thought alone; denial is self-contradictory) or a *matter of fact* (known a posteriori; the contrary is always conceivable).

- "2+2=4": to deny it is to contradict oneself; its necessity is demonstrative and absolute, independent of what exists.
- "The Sun will rise tomorrow": "the Sun will not rise" implies **no** contradiction - it is perfectly conceivable. It cannot be demonstrated; it rests on causal inference, and causal inference rests on constant conjunction plus **custom**, never on logical necessity.

Analysis. The felt certainty of sunrise is a *psychological* assurance produced by habit and the presupposed uniformity of nature, not a *logical* one. To rank it with "2+2=4" would smuggle demonstrative necessity into a merely probable belief - the very slide from expectation to necessary connexion that Hume diagnoses.

Qualification / verdict. Both may be called "certain" in ordinary speech, but the certainties differ in kind: one is logical and unconditional, the other customary and revisable. Naming the two prongs and applying the conceivability test is the whole answer.

Solved PYQ 2 - 2018 Q3(a), 20 marks

Question: How does Berkeley establish that Mind and its ideas alone are real? How do Moore and Russell react to Berkeley's view in this regard? Do you find any difference between Moore's reaction and Russell's one? Discuss.

Model solution

Thesis. Berkeley establishes that only minds and their ideas are real by a **set of arguments**, not a bare slogan; Moore and Russell both reject the result, but by *different methods*, so there is a real difference between their reactions.

How Berkeley establishes it. (1) *Semantic*: sensible things just are collections of immediately perceived ideas, so their being is being perceived (*esse est percipi*). (2) *Likeness*: "an idea can be like nothing but an idea", so no idea can resemble an unperceiving material quality. (3) *Parity/collapse*: every relativity Locke grants for secondary qualities applies to the primary, so all qualities are ideas and matter has nothing left to be. (4) *Master Argument*: one cannot conceive an unconceived object. (5) *Continuity*: the involuntary, orderly ideas of sense require an active cause - the infinite Mind, God. Spirits are known not by ideas (which are passive) but by **notions**.

Moore's reaction. In "The Refutation of Idealism" Moore distinguishes the **act** of awareness from its **object**: the awareness of blue is not identical with blue. Berkeley's inference illegitimately fuses sensing and sensed; once separated, the object need not depend on the act, and common-sense realism stands.

Russell's reaction. Russell also refuses idealism but does not simply trust ordinary objects; he **reconstructs** physical objects by logical analysis as constructions out of sense-data and their relations, seeking mind-independent structure.

Is there a difference? - Yes. Moore keeps ordinary objects through the transparency of sensation (direct realism); Russell replaces ordinary objects with logical constructions. The difference is one of method, not merely emphasis.

Verdict. Both deny that existence collapses into being-perceived. Berkeley's reply - that there is no object over and above the idea - shows the Master Argument to be question-begging, but does not rescue the likeness principle against structural (non-qualitative) resemblance.

Solved PYQ 3 - 2019 Q4(b), 15 marks

Question: Is there any element of necessity in causal relations according to Hume? Discuss.

Model solution

Thesis. Yes and no - the answer must **split the locus** of necessity. In the *objects* there is none; in the *mind* there is a genuine but merely psychological necessity.

In objects - no necessity. Applying the Copy Principle, a single instance of causation (one billiard ball striking another) delivers only priority, contiguity and the succession of qualities; no impression of a *power* or *tie* is given, and repetition adds nothing to the objects themselves. So causal necessity is not an objective relation in nature.

In the mind - a subjective necessity. Repetition does change the *mind*: after constant conjunction it is **determined** to pass from the idea of A to the idea of B. That felt determination is an **impression of reflection**, and it is a real, if psychological, necessity - a fact about us, not about things. From it flow the **two definitions** of cause (philosophical: constant conjunction; natural: the mind's transition).

Analysis. Hume therefore does not *abolish* necessity; he **relocates** it from world to mind. The disciplined answer refuses to collapse the two loci - "no necessity in objects" and "a subjective necessity in the mind" are both true.

Verdict. There is necessity in causation for Hume only as projected felt compulsion; objective necessary connexion is a fiction of the imagination. Naming both definitions secures the marks.

Solved PYQ 4 - 2020 Q2(a), 20 marks

Question: "I never can catch myself at any time without perception, and never can observe anything but the perception." How does this statement by Hume problematize the philosophical notion of personal identity? How does Kant deal with this problem in his Critique of Pure Reason?

Model solution

Thesis. Hume's confession problematizes personal identity by removing any *impression* of a self, leaving only a **bundle**; Kant answers not by restoring a soul but by making the unity of the self a **formal condition** of experience.

How Hume problematizes it. By the Copy Principle every idea needs a source impression. Introspection ("I never can catch myself... without a perception") finds only a flux of particular perceptions, never an impression of a simple, continuing "I". So the self is "nothing but a bundle or collection of different perceptions... in perpetual flux". The ascribed identity is a *fiction* produced by imagination's habits of resemblance and causation. Hume's **Appendix** honestly retracts: he can find no principle that *unites* the successive perceptions.

How Kant deals with it. Kant grants that there is no *empirical intuition* of the self. But the "**I think**" must be *able* to accompany all my representations, as the condition of their belonging to one consciousness - the **transcendental unity of apperception**. This is a formal, a priori condition of unified experience, not an observed inner object and not a Cartesian ego-substance.

Analysis / verdict. Kant concedes Hume's negative point (no impression of a self) while denying his conclusion (therefore no unifying subject). The bundle is the last casualty of an atomism of impressions in which no relation can itself be perceived; Kant's reply targets that atomism, relocating unity from something *found* to something *presupposed*. (The Buddhist anatta parallel may be noted.)

Solved PYQ 5 - 2021 Q1(c), 10 marks

Question: "Sensible things are those only which are immediately perceived by sense." Explain Berkeley's theory of knowledge with reference to the above statement.

Model solution

Thesis. The quoted line states Berkeley's **semantic argument**: since sensible things are *only* what is immediately perceived, their whole being is to be perceived - *esse est percipi*.

Explanation of the theory of knowledge. For Berkeley the immediate objects of sense are **ideas**. What we call a "thing" (an apple, a table) is a stable collection of such immediately perceived ideas - colours, tastes, shapes, sounds. Anything "mediately" inferred behind them (a material substratum) is never itself perceived, so belief in it has no experiential content and is meaningless. Hence, for sensible things, to be is to be perceived; and minds (spirits), which do the perceiving, are known not by ideas but by **notions**.

Anti-sceptical point. Because there is no unperceivable matter behind our ideas, there is no "veil of perception" to breed doubt: we perceive real things *directly* (they are ideas), and God's constant perception secures their continuity.

Verdict. The statement is the compressed form of the whole system: restrict reality to the immediately perceived, and idealism follows without scepticism.

Solved PYQ 6 - 2021 Q1(d), 10 marks

Question: Examine the concept of personal identity by Locke.

Model solution

Thesis (directive: examine). Locke's criterion is **continuity of consciousness**, not sameness of soul or body; it is a genuine advance, but the examining eye must expose that memory alone cannot carry the whole weight.

The doctrine. Personal identity consists in the same *consciousness* extended backwards through memory. It is neither sameness of material body (which changes) nor sameness of thinking substance/soul (which could be swapped unnoticed). The **prince and the cobbler** isolate the thesis: transfer the prince's consciousness into the cobbler's body and the *person* of the prince goes with it, though the *man* is the cobbler. Identity is a **forensic** term - it fixes accountability, since we are answerable only for acts we can appropriate as our own.

Examination - objections. (i) **Circularity** (Butler): I can remember only *my own* past experiences, so identity is presupposed before memory can confirm it. (ii) **Transitivity failure** (Reid's **Brave Officer**): the general remembers the officer, the officer the flogged boy, but the general not the boy; by Locke's rule general = officer = boy yet general is not boy. Repair: **overlapping chains** of memory restore transitivity.

Verdict. Locke rightly detaches the person from both body and soul and ties identity to moral answerability; but memory is at best part of the criterion, and later psychological-continuity theories are repairs of Locke, not replacements.

Solved PYQ 7 - 2021 Q1(e), 10 marks

Question: "The relation between cause and effect is one of constant conjunction". Examine Hume's criticism of causation in the light of the above statement.

Model solution

Thesis. The statement gives Berkeley-free, purely Humean *objective* definition of cause: all that "cause and effect" denotes in the objects is **constant conjunction** - there is no perceivable necessary connexion.

Hume's criticism, in steps. (1) In any single instance we observe only temporal priority, spatial contiguity and the succession of qualities - never a *power* binding cause to effect. (2) Repetition adds nothing to the objects; the hundredth collision is, in the objects, no different from the first. (3) What repetition changes is the **mind**: after constant conjunction it is *determined* to expect B on seeing A. (4) That felt determination is an **impression of reflection**, the true source of the idea of necessity. (5) Hence the **two definitions** of cause - philosophical (constant conjunction) and natural (the mind's transition).

Analysis. "The relation... is one of constant conjunction" is therefore the *objective* half of the story: necessity is not *in* the relation but **projected** onto it by custom/habit, "the great guide of human life".

Verdict / trap. Hume does not deny that we make causal inferences (custom compels them); he denies the *idea of necessary connexion in objects*. Reading the line as "mere succession" is incomplete - it omits contiguity, priority and the felt necessity.

Solved PYQ 8 - 2022 Q4(c), 15 marks

Question: Why and how does John Locke refute the innate ideas? Elucidate the nature and source of knowledge in Locke's epistemology.

Model solution

Thesis. Locke refutes innate ideas because, once experience is shown to supply every idea, innate content is **unnecessary and unevicenced**; his positive epistemology then derives all knowledge from **sensation and reflection**.

Why he refutes innate ideas. (1) The **universal-consent** argument fails: if principles like identity or "the whole is greater than the part" were innate, all would assent, yet children and "idiots" show no awareness of them. (2) The dispositional rescue ("innate but not yet noticed") is ruled out by Locke's stipulation that "to be in the mind" *is* "to be perceived by the mind" - an unperceived idea in the mind is a contradiction. (3) Innate ideas are in any case **superfluous** once experience can account for the same content.

How - the nature and source of knowledge. The mind at birth is "**white paper, void of all characters**" (*tabula rasa*). Two fountains supply ideas: **sensation** (the outer world) and **reflection** (the mind observing its own operations). **Simple ideas** are received passively; the mind actively combines them into **complex ideas** (modes, substances, relations). Knowledge is the perception of the agreement/disagreement of ideas and comes in **degrees** - *intuitive* (most certain), *demonstrative* (via intervening ideas), *sensitive* (of particular existents, least certain but reliable).

Qualification / verdict. Locke's argument defeats a *naïve* innatism (fully formed conscious principles at birth). It does not touch the **dispositional** innatism that Descartes and Leibniz actually held (Leibniz's "veined marble"). His enduring contribution is the derivation programme - experience as the sole source, with reflection kept as an *active* second source so the mind is not merely passive.

Solved PYQ 9 - 2023 Q2(a), 20 marks

Question: Critically analyse Hume's argument that causality is a matter of habit/custom involving psychological principle of association.

Model solution

Thesis (directive: critically analyse). Hume's reduction of causality to habit/custom, powered by the psychological principle of **association**, is unanswerable *as a description of what perception gives* - but it rests on contestable presuppositions, and its verdict must be qualified rather than simply endorsed.

Exposition. *Negatively:* by the Copy Principle no impression of *power* is found in any single instance (billiard balls, bread nourishing); repetition adds nothing to the objects. *Positively:* repetition determines the **mind** to pass from A to B; this felt determination is an **impression of reflection**. The transition is governed by the principles of **association** - resemblance, contiguity and cause-effect - the "gentle force" that carries the imagination from one idea to the next. Hence the **two definitions** of cause (constant conjunction; mental transition) and the reduction of necessity to custom, "the great guide of human life".

Critical analysis - presuppositions. (P1) the Copy Principle is treated as exceptionless - yet Hume himself concedes the **missing shade of blue**; (P2) causation must be *visible in a single instance* if it is objective at all; (P3) impressions are **atomic and separable**, so no relation is given with its terms; (P4) necessity must be either observed or projected, with no third option such as an inferred theoretical posit. **Kant** attacks exactly this: causality is an a priori **category**, a condition of objective experience, supplying the necessity perception cannot.

Verdict. As phenomenology of the given, Hume is decisive; as metaphysics, his atomism makes lawful, theoretical necessity look illegitimate *by fiat*. The graded position: accept the psychological account, reject the atomist premise that rules out non-observational necessity.

Solved PYQ 10 - 2024 Q2(a), 20 marks

Question: Is rejection of Locke's notion of primary qualities instrumental in Berkeley's leaning towards idealism? In this context, also discuss how subjective idealism is different from the absolute idealism proposed by Hegel.

Model solution

Thesis. Yes - with qualification. Rejecting the privileged status of Locke's **primary qualities** removes matter's last foothold and is genuinely *instrumental* in Berkeley's idealism; but Berkeley's **nominalism** does the deeper work. And Berkeley's *subjective* idealism differs **in kind** from Hegel's *absolute* idealism.

The instrumental role. Locke made primary qualities (extension, figure, motion) really resemble our ideas, while secondary qualities were mere powers. Berkeley's **parity argument** shows that every relativity used to subjectivise the secondary (variation with observer, organ, medium) applies equally to the primary (apparent size, shape, motion vary too). So either all qualities are mind-dependent or none are; since Locke concedes it for the secondary, parity drags the primary along. Once no quality is left to inhere in matter, and the likeness principle ("an idea can be like nothing but an idea") blocks resemblance to an unperceiving substratum, "matter" has nothing to be. In this precise sense rejecting primary qualities is instrumental - though the argument is completed only by Berkeley's prior denial of **abstract ideas**.

Subjective vs absolute idealism. *Berkeley*: reality is **ideas in finite and divine minds** - things are mind-dependent, sustained by God's perceiving; existence is being perceived. *Hegel*: reality is the **self-development of Absolute Spirit (Geist) through dialectic** - Mind developing itself as the very substance of the world. So Berkeley's idealism is *subjective* (depends on minds that already exist and perceive), Hegel's is *objective/absolute* (finite minds and world alike are moments in one self-unfolding Absolute).

Verdict. Instrumental, yes, but not sufficient alone; and the two idealisms differ in **kind, not degree** - Hegel's Absolute is not "Berkeley writ large".

Solved PYQ 11 - 2025 Q2(c), 15 marks

Question: Examine Hume's refutation of Causal relation and Kant's response to it.

Model solution

Thesis. Hume refutes the *objective* causal relation by finding no impression of necessary connexion; Kant responds not by observing such a connexion but by making causality an a priori **category** that constitutes objective experience.

Hume's refutation. In any instance we perceive only priority, contiguity and constant conjunction; no *power* or *tie* is given, and repetition adds nothing to the objects. The idea of necessity is copied from an **impression of reflection** - the mind's felt determination to pass from A to B after constant conjunction. Hence necessity is **projected**, not perceived; causal inference rests on **custom/habit**, and two definitions of cause follow. Extended to induction, the Uniformity Principle can be justified neither demonstratively (its denial is not contradictory) nor experientially (circular).

Kant's response. Awakened by Hume from "dogmatic slumber", Kant concedes that no *impression* of necessity exists, but denies Hume's conclusion. The concept of cause is a **pure concept of the understanding** (a category); the principle "every event has a cause" is a **synthetic a priori** condition without which objective, ordered experience of a temporal world would be impossible. Necessity is real but its seat is the **mind's constitution of objects**, not the objects in themselves (transcendental idealism).

Verdict. Kant meets Hume by relocating necessity from *habit* to the *a priori form* of experience - preserving science's lawfulness while accepting Hume's point that necessity is not read off perception. The unresolved cost is that necessity holds only for phenomena, not things-in-themselves.

Solved PYQ 12 - 2025 Q4(c), 15 marks

Question: Explain Berkeley's doctrine of nominalism and his refutation of Abstract ideas.

Model solution

Thesis. Berkeley's **nominalism** - the denial of **abstract general ideas** - is the indispensable first premise of immaterialism: there is no abstract idea of "matter" or "existence" apart from being perceived.

Refutation of abstract ideas. Against Locke, Berkeley argues that the mind simply **cannot frame** an abstract general idea - for instance, an idea of a triangle that is "neither oblique nor rectangle, equilateral nor scalene, but all and none of these at once". Every idea we actually have is fully **particular** (this determinate colour, this determinate shape). Introspection never yields the indeterminate abstract image Locke's doctrine requires.

How generality is preserved (nominalism). Words are general, not ideas. A **particular** idea becomes general by **representative function** - it *stands for* all other particulars of the same sort. "Triangle" in a proof signifies any triangle because the particular figure drawn represents all; the generality lies in the *use/sign*, not in a special abstract object.

Consequence for immaterialism. Since there is no abstract idea, there is no legitimate abstract idea of **existence unperceived**, nor of a quality existing in an unthinking **substratum**. "Matter" is exposed as an empty abstraction - the very fiction Locke's doctrine of abstraction had made to seem intelligible. So the refutation of abstract ideas clears the ground on which *esse est percipi* is built.

Verdict. Nominalism is not a side-doctrine but the **engine**: destroy abstraction and the abstract idea of matter falls with it. This is why the examiner pairs "nominalism" and "abstract ideas" - they are one movement.

ORIGINAL MCQ MASTERY SET - EXACTLY 32 QUESTIONS

Questions 1-24 are core coverage across all ten subtopics; Questions 25-32 are remedial items targeting the most common misreadings. Correct answers rotate strictly A -> B -> C -> D eight times.

MCQ 1

Which sequence best captures the internal logic ('slide') of British Empiricism?

A. Locke's representative realism -> Berkeley's subjective idealism -> Hume's mitigated scepticism
B. Berkeley's idealism -> Locke's realism -> Hume's scepticism
C. Hume's scepticism -> Locke's realism -> Berkeley's idealism
D. Locke's idealism -> Berkeley's realism -> Hume's dogmatism

Correct answer: A

Explanation: Each thinker takes the shared premise (all ideas from experience) one step further; the movement runs realism -> idealism -> scepticism.

MCQ 2

The single premise said to drive the empiricist slide is:

A. that God exists and sustains ideas
B. that all ideas derive from experience
C. the primary/secondary quality distinction
D. the doctrine of innate ideas

Correct answer: B

Explanation: The shared starting point is experience as the sole source of ideas; the atomism of impressions then forces the slide toward scepticism.

MCQ 3

Locke's central objection to innate ideas is that:

A. they are morally corrupting
B. they contradict the existence of God
C. universal consent fails and an unperceived idea 'in the mind' is a contradiction
D. Descartes never actually held them

Correct answer: C

Explanation: Children and 'idiots' show no awareness of the alleged principles, and Locke stipulates that to be in the mind is to be perceived, ruling out unnoticed innate content.

MCQ 4

For Locke, the two 'fountains' of all ideas are:

A. intuition and demonstration
B. impressions and ideas
C. primary and secondary qualities
D. sensation and reflection

Correct answer: D

Explanation: Sensation (the outer world) and reflection (the mind observing its own operations) supply every idea; the mind at birth is a tabula rasa.

MCQ 5

Locke's 'degrees of knowledge', ordered from most to least certain, are:

A. intuitive, demonstrative, sensitive
B. sensitive, demonstrative, intuitive
C. demonstrative, intuitive, sensitive
D. intuitive, sensitive, demonstrative

Correct answer: A

Explanation: Intuitive (immediate) is most certain, demonstrative proceeds via intervening ideas, and sensitive knowledge of particular existents is least certain but still reliable.

MCQ 6

Locke's doctrine of abstract general ideas claims that the mind forms a general idea by:

- A. denying that general words have any meaning
- B. omitting the particular differences of particular ideas (e.g. of 'triangle')
- C. recollecting an innate universal
- D. perceiving the real essence directly

Correct answer: B

Explanation: Locke's abstraction leaves out differentiating particulars to yield a general idea - the very doctrine Berkeley later destroys.

MCQ 7

For Locke, the 'real essence' of a natural substance such as gold is:

- A. the nominal definition we use to classify it
- B. an abstract general idea in the mind
- C. its unknown internal constitution, from which its observable properties flow
- D. identical with its secondary qualities

Correct answer: C

Explanation: Nominal essence is the known sorting idea; real essence is the unknown microstructure - unknowable for substances, which is Locke's epistemic humility.

MCQ 8

Which set correctly lists Locke's primary qualities?

- A. colour, sound, taste
- B. warmth, smell, colour
- C. beauty, value, purpose
- D. extension, figure, motion, solidity, number

Correct answer: D

Explanation: Primary qualities are inseparable from body and our ideas resemble them; secondary qualities (colour, sound, taste) are only powers to produce sensations.

MCQ 9

Locke's 'substratum' is best described as:

- A. a 'something I know not what' that supports qualities but is itself unknown
- B. a bundle of perceptions in flux
- C. God's idea of the object
- D. the real essence, fully known

Correct answer: A

Explanation: Locke grants that substance exists but denies knowledge of its nature; Berkeley turns this admitted emptiness into a weapon against matter.

MCQ 10

Locke locates personal identity in:

- A. the same immaterial soul-substance
- B. continuity of consciousness (memory)
- C. the same living body
- D. a divine decree

Correct answer: B

Explanation: Identity is neither soul nor body but sameness of consciousness; Locke calls the term 'forensic' because it fixes accountability.

MCQ 11

The prince-and-cobbler thought experiment is designed to show that:

A. bodies never really change B. memory is fundamentally unreliable C. the person follows the consciousness, not the body D. the soul is the true criterion of identity

Correct answer: C

Explanation: Transfer the prince's consciousness into the cobbler's body and the person is the prince, though the 'man' is the cobbler - identity tracks consciousness.

MCQ 12

Locke's proof of God's existence is:

A. purely innate knowledge B. a direct sense perception of God C. a version of the ontological argument D. a demonstrative argument from the impossibility of something coming from nothing

Correct answer: D

Explanation: Locke reasons that he exists and nothing can come from nothing, so there must be an eternal, most powerful and most knowing being - a cosmological-style demonstration.

MCQ 13

'Esse est percipi', correctly read, means:

A. for sensible things, to exist is to be perceived B. nothing exists unless I personally am looking at it C. there is no external world whatsoever D. only God exists and the world is illusion

Correct answer: A

Explanation: The formula applies to sensible things (ideas), which God sustains when no finite mind perceives them; it does not deny the external world.

MCQ 14

Berkeley's 'likeness' principle states that:

A. our ideas resemble material substances B. an idea can be like nothing but an idea C. primary qualities resemble objects but secondary do not D. God resembles the finite mind

Correct answer: B

Explanation: If an idea can resemble only another idea, no idea can picture an unperceiving material quality, so Locke's resemblance thesis collapses.

MCQ 15

Berkeley's 'Master Argument' is standardly criticised for:

A. covertly denying the existence of God B. presupposing innate ideas C. a scope / use-mention confusion between the act and the object of conceiving D. relying on constant conjunction

Correct answer: C

Explanation: Russell, Prior and Gallois note that conceiving *that* X is unconceived is coherent, even though conceiving X 'as unconceived by me' is not.

MCQ 16

Berkeley's parity (collapse) argument concludes that:

A. only primary qualities are genuinely real B. secondary qualities are objective after all C. matter is unknowable but nonetheless real D. primary qualities are as mind-dependent as secondary, so matter has nothing left to be

Correct answer: D

Explanation: The relativities Locke used to subjectivise secondary qualities apply equally to the primary, dragging all qualities into mind-dependence.

MCQ 17

Berkeley holds that we know spirits (minds) by:

A. a notion, because ideas are passive and cannot picture an active mind B. an idea copied from a prior impression C. direct sense perception of the soul D. an innate intuition implanted by God

Correct answer: A

Explanation: Ideas are passive and inert; the active self and other spirits are grasped by a 'notion', not by an idea - an asymmetry central to Berkeley's system.

MCQ 18

For Berkeley, the continuity of objects when no human perceives them is secured by:

A. an underlying material substance B. God's constant perception C. physical forces described by natural law D. the bundle of perceptions

Correct answer: B

Explanation: Involuntary, orderly ideas require an active cause; God perceives and sustains them, so the tree in the quad does not blink out when unobserved by us.

MCQ 19

Moore's refutation of idealism turns on distinguishing:

A. primary from secondary qualities B. relations of ideas from matters of fact C. the act of awareness from its object D. impressions from ideas

Correct answer: C

Explanation: The awareness of blue is not identical with blue; 'esse is percipi' illegitimately fuses the sensing and the sensed.

MCQ 20

The key difference between Moore's and Russell's reactions to Berkeley is that:

A. Russell accepts idealism while Moore rejects it B. Moore uses logical analysis while Russell trusts common sense C. their methods are effectively identical D. Moore defends ordinary objects by direct realism, whereas Russell reconstructs objects as logical constructions from sense-data

Correct answer: D

Explanation: Both resist idealism, but the method differs in kind: Moore keeps ordinary objects; Russell analyses them into constructions seeking mind-independent structure.

MCQ 21

Hume's Copy Principle states that:

A. every simple idea is a faint copy of a prior simple impression B. every impression is a copy of an idea C. all ideas are innate and uncopied D. complex ideas cannot be analysed into simples

Correct answer: A

Explanation: The principle grounds Hume's test of meaning: for any term, ask from what impression its idea is derived; if none, the term is a fiction.

MCQ 22

On Hume's Fork, 'the sun will rise tomorrow' is:

A. a relation of ideas, necessarily true B. a matter of fact, whose contrary is always conceivable C. strictly meaningless D. an analytic truth like 'a bachelor is unmarried'

Correct answer: B

Explanation: Its denial implies no contradiction, so it is contingent and a posteriori; only propositions like '2+2=4' are necessary relations of ideas.

MCQ 23

Hume's bundle theory of the self is qualified by his Appendix admission that:

A. the self is an immaterial substance after all B. perceptions themselves do not exist C. he cannot explain the principle that unites the successive perceptions D. memory is an innate faculty

Correct answer: C

Explanation: Having denied both a substance and any real connexion, Hume finds nothing left to bind the bundle - 'all my hopes vanish'.

MCQ 24

Applying the Copy Principle to substance, Hume concludes that:

A. material substance is real but spiritual substance is not B. spiritual substance is real but material substance is not C. substance is the substratum, known by intuition D. there is no impression of substance, so both material and spiritual substance are fictions

Correct answer: D

Explanation: Only impressions of qualities are ever found; with no impression of an underlying support, substance in both forms is a fiction of the imagination.

Remedial MCQ 25

Remedial: the precise content of the claim 'Hume denies causation' is that Hume denies:

A. the idea of necessary connexion in the objects, not the practice of causal inference B. that anything whatever causes anything else C. the existence of constant conjunction D. the existence of the external world

Correct answer: A

Explanation: Custom compels us to infer effects from causes; what Hume denies is an objective, perceivable necessary connexion in the objects themselves.

Remedial MCQ 26

Remedial: for Hume the idea of necessary connexion is copied from:

A. an impression of sensation of a power residing in objects B. an impression of reflection - the mind's felt determination to pass from A to B C. an innate category of the understanding D. a relation of ideas grasped a priori

Correct answer: B

Explanation: Repetition changes the mind, not the objects; the felt determination is the source of the idea, and it yields Hume's two definitions of cause.

Remedial MCQ 27

Remedial: Hume's problem of induction shows that the Uniformity Principle can be justified:

A. by demonstration alone B. by experience alone, and non-circularly C. neither demonstratively (nature changing implies no contradiction) nor experientially (that is circular) D. by an a priori category supplied by the understanding

Correct answer: C

Explanation: Hence induction rests on custom/habit, not reason; Kant's a priori is a later reply, not Hume's own solution.

Remedial MCQ 28

Remedial: the 'parity of reasoning' objection to Locke's quality distinction is that:

A. primary qualities are more real than secondary ones B. secondary qualities do resemble objects C. the distinction is safely grounded in real essence D. the relativities that subjectivise secondary qualities apply equally to the primary ones

Correct answer: D

Explanation: Berkeley concludes that either all qualities are mind-dependent or none are; the resemblance version of the distinction cannot survive.

Remedial MCQ 29

Remedial: Reid's 'Brave Officer' objection shows that Locke's memory criterion can fail to be:

A. transitive B. forensic C. conscious D. bodily

Correct answer: A

Explanation: The general remembers the officer and the officer the flogged boy, but the general not the boy; overlapping-chains repair restores the required transitivity.

Remedial MCQ 30

Remedial: it is a mistake to call Berkeley a sceptic because:

A. he affirms the reality of material substance B. his idealism is explicitly anti-sceptical - the materialist, not he, breeds doubt C. he denies the existence of God D. he denies that we perceive anything at all

Correct answer: B

Explanation: By removing the unknowable material world Berkeley claims certainty; sensible things are real ideas, sustained in being by God.

Remedial MCQ 31

Remedial: Berkeley's subjective idealism differs from Hegel's absolute idealism in that:

A. the two positions are essentially identical B. Berkeley, not Hegel, posits the self-development of Geist C. Berkeley makes reality ideas in finite and divine minds, whereas Hegel makes it the dialectical self-development of Absolute Spirit D. Hegel denies that any minds exist

Correct answer: C

Explanation: They differ in kind, not degree: Hegel's Absolute is the world's self-unfolding substance, not 'Berkeley writ large'.

Remedial MCQ 32

Remedial: the clearly-labelled contemporary application of Hume's problem of induction to machine learning holds that ML prediction:

A. proves a necessary connexion between events B. solves Hume's logical problem of induction C. removes any need for the Uniformity Principle D. operationalises inductive expectation but neither establishes necessity nor solves the logical problem

Correct answer: D

Explanation: Distributional shift restates Hume's point; the anchor (IIARD 2026) is a contemporary application, not doctrinal proof, and invents no statistics.

ORIGINAL MAINS PRACTICE WITH MODEL SOLUTIONS

These are original questions (not from the verified PYQ bank), written in UPSC directive style to drill the same doctrine at 10, 15 and 20 marks. Model solutions follow the claim -> doctrine -> named evidence -> objection/reply -> verdict spine.

Original Mains 1 - 10 marks

Q. "The mind is white paper, void of all characters." Explain Locke's empiricist theory of the source of knowledge and state one difficulty it faces. (Answer in 150 words.)

Model solution. Locke's image denies innate ideas: the mind at birth carries no characters, and every idea enters through two fountains - **sensation** (the outer world) and **reflection** (the mind observing its own operations). Simple ideas are received passively; the mind actively compounds them into complex ideas, and knowledge (the perception of agreement/disagreement of ideas) comes in degrees - intuitive, demonstrative, sensitive. The programme is powerful because it explains conceptual content without innate furniture. **One difficulty:** reflection is an *internal* source whose operations (comparing, willing, doubting) are not obviously given by outer experience, so critics charge that Locke smuggles a non-sensory faculty back in; and Leibniz replies that the "blank paper" is really *veined marble* - dispositions the mind brings to experience. Locke defeats naive innatism but not this dispositional version.

Original Mains 2 - 15 marks

Q. Examine Berkeley's claim that immaterialism defends common sense rather than destroys it. (Answer in 250 words.)

Model solution. Berkeley's paradox is that abolishing matter is meant to save ordinary belief. His case has two sides. **Destructive:** the semantic, likeness, parity and master arguments show that a mind-independent material substratum is both unperceivable and unintelligible - "an idea can be like nothing but an idea", and the relativities Locke grants for secondary qualities engulf the primary too. **Constructive:** what remains is exactly the world of ordinary experience - tables, trees, apples - now understood as stable **collections of ideas**. Their existence unperceived by us is secured by **God's** constant perception; their order is the settled way an infinite Spirit produces our involuntary ideas, i.e. the laws of nature. So Berkeley claims to be *anti-sceptical*: it is the *materialist* who breeds doubt by inserting an unknowable world behind the veil of perception. **Examination.** The claim is partly vindicated - Berkeley does keep the perceptible world and rejects the veil. But it is bought with heavy metaphysics: God must do the work matter did, and other minds are known only by analogy, raising a solipsism worry. Samuel Johnson's stone-kicking misses the target

(the stone is a real idea), yet Moore's later act/object distinction reopens the question of whether being and being-perceived can be so easily identified. **Verdict:** Berkeley rescues common-sense *objects* while overturning the common-sense *metaphysics* of matter - a defence of ordinary life resting on an extraordinary theology.

Original Mains 3 - 20 marks

Q. "Hume's scepticism about causation is the empiricist premise made consistent, not a failure of empiricism." Critically discuss, and assess Kant's response. (Answer in 250 words.)

Model solution. The statement reads Hume not as breaking empiricism but as **completing** it. Locke admitted an unknowable material substratum; Berkeley dropped matter but kept an active self and God; Hume applies the Copy Principle without exception and finds no impression of **substance**, of a simple **self**, or of **necessary connexion**. On causation the analysis is exact: a single instance yields only priority, contiguity and constant conjunction; repetition changes not the objects but the **mind**, which is *determined* to expect the effect - an **impression of reflection** from which the idea of necessity is copied, yielding the **two definitions** of cause. Induction then has no rational ground: the Uniformity Principle is neither demonstrable nor provable without circularity, so custom, "the great guide of human life", replaces reason. **Critical discussion.** This is consistency, not carelessness - but consistency exposes a premise: the **atomism of impressions**, on which no relation can itself be perceived, so every relation becomes a projection. That premise, not the psychology, is the vulnerable point, and Hume's own **missing shade of blue** already dents the exceptionless Copy Principle. **Kant's response.** Kant concedes there is no impression of necessity yet denies Hume's conclusion: causality is an a priori **category**, a condition of objective experience, so the necessity is real but seated in the mind's constitution of phenomena (the synthetic a priori). **Verdict:** Hume's scepticism is empiricism made rigorous, and it rightly shows the bare premise "all ideas from experience" to be *incomplete*; Kant's reply supplies the missing structure, at the price of confining necessity to appearances.

FINAL CONSOLIDATED REGISTER NOTES - EMPIRICISM

Last section by design: revise only after teaching and practice. One compressed block per subtopic, topic-specific, retrieval-ready.

R1. The master slide (Realism -> Idealism -> Scepticism)

- One premise: **no innate ideas; all ideas from experience**; mind = "white paper".
- Locke keeps matter (unknowable "know-not-what") -> Berkeley drops matter (*esse est percipi*) -> Hume drops substance, simple self and objective necessity.
- Engine = **atomism of impressions**: no relation is itself perceived, so relations become projections.
- Endpoint provokes **Kant** (a priori rescue). Not a "collapse" - the premise made consistent.

R2. Locke - theory of knowledge

- Attack on innate ideas: universal-consent fails; "in the mind" = "perceived"; innate content superfluous.
- Sources: **sensation** (outer) + **reflection** (inner, active). Simple ideas (passive) -> complex ideas (active).
- Degrees of knowledge: **intuitive** > **demonstrative** > **sensitive**.
- Defeats naive innatism only; dispositional innatism (Descartes/Leibniz "veined marble") survives.

R3. Locke - abstraction and essence

- **Abstract general ideas**: generality by omitting particular differences (the doctrine Berkeley destroys).
- **Nominal essence** = known sorting idea; **real essence** = unknown internal constitution (unknowable for substances).

R4. Locke - qualities and substance

- **Primary** (extension, figure, motion, solidity, number) - in body, idea resembles.
- **Secondary** (colour, sound, taste, warmth) - powers only; idea resembles nothing.
- **Substratum** = "something I know not what": existence granted, nature unknown.
- Berkeley's way in: parity of relativity + "an idea can be like nothing but an idea".

R5. Locke - self and God

- Personal identity = **continuity of consciousness (memory)**, not soul, not body; **prince-cobbler; forensic**.
- Objections: **circularity** (Butler), **Brave Officer / transitivity** (Reid); repair via overlapping chains.
- God: **demonstrative** cosmological-style proof (something cannot come from nothing).

R6. Berkeley - immaterialism

- Five reconstructed arguments: **semantic, likeness, parity/collapse, master, continuity**.
- **esse est percipi** for sensible things; reality = spirits + ideas; matter = empty abstraction.
- Master Argument's flaw: scope / use-mention confusion (Russell, Prior, Gallois).

R7. Berkeley - spirits, God, critics

- Spirits (active) known by **notion**, not idea; **God** causes involuntary orderly ideas and sustains continuity.
- **Anti-sceptical**: the materialist breeds doubt. Johnson's stone misses (stone = real idea).
- **Moore**: act of awareness is not its object -> direct realism. **Russell**: logical constructions from sense-data. Difference = method, not emphasis.

R8. Hume - forensic empiricism

- **Impressions** (vivid) -> **ideas** (faint copies); **Copy Principle** tests meaning.
- **Hume's Fork**: relations of ideas (a priori, necessary) vs matters of fact (a posteriori, contingent); "commit it then to the flames".
- No impression of **substance** -> fiction; no impression of a simple self -> **bundle** (Appendix: cannot unite it).
- **Kant**: "I think" = **transcendental unity of apperception**, a formal condition, not a soul.

R9. Hume - causation

- Observed: priority + contiguity + **constant conjunction**; not observed: **necessary connexion**.
- Idea of necessity copied from an **impression of reflection**; mechanism = **custom/habit**.
- **Two definitions** of cause (philosophical = regularity; natural = mental transition) - name both.
- 2019 split: no necessity in objects; a subjective necessity in the mind. Trap: he relocates, not denies, causation.

R10. Hume - induction, scepticism, God; comparisons

- **Induction dilemma:** Uniformity Principle neither demonstrable nor provable-by-experience (circular) -> custom. Replies: Kant (synthetic a priori), Popper (no induction), Strawson (dissolves the demand).
- **Mitigated scepticism:** modest, evidence-proportioned enquiry, not Pyrrhonian suspension.
- **Hume's God:** design and miracles arguments fail; natural theology collapses into causal scepticism.
- **Subjective (Berkeley) vs absolute (Hegel) idealism:** ideas in finite/divine minds vs Geist's dialectical self-development - differ in kind.
- Bridges: Descartes->Locke, Locke->Berkeley, Berkeley->Hume, Hume->Kant.
- **Contemporary application (labelled):** machine-learning prediction operationalises inductive habit but neither proves necessity nor solves Hume's logical problem (IIARD 2026); an application, never doctrinal proof.

R11. Provenance discipline (do not fabricate)

- "Tabula rasa" - the Latin phrase is not Locke's own wording in the *Essay*; the English "white paper, void of all characters" is his.
- "Commit it then to the flames" - *Enquiry* XII, verbatim-safe.
- Distinguish direct doctrine (FACT) from analysis (ANALYSIS); keep Latin (*esse est percipi*) as Berkeley's own.

R12. Memory chain (say this in one breath)

No innate ideas -> sensation + reflection -> primary/secondary + know-not-what -> memory-self + demonstrated God -> Berkeley: no matter, *esse est percipi*, God sustains, spirits by notion -> Moore/Russell push back -> Hume: Copy Principle + Fork -> no substance, bundle self -> constant conjunction + custom + two definitions -> induction has no rational ground -> mitigated scepticism -> Kant wakes to supply the a priori.
