

SOLVED PRACTICE WORKBOOK

Effects of Globalisation on Indian Society - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Effects of Globalisation on Indian Society - Solved Practice Workbook 6

BASIC MCQS / REMEDIATION 6

Q1. Which statement correctly identifies Globalisation as a set of channels?	6
Q2. Which chronology card should be filed under Globalisation as a set of channels?	6
Q3. Which option preserves the source-bounded meaning of Globalisation as a set of channels?	7
Q4. Which statement avoids a close-option trap about Globalisation as a set of channels?	7
Q5. Which statement correctly identifies Consumer culture?	7
Q6. Which chronology card should be filed under Consumer culture?	8
Q7. Which option preserves the source-bounded meaning of Consumer culture?	8
Q8. Which statement avoids a close-option trap about Consumer culture?	8
Q9. Which statement correctly identifies Structural and cultural consumerism?	9
Q10. Which chronology card should be filed under Structural and cultural consumerism?	9
Q11. Which option preserves the source-bounded meaning of Structural and cultural consumerism?	10
Q12. Which statement avoids a close-option trap about Structural and cultural consumerism?	10
Q13. Which statement correctly identifies Homogenisation?	10
Q14. Which chronology card should be filed under Homogenisation?	11
Q15. Which option preserves the source-bounded meaning of Homogenisation?	11
Q16. Which statement avoids a close-option trap about Homogenisation?	11
Q17. Which statement correctly identifies Glocalisation?	12
Q18. Which chronology card should be filed under Glocalisation?	12
Q19. Which option preserves the source-bounded meaning of Glocalisation?	12
Q20. Which statement avoids a close-option trap about Glocalisation?	13
Q21. Which statement correctly identifies Simultaneity rule?	13
Q22. Which chronology card should be filed under Simultaneity rule?	13
Q23. Which option preserves the source-bounded meaning of Simultaneity rule?	14
Q24. Which statement avoids a close-option trap about Simultaneity rule?	14
Q25. Which statement correctly identifies The exclusivity trap?	15
Q26. Which chronology card should be filed under The exclusivity trap?	15
Q27. Which option preserves the source-bounded meaning of The exclusivity trap?	15

Q28. Which statement avoids a close-option trap about The exclusivity trap?	16
Q29. Which statement correctly identifies Service-sector labour pull?	16
Q30. Which chronology card should be filed under Service-sector labour pull?	17
Q31. Which option preserves the source-bounded meaning of Service-sector labour pull?	17
Q32. Which statement avoids a close-option trap about Service-sector labour pull?	17
Q33. Which statement correctly identifies PLFS 2023-24 anchor?	18
Q34. Which chronology card should be filed under PLFS 2023-24 anchor?	18
Q35. Which option preserves the source-bounded meaning of PLFS 2023-24 anchor?	18
Q36. Which statement avoids a close-option trap about PLFS 2023-24 anchor?	19
Q37. Which statement correctly identifies PLFS 2025 reference-period change?	19
Q38. Which chronology card should be filed under PLFS 2025 reference-period change?	19
Q39. Which option preserves the source-bounded meaning of PLFS 2025 reference-period change?	20
Q40. Which statement avoids a close-option trap about PLFS 2025 reference-period change?	20
Q41. Which statement correctly identifies A participation rate is not a migration stream?	21
Q42. Which chronology card should be filed under A participation rate is not a migration stream?	21
Q43. Which option preserves the source-bounded meaning of A participation rate is not a migration stream?	21
Q44. Which statement avoids a close-option trap about A participation rate is not a migration stream?	22
Q45. Which statement correctly identifies Personal-freedom expansion?	22
Q46. Which chronology card should be filed under Personal-freedom expansion?	22
Q47. Which option preserves the source-bounded meaning of Personal-freedom expansion?	23
Q48. Which statement avoids a close-option trap about Personal-freedom expansion?	23
Q49. Which statement correctly identifies Family renegotiation rather than severance?	23
Q50. Which chronology card should be filed under Family renegotiation rather than severance?	24
Q51. Which option preserves the source-bounded meaning of Family renegotiation rather than severance?	24
Q52. Which statement avoids a close-option trap about Family renegotiation rather than severance?	25
Q53. Which statement correctly identifies Freedom and security trade-off?	25
Q54. Which chronology card should be filed under Freedom and security trade-off?	25
Q55. Which option preserves the source-bounded meaning of Freedom and security trade-off?	26
Q56. Which statement avoids a close-option trap about Freedom and security trade-off?	26
Q57. Which statement correctly identifies Fast-food paradox?	26
Q58. Which chronology card should be filed under Fast-food paradox?	27
Q59. Which option preserves the source-bounded meaning of Fast-food paradox?	27

Q60. Which statement avoids a close-option trap about Fast-food paradox?	27
Q61. Which statement correctly identifies Bounded rationality as one lens?	28
Q62. Which chronology card should be filed under Bounded rationality as one lens?	28
Q63. Which option preserves the source-bounded meaning of Bounded rationality as one lens?	29
Q64. Which statement avoids a close-option trap about Bounded rationality as one lens?	29
Q65. Which statement correctly identifies Domestic food systems belong in the answer?	29
Q66. Which chronology card should be filed under Domestic food systems belong in the answer?	30
Q67. Which option preserves the source-bounded meaning of Domestic food systems belong in the answer?	30
Q68. Which statement avoids a close-option trap about Domestic food systems belong in the answer?	31
Q69. Which statement correctly identifies Digital-access anchor?	31
Q70. Which chronology card should be filed under Digital-access anchor?	31
Q71. Which option preserves the source-bounded meaning of Digital-access anchor?	32
Q72. Which statement avoids a close-option trap about Digital-access anchor?	32
Q73. Which statement correctly identifies Digital divide?	33
Q74. Which chronology card should be filed under Digital divide?	33
Q75. Which option preserves the source-bounded meaning of Digital divide?	33
Q76. Which statement avoids a close-option trap about Digital divide?	34
Q77. Which statement correctly identifies Verified direct Mains demands and one ownership conflict?	34
Q78. Which chronology card should be filed under Verified direct Mains demands and one ownership conflict?	35
Q79. Which option preserves the source-bounded meaning of Verified direct Mains demands and one ownership conflict?	35
Q80. Which statement avoids a close-option trap about Verified direct Mains demands and one ownership conflict?	36

Effects of Globalisation on Indian Society - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Globalisation as a set of channels?

A. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. B. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. C. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. D. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration.

Answer: A. Explanation: Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. The remaining options belong to different chronology, actor or analytical categories.

Q2. Which chronology card should be filed under Globalisation as a set of channels?

A. Globalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. B. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. C. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. D. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain.

Answer: B. Explanation: Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. The remaining options belong to different chronology, actor or analytical categories.

Q3. Which option preserves the source-bounded meaning of Globalisation as a set of channels?

A. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. B. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. C. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. D. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner.

Answer: C. Explanation: Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. The remaining options belong to different chronology, actor or analytical categories.

Q4. Which statement avoids a close-option trap about Globalisation as a set of channels?

A. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. B. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. C. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. D. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice.

Answer: D. Explanation: Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. The remaining options belong to different chronology, actor or analytical categories.

Q5. Which statement correctly identifies Consumer culture?

A. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. B. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. C. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. D. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms.

Answer: A. Explanation: Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. The remaining options belong to different chronology, actor or analytical categories.

Q6. Which chronology card should be filed under Consumer culture?

A. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. B. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. C. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. D. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner.

Answer: B. Explanation: Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. The remaining options belong to different chronology, actor or analytical categories.

Q7. Which option preserves the source-bounded meaning of Consumer culture?

A. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. B. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. C. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. D. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms.

Answer: C. Explanation: Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. The remaining options belong to different chronology, actor or analytical categories.

Q8. Which statement avoids a close-option trap about Consumer culture?

A. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. B. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. C. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. D. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration.

Answer: D. Explanation: Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. The remaining options belong to different chronology, actor or analytical categories.

Q9. Which statement correctly identifies Structural and cultural consumerism?

A. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. B. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. C. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. D. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms.

Answer: A. Explanation: Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. The remaining options belong to different chronology, actor or analytical categories.

Q10. Which chronology card should be filed under Structural and cultural consumerism?

A. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. B. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. C. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. D. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone.

Answer: B. Explanation: Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. The remaining options belong to different chronology, actor or analytical categories.

Q11. Which option preserves the source-bounded meaning of Structural and cultural consumerism?

A. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. B. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. C. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. D. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner.

Answer: C. Explanation: Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. The remaining options belong to different chronology, actor or analytical categories.

Q12. Which statement avoids a close-option trap about Structural and cultural consumerism?

A. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. B. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. C. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. D. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment.

Answer: D. Explanation: Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. The remaining options belong to different chronology, actor or analytical categories.

Q13. Which statement correctly identifies Homogenisation?

A. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. B. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. C. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes

instead of selecting a single winner. D. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms.

Answer: A. Explanation: Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. The remaining options belong to different chronology, actor or analytical categories.

Q14. Which chronology card should be filed under Homogenisation?

A. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. B. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. C. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. D. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner.

Answer: B. Explanation: Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. The remaining options belong to different chronology, actor or analytical categories.

Q15. Which option preserves the source-bounded meaning of Homogenisation?

A. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. B. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. C. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. D. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent.

Answer: C. Explanation: Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. The remaining options belong to different chronology, actor or analytical categories.

Q16. Which statement avoids a close-option trap about Homogenisation?

A. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. B. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. C. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. D. Homogenisation is the theory that globalisation makes

cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain.

Answer: D. Explanation: Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. The remaining options belong to different chronology, actor or analytical categories.

Q17. Which statement correctly identifies Glocalisation?

A. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. B. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. C. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. D. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner.

Answer: A. Explanation: Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. The remaining options belong to different chronology, actor or analytical categories.

Q18. Which chronology card should be filed under Glocalisation?

A. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. B. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. C. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. D. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone.

Answer: B. Explanation: Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. The remaining options belong to different chronology, actor or analytical categories.

Q19. Which option preserves the source-bounded meaning of Glocalisation?

A. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. B. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. C. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. D. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside

education, safety, housing and family norms rather than as a proven cause of any particular migration stream.

Answer: C. Explanation: Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. The remaining options belong to different chronology, actor or analytical categories.

Q20. Which statement avoids a close-option trap about Glocalisation?

A. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. B. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. C. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. D. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms.

Answer: D. Explanation: Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. The remaining options belong to different chronology, actor or analytical categories.

Q21. Which statement correctly identifies Simultaneity rule?

A. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. B. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. C. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. D. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone.

Answer: A. Explanation: Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. The remaining options belong to different chronology, actor or analytical categories.

Q22. Which chronology card should be filed under Simultaneity rule?

A. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. B. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. C. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. D. The Periodic Labour Force Survey Annual

Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent.

Answer: B. Explanation: Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. The remaining options belong to different chronology, actor or analytical categories.

Q23. Which option preserves the source-bounded meaning of Simultaneity rule?

A. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. B. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. C. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. D. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent.

Answer: C. Explanation: Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. The remaining options belong to different chronology, actor or analytical categories.

Q24. Which statement avoids a close-option trap about Simultaneity rule?

A. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. B. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. C. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. D. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner.

Answer: D. Explanation: Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. The remaining options belong to different chronology, actor or analytical categories.

Q25. Which statement correctly identifies The exclusivity trap?

A. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. B. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. C. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. D. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent.

Answer: A. Explanation: The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. The remaining options belong to different chronology, actor or analytical categories.

Q26. Which chronology card should be filed under The exclusivity trap?

A. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. B. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. C. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. D. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream.

Answer: B. Explanation: The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. The remaining options belong to different chronology, actor or analytical categories.

Q27. Which option preserves the source-bounded meaning of The exclusivity trap?

A. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. B. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. C. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. D. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared.

Answer: C. Explanation: The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. The remaining options belong to different chronology, actor or analytical categories.

Q28. Which statement avoids a close-option trap about The exclusivity trap?

A. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. B. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. C. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. D. The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone.

Answer: D. Explanation: The 2025 General Studies Paper-I demand asks whether globalisation results in only an aggressive consumer culture, and the examinable move is to reject the word only by showing that labour markets, family structure and digital access change through separate mechanisms rather than flowing from consumption behaviour alone. The remaining options belong to different chronology, actor or analytical categories.

Q29. Which statement correctly identifies Service-sector labour pull?

A. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. B. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. C. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. D. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream.

Answer: A. Explanation: Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. The remaining options belong to different chronology, actor or analytical categories.

Q30. Which chronology card should be filed under Service-sector labour pull?

A. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. B. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. C. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. D. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream.

Answer: B. Explanation: Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. The remaining options belong to different chronology, actor or analytical categories.

Q31. Which option preserves the source-bounded meaning of Service-sector labour pull?

A. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. B. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. C. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. D. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted.

Answer: C. Explanation: Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. The remaining options belong to different chronology, actor or analytical categories.

Q32. Which statement avoids a close-option trap about Service-sector labour pull?

A. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. B. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. C. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. D. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream.

Answer: D. Explanation: Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular

migration stream. The remaining options belong to different chronology, actor or analytical categories.

Q33. Which statement correctly identifies PLFS 2023-24 anchor?

A. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. B. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. C. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. D. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared.

Answer: A. Explanation: The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. The remaining options belong to different chronology, actor or analytical categories.

Q34. Which chronology card should be filed under PLFS 2023-24 anchor?

A. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. B. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. C. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. D. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another.

Answer: B. Explanation: The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. The remaining options belong to different chronology, actor or analytical categories.

Q35. Which option preserves the source-bounded meaning of PLFS 2023-24 anchor?

A. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. B. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. C. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. D. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration.

Answer: C. Explanation: The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. The remaining options belong to different chronology, actor or analytical categories.

Q36. Which statement avoids a close-option trap about PLFS 2023-24 anchor?

A. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. B. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. C. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. D. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent.

Answer: D. Explanation: The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. The remaining options belong to different chronology, actor or analytical categories.

Q37. Which statement correctly identifies PLFS 2025 reference-period change?

A. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. B. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. C. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. D. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream.

Answer: A. Explanation: The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. The remaining options belong to different chronology, actor or analytical categories.

Q38. Which chronology card should be filed under PLFS 2025 reference-period change?

A. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. B. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. C. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs

family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. D. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted.

Answer: B. Explanation: The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. The remaining options belong to different chronology, actor or analytical categories.

Q39. Which option preserves the source-bounded meaning of PLFS 2025 reference-period change?

A. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. B. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. C. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. D. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration.

Answer: C. Explanation: The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. The remaining options belong to different chronology, actor or analytical categories.

Q40. Which statement avoids a close-option trap about PLFS 2025 reference-period change?

A. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. B. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. C. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. D. The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared.

Answer: D. Explanation: The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. The remaining options belong to different chronology, actor or analytical categories.

Q41. Which statement correctly identifies A participation rate is not a migration stream?

A. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. B. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. C. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. D. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration.

Answer: A. Explanation: A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. The remaining options belong to different chronology, actor or analytical categories.

Q42. Which chronology card should be filed under A participation rate is not a migration stream?

A. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. B. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. C. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. D. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another.

Answer: B. Explanation: A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. The remaining options belong to different chronology, actor or analytical categories.

Q43. Which option preserves the source-bounded meaning of A participation rate is not a migration stream?

A. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. B. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. C. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. D. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk.

Answer: C. Explanation: A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. The remaining options belong to different chronology, actor or analytical categories.

Q44. Which statement avoids a close-option trap about A participation rate is not a migration stream?

A. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. B. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. C. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. D. A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream.

Answer: D. Explanation: A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. The remaining options belong to different chronology, actor or analytical categories.

Q45. Which statement correctly identifies Personal-freedom expansion?

A. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. B. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. C. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. D. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another.

Answer: A. Explanation: Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. The remaining options belong to different chronology, actor or analytical categories.

Q46. Which chronology card should be filed under Personal-freedom expansion?

A. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. B. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. C. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. D.

Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase.

Answer: B. Explanation: Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. The remaining options belong to different chronology, actor or analytical categories.

Q47. Which option preserves the source-bounded meaning of Personal-freedom expansion?

A. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. B. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. C. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. D. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase.

Answer: C. Explanation: Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. The remaining options belong to different chronology, actor or analytical categories.

Q48. Which statement avoids a close-option trap about Personal-freedom expansion?

A. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. B. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. C. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. D. Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted.

Answer: D. Explanation: Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. The remaining options belong to different chronology, actor or analytical categories.

Q49. Which statement correctly identifies Family renegotiation rather than severance?

A. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. B. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. C. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health

emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. D. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk.

Answer: A. Explanation: Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. The remaining options belong to different chronology, actor or analytical categories.

Q50. Which chronology card should be filed under Family renegotiation rather than severance?

A. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. B. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. C. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. D. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase.

Answer: B. Explanation: Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. The remaining options belong to different chronology, actor or analytical categories.

Q51. Which option preserves the source-bounded meaning of Family renegotiation rather than severance?

A. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. B. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. C. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. D. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate.

Answer: C. Explanation: Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. The remaining options belong to different chronology, actor or analytical categories.

Q52. Which statement avoids a close-option trap about Family renegotiation rather than severance?

A. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. B. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. C. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. D. Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another.

Answer: D. Explanation: Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. The remaining options belong to different chronology, actor or analytical categories.

Q53. Which statement correctly identifies Freedom and security trade-off?

A. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. B. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. C. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. D. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase.

Answer: A. Explanation: The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. The remaining options belong to different chronology, actor or analytical categories.

Q54. Which chronology card should be filed under Freedom and security trade-off?

A. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. B. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. C. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. D. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate.

Answer: B. Explanation: The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. The

remaining options belong to different chronology, actor or analytical categories.

Q55. Which option preserves the source-bounded meaning of Freedom and security trade-off?

A. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. B. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. C. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. D. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth.

Answer: C. Explanation: The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. The remaining options belong to different chronology, actor or analytical categories.

Q56. Which statement avoids a close-option trap about Freedom and security trade-off?

A. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. B. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. C. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. D. The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration.

Answer: D. Explanation: The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. The remaining options belong to different chronology, actor or analytical categories.

Q57. Which statement correctly identifies Fast-food paradox?

A. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. B. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. C. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. D. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth.

Answer: A. Explanation: The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. The remaining options belong to different chronology, actor or analytical categories.

Q58. Which chronology card should be filed under Fast-food paradox?

A. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. B. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. C. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. D. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth.

Answer: B. Explanation: The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. The remaining options belong to different chronology, actor or analytical categories.

Q59. Which option preserves the source-bounded meaning of Fast-food paradox?

A. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. B. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. C. The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. D. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion.

Answer: C. Explanation: The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk. The remaining options belong to different chronology, actor or analytical categories.

Q60. Which statement avoids a close-option trap about Fast-food paradox?

A. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. B. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. C. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. D. The fast-food

paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and globalised menu adaptation rather than through any denial of health risk.

Answer: D. Explanation: The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and globalised menu adaptation rather than through any denial of health risk. The remaining options belong to different chronology, actor or analytical categories.

Q61. Which statement correctly identifies Bounded rationality as one lens?

A. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. B. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. C. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. D. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth.

Answer: A. Explanation: Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. The remaining options belong to different chronology, actor or analytical categories.

Q62. Which chronology card should be filed under Bounded rationality as one lens?

A. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. B. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. C. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. D. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion.

Answer: B. Explanation: Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. The remaining options belong to different chronology, actor or analytical categories.

Q63. Which option preserves the source-bounded meaning of Bounded rationality as one lens?

A. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. B. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. C. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. D. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion.

Answer: C. Explanation: Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. The remaining options belong to different chronology, actor or analytical categories.

Q64. Which statement avoids a close-option trap about Bounded rationality as one lens?

A. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. B. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. C. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. D. Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase.

Answer: D. Explanation: Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase. The remaining options belong to different chronology, actor or analytical categories.

Q65. Which statement correctly identifies Domestic food systems belong in the answer?

A. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. B. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. C. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. D. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one.

Answer: A. Explanation: An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. The remaining options belong to different chronology, actor or analytical categories.

Q66. Which chronology card should be filed under Domestic food systems belong in the answer?

A. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. B. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. C. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. D. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion.

Answer: B. Explanation: An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. The remaining options belong to different chronology, actor or analytical categories.

Q67. Which option preserves the source-bounded meaning of Domestic food systems belong in the answer?

A. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. B. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. C. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. D. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice.

Answer: C. Explanation: An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. The remaining options belong to different chronology, actor or analytical categories.

Q68. Which statement avoids a close-option trap about Domestic food systems belong in the answer?

A. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. B. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. C. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. D. An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth.

Answer: D. Explanation: An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth. The remaining options belong to different chronology, actor or analytical categories.

Q69. Which statement correctly identifies Digital-access anchor?

A. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. B. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. C. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. D. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion.

Answer: A. Explanation: This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. The remaining options belong to different chronology, actor or analytical categories.

Q70. Which chronology card should be filed under Digital-access anchor?

A. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. B. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. C. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it,

and that conflict is recorded openly rather than resolved by assertion. D. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration.

Answer: B. Explanation: This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. The remaining options belong to different chronology, actor or analytical categories.

Q71. Which option preserves the source-bounded meaning of Digital-access anchor?

A. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. B. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. C. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. D. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice.

Answer: C. Explanation: This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. The remaining options belong to different chronology, actor or analytical categories.

Q72. Which statement avoids a close-option trap about Digital-access anchor?

A. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. B. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. C. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. D. This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate.

Answer: D. Explanation: This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate. The remaining options belong to different chronology, actor or analytical categories.

Q73. Which statement correctly identifies Digital divide?

A. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. B. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. C. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. D. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice.

Answer: A. Explanation: The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. The remaining options belong to different chronology, actor or analytical categories.

Q74. Which chronology card should be filed under Digital divide?

A. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. B. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. C. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. D. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration.

Answer: B. Explanation: The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. The remaining options belong to different chronology, actor or analytical categories.

Q75. Which option preserves the source-bounded meaning of Digital divide?

A. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. B. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. C. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. D. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment.

Answer: C. Explanation: The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. The remaining options belong to different chronology, actor or analytical categories.

Q76. Which statement avoids a close-option trap about Digital divide?

A. Globalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. B. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. C. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. D. The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one.

Answer: D. Explanation: The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one. The remaining options belong to different chronology, actor or analytical categories.

Q77. Which statement correctly identifies Verified direct Mains demands and one ownership conflict?

A. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. B. Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice. C. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. D. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment.

Answer: A. Explanation: Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. The remaining options belong to different chronology, actor or analytical categories.

Q78. Which chronology card should be filed under Verified direct Mains demands and one ownership conflict?

A. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. B. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. C. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. D. Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration.

Answer: B. Explanation: Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. The remaining options belong to different chronology, actor or analytical categories.

Q79. Which option preserves the source-bounded meaning of Verified direct Mains demands and one ownership conflict?

A. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. B. Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment. C. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. D. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain.

Answer: C. Explanation: Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. The remaining options belong to different chronology, actor or analytical categories.

Q80. Which statement avoids a close-option trap about Verified direct Mains demands and one ownership conflict?

A. Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner. B. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. C. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. D. Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion.

Answer: D. Explanation: Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion. The remaining options belong to different chronology, actor or analytical categories.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

Six direct General Studies Paper-I Mains demands are routed to this topic and each is recorded with its exact routing status. The 2018 Q19 demand on globalisation, cultural homogenisation and Indian cultural specificities, the 2019 Q20 demand on losing local identity for a global identity, the 2020 Q18 demand on diversity and pluralism under threat from globalisation and the 2022 Q20 demand on globalisation and new technology in a world of scarce resources are routed in the audited 2018-2023 Mains ledger to the Advanced owner, while the Core owner's own answer-architecture table records that Core routing supersedes those pointers, so all four are answered here from the Basic spine. The locally held official question papers for 2018, 2019, 2020 and 2022 are scanned images from which reliable English text cannot be extracted, so the audited ledger's neutral demand rendering is used for those four years and no verbatim wording is claimed. The 2024 Q19 demand on globalisation and the urban migration of skilled, young and unmarried women and the 2025 Q10 demand on whether globalisation results only in an aggressive consumer culture are routed in the audited 2024-2025 ledger to this Basic owner, and the wording of both was confirmed in the locally held official 2024 and 2025 General Studies Paper-I question papers. A seventh demand, the 2025 Q18 fast-food question, is claimed by this owner's own answer-architecture table while the audited 2024-2025 ledger routes it to the Social Change and Modernisation owner; that cross-owner conflict is stated openly here and the demand is answered under the owner the ledger names rather than duplicated. No marking scheme, official key or model answer of the Union Public Service Commission is held locally, and none is reproduced or inferred.

Demand decoding: The directive **answer** requires a direct position on "VERIFIED PYQ OWNERSHIP AUDIT", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The answer must resolve the sociological demand in "VERIFIED PYQ OWNERSHIP AUDIT".

Analytical body:

1. **Claim and named evidence:** Define the central concept and separate it from the nearest social or legal category. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

2. **Claim and named evidence:** Trace the historical and institutional setting instead of assuming a timeless practice. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** Explain the norm, incentive, network, power or agency mechanism producing the outcome. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** Use one named Indian community, movement, region, institution or source-dated dataset. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
5. **Claim and named evidence:** Qualify the pattern through intersectionality, regional variation, causation and implementation limits. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: The answer must resolve the sociological demand in "VERIFIED PYQ OWNERSHIP AUDIT".

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "VERIFIED PYQ OWNERSHIP AUDIT", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

OWNER PYQ LEDGER EXTRACTS

5. Indian applications and PYQ mapping

- FACT: **2025 GS-I PYQ (10 marks, verbatim):** "Do you think that globalization results in only an aggressive consumer culture? Justify your answer." The expected answer: reject the "only" framing - acknowledge genuine consumer-culture intensification, but argue globalisation equally reshapes employment patterns, family structures, digital access and cultural adaptation (glocalisation), justifying a "more than just consumer culture" position with concrete Indian examples.

- FACT: **2024 GS-I PYQ (15 marks, verbatim):** "Globalization has increased urban migration by skilled, young, unmarried women from various classes. How has this trend impacted upon their personal freedom and relationship with family?" The expected answer: trace independent income and urban residence expanding personal freedom (mobility, spending, partner-choice voice) while family relationships are renegotiated through continued remittance and periodic contact rather than severed outright - full treatment also in 04_Family-Marriage-and-Kinship.md.

- FACT: **2025 GS-I PYQ (15 marks, verbatim):** "How do you account for the growing fast food industries given that there are increased health concerns in modern society? Illustrate your answer with the Indian experience." The expected answer: explain the paradox through convenience, dual-income urban household time constraints, aspirational branding and glocalised Indian-taste menu adaptation, showing behaviour is not purely health-rational.

9. PYQ application

- FACT: **2025 Q10 (10 marks)**: reject the "only consumer culture" framing with a multi-domain argument (employment, family, digital access, glocalisation).
- FACT: **2024 Q19 (15 marks)**: analyse possible personal-freedom expansion and family renegotiation using the exact "skilled, young, unmarried women" framing; distinguish the PYQ proposition from a verified national migration series.
- FACT: **2025 Q18 (15 marks)**: explain the fast-food paradox through convenience, time constraints, pricing/delivery, aspiration and local adaptation, including domestic as well as global food systems.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2024-2025.md.

- **Years represented:** 2024, 2025
- **Paper(s):** GS-I
- **Routed question demands:** 2

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2024	GS-I	19	Globalization and urban migration of skilled young unmarried women	Discuss · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.
2025	GS-I	10	Whether globalization results only in aggressive consumer culture	Justify · 10 marks · 150 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Globalization and urban migration of skilled young unmarried women
- Whether globalization results only in aggressive consumer culture

This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

10. PYQ-based analytical application

- FACT: **2025 Q10 (10 marks, verbatim)**: "Do you think that globalization results in only an aggressive consumer culture? Justify your answer." Analytical route: reject the "only" framing using the structural-versus-cultural-consumerism distinction and the multi-domain causal chain (labour, family, digital access, glocalisation).
- FACT: **2024 Q19 (15 marks, verbatim)**: "Globalization has increased urban migration by skilled, young, unmarried women from various classes. How has this trend impacted upon their personal freedom and relationship with family?" Analytical route: apply the gender-specific push-pull refinement and the freedom-family-coexistence framing, citing PLFS female-participation data as evidence of the underlying employment pull.
- FACT: **2025 Q18 (15 marks, verbatim)**: "How do you account for the growing fast food industries given that there are increased health concerns in modern society? Illustrate your answer with the Indian experience." Analytical route: apply the bounded-rationality chain (convenience, aspiration, glocalised menu adaptation outweighing health-rational choice) with Indian examples.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2018, 2019, 2020, 2022
- **Paper(s):** GS-I
- **Routed question demands:** 4

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2018	GS-I	19	Globalization, cultural homogenization and Indian cultural specificities	Elucidate · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.
2019	GS-I	20	Losing local identity for a global identity	Discuss · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.
2020	GS-I	18	Diversity and pluralism in India under threat from globalisation	Justify your answer · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.
2022	GS-I	20	Globalization and new technology in a world of scarce resources	Elucidate · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Globalization, cultural homogenization and Indian cultural specificities
- Losing local identity for a global identity
- Diversity and pluralism in India under threat from globalisation
- Globalization and new technology in a world of scarce resources

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

PYQ DEMAND CARD 1 - 2018 GS-I Q19

Demand: Audited ledger demand rendering: globalisation, cultural homogenisation and Indian cultural specificities. Elucidate, 15 marks, 250 words.

Status: Routed in the audited 2018-2023 Mains ledger to the Advanced owner, with the Core owner recording that Core routing supersedes. The locally held official 2018 paper is a scanned image without reliable English text extraction, so the ledger rendering is used and no verbatim wording is claimed.

Model solution: Set the two processes against each other at the start, because the demand is about specificity and not about whether globalisation exists. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats; it is a convergence prediction. Globalisation is the observed adaptation of global products and practices to local tastes, norms and contexts, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. Show that Indian evidence carries both. Global brand recognition and shared media formats are the domains where convergence is strongest, while menu adaptation and vernacular platform content are the domains where local specificity reasserts itself, and because the two run at once the correct analytical stance names the domain rather than declaring a single winner. Add the structural half of the argument so the answer

is not only cultural. Structural consumerism, meaning the expansion of market access and purchasing capacity through income growth, retail expansion and credit, can precede and operate independently of the cultural meaning attached to consumption, so convergence in purchasing capacity is not the same as convergence in identity. Qualify the claim honestly. An illustration of adaptation is not a measurement of how much adaptation is occurring, and no figure for the vitality of any language or cultural form is held by this owner, so the answer must not assert either loss or resilience as a quantity. Conclude that Indian cultural specificity survives inside globalisation through adaptation rather than by exclusion from it, and that a specificity answer therefore reports a mixed, domain-graded pattern instead of a civilisational verdict.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 1 - 2018 GS-I Q19", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Set the two processes against each other at the start, because the demand is about specificity and not about whether globalisation exists. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats; it is a convergence prediction. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. Show that Indian evidence carries both. Global brand recognition and shared media formats are the domains where convergence is strongest, while menu adaptation and vernacular platform content are the domains where local specificity reasserts itself, and because the two run at once the correct analytical stance names the domain rather than declaring a single winner. Add the structural half of the argument so the answer is not only cultural. Structural consumerism, meaning the expansion of market access and purchasing capacity through income growth, retail expansion and credit, can precede and operate independently of the cultural meaning attached to consumption, so convergence in purchasing capacity is not the same as convergence in identity. Qualify the claim honestly. An illustration of adaptation is not a measurement of how much adaptation is occurring, and no figure for the vitality of any language or cultural form is held by this owner, so the answer must not assert either loss or resilience as a quantity. Conclude that Indian cultural specificity survives inside globalisation through adaptation rather than by exclusion from it, and that a specificity answer therefore reports a mixed, domain-graded pattern instead of a civilisational verdict.

Analytical body:

1. **Claim and named evidence:** Demand: Audited ledger demand rendering: globalisation, cultural homogenisation and Indian cultural specificities. Elucidate, 15 marks, 250 words. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: Set the two processes against each other at the start, because the demand is about specificity and not about whether globalisation exists. Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats; it is a convergence prediction. Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. Show that Indian evidence carries both. Global brand recognition and shared media formats are the domains where convergence is strongest, while menu adaptation and vernacular platform content are the domains where local specificity reasserts itself, and because the two run at once the correct analytical stance names the domain rather than declaring a single winner. Add the structural half of the argument so the answer is not only cultural. Structural consumerism, meaning the expansion of market access and purchasing capacity through income growth, retail expansion and credit, can precede and operate independently of the cultural meaning attached to consumption, so convergence in purchasing capacity is not the same as convergence in identity. Qualify the claim honestly. An illustration of adaptation is not a measurement of how much adaptation is occurring, and no

figure for the vitality of any language or cultural form is held by this owner, so the answer must not assert either loss or resilience as a quantity. Conclude that Indian cultural specificity survives inside globalisation through adaptation rather than by exclusion from it, and that a specificity answer therefore reports a mixed, domain-graded pattern instead of a civilisational verdict.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "PYQ DEMAND CARD 1 - 2018 GS-I Q19", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

PYQ DEMAND CARD 2 - 2019 GS-I Q20

Demand: Audited ledger demand rendering: losing local identity for a global identity. Discuss, 15 marks, 250 words.

Status: Routed in the audited 2018-2023 Mains ledger to the Advanced owner, with the Core owner recording that Core routing supersedes. The locally held official 2019 paper is a scanned image without reliable English text extraction, so the ledger rendering is used and no verbatim wording is claimed.

Model solution: Refuse the substitution premise before discussing it, because the demand is framed as a loss and the examinable move is to test whether loss is the right description. Establish what could support the premise. Homogenisation predicts convergence toward globally uniform consumption and cultural patterns, and global brand recognition, shared media formats and English-medium aspiration are the domains where that prediction has visible Indian purchase. Then establish what defeats a simple substitution reading. Glocalisation shows global products and practices being adapted rather than adopted unchanged, so regional-language content on global platforms and locally customised menus are cases in which a global vehicle carries local content instead of replacing it. Add a second, non-cultural channel so the discussion is not confined to symbols. Service-sector employment growth in cities changes work patterns and household authority, and independent urban income can expand a migrant's mobility and voice while remittance, ritual participation and periodic visits keep the local tie intact, which is a renegotiation of identity rather than its replacement. Bring the access qualification. The digital channel through which global identity is supposed to arrive is itself stratified, because the digital divide distributes connectivity unequally by income, gender, region and generation, so any claim of uniform identity change overstates the reach of the mechanism that would produce it. State the evidence boundary plainly: this owner holds no survey of identity, language use or cultural attachment, so the answer argues from mechanisms and named illustrations and quotes no figure for identity loss. Conclude that the honest description is layered identity, in which local, regional and global affiliations are held together and reweighted, rather than one identity being surrendered for another.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 2 - 2019 GS-I Q20", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Refuse the substitution premise before discussing it, because the demand is framed as a loss and the examinable move is to test whether loss is the right description. Establish what could support the premise. Homogenisation predicts convergence toward globally uniform consumption and cultural patterns, and global brand recognition, shared media formats and English-medium aspiration are the domains where that prediction has visible Indian purchase. Then establish what defeats a simple substitution reading. global identity is supposed to arrive is itself stratified, because the digital divide distributes connectivity unequally by income, gender, region and generation, so any claim of uniform identity change overstates the reach of the mechanism that would produce it. State the evidence boundary plainly: this owner holds no survey of identity, language use or cultural attachment, so the answer argues from mechanisms and named illustrations and quotes no figure for identity loss. Conclude that the honest description is layered identity, in which local, regional and global affiliations are held together and reweighted, rather than one identity being surrendered for another.

Analytical body:

1. **Claim and named evidence:** Demand: Audited ledger demand rendering: losing local identity for a global identity. Discuss, 15 marks, 250 words. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: Refuse the substitution premise before discussing it, because the demand is framed as a loss and the examinable move is to test whether loss is the right description. Establish what could support the premise. Homogenisation predicts convergence toward globally uniform consumption and cultural patterns, and global brand recognition, shared media formats and English-medium aspiration are the domains where that prediction has visible Indian purchase. Then establish what defeats a simple substitution reading. Glocalisation shows global products and practices being adapted rather than adopted unchanged, so regional-language content on global platforms and locally customised menus are cases in which a global vehicle carries local content instead of replacing it. Add a second, non-cultural channel so the discussion is not confined to symbols. Service-sector employment growth in cities changes work patterns and household authority, and independent urban income can expand a migrant's mobility and voice while remittance, ritual participation and periodic visits keep the local tie intact, which is a renegotiation of identity rather than its replacement. Bring the access qualification. The digital channel through which global identity is supposed to arrive is itself stratified, because the digital divide distributes connectivity unequally by income, gender, region and generation, so any claim of uniform identity change overstates the reach of the mechanism that would produce it. State the evidence boundary plainly: this owner holds no survey of identity, language use or cultural attachment, so the answer argues from mechanisms and named illustrations and quotes no figure for identity loss. Conclude that the honest description is layered identity, in which local, regional and global affiliations are held together and reweighted, rather than one identity being surrendered for another.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "PYQ DEMAND CARD 2 - 2019 GS-I Q20", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

PYQ DEMAND CARD 3 - 2020 GS-I Q18

Demand: Audited ledger demand rendering: diversity and pluralism in India under threat from globalisation. Justify your answer, 15 marks, 250 words.

Status: Routed in the audited 2018-2023 Mains ledger to the Advanced owner, with the Core owner recording that Core routing supersedes. The locally held official 2020 paper is a scanned image without reliable English text extraction, so the ledger rendering is used and no verbatim wording is claimed.

Model solution: Treat the demand as conditional rather than as a yes-or-no verdict, because a justify directive rewards the conditions under which the threat is real. Name the vulnerability first. Homogenising market and media pressure can narrow the range of formats, languages and consumption styles that are commercially viable, and where

a local practice depends on a market that global formats displace, its transmission becomes harder. Then name the countervailing process with equal precision. Glocalisation reworks global products, language and practice locally, and regional-language content on global platforms is the clearest Indian case of a global channel expanding rather than shrinking the space available to a local form. Introduce the decisive variable, which is access rather than presence. Pluralism depends on whether a group has voice and reach, not on whether global products are visible in its market, and the digital divide means connectivity gains reach the already better positioned first, so the same channel can widen the voice of one group while leaving another dependent on intermediaries. Add the labour and household channel so the justification is not only about culture. Service-sector demand and urban migration reorganise family authority and residence, and the observed pattern is renegotiation with continuing remittance and periodic contact rather than the severance that a cultural-loss thesis would predict. Qualify the whole answer with the evidence boundary: no measure of linguistic vitality, cultural attachment or pluralism is held by this owner, so the answer justifies a conditional position and quotes no figure. Conclude that globalisation places diversity and pluralism under conditional pressure whose severity depends on voice, access and institutional support, and that this is a policy variable rather than a fate.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 3 - 2020 GS-I Q18", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Treat the demand as conditional rather than as a yes-or-no verdict, because a justify directive rewards the conditions under which the threat is real. Conclude that globalisation places diversity and pluralism under conditional pressure whose severity depends on voice, access and institutional support, and that this is a policy variable rather than a fate.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "PYQ DEMAND CARD 3 - 2020 GS-I Q18", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

PYQ DEMAND CARD 4 - 2022 GS-I Q20

Demand: Audited ledger demand rendering: globalisation and new technology in a world of scarce resources. Elucidate, 15 marks, 250 words.

Status: Routed in the audited 2018-2023 Mains ledger to the Advanced owner, with the Core owner recording that Core routing supersedes. The locally held official 2022 paper is a scanned image without reliable English text extraction, so the ledger rendering is used and no verbatim wording is claimed.

Model solution: Separate the two layers of the demand in the opening sentence, because the commonest failure here is to answer with technical or macroeconomic material that this owner does not own. The society layer analyses access, trust, work, identity and unequal risk; the instrument layer, meaning energy and material chains, trade and investment mechanics and technical performance, is cross-linked to Economy, Environment and Science and Technology and is not re-derived. Elucidate the social gain first. New technology delivered through globalised platforms can widen access to information, markets and services, and the digital channel is the clearest Indian illustration because it reaches households directly. Then elucidate the distributional cost, which is where the scarce-resource half of the demand belongs on the society layer. Access is not uniform, because the digital divide distributes connectivity unequally by income, gender, region and generation, so an efficiency gain that is real in aggregate can still concentrate among those already better positioned. Add the consumption mechanism that links technology to resource pressure without importing an environmental statistic. Platform-mediated convenience, illustrated by delivery-based food consumption in dual-income urban households, converts time scarcity into higher throughput of goods and packaging, so technology can raise material demand at the same time as it raises productivity. Anchor the evidence available here. This owner's dated access measure is the National Family Health Survey ever-internet-use figure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets against 33.3 per cent in the round five comparator, and because the round six results are labelled provisional the figure shows direction rather than a current connectivity level. Conclude that a technology's social effect in a resource-constrained world depends on who has access, who bears the cost and how use is regulated, not on the technology's label.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 4 - 2022 GS-I Q20", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Separate the two layers of the demand in the opening sentence, because the commonest failure here is to answer with technical or macroeconomic material that this owner does not own. The society layer

analyses access, trust, work, identity and unequal risk; the instrument layer, meaning energy and material chains, trade and investment mechanics and technical performance, is cross-linked to Economy, Environment and Science and Technology and is not re-derived. Elucidate the social gain first. New technology delivered through globalised platforms can widen access to information, markets and services, and the digital channel is the clearest Indian illustration because it reaches households directly. Then elucidate the distributional cost, which is where the scarce-resource half of the demand belongs on the society layer. Access is not uniform, because the digital divide distributes connectivity unequally by income, gender, region and generation, so an efficiency gain that is real in aggregate can still concentrate among those already better positioned. Add the consumption mechanism that links technology to resource pressure without importing an environmental statistic. Platform-mediated convenience, illustrated by delivery-based food consumption in dual-income urban households, converts time scarcity into higher throughput of goods and packaging, so technology can raise material demand at the same time as it raises productivity. Anchor the evidence available here. This owner's dated access measure is the National Family Health Survey ever-internet-use figure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets against 33.3 per cent in the round five comparator, and because the round six results are labelled provisional the figure shows direction rather than a current connectivity level. Conclude that a technology's social effect in a resource-constrained world depends on who has access, who bears the cost and how use is regulated, not on the technology's label.

Analytical body:

1. **Claim and named evidence:** Demand: Audited ledger demand rendering: globalisation and new technology in a world of scarce resources. Elucidate, 15 marks, 250 words. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication.

Qualification: State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: Separate the two layers of the demand in the opening sentence, because the commonest failure here is to answer with technical or macroeconomic material that this owner does not own. The society layer analyses access, trust, work, identity and unequal risk; the instrument layer, meaning energy and material chains, trade and investment mechanics and technical performance, is cross-linked to Economy, Environment and Science and Technology and is not re-derived. Elucidate the social gain first. New technology delivered through globalised platforms can widen access to information, markets and services, and the digital channel is the clearest Indian illustration because it reaches households directly. Then elucidate the distributional cost, which is where the scarce-resource half of the demand belongs on the society layer. Access is not uniform, because the digital divide distributes connectivity unequally by income, gender, region and generation, so an efficiency gain that is real in aggregate can still concentrate among those already better positioned. Add the consumption mechanism that links technology to resource pressure without importing an environmental statistic. Platform-mediated convenience, illustrated by delivery-based food consumption in dual-income urban households, converts time scarcity into higher throughput of goods and packaging, so technology can raise material demand at the same time as it raises productivity. Anchor the evidence available here. This owner's dated access measure is the National Family Health Survey ever-internet-use figure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets against 33.3 per cent in the round five comparator, and because the round six results are labelled provisional the figure shows direction rather than a current connectivity level. Conclude that a technology's social effect in a resource-constrained world depends on who has access, who bears the cost and how use is regulated, not on the technology's label.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "PYQ DEMAND CARD 4 - 2022 GS-I Q20", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

PYQ DEMAND CARD 5 - 2024 GS-I Q19

Demand: Globalization has increased urban migration by skilled, young, unmarried women from various classes. How has this trend impacted upon their personal freedom and relationship with family? (Answer in 250 words) 15 marks.

Status: Wording confirmed in the locally held official 2024 General Studies Paper-I. Routed in the audited 2024-2025 Mains ledger to this Basic owner with no cross-owner conflict recorded.

Model solution: Accept the stem's proposition as the premise the examiner supplies and then answer the two questions actually asked, which are about personal freedom and about the relationship with family. Begin with the pull mechanism, stated as a possibility rather than a proof. Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and education, safety, housing and prevailing family norms condition whether a particular young woman can act on that demand. State the statistical boundary immediately, because it is the discipline this demand rewards. The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported female labour force participation at 41.7 per cent against 37.0 per cent in 2022-23, and the Annual Report 2025 released in March 2026 reports usual-status female participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period rather than the earlier July to June cycle; these measure aggregate participation and establish neither the size nor the composition nor the cause of the migration stream in the stem, and the changed reference period must be named before the two are compared. Answer the freedom half specifically. Independent income and separate residence expand physical mobility, spending autonomy, the timing of marriage and the migrant's voice in partner selection, and naming each freedom is what distinguishes an answer from a summary. Answer the family half as renegotiation. Remittance flows, ritual participation and periodic visits continue while day-to-day parental oversight weakens, so the relationship is redefined rather than severed and the two halves of the demand are not in opposition. Close with the qualification that keeps the answer honest: the same independence that expands freedom thins the family-based support available during workplace harassment or a health emergency far from home, so the outcome varies with class, occupation, housing and city, and no uniform result may be claimed.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 5 - 2024 GS-I Q19", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

PYQ DEMAND CARD 6 - 2025 GS-I Q10

Demand: Do you think that globalization results in only an aggressive consumer culture? Justify your answer. (Answer in 150 words) 10 marks.

Status: Wording confirmed in the locally held official 2025 General Studies Paper-I. Routed in the audited 2024-2025 Mains ledger to this Basic owner with no cross-owner conflict recorded.

Model solution: Attack the word only in the first line, because the entire mark difference on this demand sits there. Concede what is true so the refusal is credible. Consumer culture, meaning the pattern in which consumption of goods and brands becomes a primary vehicle for identity, status and social participation, has genuinely intensified under expanded market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration. Then separate the two layers of that concession. Structural consumerism, the expansion of market access and purchasing capacity through income growth, retail expansion and credit, can precede and operate independently of cultural consumerism, the symbolic status meaning attached to consumption, which already shows that a single consumption story is doing too much work. Now supply the channels that do not run through consumption at all. Service-sector

employment growth reorganises work; urban migration renegotiates household authority through remittance and periodic contact while expanding a migrant's mobility and voice; and digital access reorganises information and participation, with the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine reported at 64.3 per cent in the round six national fact sheets and labelled provisional. Add the cultural counter-process. Glocalisation shows global products and practices being adapted to local tastes rather than adopted unchanged, which contradicts the picture of a single aggressive consumer culture arriving intact. Justify the verdict rather than merely stating it: because these effects operate through separate mechanisms of labour demand, technology diffusion and cultural exposure, the exclusivity claim is empirically too narrow. Conclude that globalisation produces an intensified consumer culture among other simultaneous social changes, and that the honest answer is more than consumption rather than a denial of it.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 6 - 2025 GS-I Q10", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish structural consumerism from cultural consumerism and explain why the distinction changes a globalisation answer. Answer in about 150 words.

Model thesis: Naming the structural and the cultural layer separately is what allows an answer to concede that consumption has genuinely intensified while still refusing the claim that consumption is the whole social effect of globalisation.

Claim -> named evidence -> analysis -> qualification:

- Structural consumerism is the expansion of market access and purchasing capacity through income growth, retail expansion and credit access, while cultural consumerism is the symbolic status and identity meaning attached to consumption, and because the structural change can precede and operate independently of the cultural one the pairing of structural consumerism vs cultural consumerism belongs in the core answer rather than in optional enrichment.
- Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration.
- Globalisation is treated in this answer as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice.

Qualified conclusion: Naming the structural and the cultural layer separately is what allows an answer to concede that consumption has genuinely intensified while still refusing the claim that consumption is the whole social effect of globalisation.

Demand decoding: The directive **explain** requires a direct position on "Distinguish structural consumerism from cultural consumerism and explain why the distinction...", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Naming the structural and the cultural layer separately is what allows an answer to concede that consumption has genuinely intensified while still refusing the claim that consumption is the whole social effect of globalisation.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain glocalisation and show why it must be presented alongside homogenisation in an Indian answer. Answer in about 150 words.

Model thesis: Homogenisation is a convergence prediction and glocalisation is an observed adaptation, so the defensible Indian position is domain-specific rather than a choice between the two.

Claim -> named evidence -> analysis -> qualification:

- Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain.

- Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms.
- Indian evidence shows homogenisation and glocalisation operating simultaneously in different domains rather than as rival theories of which only one can be true, and the analytical claim carried into the core answer is therefore that a competent response names the domain each process describes instead of selecting a single winner.

Qualified conclusion: Homogenisation is a convergence prediction and glocalisation is an observed adaptation, so the defensible Indian position is domain-specific rather than a choice between the two.

Demand decoding: The directive **explain** requires a direct position on "Explain glocalisation and show why it must be presented alongside homogenisation in an Indian...", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Homogenisation is a convergence prediction and glocalisation is an observed adaptation, so the defensible Indian position is domain-specific rather than a choice between the two.

Analytical body:

1. **Claim and named evidence:** Homogenisation is the theory that globalisation makes cultures and consumption patterns increasingly similar worldwide through the spread of global brands and media formats, and it is a prediction about convergence rather than a proven description of every Indian domain. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Glocalisation is the observed adaptation of global products and practices to local tastes, norms and contexts instead of their unchanged adoption, illustrated in this owner by locally customised menus at global chains and by regional-language content on global digital platforms. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: Homogenisation is a convergence prediction and glocalisation is an observed adaptation, so the defensible Indian position is domain-specific rather than a choice between the two.

Executable exam-length answer / compression plan: For a 10-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise three points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "Explain glocalisation and show why it must be presented alongside homogenisation in an Indian...", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

ORIGINAL MAINS 3 - 15 MARKS

Question: Examine the limits of using an aggregate labour-force statistic as evidence about a specific migration stream. Answer in about 250 words.

Model thesis: An aggregate participation rate can establish the employment context in which a migration decision is taken but never the composition or cause of the stream itself, and stating that limit is what converts a citation into analysis.

Claim -> named evidence -> analysis -> qualification:

- The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent.
- The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared.
- A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream.
- Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream.

Qualified conclusion: An aggregate participation rate can establish the employment context in which a migration decision is taken but never the composition or cause of the stream itself, and stating that limit is what converts a citation into analysis.

Demand decoding: The directive **examine** requires a direct position on "Examine the limits of using an aggregate labour-force statistic as evidence about a specific...", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: An aggregate participation rate can establish the employment context in which a migration decision is taken but never the composition or cause of the stream itself, and stating that limit is what converts a citation into analysis.

Analytical body:

1. **Claim and named evidence:** The Periodic Labour Force Survey Annual Report 2023-24 of the Ministry of Statistics and Programme Implementation, released on 23 September 2024, reported a female labour force participation rate of 41.7 per cent against 37.0 per cent in 2022-23 and a female worker population ratio of 40.3 per cent. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** The Periodic Labour Force Survey Annual Report 2025, released in March 2026, reports usual-status female labour force participation for age fifteen and above at 40.0 per cent on a January to December 2025 reference period instead of the earlier July to June cycle, so the reference period and the measure must be stated before the two reports are compared. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** A labour force participation rate measures aggregate participation in the labour force and does not establish the size, age composition, marital status, destination or cause of the skilled, young and unmarried women's urban migration named in the 2024 demand, so the statistic may supply context but never proof of that stream. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism ->

differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

4. **Claim and named evidence:** Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream.

Analysis: Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: An aggregate participation rate can establish the employment context in which a migration decision is taken but never the composition or cause of the stream itself, and stating that limit is what converts a citation into analysis.

Executable exam-length answer / compression plan: For a 15-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise five points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "Examine the limits of using an aggregate labour-force statistic as evidence about a specific...", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

ORIGINAL MAINS 4 - 15 MARKS

Question: Examine how urban work can expand a woman migrant's personal freedom while her family relationship is renegotiated rather than severed. Answer in about 250 words.

Model thesis: Freedom and family tie are not substitutes under migration, because remittance, ritual participation and periodic contact persist while daily oversight weakens, and the honest qualification is the security that independent residence can cost.

Claim -> named evidence -> analysis -> qualification:

- Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted.
- Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another.
- The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration.
- Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream.

Qualified conclusion: Freedom and family tie are not substitutes under migration, because remittance, ritual participation and periodic contact persist while daily oversight weakens, and the honest qualification is the security that independent residence can cost.

Demand decoding: The directive **examine** requires a direct position on "Examine how urban work can expand a woman migrant's personal freedom while her family...", all clauses, a sociological mechanism, historical trajectory,

intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Freedom and family tie are not substitutes under migration, because remittance, ritual participation and periodic contact persist while daily oversight weakens, and the honest qualification is the security that independent residence can cost.

Analytical body:

1. **Claim and named evidence:** Independent urban income and separate residence can expand a migrant woman's personal freedom through physical mobility, spending autonomy, later marriage and a greater voice in partner selection, and these are the specific freedoms the 2024 demand asks to be traced rather than merely asserted. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
2. **Claim and named evidence:** Family relationships under such migration are typically renegotiated rather than severed, because remittance flows, ritual participation and periodic visits continue even as day-to-day parental oversight weakens, so the pairing of personal-freedom expansion vs family-authority renegotiation is a core requirement of the answer and expanded freedom and a continuing family tie coexist instead of replacing one another. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
3. **Claim and named evidence:** The same independent migration that expands freedom can thin the family-based support network a woman could otherwise draw upon during workplace harassment or a health emergency far from home, and this is the qualification that keeps a freedom answer from becoming a celebration. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.
4. **Claim and named evidence:** Service-sector employment growth in cities is the labour channel through which globalisation reaches households, and for the 2024 demand it is analysed as one possible pull factor alongside education, safety, housing and family norms rather than as a proven cause of any particular migration stream. **Analysis:** Connect structure or institution -> norm/incentive/power/agency mechanism -> differentiated social outcome -> feedback or policy implication. **Qualification:** State internal group variation, regional/historical scope, correlation-versus-causation or legal-norm-versus-lived-outcome boundary.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "Examine how urban work can expand a woman migrant's personal freedom while her family...", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

ORIGINAL MAINS 5 - 20 MARKS

Question: Assess the social explanations for the growth of fast-food industries in India despite rising health concern. Answer in about 300 words.

Model thesis: The paradox is explained by time constraint, price and delivery convenience, aspirational branding and local menu adaptation acting together with domestic supply chains, and no single behavioural lens may be promoted to a complete account.

Claim -> named evidence -> analysis -> qualification:

- The fast-food paradox is the coexistence of rising health concern with growing fast-food industries, and this owner explains it through urban time constraints in dual-income households, price and delivery convenience, aspirational branding and glocalised menu adaptation rather than through any denial of health risk.
- Bounded rationality is offered as one behavioural-economics lens on that paradox, showing that convenience, present-oriented food choice and status motives can outweigh long-run health considerations in an actual purchase, and it is a lens rather than proof that one motive dominates every purchase.
- An Indian illustration of the paradox must include domestic chains and food-delivery ecosystems alongside global brands, because attributing the entire trend to globalisation alone misreads a market in which local supply and platform logistics carry much of the growth.
- Consumer culture is a social pattern in which the consumption of goods and brands becomes a primary vehicle for identity, status and social participation, intensified by globalisation-driven market access and advertising, and it is most visible in urban middle-class lifestyle and aspiration.

Qualified conclusion: The paradox is explained by time constraint, price and delivery convenience, aspirational branding and local menu adaptation acting together with domestic supply chains, and no single behavioural lens may be promoted to a complete account.

Demand decoding: The directive **assess** requires a direct position on "Assess the social explanations for the growth of fast-food industries in India despite rising...", all clauses, a sociological mechanism, historical trajectory, intersectional and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The paradox is explained by time constraint, price and delivery convenience, aspirational branding and local menu adaptation acting together with domestic supply chains, and no single behavioural lens may be promoted to a complete account.

Counter-position / limit: Neither a constitutional provision, one scheme, aggregate correlation nor a single community example establishes uniform implementation, causation or national experience; test institutions, power, agency, intersectionality, region, period and evidence status.

Qualified conclusion: The paradox is explained by time constraint, price and delivery convenience, aspirational branding and local menu adaptation acting together with domestic supply chains, and no single behavioural lens may be promoted to a complete account.

Executable exam-length answer / compression plan: For a 20-mark answer, spend about one-sixth of the time decoding the directive and drawing the mechanism; define and state a thesis; organise six to eight points as claim -> named evidence -> analysis -> qualification; compress examples before mechanisms and reserve the final minute for causation, group variation and legal-outcome limits.

Why this earns marks: The answer obeys the directive, explains rather than lists, integrates India-centric evidence and avoids homogenisation, legalism and causal overclaim.

How to improve this answer: For "Assess the social explanations for the growth of fast-food industries in India despite rising...", replace the weakest generalisation with one named community, region, institution, movement or source-dated dataset and state what that evidence cannot establish.

ORIGINAL MAINS 6 - 20 MARKS

Question: Assess the claim that globalisation's digital channel benefits Indian society uniformly. Answer in about 300 words.

Model thesis: The digital channel is stratified before it is universal, because access is unequal by income, gender, region and generation, and the dated access anchor available here shows direction without licensing a current-connectivity claim.

Claim -> named evidence -> analysis -> qualification:

- This owner's digital-access anchor is the National Family Health Survey ever-internet-use measure for women aged fifteen to forty-nine, reported at 64.3 per cent in the round six national fact sheets and at 33.3 per cent in the earlier round five comparator, and because the round six results are labelled provisional neither figure may be quoted as a current connectivity estimate.
- The digital divide is unequal access to digital technology and connectivity across income, gender, region and generation, and it is the reason globalisation's connectivity gains reach those already better positioned first, which converts an apparently universal channel into a stratified one.
- Globalisation is treated in this owner as a set of traceable channels into Indian society, namely consumer markets, urban labour migration, food-industry growth and digital access, rather than as one uniform cultural force, while the macroeconomics of trade and investment liberalisation remains with Economy and the labour-code and gig-work dimension remains with Social Justice.
- Six General Studies Paper-I demands are routed to this topic across the audited ledgers, four of them from 2018 to 2022 to the Advanced owner and two from 2024 and 2025 to the Basic owner, while the 2025 fast-food demand is routed by the audited 2024-2025 ledger to the Social Change and Modernisation owner even though this owner's own answer-architecture table also claims it, and that conflict is recorded openly rather than resolved by assertion.

Qualified conclusion: The digital channel is stratified before it is universal, because access is unequal by income, gender, region and generation, and the dated access anchor available here shows direction without licensing a current-connectivity claim.

Demand decoding: The directive **assess** requires a direct position on "Assess the claim that globalisation's digital channel benefits Indian society uniformly....", all clauses, a sociological mechanism, historical trajectory, intersectional

and regional variation, named Indian evidence, constitutional/institutional boundaries and a qualified conclusion.

Detailed examiner-grade model answer:
