

SOLVED PRACTICE WORKBOOK

Industrial Revolution - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Industrial Revolution - Solved Practice Workbook	5
BASIC MCQS / REMEDIATION	5
Q1. Which statement correctly identifies Industrial transition from about 1750?	5
Q2. Which chronology card should be filed under Industrial transition from about 1750?	5
Q3. Which option preserves the source-bounded meaning of Industrial transition from about 1750?	5
Q4. Which statement avoids a close-option trap about Industrial transition from about 1750?	5
Q5. Which statement correctly identifies Capital accumulation?	6
Q6. Which chronology card should be filed under Capital accumulation?	6
Q7. Which option preserves the source-bounded meaning of Capital accumulation?	6
Q8. Which statement avoids a close-option trap about Capital accumulation?	6
Q9. Which statement correctly identifies Coal and iron?	6
Q10. Which chronology card should be filed under Coal and iron?	7
Q11. Which option preserves the source-bounded meaning of Coal and iron?	7
Q12. Which statement avoids a close-option trap about Coal and iron?	7
Q13. Which statement correctly identifies Enclosure and labour?	7
Q14. Which chronology card should be filed under Enclosure and labour?	7
Q15. Which option preserves the source-bounded meaning of Enclosure and labour?	8
Q16. Which statement avoids a close-option trap about Enclosure and labour?	8
Q17. Which statement correctly identifies Agricultural surplus?	8
Q18. Which chronology card should be filed under Agricultural surplus?	8
Q19. Which option preserves the source-bounded meaning of Agricultural surplus?	8
Q20. Which statement avoids a close-option trap about Agricultural surplus?	9
Q21. Which statement correctly identifies Shipping, markets and political order?	9
Q22. Which chronology card should be filed under Shipping, markets and political order?	9
Q23. Which option preserves the source-bounded meaning of Shipping, markets and political order?	9
Q24. Which statement avoids a close-option trap about Shipping, markets and political order?	9
Q25. Which statement correctly identifies Spinning jenny, 1764?	10
Q26. Which chronology card should be filed under Spinning jenny, 1764?	10
Q27. Which option preserves the source-bounded meaning of Spinning jenny, 1764?	10

Q28. Which statement avoids a close-option trap about Spinning jenny, 1764?	10
Q29. Which statement correctly identifies Water frame and Watt era, 1769?	10
Q30. Which chronology card should be filed under Water frame and Watt era, 1769?	11
Q31. Which option preserves the source-bounded meaning of Water frame and Watt era, 1769?	11
Q32. Which statement avoids a close-option trap about Water frame and Watt era, 1769?	11
Q33. Which statement correctly identifies Power loom, 1785?	11
Q34. Which chronology card should be filed under Power loom, 1785?	11
Q35. Which option preserves the source-bounded meaning of Power loom, 1785?	12
Q36. Which statement avoids a close-option trap about Power loom, 1785?	12
Q37. Which statement correctly identifies Cotton gin, 1793?	12
Q38. Which chronology card should be filed under Cotton gin, 1793?	12
Q39. Which option preserves the source-bounded meaning of Cotton gin, 1793?	12
Q40. Which statement avoids a close-option trap about Cotton gin, 1793?	13
Q41. Which statement correctly identifies Factory system?	13
Q42. Which chronology card should be filed under Factory system?	13
Q43. Which option preserves the source-bounded meaning of Factory system?	13
Q44. Which statement avoids a close-option trap about Factory system?	13
Q45. Which statement correctly identifies Transport revolution?	14
Q46. Which chronology card should be filed under Transport revolution?	14
Q47. Which option preserves the source-bounded meaning of Transport revolution?	14
Q48. Which statement avoids a close-option trap about Transport revolution?	14
Q49. Which statement correctly identifies Urbanisation and class formation?	14
Q50. Which chronology card should be filed under Urbanisation and class formation?	15
Q51. Which option preserves the source-bounded meaning of Urbanisation and class formation?	15
Q52. Which statement avoids a close-option trap about Urbanisation and class formation?	15
Q53. Which statement correctly identifies Women, children and labour conditions?	15
Q54. Which chronology card should be filed under Women, children and labour conditions?	15
Q55. Which option preserves the source-bounded meaning of Women, children and labour conditions?	16
Q56. Which statement avoids a close-option trap about Women, children and labour conditions?	16
Q57. Which statement correctly identifies Factory Act, 1802?	16
Q58. Which chronology card should be filed under Factory Act, 1802?	16
Q59. Which option preserves the source-bounded meaning of Factory Act, 1802?	17

Q60. Which statement avoids a close-option trap about Factory Act, 1802?	17
Q61. Which statement correctly identifies Trade unions and Chartism?	17
Q62. Which chronology card should be filed under Trade unions and Chartism?	17
Q63. Which option preserves the source-bounded meaning of Trade unions and Chartism?	18
Q64. Which statement avoids a close-option trap about Trade unions and Chartism?	18
Q65. Which statement correctly identifies Uneven continental spread?	18
Q66. Which chronology card should be filed under Uneven continental spread?	18
Q67. Which option preserves the source-bounded meaning of Uneven continental spread?	19
Q68. Which statement avoids a close-option trap about Uneven continental spread?	19
Q69. Which statement correctly identifies State-assisted late industrialisation?	19
Q70. Which chronology card should be filed under State-assisted late industrialisation?	19
Q71. Which option preserves the source-bounded meaning of State-assisted late industrialisation?	20
Q72. Which statement avoids a close-option trap about State-assisted late industrialisation?	20
Q73. Which statement correctly identifies Industry and imperialism?	20
Q74. Which chronology card should be filed under Industry and imperialism?	20
Q75. Which option preserves the source-bounded meaning of Industry and imperialism?	21
Q76. Which statement avoids a close-option trap about Industry and imperialism?	21
Q77. Which statement correctly identifies Mixed-blessing verdict?	21
Q78. Which chronology card should be filed under Mixed-blessing verdict?	21
Q79. Which option preserves the source-bounded meaning of Mixed-blessing verdict?	22
Q80. Which statement avoids a close-option trap about Mixed-blessing verdict?	22

Industrial Revolution - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Industrial transition from about 1750?

A. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. B. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. C. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. D. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence.

Answer: A. Explanation: Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. The remaining options belong to different chronology, actor or analytical categories.

Q2. Which chronology card should be filed under Industrial transition from about 1750?

A. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. B. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. C. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. D. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive.

Answer: B. Explanation: Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. The remaining options belong to different chronology, actor or analytical categories.

Q3. Which option preserves the source-bounded meaning of Industrial transition from about 1750?

A. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. B. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. C. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. D. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence.

Answer: C. Explanation: Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. The remaining options belong to different chronology, actor or analytical categories.

Q4. Which statement avoids a close-option trap about Industrial transition from about 1750?

A. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. B. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. C. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. D. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy.

Answer: D. Explanation: Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. The remaining options belong to different chronology, actor or analytical categories.

Q5. Which statement correctly identifies Capital accumulation?

A. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. B. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. C. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. D. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population.

Answer: A. Explanation: Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. The remaining options belong to different chronology, actor or analytical categories.

Q6. Which chronology card should be filed under Capital accumulation?

A. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. B. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. C. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. D. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence.

Answer: B. Explanation: Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. The remaining options belong to different chronology, actor or analytical categories.

Q7. Which option preserves the source-bounded meaning of Capital accumulation?

A. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. B. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. C. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. D. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population.

Answer: C. Explanation: Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. The remaining options belong to different chronology, actor or analytical categories.

Q8. Which statement avoids a close-option trap about Capital accumulation?

A. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. B. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. C. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. D. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause.

Answer: D. Explanation: Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. The remaining options belong to different chronology, actor or analytical categories.

Q9. Which statement correctly identifies Coal and iron?

A. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. B. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. C. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. D. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population.

Answer: A. Explanation: England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. The remaining options belong to different chronology, actor or analytical categories.

Q10. Which chronology card should be filed under Coal and iron?

A. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. B. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. C. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. D. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector.

Answer: B. Explanation: England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. The remaining options belong to different chronology, actor or analytical categories.

Q11. Which option preserves the source-bounded meaning of Coal and iron?

A. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. B. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. C. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. D. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise.

Answer: C. Explanation: England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. The remaining options belong to different chronology, actor or analytical categories.

Q12. Which statement avoids a close-option trap about Coal and iron?

A. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. B. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. C. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. D. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive.

Answer: D. Explanation: England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. The remaining options belong to different chronology, actor or analytical categories.

Q13. Which statement correctly identifies Enclosure and labour?

A. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. B. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. C. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. D. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector.

Answer: A. Explanation: The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. The remaining options belong to different chronology, actor or analytical categories.

Q14. Which chronology card should be filed under Enclosure and labour?

A. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. B. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. C. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. D. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise.

Answer: B. Explanation: The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. The remaining options belong to different chronology, actor or analytical categories.

Q15. Which option preserves the source-bounded meaning of Enclosure and labour?

A. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. B. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. C. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. D. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories.

Answer: C. Explanation: The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. The remaining options belong to different chronology, actor or analytical categories.

Q16. Which statement avoids a close-option trap about Enclosure and labour?

A. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. B. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. C. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. D. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence.

Answer: D. Explanation: The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. The remaining options belong to different chronology, actor or analytical categories.

Q17. Which statement correctly identifies Agricultural surplus?

A. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. B. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. C. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. D. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector.

Answer: A. Explanation: Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. The remaining options belong to different chronology, actor or analytical categories.

Q18. Which chronology card should be filed under Agricultural surplus?

A. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. B. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. C. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. D. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector.

Answer: B. Explanation: Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. The remaining options belong to different chronology, actor or analytical categories.

Q19. Which option preserves the source-bounded meaning of Agricultural surplus?

A. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. B. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. C. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. D. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing.

Answer: C. Explanation: Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. The remaining options belong to different chronology, actor or analytical categories.

Q20. Which statement avoids a close-option trap about Agricultural surplus?

A. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. B. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. C. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. D. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population.

Answer: D. Explanation: Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. The remaining options belong to different chronology, actor or analytical categories.

Q21. Which statement correctly identifies Shipping, markets and political order?

A. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. B. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. C. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. D. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector.

Answer: A. Explanation: Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. The remaining options belong to different chronology, actor or analytical categories.

Q22. Which chronology card should be filed under Shipping, markets and political order?

A. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. B. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. C. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. D. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine.

Answer: B. Explanation: Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. The remaining options belong to different chronology, actor or analytical categories.

Q23. Which option preserves the source-bounded meaning of Shipping, markets and political order?

A. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. B. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. C. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. D. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories.

Answer: C. Explanation: Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. The remaining options belong to different chronology, actor or analytical categories.

Q24. Which statement avoids a close-option trap about Shipping, markets and political order?

A. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. B. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. C. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. D. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise.

Answer: D. Explanation: Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. The remaining options belong to different chronology, actor or analytical categories.

Q25. Which statement correctly identifies Spinning jenny, 1764?

A. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. B. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. C. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. D. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing.

Answer: A. Explanation: James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. The remaining options belong to different chronology, actor or analytical categories.

Q26. Which chronology card should be filed under Spinning jenny, 1764?

A. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. B. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. C. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. D. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing.

Answer: B. Explanation: James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. The remaining options belong to different chronology, actor or analytical categories.

Q27. Which option preserves the source-bounded meaning of Spinning jenny, 1764?

A. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. B. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. C. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. D. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing.

Answer: C. Explanation: James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. The remaining options belong to different chronology, actor or analytical categories.

Q28. Which statement avoids a close-option trap about Spinning jenny, 1764?

A. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. B. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. C. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. D. James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector.

Answer: D. Explanation: James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. The remaining options belong to different chronology, actor or analytical categories.

Q29. Which statement correctly identifies Water frame and Watt era, 1769?

A. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. B. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. C. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. D. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline.

Answer: A. Explanation: Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. The remaining options belong to different chronology, actor or analytical categories.

Q30. Which chronology card should be filed under Water frame and Watt era, 1769?

A. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. B. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. C. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. D. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing.

Answer: B. Explanation: Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. The remaining options belong to different chronology, actor or analytical categories.

Q31. Which option preserves the source-bounded meaning of Water frame and Watt era, 1769?

A. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. B. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. C. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. D. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline.

Answer: C. Explanation: Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. The remaining options belong to different chronology, actor or analytical categories.

Q32. Which statement avoids a close-option trap about Water frame and Watt era, 1769?

A. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. B. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. C. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. D. Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine.

Answer: D. Explanation: Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. The remaining options belong to different chronology, actor or analytical categories.

Q33. Which statement correctly identifies Power loom, 1785?

A. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. B. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. C. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. D. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline.

Answer: A. Explanation: Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. The remaining options belong to different chronology, actor or analytical categories.

Q34. Which chronology card should be filed under Power loom, 1785?

A. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. B. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. C. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. D. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes.

Answer: B. Explanation: Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. The remaining options belong to different chronology, actor or analytical categories.

Q35. Which option preserves the source-bounded meaning of Power loom, 1785?

A. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. B. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. C. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. D. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.

Answer: C. Explanation: Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. The remaining options belong to different chronology, actor or analytical categories.

Q36. Which statement avoids a close-option trap about Power loom, 1785?

A. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. B. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. C. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. D. Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories.

Answer: D. Explanation: Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. The remaining options belong to different chronology, actor or analytical categories.

Q37. Which statement correctly identifies Cotton gin, 1793?

A. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. B. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. C. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. D. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline.

Answer: A. Explanation: Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. The remaining options belong to different chronology, actor or analytical categories.

Q38. Which chronology card should be filed under Cotton gin, 1793?

A. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. B. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. C. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. D. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes.

Answer: B. Explanation: Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. The remaining options belong to different chronology, actor or analytical categories.

Q39. Which option preserves the source-bounded meaning of Cotton gin, 1793?

A. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. B. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. C. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. D. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.

Answer: C. Explanation: Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. The remaining options belong to different chronology, actor or analytical categories.

Q40. Which statement avoids a close-option trap about Cotton gin, 1793?

A. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. B. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. C. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. D. Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing.

Answer: D. Explanation: Eli Whitney's cotton gin of 1793, an American invention, accelerated raw-cotton processing. The remaining options belong to different chronology, actor or analytical categories.

Q41. Which statement correctly identifies Factory system?

A. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. B. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. C. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. D. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.

Answer: A. Explanation: The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. The remaining options belong to different chronology, actor or analytical categories.

Q42. Which chronology card should be filed under Factory system?

A. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. B. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. C. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. D. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak.

Answer: B. Explanation: The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. The remaining options belong to different chronology, actor or analytical categories.

Q43. Which option preserves the source-bounded meaning of Factory system?

A. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. B. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. C. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. D. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights.

Answer: C. Explanation: The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. The remaining options belong to different chronology, actor or analytical categories.

Q44. Which statement avoids a close-option trap about Factory system?

A. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. B. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. C. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. D. The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline.

Answer: D. Explanation: The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. The remaining options belong to different chronology, actor or analytical categories.

Q45. Which statement correctly identifies Transport revolution?

A. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. B. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. C. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. D. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.

Answer: A. Explanation: Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. The remaining options belong to different chronology, actor or analytical categories.

Q46. Which chronology card should be filed under Transport revolution?

A. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. B. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. C. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. D. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights.

Answer: B. Explanation: Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. The remaining options belong to different chronology, actor or analytical categories.

Q47. Which option preserves the source-bounded meaning of Transport revolution?

A. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. B. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. C. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. D. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights.

Answer: C. Explanation: Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. The remaining options belong to different chronology, actor or analytical categories.

Q48. Which statement avoids a close-option trap about Transport revolution?

A. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. B. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. C. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. D. Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets.

Answer: D. Explanation: Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. The remaining options belong to different chronology, actor or analytical categories.

Q49. Which statement correctly identifies Urbanisation and class formation?

A. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. B. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. C. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. D. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.

Answer: A. Explanation: Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. The remaining options belong to different chronology, actor or analytical categories.

Q50. Which chronology card should be filed under Urbanisation and class formation?

A. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. B. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. C. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. D. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870.

Answer: B. Explanation: Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. The remaining options belong to different chronology, actor or analytical categories.

Q51. Which option preserves the source-bounded meaning of Urbanisation and class formation?

A. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. B. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. C. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. D. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry.

Answer: C. Explanation: Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. The remaining options belong to different chronology, actor or analytical categories.

Q52. Which statement avoids a close-option trap about Urbanisation and class formation?

A. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. B. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. C. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. D. Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes.

Answer: D. Explanation: Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. The remaining options belong to different chronology, actor or analytical categories.

Q53. Which statement correctly identifies Women, children and labour conditions?

A. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. B. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. C. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. D. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870.

Answer: A. Explanation: Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. The remaining options belong to different chronology, actor or analytical categories.

Q54. Which chronology card should be filed under Women, children and labour conditions?

A. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. B. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. C. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. D. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry.

Answer: B. Explanation: Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. The remaining options belong to different chronology, actor or analytical

categories.

Q55. Which option preserves the source-bounded meaning of Women, children and labour conditions?

A. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. B. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. C. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. D. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire.

Answer: C. Explanation: Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. The remaining options belong to different chronology, actor or analytical categories.

Q56. Which statement avoids a close-option trap about Women, children and labour conditions?

A. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. B. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. C. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. D. Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.

Answer: D. Explanation: Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. The remaining options belong to different chronology, actor or analytical categories.

Q57. Which statement correctly identifies Factory Act, 1802?

A. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. B. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. C. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. D. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights.

Answer: A. Explanation: The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. The remaining options belong to different chronology, actor or analytical categories.

Q58. Which chronology card should be filed under Factory Act, 1802?

A. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. B. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. C. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. D. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire.

Answer: B. Explanation: The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. The remaining options belong to different chronology, actor or analytical categories.

Q59. Which option preserves the source-bounded meaning of Factory Act, 1802?

A. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. B. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. C. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. D. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story.

Answer: C. Explanation: The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. The remaining options belong to different chronology, actor or analytical categories.

Q60. Which statement avoids a close-option trap about Factory Act, 1802?

A. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. B. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. C. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. D. The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak.

Answer: D. Explanation: The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. The remaining options belong to different chronology, actor or analytical categories.

Q61. Which statement correctly identifies Trade unions and Chartism?

A. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. B. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. C. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. D. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire.

Answer: A. Explanation: Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. The remaining options belong to different chronology, actor or analytical categories.

Q62. Which chronology card should be filed under Trade unions and Chartism?

A. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. B. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. C. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. D. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire.

Answer: B. Explanation: Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. The remaining options belong to different chronology, actor or analytical categories.

Q63. Which option preserves the source-bounded meaning of Trade unions and Chartism?

A. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. B. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. C. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. D. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story.

Answer: C. Explanation: Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. The remaining options belong to different chronology, actor or analytical categories.

Q64. Which statement avoids a close-option trap about Trade unions and Chartism?

A. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. B. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. C. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. D. Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights.

Answer: D. Explanation: Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. The remaining options belong to different chronology, actor or analytical categories.

Q65. Which statement correctly identifies Uneven continental spread?

A. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. B. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. C. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. D. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story.

Answer: A. Explanation: Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. The remaining options belong to different chronology, actor or analytical categories.

Q66. Which chronology card should be filed under Uneven continental spread?

A. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. B. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. C. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. D. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy.

Answer: B. Explanation: Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. The remaining options belong to different chronology, actor or analytical categories.

Q67. Which option preserves the source-bounded meaning of Uneven continental spread?

A. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. B. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. C. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. D. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story.

Answer: C. Explanation: Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. The remaining options belong to different chronology, actor or analytical categories.

Q68. Which statement avoids a close-option trap about Uneven continental spread?

A. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. B. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. C. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. D. Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870.

Answer: D. Explanation: Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. The remaining options belong to different chronology, actor or analytical categories.

Q69. Which statement correctly identifies State-assisted late industrialisation?

A. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. B. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. C. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. D. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story.

Answer: A. Explanation: Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. The remaining options belong to different chronology, actor or analytical categories.

Q70. Which chronology card should be filed under State-assisted late industrialisation?

A. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. B. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. C. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. D. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy.

Answer: B. Explanation: Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. The remaining options belong to different chronology, actor or analytical categories.

Q71. Which option preserves the source-bounded meaning of State-assisted late industrialisation?

A. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. B. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. C. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. D. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy.

Answer: C. Explanation: Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. The remaining options belong to different chronology, actor or analytical categories.

Q72. Which statement avoids a close-option trap about State-assisted late industrialisation?

A. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. B. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. C. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. D. Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry.

Answer: D. Explanation: Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry. The remaining options belong to different chronology, actor or analytical categories.

Q73. Which statement correctly identifies Industry and imperialism?

A. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. B. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. C. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. D. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause.

Answer: A. Explanation: Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. The remaining options belong to different chronology, actor or analytical categories.

Q74. Which chronology card should be filed under Industry and imperialism?

A. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy. B. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. C. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. D. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause.

Answer: B. Explanation: Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. The remaining options belong to different chronology, actor or analytical categories.

Q75. Which option preserves the source-bounded meaning of Industry and imperialism?

A. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. B. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. C. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. D. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause.

Answer: C. Explanation: Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. The remaining options belong to different chronology, actor or analytical categories.

Q76. Which statement avoids a close-option trap about Industry and imperialism?

A. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. B. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. C. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. D. Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire.

Answer: D. Explanation: Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. The remaining options belong to different chronology, actor or analytical categories.

Q77. Which statement correctly identifies Mixed-blessing verdict?

A. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. B. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. C. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. D. Old NCERT places the beginning of the Industrial Revolution in England around 1750 as machine-based large-scale production created an industrial economy.

Answer: A. Explanation: Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. The remaining options belong to different chronology, actor or analytical categories.

Q78. Which chronology card should be filed under Mixed-blessing verdict?

A. Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. B. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. C. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. D. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive.

Answer: B. Explanation: Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. The remaining options belong to different chronology, actor or analytical categories.

Q79. Which option preserves the source-bounded meaning of Mixed-blessing verdict?

A. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. B. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. C. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. D. England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive.

Answer: C. Explanation: Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. The remaining options belong to different chronology, actor or analytical categories.

Q80. Which statement avoids a close-option trap about Mixed-blessing verdict?

A. The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. B. Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. C. Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. D. Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story.

Answer: D. Explanation: Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. The remaining options belong to different chronology, actor or analytical categories.

PYQS AND ANSWER PRACTICE

7. Exact PYQ support route (2024 GS-I)

Verbatim: "How far was the Industrial Revolution in England responsible for the decline of handicrafts and cottage industries in India? (Answer in 250 words)"

This file supplies only the **English-side mechanism**:

mechanised factory production + lower unit costs
->
larger output + demand for raw materials and overseas markets
->
British manufactured imports gain a structural advantage

ANALYSIS: The question's decisive "how far" assessment belongs to Modern-Indian-History/advanced/07_Economic-Impact-of-British-Rule.md, which adds colonial tariffs/monopoly, lost court patronage, transport and regional variation. Do not answer the India-specific causal question from World History alone.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2023
- **Paper(s):** GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive /​format	Source status	Owner requirement
2023	GS-I	3	Socio-economic effects of railways in different countries	Bring out · 10 marks · 150 words	Routed to owning topic	Prepare context, core dimensions, evidence/​examples, counterpoint and a concise conclusion.

What this owner must now support

- Socio-economic effects of railways in different countries

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

PYQ DEMAND CARD 1 - 2023 GS-I · 10 marks · 150 words

Demand: Bring out the socio-economic effects of railways in different countries.

Status: Verified neutral demand from the local owner.

Model solution: Railways magnified the political economy they entered. In Britain they integrated coal, iron, engineering and a national market; in continental catch-up economies they often supported state-led market integration; in the United States they opened a settler frontier while accelerating indigenous dispossession; in Russia and Japan they served compressed strategic modernisation; and in colonies they commonly moved export commodities and administrative power toward ports. Across settings they accelerated urbanisation, migration, standard time and new occupations. Thus the technology was common, but ownership and economic purpose determined whether integration or extraction dominated.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 1 - 2023 GS-I · 10 marks · 150 words”, every clause and time boundary, chronological-causal organisation, named evidence, a counter-position and a qualified global verdict.

Detailed examiner-grade model status: The solved content above is the executable answer base. Preserve its thesis, named chronology, spatial evidence, causal mechanism, counter-position and qualification rather than replacing it with a generic narrative.

Executable exam-length answer / compression plan: For a 10-mark answer, open with a two-sentence thesis and a spatial-temporal frame; organise three named events, treaties, actors, regions, institutions or attributed interpretations as claim -> evidence -> analysis -> qualification; reserve the final lines for a graded conclusion.

Why this earns marks: The answer obeys the directive, distinguishes structure, trigger and outcome, connects evidence to mechanism, includes non-European agency and avoids teleology, presentism and monocausal explanation.

How to improve this answer: For “PYQ DEMAND CARD 1 - 2023 GS-I · 10 marks · 150 words”, replace the weakest generalisation with one additional named treaty, regional case, primary record or attributed scholarly position and state what that evidence cannot prove.

Detailed examiner-grade model answer:

Introduction and thesis: Railways magnified the political economy they entered. In Britain they integrated coal, iron, engineering and a national market; in continental catch-up economies they often supported state-led market integration; in the United States they opened a settler frontier while accelerating indigenous dispossession; in Russia and Japan they served compressed strategic modernisation; and in colonies they commonly moved export commodities and administrative power toward ports. Across settings they accelerated urbanisation, migration, standard time and new occupations. Thus the technology was common, but ownership and economic purpose determined whether integration or extraction dominated.

Qualification: Treat the stated causal weight as bounded by the question's period, geography and evidence status; do not convert it into inevitability or a universal civilisational claim.

PYQ DEMAND CARD 2 - 2024 GS-I · 15 marks · 250 words

Demand: How far was the Industrial Revolution in England responsible for the decline of handicrafts and cottage industries in India?

Status: Exact wording reproduced by the World History owner; final India verdict belongs to Modern Indian History.

Model solution: England's mechanised textile sequence, steam-powered factory production and cheaper transport sharply lowered unit costs and created pressure for overseas raw materials and markets. This made British manufactures formidable competitors to hand production. However, 'how far' cannot be answered from English technology alone. Colonial tariff and monopoly structures, revenue policy, loss of court patronage, transport penetration and regional and craft variation determined the Indian outcome. Some coarse rural and specialised luxury production persisted. The Industrial Revolution supplied the cost and scale advantage; colonial power converted that advantage into asymmetric market access, so the decline was technologically enabled but politically mediated.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 2 - 2024 GS-I · 15 marks · 250 words", every clause and time boundary, chronological-causal organisation, named evidence, a counter-position and a qualified global verdict.

Detailed examiner-grade model status: The solved content above is the executable answer base. Preserve its thesis, named chronology, spatial evidence, causal mechanism, counter-position and qualification rather than replacing it with a generic narrative.

Executable exam-length answer / compression plan: For a 15-mark answer, open with a two-sentence thesis and a spatial-temporal frame; organise five named events, treaties, actors, regions, institutions or attributed interpretations as claim -> evidence -> analysis -> qualification; reserve the final lines for a graded conclusion.

Why this earns marks: The answer obeys the directive, distinguishes structure, trigger and outcome, connects evidence to mechanism, includes non-European agency and avoids teleology, presentism and monocausal explanation.

How to improve this answer: For "PYQ DEMAND CARD 2 - 2024 GS-I · 15 marks · 250 words", replace the weakest generalisation with one additional named treaty, regional case, primary record or attributed scholarly position and state what that evidence cannot prove.

Detailed examiner-grade model answer:

Introduction and thesis: England's mechanised textile sequence, steam-powered factory production and cheaper transport sharply lowered unit costs and created pressure for overseas raw materials and markets. This made British manufactures formidable competitors to hand production. However, 'how far' cannot be answered from English technology alone. Colonial tariff and monopoly structures, revenue policy, loss of court patronage, transport penetration and regional and craft variation determined the Indian outcome. Some coarse rural and specialised luxury production persisted. The Industrial Revolution supplied the cost and scale advantage; colonial power converted that advantage into asymmetric market access, so the decline was technologically enabled but politically mediated.

Qualification: Treat the stated causal weight as bounded by the question's period, geography and evidence status; do not convert it into inevitability or a universal civilisational claim.

ORIGINAL MAINS 1 - 10 MARKS

Question: Why did England industrialise first? Answer in about 150 words.

Model thesis: England's lead arose from a conjunction of capital, coal, labour release, agricultural surplus, markets, transport and commercial institutions rather than a single invention.

Claim -> named evidence -> analysis -> qualification:

- Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause.
- England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive.
- The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence.

- Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population.
- Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise.

Qualified conclusion: England's lead arose from a conjunction of capital, coal, labour release, agricultural surplus, markets, transport and commercial institutions rather than a single invention.

Demand decoding: The directive **answer** requires a direct position on “Why did England industrialise first? Answer in about 150 words.”, every clause and time boundary, chronological-causal organisation, named evidence, a counter-position and a qualified global verdict.

Detailed examiner-grade model status: The solved content above is the executable answer base. Preserve its thesis, named chronology, spatial evidence, causal mechanism, counter-position and qualification rather than replacing it with a generic narrative.

Executable exam-length answer / compression plan: For a 10-mark answer, open with a two-sentence thesis and a spatial-temporal frame; organise three named events, treaties, actors, regions, institutions or attributed interpretations as claim -> evidence -> analysis -> qualification; reserve the final lines for a graded conclusion.

Why this earns marks: The answer obeys the directive, distinguishes structure, trigger and outcome, connects evidence to mechanism, includes non-European agency and avoids teleology, presentism and monocausal explanation.

How to improve this answer: For “Why did England industrialise first? Answer in about 150 words.”, replace the weakest generalisation with one additional named treaty, regional case, primary record or attributed scholarly position and state what that evidence cannot prove.

Detailed examiner-grade model answer:

Introduction and thesis: England's lead arose from a conjunction of capital, coal, labour release, agricultural surplus, markets, transport and commercial institutions rather than a single invention.

Analytical body:

1. **Claim and named evidence:** Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
2. **Claim and named evidence:** England's abundant coal and iron supported energy-intensive machinery, though resources required markets, institutions and capital to become productive. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
3. **Claim and named evidence:** The enclosure movement released landless labour for factories, linking agricultural change to industrial wage dependence. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
4. **Claim and named evidence:** Crop rotation, manuring and new implements raised food supply and helped sustain a non-farming urban population. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
5. **Claim and named evidence:** Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

Counter-position / limit: No single actor, battle, treaty, ideology or economic pressure should be made sufficient where the evidence shows interaction among structures, triggers, agency and uneven regional outcomes.

Qualified conclusion: England's lead arose from a conjunction of capital, coal, labour release, agricultural surplus, markets, transport and commercial institutions rather than a single invention.

ORIGINAL MAINS 2 - 10 MARKS

Question: Why was the factory system a decisive break from domestic production? Answer in about 150 words.

Model thesis: Factories concentrated machinery, labour supervision, steam power and time discipline, increasing scale while creating new wage dependence.

Claim -> named evidence -> analysis -> qualification:

- Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine.
- Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories.
- The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline.
- Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.

Qualified conclusion: Factories concentrated machinery, labour supervision, steam power and time discipline, increasing scale while creating new wage dependence.

Demand decoding: The directive **answer** requires a direct position on "Why was the factory system a decisive break from domestic production? Answer in about 150...", every clause and time boundary, chronological-causal organisation, named evidence, a counter-position and a qualified global verdict.

Detailed examiner-grade model status: The solved content above is the executable answer base. Preserve its thesis, named chronology, spatial evidence, causal mechanism, counter-position and qualification rather than replacing it with a generic narrative.

Executable exam-length answer / compression plan: For a 10-mark answer, open with a two-sentence thesis and a spatial-temporal frame; organise three named events, treaties, actors, regions, institutions or attributed interpretations as claim -> evidence -> analysis -> qualification; reserve the final lines for a graded conclusion.

Why this earns marks: The answer obeys the directive, distinguishes structure, trigger and outcome, connects evidence to mechanism, includes non-European agency and avoids teleology, presentism and monocausal explanation.

How to improve this answer: For "Why was the factory system a decisive break from domestic production? Answer in about 150...", replace the weakest generalisation with one additional named treaty, regional case, primary record or attributed scholarly position and state what that evidence cannot prove.

Detailed examiner-grade model answer:

Introduction and thesis: Factories concentrated machinery, labour supervision, steam power and time discipline, increasing scale while creating new wage dependence.

Analytical body:

1. **Claim and named evidence:** Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
2. **Claim and named evidence:** Edmund Cartwright's power loom of 1785 mechanised weaving and helped integrate textile production inside factories. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
3. **Claim and named evidence:** The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

4. **Claim and named evidence:** Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

Counter-position / limit: No single actor, battle, treaty, ideology or economic pressure should be made sufficient where the evidence shows interaction among structures, triggers, agency and uneven regional outcomes.

Qualified conclusion: Factories concentrated machinery, labour supervision, steam power and time discipline, increasing scale while creating new wage dependence.

ORIGINAL MAINS 3 - 15 MARKS

Question: Examine the social consequences of the Industrial Revolution. Answer in about 250 words.

Model thesis: Productivity and urban growth created capitalist and working classes, harsh gendered and child labour, slums, unions, labour law and demands for political rights.

Claim -> named evidence -> analysis -> qualification:

- Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes.
- Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.
- The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak.
- Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights.
- Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story.

Qualified conclusion: Productivity and urban growth created capitalist and working classes, harsh gendered and child labour, slums, unions, labour law and demands for political rights.

Demand decoding: The directive **examine** requires a direct position on “Examine the social consequences of the Industrial Revolution. Answer in about 250 words.”, every clause and time boundary, chronological-causal organisation, named evidence, a counter-position and a qualified global verdict.

Detailed examiner-grade model status: The solved content above is the executable answer base. Preserve its thesis, named chronology, spatial evidence, causal mechanism, counter-position and qualification rather than replacing it with a generic narrative.

Executable exam-length answer / compression plan: For a 15-mark answer, open with a two-sentence thesis and a spatial-temporal frame; organise five named events, treaties, actors, regions, institutions or attributed interpretations as claim -> evidence -> analysis -> qualification; reserve the final lines for a graded conclusion.

Why this earns marks: The answer obeys the directive, distinguishes structure, trigger and outcome, connects evidence to mechanism, includes non-European agency and avoids teleology, presentism and monocausal explanation.

How to improve this answer: For “Examine the social consequences of the Industrial Revolution. Answer in about 250 words.”, replace the weakest generalisation with one additional named treaty, regional case, primary record or attributed scholarly position and state what that evidence cannot prove.

Detailed examiner-grade model answer:

Introduction and thesis: Productivity and urban growth created capitalist and working classes, harsh gendered and child labour, slums, unions, labour law and demands for political rights.

Analytical body:

1. **Claim and named evidence:** Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
2. **Claim and named evidence:** Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not

merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

3. **Claim and named evidence:** The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
4. **Claim and named evidence:** Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

Counter-position / limit: No single actor, battle, treaty, ideology or economic pressure should be made sufficient where the evidence shows interaction among structures, triggers, agency and uneven regional outcomes.

Qualified conclusion: Productivity and urban growth created capitalist and working classes, harsh gendered and child labour, slums, unions, labour law and demands for political rights.

ORIGINAL MAINS 4 - 15 MARKS

Question: Bring out the socio-economic effects of railways in different country settings. Answer in about 250 words.

Model thesis: Railways integrated industrial markets, accelerated continental catch-up, opened settler frontiers, enabled state modernisation and deepened colonial extraction according to the political economy they entered.

Claim -> named evidence -> analysis -> qualification:

- Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets.
- Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870.
- Russia and Japan followed later state-assisted paths; Japan's Meiji government from 1868 built railways, improved roads and promoted modern cotton and silk industry.
- Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire.

Qualified conclusion: Railways integrated industrial markets, accelerated continental catch-up, opened settler frontiers, enabled state modernisation and deepened colonial extraction according to the political economy they entered.

Demand decoding: The directive **answer** requires a direct position on "Bring out the socio-economic effects of railways in different country settings. Answer in...", every clause and time boundary, chronological-causal organisation, named evidence, a counter-position and a qualified global verdict.

Detailed examiner-grade model status: The solved content above is the executable answer base. Preserve its thesis, named chronology, spatial evidence, causal mechanism, counter-position and qualification rather than replacing it with a generic narrative.

Executable exam-length answer / compression plan: For a 15-mark answer, open with a two-sentence thesis and a spatial-temporal frame; organise five named events, treaties, actors, regions, institutions or attributed interpretations as claim -> evidence -> analysis -> qualification; reserve the final lines for a graded conclusion.

Why this earns marks: The answer obeys the directive, distinguishes structure, trigger and outcome, connects evidence to mechanism, includes non-European agency and avoids teleology, presentism and monocausal explanation.

How to improve this answer: For "Bring out the socio-economic effects of railways in different country settings. Answer in...", replace the weakest generalisation with one additional named treaty, regional case, primary record or attributed scholarly position and state what that evidence cannot prove.

Detailed examiner-grade model answer:

Introduction and thesis: Railways integrated industrial markets, accelerated continental catch-up, opened settler frontiers, enabled state modernisation and deepened colonial extraction according to the political economy they entered.

Analytical body:

1. **Claim and named evidence:** Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

Counter-position / limit: No single actor, battle, treaty, ideology or economic pressure should be made sufficient where the evidence shows interaction among structures, triggers, agency and uneven regional outcomes.

Qualified conclusion: Railways integrated industrial markets, accelerated continental catch-up, opened settler frontiers, enabled state modernisation and deepened colonial extraction according to the political economy they entered.

ORIGINAL MAINS 5 - 20 MARKS

Question: The Industrial Revolution was a mixed blessing. Critically examine. Answer in about 300 words.

Model thesis: Its productive gains were broad and long-term, while early costs were concentrated and immediate; the resulting conflict forced regulation, unionism and franchise reform.

Claim -> named evidence -> analysis -> qualification:

- James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector.
- Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine.
- The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline.
- Industrialisation shifted economic life toward towns and made capitalists and wage-workers central social classes.
- Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions.
- The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak.
- Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights.
- Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story.

Qualified conclusion: Its productive gains were broad and long-term, while early costs were concentrated and immediate; the resulting conflict forced regulation, unionism and franchise reform.

Demand decoding: The directive **critically examine** requires a direct position on "The Industrial Revolution was a mixed blessing. Critically examine. Answer in about 300 words.", every clause and time boundary,

chronological-causal organisation, named evidence, a counter-position and a qualified global verdict.

Detailed examiner-grade model status: The solved content above is the executable answer base. Preserve its thesis, named chronology, spatial evidence, causal mechanism, counter-position and qualification rather than replacing it with a generic narrative.

Executable exam-length answer / compression plan: For a 20-mark answer, open with a two-sentence thesis and a spatial-temporal frame; organise six to eight named events, treaties, actors, regions, institutions or attributed interpretations as claim -> evidence -> analysis -> qualification; reserve the final lines for a graded conclusion.

Why this earns marks: The answer obeys the directive, distinguishes structure, trigger and outcome, connects evidence to mechanism, includes non-European agency and avoids teleology, presentism and monocausal explanation.

How to improve this answer: For “The Industrial Revolution was a mixed blessing. Critically examine. Answer in about 300 words.”, replace the weakest generalisation with one additional named treaty, regional case, primary record or attributed scholarly position and state what that evidence cannot prove.

Detailed examiner-grade model answer:

Introduction and thesis: Its productive gains were broad and long-term, while early costs were concentrated and immediate; the resulting conflict forced regulation, unionism and franchise reform.

Analytical body:

1. **Claim and named evidence:** James Hargreaves' spinning jenny of 1764 accelerated spinning in the leading cotton-textile sector. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
2. **Claim and named evidence:** Arkwright's water frame and Watt's steam-engine improvement era around 1769 deepened mechanisation; Watt improved rather than solely invented the steam engine. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
3. **Claim and named evidence:** The factory system replaced much domestic putting-out production with concentrated machinery, supervision and time discipline. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

5. **Claim and named evidence:** Early factories relied heavily on women and children amid long hours, low wages, insecurity and slum conditions. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
6. **Claim and named evidence:** The first Factory Act in England in 1802 began labour regulation, though early enforcement remained weak. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
7. **Claim and named evidence:** Repeal of anti-union laws in 1824 enabled union growth, while Chartism in the 1830s and 1840s connected labour conditions with political rights. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
8. **Claim and named evidence:** Industrialisation raised long-run productive capacity but concentrated immediate social costs on workers, making labour law, unionism and political reform part of the industrial story. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

Counter-position / limit: No single actor, battle, treaty, ideology or economic pressure should be made sufficient where the evidence shows interaction among structures, triggers, agency and uneven regional outcomes.

Qualified conclusion: Its productive gains were broad and long-term, while early costs were concentrated and immediate; the resulting conflict forced regulation, unionism and franchise reform.

ORIGINAL MAINS 6 - 20 MARKS

Question: Analyse the relationship between industrialisation and imperialism. Answer in about 300 words.

Model thesis: Industrial output intensified the search for raw materials, markets and investment and sharpened interstate rivalry, but imperialism also had strategic, political and ideological causes.

Claim -> named evidence -> analysis -> qualification:

- Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause.
- Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise.
- Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets.
- Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870.
- Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire.

Qualified conclusion: Industrial output intensified the search for raw materials, markets and investment and sharpened interstate rivalry, but imperialism also had strategic, political and ideological causes.

Demand decoding: The directive **analyse** requires a direct position on “Analyse the relationship between industrialisation and imperialism. Answer in about 300 words.”, every clause and time boundary, chronological-causal organisation, named evidence, a counter-position and a qualified global verdict.

Detailed examiner-grade model status: The solved content above is the executable answer base. Preserve its thesis, named chronology, spatial evidence, causal mechanism, counter-position and qualification rather than replacing it with a generic narrative.

Executable exam-length answer / compression plan: For a 20-mark answer, open with a two-sentence thesis and a spatial-temporal frame; organise six to eight named events, treaties, actors, regions, institutions or attributed interpretations as claim -> evidence -> analysis -> qualification; reserve the final lines for a graded conclusion.

Why this earns marks: The answer obeys the directive, distinguishes structure, trigger and outcome, connects evidence to mechanism, includes non-European agency and avoids teleology, presentism and monocausal explanation.

How to improve this answer: For “Analyse the relationship between industrialisation and imperialism. Answer in about 300 words.”, replace the weakest generalisation with one additional named treaty, regional case, primary record or attributed scholarly position and state what that evidence cannot prove.

Detailed examiner-grade model answer:

Introduction and thesis: Industrial output intensified the search for raw materials, markets and investment and sharpened interstate rivalry, but imperialism also had strategic, political and ideological causes.

Analytical body:

1. **Claim and named evidence:** Expanding trade, colonies and accumulated wealth supplied investible capital, but colonial gains were one element rather than the sole cause. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
2. **Claim and named evidence:** Overseas shipping and markets encouraged scale, while a commercially favourable post-seventeenth-century political-legal order reduced friction for enterprise. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

3. **Claim and named evidence:** Canals, macadam roads, steam boats and the first passenger railway in 1830 reduced transport costs and deepened national markets. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
4. **Claim and named evidence:** Industrialisation spread unevenly to France, Belgium and Switzerland after 1815, later to Germany, and rapidly in the United States especially after 1870. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.
5. **Claim and named evidence:** Rising output intensified demand for raw materials, markets and investment outlets, greatly strengthening imperial rivalry without mechanically creating empire. **Analysis:** Use this evidence to establish the mechanism asked in the directive, not merely to narrate the event. **Qualification:** Keep its chronological, regional and interpretive boundary explicit.

Counter-position / limit: No single actor, battle, treaty, ideology or economic pressure should be made sufficient where the evidence shows interaction among structures, triggers, agency and uneven regional outcomes.

Qualified conclusion: Industrial output intensified the search for raw materials, markets and investment and sharpened interstate rivalry, but imperialism also had strategic, political and ideological causes.
