

SOLVED PRACTICE WORKBOOK

Participatory Governance - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Participatory Governance - Solved Practice Workbook 6

BASIC MCQS / REMEDIATION 6

Q1. Which statement correctly identifies What participation quality owns and what it cross-links?	6
Q2. Which chronology card should be filed under What participation quality owns and what it cross-links?	6
Q3. Which option preserves the source-bounded meaning of What participation quality owns and what it cross-links?	7
Q4. Which statement avoids a close-option trap about What participation quality owns and what it cross-links?	7
Q5. Which statement correctly identifies Subsidiarity is an efficiency argument before it is a democratic one?	8
Q6. Which chronology card should be filed under Subsidiarity is an efficiency argument before it is a democratic one?	8
Q7. Which option preserves the source-bounded meaning of Subsidiarity is an efficiency argument before it is a democratic one?	9
Q8. Which statement avoids a close-option trap about Subsidiarity is an efficiency argument before it is a democratic one?	9
Q9. Which statement correctly identifies Subsidiarity is a principle of the appropriate level?	10
Q10. Which chronology card should be filed under Subsidiarity is a principle of the appropriate level?	10
Q11. Which option preserves the source-bounded meaning of Subsidiarity is a principle of the appropriate level?	11
Q12. Which statement avoids a close-option trap about Subsidiarity is a principle of the appropriate level?	11
Q13. Which statement correctly identifies Participation quality against participation frequency?	12
Q14. Which chronology card should be filed under Participation quality against participation frequency?	12
Q15. Which option preserves the source-bounded meaning of Participation quality against participation frequency?	13
Q16. Which statement avoids a close-option trap about Participation quality against participation frequency?	14
Q17. Which statement correctly identifies The participation ladder from information to delegated control?	14
Q18. Which chronology card should be filed under The participation ladder from information to delegated control?	15
Q19. Which option preserves the source-bounded meaning of The participation ladder from information to delegated control?	15
Q20. Which statement avoids a close-option trap about The participation ladder from information to delegated control?	16
Q21. Which statement correctly identifies The Indian participation paradox?	16
Q22. Which chronology card should be filed under The Indian participation paradox?	17
Q23. Which option preserves the source-bounded meaning of The Indian participation paradox?	17
Q24. Which statement avoids a close-option trap about The Indian participation paradox?	18
Q25. Which statement correctly identifies The Pre-Legislative Consultation Policy of 2014 and its exact status?	18
Q26. Which chronology card should be filed under The Pre-Legislative Consultation Policy of 2014 and its exact status?	19

Q27. Which option preserves the source-bounded meaning of The Pre-Legislative Consultation Policy of 2014 and its exact status?	19
Q28. Which statement avoids a close-option trap about The Pre-Legislative Consultation Policy of 2014 and its exact status?	20
Q29. Which statement correctly identifies The citizen-engagement platform and one dated consultation window?	21
Q30. Which chronology card should be filed under The citizen-engagement platform and one dated consultation window?	21
Q31. Which option preserves the source-bounded meaning of The citizen-engagement platform and one dated consultation window?	22
Q32. Which statement avoids a close-option trap about The citizen-engagement platform and one dated consultation window?	22
Q33. Which statement correctly identifies The village assembly and the authority test?	23
Q34. Which chronology card should be filed under The village assembly and the authority test?	23
Q35. Which option preserves the source-bounded meaning of The village assembly and the authority test?	24
Q36. Which statement avoids a close-option trap about The village assembly and the authority test?	24
Q37. Which statement correctly identifies Ward Committees and the Article 243S threshold?	25
Q38. Which chronology card should be filed under Ward Committees and the Article 243S threshold?	25
Q39. Which option preserves the source-bounded meaning of Ward Committees and the Article 243S threshold?	26
Q40. Which statement avoids a close-option trap about Ward Committees and the Article 243S threshold?	26
Q41. Which statement correctly identifies Participatory budgeting as co-decision at pilot scale?	27
Q42. Which chronology card should be filed under Participatory budgeting as co-decision at pilot scale?	27
Q43. Which option preserves the source-bounded meaning of Participatory budgeting as co-decision at pilot scale?	28
Q44. Which statement avoids a close-option trap about Participatory budgeting as co-decision at pilot scale?	28
Q45. Which statement correctly identifies Scheduled Areas, the Gram Sabha and consultation rather than consent?	29
Q46. Which chronology card should be filed under Scheduled Areas, the Gram Sabha and consultation rather than consent?	30
Q47. Which option preserves the source-bounded meaning of Scheduled Areas, the Gram Sabha and consultation rather than consent?	30
Q48. Which statement avoids a close-option trap about Scheduled Areas, the Gram Sabha and consultation rather than consent?	31
Q49. Which statement correctly identifies Why decisions drift upward?	31
Q50. Which chronology card should be filed under Why decisions drift upward?	32
Q51. Which option preserves the source-bounded meaning of Why decisions drift upward?	32
Q52. Which statement avoids a close-option trap about Why decisions drift upward?	33
Q53. Which statement correctly identifies Information loss in transmission and outcome mismatch?	34
Q54. Which chronology card should be filed under Information loss in transmission and outcome mismatch?	34
Q55. Which option preserves the source-bounded meaning of Information loss in transmission and outcome mismatch?	35

Q56. Which statement avoids a close-option trap about Information loss in transmission and outcome mismatch?	36
Q57. Which statement correctly identifies Two distinct separations inside one demand?	37
Q58. Which chronology card should be filed under Two distinct separations inside one demand?	37
Q59. Which option preserves the source-bounded meaning of Two distinct separations inside one demand?	38
Q60. Which statement avoids a close-option trap about Two distinct separations inside one demand?	39
Q61. Which statement correctly identifies The legitimate rationales for central decision-making?	40
Q62. Which chronology card should be filed under The legitimate rationales for central decision-making?	41
Q63. Which option preserves the source-bounded meaning of The legitimate rationales for central decision-making?	42
Q64. Which statement avoids a close-option trap about The legitimate rationales for central decision-making?	43
Q65. Which statement correctly identifies Elite capture and the design that answers it?	43
Q66. Which chronology card should be filed under Elite capture and the design that answers it?	44
Q67. Which option preserves the source-bounded meaning of Elite capture and the design that answers it?	45
Q68. Which statement avoids a close-option trap about Elite capture and the design that answers it?	46
Q69. Which statement correctly identifies The eight design tests that make deliberation real?	47
Q70. Which chronology card should be filed under The eight design tests that make deliberation real?	48
Q71. Which option preserves the source-bounded meaning of The eight design tests that make deliberation real?	49
Q72. Which statement avoids a close-option trap about The eight design tests that make deliberation real?	49
Q73. Which statement correctly identifies Co-production, partnership forms and diffused accountability?	50
Q74. Which chronology card should be filed under Co-production, partnership forms and diffused accountability?	51
Q75. Which option preserves the source-bounded meaning of Co-production, partnership forms and diffused accountability?	52
Q76. Which statement avoids a close-option trap about Co-production, partnership forms and diffused accountability?	52
Q77. Which statement correctly identifies Absent participants, trade-offs and honest question ownership?	53
Q78. Which chronology card should be filed under Absent participants, trade-offs and honest question ownership?	54
Q79. Which option preserves the source-bounded meaning of Absent participants, trade-offs and honest question ownership?	55
Q80. Which statement avoids a close-option trap about Absent participants, trade-offs and honest question ownership?	56

Participatory Governance - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies What participation quality owns and what it cross-links?

A. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. B. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. C. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. D. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one.

Answer: A. Explanation: This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. The remaining options belong to different chronology, actor or analytical categories.

Q2. Which chronology card should be filed under What participation quality owns and what it cross-links?

A. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. B. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. C. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. D. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies.

Answer: B. Explanation: This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the

constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. The remaining options belong to different chronology, actor or analytical categories.

Q3. Which option preserves the source-bounded meaning of What participation quality owns and what it cross-links?

A. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. B. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. C. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. D. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies.

Answer: C. Explanation: This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. The remaining options belong to different chronology, actor or analytical categories.

Q4. Which statement avoids a close-option trap about What participation quality owns and what it cross-links?

A. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. B. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. C. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. D. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the

constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material.

Answer: D. Explanation: This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. The remaining options belong to different chronology, actor or analytical categories.

Q5. Which statement correctly identifies Subsidiarity is an efficiency argument before it is a democratic one?

A. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. B. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. C. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. D. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general.

Answer: A. Explanation: Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. The remaining options belong to different chronology, actor or analytical categories.

Q6. Which chronology card should be filed under Subsidiarity is an efficiency argument before it is a democratic one?

A. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. B. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. C. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism

on this ladder and then asking who is excluded from it is the structuring device this topic supplies. D. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all.

Answer: B. Explanation: Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. The remaining options belong to different chronology, actor or analytical categories.

Q7. Which option preserves the source-bounded meaning of Subsidiarity is an efficiency argument before it is a democratic one?

A. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. B. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. C. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. D. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation.

Answer: C. Explanation: Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. The remaining options belong to different chronology, actor or analytical categories.

Q8. Which statement avoids a close-option trap about Subsidiarity is an efficiency argument before it is a democratic one?

A. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. B. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation

compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. C. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. D. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one.

Answer: D. Explanation: Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. The remaining options belong to different chronology, actor or analytical categories.

Q9. Which statement correctly identifies Subsidiarity is a principle of the appropriate level?

A. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. B. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. C. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. D. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect.

Answer: A. Explanation: Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. The remaining options belong to different chronology, actor or analytical categories.

Q10. Which chronology card should be filed under Subsidiarity is a principle of the appropriate level?

A. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. B. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. C. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and

the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. D. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect.

Answer: B. Explanation: Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. The remaining options belong to different chronology, actor or analytical categories.

Q11. Which option preserves the source-bounded meaning of Subsidiarity is a principle of the appropriate level?

A. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. B. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. C. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. D. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect.

Answer: C. Explanation: Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. The remaining options belong to different chronology, actor or analytical categories.

Q12. Which statement avoids a close-option trap about Subsidiarity is a principle of the appropriate level?

A. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. B. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. C. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not

institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. D. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general.

Answer: D. Explanation: Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. The remaining options belong to different chronology, actor or analytical categories.

Q13. Which statement correctly identifies Participation quality against participation frequency?

A. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. B. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. C. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. D. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation.

Answer: A. Explanation: Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. The remaining options belong to different chronology, actor or analytical categories.

Q14. Which chronology card should be filed under Participation quality against participation frequency?

A. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. B. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. C. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion

and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. D. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect.

Answer: B. Explanation: Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. The remaining options belong to different chronology, actor or analytical categories.

Q15. Which option preserves the source-bounded meaning of Participation quality against participation frequency?

A. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. B. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. C. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. D. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted.

Answer: C. Explanation: Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. The remaining options belong to different chronology, actor or analytical categories.

Q16. Which statement avoids a close-option trap about Participation quality against participation frequency?

A. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. B. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. C. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. D. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all.

Answer: D. Explanation: Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. The remaining options belong to different chronology, actor or analytical categories.

Q17. Which statement correctly identifies The participation ladder from information to delegated control?

A. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. B. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. C. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. D. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect.

Answer: A. Explanation: Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is

asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. The remaining options belong to different chronology, actor or analytical categories.

Q18. Which chronology card should be filed under The participation ladder from information to delegated control?

A. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. B. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. C. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. D. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted.

Answer: B. Explanation: Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. The remaining options belong to different chronology, actor or analytical categories.

Q19. Which option preserves the source-bounded meaning of The participation ladder from information to delegated control?

A. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. B. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. C. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. D. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its

influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted.

Answer: C. Explanation: Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. The remaining options belong to different chronology, actor or analytical categories.

Q20. Which statement avoids a close-option trap about The participation ladder from information to delegated control?

A. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. B. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. C. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. D. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies.

Answer: D. Explanation: Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. The remaining options belong to different chronology, actor or analytical categories.

Q21. Which statement correctly identifies The Indian participation paradox?

A. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. B. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. C. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and

ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. D. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial.

Answer: A. Explanation: India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. The remaining options belong to different chronology, actor or analytical categories.

Q22. Which chronology card should be filed under The Indian participation paradox?

A. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. B. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. C. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. D. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted.

Answer: B. Explanation: India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. The remaining options belong to different chronology, actor or analytical categories.

Q23. Which option preserves the source-bounded meaning of The Indian participation paradox?

A. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. B. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. C. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument,

participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. D. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement.

Answer: C. Explanation: India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. The remaining options belong to different chronology, actor or analytical categories.

Q24. Which statement avoids a close-option trap about The Indian participation paradox?

A. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. B. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. C. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. D. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect.

Answer: D. Explanation: India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. The remaining options belong to different chronology, actor or analytical categories.

Q25. Which statement correctly identifies The Pre-Legislative Consultation Policy of 2014 and its exact status?

A. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. B. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. C. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment

window, and no campaign count, participation count, submission total or consultation outcome is asserted. D. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement.

Answer: A. Explanation: The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. The remaining options belong to different chronology, actor or analytical categories.

Q26. Which chronology card should be filed under The Pre-Legislative Consultation Policy of 2014 and its exact status?

A. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. B. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. C. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. D. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial.

Answer: B. Explanation: The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. The remaining options belong to different chronology, actor or analytical categories.

Q27. Which option preserves the source-bounded meaning of The Pre-Legislative Consultation Policy of 2014 and its exact status?

A. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. B. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. C. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive

policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. D. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area.

Answer: C. Explanation: The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. The remaining options belong to different chronology, actor or analytical categories.

Q28. Which statement avoids a close-option trap about The Pre-Legislative Consultation Policy of 2014 and its exact status?

A. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. B. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. C. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. D. The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation.

Answer: D. Explanation: The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation. The remaining options belong to different chronology, actor or analytical categories.

Q29. Which statement correctly identifies The citizen-engagement platform and one dated consultation window?

A. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. B. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. C. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. D. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial.

Answer: A. Explanation: MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. The remaining options belong to different chronology, actor or analytical categories.

Q30. Which chronology card should be filed under The citizen-engagement platform and one dated consultation window?

A. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. B. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. C. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. D. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale.

Answer: B. Explanation: MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public

consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. The remaining options belong to different chronology, actor or analytical categories.

Q31. Which option preserves the source-bounded meaning of The citizen-engagement platform and one dated consultation window?

A. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. B. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. C. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. D. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area.

Answer: C. Explanation: MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. The remaining options belong to different chronology, actor or analytical categories.

Q32. Which statement avoids a close-option trap about The citizen-engagement platform and one dated consultation window?

A. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. B. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. C. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. D. MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision

varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted.

Answer: D. Explanation: MyGov is the Government of India's citizen-engagement platform for crowdsourcing ideas, public discussion and campaign participation, and its influence on a final decision varies by initiative and is not institutionally guaranteed; its front page, read on 2 September 2026, displayed an open public consultation entry titled Public Consultation on the University Townships Initiative with a stated start date of 10 July 2026 and a stated end date of 20 August 2026, which is used here only as dated evidence that consultations are published with a defined comment window, and no campaign count, participation count, submission total or consultation outcome is asserted. The remaining options belong to different chronology, actor or analytical categories.

Q33. Which statement correctly identifies The village assembly and the authority test?

A. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. B. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. C. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. D. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the

budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale.

Answer: B. Explanation: The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. The remaining options belong to different chronology, actor or analytical categories.

Q35. Which option preserves the source-bounded meaning of The village assembly and the authority test?

A. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. B. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. C. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. D. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one.

Answer: C. Explanation: The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. The remaining options belong to different chronology, actor or analytical categories.

Q36. Which statement avoids a close-option trap about The village assembly and the authority test?

A. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. B. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. C. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical

claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. D. The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial.

Answer: D. Explanation: The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial. The remaining options belong to different chronology, actor or analytical categories.

Q37. Which statement correctly identifies Ward Committees and the Article 243S threshold?

A. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. B. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. C. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. D. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one.

Answer: A. Explanation: Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. The remaining options belong to different chronology, actor or analytical categories.

Q38. Which chronology card should be filed under Ward Committees and the Article 243S threshold?

A. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. B. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. C. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. D. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives

the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area.

Answer: B. Explanation: Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. The remaining options belong to different chronology, actor or analytical categories.

Q39. Which option preserves the source-bounded meaning of Ward Committees and the Article 243S threshold?

A. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. B. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. C. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. D. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one.

Answer: C. Explanation: Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. The remaining options belong to different chronology, actor or analytical categories.

Q40. Which statement avoids a close-option trap about Ward Committees and the Article 243S threshold?

A. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. B. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. C. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation

is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. D. Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement.

Answer: D. Explanation: Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement. The remaining options belong to different chronology, actor or analytical categories.

Q41. Which statement correctly identifies Participatory budgeting as co-decision at pilot scale?

A. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. B. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. C. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. D. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one.

Answer: A. Explanation: Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. The remaining options belong to different chronology, actor or analytical categories.

Q42. Which chronology card should be filed under Participatory budgeting as co-decision at pilot scale?

A. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. B. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. C. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation

is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. D. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate.

Answer: B. Explanation: Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. The remaining options belong to different chronology, actor or analytical categories.

Q43. Which option preserves the source-bounded meaning of Participatory budgeting as co-decision at pilot scale?

A. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. B. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. C. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. D. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate.

Answer: C. Explanation: Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. The remaining options belong to different chronology, actor or analytical categories.

Q44. Which statement avoids a close-option trap about Participatory budgeting as co-decision at pilot scale?

A. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. B. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives

are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. C. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. D. Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale.

Answer: D. Explanation: Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale. The remaining options belong to different chronology, actor or analytical categories.

Q45. Which statement correctly identifies Scheduled Areas, the Gram Sabha and consultation rather than consent?

A. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. B. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. C. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. D. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government.

Answer: A. Explanation: In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. The remaining options belong to different chronology, actor or analytical categories.

Q46. Which chronology card should be filed under Scheduled Areas, the Gram Sabha and consultation rather than consent?

A. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. B. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. C. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. D. Answer: B. Explanation: In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. The remaining options belong to different chronology, actor or analytical categories.

Q47. Which option preserves the source-bounded meaning of Scheduled Areas, the Gram Sabha and consultation rather than consent?

A. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. B. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. C. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. D. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless.

Answer: C. Explanation: In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the

co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. The remaining options belong to different chronology, actor or analytical categories.

Q48. Which statement avoids a close-option trap about Scheduled Areas, the Gram Sabha and consultation rather than consent?

A. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. B. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. C. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. D. In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area.

Answer: D. Explanation: In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area. The remaining options belong to different chronology, actor or analytical categories.

Q49. Which statement correctly identifies Why decisions drift upward?

A. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. B. D. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong.

Answer: B. Explanation: Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. The remaining options belong to different chronology, actor or analytical categories.

Q51. Which option preserves the source-bounded meaning of Why decisions drift upward?

A. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. B. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response,

meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. C. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. D. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong.

Answer: C. Explanation: Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. The remaining options belong to different chronology, actor or analytical categories.

Q52. Which statement avoids a close-option trap about Why decisions drift upward?

A. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. B. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. C. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. D. Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one.

Answer: D. Explanation: Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive

because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one. The remaining options belong to different chronology, actor or analytical categories.

Q53. Which statement correctly identifies Information loss in transmission and outcome mismatch?

A. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. B. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. C. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. D. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government.

Answer: A. Explanation: Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. The remaining options belong to different chronology, actor or analytical categories.

Q54. Which chronology card should be filed under Information loss in transmission and outcome mismatch?

A. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless.

Answer: C. Explanation: Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. The remaining options belong to different chronology, actor or analytical categories.

Q56. Which statement avoids a close-option trap about Information loss in transmission and outcome mismatch?

A. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. B. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. C. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. D. Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate.

Answer: D. Explanation: Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate. The remaining options belong to different chronology, actor or analytical categories.

Q57. Which statement correctly identifies Two distinct separations inside one demand?

A. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. B. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. C. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. D. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance.

Answer: A. Explanation: The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. The remaining options belong to different chronology, actor or analytical categories.

Q58. Which chronology card should be filed under Two distinct separations inside one demand?

A. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. B. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. C. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning

whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. D. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless.

Answer: B. Explanation: The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. The remaining options belong to different chronology, actor or analytical categories.

Q59. Which option preserves the source-bounded meaning of Two distinct separations inside one demand?

A. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. B. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. C. The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a

locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. D. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance.

Answer: C. Explanation: The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. The remaining options belong to different chronology, actor or analytical categories.

Q60. Which statement avoids a close-option trap about Two distinct separations inside one demand?

A. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. B. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. C. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. D. The demand about responsibilities not located close to the source of information

and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government.

Answer: D. Explanation: The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government. The remaining options belong to different chronology, actor or analytical categories.

Q61. Which statement correctly identifies The legitimate rationales for central decision-making?

A. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. B. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. C. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. D. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance.

Answer: A. Explanation: Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. The remaining options belong to different chronology, actor or analytical categories.

Q62. Which chronology card should be filed under The legitimate rationales for central decision-making?

A. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. B. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. C. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. D. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance.

Answer: B. Explanation: Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. The remaining options belong to different chronology, actor or analytical categories.

Q63. Which option preserves the source-bounded meaning of The legitimate rationales for central decision-making?

A. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. B. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. C. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. D. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable.

Answer: C. Explanation: Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. The remaining options belong to different chronology, actor or analytical categories.

Q64. Which statement avoids a close-option trap about The legitimate rationales for central decision-making?

A. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. B. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. C. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. D. Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong.

Answer: D. Explanation: Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong. The remaining options belong to different chronology, actor or analytical categories.

Q65. Which statement correctly identifies Elite capture and the design that answers it?

A. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. B. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains

ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. C. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. D. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable.

Answer: A. Explanation: Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. The remaining options belong to different chronology, actor or analytical categories.

Q66. Which chronology card should be filed under Elite capture and the design that answers it?

A. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform

user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. B. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. C. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. D. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable.

Answer: B. Explanation: Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. The remaining options belong to different chronology, actor or analytical categories.

Q67. Which option preserves the source-bounded meaning of Elite capture and the design that answers it?

A. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. B. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that

changed a draft or named consultation outcome is asserted anywhere. C. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. D. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material.

Answer: C. Explanation: Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. The remaining options belong to different chronology, actor or analytical categories.

Q68. Which statement avoids a close-option trap about Elite capture and the design that answers it?

A. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. B. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. C. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. D. Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless.

Answer: D. Explanation: Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless. The remaining options belong to different chronology, actor or analytical categories.

Q69. Which statement correctly identifies The eight design tests that make deliberation real?

A. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. B. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. C. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. D. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere.

Answer: A. Explanation: Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. The remaining options belong to different chronology, actor or analytical categories.

Q70. Which chronology card should be filed under The eight design tests that make deliberation real?

A. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. B. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. C. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. D. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one.

Answer: B. Explanation: Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. The remaining options belong to different chronology, actor or analytical categories.

Q71. Which option preserves the source-bounded meaning of The eight design tests that make deliberation real?

A. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material. B. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. C. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general.

Answer: C. Explanation: Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. The remaining options belong to different chronology, actor or analytical categories.

Q72. Which statement avoids a close-option trap about The eight design tests that make deliberation real?

A. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. B. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. C. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. D. Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form

and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance.

Answer: D. Explanation: Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance. The remaining options belong to different chronology, actor or analytical categories.

Q73. Which statement correctly identifies Co-production, partnership forms and diffused accountability?

A. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. B. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. C. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. D. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and

constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material.

Answer: A. Explanation: Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. The remaining options belong to different chronology, actor or analytical categories.

Q74. Which chronology card should be filed under Co-production, partnership forms and diffused accountability?

A. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. B. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. C. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. D. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general.

Answer: C. Explanation: Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. The remaining options belong to different chronology, actor or analytical categories.

Q76. Which statement avoids a close-option trap about Co-production, partnership forms and diffused accountability?

A. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. B. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. C. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. D. Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting,

where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable.

Answer: D. Explanation: Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable. The remaining options belong to different chronology, actor or analytical categories.

Q77. Which statement correctly identifies Absent participants, trade-offs and honest question ownership?

A. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. B. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. C. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. D. This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material.

Answer: A. Explanation: Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and

disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. The remaining options belong to different chronology, actor or analytical categories.

Q78. Which chronology card should be filed under Absent participants, trade-offs and honest question ownership?

A. Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one. B. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. C. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. D. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general.

Answer: B. Explanation: Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can

decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. The remaining options belong to different chronology, actor or analytical categories.

Q79. Which option preserves the source-bounded meaning of Absent participants, trade-offs and honest question ownership?

A. Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general. B. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. C. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. D. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all.

Answer: C. Explanation: Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can

decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. The remaining options belong to different chronology, actor or analytical categories.

Q80. Which statement avoids a close-option trap about Absent participants, trade-offs and honest question ownership?

A. Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies. B. Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all. C. India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect. D. Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere.

Answer: D. Explanation: Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can

decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere. The remaining options belong to different chronology, actor or analytical categories.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

Two direct General Studies Paper-II Mains demands and one applied objective demand are routed to this topic across the audited ledgers, and both routed Mains stems used below were confirmed word for word in the locally held OCR-searchable official question papers. The audited 2018-2023 Mains ledger routes the 2019 demand on the need for cooperation among various service sectors and on partnership in the development process to this topic's Advanced companion, and the Basic owner records expressly that core routing supersedes that older Advanced pointer and holds all marks-bearing content for participation as a governance mechanism, so the demand is answered from the core file. The same ledger routes the 2022 demand on whether increasing dependence on donor agencies reduces the importance of community participation jointly to the development-processes owner and to this owner, because the stem names both the development industry and participation, so the four donor-distortion channels and the five-test grid remain with that owner and only the participation half is supplied here. The audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict to this Basic owner; the 2026 Set-A key held locally is provisional, so no option, answer letter or distractor is recorded or inferred. One ownership conflict is recorded openly rather than resolved by assertion, because the 2025 General Studies Paper-II demand on decision-making and problem-solving responsibilities not located close to the source of information and execution is discussed at length in the text of this owner while the audited 2024-2025 Mains ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half of that answer. No official answer key or marking scheme is held locally for any routed Mains demand, so every model solution below is an authored answer route rather than an official key.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- FACT: 2025 Q17: "In contemporary development models, decision-making and problem-solving responsibilities are not located close to the source of information and execution defeating the objectives of development. Critically evaluate." - structure the answer as (a) define subsidiarity and its information/execution rationale; (b) explain why centralisation persists (administrative convenience, capacity/coordination concerns, political control incentives); (c) show concretely how this mismatch defeats development objectives (misdiagnosed local needs, delayed correction, weak local ownership); (d) recommend subsidiarity-consistent correctives (genuine Gram Sabha/Ward Committee authority - see 12 for 3Fs, participatory budgeting, capacity-building) while acknowledging legitimate reasons for some centralisation (economies of scale, equity across regions, technical capacity gaps).

2026 PYQ Integration

Status: 2026 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2026.md. **Answer-key rule:** The 2026 Prelims and CSAT Set-A keys held locally are **provisional**; no option or answer is recorded or inferred in this integration.

- **Year represented:** 2026
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2026	Prelims GS-I	52	Participatory resolution of tribal land, waste management, and environmental conflict	Objective question; provisional 2026 Set-A key present locally, answer not inferred	Provisional 2026 Set-A key present locally (Ans - 2026 - GS1 - Provisional); key is provisional - no answer letter recorded or inferred here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Participatory resolution of tribal land, waste management, and environmental conflict

This block integrates the 2026 examinable demand and paper metadata. It is kept separate from the 2018-2023 and 2024-2025 blocks and does not convert a provisionally-keyed, answer-free objective question into a solved answer.

10. PYQ-based analytical application

- **FACT:** 2025 Q17 rewards distinguishing information-separation from execution-separation

explicitly, acknowledging centralisation's legitimate rationales (scale, equity, technical capacity) before critiquing its excess, and recommending co-decision (not merely consultation-based) subsidiarity-consistent correctives with capture safeguards - a markedly more sophisticated answer than a generic "decentralisation is good" response.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2019, 2022
- **Paper(s):** GS-II
- **Routed question demands:** 2

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2019	GS-II	17	Cooperation among service sectors and partnership in development	Examine · 15 marks · 250 words	Routed to owning topic; word limit taken from the instruction block	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.
2022	GS-II	17	Dependence on donor agencies and community participation in development	Justify your answer · 15 marks · 250 words	Cross-cutting; development industry and participation both named in the stem	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Cooperation among service sectors and partnership in development
- Dependence on donor agencies and community participation in development

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

PYQ DEMAND CARD 1 - 2019 General Studies Paper-II

Demand: The need for cooperation among various service sectors has been an inherent component of development discourse. Partnership bridges the gap among the sectors. It also sets in motion a culture of 'collaboration' and 'team spirit'. In the light of statements above examine India's development process. Answer in 250 words for 15 marks.

Status: Routed by the audited 2018-2023 Mains ledger to this topic's Advanced companion and answered from the Basic owner under the recorded core routing that supersedes the older Advanced pointer, and confirmed word for word in the locally held OCR-searchable official 2019 General Studies Paper-II. No official answer key is held locally, so the model solution is an authored answer route.

Model solution: Examine is a two-sided directive, so the answer must reframe the stem before endorsing it. Reframe first: the question is about co-production, meaning development outcomes produced jointly by government, market, civil society and citizens, rather than delivered by one actor to a passive recipient, and the phrase about collaboration and team spirit is the stem's own signal that it wants the mechanism and not a list of partners. Establish why partnership is structurally necessary and not merely desirable: outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one, so only the second produces the health outcome. Then keep the partnership forms distinct rather than merging them into the single word partnership, because the distinction is where the marks sit: contracting, in which the state buys delivery against a specification; convergence, in which several public agencies align at the point of delivery; co-production, in which citizens are co-producers through community monitoring, user and water-user groups and self-help-group-mediated delivery; and public-private partnership, in which risk and finance are shared under a contract with an output standard, competitive procurement, performance monitoring, dispute and exit rules and affordability safeguards. State the governance conditions under which partnership works: a clear allocation of responsibility so that shared work does not become nobody's work, a shared information base, a single accountable authority for the outcome, and a dispute and exit mechanism. Now deliver the critical half that examine requires. Partnership can diffuse accountability, because when four actors share a task the citizen has no addressee for a failure. It can substitute for a state obligation rather than supplement it, converting an entitlement into a service that depends on a partner's continued presence. It can privilege organised partners over unorganised beneficiaries, because the partner who can write a proposal is not always the one who bears the problem. It also carries a coordination cost that is real and is routinely omitted from advocacy. Conclude with a conditional verdict: cooperation improves development outcomes where the duty-holder remains identifiable and the information base is shared, and it degrades them where partnership is used to distribute responsibility rather than work. Invent no project-level result, contract value or evaluation finding.

PYQ DEMAND CARD 2 - 2022 General Studies Paper-II

Demand: Do you agree with the view that increasing dependence on donor agencies for development reduces the importance of community participation in the development process? Justify your answer in 250 words for 15 marks.

Status: Routed by the audited 2018-2023 Mains ledger as a cross-cutting demand naming both the development industry and participation, and confirmed word for word in the locally held OCR-searchable official 2022 General Studies Paper-II. The four donor-distortion channels and the five-test grid are held by the development-processes owner and are not restated here; this owner supplies the participation half. No official answer key is held locally, so the model solution is an authored answer route.

Model solution: The directive asks for agreement with justification, so take a qualified position rather than a balanced shrug, and locate the argument where this owner is strong, namely in what genuine participation actually requires. Open with the qualified position: dependence reduces the importance of community participation only where the funding relationship relocates authority away from the community, and the same external rupee can either strengthen participation or displace it depending on who sets the agenda, who defines the success metric and who receives the report. Establish the participation half precisely. Genuine community participation means authority over a decision and not consultation on a decision already taken, which is the difference between the co-decision rung and the consultation rung of the participation ladder, so a project that convenes a community meeting to explain a design

already fixed by a grant agreement has satisfied consultation and delivered no participation. Show the mechanism by which dependence erodes that authority. First, priority-setting moves to the financing agreement, so the community deliberates about implementation and not about what should be done. Second, the reporting metric is defined externally, so the forum's attention is drawn to countable outputs rather than to locally valued outcomes. Third, project cycles are short while the institution-building that participation requires is slow, so a forum that would take years to become genuinely deliberative is assessed and closed within a funding period. Fourth, a paid facilitator dependent on the same grant cannot be an independent facilitator, which fails one of the design tests deliberation must satisfy. Add the qualification that keeps the answer honest: participation is not automatically virtuous either, because a devolved forum can be captured by locally dominant groups, so the correct comparison is between externally driven priorities and locally captured priorities rather than between dependence and an idealised community. Then state the conditions under which external finance and participation coexist, namely community control over priority-setting within a broad envelope, a locally agreed indicator carried alongside the donor's indicator, independent facilitation not paid from the project, a published response to objections, and an exit plan that leaves the forum with a recurring resource. Conclude that dependence reduces the importance of participation as a matter of design rather than as a matter of arithmetic, and that the test is whether the community still decides anything after the agreement is signed. Assert no funding figure, project outcome or agency name.

PYQ DEMAND CARD 3 - 2026 Preliminary Examination General Studies Paper-I

Demand: Objective demand on participatory resolution of tribal land, waste-management and environmental conflict, routed to this Basic owner by the audited 2026 Prelims ledger.

Status: The 2026 Set-A key held locally is provisional, so no option, answer letter or distractor is recorded or inferred, and no statute, authority or outcome is asserted beyond what the repository owners hold.

Model solution: The examinable content is participation in a conflict setting rather than in a planning setting, and the safe method is to answer from the design frame this owner holds. Begin from the controlling distinction between consultation, in which a community is asked and the decision-maker is not bound, consent, in which the community's agreement is a precondition, and co-decision, in which the community determines the outcome jointly, because objective statements in this family are usually built on a claim that one of these is present when another is. Attach the exact legal position this owner holds for Scheduled Areas: the Panchayats Extension to Scheduled Areas Act, 1996 gives the village assembly powers in Fifth Schedule areas that are not available elsewhere, including approval functions that sit on the co-decision rung, and it requires consultation before land acquisition and resettlement rather than a universal consent requirement, and it applies to Scheduled Areas rather than to every tribal-majority area. Then apply the conflict-specific design conditions, because deliberation resolves a dispute only where there is a recognised representative body that can speak for a side, an agreed factual basis such as a shared survey or measurement that both sides accept, a route to an outcome that binds once reached, and an independent facilitator rather than the implementing agency running its own hearing. Note the failure mode explicitly: deliberation without a route to a binding decision converts a dispute into a grievance, which is why an unresolved environmental or waste-siting conflict often reappears rather than settling. Add the inclusion test, since in land and siting disputes the absent parties are usually landless households, migrant workers and downstream residents who bear the effect without appearing on the roll of the deciding forum. Close on the honest boundary: the provisional nature of the locally held key means no option may be selected, and no statute, authority, timeline or outcome beyond the owner's own material may be asserted for this demand.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish participation quality from participation frequency in India's village assembly and ward committee system. Answer in about 150 words.

Model thesis: Frequency records attendance while quality records influence, so the distinction must be made through the authority question rather than through a list of forums, and the honest finding is that India has institutionalised the forms of participation without their substance.

Claim -> named evidence -> analysis -> qualification:

- Genuine participatory governance requires that a village assembly or ward meeting actually influences the decision under discussion, which is participation quality, and not merely that the meeting is held on schedule with a

recorded quorum, which is participation frequency and can become a compliance formality; an assembly that ratifies a plan already settled elsewhere satisfies frequency completely while delivering no participation at all.

- The village assembly is the forum of all registered voters in a Panchayat area and is the primary constitutional forum for direct citizen participation in local governance, so the question to ask of it is not how often it met but what it can actually decide and whether that decision binds the Panchayat; where the development plan is genuinely settled in the assembly the forum is real, and where the plan arrives for ratification the forum is ceremonial.
- Article 243S requires the constitution of Ward Committees in municipalities with a population of three lakh or more, with State law determining their composition and detail, so urban participation has a constitutional anchor with a population threshold and a State-variable design, and the resulting urban participation gap is structural rather than incidental because a smaller municipality carries no such requirement.
- Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies.

Qualified conclusion: Frequency records attendance while quality records influence, so the distinction must be made through the authority question rather than through a list of forums, and the honest finding is that India has institutionalised the forms of participation without their substance.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain why subsidiarity is better presented as an efficiency principle than as a democratic preference. Answer in about 150 words.

Model thesis: The information and execution argument makes subsidiarity testable, because a decision taken away from current local knowledge misdiagnoses need and mis-sequences delivery whatever the funding, while the appropriate-level qualification prevents the principle from collapsing into absolute localism.

Claim -> named evidence -> analysis -> qualification:

- Subsidiarity holds that decisions and problem-solving responsibility should sit as close as possible to the level that holds the relevant information and will carry out the decision, and its force is informational rather than sentimental, because a decision taken far from where information originates and where execution occurs is systematically worse irrespective of the resources behind it; framing the principle as an efficiency argument rather than as a democratic preference is what converts a moralising answer into an analytical one.
- Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general.
- Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate.
- Centralisation is legitimately justified by economies of scale in large infrastructure, by inter-regional equity in redistributive transfers, by genuine technical-capacity requirements such as epidemiology and structural engineering, and by rights that must not vary locally such as non-discrimination, so naming these before criticising central excess is what separates an evaluation from advocacy; a large national highway corridor is the standard example where the scale rationale is genuinely strong.

Qualified conclusion: The information and execution argument makes subsidiarity testable, because a decision taken away from current local knowledge misdiagnoses need and mis-sequences delivery whatever the funding, while the appropriate-level qualification prevents the principle from collapsing into absolute localism.

ORIGINAL MAINS 3 - 15 MARKS

Question: Examine the participation ladder as a device for evaluating any citizen-engagement mechanism in India. Answer in about 250 words.

Model thesis: The ladder converts a vague question about participation into a placement exercise, and its Indian application yields a paradox in which the most institutionalised instruments occupy the weakest rungs while the most co-decisional instrument remains the least institutionalised.

Claim -> named evidence -> analysis -> qualification:

- Participation can be graded on a ladder whose rungs are information, meaning the citizen is told after the decision and which is not participation at all, consultation, meaning the citizen is asked and the decision-maker is not bound, involvement, meaning the citizen takes part in planning, co-decision, meaning the citizen determines an outcome, co-production, meaning the citizen helps produce the outcome, and delegated control, meaning the community runs the service; placing any mechanism on this ladder and then asking who is excluded from it is the structuring device this topic supplies.
- India's most institutionalised participation instruments, namely pre-legislative consultation and the citizen-engagement platform, sit on the weakest rungs of the ladder, while its most genuinely co-decisional instrument, participatory budgeting, remains the least institutionalised and operates at pilot scale, and stating that inversion in one sentence answers a large family of stems because it explains why participation is visible in India and weak in effect.
- The Union's Pre-Legislative Consultation Policy of 2014 calls for the publication of draft legislation with explanatory material and ordinarily at least thirty days for comments, subject to stated exceptions, and its precise status is that it is an executive policy rather than a statute, that comments are not binding, and that there is no general duty to publish a reasoned response; opening a comment window without showing how major objections were handled is participation compliance rather than deliberative accountability, which is why a consultation feedback matrix should be demanded in any recommendation.
- Participatory budgeting allows citizens to deliberate directly and decide on the allocation of a defined share of a public budget rather than leaving the budget to representatives and administrators alone, which places it on the co-decision rung, and in India it remains a scattered set of municipal and ward-level pilots that typically cover only a modest share of the municipal budget rather than a universal practice; the honest formulation is genuinely co-decisional and genuinely small in scale.

Qualified conclusion: The ladder converts a vague question about participation into a placement exercise, and its Indian application yields a paradox in which the most institutionalised instruments occupy the weakest rungs while the most co-decisional instrument remains the least institutionalised.

ORIGINAL MAINS 4 - 15 MARKS

Question: Examine why decision-making drifts away from the source of information in Indian development administration, and what it costs. Answer in about 250 words.

Model thesis: Drift is produced by four distinguishable drivers rather than by a single failure of will, and its cost is an outcome mismatch that no increase in funding corrects, so the corrective must relocate authority rather than merely add resources or consultation.

Claim -> named evidence -> analysis -> qualification:

- Four drivers push authority upward, namely administrative convenience because one design is simpler to run than hundreds of local variants, a capacity argument that is genuine and also self-fulfilling because capacity is never built where authority is never given, a political-control incentive because discretionary allocation carries political credit, and coordination concerns in schemes that span many jurisdictions; naming the drivers separately is what allows an answer to say which of them is a legitimate reason and which is merely a convenient one.
- Even where a central planner genuinely intends to use local information, the chain from local report through block and district to State and Union filters, delays and aggregates that information at every step, so the decision is taken without current local knowledge and the outcome mismatches, producing a standard design unsuited to the terrain or social structure, a sequence that does not match local execution capacity, or a scheme that arrives too late to be useful; the development objective is then defeated even where the funding was adequate.

- The demand about responsibilities not located close to the source of information and execution contains two analytically different failures, namely separation from information, where the decision-maker lacks accurate local knowledge, and separation from execution, where the decision-maker has neither awareness of nor accountability for implementation reality, and treating them separately rather than merging them into one complaint about centralisation is the move that earns the higher band; the analytical claim to state explicitly is that this is a locational mismatch between where knowledge sits and where the choice is made, rather than a generic objection to central government.
- Subsidiarity permits and sometimes requires a higher level to act where the lower level genuinely cannot act effectively, so it is a principle of the appropriate level rather than a blanket rule against central action, and the credible answer therefore identifies where centralisation has exceeded its own justification instead of opposing centralisation in general.

Qualified conclusion: Drift is produced by four distinguishable drivers rather than by a single failure of will, and its cost is an outcome mismatch that no increase in funding corrects, so the corrective must relocate authority rather than merely add resources or consultation.

ORIGINAL MAINS 5 - 20 MARKS

Question: Assess whether decentralised participation can be made genuinely inclusive, and state the design conditions it requires. Answer in about 300 words.

Model thesis: Devolution alone brings decisions closer to locally dominant groups as readily as to citizens, so inclusion is a design outcome rather than a devolution outcome, and the eight deliberation tests together with capture safeguards supply the conditions a defensible recommendation must contain.

Claim -> named evidence -> analysis -> qualification:

- Bringing a decision closer to citizens also brings it closer to locally dominant groups, so a decentralised forum can reflect the preference of a dominant caste or economic group rather than of the whole community, and the correctives are reservation and rotation, independent facilitation, disclosure of proceedings, quorum requirements, separate forums for excluded groups and social audit; each corrective adds administrative complexity, which is the real implementation cost of taking subsidiarity seriously rather than treating decentralisation as costless.
- Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance.
- Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and

participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere.

- In Fifth Schedule areas the Panchayats Extension to Scheduled Areas Act, 1996 gives the Gram Sabha powers not available elsewhere, including approval functions that place it on the co-decision rung, but the precision that decides marks is that the statute requires consultation before land acquisition and resettlement rather than a universal consent requirement, and that it applies to Scheduled Areas rather than to every tribal-majority area.

Qualified conclusion: Devolution alone brings decisions closer to locally dominant groups as readily as to citizens, so inclusion is a design outcome rather than a devolution outcome, and the eight deliberation tests together with capture safeguards supply the conditions a defensible recommendation must contain.

ORIGINAL MAINS 6 - 20 MARKS

Question: Assess the claim that cooperation and partnership among sectors improve development outcomes in India. Answer in about 300 words.

Model thesis: Partnership is structurally necessary because outcomes depend on household behaviour as much as on state supply, and it improves outcomes only where a single duty-holder remains identifiable, so the assessment must separate contracting, convergence, co-production and contractual partnership and confront the diffusion of accountability directly.

Claim -> named evidence -> analysis -> qualification:

- Development outcomes in health, education, sanitation, nutrition and livelihoods depend on household behaviour as much as on state supply, and sanitation is the clearest case because constructing a facility is a supply act while sustained use is a behavioural one and only the second produces the health outcome, so partnership is structurally necessary rather than merely desirable; the forms must be kept distinct as contracting, where the state buys delivery, convergence, where public agencies align at the point of delivery, co-production, where citizens are co-producers through community monitoring, user groups and self-help-group-mediated delivery, and public-private partnership, where risk and finance are shared under contract, and the critical half is that partnership can diffuse accountability so that shared work becomes nobody's work, can substitute for a state obligation and can privilege organised partners over unorganised beneficiaries, which is why cooperation improves outcomes only where a single duty-holder remains identifiable.
- This topic owns participation as a governance mechanism, namely whether a citizen forum actually decides anything, and it therefore analyses the quality of participation rather than the constitutional anatomy of the forums; the composition and constitutional mandate of the village assembly belong to Polity, the funds, functions and functionaries diagnostic belongs to the local-governance owner, and the donor-distortion channels that shape externally financed projects belong to the development-processes owner, so this owner cross-links to each of them instead of restating their material.
- Any participatory mechanism, including an unfamiliar one such as a citizen jury, a deliberative poll, an online consultation or a community scorecard, can be tested on authority, meaning whether the forum decides or merely advises, on timing, meaning whether it is consulted before options are foreclosed, on information, meaning whether budgets, options and trade-offs are supplied in usable form and language, on inclusion, meaning who is absent, on facilitation, meaning whether an independent facilitator runs it rather than the implementing agency, on record and response, meaning whether objections are recorded and a reasoned response published, on the feedback loop, meaning whether the participant learns what happened to the input, and in a conflict setting additionally on whether there is a recognised representative body, an agreed factual basis and a route to a binding outcome, because deliberation without a route to decision converts a dispute into a grievance.
- Participation costs wages and time so the poorest bear the highest relative cost of attending, which is itself a source of selection bias, deliberation costs time so outbreak response and disaster relief require differentiated rather than uniform participation, and a majority in an assembly can decide against a minority within the village, so participation is not a substitute for rights protection; the systematically absent categories are women, whose attendance, speaking time and proxy participation are three different things, landless and migrant households frequently outside the electoral roll on which the forum rests, persons with disabilities and the poorest. On ownership, the audited 2018-2023 Mains ledger routes the 2019 demand on cooperation among service sectors to

this topic's Advanced companion and the Basic owner records that core routing supersedes that pointer, the same ledger routes the 2022 demand on donor dependence against community participation jointly to the development-processes owner and to this owner so that only the participation half is supplied here, the audited 2026 Prelims ledger routes an objective demand on participatory resolution of tribal land, waste-management and environmental conflict here with a provisional key from which no answer is inferred, and one ownership conflict is recorded openly rather than resolved by assertion because the 2025 demand on decision-making distant from the source of information and execution is discussed at length in this owner while the audited 2024-2025 ledger routes it to the development-processes owner, so it is solved there and this owner supplies only the subsidiarity and participation half; no participatory-budgeting city or ward list, platform user or campaign count, assembly attendance or meeting-frequency statistic, count of functioning ward committees, percentage of consultations that changed a draft or named consultation outcome is asserted anywhere.

Qualified conclusion: Partnership is structurally necessary because outcomes depend on household behaviour as much as on state supply, and it improves outcomes only where a single duty-holder remains identifiable, so the assessment must separate contracting, convergence, co-production and contractual partnership and confront the diffusion of accountability directly.
