## MCQ 1

---

Which account best captures continuity and discontinuity between the early and later Wittgenstein?

A. The picture theory remains unchanged, while ordinary examples merely illustrate the same elementary propositions. B. The concern with language disappears, while a new metaphysical theory of mental objects replaces logical analysis entirely. C. The aim of clarification remains, while one logical form gives way to descriptions of diverse grammatical practices. D. The later work accepts verificationism, while the early work is recast as an empirical psychology of speech.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "The picture theory remains unchanged, while ordinary examples merely illustrate the same elementary propositions." Correct replacement: "The aim of clarification remains, while one logical form gives way to descriptions of diverse grammatical practices." This option fails because it denies the decisive abandonment of one pictorial essence and treats examples as decoration. - **B:** False proposition: "The concern with language disappears, while a new metaphysical theory of mental objects replaces logical analysis entirely." Correct replacement: "The aim of clarification remains, while one logical form gives way to descriptions of diverse grammatical practices." This option fails because it invents a metaphysical replacement and wrongly removes language from the later project. - **C:** This is correct because state continuity of therapeutic clarification and discontinuity about the source and structure of meaning. It preserves the tested distinction and applies it to the question's exact demand. - **D:** False proposition: "The later work accepts verificationism, while the early work is recast as an empirical psychology of speech." Correct replacement: "The aim of clarification remains, while one logical form gives way to descriptions of diverse grammatical practices." This option fails because it merges Later Wittgenstein with a distinct positivist programme and misclassifies the early method.

**Examiner trap 1:** Mistaking a methodological transformation for either total rupture or unchanged doctrine.

**Repair action:** State continuity of therapeutic clarification and discontinuity about the source and structure of meaning.

**Coverage mapping:** C01.

**PYQ linkage:** 2023 Q4(c); 2025 Q3(a).

## MCQ 2

---

Why is the colour-exclusion problem relevant to Wittgenstein's transition after the Tractatus?

A. Apparently elementary colour propositions exclude one another, pressuring the early requirement that elementary propositions be logically independent. B. The problem concerns private colour sensations alone, so it first appears within the diary argument of section 258. C. Colour incompatibility shows that propositions never picture facts, directly establishing the complete later philosophy as a complete semantic account. D. Colour words lack observable instances, proving that all ordinary propositions are metaphysical pseudostatements.

**Answer: A.**

**Option explanations:** - **A:** This is correct because present colour exclusion as an internal crack, then add the Augustinian and methodological criticisms. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "The problem concerns private colour sensations alone, so it first appears within the diary argument of section 258." Correct replacement: "Apparently elementary colour propositions exclude one another, pressuring the early requirement that elementary propositions be logically independent." This option fails because it relocates a 1929 problem into the much later private-language discussion and changes its target. - **C:** False proposition: "Colour incompatibility shows that propositions never picture facts, directly establishing the complete later philosophy as a complete semantic account." Correct replacement: "Apparently elementary colour propositions exclude one another, pressuring the early requirement that elementary propositions be logically independent." This option fails because it overstates one internal pressure as a deductive proof of every later doctrine. - **D:** False proposition: "Colour words lack observable instances, proving that all ordinary propositions are metaphysical pseudostatements." Correct replacement: "Apparently elementary colour propositions exclude one another, pressuring the early requirement that elementary propositions be logically independent." This option fails because it reverses the case because colours are observable and the issue is logical dependence, not positivist meaninglessness.

**Examiner trap 2:** Using one historical pressure as if it independently proved meaning as use.

**Repair action:** Present colour exclusion as an internal crack, then add the Augustinian and methodological criticisms.

**Coverage mapping:** C01.

**PYQ linkage:** 2023 Q4(c); 2025 Q3(a).

## MCQ 3

---

Which provenance statement is accurate for an examination answer on Philosophical Investigations?

A. The work appeared in 1969 as notes on certainty, with Kripke responsible for its English translation. B. The work appeared posthumously in 1953, with Anscombe and Rhees as editors and Anscombe as translator. C. Wittgenstein published the completed work in 1921 with Russell's introduction and later withdrew its central thesis. D. The work was a Vienna Circle manifesto jointly issued by Wittgenstein, Schlick and Carnap in 1929.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "The work appeared in 1969 as notes on certainty, with Kripke responsible for its English translation." Correct replacement: "The work appeared posthumously in 1953, with Anscombe and Rhees as editors and Anscombe as translator." This option fails because it confuses On Certainty and a secondary interpreter with the Investigations publication. - **B:** This is correct because attach 1921 or 1922 to the Tractatus and 1953 posthumously to the Investigations. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "Wittgenstein published the completed work in 1921 with Russell's introduction and later withdrew its central thesis." Correct replacement: "The work appeared posthumously in 1953, with Anscombe and Rhees as editors and Anscombe as translator." This option fails because it assigns the date and publication history of the

Tractatus to the later work. - **D:** False proposition: "The work was a Vienna Circle manifesto jointly issued by Wittgenstein, Schlick and Carnap in 1929." Correct replacement: "The work appeared posthumously in 1953, with Anscombe and Rhees as editors and Anscombe as translator." This option fails because it converts a posthumous philosophical work into an institutional positivist manifesto.

**Examiner trap 3:** Confusing the dates, editors and genres of Wittgenstein's distinct works.

**Repair action:** Attach 1921 or 1922 to the Tractatus and 1953 posthumously to the Investigations.

**Coverage mapping:** C01.

**PYQ linkage:** All transition PYQs.

## MCQ 4

---

A candidate says that later Wittgenstein simply replaced an ideal language with a better ordinary-language theory. What is the best correction?

A. He kept philosophy's clarificatory aim but rejected one explanatory theory, using case-specific descriptions to dissolve confusion. B. He recast philosophy as an empirical study of verbal conduct, allowing observation to settle the conceptual questions left by logic. C. He treated ordinary conventions as authoritative rules whose stability provides a general theory of linguistic correctness. D. He transferred the Tractarian search for a single calculus to established ordinary usage, but treated that usage as the final explanatory system.

**Answer: A.**

**Option explanations:** - **A:** This is correct because the later method preserves philosophical clarification while replacing a general semantic calculus with reminders, comparisons and case-sensitive grammatical investigation. - **B:** False proposition: "He recast philosophy as an empirical study of verbal conduct, allowing observation to settle the conceptual questions left by logic." Correct replacement: "He kept philosophy's clarificatory aim but rejected one explanatory theory, using case-specific descriptions to dissolve confusion." This option mistakes grammatical investigation for behavioural science. - **C:** False proposition: "He treated ordinary conventions as authoritative rules whose stability provides a general theory of linguistic correctness." Correct replacement: "He kept philosophy's clarificatory aim but rejected one explanatory theory, using case-specific descriptions to dissolve confusion." This option substitutes conventionalist system-building for therapeutic description. - **D:** False proposition: "He transferred the Tractarian search for a single calculus to established ordinary usage, but treated that usage as the final explanatory system." Correct replacement: "He kept philosophy's clarificatory aim but rejected one explanatory theory, using case-specific descriptions to dissolve confusion." This option wrongly turns ordinary usage into the successor system to ideal analysis.

**Examiner trap 4:** Turning an anti-systematic method into another universal theory or into anti-philosophy.

**Repair action:** Describe reminders, comparisons and perspicuous representation as philosophical work without making them a hidden calculus.

**Coverage mapping:** C01.

**PYQ linkage:** 2023 Q4(c); 2025 Q3(a).

## MCQ 5

---

Which ownership statement correctly separates Topic 08 from the two preceding topics?

A. Picture theory is owned by Topic 06 and verificationism by Topic 07, while their contrast with use is cross-linked here. B. Every question mentioning Wittgenstein belongs to Topic 08, regardless of whether it concerns the Tractatus or Investigations. C. Verificationism becomes a Later Wittgenstein doctrine because section 353 mentions asking how a proposition may be verified. D. The hierarchy of languages question belongs primarily here because later language-games also recognize multiple linguistic practices.

**Answer: A.**

**Option explanations:** - **A:** This is correct because assign ownership by the principal doctrine demanded, and label comparisons without recounting them. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "Every question mentioning Wittgenstein belongs to Topic 08, regardless of whether it concerns the Tractatus or Investigations." Correct replacement: "Picture theory is owned by Topic 06 and verificationism by Topic 07, while their contrast with use is cross-linked here." This option fails because it erases the early and later syllabus division and duplicates Topic 06 ownership. - **C:** False proposition: "Verificationism becomes a Later Wittgenstein doctrine because section 353 mentions asking how a proposition may be verified." Correct replacement: "Picture theory is owned by Topic 06 and verificationism by Topic 07, while their contrast with use is cross-linked here." This option fails because it mistakes a local diagnostic question for a universal positivist criterion of meaning. - **D:** False proposition: "The hierarchy of languages question belongs primarily here because later language-games also recognize multiple linguistic practices." Correct replacement: "Picture theory is owned by Topic 06 and verificationism by Topic 07, while their contrast with use is cross-linked here." This option fails because it confuses Russell's proposed metalanguage hierarchy with the plurality of ordinary language-games.

**Examiner trap 5:** Inflating ownership whenever a neighbouring question contains familiar vocabulary.

**Repair action:** Assign ownership by the principal doctrine demanded, and label comparisons without recounting them.

**Coverage mapping:** C01.

**PYQ linkage:** Ownership reconciliation.

## MCQ 6

---

What is the precise force of the qualification in Philosophical Investigations section 43?

A. Only names have meanings, while logical particles and avowals are convenient but strictly meaningless noises. B. Use replaces reference entirely, making it incorrect to say that a proper name ever refers to an individual. C. Every expression means only its statistically most frequent occurrence across all communities and historical periods. D. In many cases, meaning can be clarified through use, without claiming one universal reduction of meaning.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "Only names have meanings, while logical particles and avowals are convenient but strictly meaningless noises." Correct replacement: "In many cases, meaning can be clarified through use, without claiming one universal reduction of meaning." This option fails because it revives the naming model and excludes the very cases used against that model. - **B:** False proposition: "Use replaces reference entirely, making it incorrect to say that a proper name ever refers to an individual." Correct replacement: "In many cases, meaning can be clarified through use, without claiming one universal reduction of meaning." This option fails because it turns a corrective to semantic monism into another monistic denial of legitimate reference. - **C:** False proposition: "Every expression means only its statistically most frequent occurrence across all communities and historical periods." Correct replacement: "In many cases, meaning can be clarified through use, without claiming one universal reduction of meaning." This option fails because it substitutes frequency for norm-governed role and ignores contextual grammar. - **D:** This is correct because quote the hedge and define use as a role governed by a practice. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 6:** Flattening the phrase 'for a large class of cases, though not for all' into an exceptionless slogan.

**Repair action:** Quote the hedge and define use as a role governed by a practice.

**Coverage mapping:** C02.

**PYQ linkage:** 2023 Q4(c); 2025 Q3(a); 2026 Q3(c).

## MCQ 7

---

Why does the toolbox analogy challenge the Augustinian picture of language?

A. Tools are useful only when privately imagined, so mental images supply the common foundation of linguistic understanding. B. A toolbox is a formal calculus whose rules determine every future sentence independently of training and circumstances. C. Every tool has one material bearer, proving that every meaningful expression must name a physical object. D. Different expressions perform different jobs, so naming is one linguistic function rather than the essence of every word.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "Tools are useful only when privately imagined, so mental images supply the common foundation of linguistic understanding." Correct replacement: "Different expressions perform different jobs, so naming is one linguistic function rather than the essence of every word." This option fails because it makes private imagery foundational although the analogy directs attention to public roles. - **B:** False proposition: "A toolbox is a formal calculus whose rules determine every future sentence independently of training and circumstances." Correct replacement: "Different expressions perform different jobs, so naming is one linguistic function rather than the essence of every word." This option fails because it mistakes varied practical employment for a self-interpreting formal system. - **C:** False proposition: "Every tool has one material bearer, proving that every meaningful expression must name a physical object." Correct replacement: "Different expressions perform different jobs, so naming is one linguistic function rather than the essence of every word." This option fails because it converts an analogy of functional diversity into support for universal reference. - **D:** This is correct because use the toolbox to compare linguistic functions such as ordering, asking, calculating and avowing. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 7:** Remembering the image while reversing the philosophical work it performs.

**Repair action:** Use the toolbox to compare linguistic functions such as ordering, asking, calculating and avowing.

**Coverage mapping:** C02.

**PYQ linkage:** 2023 Q4(c); 2026 Q3(c).

## MCQ 8

---

A teacher points to two red squares and says 'red'. Why does this not fix the word's meaning by itself?

A. The spoken label supplies a self-interpreting rule that fixes the sample as a colour standard rather than as an example of shape or number. B. The lesson succeeds chiefly when the sample resembles later red objects closely enough to guide analogical extension. C. Pointing helps, although training must establish whether colour, shape, number, material, position or another role is at issue. D. Pointing becomes determinate once the teacher's private intention selects colour, although the learner may initially misunderstand it.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "The spoken label supplies a self-interpreting rule that fixes the sample as a colour standard rather than as an example of shape or number." Correct replacement: "Pointing helps, although training must establish whether colour, shape, number, material, position or another role is at issue." The label and gesture acquire determinate roles through training rather than explaining themselves. - **B:** False proposition: "The lesson succeeds chiefly when the sample resembles later red objects closely enough to guide analogical extension." Correct replacement: "Pointing helps, although training must establish whether colour, shape, number, material, position or another role is at issue." Resemblance cannot select the relevant dimension without a practice of comparison. - **C:** This is correct because ostension can contribute to learning while background training determines what role the sample has in the language-game. - **D:** False proposition: "Pointing becomes determinate once the teacher's private intention selects colour, although the learner may initially misunderstand it." Correct replacement: "Pointing helps, although training must establish whether colour, shape, number, material, position or another role is at issue." A private intention cannot make the gesture self-interpreting.

**Examiner trap 8:** Treating the pointed object as if it selected its own dimension of application.

**Repair action:** State that ostension functions inside an already developing language-game and method of comparison.

**Coverage mapping:** C02.

**PYQ linkage:** Original practice; 2026 Q3(c).

## MCQ 9

---

Which performance most directly displays understanding as mastery of a technique?

A. Experiencing a vivid inner image that no outward performance could ever confirm or disconfirm. B. Continuing a learned series appropriately while responding to correction across relevant new cases. C. Naming the private mental object that allegedly accompanies every competent utterance of the word. D. Reciting a dictionary sentence without being able to use the expression in any altered circumstance.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "Experiencing a vivid inner image that no outward performance could ever confirm or disconfirm." Correct replacement: "Continuing a learned series appropriately while responding to correction across relevant new cases." This option fails because it makes an inaccessible episode sufficient and removes the normative distinction between mastery and seeming. - **B:** This is correct because test mastery through appropriate continuation, correction and transfer rather than introspective accompaniment. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "Naming the private mental object that allegedly accompanies every competent utterance of the word." Correct replacement: "Continuing a learned series appropriately while responding to correction across relevant new cases." This option fails because it reinstates the private-object model challenged by use and rule-following. - **D:** False proposition: "Reciting a dictionary sentence without being able to use the expression in any altered circumstance." Correct replacement: "Continuing a learned series appropriately while responding to correction across relevant new cases." This option fails because it substitutes verbal repetition for the ability to go on under changed conditions.

**Examiner trap 9:** Equating understanding with an episode rather than a norm-sensitive capacity.

**Repair action:** Test mastery through appropriate continuation, correction and transfer rather than introspective accompaniment.

**Coverage mapping:** C02.

**PYQ linkage:** 2026 Q3(c).

## MCQ 10

---

How should the word 'Water!' be analysed in later Wittgenstein's method?

A. A relatively stable private image can accompany the word, but that image fixes its speech-act role across changing settings. B. Context lets each speaker negotiate a local meaning, with communal correction entering after the intended use has been formed. C. Its role varies with the language-game but remains answerable to shared practice, as in a request, warning or identification. D. Its primary meaning remains descriptive reference, while requests and warnings are pragmatically shortened descriptions.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "A relatively stable private image can accompany the word, but that image fixes its speech-act role across changing settings." Correct replacement: "Its role varies with the language-game but remains answerable to shared practice, as in a request, warning or identification." An accompanying image does not determine whether the utterance requests, warns or identifies. - **B:** False proposition: "Context lets each speaker negotiate a local meaning, with communal correction entering after the intended use has been formed." Correct replacement: "Its role varies with the language-game but remains answerable to shared practice, as in a request, warning or identification." Public norms help

constitute the use rather than merely checking a privately formed meaning afterward. - **C**: This is correct because grammatical analysis asks what the expression does in a concrete activity while retaining shared standards for appropriate uptake. - **D**: False proposition: "Its primary meaning remains descriptive reference, while requests and warnings are pragmatically shortened descriptions." Correct replacement: "Its role varies with the language-game but remains answerable to shared practice, as in a request, warning or identification." This option preserves descriptive reference as the privileged underlying form.

**Examiner trap 10:** Acknowledging context while retaining a single hidden function or abandoning norms.

**Repair action:** Ask what the expression does in the concrete activity and what responses count as appropriate.

**Coverage mapping:** C02.

**PYQ linkage:** 2023 Q4(c); 2026 Q3(c).

## MCQ 11

---

Which formulation best states family resemblance without converting it into a hidden essence?

A. A concept is legitimate only when philosophers can state necessary and sufficient conditions for every possible application. B. Instances need no similarities or learned boundaries because any object may belong to any concept at will. C. Instances are connected by overlapping and criss-crossing similarities, with no one feature required in every case. D. Every instance shares the single higher-order property of family resemblance, which functions as its real definition.

**Answer: C.**

**Option explanations:** - **A**: False proposition: "A concept is legitimate only when philosophers can state necessary and sufficient conditions for every possible application." Correct replacement: "Instances are connected by overlapping and criss-crossing similarities, with no one feature required in every case." This option fails because it restores the universal definitional demand that the games example is designed to challenge. - **B**: False proposition: "Instances need no similarities or learned boundaries because any object may belong to any concept at will." Correct replacement: "Instances are connected by overlapping and criss-crossing similarities, with no one feature required in every case." This option fails because it confuses fuzzy boundaries with normless inclusion and ignores training and established applications. - **C**: This is correct because describe a network of similarities whose different strands connect different cases. It preserves the tested distinction and applies it to the question's exact demand. - **D**: False proposition: "Every instance shares the single higher-order property of family resemblance, which functions as its real definition." Correct replacement: "Instances are connected by overlapping and criss-crossing similarities, with no one feature required in every case." This option fails because it names family resemblance as the common essence that the argument rejects.

**Examiner trap 11:** Using 'family resemblance' as if it were the common property shared by all members.

**Repair action:** Describe a network of similarities whose different strands connect different cases.

**Coverage mapping:** C03.

**PYQ linkage:** 2018 Q1(c).

## MCQ 12

---

What does the instruction 'Don't think, but look!' require in the investigation of a concept?

- A. Survey actual cases and differences before imposing a theoretical essence that usage may not display.
- B. Avoid reasoning altogether and replace conceptual inquiry with passive visual observation of physical objects.
- C. Search introspection for the mental image shared by every competent user of the disputed expression.
- D. Accept the first familiar definition because ordinary speakers cannot be mistaken about their grammatical practices.

**Answer: A.**

**Option explanations:** - **A:** This is correct because use examples to test whether the alleged common feature survives across the concept's applications. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "Avoid reasoning altogether and replace conceptual inquiry with passive visual observation of physical objects." Correct replacement: "Survey actual cases and differences before imposing a theoretical essence that usage may not display." This option fails because it mistakes a method against premature theorising for hostility to reasoning. - **C:** False proposition: "Search introspection for the mental image shared by every competent user of the disputed expression." Correct replacement: "Survey actual cases and differences before imposing a theoretical essence that usage may not display." This option fails because it returns to private mental accompaniment rather than examining the public variety of uses. - **D:** False proposition: "Accept the first familiar definition because ordinary speakers cannot be mistaken about their grammatical practices." Correct replacement: "Survey actual cases and differences before imposing a theoretical essence that usage may not display." This option fails because it turns description into deference and ignores the need for comparison and correction.

**Examiner trap 12:** Reading a methodological warning as anti-intellectualism or naive observation.

**Repair action:** Use examples to test whether the alleged common feature survives across the concept's applications.

**Coverage mapping:** C03.

**PYQ linkage:** 2018 Q1(c).

## MCQ 13

---

Why do blurred boundaries not make a family-resemblance concept defective?

- A. The absence of sharp boundaries means that correct and incorrect uses can never be distinguished in ordinary practice.
- B. Training and established applications can guide competent continuation without a sharp essence at every edge.
- C. Competence requires every speaker to draw exactly the same boundary in every imaginable borderline case.
- D. A blurred concept becomes meaningful only after science discovers the hidden property common to all its instances.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "The absence of sharp boundaries means that correct and incorrect uses can never be distinguished in ordinary practice." Correct replacement: "Training and established applications can guide competent continuation without a sharp essence at every edge." This option fails because it infers total normlessness from open texture despite ordinary correction and stable central cases. - **B:** This is correct because separate fuzzy edges from the trained central applications that sustain a concept. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "Competence requires every speaker to draw exactly the same boundary in every imaginable borderline case." Correct replacement: "Training and established applications can guide competent continuation without a sharp essence at every edge." This option fails because it demands a uniformity stronger than the practical agreement Wittgenstein describes. - **D:** False proposition: "A blurred concept becomes meaningful only after science discovers the hidden property common to all its instances." Correct replacement: "Training and established applications can guide competent continuation without a sharp essence at every edge." This option fails because it postpones meaning until an essence is discovered and rejects the anti-essentialist diagnosis.

**Examiner trap 13:** Equating open texture with absence of standards.

**Repair action:** Separate fuzzy edges from the trained central applications that sustain a concept.

**Coverage mapping:** C03.

**PYQ linkage:** 2018 Q1(c).

## MCQ 14

---

How does family resemblance support the claim that language is composed of games?

A. It identifies picturing facts as the common feature shared by requests, jokes, prayers, reports and avowals. B. It permits diverse linguistic activities to count as language through overlapping relations rather than one common function. C. It proves that every linguistic activity is entertaining, competitive and governed by an explicit written rulebook. D. It shows that the term language-game is only decorative because language has a strict essence independently of use, despite actual usage.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "It identifies picturing facts as the common feature shared by requests, jokes, prayers, reports and avowals." Correct replacement: "It permits diverse linguistic activities to count as language through overlapping relations rather than one common function." This option fails because it reinstates factual picturing as the universal essence denied by the plurality of uses. - **B:** This is correct because move from varied games to overlapping similarities and then to varied linguistic practices. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "It proves that every linguistic activity is entertaining, competitive and governed by an explicit written rulebook." Correct replacement: "It permits diverse linguistic activities to count as language through overlapping relations rather than one common function." This option fails because it literalises the game analogy and adds features not required by language-games. - **D:** False proposition: "It shows that the term language-game is only decorative because language has a strict essence independently of use, despite actual usage." Correct replacement: "It permits diverse linguistic activities to count as language through overlapping relations rather than one common function." This option fails because it empties family resemblance of its anti-essentialist role and preserves a strict essence.

**Examiner trap 14:** Treating 'game' literally or smuggling a universal feature back into the analogy.

**Repair action:** Move from varied games to overlapping similarities and then to varied linguistic practices.

**Coverage mapping:** C03.

**PYQ linkage:** 2018 Q1(c).

## MCQ 15

---

What does Wittgenstein's builders' example establish about a primitive language?

A. A four-word vocabulary is meaningful only if each word silently abbreviates a complete proposition in an ideal language. B. The example shows that all language-games reduce to issuing commands and obeying them within manual labour. C. The workers understand because each sound produces the same private image in both minds before any action occurs. D. A restricted order-and-response practice can be complete for its purpose without being a defective fragment of ordinary speech.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "A four-word vocabulary is meaningful only if each word silently abbreviates a complete proposition in an ideal language." Correct replacement: "A restricted order-and-response practice can be complete for its purpose without being a defective fragment of ordinary speech." This option fails because it preserves ideal-language completion instead of recognizing the stipulated practice as sufficient. - **B:** False proposition: "The example shows that all language-games reduce to issuing commands and obeying them within manual labour." Correct replacement: "A restricted order-and-response practice can be complete for its purpose without being a defective fragment of ordinary speech." This option fails because it generalizes one deliberately simple game into the essence of every linguistic activity. - **C:** False proposition: "The workers understand because each sound produces the same private image in both minds before any action occurs." Correct replacement: "A restricted order-and-response practice can be complete for its purpose without being a defective fragment of ordinary speech." This option fails because it makes inaccessible imagery do the work supplied by training, circumstances and response. - **D:** This is correct because explain what makes this activity self-contained, then stress that it is one game among many. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 15:** Treating a primitive example as incomplete or as the universal model of language.

**Repair action:** Explain what makes this activity self-contained, then stress that it is one game among many.

**Coverage mapping:** C04.

**PYQ linkage:** 2018 Q1(c); 2023 Q4(c).

## MCQ 16

---

Which account of language-game rules is most faithful to the later view?

A. Rules are private interpretations that determine use before any social training or observable correction occurs. B. A practice counts as a language-game only when all participants can state every governing rule propositionally. C. Calling language a game means speakers may revise meanings individually without standards or consequences. D. Rules may be implicit in training, correction and practice even when no complete written rulebook exists.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "Rules are private interpretations that determine use before any social training or observable correction occurs." Correct replacement: "Rules may be implicit in training, correction and practice even when no complete written rulebook exists." This option fails because it locates normativity in private interpretation and restarts the regress. - **B:** False proposition: "A practice counts as a language-game only when all participants can state every governing rule propositionally." Correct replacement: "Rules may be implicit in training, correction and practice even when no complete written rulebook exists." This option fails because it intellectualizes rule mastery and excludes ordinary unarticulated competence. - **C:** False proposition: "Calling language a game means speakers may revise meanings individually without standards or consequences." Correct replacement: "Rules may be implicit in training, correction and practice even when no complete written rulebook exists." This option fails because it confuses the possibility of change with arbitrary personal licence. - **D:** This is correct because look for stable teaching, correction and continuation rather than a complete rulebook. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 16:** Assuming that norm-governed practice requires explicit codification.

**Repair action:** Look for stable teaching, correction and continuation rather than a complete rulebook.

**Coverage mapping:** C04.

**PYQ linkage:** 2018 Q1(c); 2022 Q1(c).

## MCQ 17

---

Why can new language-games arise and old ones disappear without making meaning arbitrary?

A. Change occurs within shared techniques and purposes, although uptake and correction still distinguish innovation from failure. B. Meanings may change at the margins, although an underlying logical role fixes the core of each expression through historical shifts. C. New games become norm-governed when an institution codifies their rules, with informal usage serving mainly as preliminary experimentation. D. An innovation acquires meaning when a speaker forms a sufficiently determinate intention and others later infer the intended rule.

**Answer: A.**

**Option explanations:** - **A:** This is correct because living practices can change while shared training, uptake and correction continue to separate intelligible innovation from failure. - **B:** False proposition: "Meanings may change at the margins, although an underlying logical role fixes the core of each expression through historical shifts." Correct replacement: "Change occurs within shared techniques and purposes, although uptake and correction still distinguish innovation from failure." This retains a timeless semantic core beneath the historical practices under examination. - **C:** False proposition: "New games

become norm-governed when an institution codifies their rules, with informal usage serving mainly as preliminary experimentation." Correct replacement: "Change occurs within shared techniques and purposes, although uptake and correction still distinguish innovation from failure." Codification can record a practice, but it is not the general source of linguistic normativity. - **D**: False proposition: "An innovation acquires meaning when a speaker forms a sufficiently determinate intention and others later infer the intended rule." Correct replacement: "Change occurs within shared techniques and purposes, although uptake and correction still distinguish innovation from failure." Intention does not establish a norm before the practice in which uptake and correction operate.

**Examiner trap 17:** Confusing living change with either individual whim or timeless fixity.

**Repair action:** Describe innovation as norm-governed uptake within changing human activities.

**Coverage mapping:** C04.

**PYQ linkage:** Language-games application.

## MCQ 18

---

A speaker uses a familiar sentence as a joke rather than as a report. What follows for its meaning?

A. The speaker's unexpressed intention alone fixes the joke even if no practice could distinguish it from a report. B. The sentence retains only its literal report because grammatical surface fixes one function independently of context. C. The surrounding activity and criteria of response help determine its role, so sentence form alone is insufficient. D. The joke is meaningless because only propositions that picture facts can participate in a genuine language-game.

**Answer: C.**

**Option explanations:** - **A**: False proposition: "The speaker's unexpressed intention alone fixes the joke even if no practice could distinguish it from a report." Correct replacement: "The surrounding activity and criteria of response help determine its role, so sentence form alone is insufficient." This option fails because it makes private intention self-validating instead of requiring public-type circumstances and uptake. - **B**: False proposition: "The sentence retains only its literal report because grammatical surface fixes one function independently of context." Correct replacement: "The surrounding activity and criteria of response help determine its role, so sentence form alone is insufficient." This option fails because it treats surface grammar as a complete semantic determinant and ignores use. - **C**: This is correct because identify the activity, expected uptake and standards that distinguish joking from reporting. It preserves the tested distinction and applies it to the question's exact demand. - **D**: False proposition: "The joke is meaningless because only propositions that picture facts can participate in a genuine language-game." Correct replacement: "The surrounding activity and criteria of response help determine its role, so sentence form alone is insufficient." This option fails because it applies the early factual model as an exclusionary criterion to a nonreporting practice.

**Examiner trap 18:** Reading grammatical shape as a guarantee of one speech function.

**Repair action:** Identify the activity, expected uptake and standards that distinguish joking from reporting.

**Coverage mapping:** C04.

## MCQ 19

---

Which sequence correctly connects the main later-Wittgenstein concepts?

A. Plural uses support language-games, overlapping relations support family resemblance, and shared practice supports rule-following. B. Aspect-blindness supports ideal notation, ideal notation supports elementary propositions, and these establish public criteria. C. Verification supports forms of life, forms of life support protocol sentences, and protocols establish private language. D. Private ideas support reference, reference supports logical atomism, and logical atomism supports ordinary-language therapy.

**Answer: A.**

**Option explanations:** - **A:** This is correct because use the progression from use to games, family resemblance, forms of life, rules and private-language criticism. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "Aspect-blindness supports ideal notation, ideal notation supports elementary propositions, and these establish public criteria." Correct replacement: "Plural uses support language-games, overlapping relations support family resemblance, and shared practice supports rule-following." This option fails because it joins a later perceptual discussion to abandoned early doctrines without argumentative connection. - **C:** False proposition: "Verification supports forms of life, forms of life support protocol sentences, and protocols establish private language." Correct replacement: "Plural uses support language-games, overlapping relations support family resemblance, and shared practice supports rule-following." This option fails because it mixes positivist verification and protocols with a doctrine that rejects private grounding. - **D:** False proposition: "Private ideas support reference, reference supports logical atomism, and logical atomism supports ordinary-language therapy." Correct replacement: "Plural uses support language-games, overlapping relations support family resemblance, and shared practice supports rule-following." This option fails because it reconstructs the early atomist route rather than the later grammatical route.

**Examiner trap 19:** Combining familiar terms from neighbouring topics into a false conceptual chain.

**Repair action:** Use the progression from use to games, family resemblance, forms of life, rules and private-language criticism.

**Coverage mapping:** C04.

**PYQ linkage:** All Later Wittgenstein PYQs.

## MCQ 20

---

What does the statement 'To imagine a language means to imagine a form of life' primarily assert?

A. Language originates in a private imaginative act that subsequently projects meanings onto social behaviour. B. Each natural language embodies a complete metaphysical worldview that outsiders can never understand or criticize. C. Linguistic intelligibility is inseparable from patterns of activity, reaction, training and shared human life. D. A form of life is an explicit set of opinions accepted by majority vote within a linguistic community.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "Language originates in a private imaginative act that subsequently projects meanings onto social behaviour." Correct replacement: "Linguistic intelligibility is inseparable from patterns of activity, reaction, training and shared human life." This option fails because it makes private imagination foundational instead of shared activity. - **B:** False proposition: "Each natural language embodies a complete metaphysical worldview that outsiders can never understand or criticize." Correct replacement: "Linguistic intelligibility is inseparable from patterns of activity, reaction, training and shared human life." This option fails because it inflates the claim into sealed cultural relativism and removes possibilities of translation and criticism. - **C:** This is correct because define it minimally as the shared natural and cultural background in which games have a point. It preserves the tested distinction and applies it to the question's exact demand. - **D:** False proposition: "A form of life is an explicit set of opinions accepted by majority vote within a linguistic community." Correct replacement: "Linguistic intelligibility is inseparable from patterns of activity, reaction, training and shared human life." This option fails because it intellectualizes practical agreement and confuses it with voted doctrine.

**Examiner trap 20:** Turning the sparse notion of form of life into a total social theory.

**Repair action:** Define it minimally as the shared natural and cultural background in which games have a point.

**Coverage mapping:** C05.

**PYQ linkage:** 2022 Q1(c).

## MCQ 21

---

How should agreement in form of life be distinguished from agreement in opinion?

A. A statistical majority's current preference determines truth and correctness in every disputed case. B. It concerns shared ways of acting and judging that make particular disagreements and corrections intelligible. C. It means every member accepts identical beliefs, values and theories before communication can begin. D. It is an innate logical structure that functions independently of bodily reactions, training and social practices.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "A statistical majority's current preference determines truth and correctness in every disputed case." Correct replacement: "It concerns shared ways of acting and judging that make particular disagreements and corrections intelligible." This option fails because it reduces grammar and correction to head counting and invites crude conventionalism. - **B:** This is correct because use shared doing as the background that permits disagreement rather than eliminating it. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "It means every member accepts identical beliefs, values and theories before communication can begin." Correct replacement: "It concerns shared ways of acting and judging that make particular disagreements and corrections intelligible." This option fails because it demands complete doctrinal unanimity rather than a practical background. - **D:** False proposition: "It is an innate logical structure that functions

independently of bodily reactions, training and social practices." Correct replacement: "It concerns shared ways of acting and judging that make particular disagreements and corrections intelligible." This option fails because it abstracts the background from the natural reactions and practices that give it content.

**Examiner trap 21:** Equating practical agreement with consensus on propositions.

**Repair action:** Use shared doing as the background that permits disagreement rather than eliminating it.

**Coverage mapping:** C05.

**PYQ linkage:** 2022 Q1(c).

## MCQ 22

---

What is the safest interpretation of the remark that a speaking lion would not be understood?

A. Nonhuman animals are physically incapable of producing meaningful sounds under any possible circumstances. B. Translation between distinct human cultures is logically impossible because every culture has an inaccessible private grammar. C. Understanding requires identical inner images in speaker and hearer, which a lion could never reproduce. D. Shared vocabulary may be insufficient when forms of activity and natural reactions are radically different.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "Nonhuman animals are physically incapable of producing meaningful sounds under any possible circumstances." Correct replacement: "Shared vocabulary may be insufficient when forms of activity and natural reactions are radically different." This option fails because it converts a conditional philosophical remark into an empirical claim about anatomy. - **B:** False proposition: "Translation between distinct human cultures is logically impossible because every culture has an inaccessible private grammar." Correct replacement: "Shared vocabulary may be insufficient when forms of activity and natural reactions are radically different." This option fails because it overextends difference into absolute human incommensurability and privatizes grammar. - **C:** False proposition: "Understanding requires identical inner images in speaker and hearer, which a lion could never reproduce." Correct replacement: "Shared vocabulary may be insufficient when forms of activity and natural reactions are radically different." This option fails because it reintroduces matching private images as the criterion of understanding. - **D:** This is correct because connect intelligibility to shared practices while preserving translation across sufficiently overlapping lives. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 22:** Using the lion remark as proof of total cultural relativism.

**Repair action:** Connect intelligibility to shared practices while preserving translation across sufficiently overlapping lives.

**Coverage mapping:** C05.

**PYQ linkage:** 2022 Q1(c).

## MCQ 23

---

When justification reaches 'This is simply what I do', what has happened?

A. Reasons have reached the practical bedrock of trained action, not an infallible private intuition or arbitrary preference. B. A metaphysical foundation has been discovered beneath practice and can be stated as a final explanatory proposition. C. The speaker has abandoned every standard, so any continuation now counts as equally correct within the game. D. The community has voted to stop inquiry, making the majority's behaviour logically immune from criticism.

**Answer: A.**

**Option explanations:** - **A:** This is correct because say that explanations end in established practice while right and wrong remain internal to that practice. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "A metaphysical foundation has been discovered beneath practice and can be stated as a final explanatory proposition." Correct replacement: "Reasons have reached the practical bedrock of trained action, not an infallible private intuition or arbitrary preference." This option fails because it turns anti-foundational bedrock into the kind of hidden metaphysical ground being resisted. - **C:** False proposition: "The speaker has abandoned every standard, so any continuation now counts as equally correct within the game." Correct replacement: "Reasons have reached the practical bedrock of trained action, not an infallible private intuition or arbitrary preference." This option fails because it mistakes the end of reasons for the disappearance of normativity. - **D:** False proposition: "The community has voted to stop inquiry, making the majority's behaviour logically immune from criticism." Correct replacement: "Reasons have reached the practical bedrock of trained action, not an infallible private intuition or arbitrary preference." This option fails because it substitutes a sociological decision for the practical background of judging and correcting.

**Examiner trap 23:** Confusing the termination of justification with arbitrariness or dogmatic foundation.

**Repair action:** Say that explanations end in established practice while right and wrong remain internal to that practice.

**Coverage mapping:** C05.

**PYQ linkage:** 2022 Q1(c); rule-following.

## MCQ 24

---

Which criticism of forms of life is strongest and still fair to Wittgenstein?

A. The notion denies all biological commonality and defines practices solely through consciously negotiated conventions. B. The notion proves that criticism across practices is impossible, which Wittgenstein explicitly presents as its main conclusion. C. The notion is under-specified between natural and cultural readings, creating pressure toward relativism without entailing it. D. The notion is incoherent because every meaningful sentence must instead picture an atomic fact through logical form.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "The notion denies all biological commonality and defines practices solely through consciously negotiated conventions." Correct replacement: "The notion is under-specified between natural and cultural readings, creating pressure toward relativism without entailing it." This option fails because it attributes an exclusively conventional account that the natural-history remarks resist. - **B:** False proposition: "The notion proves that criticism across practices is impossible, which Wittgenstein explicitly presents as its main conclusion." Correct replacement: "The notion is under-specified between natural and cultural readings, creating pressure toward relativism without entailing it." This option fails because it presents a disputed overextension as an explicit conclusion of the text. - **C:** This is correct because frame the issue as under-definition, then note shared natural reactions and cross-practice overlap. It preserves the tested distinction and applies it to the question's exact demand. - **D:** False proposition: "The notion is incoherent because every meaningful sentence must instead picture an atomic fact through logical form." Correct replacement: "The notion is under-specified between natural and cultural readings, creating pressure toward relativism without entailing it." This option fails because it merely restates the abandoned early framework instead of identifying an internal difficulty.

**Examiner trap 24:** Criticizing the notion by attributing a crude relativism rather than locating its genuine ambiguity.

**Repair action:** Frame the issue as under-definition, then note shared natural reactions and cross-practice overlap.

**Coverage mapping:** C05.

**PYQ linkage:** 2022 Q1(c).

## MCQ 25

---

What generates the rule-following paradox in section 201?

A. Rules are generally vague sentences, and replacing them with longer sentences always eliminates the problem completely. B. Any finite action can be made to fit a rule under some interpretation, so interpretation alone cannot determine correctness. C. Communities disagree about rules, proving that correct application is whatever the largest group presently approves. D. No human behaviour displays regularity, so the very idea of repeated or customary action must be abandoned across cases.

**Answer:** B.

**Option explanations:** - **A:** False proposition: "Rules are generally vague sentences, and replacing them with longer sentences always eliminates the problem completely." Correct replacement: "Any finite action can be made to fit a rule under some interpretation, so interpretation alone cannot determine correctness." This option fails because it treats further verbal detail as a final interpretation when the same regress applies. - **B:** This is correct because state the regress and then distinguish an interpretation from a practice of obeying and correcting. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "Communities disagree about rules, proving that correct application is whatever the largest group presently approves." Correct replacement: "Any finite action can be made to fit a rule under some interpretation, so interpretation alone cannot determine correctness." This option fails because it jumps from disagreement to majority rule and misses the interpretation problem. - **D:** False proposition: "No human behaviour displays regularity, so the very idea of repeated or customary action

must be abandoned across cases." Correct replacement: "Any finite action can be made to fit a rule under some interpretation, so interpretation alone cannot determine correctness." This option fails because it denies observable regularity although the argument concerns its normative interpretation.

**Examiner trap 25:** Reading the paradox as scepticism about regularity rather than about interpretation as a foundation.

**Repair action:** State the regress and then distinguish an interpretation from a practice of obeying and correcting.

**Coverage mapping:** C06.

**PYQ linkage:** Private-language PYQs.

## MCQ 26

---

Why does adding a second rule fail to determine the application of a first rule?

A. The second rule is necessarily written in another natural language and therefore cannot contain any meaningful words. B. The second rule itself requires application, so an interpretation-based solution merely moves the regress one step. C. A community may recognize only one rule at a time, making combined standards sociologically impossible. D. Rules can guide action only when a private image accompanies them, and additional wording weakens that image.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "The second rule is necessarily written in another natural language and therefore cannot contain any meaningful words." Correct replacement: "The second rule itself requires application, so an interpretation-based solution merely moves the regress one step." This option fails because it wrongly infers meaninglessness from the use of another language rather than exposing regress. - **B:** This is correct because show why each proposed interpretation requires another standard, then move to trained practice. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "A community may recognize only one rule at a time, making combined standards sociologically impossible." Correct replacement: "The second rule itself requires application, so an interpretation-based solution merely moves the regress one step." This option fails because it invents a sociological restriction unrelated to the logical problem of application. - **D:** False proposition: "Rules can guide action only when a private image accompanies them, and additional wording weakens that image." Correct replacement: "The second rule itself requires application, so an interpretation-based solution merely moves the regress one step." This option fails because it makes private imagery the remedy although that is the model under criticism.

**Examiner trap 26:** Assuming that greater explicitness can terminate every question of interpretation.

**Repair action:** Show why each proposed interpretation requires another standard, then move to trained practice.

**Coverage mapping:** C06.

**PYQ linkage:** Rule-following support.

## MCQ 27

---

How does Wittgenstein preserve normativity after rejecting interpretation all the way down?

A. A private feeling of certainty fixes the rule even when no distinction between seeming and being right remains. B. An abstract rule-object causally produces the correct next action independently of learners and circumstances. C. Every regular sequence is correct simply because it occurs, so normative assessment reduces to behavioural frequency. D. Correct and incorrect continuation are exhibited within trained practices of teaching, correction and going on.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "A private feeling of certainty fixes the rule even when no distinction between seeming and being right remains." Correct replacement: "Correct and incorrect continuation are exhibited within trained practices of teaching, correction and going on." This option fails because it enthrones the private seeming whose insufficiency drives the paradox. - **B:** False proposition: "An abstract rule-object causally produces the correct next action independently of learners and circumstances." Correct replacement: "Correct and incorrect continuation are exhibited within trained practices of teaching, correction and going on." This option fails because it posits a mysterious causal object rather than explaining normative mastery in practice. - **C:** False proposition: "Every regular sequence is correct simply because it occurs, so normative assessment reduces to behavioural frequency." Correct replacement: "Correct and incorrect continuation are exhibited within trained practices of teaching, correction and going on." This option fails because it reduces normativity to recurrence and cannot distinguish habit from mistake. - **D:** This is correct because use training and correction as constitutive practices, not as mere statistical regularities. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 27:** Thinking that rejecting private interpretation entails rejecting correctness.

**Repair action:** Use training and correction as constitutive practices, not as mere statistical regularities.

**Coverage mapping:** C06.

**PYQ linkage:** 2019 Q3(b); 2024 Q1(d).

## MCQ 28

---

What is the examiner-safe treatment of Kripke's reading of rule-following?

A. Reject every secondary interpretation without stating the problem it illuminates or the textual grounds for disagreement. B. Treat community assertibility as Wittgenstein's uncontested doctrine and omit section 201's description of a misunderstanding. C. Identify Kripke as an editor of Philosophical Investigations whose notes establish the official meaning of its remarks. D. Present the sceptical paradox and community solution as influential and contested, then distinguish them from the textual dissolution.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "Reject every secondary interpretation without stating the problem it illuminates or the textual grounds for disagreement." Correct replacement: "Present the sceptical paradox and community solution as influential and contested, then distinguish them from the textual dissolution." This option fails because it avoids the interpretive issue instead of critically evaluating it. - **B:** False proposition: "Treat community assertibility as Wittgenstein's uncontested doctrine and omit section 201's description of a misunderstanding." Correct replacement: "Present the sceptical paradox and community solution as influential and contested, then distinguish them from the textual dissolution." This option fails because it reports a disputed interpretation as settled doctrine and suppresses counterevidence. - **C:** False proposition: "Identify Kripke as an editor of Philosophical Investigations whose notes establish the official meaning of its remarks." Correct replacement: "Present the sceptical paradox and community solution as influential and contested, then distinguish them from the textual dissolution." This option fails because it confuses a later philosopher with the work's editors and grants nonexistent official authority. - **D:** This is correct because state Kripke's challenge, then note Baker, Hacker and the text's therapeutic framing. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 28:** Presenting 'Kripkenstein' without labelling it as an interpretation.

**Repair action:** State Kripke's challenge, then note Baker, Hacker and the text's therapeutic framing.

**Coverage mapping:** C06.

**PYQ linkage:** Advanced enrichment.

## MCQ 29

---

Which case would most directly expose the difference between following a rule and merely acting regularly?

A. A speaker feels inwardly compelled to continue but cannot identify any circumstance in which the continuation would be wrong. B. A machine repeats an output pattern accidentally, although no distinction between error and correction applies to its operation. C. A learner responds to correction and extends the procedure to unfamiliar cases for reasons recognized within the practice. D. A crowd produces the same response repeatedly, so numerical convergence alone is treated as sufficient for correctness.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "A speaker feels inwardly compelled to continue but cannot identify any circumstance in which the continuation would be wrong." Correct replacement: "A learner responds to correction and extends the procedure to unfamiliar cases for reasons recognized within the practice." This option fails because it converts subjective compulsion into a self-validating standard. - **B:** False proposition: "A machine repeats an output pattern accidentally, although no distinction between error and correction applies to its operation." Correct replacement: "A learner responds to correction and extends the procedure to unfamiliar cases for reasons recognized within the practice." This option fails because it supplies recurrence without the normative setting needed for rule-following. - **C:** This is correct because look for teachability, correction, reasons and recognized mistakes across new cases. It preserves the tested distinction and applies it to the question's exact demand. - **D:** False proposition: "A crowd produces the same response repeatedly, so numerical convergence alone is treated as sufficient for

correctness." Correct replacement: "A learner responds to correction and extends the procedure to unfamiliar cases for reasons recognized within the practice." This option fails because it replaces standards of application with head counting.

**Examiner trap 29:** Using regularity or consensus as a substitute for normative practice.

**Repair action:** Look for teachability, correction, reasons and recognized mistakes across new cases.

**Coverage mapping:** C06.

**PYQ linkage:** Rule-following application.

## MCQ 30

---

How does rule-following prepare the critique of private language?

A. A sign needs a standard beyond present seeming despite absent observers, and private ostension supplies none. B. Communal agreement constitutes the truth of a rule and thereby determines whether the sensation named by it is present. C. Rule-following requires a contemporaneous social check despite allowing a person to execute the rule in physical solitude. D. The problem turns mainly on the diarist's fallible memory, so a reliable mnemonic device would secure the private sign's correctness.

**Answer: A.**

**Option explanations:** - **A:** This is correct because the argument concerns the availability of a correctness standard, not the physical presence of a community during each application. - **B:** False proposition: "Communal agreement constitutes the truth of a rule and thereby determines whether the sensation named by it is present." Correct replacement: "A sign needs a standard beyond present seeming despite absent observers, and private ostension supplies none." This option confuses semantic normativity with communal creation of facts. - **C:** False proposition: "Rule-following requires a contemporaneous social check despite allowing a person to execute the rule in physical solitude." Correct replacement: "A sign needs a standard beyond present seeming despite absent observers, and private ostension supplies none." Public-type criteria do not require present surveillance. - **D:** False proposition: "The problem turns mainly on the diarist's fallible memory, so a reliable mnemonic device would secure the private sign's correctness." Correct replacement: "A sign needs a standard beyond present seeming despite absent observers, and private ostension supplies none." A better memory leaves the logical standard problem untouched.

**Examiner trap 30:** Equating public criteria with constant social monitoring.

**Repair action:** Distinguish logical availability of standards from the accidental presence of other speakers.

**Coverage mapping:** C06.

**PYQ linkage:** 2019 Q3(b); 2020 Q4(c); 2024 Q1(d).

## MCQ 31

---

Which proposed language is private in Wittgenstein's strict target sense?

A. Signs whose meanings are fixed by sensations accessible in principle only to one speaker and unteachable to others. B. A person silently rehearsing ordinary sentences that other competent speakers could understand if they heard them. C. A natural language whose only remaining fluent speaker applies inherited words in publicly learnable ways. D. A cipher used by one agent today but constructed from a public language and decipherable with the key.

**Answer: A.**

**Option explanations:** - **A:** This is correct because define the target through in-principle inaccessibility and private ostensive grounding. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "A person silently rehearsing ordinary sentences that other competent speakers could understand if they heard them." Correct replacement: "Signs whose meanings are fixed by sensations accessible in principle only to one speaker and unteachable to others." This option fails because it is unspoken public language, not a system grounded in inaccessible objects. - **C:** False proposition: "A natural language whose only remaining fluent speaker applies inherited words in publicly learnable ways." Correct replacement: "Signs whose meanings are fixed by sensations accessible in principle only to one speaker and unteachable to others." This option fails because it is solitary in fact rather than logically private in principle. - **D:** False proposition: "A cipher used by one agent today but constructed from a public language and decipherable with the key." Correct replacement: "Signs whose meanings are fixed by sensations accessible in principle only to one speaker and unteachable to others." This option fails because it is contingently secret but remains translatable and governed by public techniques.

**Examiner trap 31:** Confusing essential privacy with secrecy, solitude or inner speech.

**Repair action:** Define the target through in-principle inaccessibility and private ostensive grounding.

**Coverage mapping:** C07.

**PYQ linkage:** 2019 Q3(b); 2020 Q4(c); 2024 Q1(d).

## MCQ 32

---

Why does the diary sign 'S' fail to acquire a private meaning?

A. Sensations change too quickly for memory, although a person with perfect memory could create the private rule. B. No independent standard distinguishes remembering the same sensation correctly from merely seeming to remember it correctly. C. The diarist cannot pronounce a one-letter sign clearly enough for it to function as a word in any language. D. The diary is written rather than spoken, and only vocal expressions can participate in language-games.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "Sensations change too quickly for memory, although a person with perfect memory could create the private rule." Correct replacement: "No independent standard distinguishes remembering the same sensation correctly from merely seeming to remember it correctly." This option fails because it makes the argument depend on contingent memory weakness and concedes the ideal private case. - **B:** This is correct because show that memory cannot validate itself when the same present impression defines both rule and correctness. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "The diarist cannot pronounce a one-

letter sign clearly enough for it to function as a word in any language." Correct replacement: "No independent standard distinguishes remembering the same sensation correctly from merely seeming to remember it correctly." This option fails because it replaces a logical criterion problem with an irrelevant phonetic condition. - **D**: False proposition: "The diary is written rather than spoken, and only vocal expressions can participate in language-games." Correct replacement: "No independent standard distinguishes remembering the same sensation correctly from merely seeming to remember it correctly." This option fails because it invents a speech requirement contradicted by ordinary meaningful writing.

**Examiner trap 32:** Reducing the diary argument to bad memory or practical inconvenience.

**Repair action:** Show that memory cannot validate itself when the same present impression defines both rule and correctness.

**Coverage mapping:** C07.

**PYQ linkage:** 2019 Q3(b); 2020 Q4(c); 2024 Q1(d).

## MCQ 33

---

What is established by the phrase 'whatever seems right to me is right' in the diary case?

A. Private certainty is the highest possible standard and therefore makes the sign more secure than public expressions. B. Public rules are valid only because most speakers happen to experience the same sensation when using a word. C. Every first-person avowal is false because no speaker can compare an inner state with another person's state. D. The distinction between correct and apparently correct application has collapsed, so talk of a rule loses its point.

**Answer: D.**

**Option explanations:** - **A**: False proposition: "Private certainty is the highest possible standard and therefore makes the sign more secure than public expressions." Correct replacement: "The distinction between correct and apparently correct application has collapsed, so talk of a rule loses its point." This option fails because it treats the collapse of a standard as the strongest possible standard. - **B**: False proposition: "Public rules are valid only because most speakers happen to experience the same sensation when using a word." Correct replacement: "The distinction between correct and apparently correct application has collapsed, so talk of a rule loses its point." This option fails because it explains grammar through matching private experiences rather than shared use. - **C**: False proposition: "Every first-person avowal is false because no speaker can compare an inner state with another person's state." Correct replacement: "The distinction between correct and apparently correct application has collapsed, so talk of a rule loses its point." This option fails because it turns a semantic argument into blanket scepticism about avowals. - **D**: This is correct because state the normative consequence: a sign cannot be governed when seeming and correctness are identical. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 33:** Quoting the line without explaining why no possible mistake means no rule.

**Repair action:** State the normative consequence: a sign cannot be governed when seeming and correctness are identical.

**Coverage mapping:** C07.

**PYQ linkage:** Private-language PYQs.

## MCQ 34

---

What is the role of the beetle-in-a-box analogy?

A. It restates the diary's memory problem and depends on each speaker checking the same private object over time. B. It establishes that inner experiences do not exist, since the imagined boxes may turn out to be empty. C. It proves that each person's sensation is qualitatively identical because everyone uses the same public word. D. It shows that a hidden private object cannot determine the public grammar of a sensation expression.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "It restates the diary's memory problem and depends on each speaker checking the same private object over time." Correct replacement: "It shows that a hidden private object cannot determine the public grammar of a sensation expression." This option fails because it collapses two distinct arguments and misses the analogy's public-use point. - **B:** False proposition: "It establishes that inner experiences do not exist, since the imagined boxes may turn out to be empty." Correct replacement: "It shows that a hidden private object cannot determine the public grammar of a sensation expression." This option fails because it converts semantic irrelevance into an ontological denial of experience. - **C:** False proposition: "It proves that each person's sensation is qualitatively identical because everyone uses the same public word." Correct replacement: "It shows that a hidden private object cannot determine the public grammar of a sensation expression." This option fails because it infers qualitative identity from common usage, which the analogy deliberately does not establish. - **D:** This is correct because say that the box's content may vary or be empty while the shared word continues to function. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 34:** Turning the beetle into scepticism about other minds or elimination of sensations.

**Repair action:** Say that the box's content may vary or be empty while the shared word continues to function.

**Coverage mapping:** C07.

**PYQ linkage:** 2019 Q3(b); 2020 Q4(c); 2024 Q1(d).

## MCQ 35

---

How does the private-language argument bear on solipsism?

A. It undermines the attempt to state a world grounded solely in private experience because the required private signs lack standards. B. It accepts solipsism as true but recommends silence because private truths cannot be communicated conveniently. C. It proves by observation that other minds exist and therefore refutes every metaphysical form of idealism. D. It shows that public language mirrors identical private objects in all speakers, thereby guaranteeing interpersonal certainty.

**Answer: A.**

**Option explanations:** - **A:** This is correct because trace the solipsist's assertion to the need for rule-governed signs and then expose private ostension. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "It accepts solipsism as true but recommends silence because private truths cannot be communicated conveniently." Correct replacement: "It undermines the attempt to state a world grounded solely in private experience because the required private signs lack standards." This option fails because it treats the position as a hidden truth rather than showing its linguistic grounding fails. - **C:** False proposition: "It proves by observation that other minds exist and therefore refutes every metaphysical form of idealism." Correct replacement: "It undermines the attempt to state a world grounded solely in private experience because the required private signs lack standards." This option fails because it substitutes an empirical proof of other minds for a grammatical dissolution. - **D:** False proposition: "It shows that public language mirrors identical private objects in all speakers, thereby guaranteeing interpersonal certainty." Correct replacement: "It undermines the attempt to state a world grounded solely in private experience because the required private signs lack standards." This option fails because it returns to matching inner objects and claims a guarantee the argument rejects.

**Examiner trap 35:** Describing a dissolution of solipsistic language as a proof of external minds.

**Repair action:** Trace the solipsist's assertion to the need for rule-governed signs and then expose private ostension.

**Coverage mapping:** C07.

**PYQ linkage:** 2019 Q3(b).

## MCQ 36

---

Does the private-language argument deny that a solitary person can follow rules?

A. Yes, another observer must watch each application for any rule to exist at that moment. B. No, solitude is compatible with rules learned or sustained through public-type criteria and repeatable techniques. C. No, because private conviction replaces training once a person becomes physically isolated from society. D. Yes, because every language requires simultaneous conversation between at least two living speakers.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "Yes, another observer must watch each application for any rule to exist at that moment." Correct replacement: "No, solitude is compatible with rules learned or sustained through public-type criteria and repeatable techniques." This option fails because it confuses logical standards with actual surveillance. - **B:** This is correct because use the Robinson Crusoe distinction: actual isolation differs from essential privacy. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "No, because private conviction replaces training once a person becomes physically isolated from society." Correct replacement: "No, solitude is compatible with rules learned or sustained through public-type criteria and repeatable techniques." This option fails because it preserves solitude by making private seeming foundational rather than retaining learnable criteria. - **D:** False proposition: "Yes, because every language requires simultaneous conversation between

at least two living speakers.” Correct replacement: “No, solitude is compatible with rules learned or sustained through public-type criteria and repeatable techniques.” This option fails because it changes a claim about rule-governed use into a demographic requirement.

**Examiner trap 36:** Equating 'public' with a crowd physically present.

**Repair action:** Use the Robinson Crusoe distinction: actual isolation differs from essential privacy.

**Coverage mapping:** C07.

**PYQ linkage:** 2024 Q1(d).

## MCQ 37

---

Which objection most seriously tests the private-language argument from within its own concerns?

A. The argument is false because introspection always reveals exactly the same qualitative state whenever a word recurs. B. Private sensations cannot be weighed on laboratory scales, so their existence should be rejected as scientifically meaningless. C. The argument fails because secret military codes are routinely spoken by only one authorized operator. D. A solitary speaker may preserve stable criteria through memory and practice, challenging whether social publicity is necessary.

**Answer: D.**

**Option explanations:** - **A:** False proposition: “The argument is false because introspection always reveals exactly the same qualitative state whenever a word recurs.” Correct replacement: “A solitary speaker may preserve stable criteria through memory and practice, challenging whether social publicity is necessary.” This option fails because it assumes infallible sameness without supplying the independent standard under dispute. - **B:** False proposition: “Private sensations cannot be weighed on laboratory scales, so their existence should be rejected as scientifically meaningless.” Correct replacement: “A solitary speaker may preserve stable criteria through memory and practice, challenging whether social publicity is necessary.” This option fails because it imports positivist verification and changes a semantic issue into elimination of the inner. - **C:** False proposition: “The argument fails because secret military codes are routinely spoken by only one authorized operator.” Correct replacement: “A solitary speaker may preserve stable criteria through memory and practice, challenging whether social publicity is necessary.” This option fails because it attacks an excluded case because codes remain publicly structured and decipherable in principle. - **D:** This is correct because present the solitary-speaker challenge, then distinguish inherited public-type criteria from private ostension. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 37:** Using an irrelevant objection instead of testing whether normativity requires a community.

**Repair action:** Present the solitary-speaker challenge, then distinguish inherited public-type criteria from private ostension.

**Coverage mapping:** C07.

**PYQ linkage:** 2020 Q4(c); 2024 Q1(d).

## MCQ 38

---

Which conclusion about inner experience follows from the private-language argument?

A. Inner experience directly supplies private meanings, although those meanings become public only through translation. B. Inner experience is unknowable to the subject because first-person avowals require third-person behavioural evidence. C. Inner experience remains real and cannot alone fix the grammar and correctness of sensation words. D. Inner experience is unreal because only outwardly observable behaviour may exist within a scientific ontology.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "Inner experience directly supplies private meanings, although those meanings become public only through translation." Correct replacement: "Inner experience remains real and cannot alone fix the grammar and correctness of sensation words." This option fails because it grants the private semantic foundation that the diary argument rejects. - **B:** False proposition: "Inner experience is unknowable to the subject because first-person avowals require third-person behavioural evidence." Correct replacement: "Inner experience remains real and cannot alone fix the grammar and correctness of sensation words." This option fails because it removes first-person authority and applies third-person criteria to avowals. - **C:** This is correct because it separates the existence of sensations from the semantic role assigned to private objects. It preserves the tested distinction and applies it to the question's exact demand. - **D:** False proposition: "Inner experience is unreal because only outwardly observable behaviour may exist within a scientific ontology." Correct replacement: "Inner experience remains real and cannot alone fix the grammar and correctness of sensation words." This option fails because it mistakes a grammatical critique for eliminative behaviourism.

**Examiner trap 38:** Concluding that anti-private-language means anti-mind.

**Repair action:** Separate the existence of sensations from the semantic role assigned to private objects.

**Coverage mapping:** C07.

**PYQ linkage:** 2020 Q4(c); 2026 Q3(c).

## MCQ 39

---

How does a criterion differ from a symptom in Wittgenstein's philosophy of psychology?

A. A criterion is simply a symptom observed more frequently and with greater statistical reliability over time. B. A criterion is accessible only to the subject, while a symptom is any behaviour visible to another person. C. A criterion belongs to the grammar of applying a concept, while a symptom is an empirically discovered correlation. D. A criterion proves the presence of a state infallibly, while a symptom is always weak and dispensable evidence.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "A criterion is simply a symptom observed more frequently and with greater statistical reliability over time." Correct replacement: "A criterion belongs to the grammar of applying a concept, while a symptom is an empirically discovered correlation." This option fails because

it reduces a distinction in kind to a difference in empirical degree. - **B:** False proposition: "A criterion is accessible only to the subject, while a symptom is any behaviour visible to another person." Correct replacement: "A criterion belongs to the grammar of applying a concept, while a symptom is an empirically discovered correlation." This option fails because it reverses the public-role issue and privatizes the meaning-constituting connection. - **C:** This is correct because contrast grammatical justification with inductive evidence and preserve defeasibility. It preserves the tested distinction and applies it to the question's exact demand. - **D:** False proposition: "A criterion proves the presence of a state infallibly, while a symptom is always weak and dispensable evidence." Correct replacement: "A criterion belongs to the grammar of applying a concept, while a symptom is an empirically discovered correlation." This option fails because it denies defeasibility and makes criteria exceptionless proofs.

**Examiner trap 39:** Calling criteria unusually reliable symptoms.

**Repair action:** Contrast grammatical justification with inductive evidence and preserve defeasibility.

**Coverage mapping:** C08.

**PYQ linkage:** 2020 Q4(c).

## MCQ 40

---

Why does the defeasibility of pain criteria matter to the charge of behaviourism?

A. Pretence proves that first-person avowals are observational reports inferred from the speaker's own bodily movements. B. Because criteria sometimes fail, sensation words must ultimately be grounded in private ostensive definitions. C. Defeasibility shows that behaviour is irrelevant to pain concepts and may be removed from their grammar entirely within psychological discourse. D. Pain behaviour can be pretended or suppressed, so its criterial role does not make pain identical with behaviour.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "Pretence proves that first-person avowals are observational reports inferred from the speaker's own bodily movements." Correct replacement: "Pain behaviour can be pretended or suppressed, so its criterial role does not make pain identical with behaviour." This option fails because it misclassifies avowals as self-observation and erases first-person asymmetry. - **B:** False proposition: "Because criteria sometimes fail, sensation words must ultimately be grounded in private ostensive definitions." Correct replacement: "Pain behaviour can be pretended or suppressed, so its criterial role does not make pain identical with behaviour." This option fails because it treats exceptions as a reason to revive the private foundation already criticized. - **C:** False proposition: "Defeasibility shows that behaviour is irrelevant to pain concepts and may be removed from their grammar entirely within psychological discourse." Correct replacement: "Pain behaviour can be pretended or suppressed, so its criterial role does not make pain identical with behaviour." This option fails because it overcorrects by severing the grammatical connection to outward circumstances. - **D:** This is correct because use pretence to show constitutive relevance without reductive equivalence. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 40:** Assuming a criterial connection is either identity or mere correlation.

**Repair action:** Use pretence to show constitutive relevance without reductive equivalence.

**Coverage mapping:** C08.

**PYQ linkage:** 2020 Q4(c).

## MCQ 41

---

What does 'An inner process stands in need of outward criteria' most plausibly mean?

A. Only outward movements exist, while references to inner processes are false scientific hypotheses within a completed materialist psychology. B. Every genuine inner episode must produce one unique behaviour that establishes it with certainty. C. A subject knows pain by observing personal behaviour and inferring an inaccessible inner cause. D. Meaningful psychological discourse is grammatically anchored to public circumstances without denying inner processes.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "Only outward movements exist, while references to inner processes are false scientific hypotheses within a completed materialist psychology." Correct replacement: "Meaningful psychological discourse is grammatically anchored to public circumstances without denying inner processes." This option fails because it turns a grammatical remark into eliminative ontology. - **B:** False proposition: "Every genuine inner episode must produce one unique behaviour that establishes it with certainty." Correct replacement: "Meaningful psychological discourse is grammatically anchored to public circumstances without denying inner processes." This option fails because it demands one-to-one infallible manifestation and ignores defeasibility. - **C:** False proposition: "A subject knows pain by observing personal behaviour and inferring an inaccessible inner cause." Correct replacement: "Meaningful psychological discourse is grammatically anchored to public circumstances without denying inner processes." This option fails because it makes first-person awareness an inference from self-observation. - **D:** This is correct because state the semantic anchoring claim and explicitly reject behavioural identity. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 41:** Reading section 580 as a denial of inner life.

**Repair action:** State the semantic anchoring claim and explicitly reject behavioural identity.

**Coverage mapping:** C08.

**PYQ linkage:** 2020 Q4(c); 2026 Q3(c).

## MCQ 42

---

How should the first-person utterance 'I am in pain' normally be classified?

A. It functions as an avowal or learned expression of pain rather than a report inferred from behavioural criteria. B. The utterance is a third-person description abbreviated for convenience and governed by precisely the same evidential route. C. It is meaningless because the speaker alone has access to the sensation named by the word pain. D. The utterance is a hypothesis about a private object confirmed by comparing one's present behaviour with previous observations.

**Answer: A.**

**Option explanations:** - **A:** This is correct because contrast expressive first-person use with criterion-guided third-person attribution. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "The utterance is a third-person description abbreviated for convenience and governed by precisely the same evidential route." Correct replacement: "It functions as an avowal or learned expression of pain rather than a report inferred from behavioural criteria." This option fails because it erases the grammatical asymmetry between avowal and attribution to another. - **C:** False proposition: "It is meaningless because the speaker alone has access to the sensation named by the word pain." Correct replacement: "It functions as an avowal or learned expression of pain rather than a report inferred from behavioural criteria." This option fails because it mistakes privileged first-person use for the impossible private-language target. - **D:** False proposition: "The utterance is a hypothesis about a private object confirmed by comparing one's present behaviour with previous observations." Correct replacement: "It functions as an avowal or learned expression of pain rather than a report inferred from behavioural criteria." This option fails because it revives inner-object reporting and makes self-knowledge observational.

**Examiner trap 42:** Applying third-person criteria symmetrically to first-person avowals.

**Repair action:** Contrast expressive first-person use with criterion-guided third-person attribution.

**Coverage mapping:** C08.

**PYQ linkage:** Private-language assessment.

## MCQ 43

---

Which position best describes Wittgenstein's middle route in philosophy of mind?

A. He accepts Cartesian private objects but supplements them with behaviour as indirect evidence for other minds. B. He eliminates sensations in favour of observable movements and treats first-person speech as theoretically dispensable. C. He makes each community's majority response constitutive of whether an individual genuinely experiences pain. D. He rejects private-object semantics and reductive behaviourism while retaining inner life and defeasible public criteria.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "He accepts Cartesian private objects but supplements them with behaviour as indirect evidence for other minds." Correct replacement: "He rejects private-object semantics and reductive behaviourism while retaining inner life and defeasible public criteria." This option fails because it preserves the private objects whose semantic role is under attack. - **B:** False proposition: "He eliminates sensations in favour of observable movements and treats first-person speech as theoretically dispensable." Correct replacement: "He rejects private-object semantics and reductive behaviourism while retaining inner life and defeasible public criteria." This option fails because it attributes the reductive behaviourism explicitly resisted by criteria and avowals. - **C:** False proposition: "He makes each community's majority response constitutive of whether an individual genuinely experiences pain." Correct replacement: "He rejects private-object semantics and reductive behaviourism while retaining inner life and defeasible public criteria." This option fails because it turns conceptual standards into a vote about another person's experience. - **D:** This is correct because name both rejected poles and explain how criteria plus avowals occupy the middle. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 43:** Forcing the view into either Cartesianism or behaviourism.

**Repair action:** Name both rejected poles and explain how criteria plus avowals occupy the middle.

**Coverage mapping:** C08.

**PYQ linkage:** 2020 Q4(c); 2026 Q3(c).

## MCQ 44

---

What diagnosis is expressed by the phrase 'language goes on holiday'?

A. A word is detached from the ordinary practices that give it work, generating a misleading philosophical appearance. B. Every metaphor becomes meaningless whenever it departs from literal description of an observable fact. C. Natural language temporarily stops changing, allowing an ideal logical notation to replace it without loss. D. Speakers cease communicating during leisure, so philosophy must study language only in professional institutions.

**Answer: A.**

**Option explanations:** - **A:** This is correct because show the home use, the illicit extension and the appearance produced by that extension. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "Every metaphor becomes meaningless whenever it departs from literal description of an observable fact." Correct replacement: "A word is detached from the ordinary practices that give it work, generating a misleading philosophical appearance." This option fails because it imposes verificationist factual meaning and excludes ordinary figurative practices. - **C:** False proposition: "Natural language temporarily stops changing, allowing an ideal logical notation to replace it without loss." Correct replacement: "A word is detached from the ordinary practices that give it work, generating a misleading philosophical appearance." This option fails because it converts a criticism of decontextualized use into a project of ideal replacement. - **D:** False proposition: "Speakers cease communicating during leisure, so philosophy must study language only in professional institutions." Correct replacement: "A word is detached from the ordinary practices that give it work, generating a misleading philosophical appearance." This option fails because it literalizes the metaphor and substitutes sociology for grammatical diagnosis.

**Examiner trap 44:** Quoting the slogan without identifying decontextualized grammar as the problem.

**Repair action:** Show the home use, the illicit extension and the appearance produced by that extension.

**Coverage mapping:** C09.

**PYQ linkage:** 2023 Q4(c); 2025 Q3(a).

## MCQ 45

---

What is a perspicuous or surveyable representation intended to achieve?

A. It rearranges familiar uses so their connections become visible and a specific conceptual confusion can dissolve. B. It derives hidden metaphysical entities from ordinary sentences through a complete formal proof. C. It translates every language-game into one ideal notation whose logical form supplies its genuine meaning. D. It records statistically dominant usage and declares minority practices incorrect by definition.

**Answer: A.**

**Option explanations:** - **A:** This is correct because use comparison tables, intermediate cases and reminders to make grammatical relations surveyable. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "It derives hidden metaphysical entities from ordinary sentences through a complete formal proof." Correct replacement: "It rearranges familiar uses so their connections become visible and a specific conceptual confusion can dissolve." This option fails because it turns a descriptive therapeutic device into metaphysical deduction. - **C:** False proposition: "It translates every language-game into one ideal notation whose logical form supplies its genuine meaning." Correct replacement: "It rearranges familiar uses so their connections become visible and a specific conceptual confusion can dissolve." This option fails because it restores the universal ideal-language project that the method abandons. - **D:** False proposition: "It records statistically dominant usage and declares minority practices incorrect by definition." Correct replacement: "It rearranges familiar uses so their connections become visible and a specific conceptual confusion can dissolve." This option fails because it substitutes frequency policing for conceptual comparison.

**Examiner trap 45:** Treating therapeutic description as either mere summary or a concealed theory.

**Repair action:** Use comparison tables, intermediate cases and reminders to make grammatical relations surveyable.

**Coverage mapping:** C09.

**PYQ linkage:** Transition PYQs.

## MCQ 46

---

How should 'philosophy leaves everything as it is' be interpreted?

A. Philosophy must endorse every social institution and moral practice because criticism always misuses language. B. Philosophy does not reform ordinary grammar through theory and can change our view by dissolving confusion. C. Science supplies all truths, while philosophy merely repeats verified findings without conceptual analysis. D. Philosophical work is impossible, since any description would interfere with language and count as a forbidden thesis.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "Philosophy must endorse every social institution and moral practice because criticism always misuses language." Correct replacement: "Philosophy does not reform ordinary grammar through theory and can change our view by dissolving confusion." This option fails because it turns methodological quietism into political and moral conservatism. - **B:** This is correct because limit the slogan to nonrevisionary grammatical clarification and acknowledge the quietist objection. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "Science supplies all truths, while philosophy merely repeats verified findings without

conceptual analysis." Correct replacement: "Philosophy does not reform ordinary grammar through theory and can change our view by dissolving confusion." This option fails because it assigns philosophy a positivist reporting role rather than grammatical clarification. - **D:** False proposition: "Philosophical work is impossible, since any description would interfere with language and count as a forbidden thesis." Correct replacement: "Philosophy does not reform ordinary grammar through theory and can change our view by dissolving confusion." This option fails because it makes the therapeutic activity self-cancelling instead of distinguishing reminders from theories.

**Examiner trap 46:** Extending a claim about philosophical method into blanket conservatism.

**Repair action:** Limit the slogan to nonrevisionary grammatical clarification and acknowledge the quietist objection.

**Coverage mapping:** C09.

**PYQ linkage:** 2023 Q4(c); 2025 Q3(a).

## MCQ 47

---

What is the force of the fly-bottle image?

A. Ordinary speakers are irrational insects whose mistakes require correction by an expert scientific language. B. The image proves that all philosophical questions are meaningless under the verification principle. C. Therapy helps a thinker retrace the linguistic route into confusion until the apparent problem loses its grip. D. A philosophical theory should trap every possible objection inside a deductively closed system of propositions.

**Answer: C.**

**Option explanations:** - **A:** False proposition: "Ordinary speakers are irrational insects whose mistakes require correction by an expert scientific language." Correct replacement: "Therapy helps a thinker retrace the linguistic route into confusion until the apparent problem loses its grip." This option fails because it converts self-clarification into intellectual hierarchy and ideal-language reform. - **B:** False proposition: "The image proves that all philosophical questions are meaningless under the verification principle." Correct replacement: "Therapy helps a thinker retrace the linguistic route into confusion until the apparent problem loses its grip." This option fails because it imports a universal positivist criterion instead of case-specific therapy. - **C:** This is correct because connect diagnosis, reminders, perspicuous representation and the ability to stop. It preserves the tested distinction and applies it to the question's exact demand. - **D:** False proposition: "A philosophical theory should trap every possible objection inside a deductively closed system of propositions." Correct replacement: "Therapy helps a thinker retrace the linguistic route into confusion until the apparent problem loses its grip." This option fails because it reverses release into systematic enclosure.

**Examiner trap 47:** Using a memorable image as a substitute for explaining therapeutic method.

**Repair action:** Connect diagnosis, reminders, perspicuous representation and the ability to stop.

**Coverage mapping:** C09.

**PYQ linkage:** Transition PYQs.

## MCQ 48

---

What does the duck-rabbit illustrate in the discussion of aspect-seeing?

A. The unchanged figure can be experienced under different aspects, revealing perception shaped by conceptual mastery. B. Seeing an aspect is merely an inference stated after neutral perception and never belongs to visual experience. C. The physical drawing changes whenever attention shifts, so perception faithfully records a new external object. D. Only private images determine which animal is seen, making aspect reports instances of essentially private language.

**Answer: A.**

**Option explanations:** - **A:** This is correct because state that the marks remain constant while a conceptually informed aspect dawns. It preserves the tested distinction and applies it to the question's exact demand. - **B:** False proposition: "Seeing an aspect is merely an inference stated after neutral perception and never belongs to visual experience." Correct replacement: "The unchanged figure can be experienced under different aspects, revealing perception shaped by conceptual mastery." This option fails because it reduces seeing-as to inference despite Wittgenstein's insistence on its experiential character. - **C:** False proposition: "The physical drawing changes whenever attention shifts, so perception faithfully records a new external object." Correct replacement: "The unchanged figure can be experienced under different aspects, revealing perception shaped by conceptual mastery." This option fails because it locates the change in the stimulus rather than in the experienced aspect. - **D:** False proposition: "Only private images determine which animal is seen, making aspect reports instances of essentially private language." Correct replacement: "The unchanged figure can be experienced under different aspects, revealing perception shaped by conceptual mastery." This option fails because it converts trained conceptual capacity into private-object semantics.

**Examiner trap 48:** Treating seeing-as as either physical change or detached inference.

**Repair action:** State that the marks remain constant while a conceptually informed aspect dawns.

**Coverage mapping:** C10.

**PYQ linkage:** Bounded enrichment.

## MCQ 49

---

Which statement respects the ownership boundary for aspect-seeing and On Certainty?

A. They are directly examined in every Later Wittgenstein PYQ and therefore replace detailed study of language-games. B. They are bounded enrichments that may sharpen answers without displacing the three printed syllabus limbs. C. Aspect-seeing is a doctrine of the Tractatus because the duck-rabbit pictures two possible atomic facts simultaneously. D. Hinge certainty belongs to Topic 06 because Moore's propositions are discussed, so later analysis should never appear here.

**Answer: B.**

**Option explanations:** - **A:** False proposition: "They are directly examined in every Later Wittgenstein PYQ and therefore replace detailed study of language-games." Correct replacement: "They are bounded enrichments that may sharpen answers without displacing the three printed syllabus limbs." This option fails because it inflates optional enrichment into the central printed syllabus and misstates the PYQ record. - **B:** This is correct because prioritize use, games and private language, then add aspects or hinges only where the demand invites them. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "Aspect-seeing is a doctrine of the Tractatus because the duck-rabbit pictures two possible atomic facts simultaneously." Correct replacement: "They are bounded enrichments that may sharpen answers without displacing the three printed syllabus limbs." This option fails because it projects a later psychology-of-concepts discussion into early picture theory. - **D:** False proposition: "Hinge certainty belongs to Topic 06 because Moore's propositions are discussed, so later analysis should never appear here." Correct replacement: "They are bounded enrichments that may sharpen answers without displacing the three printed syllabus limbs." This option fails because it assigns the later hinge response entirely to Moore's owner and prevents legitimate bounded comparison.

**Examiner trap 49:** Allowing interesting enrichment to crowd out the assessed core or assigning it to the wrong period.

**Repair action:** Prioritize use, games and private language, then add aspects or hinges only where the demand invites them.

**Coverage mapping:** C10.

**PYQ linkage:** Coverage discipline.

## MCQ 50

---

Can words generally be identified with ideas in the mind of the person who uses them?

A. Yes, because each meaningful word names one introspectible idea whose recurrence guarantees the same application. B. No, private ideas may accompany speech without determining correct use, which depends on techniques and criteria within language-games. C. No, because mental imagery never occurs and all psychological language should be eliminated in favour of behaviour. D. Yes, provided speakers report their ideas sincerely, since sincerity supplies a complete semantic rule.

**Answer:** B.

**Option explanations:** - **A:** False proposition: "Yes, because each meaningful word names one introspectible idea whose recurrence guarantees the same application." Correct replacement: "No, private ideas may accompany speech without determining correct use, which depends on techniques and criteria within language-games." This option fails because it states the private-reference model challenged by use, rules and the diary argument. - **B:** This is correct because separate causal accompaniment from normative meaning and use examples lacking plausible mental objects. It preserves the tested distinction and applies it to the question's exact demand. - **C:** False proposition: "No, because mental imagery never occurs and all psychological language should be eliminated in favour of behaviour." Correct replacement: "No, private ideas may accompany speech without determining correct use, which depends on techniques and criteria within language-games." This option fails because it reaches eliminative behaviourism instead of denying only the foundational semantic role of ideas. - **D:** False proposition: "Yes, provided speakers report their ideas sincerely, since sincerity supplies a complete semantic rule." Correct replacement: "No, private ideas

may accompany speech without determining correct use, which depends on techniques and criteria within language-games." This option fails because it confuses sincerity with a correctness standard and cannot distinguish stable meaning from honest error.

**Examiner trap 50:** Answering the 2026 question by denying mentality rather than denying mentalistic semantics.

**Repair action:** Separate causal accompaniment from normative meaning and use examples lacking plausible mental objects.

**Coverage mapping:** C10.

**PYQ linkage:** 2026 Q3(c).

## MCQ 51

---

Which overall judgement best integrates the strengths and limits of Later Wittgenstein's project?

A. It makes meaning whatever communities happen to approve and therefore abolishes rational criticism across practices. B. It proves all metaphysical claims false by applying one universal criterion of cognitive meaning to every sentence. C. It supplies a complete empirical science of language whose predictions eliminate the need for philosophical criticism. D. It powerfully exposes semantic myths through practice, with unresolved questions about normativity, quietism and forms of life.

**Answer: D.**

**Option explanations:** - **A:** False proposition: "It makes meaning whatever communities happen to approve and therefore abolishes rational criticism across practices." Correct replacement: "It powerfully exposes semantic myths through practice, with unresolved questions about normativity, quietism and forms of life." This option fails because it reduces practical standards to crude conventionalism and ignores internal criticism and natural constraints. - **B:** False proposition: "It proves all metaphysical claims false by applying one universal criterion of cognitive meaning to every sentence." Correct replacement: "It powerfully exposes semantic myths through practice, with unresolved questions about normativity, quietism and forms of life." This option fails because it confuses the view with verificationism and changes dissolution into a truth verdict. - **C:** False proposition: "It supplies a complete empirical science of language whose predictions eliminate the need for philosophical criticism." Correct replacement: "It powerfully exposes semantic myths through practice, with unresolved questions about normativity, quietism and forms of life." This option fails because it recasts grammatical therapy as predictive science and overstates its ambition. - **D:** This is correct because conclude with explanatory gains and identify the specific unresolved seams rather than generic objections. It preserves the tested distinction and applies it to the question's exact demand.

**Examiner trap 51:** Offering either unqualified celebration or a caricature instead of a graded verdict.

**Repair action:** Conclude with explanatory gains and identify the specific unresolved seams rather than generic objections.

**Coverage mapping:** C10.

**PYQ linkage:** All PYQs.
