WEBER'S LEAST-COST THEORY IN SIX ANALYTICAL STEPS

WEBER'S LEAST-COST THEORY IN SIX ANALYTICAL STEPS1. LOCATE RAW-MATERIAL SOURCES AND MARKET2. CLASSIFY INPUTSUBIQUITOUS OR LOCALISED; PURE OR WEIGHT-LOSING3. COMPARE TRANSPORT BURDEN THROUGH THE MATERIAL INDEX4. FIND TRANSPORT-MINIMUM POINT WITHIN THE LOCATIONAL TRIANGLE5. TEST LABOUR SAVING AGAINST ADDED TRANSPORT COST6. TEST AGGLOMERATION SAVING AGAINST CONGESTION AND DISPERSION COST

1. LOCATE raw-material sources and market

2. CLASSIFY inputs: ubiquitous or localised; pure or weight-losing

3. COMPARE transport burden through the material index

4. FIND transport-minimum point within the locational triangle

CORE CLAIM

- 1. LOCATE raw-material sources and market
- 2. CLASSIFY inputs: ubiquitous or localised; pure or weight-losing
- 3. COMPARE transport burden through the material index
- 4. FIND transport-minimum point within the locational triangle

MECHANISM

- 5. TEST labour saving against added transport cost
- 6. TEST agglomeration saving against congestion and dispersion cost
- LEAST TOTAL COST LOCATION
- TRANSPORT COST + LABOUR COST + AGGLOMERATION ECONOMY

CONSEQUENCE / LIMIT

- MODERN QUALIFICATION containers + roads + reliable power + data + regulation +
- value chains alter cost surfaces, but distance, weight, time and reliability still matter.
- Weber explains a baseline mechanism, not every final location.

MECHANISM / VERDICT

Weber explains a baseline mechanism, not every final location.

ANSWER-GRABBING LINE

WRITE/ADAPT IN THE EXAM: MODERN QUALIFICATION containers + roads + reliable power + data + regulation + value chains alter cost surfaces, but distance, weight, time and reliability still matter.

- 1. India's industrial geography: from inherited belts to designed corridors
- 2. Corridors and planned industrial space
- 3. PLI and the new sector-specific industrial map
- 4. Institutions, regional imbalance and the spread-backwash test

ADVANCED DEBATE

- 5. Advanced facts, traps and current linkage
- 6. Historical PYQ integration and advanced answer routes
- Regional imbalance: western and southern corridors may advance faster than eastern or interior regions because prior capabilities differ.
- Brownfield versus greenfield: old belts possess supplier and labour depth; new cities may offer better infrastructure and planning.

LEGACY / NUANCE

- Deindustrialisation: corridor construction can coexist with weak manufacturing employment quality or decline in particular old sectors.
- Logistics-led industrialisation: multimodal connectivity now complements tariffs, subsidies and industrial licensing.
- Spread versus backwash: local procurement, skills and small-firm upgrading produce spread
- imported labour, enclave supply chains and land pressure produce backwash.

OPTIONAL STATUS — This optional depth is unnecessary for a competent core answer; use it only for added nuance after the complete core has been written.
