

SOLVED PRACTICE WORKBOOK

Persons with Disabilities - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Persons with Disabilities - Solved Practice Workbook 6

BASIC MCQS / REMEDIATION 6

Q1. Which statement correctly identifies What this owner holds and the exact demands routed to it?	6
Q2. Which chronology card should be filed under What this owner holds and the exact demands routed to it?	7
Q3. Which option preserves the source-bounded meaning of What this owner holds and the exact demands routed to it?	7
Q4. Which statement avoids a close-option trap about What this owner holds and the exact demands routed to it?	8
Q5. Which statement correctly identifies The statutory definition and its convention anchor?	9
Q6. Which chronology card should be filed under The statutory definition and its convention anchor?	10
Q7. Which option preserves the source-bounded meaning of The statutory definition and its convention anchor?	10
Q8. Which statement avoids a close-option trap about The statutory definition and its convention anchor?	11
Q9. Which statement correctly identifies The twenty-one specified disabilities and the power to notify more?	12
Q10. Which chronology card should be filed under The twenty-one specified disabilities and the power to notify more?	12
Q11. Which option preserves the source-bounded meaning of The twenty-one specified disabilities and the power to notify more?	13
Q12. Which statement avoids a close-option trap about The twenty-one specified disabilities and the power to notify more?	14
Q13. Which statement correctly identifies The move from seven categories to twenty-one?	15
Q14. Which chronology card should be filed under The move from seven categories to twenty-one?	15
Q15. Which option preserves the source-bounded meaning of The move from seven categories to twenty-one?	16
Q16. Which statement avoids a close-option trap about The move from seven categories to twenty-one?	17
Q17. Which statement correctly identifies Benchmark disability and what it triggers?	17
Q18. Which chronology card should be filed under Benchmark disability and what it triggers?	18
Q19. Which option preserves the source-bounded meaning of Benchmark disability and what it triggers?	19
Q20. Which statement avoids a close-option trap about Benchmark disability and what it triggers?	19
Q21. Which statement correctly identifies Statutory reservation and why it is not Article 16(4) reservation?	20
Q22. Which chronology card should be filed under Statutory reservation and why it is not Article 16(4) reservation?	21
Q23. Which option preserves the source-bounded meaning of Statutory reservation and why it is not Article 16(4) reservation?	21
Q24. Which statement avoids a close-option trap about Statutory reservation and why it is not Article 16(4) reservation?	22
Q25. Which statement correctly identifies Reasonable accommodation and the fact that its denial is discrimination?	23

Q26. Which chronology card should be filed under Reasonable accommodation and the fact that its denial is discrimination?	23
Q27. Which option preserves the source-bounded meaning of Reasonable accommodation and the fact that its denial is discrimination?	24
Q28. Which statement avoids a close-option trap about Reasonable accommodation and the fact that its denial is discrimination?	25
Q29. Which statement correctly identifies The medical, social and rights models?	25
Q30. Which chronology card should be filed under The medical, social and rights models?	26
Q31. Which option preserves the source-bounded meaning of The medical, social and rights models?	27
Q32. Which statement avoids a close-option trap about The medical, social and rights models?	27
Q33. Which statement correctly identifies Universal design against retrofitting?	28
Q34. Which chronology card should be filed under Universal design against retrofitting?	29
Q35. Which option preserves the source-bounded meaning of Universal design against retrofitting?	29
Q36. Which statement avoids a close-option trap about Universal design against retrofitting?	30
Q37. Which statement correctly identifies The portable identity platform and what it does not do?	31
Q38. Which chronology card should be filed under The portable identity platform and what it does not do?	31
Q39. Which option preserves the source-bounded meaning of The portable identity platform and what it does not do?	32
Q40. Which statement avoids a close-option trap about The portable identity platform and what it does not do?	33
Q41. Which statement correctly identifies The accessibility framework and its present implementation vehicle?	33
Q42. Which chronology card should be filed under The accessibility framework and its present implementation vehicle?	34
Q43. Which option preserves the source-bounded meaning of The accessibility framework and its present implementation vehicle?	35
Q44. Which statement avoids a close-option trap about The accessibility framework and its present implementation vehicle?	35
Q45. Which statement correctly identifies The assistive-device scheme and its delivery modes?	36
Q46. Which chronology card should be filed under The assistive-device scheme and its delivery modes?	37
Q47. Which option preserves the source-bounded meaning of The assistive-device scheme and its delivery modes?	38
Q48. Which statement avoids a close-option trap about The assistive-device scheme and its delivery modes?	38
Q49. Which statement correctly identifies The 1999 trust statute and its four-condition scope?	39
Q50. Which chronology card should be filed under The 1999 trust statute and its four-condition scope?	40
Q51. Which option preserves the source-bounded meaning of The 1999 trust statute and its four-condition scope?	40
Q52. Which statement avoids a close-option trap about The 1999 trust statute and its four-condition scope?	41
Q53. Which statement correctly identifies The grievance and monitoring authorities under the 2016 Act?	42
Q54. Which chronology card should be filed under The grievance and monitoring authorities under the 2016 Act?	42
Q55. Which option preserves the source-bounded meaning of The grievance and monitoring authorities under the 2016 Act?	43

Q56. Which statement avoids a close-option trap about The grievance and monitoring authorities under the 2016 Act?	44
Q57. Which statement correctly identifies The two recorded cases on accommodation and dignity?	44
Q58. Which chronology card should be filed under The two recorded cases on accommodation and dignity?	45
Q59. Which option preserves the source-bounded meaning of The two recorded cases on accommodation and dignity?	46
Q60. Which statement avoids a close-option trap about The two recorded cases on accommodation and dignity?	47
Q61. Which statement correctly identifies The department's own dated prevalence statement?	47
Q62. Which chronology card should be filed under The department's own dated prevalence statement?	48
Q63. Which option preserves the source-bounded meaning of The department's own dated prevalence statement?	49
Q64. Which statement avoids a close-option trap about The department's own dated prevalence statement?	50
Q65. Which statement correctly identifies What a prevalence figure can and cannot prove?	51
Q66. Which chronology card should be filed under What a prevalence figure can and cannot prove?	51
Q67. Which option preserves the source-bounded meaning of What a prevalence figure can and cannot prove?	52
Q68. Which statement avoids a close-option trap about What a prevalence figure can and cannot prove?	53
Q69. Which statement correctly identifies Where the entitlement-to-participation gap actually opens?	54
Q70. Which chronology card should be filed under Where the entitlement-to-participation gap actually opens?	54
Q71. Which option preserves the source-bounded meaning of Where the entitlement-to-participation gap actually opens?	55
Q72. Which statement avoids a close-option trap about Where the entitlement-to-participation gap actually opens?	56
Q73. Which statement correctly identifies Coverage against substantive participation?	57
Q74. Which chronology card should be filed under Coverage against substantive participation?	57
Q75. Which option preserves the source-bounded meaning of Coverage against substantive participation?	58
Q76. Which statement avoids a close-option trap about Coverage against substantive participation?	59
Q77. Which statement correctly identifies The verified previous-year ownership stated precisely?	59
Q78. Which chronology card should be filed under The verified previous-year ownership stated precisely?	60
Q79. Which option preserves the source-bounded meaning of The verified previous-year ownership stated precisely?	61
Q80. Which statement avoids a close-option trap about The verified previous-year ownership stated precisely?	62

Persons with Disabilities - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies What this owner holds and the exact demands routed to it?

A. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. B. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. C. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. D. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise.

Answer: A. Explanation: This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. The remaining options belong to different chronology, actor or analytical categories.

Q2. Which chronology card should be filed under What this owner holds and the exact demands routed to it?

A. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. B. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. C. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. D. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement.

Answer: B. Explanation: This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. The remaining options belong to different chronology, actor or analytical categories.

Q3. Which option preserves the source-bounded meaning of What this owner holds and the exact demands routed to it?

A. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. B. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers

while remaining outside the reservation entitlement. C. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. D. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement.

Answer: C. Explanation: This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. The remaining options belong to different chronology, actor or analytical categories.

Q4. Which statement avoids a close-option trap about What this owner holds and the exact demands routed to it?

A. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. B. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. C. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. D. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance

authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package.

Answer: D. Explanation: This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. The remaining options belong to different chronology, actor or analytical categories.

Q5. Which statement correctly identifies The statutory definition and its convention anchor?

A. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. B. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. C. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. D. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement.

Answer: A. Explanation: The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. The remaining options belong to different chronology, actor or analytical categories.

Q6. Which chronology card should be filed under The statutory definition and its convention anchor?

A. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. B. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. C. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. D. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise.

Answer: B. Explanation: The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. The remaining options belong to different chronology, actor or analytical categories.

Q7. Which option preserves the source-bounded meaning of The statutory definition and its convention anchor?

A. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. B. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. C. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with

the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. D. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement.

Answer: C. Explanation: The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. The remaining options belong to different chronology, actor or analytical categories.

Q8. Which statement avoids a close-option trap about The statutory definition and its convention anchor?

A. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. B. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. C. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. D. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement.

Answer: D. Explanation: The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. The

remaining options belong to different chronology, actor or analytical categories.

Q9. Which statement correctly identifies The twenty-one specified disabilities and the power to notify more?

A. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. B. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. C. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. D. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise.

Answer: A. Explanation: The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. The remaining options belong to different chronology, actor or analytical categories.

Q10. Which chronology card should be filed under The twenty-one specified disabilities and the power to notify more?

A. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. B. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable

discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. C. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. D. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused.

Answer: B. Explanation: The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. The remaining options belong to different chronology, actor or analytical categories.

Q11. Which option preserves the source-bounded meaning of The twenty-one specified disabilities and the power to notify more?

A. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. B. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. C. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. D. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement.

Answer: C. Explanation: The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. The remaining options belong to different chronology, actor or analytical categories.

Q12. Which statement avoids a close-option trap about The twenty-one specified disabilities and the power to notify more?

A. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. B. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. C. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. D. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability.

Answer: D. Explanation: The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. The remaining options belong to different chronology, actor or analytical categories.

Q13. Which statement correctly identifies The move from seven categories to twenty-one?

A. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. B. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. D. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused.

Answer: A. Explanation: The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. The remaining options belong to different chronology, actor or analytical categories.

Q14. Which chronology card should be filed under The move from seven categories to twenty-one?

A. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. B. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. C. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal

answer different questions. D. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused.

Answer: B. Explanation: The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. The remaining options belong to different chronology, actor or analytical categories.

Q15. Which option preserves the source-bounded meaning of The move from seven categories to twenty-one?

A. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. B. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. C. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. D. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused.

Answer: C. Explanation: The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. The remaining options belong to different chronology, actor or analytical categories.

Q16. Which statement avoids a close-option trap about The move from seven categories to twenty-one?

A. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. B. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. C. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. D. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise.

Answer: D. Explanation: The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. The remaining options belong to different chronology, actor or analytical categories.

Q17. Which statement correctly identifies Benchmark disability and what it triggers?

A. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. B. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. C. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. D. The owners set out three conceptions in sequence:

the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions.

Answer: A. Explanation: The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q18. Which chronology card should be filed under Benchmark disability and what it triggers?

A. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. B. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. C. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. D. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions.

Answer: B. Explanation: The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q19. Which option preserves the source-bounded meaning of Benchmark disability and what it triggers?

A. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. B. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. C. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. D. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives.

Answer: C. Explanation: The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q20. Which statement avoids a close-option trap about Benchmark disability and what it triggers?

A. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. B. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. C. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. D. The

owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement.

Answer: D. Explanation: The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q21. Which statement correctly identifies Statutory reservation and why it is not Article 16(4) reservation?

A. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. B. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. C. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. D. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions.

Answer: A. Explanation: The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q22. Which chronology card should be filed under Statutory reservation and why it is not Article 16(4) reservation?

A. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. B. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. C. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. D. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives.

Answer: B. Explanation: The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q23. Which option preserves the source-bounded meaning of Statutory reservation and why it is not Article 16(4) reservation?

A. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. B. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. C. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the

statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. D. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.

Answer: C. Explanation: The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q24. Which statement avoids a close-option trap about Statutory reservation and why it is not Article 16(4) reservation?

A. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. B. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. C. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. D. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement.

Answer: D. Explanation: The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the

Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q25. Which statement correctly identifies Reasonable accommodation and the fact that its denial is discrimination?

A. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. B. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. C. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. D. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.

Answer: A. Explanation: Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. The remaining options belong to different chronology, actor or analytical categories.

Q26. Which chronology card should be filed under Reasonable accommodation and the fact that its denial is discrimination?

A. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. B. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs

must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. C. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. D. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.

Answer: B. Explanation: Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. The remaining options belong to different chronology, actor or analytical categories.

Q27. Which option preserves the source-bounded meaning of Reasonable accommodation and the fact that its denial is discrimination?

A. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. B. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. C. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. D. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.

Answer: C. Explanation: Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that

persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. The remaining options belong to different chronology, actor or analytical categories.

Q28. Which statement avoids a close-option trap about Reasonable accommodation and the fact that its denial is discrimination?

A. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. B. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. C. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. D. Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused.

Answer: D. Explanation: Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. The remaining options belong to different chronology, actor or analytical categories.

Q29. Which statement correctly identifies The medical, social and rights models?

A. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. B. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with

Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. C. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. D. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.

Answer: A. Explanation: The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. The remaining options belong to different chronology, actor or analytical categories.

Q30. Which chronology card should be filed under The medical, social and rights models?

A. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. B. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. C. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. D. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.

Answer: B. Explanation: The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates

the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. The remaining options belong to different chronology, actor or analytical categories.

Q31. Which option preserves the source-bounded meaning of The medical, social and rights models?

A. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. B. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. C. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. D. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility.

Answer: C. Explanation: The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. The remaining options belong to different chronology, actor or analytical categories.

Q32. Which statement avoids a close-option trap about The medical, social and rights models?

A. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. B. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp

scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. C. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. D. The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions.

Answer: D. Explanation: The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. The remaining options belong to different chronology, actor or analytical categories.

Q33. Which statement correctly identifies Universal design against retrofitting?

A. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. B. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. C. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. D. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument.

Answer: A. Explanation: The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual

accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. The remaining options belong to different chronology, actor or analytical categories.

Q34. Which chronology card should be filed under Universal design against retrofitting?

A. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. B. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. C. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. D. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility.

Answer: B. Explanation: The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. The remaining options belong to different chronology, actor or analytical categories.

Q35. Which option preserves the source-bounded meaning of Universal design against retrofitting?

A. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. B. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. C. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility

from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. D. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument.

Answer: C. Explanation: The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. The remaining options belong to different chronology, actor or analytical categories.

Q36. Which statement avoids a close-option trap about Universal design against retrofitting?

A. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. B. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. C. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. D. The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives.

Answer: D. Explanation: The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives. The remaining options belong to different chronology, actor or analytical categories.

Q37. Which statement correctly identifies The portable identity platform and what it does not do?

A. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. B. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. C. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. D. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument.

Answer: A. Explanation: The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q38. Which chronology card should be filed under The portable identity platform and what it does not do?

A. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. B. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. C. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a

dispersed rural population, which is a delivery argument rather than a funding argument. D. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability.

Answer: B. Explanation: The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q39. Which option preserves the source-bounded meaning of The portable identity platform and what it does not do?

A. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. B. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. C. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. D. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability.

Answer: C. Explanation: The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q40. Which statement avoids a close-option trap about The portable identity platform and what it does not do?

A. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. B. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. C. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. D. The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.

Answer: D. Explanation: The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement. The remaining options belong to different chronology, actor or analytical categories.

Q41. Which statement correctly identifies The accessibility framework and its present implementation vehicle?

A. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. B. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. C. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial

measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. D. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability.

Answer: A. Explanation: The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. The remaining options belong to different chronology, actor or analytical categories.

Q42. Which chronology card should be filed under The accessibility framework and its present implementation vehicle?

A. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. B. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. C. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. D. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record.

Answer: B. Explanation: The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal

accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. The remaining options belong to different chronology, actor or analytical categories.

Q43. Which option preserves the source-bounded meaning of The accessibility framework and its present implementation vehicle?

A. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. B. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. C. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. D. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted.

Answer: C. Explanation: The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. The remaining options belong to different chronology, actor or analytical categories.

Q44. Which statement avoids a close-option trap about The accessibility framework and its present implementation vehicle?

A. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. B. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a

completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. C. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. D. The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility.

Answer: D. Explanation: The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. The remaining options belong to different chronology, actor or analytical categories.

Q45. Which statement correctly identifies The assistive-device scheme and its delivery modes?

A. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. B. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. C. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. D. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken

for a care and guardianship system covering every specified disability.

Answer: A. Explanation: The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. The remaining options belong to different chronology, actor or analytical categories.

Q46. Which chronology card should be filed under The assistive-device scheme and its delivery modes?

A. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. B. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. C. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. D. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them.

Answer: B. Explanation: The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. The remaining options belong to different chronology, actor or analytical categories.

Q47. Which option preserves the source-bounded meaning of The assistive-device scheme and its delivery modes?

A. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. B. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. C. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. D. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation.

Answer: C. Explanation: The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. The remaining options belong to different chronology, actor or analytical categories.

Q48. Which statement avoids a close-option trap about The assistive-device scheme and its delivery modes?

A. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. B. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. C. The owners record that the Census 2011 disability estimate rests on

self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. D. The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument.

Answer: D. Explanation: The owners record the scheme for assistance to disabled persons for the purchase and fitting of aids and appliances as the assistive-device route, providing wheelchairs, tricycles, hearing aids, artificial limbs and braille kits among others to enhance mobility, independence and participation, and they record that it is implemented in camp mode and in institutional mode by the department; the reason the delivery mode is examinable is that camp mode makes reach a function of camp scheduling and location, so a device scheme can be fully funded and still miss a dispersed rural population, which is a delivery argument rather than a funding argument. The remaining options belong to different chronology, actor or analytical categories.

Q49. Which statement correctly identifies The 1999 trust statute and its four-condition scope?

A. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. B. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. C. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. D. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them.

Answer: A. Explanation: The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified

categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. The remaining options belong to different chronology, actor or analytical categories.

Q50. Which chronology card should be filed under The 1999 trust statute and its four-condition scope?

A. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. B. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. C. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. D. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted.

Answer: B. Explanation: The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. The remaining options belong to different chronology, actor or analytical categories.

Q51. Which option preserves the source-bounded meaning of The 1999 trust statute and its four-condition scope?

A. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. B. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those

recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. C. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. D. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation.

Answer: C. Explanation: The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability. The remaining options belong to different chronology, actor or analytical categories.

Q52. Which statement avoids a close-option trap about The 1999 trust statute and its four-condition scope?

A. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. B. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. C. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. D. The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every specified disability.

Answer: D. Explanation: The National Trust for the Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities Act, 1999 creates a statutory body whose functions include legal-guardianship support and support to registered organisations for care and rehabilitation, and the owners record the scope mismatch as an exam-trap-worthy nuance: the trust statute covers only those four conditions, using the statute's own term mental retardation, while the 2016 Act covers twenty-one specified categories, so the older institution must not be mistaken for a care and guardianship system covering every

specified disability. The remaining options belong to different chronology, actor or analytical categories.

Q53. Which statement correctly identifies The grievance and monitoring authorities under the 2016 Act?

A. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. B. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. C. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. D. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted.

Answer: A. Explanation: The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. The remaining options belong to different chronology, actor or analytical categories.

Q54. Which chronology card should be filed under The grievance and monitoring authorities under the 2016 Act?

A. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. B. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to

name each institution's function without merging them. C. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. D. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted.

Answer: B. Explanation: The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. The remaining options belong to different chronology, actor or analytical categories.

Q55. Which option preserves the source-bounded meaning of The grievance and monitoring authorities under the 2016 Act?

A. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. B. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. C. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. D. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation.

Answer: C. Explanation: The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither

the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. The remaining options belong to different chronology, actor or analytical categories.

Q56. Which statement avoids a close-option trap about The grievance and monitoring authorities under the 2016 Act?

A. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. B. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. C. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. D. The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them.

Answer: D. Explanation: The owners record the Chief Commissioner for Persons with Disabilities as the statutory authority under the 2016 Act to receive complaints, monitor safeguards and recommend remedial measures, with State Commissioners performing parallel functions at the State level, and they record separately that the disability development-finance corporation is a credit and livelihood route and is neither the regulator nor the accessibility mission; keeping these three institutions apart is the exact distinction on which the routed objective demand about disability rights law, the accessibility mission and the development corporation turns, so an answer must be able to name each institution's function without merging them. The remaining options belong to different chronology, actor or analytical categories.

Q57. Which statement correctly identifies The two recorded cases on accommodation and dignity?

A. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. B. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a

prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. C. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. D. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted.

Answer: A. Explanation: The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. The remaining options belong to different chronology, actor or analytical categories.

Q58. Which chronology card should be filed under The two recorded cases on accommodation and dignity?

A. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. B. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. C. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. D. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Answer: B. Explanation: The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. The remaining options belong to different chronology, actor or analytical categories.

Q59. Which option preserves the source-bounded meaning of The two recorded cases on accommodation and dignity?

A. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. B. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. C. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. D. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation.

Answer: C. Explanation: The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. The remaining options belong to different chronology, actor or analytical categories.

Q60. Which statement avoids a close-option trap about The two recorded cases on accommodation and dignity?

A. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. B. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. C. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. D. The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record.

Answer: D. Explanation: The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. The remaining options belong to different chronology, actor or analytical categories.

Q61. Which statement correctly identifies The department's own dated prevalence statement?

A. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. B. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in

2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. C. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. D. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Answer: A. Explanation: The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. The remaining options belong to different chronology, actor or analytical categories.

Q62. Which chronology card should be filed under The department's own dated prevalence statement?

A. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. B. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. D. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Answer: B. Explanation: The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. The remaining options belong to different chronology, actor or analytical categories.

Q63. Which option preserves the source-bounded meaning of The department's own dated prevalence statement?

A. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. B. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. C. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. D. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Answer: C. Explanation: The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. The remaining options belong to different chronology, actor or

Q64. Which statement avoids a close-option trap about The department's own dated prevalence statement?

A. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. B. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. C. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. D. The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted.

Answer: D. Explanation: The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted. The remaining options belong to different chronology, actor or analytical categories.

Q65. Which statement correctly identifies What a prevalence figure can and cannot prove?

A. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. B. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. C. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. D. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy.

Answer: A. Explanation: The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. The remaining options belong to different chronology, actor or analytical categories.

Q66. Which chronology card should be filed under What a prevalence figure can and cannot prove?

A. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. B. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. C. The owners separate coverage, which counts how many persons hold certificates or receive scheme

benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. D. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package.

Answer: B. Explanation: The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. The remaining options belong to different chronology, actor or analytical categories.

Q67. Which option preserves the source-bounded meaning of What a prevalence figure can and cannot prove?

A. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. B. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. C. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. D. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in

interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement.

Answer: C. Explanation: The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. The remaining options belong to different chronology, actor or analytical categories.

Q68. Which statement avoids a close-option trap about What a prevalence figure can and cannot prove?

A. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. B. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. C. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. D. The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation.

Answer: D. Explanation: The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation. The remaining options belong to different chronology, actor or analytical categories.

Q69. Which statement correctly identifies Where the entitlement-to-participation gap actually opens?

A. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. B. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. C. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. D. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Answer: A. Explanation: The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. The remaining options belong to different chronology, actor or analytical categories.

Q70. Which chronology card should be filed under Where the entitlement-to-participation gap actually opens?

A. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. B. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy

infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. C. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. D. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation.

Answer: B. Explanation: The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. The remaining options belong to different chronology, actor or analytical categories.

Q71. Which option preserves the source-bounded meaning of Where the entitlement-to-participation gap actually opens?

A. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. B. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. C. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. D. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with

long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement.

Answer: C. Explanation: The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. The remaining options belong to different chronology, actor or analytical categories.

Q72. Which statement avoids a close-option trap about Where the entitlement-to-participation gap actually opens?

A. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. B. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. C. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. D. The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy.

Answer: D. Explanation: The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. The remaining options belong to different chronology, actor or analytical categories.

Q73. Which statement correctly identifies Coverage against substantive participation?

A. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. B. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. C. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. D. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement.

Answer: A. Explanation: The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. The remaining options belong to different chronology, actor or analytical categories.

Q74. Which chronology card should be filed under Coverage against substantive participation?

A. This owner holds the disability half of the rights-and-inclusion argument: the statutory definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. B. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be

complete while the journey it was meant to enable remains impossible. C. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. D. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement.

Answer: B. Explanation: The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. The remaining options belong to different chronology, actor or analytical categories.

Q75. Which option preserves the source-bounded meaning of Coverage against substantive participation?

A. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. B. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. C. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. D. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability.

Answer: C. Explanation: The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not

verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. The remaining options belong to different chronology, actor or analytical categories.

Q76. Which statement avoids a close-option trap about Coverage against substantive participation?

A. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. B. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. C. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. D. The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Answer: D. Explanation: The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. The remaining options belong to different chronology, actor or analytical categories.

Q77. Which statement correctly identifies The verified previous-year ownership stated precisely?

A. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. B. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. C. This owner holds the disability half of the rights-and-inclusion argument: the statutory

definition and the twenty-one specified disabilities, benchmark certification and the portable identity platform, statutory reservation, the reasonable-accommodation duty, the accessibility framework and its present implementation vehicle, the assistive-device scheme, the narrower 1999 trust statute and the grievance authorities; its ownership record is mixed rather than empty, because the audited 2018-2023 Mains routing ledger routes the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation to this owner with the note that the core route supersedes the older Advanced ownership, and the audited 2026 Prelims routing ledger routes one objective demand on disability rights law, the accessibility mission and the disability development corporation to this owner while recording that the 2026 Set-A key held locally is provisional, so no option or answer letter is recorded or inferred for it anywhere in this package. D. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability.

Answer: A. Explanation: The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. The remaining options belong to different chronology, actor or analytical categories.

Q78. Which chronology card should be filed under The verified previous-year ownership stated precisely?

A. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability. B. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. C. The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. D. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions

such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise.

Answer: B. Explanation: The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. The remaining options belong to different chronology, actor or analytical categories.

Q79. Which option preserves the source-bounded meaning of The verified previous-year ownership stated precisely?

A. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. B. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. C. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. D. The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability.

Answer: C. Explanation: The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. The remaining options belong to different chronology, actor or analytical categories.

Q80. Which statement avoids a close-option trap about The verified previous-year ownership stated precisely?

A. The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement. B. The owners record that the 2016 Act replaced the Persons with Disabilities Act, 1995, which recognised seven categories, and that the expansion to twenty-one categories is the single most tested numerical fact in the topic; the analytical value of the expansion is that it brought into the statutory frame conditions such as thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities that a purely mobility-and-sensory conception of disability had excluded, so recognition itself became a substantive act of inclusion rather than a technical listing exercise. C. The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement. D. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation.

Answer: D. Explanation: The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand to this owner, the 2022 General Studies Paper II question on the Rights of Persons with Disabilities Act, 2016 and sensitisation, directive Comment, ten marks, one hundred and fifty words, with the ledger note that the core route supersedes older Advanced ownership, and the audited 2026 Prelims routing ledger routes exactly one objective demand to this owner on disability rights law, the accessibility mission and the disability development corporation, recording that the 2026 Set-A key held locally is provisional, so that objective demand is covered as taught content and no option, key or inferred answer is recorded for it; the Mains demand is solved here to the repository's examiner-grade standard, and six original Mains questions and eighty original objective questions are added on a strict A -> B -> C -> D rotation. The remaining options belong to different chronology, actor or analytical categories.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

This owner's previous-year record is a verified one rather than a zero, and it is stated precisely. The audited 2018-2023 Mains routing ledger routes exactly one General Studies Mains demand here, the 2022 General Studies Paper II question numbered 7 on the Rights of Persons with Disabilities Act, 2016 and sensitisation, with the directive Comment, ten marks and one hundred and fifty words, and with the ledger note that this core route supersedes the older Advanced ownership; that demand is therefore solved in this package with a model answer written to the repository's examiner-grade standard using the claim, named evidence, analysis and qualification pattern. The audited 2026 Prelims routing ledger routes exactly one objective demand here, question 56 of the 2026 Prelims General Studies Paper I on disability rights law, the accessibility mission and the disability development corporation, and that ledger records expressly that the locally held 2026 Set-A key is provisional, so no option, key or inferred answer letter is recorded for it anywhere in this package and the demand is instead covered as taught content by naming the

statute, the accessibility mission and its implementation vehicle, and the development-finance corporation as a distinct credit and livelihood route. The audited 2024-2025 Mains and Prelims routing ledgers route no further demand to this owner, and both the Basic and the Advanced owner state independently that no confirmed direct 2024 or 2025 General Studies Paper II Mains question on persons with disabilities exists in the audited local texts, which is consistent with that record. Alongside the solved demand card, the package adds six original Mains questions with model solutions and eighty original objective questions on a strict A -> B -> C -> D rotation. Each model solution opens with its analytical claim so that the evidence which follows does argumentative rather than decorative work. The locally held OCR-searchable official General Studies papers were read only to confirm the printed wording of the routed Mains demand; no question was invented from them, no marking scheme or page precision was imported and no official answer key is claimed for any question anywhere in this package.

Demand decoding: The directive **answer** requires a direct position on “VERIFIED PYQ OWNERSHIP AUDIT”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The answer must resolve the Social Justice demand in “VERIFIED PYQ OWNERSHIP AUDIT”.

Analytical body:

1. **Claim and named evidence:** Define the vulnerable group, deprivation, right or policy concept and distinguish the nearest legal and measured category. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction.
Qualification: State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
2. **Claim and named evidence:** Identify the constitutional, statutory, judicial or executive basis and the competent Union, state or local institution. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction.
Qualification: State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
3. **Claim and named evidence:** Map rights-holder, household/community context, duty-bearer, frontline worker, provider and accountability forum. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction.
Qualification: State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
4. **Claim and named evidence:** Trace identification, eligibility, documentation, finance, access, portability, grievance, appeal and correction. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction.
Qualification: State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
5. **Claim and named evidence:** Use a named Indian law, judgment, scheme, institution or official dataset with source, date, denominator and status. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction.
Qualification: State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
6. **Claim and named evidence:** Test intersectionality, regional variation, stigma, accessibility, privacy, fiscal adequacy, exclusion and causal limits. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction.
Qualification: State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

Counter-position / limit: A constitutional promise, prohibition, reservation provision, scheme catalogue, allocation, registration count or headline statistic cannot alone establish accessible implementation, adequate benefit, dignity, remedy or attributable outcome; test eligibility, institutions, frontline capacity, intersectionality, regional variation,

grievance and evidence status.

Qualified conclusion: The answer must resolve the Social Justice demand in “VERIFIED PYQ OWNERSHIP AUDIT”.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing right/need -> institution -> eligibility -> delivery -> outcome -> remedy; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for dignity, accessibility, portability, grievance, denominator, fiscal and causal limits.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses named India-centric evidence and preserves legal, institutional, group, eligibility, implementation, fiscal, data and outcome distinctions.

How to improve this answer: For “VERIFIED PYQ OWNERSHIP AUDIT”, replace the weakest scheme-catalogue point with one named rights-holder, duty-bearer, eligibility bottleneck, safeguard, grievance route, process/outcome indicator and source-status qualification.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: There is no confirmed direct 2024 or 2025 GS-II Mains PYQ specifically on persons with disabilities in the audited local PYQ texts. However, questions on inclusive development, accessibility and welfare may intersect with this topic. A strong answer should cite the RPwD Act, 2016 (21 categories, reasonable accommodation), the distinction between statutory PwD reservation and constitutional SC/ST/OBC reservation, and the three pillars of Sugamya Bharat Abhiyan.

2026 PYQ Integration

Status: 2026 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2026.md. **Answer-key rule:** The 2026 Prelims and CSAT Set-A keys held locally are **provisional**; no option or answer is recorded or inferred in this integration.

- **Year represented:** 2026
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2026	Prelims GS-I	56	Disability rights law, accessibility mission, and disability development corporation	Objective question; provisional 2026 Set-A key present locally, answer not inferred	Provisional 2026 Set-A key present locally (Ans-2026-GS1-Provisional); key is provisional - no answer letter recorded or inferred here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Disability rights law, accessibility mission, and disability development corporation

This block integrates the 2026 examinable demand and paper metadata. It is kept separate from the 2018-2023 and 2024-2025 blocks and does not convert a provisionally-keyed, answer-free objective question into a solved answer.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2022
- **Paper(s):** GS-II
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2022	GS-II	7	Rights of Persons with Disabilities Act 2016 and sensitisation	Comment · 10 marks · 150 words	Core route supersedes older Advanced ownership	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Rights of Persons with Disabilities Act 2016 and sensitisation

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

10. PYQ-based analytical application

- ANALYSIS: There is no confirmed direct 2024 or 2025 GS-II Mains PYQ specifically on persons with disabilities in the audited local PYQ texts. A strong Mains answer should: (a) distinguish the medical model from the social model and locate RPwD in the latter, (b) explain reasonable accommodation as a substantive-equality concept, (c) cite the statutory (not constitutional) basis of PwD reservation, (d) flag the National Trust scope mismatch, and (e) frame success as closing the outcome gap between entitlements and participation.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2022
- **Paper(s):** GS-II
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2022	GS-II	7	Rights of Persons with Disabilities Act 2016 and sensitisation	Comment · 10 marks · 150 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Rights of Persons with Disabilities Act 2016 and sensitisation

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

PYQ DEMAND CARD 1 - 2022 General Studies Paper II

Demand: Rights of Persons with Disabilities Act 2016 and sensitisation, with the directive Comment, ten marks and one hundred and fifty words, exactly as recorded in the audited 2018-2023 Mains routing ledger, where the ledger note records that this core route supersedes older Advanced ownership.

Status: Routed to this owner by the audited 2018-2023 Mains routing ledger. The demand is rendered neutrally from that ledger and from the generated previous-year integration block carried inside the Basic and Advanced owners; no official marking scheme, model answer or page precision is claimed for it, and the answer below is this repository's own examiner-grade solution.

Model solution: Claim: the 2016 Act shifts disability from a welfare category to an equality claim, so sensitisation is not a soft accompaniment to the law but the mechanism through which its central duty, reasonable accommodation, is actually performed by the people who owe it. Named evidence and example: the statutory definition of a person with disability as one whose long-term impairment, in interaction with barriers, hinders full and effective participation on an

equal basis with others, aligned with the convention India ratified in 2007; the expansion of recognised categories from seven under the repealed 1995 Act to twenty-one specified categories, which brought thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities inside the frame and thereby made recognition itself an act of inclusion; Section 2(y), which defines reasonable accommodation as necessary and appropriate modification and adjustment that does not impose a disproportionate or undue burden, together with the Act's express treatment of the denial of such accommodation as discrimination; the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a passenger with disability; the minimum four per cent reservation in government establishments and five per cent in higher-educational institutions for persons with benchmark disabilities; the three-pillar accessibility framework covering the built environment, transport and information and communication technology, carried through the implementation scheme for the 2016 Act since March 2024 under harmonised universal-accessibility guidelines; and the Chief Commissioner and State Commissioners as the statutory complaint and monitoring authorities. Analysis: each of these duties is discharged by a decision-maker, an examiner, an employer, a teacher, a station master or a website owner, and every one of those decisions turns on whether the duty-bearer reads an adjustment as an entitlement of equal citizenship or as a discretionary favour; that is precisely why sensitisation carries the Act, because an unsensitised establishment converts a lawful accommodation request into a burden argument, leaves an identified reservation post unfilled on the ground that no suitable post exists, treats an accessible coach as compliance while the platform remains unusable, and reduces the grievance authority to a formality by contesting rather than remedying. Sensitisation, understood this way, is the transmission of the social and rights models into administrative behaviour, and it is measurable through the joints where the gap opens rather than through the number of workshops held. Qualification: sensitisation is necessary and not sufficient, because the Act itself limits the accommodation duty by the disproportionate-burden test, the benchmark threshold of forty per cent leaves persons below it outside the reservation entitlement, enforcement against private establishments is weaker than against government, and the evidence base is thin, since the departmental page records the Census 2011 figure of 2.68 crore persons with disabilities or 2.21 per cent of the population, a self-reported estimate the owners record as likely undercounting. A complete answer therefore argues that sensitisation must be paired with universal design in new construction, with identified posts and time-bound retrofitting, and with outcome measurement of participation rather than of coverage. Why this earns marks: it answers the directive Comment by taking a position on the relationship between the statute and sensitisation, uses exact statutory provisions, percentages, dates and two named decisions as argumentative rather than decorative evidence, locates the failure at named joints, and closes with a qualified verdict that does not overstate what sensitisation alone can achieve.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 1 - 2022 General Studies Paper II”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: the 2016 Act shifts disability from a welfare category to an equality claim, so sensitisation is not a soft accompaniment to the law but the mechanism through which its central duty, reasonable accommodation, is actually performed by the people who owe it. Named evidence and example: the statutory definition of a person with disability as one whose long-term impairment, in interaction with barriers, hinders full and effective participation on an equal basis with others, aligned with the convention India ratified in 2007; the expansion of recognised categories from seven under the repealed 1995 Act to twenty-one specified categories, which brought thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities inside the frame and thereby made recognition itself an act of inclusion; Section 2(y), which defines reasonable accommodation as necessary and appropriate modification and adjustment that does not impose a disproportionate or undue burden, together with the Act's express treatment of the denial of such accommodation as discrimination; the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a passenger with disability; the minimum four per cent reservation in government establishments and five per cent in higher-educational institutions for persons with benchmark disabilities; the three-pillar accessibility framework covering the built environment, transport and information and communication

technology, carried through the implementation scheme for the 2016 Act since March 2024 under harmonised universal-accessibility guidelines; and the Chief Commissioner and State Commissioners as the statutory complaint and monitoring authorities. Analysis: each of these duties is discharged by a decision-maker, an examiner, an employer, a teacher, a station master or a website owner, and every one of those decisions turns on whether the duty-bearer reads an adjustment as an entitlement of equal citizenship or as a discretionary favour; that is precisely why sensitisation carries the Act, because an unsensitised establishment converts a lawful accommodation request into a burden argument, leaves an identified reservation post unfilled on the ground that no suitable post exists, treats an accessible coach as compliance while the platform remains unusable, and reduces the grievance authority to a formality by contesting rather than remedying. Sensitisation, understood this way, is the transmission of the social and rights models into administrative behaviour, and it is measurable through the joints where the gap opens rather than through the number of workshops held. Qualification: sensitisation is necessary and not sufficient, because the Act itself limits the accommodation duty by the disproportionate-burden test, the benchmark threshold of forty per cent leaves persons below it outside the reservation entitlement, enforcement against private establishments is weaker than against government, and the evidence base is thin, since the departmental page records the Census 2011 figure of 2.68 crore persons with disabilities or 2.21 per cent of the population, a self-reported estimate the owners record as likely undercounting. A complete answer therefore argues that sensitisation must be paired with universal design in new construction, with identified posts and time-bound retrofitting, and with outcome measurement of participation rather than of coverage. Why this earns marks: it answers the directive Comment by taking a position on the relationship between the statute and sensitisation, uses exact statutory provisions, percentages, dates and two named decisions as argumentative rather than decorative evidence, locates the failure at named joints, and closes with a qualified verdict that does not overstate what sensitisation alone can achieve.

Analytical body:

1. **Claim and named evidence:** PYQ DEMAND CARD 1 - 2022 General Studies Paper II **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

Counter-position / limit: A constitutional promise, prohibition, reservation provision, scheme catalogue, allocation, registration count or headline statistic cannot alone establish accessible implementation, adequate benefit, dignity, remedy or attributable outcome; test eligibility, institutions, frontline capacity, intersectionality, regional variation, grievance and evidence status.

Qualified conclusion: Claim: the 2016 Act shifts disability from a welfare category to an equality claim, so sensitisation is not a soft accompaniment to the law but the mechanism through which its central duty, reasonable accommodation, is actually performed by the people who owe it. Named evidence and example: the statutory definition of a person with disability as one whose long-term impairment, in interaction with barriers, hinders full and effective participation on an equal basis with others, aligned with the convention India ratified in 2007; the expansion of recognised categories from seven under the repealed 1995 Act to twenty-one specified categories, which brought thalassaemia, haemophilia, sickle-cell disease, acid-attack injury and specific learning disabilities inside the frame and thereby made recognition itself an act of inclusion; Section 2(y), which defines reasonable accommodation as necessary and appropriate modification and adjustment that does not impose a disproportionate or undue burden, together with the Act's express treatment of the denial of such accommodation as discrimination; the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a passenger with disability; the minimum four per cent reservation in government establishments and five per cent in higher-educational institutions for persons with benchmark disabilities; the three-pillar accessibility framework covering the built environment, transport and information and communication technology, carried through the implementation scheme for the 2016 Act since March 2024 under harmonised universal-accessibility guidelines; and the Chief Commissioner and State Commissioners as the statutory complaint and monitoring authorities. Analysis: each of these duties is discharged by a decision-maker, an examiner, an employer, a teacher, a station master or a website owner, and every one of those decisions turns on whether the duty-bearer reads an adjustment as an entitlement of equal citizenship or as a discretionary favour; that is precisely why sensitisation carries the Act, because an unsensitised establishment converts a lawful accommodation request

into a burden argument, leaves an identified reservation post unfilled on the ground that no suitable post exists, treats an accessible coach as compliance while the platform remains unusable, and reduces the grievance authority to a formality by contesting rather than remedying. Sensitisation, understood this way, is the transmission of the social and rights models into administrative behaviour, and it is measurable through the joints where the gap opens rather than through the number of workshops held. Qualification: sensitisation is necessary and not sufficient, because the Act itself limits the accommodation duty by the disproportionate-burden test, the benchmark threshold of forty per cent leaves persons below it outside the reservation entitlement, enforcement against private establishments is weaker than against government, and the evidence base is thin, since the departmental page records the Census 2011 figure of 2.68 crore persons with disabilities or 2.21 per cent of the population, a self-reported estimate the owners record as likely undercounting. A complete answer therefore argues that sensitisation must be paired with universal design in new construction, with identified posts and time-bound retrofitting, and with outcome measurement of participation rather than of coverage. Why this earns marks: it answers the directive Comment by taking a position on the relationship between the statute and sensitisation, uses exact statutory provisions, percentages, dates and two named decisions as argumentative rather than decorative evidence, locates the failure at named joints, and closes with a qualified verdict that does not overstate what sensitisation alone can achieve.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing right/need -> institution -> eligibility -> delivery -> outcome -> remedy; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for dignity, accessibility, portability, grievance, denominator, fiscal and causal limits.

How to improve this answer: For “PYQ DEMAND CARD 1 - 2022 General Studies Paper II”, replace the weakest scheme-catalogue point with one named rights-holder, duty-bearer, eligibility bottleneck, safeguard, grievance route, process/outcome indicator and source-status qualification.

ORIGINAL MAINS 1 - 10 MARKS

Question: Explain the concept of reasonable accommodation under the Rights of Persons with Disabilities Act, 2016 and its significance for inclusive education and employment. Answer in about 150 words.

Model thesis: Accommodation is an equality duty with a built-in limit, so the explanation must state both limbs of Section 2(y), name the case that treated it as equality rather than charity, and then show what it changes in a classroom and in a workplace.

Claim -> named evidence -> analysis -> qualification:

- Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused.
- The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record.
- The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions.

- The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Qualified conclusion: Accommodation is an equality duty with a built-in limit, so the explanation must state both limbs of Section 2(y), name the case that treated it as equality rather than charity, and then show what it changes in a classroom and in a workplace.

Demand decoding: The directive **explain** requires a direct position on “Explain the concept of reasonable accommodation under the Rights of Persons with Disabilities...”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Accommodation is an equality duty with a built-in limit, so the explanation must state both limbs of Section 2(y), name the case that treated it as equality rather than charity, and then show what it changes in a classroom and in a workplace.

Analytical body:

1. **Claim and named evidence:** Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
2. **Claim and named evidence:** The owners record two decisions for use as named judicial evidence: the decision in Vikash Kumar against the Union Public Service Commission, which treated reasonable accommodation as a requirement of equality rather than an act of charity, and the decision in Jeeja Ghosh, which connected dignity and non-discrimination to the treatment of a person with disability in air travel; the answer-writing use is that these two cases convert a statutory duty into an enforceable equality claim, so a Mains answer that argues for accommodation should cite the equality framing rather than a welfare framing, and should not extend either holding beyond what the owners record. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
3. **Claim and named evidence:** The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
4. **Claim and named evidence:** The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true

test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

Counter-position / limit: A constitutional promise, prohibition, reservation provision, scheme catalogue, allocation, registration count or headline statistic cannot alone establish accessible implementation, adequate benefit, dignity, remedy or attributable outcome; test eligibility, institutions, frontline capacity, intersectionality, regional variation, grievance and evidence status.

Qualified conclusion: Accommodation is an equality duty with a built-in limit, so the explanation must state both limbs of Section 2(y), name the case that treated it as equality rather than charity, and then show what it changes in a classroom and in a workplace.

Executable exam-length answer / compression plan: For 10 marks, spend one-sixth of the time decoding the directive and drawing right/need -> institution -> eligibility -> delivery -> outcome -> remedy; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for dignity, accessibility, portability, grievance, denominator, fiscal and causal limits.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses named India-centric evidence and preserves legal, institutional, group, eligibility, implementation, fiscal, data and outcome distinctions.

How to improve this answer: For "Explain the concept of reasonable accommodation under the Rights of Persons with Disabilities...", replace the weakest scheme-catalogue point with one named rights-holder, duty-bearer, eligibility bottleneck, safeguard, grievance route, process/outcome indicator and source-status qualification.

ORIGINAL MAINS 2 - 10 MARKS

Question: Distinguish statutory reservation for persons with benchmark disabilities from constitutional reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes. Answer in about 150 words.

Model thesis: The two entitlements have different sources and different ceilings, so the distinction must name the Act and the percentages on one side and the constitutional mechanism on the other, and must state what benchmark certification adds.

Claim -> named evidence -> analysis -> qualification:

- The Act mandates a minimum of four per cent reservation in government establishments and posts and five per cent in higher-educational institutions for persons with benchmark disabilities across the statutory categories, and the owners insist that this is a statutory reservation created by ordinary legislation and not the constitutional mechanism of Article 16(4) that carries reservation for the Scheduled Castes, the Scheduled Tribes and the other backward classes; the recorded consequence is that it is not governed by the fifty per cent ceiling jurisprudence built around that constitutional mechanism, so a candidate who files disability reservation under the same heading as caste-based reservation will misread every close option about ceilings and about the source of the entitlement.
- The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement.
- The Schedule to the 2016 Act lists blindness, low vision, leprosy-cured persons, hearing impairment covering the deaf and the hard of hearing, locomotor disability, dwarfism, intellectual disability, mental illness, autism spectrum disorder, cerebral palsy, muscular dystrophy, chronic neurological conditions, specific learning disabilities, multiple sclerosis, speech and language disability, thalassaemia, haemophilia, sickle-cell disease, multiple disabilities including deafblindness, acid-attack victims and Parkinson's disease, and the government may notify additional categories; the examinable discipline is that the list is a statutory schedule and not a medical taxonomy, so a

candidate must be able to name the exact count and the expandability rather than paraphrasing the list as physical and mental disability.

- The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Qualified conclusion: The two entitlements have different sources and different ceilings, so the distinction must name the Act and the percentages on one side and the constitutional mechanism on the other, and must state what benchmark certification adds.

Demand decoding: The directive **answer** requires a direct position on “Distinguish statutory reservation for persons with benchmark disabilities from constitutional...”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The two entitlements have different sources and different ceilings, so the distinction must name the Act and the percentages on one side and the constitutional mechanism on the other, and must state what benchmark certification adds.

Analytical body:

ORIGINAL MAINS 3 - 15 MARKS

Question: Critically examine the claim that the Rights of Persons with Disabilities Act, 2016 marks a paradigm shift from welfare to rights. Answer in about 250 words.

Model thesis: A shift in model is a shift in duty-bearer, so the examination must trace medical to social to rights, test the claim against the statutory duties actually created, and then locate the residual welfare logic that survives in delivery.

Claim -> named evidence -> analysis -> qualification:

- The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions.
- The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement.
- Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights

on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused.

- The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy.

Qualified conclusion: A shift in model is a shift in duty-bearer, so the examination must trace medical to social to rights, test the claim against the statutory duties actually created, and then locate the residual welfare logic that survives in delivery.

Demand decoding: The directive **critically examine** requires a direct position on “Critically examine the claim that the Rights of Persons with Disabilities Act, 2016 marks a...”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: A shift in model is a shift in duty-bearer, so the examination must trace medical to social to rights, test the claim against the statutory duties actually created, and then locate the residual welfare logic that survives in delivery.

Analytical body:

1. **Claim and named evidence:** The owners set out three conceptions in sequence: the medical model locates disability mainly in the impairment and directs attention to cure and rehabilitation; the social model locates the disabling disadvantage in inaccessible environments, institutions and attitudes and directs attention to removing barriers; and the rights model, carried by the convention and the 2016 Act, adds enforceable equality, autonomy, accessibility and reasonable-accommodation duties, so that impairment may remain while exclusion is no longer treated as inevitable; the answer-writing use is that a recommendation must say which model it is operating in, because a cure-oriented and a barrier-oriented proposal answer different questions. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
2. **Claim and named evidence:** The Rights of Persons with Disabilities Act, 2016 defines a person with disability as a person with long-term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders full and effective participation in society on an equal basis with others, and the owners record that this definition is aligned with the United Nations Convention on the Rights of Persons with Disabilities, which India ratified in 2007 and to which the 2016 Act gives domestic effect; the decisive words are in interaction with barriers, because they place the disabling effect in the relationship between impairment and environment rather than in the impairment alone, and every later duty in the Act follows from that placement. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
3. **Claim and named evidence:** Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than automatically conceded or automatically refused. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome

-> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

4. **Claim and named evidence:** The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

Counter-position / limit: A constitutional promise, prohibition, reservation provision, scheme catalogue, allocation, registration count or headline statistic cannot alone establish accessible implementation, adequate benefit, dignity, remedy or attributable outcome; test eligibility, institutions, frontline capacity, intersectionality, regional variation, grievance and evidence status.

Qualified conclusion: A shift in model is a shift in duty-bearer, so the examination must trace medical to social to rights, test the claim against the statutory duties actually created, and then locate the residual welfare logic that survives in delivery.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing right/need -> institution -> eligibility -> delivery -> outcome -> remedy; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for dignity, accessibility, portability, grievance, denominator, fiscal and causal limits.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses named India-centric evidence and preserves legal, institutional, group, eligibility, implementation, fiscal, data and outcome distinctions.

How to improve this answer: For “Critically examine the claim that the Rights of Persons with Disabilities Act, 2016 marks a...”, replace the weakest scheme-catalogue point with one named rights-holder, duty-bearer, eligibility bottleneck, safeguard, grievance route, process/outcome indicator and source-status qualification.

ORIGINAL MAINS 4 - 15 MARKS

Question: Assess why statutory entitlements for persons with disabilities have not translated into proportionate participation in education, employment and public life. Answer in about 250 words.

Model thesis: Entitlement and participation fail at different joints, so the assessment must name unfilled posts, legacy retrofitting, weaker private-sector enforcement and the benchmark threshold, and must attach a distinct remedy to each.

Claim -> named evidence -> analysis -> qualification:

- The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy.
- The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility.

- The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.
- The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible.

Qualified conclusion: Entitlement and participation fail at different joints, so the assessment must name unfilled posts, legacy retrofitting, weaker private-sector enforcement and the benchmark threshold, and must attach a distinct remedy to each.

Demand decoding: The directive **assess** requires a direct position on “Assess why statutory entitlements for persons with disabilities have not translated into...”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Entitlement and participation fail at different joints, so the assessment must name unfilled posts, legacy retrofitting, weaker private-sector enforcement and the benchmark threshold, and must attach a distinct remedy to each.

Analytical body:

1. **Claim and named evidence:** The owners locate the gap at four named joints rather than asserting a general implementation failure: reservation seats that remain unfilled because suitable posts are not identified, legacy infrastructure whose retrofitting is expensive and slow with compliance timelines extended more than once, private-sector establishments where the accommodation duty applies but the enforcement mechanism is weaker than for government, and the benchmark threshold itself which excludes persons below forty per cent who nevertheless face significant barriers; naming the joint is what turns a complaint into a diagnosis, and each joint has a different remedy. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
2. **Claim and named evidence:** The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.
3. **Claim and named evidence:** The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating

an entitlement. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

4. **Claim and named evidence:** The owners separate coverage, which counts how many persons hold certificates or receive scheme benefits, from substantive participation, which measures whether persons with disabilities actually access education, employment and public life on an equal basis, and they state that the second is the true test of a rights-based framework; the owners give a precise illustration of why the distinction is not verbal, namely that an accessible railway coach does not by itself secure mobility if the platform remains inaccessible, so an output can be complete while the journey it was meant to enable remains impossible. **Analysis:** Connect right or deprivation -> institutional duty and eligibility rule -> frontline implementation -> differentiated access and outcome -> grievance, audit or course correction. **Qualification:** State internal group and regional variation, legal/operative status, denominator, fiscal or causal limit, accessibility, dignity, privacy, portability or residual exclusion.

Counter-position / limit: A constitutional promise, prohibition, reservation provision, scheme catalogue, allocation, registration count or headline statistic cannot alone establish accessible implementation, adequate benefit, dignity, remedy or attributable outcome; test eligibility, institutions, frontline capacity, intersectionality, regional variation, grievance and evidence status.

Qualified conclusion: Entitlement and participation fail at different joints, so the assessment must name unfilled posts, legacy retrofitting, weaker private-sector enforcement and the benchmark threshold, and must attach a distinct remedy to each.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing right/need -> institution -> eligibility -> delivery -> outcome -> remedy; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for dignity, accessibility, portability, grievance, denominator, fiscal and causal limits.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses named India-centric evidence and preserves legal, institutional, group, eligibility, implementation, fiscal, data and outcome distinctions.

How to improve this answer: For "Assess why statutory entitlements for persons with disabilities have not translated into...", replace the weakest scheme-catalogue point with one named rights-holder, duty-bearer, eligibility bottleneck, safeguard, grievance route, process/outcome indicator and source-status qualification.

ORIGINAL MAINS 5 - 20 MARKS

Question: Analyse the relationship between universal design, reasonable accommodation and accessibility standards in building a disability-inclusive public realm. Answer in about 300 words.

Model thesis: The three instruments operate at different scales, so the analysis must separate design from adjustment from standard-setting, show why none of them alone completes the chain, and use a named illustration of an incomplete chain.

Claim -> named evidence -> analysis -> qualification:

- The owners distinguish universal design, which builds accessibility into the original design so that the widest range of users can use a facility from inception, from retrofitting, which adds accessibility features to structures that were built without them, and they record that universal design is more effective and more cost-efficient while retrofitting is often the reality given legacy infrastructure; the qualification the owners attach is that universal design does not abolish the need for individual accommodation, because a specific barrier may survive even a well-designed environment, so the two instruments are complementary rather than alternatives.
- Section 2(y) of the 2016 Act defines reasonable accommodation as necessary and appropriate modification and adjustment, not imposing a disproportionate or undue burden, to ensure that persons with disabilities enjoy rights on an equal basis with others, and the owners record that denial of reasonable accommodation is expressly recognised as a form of discrimination under the Act; the two limbs must be stated together, because the duty is not unlimited and the burden test is part of the definition, and the boundary case the owners give is an employer arguing that a particular adjustment is a disproportionate burden, which the Act requires to be balanced rather than

automatically conceded or automatically refused.

- The owners record the accessibility framework as covering three pillars, namely the built environment, transport and information and communication technology, and they record the status carefully: since March 2024 accessibility work is carried through the Scheme for Implementation of the Rights of Persons with Disabilities Act, so the earlier campaign label must not be presented as proof of a separate current programme, and any compliance-dashboard figure must be cited with its reporting date and its implementation vehicle; the owners add that the harmonised guidelines and standards for universal accessibility specify the technical requirements while enforcement and independent access audits remain a State and local responsibility.

ORIGINAL MAINS 6 - 20 MARKS

Question: Evaluate the adequacy of India's disability data and identification architecture for rights-based policy. Answer in about 300 words.

Model thesis: Measurement determines what policy can even see, so the evaluation must weigh the dated prevalence statement, the certification threshold and the portable identity platform against what a rights framework needs to know, and must close with a graded verdict.

Claim -> named evidence -> analysis -> qualification:

- The Department of Empowerment of Persons with Disabilities landing page, read on 2 September 2026, records that the department in the Ministry of Social Justice and Empowerment aims to facilitate the empowerment of persons with disabilities; that as per Census 2011 the number of persons with disabilities in the country is 2.68 crore, which is 2.21 per cent of the total population of the country; and that as per the Rights of Persons with Disabilities Act, 2016 there are twenty-one types of disabilities which include locomotor disability, visual impairment, hearing impairment, speech and language disability, intellectual disability, multiple disabilities, cerebral palsy and dwarfism among others; nothing beyond those recorded statements is claimed, and no certification, registration, reservation-fill, accessibility-compliance or device-distribution count is asserted.
- The owners record that the Census 2011 disability estimate rests on self-reporting and a narrow question framing and therefore likely undercounts actual prevalence, and they add that the identity-platform registration counts are

dynamic and that a completed 2027 enumeration may later provide updated figures under revised methodologies; the discipline is that a prevalence share converts an absolute count into a rate and makes a representation or budget-share claim meaningful, while a share measured in 2011 by self-report cannot be used as a current denominator or as evidence about the adequacy of any entitlement, so the figure must always be cited with its source, its year and its recorded limitation.

- The owners record the Unique Disability Identity platform as a centralised, nationally portable disability-certificate and card system operated by the Department of Empowerment of Persons with Disabilities, which standardises the application, certificate and card processes and replaces fragmented State-level certification, and they attach the boundary that it reduces re-certification friction but does not by itself guarantee access to any benefit and that its registration counts are dynamic and are not asserted; the examinable point is therefore an administrative one, namely that identification reform lowers a transaction cost without creating an entitlement.
- The owners define benchmark disability as forty per cent or more of a specified disability certified by a medical authority, and they record that benchmark status is what triggers eligibility for reservation and various concessions rather than being the definition of disability itself; the distinction matters twice over, first because a person may be a person with disability under the Act without holding benchmark status, and second because the threshold is a recorded limitation of the design, since a person below the threshold may still face significant barriers while remaining outside the reservation entitlement.

Qualified conclusion: Measurement determines what policy can even see, so the evaluation must weigh the dated prevalence statement, the certification threshold and the portable identity platform against what a rights framework needs to know, and must close with a graded verdict.

Demand decoding: The directive **evaluate** requires a direct position on “Evaluate the adequacy of India's disability data and identification architecture for rights-...”, every clause, constitutional/statutory/policy distinction, rights-holder and institution map, eligibility/exclusion and delivery chain, intersectional and regional variation, named Indian evidence, accountability and qualified conclusion.

Detailed examiner-grade model answer:
