Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Sanitation, Manual Scavenging and Safai Karamcharis - Solved Practice Workbook 5

BASIC MCQS / REMEDIATION 5

Q1. Which statement correctly identifies What this owner holds and how its routed demand is bounded?	5
Q2. Which chronology card should be filed under What this owner holds and how its routed demand is bounded?	6
Q3. Which option preserves the source-bounded meaning of What this owner holds and how its routed demand is bounded?	6
Q4. Which statement avoids a close-option trap about What this owner holds and how its routed demand is bounded?	7
Q5. Which statement correctly identifies What manual scavenging means in the statute?	8
Q6. Which chronology card should be filed under What manual scavenging means in the statute?	8
Q7. Which option preserves the source-bounded meaning of What manual scavenging means in the statute?	9
Q8. Which statement avoids a close-option trap about What manual scavenging means in the statute?	10
Q9. Which statement correctly identifies What hazardous cleaning means and why it is separate?	10
Q10. Which chronology card should be filed under What hazardous cleaning means and why it is separate?	11
Q11. Which option preserves the source-bounded meaning of What hazardous cleaning means and why it is separate?	12
Q12. Which statement avoids a close-option trap about What hazardous cleaning means and why it is separate?	12
Q13. Which statement correctly identifies The insanitary latrine as the anchor category?	13
Q14. Which chronology card should be filed under The insanitary latrine as the anchor category?	14
Q15. Which option preserves the source-bounded meaning of The insanitary latrine as the anchor category?	14
Q16. Which statement avoids a close-option trap about The insanitary latrine as the anchor category?	15
Q17. Which statement correctly identifies What the prohibition statute actually does?	15
Q18. Which chronology card should be filed under What the prohibition statute actually does?	16
Q19. Which option preserves the source-bounded meaning of What the prohibition statute actually does?	17
Q20. Which statement avoids a close-option trap about What the prohibition statute actually does?	17
Q21. Which statement correctly identifies Who is responsible for identification and how it can fail?	18
Q22. Which chronology card should be filed under Who is responsible for identification and how it can fail?	19
Q23. Which option preserves the source-bounded meaning of Who is responsible for identification and how it can fail?	19
Q24. Which statement avoids a close-option trap about Who is responsible for identification and how it can fail?	20
Q25. Which statement correctly identifies The earlier judicial baseline and the current tiers?	21
Q26. Which chronology card should be filed under The earlier judicial baseline and the current tiers?	21
Q27. Which option preserves the source-bounded meaning of The earlier judicial baseline and the current tiers?	22

Q28. Which statement avoids a close-option trap about The earlier judicial baseline and the current tiers?	23
Q29. Which statement correctly identifies Why the source of the compensation matters in an answer?	23
Q30. Which chronology card should be filed under Why the source of the compensation matters in an answer?	24
Q31. Which option preserves the source-bounded meaning of Why the source of the compensation matters in an answer?	25
Q32. Which statement avoids a close-option trap about Why the source of the compensation matters in an answer?	25
Q33. Which statement correctly identifies The joint mechanisation scheme and what it covers?	26
Q34. Which chronology card should be filed under The joint mechanisation scheme and what it covers?	27
Q35. Which option preserves the source-bounded meaning of The joint mechanisation scheme and what it covers?	27
Q36. Which statement avoids a close-option trap about The joint mechanisation scheme and what it covers?	28
Q37. Which statement correctly identifies Mechanisation as safety against mechanisation as substitution?	29
Q38. Which chronology card should be filed under Mechanisation as safety against mechanisation as substitution?	29
Q39. Which option preserves the source-bounded meaning of Mechanisation as safety against mechanisation as substitution?	30
Q40. Which statement avoids a close-option trap about Mechanisation as safety against mechanisation as substitution?	31
Q41. Which statement correctly identifies Why mechanisation uptake stalls?	32
Q42. Which chronology card should be filed under Why mechanisation uptake stalls?	32
Q43. Which option preserves the source-bounded meaning of Why mechanisation uptake stalls?	33
Q44. Which statement avoids a close-option trap about Why mechanisation uptake stalls?	34
Q45. Which statement correctly identifies The commission and its recorded institutional character?	34
Q46. Which chronology card should be filed under The commission and its recorded institutional character?	35
Q47. Which option preserves the source-bounded meaning of The commission and its recorded institutional character?	36
Q48. Which statement avoids a close-option trap about The commission and its recorded institutional character?	37
Q49. Which statement correctly identifies The commission's own account of its origin and tenure history?	37
Q50. Which chronology card should be filed under The commission's own account of its origin and tenure history?	38
Q51. Which option preserves the source-bounded meaning of The commission's own account of its origin and tenure history?	39
Q52. Which statement avoids a close-option trap about The commission's own account of its origin and tenure history?	40
Q53. Which statement correctly identifies Why prohibition has not produced abolition?	40
Q54. Which chronology card should be filed under Why prohibition has not produced abolition?	41
Q55. Which option preserves the source-bounded meaning of Why prohibition has not produced abolition?	42
Q56. Which statement avoids a close-option trap about Why prohibition has not produced abolition?	42
Q57. Which statement correctly identifies The caste-labour nexus and what it does to policy?	43
Q58. Which chronology card should be filed under The caste-labour nexus and what it does to policy?	44

Q59. Which option preserves the source-bounded meaning of The caste-labour nexus and what it does to policy?	44
Q60. Which statement avoids a close-option trap about The caste-labour nexus and what it does to policy?	45
Q61. Which statement correctly identifies Rehabilitation against reparation?	46
Q62. Which chronology card should be filed under Rehabilitation against reparation?	47
Q63. Which option preserves the source-bounded meaning of Rehabilitation against reparation?	47

Sanitation, Manual Scavenging and Safai Karamcharis - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies What this owner holds and how its routed demand is bounded?

A. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. B. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. C. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. D. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrine, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition.

Answer: A. Explanation: This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. The remaining options belong to different chronology, actor or analytical categories.

Q2. Which chronology card should be filed under What this owner holds and how its routed demand is bounded?

A. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. B. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. C. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. D. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences.

Answer: B. Explanation: This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. The remaining options belong to different chronology, actor or analytical categories.

Q3. Which option preserves the source-bounded meaning of What this owner holds and how its routed demand is bounded?

A. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. B. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. C. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation

through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. D. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence.

Answer: C. Explanation: This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. The remaining options belong to different chronology, actor or analytical categories.

Q4. Which statement avoids a close-option trap about What this owner holds and how its routed demand is bounded?

A. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. B. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. C. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. D. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead.

Answer: D. Explanation: This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation

scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. The remaining options belong to different chronology, actor or analytical categories.

Q5. Which statement correctly identifies What manual scavenging means in the statute?

A. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. B. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. C. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. D. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all.

Answer: A. Explanation: The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. The remaining options belong to different chronology, actor or analytical categories.

Q6. Which chronology card should be filed under What manual scavenging means in the statute?

A. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. B. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it,

which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. C. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. D. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence.

Answer: B. Explanation: The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. The remaining options belong to different chronology, actor or analytical categories.

Q7. Which option preserves the source-bounded meaning of What manual scavenging means in the statute?

A. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. B. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. C. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. D. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence.

Answer: C. Explanation: The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act

and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. The remaining options belong to different chronology, actor or analytical categories.

Q8. Which statement avoids a close-option trap about What manual scavenging means in the statute?

A. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. B. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. C. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. D. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition.

Answer: D. Explanation: The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. The remaining options belong to different chronology, actor or analytical categories.

Q9. Which statement correctly identifies What hazardous cleaning means and why it is separate?

A. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. B. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. C. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to

under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. D. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument.

Answer: A. Explanation: The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. The remaining options belong to different chronology, actor or analytical categories.

Q10. Which chronology card should be filed under What hazardous cleaning means and why it is separate?

A. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. B. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. C. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. D. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument.

Answer: B. Explanation: The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. The remaining options belong to different chronology, actor or analytical categories.

Q11. Which option preserves the source-bounded meaning of What hazardous cleaning means and why it is separate?

A. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. B. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursal. C. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. D. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence.

Answer: C. Explanation: The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. The remaining options belong to different chronology, actor or analytical categories.

Q12. Which statement avoids a close-option trap about What hazardous cleaning means and why it is separate?

A. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursal. B. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. C. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. D. The owners define hazardous cleaning under the same

Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences.

Answer: D. Explanation: The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. The remaining options belong to different chronology, actor or analytical categories.

Q13. Which statement correctly identifies The insanitary latrine as the anchor category?

A. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. B. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. C. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. D. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument.

Answer: A. Explanation: The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. The remaining options belong to different chronology, actor or analytical categories.

Q14. Which chronology card should be filed under The insanitary latrine as the anchor category?

A. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. B. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. C. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. D. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence.

Answer: B. Explanation: The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. The remaining options belong to different chronology, actor or analytical categories.

Q15. Which option preserves the source-bounded meaning of The insanitary latrine as the anchor category?

A. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. B. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. C. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. D. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and

accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act.

Answer: C. Explanation: The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. The remaining options belong to different chronology, actor or analytical categories.

Q16. Which statement avoids a close-option trap about The insanitary latrine as the anchor category?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. C. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. D. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all.

Answer: D. Explanation: The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. The remaining options belong to different chronology, actor or analytical categories.

Q17. Which statement correctly identifies What the prohibition statute actually does?

A. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. B. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in

practice, and an answer should separate the direction from its disbursement. C. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. D. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence.

Answer: A. Explanation: The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. The remaining options belong to different chronology, actor or analytical categories.

Q18. Which chronology card should be filed under What the prohibition statute actually does?

A. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. B. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. C. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. D. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act.

Answer: B. Explanation: The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. The remaining options belong to different chronology,

Q19. Which option preserves the source-bounded meaning of What the prohibition statute actually does?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. C. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. D. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement.

Answer: C. Explanation: The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. The remaining options belong to different chronology, actor or analytical categories.

Q20. Which statement avoids a close-option trap about What the prohibition statute actually does?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. C. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and

convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. D. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument.

Answer: D. Explanation: The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. The remaining options belong to different chronology, actor or analytical categories.

Q21. Which statement correctly identifies Who is responsible for identification and how it can fail?

A. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. B. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. C. The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. D. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute.

Answer: A. Explanation: The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. The remaining options belong to different chronology, actor or analytical categories.

Q22. Which chronology card should be filed under Who is responsible for identification and how it can fail?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. C. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. D. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute.

Answer: B. Explanation: The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. The remaining options belong to different chronology, actor or analytical categories.

Q23. Which option preserves the source-bounded meaning of Who is responsible for identification and how it can fail?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. C. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. D. The owners record the National Action for Mechanised Sanitation Ecosystem,

launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute.

Answer: C. Explanation: The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. The remaining options belong to different chronology, actor or analytical categories.

Q24. Which statement avoids a close-option trap about Who is responsible for identification and how it can fail?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. C. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. D. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence.

Answer: D. Explanation: The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. The remaining options belong to different chronology, actor or analytical categories.

Q25. Which statement correctly identifies The earlier judicial baseline and the current tiers?

A. The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balram Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. B. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. C. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. D. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard.

Answer: A. Explanation: The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balram Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. The remaining options belong to different chronology, actor or analytical categories.

Q26. Which chronology card should be filed under The earlier judicial baseline and the current tiers?

A. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. B. The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balram Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. C. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the

hazard. D. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation.

Answer: B. Explanation: The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balram Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. The remaining options belong to different chronology, actor or analytical categories.

Q27. Which option preserves the source-bounded meaning of The earlier judicial baseline and the current tiers?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. C. The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balram Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. D. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation.

Answer: C. Explanation: The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balram Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. The remaining options belong to different chronology, actor or analytical categories.

Q28. Which statement avoids a close-option trap about The earlier judicial baseline and the current tiers?

A. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. B. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. C. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. D. The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balam Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act.

Answer: D. Explanation: The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balam Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act. The remaining options belong to different chronology, actor or analytical categories.

Q29. Which statement correctly identifies Why the source of the compensation matters in an answer?

A. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. B. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. C. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused

for want of trained operators, which converts a procurement statistic into a question about operation. D. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard.

Answer: A. Explanation: The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. The remaining options belong to different chronology, actor or analytical categories.

Q30. Which chronology card should be filed under Why the source of the compensation matters in an answer?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. C. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. D. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate.

Answer: B. Explanation: The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. The remaining options belong to different chronology, actor or analytical categories.

Q31. Which option preserves the source-bounded meaning of Why the source of the compensation matters in an answer?

A. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. B. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. C. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursal. D. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate.

Answer: C. Explanation: The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursal. The remaining options belong to different chronology, actor or analytical categories.

Q32. Which statement avoids a close-option trap about Why the source of the compensation matters in an answer?

A. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. B. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. C. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable

alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. D. The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement.

Answer: D. Explanation: The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement. The remaining options belong to different chronology, actor or analytical categories.

Q33. Which statement correctly identifies The joint mechanisation scheme and what it covers?

A. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. B. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. C. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. D. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate.

Answer: A. Explanation: The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. The remaining options belong to different chronology, actor or analytical categories.

Q34. Which chronology card should be filed under The joint mechanisation scheme and what it covers?

A. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. B. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. C. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. D. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution.

Answer: B. Explanation: The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. The remaining options belong to different chronology, actor or analytical categories.

Q35. Which option preserves the source-bounded meaning of The joint mechanisation scheme and what it covers?

A. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. B. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. C. The owners record the

National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. D. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer.

Answer: C. Explanation: The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. The remaining options belong to different chronology, actor or analytical categories.

Q36. Which statement avoids a close-option trap about The joint mechanisation scheme and what it covers?

A. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. B. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. C. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. D. The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute.

Answer: D. Explanation: The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the

Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute. The remaining options belong to different chronology, actor or analytical categories.

Q37. Which statement correctly identifies Mechanisation as safety against mechanisation as substitution?

A. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. B. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. C. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. D. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation.

Answer: A. Explanation: The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. The remaining options belong to different chronology, actor or analytical categories.

Q38. Which chronology card should be filed under Mechanisation as safety against mechanisation as substitution?

A. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an

executive resolution. B. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. C. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. D. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer.

Answer: B. Explanation: The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. The remaining options belong to different chronology, actor or analytical categories.

Q39. Which option preserves the source-bounded meaning of Mechanisation as safety against mechanisation as substitution?

A. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. B. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. C. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. D. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12

August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution.

Answer: C. Explanation: The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. The remaining options belong to different chronology, actor or analytical categories.

Q40. Which statement avoids a close-option trap about Mechanisation as safety against mechanisation as substitution?

A. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. B. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. C. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. D. The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard.

Answer: D. Explanation: The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard. The remaining options belong to different chronology, actor or analytical categories.

Q41. Which statement correctly identifies Why mechanisation uptake stalls?

A. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. B. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. C. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. D. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer.

Answer: A. Explanation: The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. The remaining options belong to different chronology, actor or analytical categories.

Q42. Which chronology card should be filed under Why mechanisation uptake stalls?

A. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. B. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. C. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist

after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. D. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer.

Answer: B. Explanation: The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. The remaining options belong to different chronology, actor or analytical categories.

Q43. Which option preserves the source-bounded meaning of Why mechanisation uptake stalls?

A. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. B. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. C. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. D. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative.

Answer: C. Explanation: The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. The remaining options belong to different chronology, actor or analytical categories.

Q44. Which statement avoids a close-option trap about Why mechanisation uptake stalls?

A. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. B. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. C. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. D. The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation.

Answer: D. Explanation: The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation. The remaining options belong to different chronology, actor or analytical categories.

Q45. Which statement correctly identifies The commission and its recorded institutional character?

A. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. B. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. C. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable

alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. D. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment.

Answer: A. Explanation: The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. The remaining options belong to different chronology, actor or analytical categories.

Q46. Which chronology card should be filed under The commission and its recorded institutional character?

A. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. B. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. C. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. D. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment.

Answer: B. Explanation: The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure

lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. The remaining options belong to different chronology, actor or analytical categories.

Q47. Which option preserves the source-bounded meaning of The commission and its recorded institutional character?

A. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. B. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. C. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. D. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.

Answer: C. Explanation: The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. The remaining options belong to different chronology, actor or analytical categories.

Q48. Which statement avoids a close-option trap about The commission and its recorded institutional character?

A. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. B. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. D. The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate.

Answer: D. Explanation: The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate. The remaining options belong to different chronology, actor or analytical categories.

Q49. Which statement correctly identifies The commission's own account of its origin and tenure history?

A. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. B. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. C. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability,

prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. D. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment.

Answer: A. Explanation: The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. The remaining options belong to different chronology, actor or analytical categories.

Q50. Which chronology card should be filed under The commission's own account of its origin and tenure history?

A. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. B. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. C. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. D. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.

Answer: B. Explanation: The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an

Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. The remaining options belong to different chronology, actor or analytical categories.

Q51. Which option preserves the source-bounded meaning of The commission's own account of its origin and tenure history?

A. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. B. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. C. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. D. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries.

Answer: C. Explanation: The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. The remaining options belong to different chronology, actor or analytical categories.

Q52. Which statement avoids a close-option trap about The commission's own account of its origin and tenure history?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. B. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. C. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. D. The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution.

Answer: D. Explanation: The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution. The remaining options belong to different chronology, actor or analytical categories.

Q53. Which statement correctly identifies Why prohibition has not produced abolition?

A. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. B. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. C. The owners distinguish rehabilitation, which is

forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. D. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.

Answer: A. Explanation: The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. The remaining options belong to different chronology, actor or analytical categories.

Q54. Which chronology card should be filed under Why prohibition has not produced abolition?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. B. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. C. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. D. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative.

Answer: B. Explanation: The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. The remaining options belong to different chronology, actor or analytical categories.

Q55. Which option preserves the source-bounded meaning of Why prohibition has not produced abolition?

A. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. B. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. C. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. D. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.

Answer: C. Explanation: The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. The remaining options belong to different chronology, actor or analytical categories.

Q56. Which statement avoids a close-option trap about Why prohibition has not produced abolition?

A. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. B. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and

it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. D. The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer.

Answer: D. Explanation: The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer. The remaining options belong to different chronology, actor or analytical categories.

Q57. Which statement correctly identifies The caste-labour nexus and what it does to policy?

A. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based cognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. B. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. C. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. D. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.

Answer: A. Explanation: The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based cognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer

hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. The remaining options belong to different chronology, actor or analytical categories.

Q58. Which chronology card should be filed under The caste-labour nexus and what it does to policy?

A. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. B. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. C. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. D. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries.

Answer: B. Explanation: The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. The remaining options belong to different chronology, actor or analytical categories.

Q59. Which option preserves the source-bounded meaning of The caste-labour nexus and what it does to policy?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. B. The owners record two dated status statements and bound both. The joint scheme's

implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. C. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. D. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Answer: C. Explanation: The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. The remaining options belong to different chronology, actor or analytical categories.

Q60. Which statement avoids a close-option trap about The caste-labour nexus and what it does to policy?

A. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. B. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. C. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before

alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. D. The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment.

Answer: D. Explanation: The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment. The remaining options belong to different chronology, actor or analytical categories.

Q61. Which statement correctly identifies Rehabilitation against reparation?

A. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. B. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. D. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence.

Answer: A. Explanation: The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a

livelihood alternative. The remaining options belong to different chronology, actor or analytical categories.

Q62. Which chronology card should be filed under Rehabilitation against reparation?

A. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. B. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. D. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Answer: B. Explanation: The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. The remaining options belong to different chronology, actor or analytical categories.

Q63. Which option preserves the source-bounded meaning of Rehabilitation against reparation?

A. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. B. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. C. The owners distinguish rehabilitation, which is forward-looking livelihood support, from

reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. D. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Answer: C. Explanation: The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. The remaining options belong to different chronology, actor or analytical categories.

Q64. Which statement avoids a close-option trap about Rehabilitation against reparation?

A. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. B. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. C. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. D. The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative.

Answer: D. Explanation: The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate

identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative. The remaining options belong to different chronology, actor or analytical categories.

Q65. Which statement correctly identifies How the death and incident evidence must be handled?

A. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. B. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. D. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence.

Answer: A. Explanation: The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. The remaining options belong to different chronology, actor or analytical categories.

Q66. Which chronology card should be filed under How the death and incident evidence must be handled?

A. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. B. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. C. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a

municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. D. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead.

Answer: B. Explanation: The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. The remaining options belong to different chronology, actor or analytical categories.

Q67. Which option preserves the source-bounded meaning of How the death and incident evidence must be handled?

A. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drains, pits or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. B. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. C. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. D. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Answer: C. Explanation: The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date

and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. The remaining options belong to different chronology, actor or analytical categories.

Q68. Which statement avoids a close-option trap about How the death and incident evidence must be handled?

A. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. B. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. C. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. D. The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.

Answer: D. Explanation: The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue. The remaining options belong to different chronology, actor or analytical categories.

Q69. Which statement correctly identifies The 2024 objective demand and how it is covered?

A. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. B. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative

livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. C. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. D. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence.

Answer: A. Explanation: The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. The remaining options belong to different chronology, actor or analytical categories.

Q70. Which chronology card should be filed under The 2024 objective demand and how it is covered?

A. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drains, pits or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. B. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. C. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. D. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative

livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Answer: B. Explanation: The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. The remaining options belong to different chronology, actor or analytical categories.

Q71. Which option preserves the source-bounded meaning of The 2024 objective demand and how it is covered?

A. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. B. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. C. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. D. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead.

Answer: C. Explanation: The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. The remaining options belong to different chronology, actor or analytical categories.

Q72. Which statement avoids a close-option trap about The 2024 objective demand and how it is covered?

A. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. B. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. C. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. D. The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries.

Answer: D. Explanation: The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries. The remaining options belong to different chronology, actor or analytical categories.

Q73. Which statement correctly identifies What the current status statements do and do not establish?

A. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. B. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. C. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative

livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. D. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead.

Answer: A. Explanation: The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. The remaining options belong to different chronology, actor or analytical categories.

Q74. Which chronology card should be filed under What the current status statements do and do not establish?

A. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead. B. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. C. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. D. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition.

Answer: B. Explanation: The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the

owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. The remaining options belong to different chronology, actor or analytical categories.

Q75. Which option preserves the source-bounded meaning of What the current status statements do and do not establish?

A. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. B. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. C. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. D. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrine, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition.

Answer: C. Explanation: The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. The remaining options belong to different chronology, actor or analytical categories.

Q76. Which statement avoids a close-option trap about What the current status statements do and do not establish?

A. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. B. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. C. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment

of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. D. The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence.

Answer: D. Explanation: The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence. The remaining options belong to different chronology, actor or analytical categories.

Q77. Which statement correctly identifies The reform architecture the owners recommend and its cost?

A. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. B. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. C. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrine, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. D. This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead.

Answer: A. Explanation: The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may

leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. The remaining options belong to different chronology, actor or analytical categories.

Q78. Which chronology card should be filed under The reform architecture the owners recommend and its cost?

A. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences. B. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. C. The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrines, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition. D. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all.

Answer: B. Explanation: The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. The remaining options belong to different chronology, actor or analytical categories.

Q79. Which option preserves the source-bounded meaning of The reform architecture the owners recommend and its cost?

A. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. B. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of

toilet coverage without the latrine type has not engaged the statutory category at all. C. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. D. The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences.

Answer: C. Explanation: The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. The remaining options belong to different chronology, actor or analytical categories.

Q80. Which statement avoids a close-option trap about The reform architecture the owners recommend and its cost?

A. The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all. B. The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument. C. The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence. D. The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Answer: D. Explanation: The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a

municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution. The remaining options belong to different chronology, actor or analytical categories.

PYQS AND ANSWER PRACTICE

VERIFIED OBJECTIVE-DEMAND OWNERSHIP AUDIT

This owner's previous-year record is a verified objective ownership rather than a Mains ownership, and it is stated precisely together with the boundary of what is claimed. The audited 2024-2025 Prelims routing ledger routes exactly one demand here, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and that ledger records expressly that although the official Set-A answer key is available locally the answer is not recorded there; the Basic owner's own generated integration block applies the same rule and states that it does not convert an unkeyed or answer-free objective question into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question anywhere, and discharges the owner requirement by covering the named body and its likely statement-level distinctions as taught content inside the sanitation-and-dignity frame the owner already carries. No Mains demand is claimed: the audited 2018-2023 Mains routing ledger and the audited 2024-2025 Mains routing ledger route no General Studies question to this owner, both the Basic and the Advanced owner state independently that no General Studies Paper II question in the audited 2024-2025 papers directly names manual scavenging or safai karamcharis, and the questions the owners carry are described by them as probable or anticipated framing, so none of them is reproduced here as a previous-year question and no year, paper, question number, directive, mark value or word limit is asserted for them. Because no solved Mains demand card is available, the package supplies six original Mains questions with model solutions and eighty original objective questions on a strict A -> B -> C -> D rotation, each model solution opening with its analytical claim so that the evidence which follows does argumentative rather than decorative work. The locally held OCR-searchable official General Studies papers were read only to confirm that no routed Mains demand for this owner appears in them; no question was invented from them, no marking scheme or page precision was imported and no official answer key is claimed for any question anywhere in this package.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: No direct GS-II Mains PYQ in 2024-2025. The four-lever framework (prohibition, mechanisation, rehabilitation, compensation) and the caste-labour nexus are transferable to any future question.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2024-2025.md. **Answer-key rule:** The official 2024-2025 Prelims Set-A keys are present in the repository and CSAT Set-A keys are supplied; even so, no option or answer is recorded or inferred in this integration.

- **Years represented:** 2024
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2024	Prelims GS-I	24	World Toilet Organization	Objective question; official Set-A key available locally, answer not inferred	Key available locally (official Set-A answer key present); answer not recorded here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- World Toilet Organization

This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

10. PYQ-based analytical application

- ANALYSIS: No direct GS-II Mains PYQ in 2024-2025. Apply the four-lever framework (prohibition, mechanisation, rehabilitation, compensation) and the caste-labour nexus to any future question; diagnose the specific enforcement gap rather than offering a generic "more funds needed" answer.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish manual scavenging from hazardous cleaning under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013, and examine the challenges in enforcing both prohibitions. Answer in about 150 words.

Model thesis: Claim: the two prohibitions fail for different reasons, so an answer that merges the definitions cannot diagnose either enforcement failure. Named evidence: manual scavenging defined as manually handling human excreta from insanitary latrines and comparable settings before it fully decomposes, with protective equipment expressly incapable of making it lawful; hazardous cleaning defined as manual cleaning of a sewer, septic tank or specified space without the prescribed gear, devices and precautions; the insanitary latrine defined by the need for human intervention; the criminal offences with imprisonment of up to five years for a subsequent offence; the survey duty of local authorities; and the recorded rarity of first information reports with most cases treated as accidents. Analysis: the manual-scavenging prohibition fails at enumeration because recognition creates rehabilitation liability, while the hazardous-cleaning prohibition fails at attribution because a municipal body can contract the work to a private firm and dispute employer status, so one needs an independent survey and the other needs a presumption of employer liability. Qualification: the answer should record that both prohibitions are in force and that the failure is of enforcement rather than of legal vacuum.

Claim -> named evidence -> analysis -> qualification:

- The owners define manual scavenging under the Prohibition of Employment as Manual Scavengers and their Rehabilitation Act, 2013 as employment or engagement to manually clean, carry, dispose of or otherwise handle human excreta from the statutory insanitary-latrine, open-drain, pit or railway-track settings before it fully decomposes, and they attach the decisive qualification that protective equipment does not turn manual scavenging into a lawful practice. The definition is therefore about the act and its setting rather than about the gear worn while performing it, which is why a mechanisation answer that offers only protective equipment does not answer the prohibition.
- The owners define hazardous cleaning under the same Act as the manual cleaning of a sewer, a septic tank or a specified space without the prescribed protective gear, cleaning devices and safety precautions, and they record it as distinct from manual scavenging even though both are prohibited. The distinction is precise and testable: manual scavenging concerns the handling of human excreta from insanitary latrines and comparable settings, whereas hazardous cleaning concerns entry into a sewer or septic tank without the prescribed safeguards, so an answer that treats the two terms as synonyms has merged two separately defined offences.
- The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all.
- The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is

prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument.

- The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count is an administrative output shaped by liability rather than a measured prevalence.
- The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer.

Qualified conclusion: Claim: the two prohibitions fail for different reasons, so an answer that merges the definitions cannot diagnose either enforcement failure. Named evidence: manual scavenging defined as manually handling human excreta from insanitary latrines and comparable settings before it fully decomposes, with protective equipment expressly incapable of making it lawful; hazardous cleaning defined as manual cleaning of a sewer, septic tank or specified space without the prescribed gear, devices and precautions; the insanitary latrine defined by the need for human intervention; the criminal offences with imprisonment of up to five years for a subsequent offence; the survey duty of local authorities; and the recorded rarity of first information reports with most cases treated as accidents. Analysis: the manual-scavenging prohibition fails at enumeration because recognition creates rehabilitation liability, while the hazardous-cleaning prohibition fails at attribution because a municipal body can contract the work to a private firm and dispute employer status, so one needs an independent survey and the other needs a presumption of employer liability. Qualification: the answer should record that both prohibitions are in force and that the failure is of enforcement rather than of legal vacuum.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain why the source and the status of the compensation tiers for sewer deaths must be stated precisely in a sanitation answer. Answer in about 150 words.

Model thesis: Claim: the compensation figures are judicial directions rather than a statutory schedule, and stating them wrongly converts a court's remedial order into a legislative entitlement that Parliament never enacted. Named evidence: Safai Karamchari Andolan v. Union of India of 2014 establishing the earlier baseline of ten lakh rupees and reinforcing identification, rehabilitation and mechanisation; Dr Balram Singh v. Union of India of 20 October 2023 raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury with mechanisation and accountability directions; and the owners' record that the 2013 Act contains no such schedule and that compensation is often delayed or disputed while families lack documentation to claim. Analysis: the distinction changes both the argument and the remedy, because a statutory schedule would be enforced through the Act's own machinery whereas a judicial direction depends on continuing supervision and on State compliance, which is precisely where the delay arises. Qualification: the answer should treat the tier as an announced entitlement whose disbursal must be separately evidenced rather than as a settled measure of relief delivered.

Claim -> named evidence -> analysis -> qualification:

- The owners record Safai Karamchari Andolan v. Union of India, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record Dr Balram Singh v. Union of India, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act.

- The owners treat the source of the compensation tiers as a trap in its own right, because an answer that places the thirty, twenty and ten lakh rupee tiers inside the 2013 Act has attributed to Parliament what the Supreme Court directed. They add a second discipline on the same figures, that the compensation is often delayed or disputed and that families lack the documentation to claim, so the tier is an entitlement announced by a court rather than a payment demonstrated in practice, and an answer should separate the direction from its disbursement.
- The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.

Qualified conclusion: Claim: the compensation figures are judicial directions rather than a statutory schedule, and stating them wrongly converts a court's remedial order into a legislative entitlement that Parliament never enacted. Named evidence: *Safai Karamchari Andolan v. Union of India* of 2014 establishing the earlier baseline of ten lakh rupees and reinforcing identification, rehabilitation and mechanisation; *Dr Balram Singh v. Union of India* of 20 October 2023 raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury with mechanisation and accountability directions; and the owners' record that the 2013 Act contains no such schedule and that compensation is often delayed or disputed while families lack documentation to claim. Analysis: the distinction changes both the argument and the remedy, because a statutory schedule would be enforced through the Act's own machinery whereas a judicial direction depends on continuing supervision and on State compliance, which is precisely where the delay arises. Qualification: the answer should treat the tier as an announced entitlement whose disbursement must be separately evidenced rather than as a settled measure of relief delivered.

ORIGINAL MAINS 3 - 15 MARKS

Question: Critically examine the claim that manual scavenging persists in India because of an enforcement and caste-stigma failure rather than a legal vacuum. Answer in about 250 words.

Model thesis: Claim: the claim is sustained, because every element that a prohibition needs exists in law while the elements that make a prohibition operative are missing in administration and in the labour market. Named evidence: the 2013 Act with its criminal offences, survey duty and rehabilitation mandate; the four-lever framework of prohibition, mechanisation, rehabilitation and compensation; survey under-count driven by rehabilitation liability; contractor accountability diffusion in outsourced sewer cleaning; the rarity of prosecutions and the accident framing of deaths; delayed and disputed compensation; the intergenerational occupation lock among specific Dalit sub-castes; demand-side caste preference including by municipalities; and rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers. Analysis: the enforcement failure and the caste failure reinforce each other, because under-counting reduces the recorded population that rehabilitation must serve, while caste preference in hiring reduces the alternative employment that would make rehabilitation stick, so each failure supplies the other's excuse. Qualification: the examination should record the sequencing trade-off the owners state, that strict enforcement without alternative livelihoods can leave workers without income, and should therefore argue for simultaneous rather than sequential action on the four levers.

Claim -> named evidence -> analysis -> qualification:

- The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument.
- The owners record that State governments, acting through District Magistrates and local authorities, conduct surveys to enumerate manual scavengers and sewer or septic-tank workers, and that the joint sanitation scheme extends this profiling to sanitation workers in urban areas. They then record the incentive problem in explicit terms: local authorities have an incentive to under-report manual scavengers because recognition creates rehabilitation liability, so the actual number may exceed the official survey. The examinable consequence is that a survey count

is an administrative output shaped by liability rather than a measured prevalence.

- The owners separate prohibition from abolition and then explain the gap through four named mechanisms: local bodies and contractors can diffuse employer responsibility, surveys may under-count workers where recognition creates rehabilitation liability, prosecution is rare so deterrence is weak despite criminal provisions, and one-time rehabilitation without stable alternative work can push a worker back into sanitation. They record that first information reports under the 2013 Act are rare and that most cases are treated as accidents rather than as prohibited employment, and they give the boundary case of a municipal corporation that contracts sewer cleaning to a private firm and then argues that it is not the employer.
- The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment.
- The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative.
- The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.

Qualified conclusion: Claim: the claim is sustained, because every element that a prohibition needs exists in law while the elements that make a prohibition operative are missing in administration and in the labour market. Named evidence: the 2013 Act with its criminal offences, survey duty and rehabilitation mandate; the four-lever framework of prohibition, mechanisation, rehabilitation and compensation; survey under-count driven by rehabilitation liability; contractor accountability diffusion in outsourced sewer cleaning; the rarity of prosecutions and the accident framing of deaths; delayed and disputed compensation; the intergenerational occupation lock among specific Dalit sub-castes; demand-side caste preference including by municipalities; and rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers. Analysis: the enforcement failure and the caste failure reinforce each other, because under-counting reduces the recorded population that rehabilitation must serve, while caste preference in hiring reduces the alternative employment that would make rehabilitation stick, so each failure supplies the other's excuse. Qualification: the examination should record the sequencing trade-off the owners state, that strict enforcement without alternative livelihoods can leave workers without income, and should therefore argue for simultaneous rather than sequential action on the four levers.

ORIGINAL MAINS 4 - 15 MARKS

Question: Assess whether mechanisation as currently pursued can end hazardous cleaning, and identify what more would be required. Answer in about 250 words.

Model thesis: Claim: mechanisation as currently pursued improves the safety of entry rather than removing the need for it, so it can reduce harm without ending the prohibited practice. Named evidence: the joint scheme of 2022-23 covering worker profiling, safety training and equipment, access to mechanised sanitation, livelihood support and convergence; the recorded distinction between full robotic substitution and safety-focused mechanisation with the record that the scheme emphasises the latter; urban local body procurement of sewer-cleaning equipment and the capital subsidy for a worker-entrepreneur to buy a suction machine; and the three-step uptake failure of capital

constraint and slow disbursement, low credit access for worker-entrepreneurs and equipment falling into disuse without maintenance and trained operators. Analysis: the binding constraint moves down the chain, from purchase to operation to maintenance, so a procurement target can be met while unsafe entry continues, and the boundary case of stored unused equipment shows that the measurable output and the intended outcome can diverge completely. Qualification: the assessment should record that full robotic substitution is capital-intensive and technologically nascent, so the realistic recommendation is operator training, maintenance financing and enforceable municipal procurement accountability rather than an announcement of substitution.

Claim -> named evidence -> analysis -> qualification:

- The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute.
- The owners draw the distinction that decides the quality of a mechanisation answer. Full substitution replaces human entry entirely through robotic sewer cleaning; safety-focused mechanisation supplies protective equipment and machines to workers who still enter, and the owners record that the current scheme emphasises the latter. They record the practical consequences on both sides: urban local bodies procure mechanised sewer-cleaning equipment and workers receive training and equipment, while a capital subsidy is meant to let a worker-entrepreneur buy a suction machine, and they record that mechanisation which merely adds protective equipment while still requiring human entry does not eliminate the hazard.
- The owners set out the uptake failure chain in three linked steps: urban local bodies lack the funds to procure mechanised equipment and subsidy disbursement is slow; sanitation workers lack the capital and credit access to become equipment-owning entrepreneurs so loan-subsidy uptake is low; and mechanised equipment requires maintenance and trained operators so machines fall into disuse without sustained support. They give the boundary case of a city that procures equipment and then stores it unused for want of trained operators, which converts a procurement statistic into a question about operation.
- The owners record two dated status statements and bound both. The joint scheme's implementation continues for safety, mechanisation, profiling and livelihood convergence, and the owners instruct that a profiled-worker or protective-equipment total is a dashboard output that must be cited with its component and report date and must be distinguished from proof that no unsafe entry occurs. The commission's extension of February 2025 continues a non-statutory body through 31 March 2028, and the owners instruct that both its current tenure and its resolution-based rather than permanent statutory character be stated together, so that a live tenure is not mistaken for institutional permanence.
- The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Qualified conclusion: Claim: mechanisation as currently pursued improves the safety of entry rather than removing the need for it, so it can reduce harm without ending the prohibited practice. Named evidence: the joint scheme of 2022-23 covering worker profiling, safety training and equipment, access to mechanised sanitation, livelihood support and convergence; the recorded distinction between full robotic substitution and safety-focused mechanisation with the record that the scheme emphasises the latter; urban local body procurement of sewer-cleaning equipment and the capital subsidy for a worker-entrepreneur to buy a suction machine; and the three-step uptake failure of capital constraint and slow disbursement, low credit access for worker-entrepreneurs and equipment falling into disuse without maintenance and trained operators. Analysis: the binding constraint moves down the chain, from purchase to operation to maintenance, so a procurement target can be met while unsafe entry continues, and the boundary case

of stored unused equipment shows that the measurable output and the intended outcome can diverge completely. Qualification: the assessment should record that full robotic substitution is capital-intensive and technologically nascent, so the realistic recommendation is operator training, maintenance financing and enforceable municipal procurement accountability rather than an announcement of substitution.

ORIGINAL MAINS 5 - 20 MARKS

Question: Analyse the sanitation-labour question as a four-lever problem and evaluate the institutional architecture that is supposed to hold the levers together. Answer in about 300 words.

Model thesis: Claim: prohibition, mechanisation, rehabilitation and compensation are complementary rather than alternative levers, and the institution meant to integrate them is the weakest element of the architecture, which explains why progress on any one lever does not accumulate. Named evidence: the 2013 Act as the prohibition and penalty instrument with survey and rehabilitation duties; the joint scheme of 2022-23 as the mechanisation and livelihood instrument; the judicial tiers of 20 October 2023 as the compensation instrument; the commission of statutory origin under the 1993 Act, constituted on 12 August 1994 for three years up to 31 March 1997 with a sunset in sub-section (4) of Section 1 and statutory extensions to March 2002 and February 2004, now continued by an executive resolution of February 2025 through 31 March 2028; and the constitutional contrast with the commissions under Articles 338 and 338A. Analysis: a monitoring body whose existence depends on periodic executive renewal cannot credibly compel State compliance, so under-counting, contractor diffusion, slow mechanisation and delayed compensation each remain locally rational, and the four levers operate as four separate programmes rather than as one enforcement system. Qualification: the evaluation should record the recommended corrections, a permanent statutory commission with quasi-judicial powers and parliamentary reporting and a statutory presumption of a municipal first information report for every sewer death, while conceding that both require legislative action and that neither by itself supplies alternative livelihoods.

Claim -> named evidence -> analysis -> qualification:

- This owner holds the sanitation-labour argument as a four-lever framework rather than as a single prohibition: prohibition through the 2013 statute, mechanisation through the joint sanitation scheme, rehabilitation through livelihood support and compensation through judicial direction, monitored by a commission whose institutional character is itself examinable. The owners insist that the caste-labour nexus makes this a recognitive-justice issue and not merely an occupational-safety one, because the work is performed almost exclusively by specific Dalit sub-castes. The audited ledgers route exactly one objective demand here, the 2024 Prelims General Studies Paper I question numbered 24 on the World Toilet Organization, and the ledger records that although the official Set-A key is available locally the answer is not recorded, so this package records no option or answer letter for it and covers it as taught content instead.
- The owners record the 2013 Act as prohibiting manual scavenging and hazardous cleaning, mandating identification and rehabilitation of manual scavengers, and creating offences carrying imprisonment and fines, with the Advanced owner recording imprisonment of up to five years for a subsequent offence. They record that employing a person for either prohibited practice is a criminal offence, that constructing an insanitary latrine is prohibited, and that local authorities must survey and identify manual scavengers, so the statute combines a criminal prohibition, an administrative duty of enumeration and a welfare duty of rehabilitation in one instrument.
- The owners record *Safai Karamchari Andolan v. Union of India*, decided by the Supreme Court in 2014, as establishing the earlier compensation baseline of ten lakh rupees and as reinforcing identification, rehabilitation and mechanisation. They then record *Dr Balram Singh v. Union of India*, decided on 20 October 2023, as raising sewer-death compensation to thirty lakh rupees and prescribing at least twenty lakh rupees for permanent disability and ten lakh rupees for other injury, alongside mechanisation and accountability directions. The owners state expressly that these are judicial directions and not a statutory schedule under the 2013 Act.
- The owners record the National Action for Mechanised Sanitation Ecosystem, launched in 2022-23 and implemented jointly by the Ministry of Social Justice and Empowerment and the Ministry of Housing and Urban Affairs, as covering profiling of sewer and septic-tank workers, safety training and equipment, access to mechanised sanitation, livelihood support and convergence with social-security schemes. They record that it builds on and supplements the earlier self-employment rehabilitation scheme by adding mechanisation, protective equipment, training and worker profiling, and they record that it complements rather than replaces the prohibition statute.

- The owners record the National Commission for Safai Karamcharis as a body of statutory origin under the National Commission for Safai Karamcharis Act, 1993 whose statutory tenure lapsed, so that it is now a non-statutory, resolution-based body continued by a Cabinet or Ministry extension dated February 2025 with a current tenure through 31 March 2028. They record its functions as monitoring welfare schemes, investigating complaints and recommending corrective action, and they record the constitutional contrast expressly: the commissions for Scheduled Castes and Scheduled Tribes are constitutional bodies under Articles 338 and 338A, whereas this commission has no constitutional backing and no standing statutory mandate.
- The official site of the National Commission for Safai Karamcharis, read on 2 September 2026, records that the Commission was constituted on 12 August 1994 as a statutory body by an Act of Parliament, namely the National Commission for Safai Karamcharis Act, 1993, for a period of three years, that is up to 31 March 1997; that as per sub-section (4) of Section 1 of that Act it was to cease to exist after 31 March 1997; and that the validity of the Act was extended up to March 2002 and then up to February 2004 by Amendment Acts passed in 1997 and 2001 respectively. That verified page therefore supplies the exact constitution date, the built-in sunset and the two statutory extensions, and the repository owners supply the later position that the statutory tenure lapsed and that the body now runs on an executive resolution.
- The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Qualified conclusion: Claim: prohibition, mechanisation, rehabilitation and compensation are complementary rather than alternative levers, and the institution meant to integrate them is the weakest element of the architecture, which explains why progress on any one lever does not accumulate. Named evidence: the 2013 Act as the prohibition and penalty instrument with survey and rehabilitation duties; the joint scheme of 2022-23 as the mechanisation and livelihood instrument; the judicial tiers of 20 October 2023 as the compensation instrument; the commission of statutory origin under the 1993 Act, constituted on 12 August 1994 for three years up to 31 March 1997 with a sunset in sub-section (4) of Section 1 and statutory extensions to March 2002 and February 2004, now continued by an executive resolution of February 2025 through 31 March 2028; and the constitutional contrast with the commissions under Articles 338 and 338A. Analysis: a monitoring body whose existence depends on periodic executive renewal cannot credibly compel State compliance, so under-counting, contractor diffusion, slow mechanisation and delayed compensation each remain locally rational, and the four levers operate as four separate programmes rather than as one enforcement system. Qualification: the evaluation should record the recommended corrections, a permanent statutory commission with quasi-judicial powers and parliamentary reporting and a statutory presumption of a municipal first information report for every sewer death, while conceding that both require legislative action and that neither by itself supplies alternative livelihoods.

ORIGINAL MAINS 6 - 20 MARKS

Question: Evaluate the proposition that ending manual scavenging is a question of dignity rather than of sanitation infrastructure, and state what evidence would settle the question. Answer in about 300 words.

Model thesis: Claim: the proposition is right about the diagnosis and incomplete about the remedy, because the occupation is sustained by caste rather than by the absence of toilets, yet the practice cannot end without the physical and administrative infrastructure that removes the need for human handling. Named evidence: the record that the work is performed almost exclusively by specific Dalit sub-castes; the constitutional grounding in Articles 17, 21 and 23 covering untouchability, dignity and forced labour; the availability of caste-atrocity protection where caste-based harassment accompanies the employment; the insanitary-latrines definition that ties the practice to a physical toilet form; the distinction between rehabilitation and reparation with Indian policy recorded as rehabilitative; the demand-side caste preference including by municipalities; and the evidence discipline that death counts differ across the commission, State and civil-society reporting and must carry a named source and date. Analysis: dignity explains why the occupation is inherited and why rehabilitation fails, while infrastructure explains why the occupation is still

demanding, so the settling evidence is not a death count but a joint measurement of latrine conversion, mechanised operation, prosecution rates and the destination of rehabilitated workers over time. Qualification: the evaluation should record that persistence rather than any single count is the analytical enforcement failure, and should not assert a prevalence figure that the owners expressly decline to fix.

Claim -> named evidence -> analysis -> qualification:

- The owners define an insanitary latrine as a latrine requiring human intervention for the removal of excreta, as distinct from a water-flush or septic-connected toilet, and they record that construction of such a latrine is prohibited under the 2013 Act. This definition is the anchor for the whole prohibition, because it is the physical form of the toilet rather than the identity of the worker that brings a practice within the manual-scavenging definition, and a sanitation answer that speaks only of toilet coverage without the latrine type has not engaged the statutory category at all.
- The owners record that manual scavenging in India is performed almost exclusively by specific Dalit sub-castes, which makes the topic simultaneously an occupational-health question and a caste-based recognitive-justice question, and they record the persistence chain: an intergenerational occupation lock in which specific sub-castes have performed sanitation work for generations, rehabilitation inadequacy in which one-time cash and short-term training do not overcome social barriers to alternative employment, and demand-side caste preference in which employers including municipalities may prefer hiring from traditional scavenger castes. They record the constitutional grounding for the answer as Articles 17, 21 and 23, covering untouchability, dignity and forced labour, and they record the protective legislation for caste atrocities as available where caste-based harassment accompanies the employment.
- The owners distinguish rehabilitation, which is forward-looking livelihood support, from reparation, which would address the historical injustice of intergenerational caste-based labour, and they record that Indian policy focuses on rehabilitation and not on reparation. They record the mechanics on the rehabilitation side, that identified manual scavengers and eligible sanitation workers can receive notified rehabilitation, skill, livelihood and scheme-convergence support, and they attach the boundary that separate identification, eligibility and sanction steps mean a portal listing is not proof that a household has received a livelihood alternative.
- The owners impose an evidence discipline on the most emotive numbers in the topic. They record that sewer and septic-tank death counts can differ between the commission, State reporting and civil-society reporting, and they instruct that any figure be used with a named source and date and that recorded deaths be distinguished from the incidence of all unsafe cleaning. They record that deaths during septic-tank cleaning continue to occur despite the 2013 prohibition, and they treat that persistence, rather than any particular count, as the analytical enforcement failure the answer should argue.
- The audited 2024-2025 Prelims routing ledger routes exactly one objective demand to this owner, question 24 of the 2024 Prelims General Studies Paper I on the World Toilet Organization, and it records that although the official Set-A key is available locally the answer is not recorded there. Both the Basic owner's generated integration block and the ledger apply the same rule, that an unkeyed or answer-free objective question is not converted into a solved answer. This package therefore records no option, no key and no inferred answer letter for that question, and satisfies the owner requirement by covering the named body as taught content within the sanitation-and-dignity frame that the owner already carries.
- The owners record two named institutional corrections, re-enactment of the commission as a permanent statutory commission with quasi-judicial powers, annual reporting to Parliament and power to issue binding directions to State governments, and a statutory presumption requiring a municipal first information report for every sewer death so that the current accident framing is reversed. They immediately record the trade-offs that must qualify any verdict here: strict enforcement of the prohibition may leave sanitation workers without income before alternative livelihoods exist so sequencing matters, full robotic substitution is capital-intensive and technologically nascent, and statutory permanence for the commission would strengthen independence but requires legislative action rather than executive resolution.

Qualified conclusion: Claim: the proposition is right about the diagnosis and incomplete about the remedy, because the occupation is sustained by caste rather than by the absence of toilets, yet the practice cannot end without the physical and administrative infrastructure that removes the need for human handling. Named evidence: the record that the work is performed almost exclusively by specific Dalit sub-castes; the constitutional grounding in Articles 17, 21

and 23 covering untouchability, dignity and forced labour; the availability of caste-atrocity protection where caste-based harassment accompanies the employment; the insanitary-latrines definition that ties the practice to a physical toilet form; the distinction between rehabilitation and reparation with Indian policy recorded as rehabilitative; the demand-side caste preference including by municipalities; and the evidence discipline that death counts differ across the commission, State and civil-society reporting and must carry a named source and date. Analysis: dignity explains why the occupation is inherited and why rehabilitation fails, while infrastructure explains why the occupation is still demanded, so the settling evidence is not a death count but a joint measurement of latrine conversion, mechanised operation, prosecution rates and the destination of rehabilitated workers over time. Qualification: the evaluation should record that persistence rather than any single count is the analytical enforcement failure, and should not assert a prevalence figure that the owners expressly decline to fix.
