

## SOLVED PRACTICE WORKBOOK

# Urban Poor, Homeless and Migrant Workers - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

# CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

## Urban Poor, Homeless and Migrant Workers - Solved Practice Workbook . . . . . 6

|                                                                                                                                               |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------|----|
| Q1. Which statement correctly identifies What this owner holds and where its cross-paper questions actually belong? . . . . .                 | 6  |
| Q2. Which chronology card should be filed under What this owner holds and where its cross-paper questions actually belong? . . . . .          | 7  |
| Q3. Which option preserves the source-bounded meaning of What this owner holds and where its cross-paper questions actually belong? . . . . . | 7  |
| Q4. Which statement avoids a close-option trap about What this owner holds and where its cross-paper questions actually belong? . . . . .     | 8  |
| Q5. Which statement correctly identifies The housing-livelihood-portability nexus as the organising claim? . . . . .                          | 9  |
| Q6. Which chronology card should be filed under The housing-livelihood-portability nexus as the organising claim? . . . . .                   | 9  |
| Q7. Which option preserves the source-bounded meaning of The housing-livelihood-portability nexus as the organising claim? . . . . .          | 10 |
| Q8. Which statement avoids a close-option trap about The housing-livelihood-portability nexus as the organising claim? . . . . .              | 11 |
| Q9. Which statement correctly identifies The housing-deprivation spectrum and why the categories differ? . . . . .                            | 11 |
| Q10. Which chronology card should be filed under The housing-deprivation spectrum and why the categories differ? . . . . .                    | 12 |
| Q11. Which option preserves the source-bounded meaning of The housing-deprivation spectrum and why the categories differ? . . . . .           | 13 |
| Q12. Which statement avoids a close-option trap about The housing-deprivation spectrum and why the categories differ? . . . . .               | 13 |
| Q13. Which statement correctly identifies The urban livelihoods mission and its livelihood components? . . . . .                              | 14 |
| Q14. Which chronology card should be filed under The urban livelihoods mission and its livelihood components? . . . . .                       | 15 |
| Q15. Which option preserves the source-bounded meaning of The urban livelihoods mission and its livelihood components? . . . . .              | 15 |
| Q16. Which statement avoids a close-option trap about The urban livelihoods mission and its livelihood components? . . . . .                  | 16 |
| Q17. Which statement correctly identifies The shelter component and the norm that governs it? . . . . .                                       | 17 |
| Q18. Which chronology card should be filed under The shelter component and the norm that governs it? . . . . .                                | 17 |
| Q19. Which option preserves the source-bounded meaning of The shelter component and the norm that governs it? . . . . .                       | 18 |
| Q20. Which statement avoids a close-option trap about The shelter component and the norm that governs it? . . . . .                           | 19 |
| Q21. Which statement correctly identifies Why shelter coverage fails even where the scheme exists? . . . . .                                  | 19 |
| Q22. Which chronology card should be filed under Why shelter coverage fails even where the scheme exists? . . . . .                           | 20 |
| Q23. Which option preserves the source-bounded meaning of Why shelter coverage fails even where the scheme exists? . . . . .                  | 21 |
| Q24. Which statement avoids a close-option trap about Why shelter coverage fails even where the scheme exists? . . . . .                      | 21 |

|                                                                                                                                                |    |
|------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Q25. Which statement correctly identifies The street-vendor credit scheme and what it is not? . . . . .                                        | 22 |
| Q26. Which chronology card should be filed under The street-vendor credit scheme and what it is not? . . . . .                                 | 23 |
| Q27. Which option preserves the source-bounded meaning of The street-vendor credit scheme and what it is not? . . . . .                        | 23 |
| Q28. Which statement avoids a close-option trap about The street-vendor credit scheme and what it is not? . . . . .                            | 24 |
| Q29. Which statement correctly identifies The street-vending statute and the rights it actually creates? . . . . .                             | 25 |
| Q30. Which chronology card should be filed under The street-vending statute and the rights it actually creates? . . . . .                      | 25 |
| Q31. Which option preserves the source-bounded meaning of The street-vending statute and the rights it actually creates? . . . . .             | 26 |
| Q32. Which statement avoids a close-option trap about The street-vending statute and the rights it actually creates? . . . . .                 | 27 |
| Q33. Which statement correctly identifies The official condition attached to the vendor credit scheme? . . . . .                               | 27 |
| Q34. Which chronology card should be filed under The official condition attached to the vendor credit scheme? . . . . .                        | 28 |
| Q35. Which option preserves the source-bounded meaning of The official condition attached to the vendor credit scheme? . . . . .               | 29 |
| Q36. Which statement avoids a close-option trap about The official condition attached to the vendor credit scheme? . . . . .                   | 29 |
| Q37. Which statement correctly identifies The urban housing mission and the difference between sanction and shelter? . . . . .                 | 30 |
| Q38. Which chronology card should be filed under The urban housing mission and the difference between sanction and shelter? . . . . .          | 31 |
| Q39. Which option preserves the source-bounded meaning of The urban housing mission and the difference between sanction and shelter? . . . . . | 31 |
| Q40. Which statement avoids a close-option trap about The urban housing mission and the difference between sanction and shelter? . . . . .     | 32 |
| Q41. Which statement correctly identifies Ration portability and what it is built on? . . . . .                                                | 33 |
| Q42. Which chronology card should be filed under Ration portability and what it is built on? . . . . .                                         | 33 |
| Q43. Which option preserves the source-bounded meaning of Ration portability and what it is built on? . . . . .                                | 34 |
| Q44. Which statement avoids a close-option trap about Ration portability and what it is built on? . . . . .                                    | 35 |
| Q45. Which statement correctly identifies The migrant-worker legal route as it now stands? . . . . .                                           | 35 |
| Q46. Which chronology card should be filed under The migrant-worker legal route as it now stands? . . . . .                                    | 36 |
| Q47. Which option preserves the source-bounded meaning of The migrant-worker legal route as it now stands? . . . . .                           | 37 |
| Q48. Which statement avoids a close-option trap about The migrant-worker legal route as it now stands? . . . . .                               | 37 |
| Q49. Which statement correctly identifies Why portability fails at the counter? . . . . .                                                      | 38 |
| Q50. Which chronology card should be filed under Why portability fails at the counter? . . . . .                                               | 39 |
| Q51. Which option preserves the source-bounded meaning of Why portability fails at the counter? . . . . .                                      | 39 |
| Q52. Which statement avoids a close-option trap about Why portability fails at the counter? . . . . .                                          | 40 |
| Q53. Which statement correctly identifies The slum scale anchor and its exclusions? . . . . .                                                  | 41 |
| Q54. Which chronology card should be filed under The slum scale anchor and its exclusions? . . . . .                                           | 41 |

|                                                                                                                                    |    |
|------------------------------------------------------------------------------------------------------------------------------------|----|
| Q55. Which option preserves the source-bounded meaning of The slum scale anchor and its exclusions? . . . . .                      | 42 |
| Q56. Which statement avoids a close-option trap about The slum scale anchor and its exclusions? . . . . .                          | 43 |
| Q57. Which statement correctly identifies Circular migration and why fixed-entitlement design fails it? . . . . .                  | 43 |
| Q58. Which chronology card should be filed under Circular migration and why fixed-entitlement design fails it? . . . . .           | 44 |
| Q59. Which option preserves the source-bounded meaning of Circular migration and why fixed-entitlement design fails it? . . . . .  | 45 |
| Q60. Which statement avoids a close-option trap about Circular migration and why fixed-entitlement design fails it? . . . . .      | 45 |
| Q61. Which statement correctly identifies Why large cities pull migrants more strongly than small towns? . . . . .                 | 46 |
| Q62. Which chronology card should be filed under Why large cities pull migrants more strongly than small towns? . . . . .          | 47 |
| Q63. Which option preserves the source-bounded meaning of Why large cities pull migrants more strongly than small towns? . . . . . | 48 |
| Q64. Which statement avoids a close-option trap about Why large cities pull migrants more strongly than small towns? . . . . .     | 48 |
| Q65. Which statement correctly identifies The smart-city model and the distributive-justice critique? . . . . .                    | 49 |
| Q66. Which chronology card should be filed under The smart-city model and the distributive-justice critique? . . . . .             | 50 |
| Q67. Which option preserves the source-bounded meaning of The smart-city model and the distributive-justice critique? . . . . .    | 51 |
| Q68. Which statement avoids a close-option trap about The smart-city model and the distributive-justice critique? . . . . .        | 52 |
| Q69. Which statement correctly identifies Upgrading against resettlement and tenure against title? . . . . .                       | 52 |
| Q70. Which chronology card should be filed under Upgrading against resettlement and tenure against title? . . . . .                | 53 |
| Q71. Which option preserves the source-bounded meaning of Upgrading against resettlement and tenure against title? . . . . .       | 54 |
| Q72. Which statement avoids a close-option trap about Upgrading against resettlement and tenure against title? . . . . .           | 55 |
| Q73. Which statement correctly identifies Who pays and who implements the urban mission? . . . . .                                 | 55 |
| Q74. Which chronology card should be filed under Who pays and who implements the urban mission? . . . . .                          | 56 |
| Q75. Which option preserves the source-bounded meaning of Who pays and who implements the urban mission? . . . . .                 | 57 |
| Q76. Which statement avoids a close-option trap about Who pays and who implements the urban mission? . . . . .                     | 57 |
| Q77. Which statement correctly identifies What this owner does not claim and what it recommends instead? . . . . .                 | 58 |
| Q78. Which chronology card should be filed under What this owner does not claim and what it recommends instead? . . . . .          | 59 |
| Q79. Which option preserves the source-bounded meaning of What this owner does not claim and what it recommends instead? . . . . . | 60 |
| Q80. Which statement avoids a close-option trap about What this owner does not claim and what it recommends instead? . . . . .     | 60 |

# Urban Poor, Homeless and Migrant Workers - Solved Practice Workbook

## BASIC MCQS / REMEDIATION

### Q1. Which statement correctly identifies What this owner holds and where its cross-paper questions actually belong?

A. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. B. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. C. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. D. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutchra, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them.

**Answer: A. Explanation: This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. The remaining options belong to different chronology, actor or analytical categories.**

## Q2. Which chronology card should be filed under What this owner holds and where its cross-paper questions actually belong?

A. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. B. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. C. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. D. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap.

**Answer: B. Explanation: This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. The remaining options belong to different chronology, actor or analytical categories.**

## Q3. Which option preserves the source-bounded meaning of What this owner holds and where its cross-paper questions actually belong?

A. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. B. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. C. This owner holds urban

deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. D. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served.

**Answer: C. Explanation: This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q4. Which statement avoids a close-option trap about What this owner holds and where its cross-paper questions actually belong?**

A. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. B. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. C. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. D. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry.

**Answer: D. Explanation: This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I**

questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. The remaining options belong to different chronology, actor or analytical categories.

**Q5. Which statement correctly identifies The housing-livelihood-portability nexus as the organising claim?**

A. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. B. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. C. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. D. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served.

**Answer: A. Explanation: The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. The remaining options belong to different chronology, actor or analytical categories.**

**Q6. Which chronology card should be filed under The housing-livelihood-portability nexus as the organising claim?**

A. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. B. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and

ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. C. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. D. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served.

**Answer: B. Explanation: The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q7. Which option preserves the source-bounded meaning of The housing-livelihood-portability nexus as the organising claim?**

A. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. B. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. C. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. D. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served.

**Answer: C. Explanation: The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address**

distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. The remaining options belong to different chronology, actor or analytical categories.

**Q8. Which statement avoids a close-option trap about The housing-livelihood-portability nexus as the organising claim?**

A. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. B. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. C. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. D. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis.

**Answer: D. Explanation: The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. The remaining options belong to different chronology, actor or analytical categories.**

**Q9. Which statement correctly identifies The housing-deprivation spectrum and why the categories differ?**

A. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutchra, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. B. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. C. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods

programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters.

**Answer: C. Explanation: The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. The remaining options belong to different chronology, actor or analytical categories.**

**Q12. Which statement avoids a close-option trap about The housing-deprivation spectrum and why the categories differ?**

A. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. B. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. C. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and

an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. D. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them.

**Answer: D. Explanation: The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. The remaining options belong to different chronology, actor or analytical categories.**

### **Q13. Which statement correctly identifies The urban livelihoods mission and its livelihood components?**

A. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. B. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. C. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. D. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served.

**Answer: A. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. The remaining options belong to different chronology, actor or analytical categories.**

#### Q15. Which option preserves the source-bounded meaning of The urban livelihoods mission and its livelihood components?

A. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. B. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. C. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs,

and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. D. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection.

**Answer: C. Explanation: The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q16. Which statement avoids a close-option trap about The urban livelihoods mission and its livelihood components?**

A. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. B. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation. C. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. D. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap.

**Answer: D. Explanation: The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering**

livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. The remaining options belong to different chronology, actor or analytical categories.

**Q17. Which statement correctly identifies The shelter component and the norm that governs it?**

A. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. B. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. C. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. D. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection.

**Answer: A. Explanation: The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. The remaining options belong to different chronology, actor or analytical categories.**

**Q18. Which chronology card should be filed under The shelter component and the norm that governs it?**

A. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. B. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm

measures provision rather than utilisation and cannot by itself establish that the homeless population is served. C. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. D. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection.

**Answer: B. Explanation: The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. The remaining options belong to different chronology, actor or analytical categories.**

**Q19. Which option preserves the source-bounded meaning of The shelter component and the norm that governs it?**

A. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. B. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. C. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. D. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation.

**Answer: C. Explanation: The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm**

measures provision rather than utilisation and cannot by itself establish that the homeless population is served. The remaining options belong to different chronology, actor or analytical categories.

**Q20. Which statement avoids a close-option trap about The shelter component and the norm that governs it?**

A. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable. B. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation. C. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. D. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served.

**Answer: D. Explanation: The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. The remaining options belong to different chronology, actor or analytical categories.**

**Q21. Which statement correctly identifies Why shelter coverage fails even where the scheme exists?**

A. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. B. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. C. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which

have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. D. They then record the evaluative rule: a sanctioned is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation.

**Answer: B. Explanation: The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. The remaining options belong to different chronology, actor or analytical categories.**

**Q27. Which option preserves the source-bounded meaning of The street-vendor credit scheme and what it is not?**

A. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable. B. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground. C. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten

thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. D. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation.

**Answer: C. Explanation: The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q28. Which statement avoids a close-option trap about The street-vendor credit scheme and what it is not?**

A. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress. B. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground. C. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable. D. The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend.

**Answer: D. Explanation: The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend. The remaining options belong to different chronology, actor**

**Q29. Which statement correctly identifies The street-vending statute and the rights it actually creates?**

A. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. B. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation. C. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable. D. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track.

**Answer: A. Explanation: The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. The remaining options belong to different chronology, actor or analytical categories.**

**Q30. Which chronology card should be filed under The street-vending statute and the rights it actually creates?**

A. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground. B. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. C. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and

electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable. D. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation.

**Answer: B. Explanation: The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. The remaining options belong to different chronology, actor or analytical categories.**

### **Q31. Which option preserves the source-bounded meaning of The street-vending statute and the rights it actually creates?**

A. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable. B. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress. C. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. D. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground.

**Answer: C. Explanation: The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. The remaining options belong to different chronology, actor or**

**Q32. Which statement avoids a close-option trap about The street-vending statute and the rights it actually creates?**

A. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress. B. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. C. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground. D. The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection.

**Answer: D. Explanation: The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection. The remaining options belong to different chronology, actor or analytical categories.**

**Q33. Which statement correctly identifies The official condition attached to the vendor credit scheme?**

A. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. B. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground. C. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a

qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation. D. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable.

**Answer: A. Explanation:** The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. The remaining options belong to different chronology, actor or analytical categories.

### **Q34. Which chronology card should be filed under The official condition attached to the vendor credit scheme?**

A. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable. B. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. C. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground. D. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress.

**Answer: B. Explanation:** The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for

**financial inclusion rather than a parallel track. The remaining options belong to different chronology, actor or analytical categories.**

**Q35. Which option preserves the source-bounded meaning of The official condition attached to the vendor credit scheme?**

A. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. B. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground. C. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. D. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress.

**Answer: C. Explanation: The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track. The remaining options belong to different chronology, actor or analytical categories.**

**Q36. Which statement avoids a close-option trap about The official condition attached to the vendor credit scheme?**

A. The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit. B. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. C. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal

burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress. D. The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. C. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution,

tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation. D. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress.

**Answer: C. Explanation: The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q40. Which statement avoids a close-option trap about The urban housing mission and the difference between sanction and shelter?**

A. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. B. The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit. C. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. D. The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation.

**Answer: D. Explanation: The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation. The remaining options belong to different chronology, actor or analytical categories.**

#### Q41. Which statement correctly identifies Ration portability and what it is built on?

A. The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable. B. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground. C. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. D. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress.

**Answer: A. The remaining options belong to different chronology, actor or analytical categories.**

#### Q44. Which statement avoids a close-option trap about Ration portability and what it is built on?

A. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. B. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. C. **Q48. Which statement avoids a close-option trap about The migrant-worker legal route as it now stands?**

A. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. B. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and

that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. C. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. D. The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground.

**Answer: D. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that

networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. C. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress. D. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans.

**Answer: C. Explanation: The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q52. Which statement avoids a close-option trap about Why portability fails at the counter?**

A. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. B. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. C. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. D. The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress.

**Answer: D. Explanation:** The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress. The remaining options belong to different chronology, actor or analytical categories.

**Q53. Which statement correctly identifies The slum scale anchor and its exclusions?**

A. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. B. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. C. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. D. The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit.

**Answer: A. Explanation:** The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. The remaining options belong to different chronology, actor or analytical categories.

**Q54. Which chronology card should be filed under The slum scale anchor and its exclusions?**

A. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. B. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or

every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. C. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. D. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question.

**Answer: B. Explanation: The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q55. Which option preserves the source-bounded meaning of The slum scale anchor and its exclusions?**

A. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. B. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. C. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. D. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question.

**Answer: C. Explanation: The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must**

be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. The remaining options belong to different chronology, actor or analytical categories.

**Q56. Which statement avoids a close-option trap about The slum scale anchor and its exclusions?**

A. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. B. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. C. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. D. The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation.

**Answer: D. Explanation: The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation. The remaining options belong to different chronology, actor or analytical categories.**

**Q57. Which statement correctly identifies Circular migration and why fixed-entitlement design fails it?**

A. The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit. B. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. C. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled

infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. D. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question.

**Answer: A. Explanation: The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q58. Which chronology card should be filed under Circular migration and why fixed-entitlement design fails it?**

A. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. B. C. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. D. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone.

**Answer: B. Explanation: The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a**

place while the worker is attached to a circuit. The remaining options belong to different chronology, actor or analytical categories.

**Q59. Which option preserves the source-bounded meaning of Circular migration and why fixed-entitlement design fails it?**

A. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. B. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. C. The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit. D. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval.

**Answer: C. Explanation: The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit. The remaining options belong to different chronology, actor or analytical categories.**

**Q60. Which statement avoids a close-option trap about Circular migration and why fixed-entitlement design fails it?**

A. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. B. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General

Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. C. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. D. The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit.

**Answer: D. Explanation: The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit. The remaining options belong to different chronology, actor or analytical categories.**

**Q61. Which statement correctly identifies Why large cities pull migrants more strongly than small towns?**

A. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. B. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. C. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. D. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone.

**Answer: A. Explanation:** The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. The remaining options belong to different chronology, actor or analytical categories.

**Q62. Which chronology card should be filed under Why large cities pull migrants more strongly than small towns?**

A. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. B. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. C. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. D. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval.

**Answer: B. Explanation:** The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. The remaining options belong to different chronology, actor or analytical categories.

**Q63. Which option preserves the source-bounded meaning of Why large cities pull migrants more strongly than small towns?**

A. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. B. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. C. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. D. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval.

**Answer: C. Explanation: The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. The remaining options belong to different chronology, actor or analytical categories.**

**Q64. Which statement avoids a close-option trap about Why large cities pull migrants more strongly than small towns?**

A. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. B. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and

migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. C. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. D. The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour.

**Answer: D. Explanation: The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q65. Which statement correctly identifies The smart-city model and the distributive-justice critique?**

A. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. B. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. C. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. D. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question

numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval.

**Answer: A. Explanation: The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q66. Which chronology card should be filed under The smart-city model and the distributive-justice critique?**

A. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. B. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. C. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. D. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry.

**Answer: B. Explanation:** The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. The remaining options belong to different chronology, actor or analytical categories.

**Q67. Which option preserves the source-bounded meaning of The smart-city model and the distributive-justice critique?**

A. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. B. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. C. The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. D. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry.

**Answer: C. Explanation:** The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans. The

remaining options belong to different chronology, actor or analytical categories.

**Q68. Which statement avoids a close-option trap about The smart-city model and the distributive-justice critique?**

A. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. B. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. C. The remaining options belong to different chronology, actor or analytical categories.**

**Q71. Which option preserves the source-bounded meaning of Upgrading against resettlement and tenure against title?**

A. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutchha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. B. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. C. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. D. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry.

**Answer: C. Explanation: The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. The remaining options belong to different chronology, actor or analytical categories.**

**Q72. Which statement avoids a close-option trap about Upgrading against resettlement and tenure against title?**

A. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. B. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. C. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. D. The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question.

**Answer: D. Explanation: The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question. The remaining options belong to different chronology, actor or analytical categories.**

**Q73. Which statement correctly identifies Who pays and who implements the urban mission?**

A. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. B. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. C. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies

Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. D. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis.

**Answer: A. Explanation: The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. The remaining options belong to different chronology, actor or analytical categories.**

#### **Q74. Which chronology card should be filed under Who pays and who implements the urban mission?**

A. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. B. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. C. This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry. **Q75. Which option preserves the source-bounded meaning of Who pays and who implements the urban mission?**

A. The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis. B. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. C. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. D. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them.

**Answer: C. Explanation: The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. The remaining options belong to different chronology, actor or analytical categories.**

**Q76. Which statement avoids a close-option trap about Who pays and who implements the urban mission?**

A. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. B. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. C. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and

sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. D. The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone.

**Answer: D. Explanation: The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone. The remaining options belong to different chronology, actor or analytical categories.**

**Q77. Which statement correctly identifies What this owner does not claim and what it recommends instead?**

A. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis.

**Answer: B. Explanation: The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. The remaining options belong to different chronology, actor or analytical categories.**

**Q79. Which option preserves the source-bounded meaning of What this owner does not claim and what it recommends instead?**

A. The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutcha, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them. B. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. C. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. D. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap.

**Answer: C. Explanation: The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. The remaining options belong to different chronology, actor or analytical categories.**

**Q80. Which statement avoids a close-option trap about What this owner does not claim and what it recommends instead?**

A. The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters. B. The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and

self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap. C. The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served. D. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval.

**Answer: D. Explanation: The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval. The remaining options belong to different chronology, actor or analytical categories.**

## PYQS AND ANSWER PRACTICE

### TRANSPARENT ZERO-DIRECT-PYQ AUDIT

This owner's previous-year record is a transparent zero, and it is stated precisely rather than softened, because the questions the owners themselves reproduce belong to other owners. The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns, with the directive Discuss, ten marks and one hundred and fifty words, to the Geography migration-theories-and-patterns owner; it routes the 2025 General Studies Paper I question numbered 8 on smart cities addressing urban poverty and distributive justice, with the directive Discuss, ten marks and one hundred and fifty words, to the Indian Society urbanisation owner; and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner. The audited General Studies Paper III and Paper IV ledgers route the case studies involving migrant workers during the pandemic lockdown and the confidential report on migrant infiltration to the Ethics case-study and public-service-values owners. The audited 2018-2023 and 2024-2025 Mains routing ledgers therefore route no General Studies question to this owner, and the audited 2018-2023, 2024-2025 and 2026 Prelims routing ledgers route no objective question to it. This package accordingly claims no previous-year ownership, solves no demand card and asserts no year, paper, question number, directive, mark value or word limit as its own, while continuing to teach the migration and smart-city analysis that the repository owners carry as cross-paper anchors. In place of a claimed demand, the package supplies six original Mains questions with model solutions and eighty original objective questions on a strict A -> B -> C -> D rotation, each model solution opening with its analytical claim so that the evidence which follows does argumentative rather than decorative work. The locally held OCR-searchable official General Studies papers were read only to confirm that the reproduced wording matches the printed questions routed elsewhere; no question was invented from them, no marking scheme or page precision was imported and no official

answer key is claimed for any question anywhere in this package.

## OWNER PYQ LEDGER EXTRACTS

### 5. Indian applications and examples - PYQ-anchored

#### 2024 GS-I PYQ (10 marks, 150 words)

**Question:** "Why do large cities tend to attract more migrants than smaller towns? Discuss in the light of conditions in developing countries."

- ANALYSIS: **Push factors (rural origin):** Agricultural underemployment, distress (drought, debt), limited non-farm opportunity push workers toward urban centres.
- ANALYSIS: **Pull factors (large cities):** Agglomeration economies (industry clusters, service hubs) concentrate jobs; informal-sector job availability (construction, domestic work, street vending) is higher in metros than in small towns; better public services (health, education) and infrastructure attract migrants.
- ANALYSIS: **Developing-country specificity:** Large cities offer wage premiums despite informal housing; social networks of earlier migrants lower entry barriers; smaller towns lack the economic density to absorb surplus labour.
- ANALYSIS: **Implication for policy:** Migrant welfare (ONORC portability, SUH shelters, PM SVANidhi) must be concentrated in large-city ULBs; decentralised industrialisation could spread opportunity but requires investment beyond metros.

#### 2025 GS-I PYQ (150 words)

**Question:** "How does smart city in India address the issues of urban poverty and distributive justice?"

- ANALYSIS: **Smart Cities Mission model:** Special Purpose Vehicle (SPV)-based area development; emphasis on ICT-enabled infrastructure, mobility, sanitation, e-governance.
- ANALYSIS: **Critique - distributive-justice gap:** Mission selects limited "smart" zones within cities; benefits (upgraded infrastructure, digital services) may accrue to already-served areas rather than slums or peripheral informal settlements; area-based development can exclude the poorest unless explicitly inclusive.
- ANALYSIS: **Counter-argument - pan-city component:** Some smart-city projects include pan-city transport, water and waste-management improvements benefiting wider populations; digital platforms can improve service access for street vendors (PM SVANidhi linkage) and homeless (shelter-locator apps).
- ANALYSIS: **Assessment:** Smart Cities Mission has been critiqued for prioritising showcase infrastructure over inclusive service access; distributive justice requires explicit targeting of slums, homeless shelters and migrant-worker services within smart-city plans.
- FACT: **Scale anchor:** Census 2011 counted about 65.5 million people in slums, around 17.4% of the urban population. It does not include every informal renter, homeless person or unnotified settlement.
- ANALYSIS: **Housing evaluation:** PMAY-U 2.0 covers ownership, partnership, rental and credit, but land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation.

### 9. PYQ application

- FACT: 2024 GS-I (migration to large cities): use push-pull framework + agglomeration + informal-sector job availability; connect to ONORC portability and SUH shelter policy.
- FACT: 2025 GS-I (smart city and urban poverty): critically assess SPV-based area development vs inclusive service access; take a reasoned ANALYSIS: position on distributive-justice gaps.

### 10. PYQ-based analytical application

#### 2024 GS-I PYQ (migration to large cities)

- ANALYSIS: Answer spine: (1) Define push (rural distress, underemployment) and pull

(agglomeration, informal jobs, services) factors. (2) Developing-country specificity: wage premium despite informal housing; migrant networks. (3) Policy implication: concentrate migrant welfare (ONORC, SUH) in metros; decentralised industrialisation as structural remedy.

### 2025 GS-I PYQ (smart city and distributive justice)

- ANALYSIS: Answer spine: (1) Describe SPV-based area development. (2) Critique: area-based selection excludes slums; showcase infrastructure priority; participation gap. (3) Counter: pan-city components, digital-service access. (4) Conclude: distributive justice requires explicit slum/homeless targeting within smart-city plans.

## ORIGINAL MAINS 1 - 10 MARKS

**Question:** Explain why urban poverty in India must be analysed as a housing, livelihood and portability nexus rather than as a housing shortage. Answer in about 150 words.

**Model thesis:** Claim: the three deprivations have different units, a place, an occupation and a person in motion, so a single-instrument answer necessarily leaves two of them unaddressed. Named evidence: the spectrum from houseless and roofless persons through inadequate housing to slum dwelling with tenure insecurity; the urban livelihoods mission with its self-employment, skill-training and self-help-group components and its shelter component with round-the-clock access, bedding, water and sanitation and referral linkages; the street-vending statute of 2014 with Town Vending Committees, surveys and certificates, vending plans and eviction safeguards alongside the collateral-free credit scheme of 2020; and the ration-portability mechanism operating on the existing card with electronic point-of-sale authentication. Analysis: a shelter answers rooflessness but not tenure, a loan answers working capital but not eviction, and portability answers movement but not housing, so the instruments are complements rather than substitutes and the diagnosis must name which deprivation the question engages. Qualification: the answer should record that the categories are analytically distinct while the same household often experiences all three at once, which is precisely why convergence at the urban local body matters.

**Claim -> named evidence -> analysis -> qualification:**

- The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis.
- The owners set out a spectrum rather than a single category: houseless or roofless persons such as pavement dwellers have no shelter at all; inadequate housing means kutchra, unsafe or overcrowded shelter; and slum dwelling means shelter within an informal settlement with tenure insecurity and inadequate services. They insist the categories require different policy responses, because a shelter answers rooflessness while tenure security and service upgrading answer slum deprivation, and an answer that treats homelessness and slum residence as one condition will prescribe the wrong instrument for at least one of them.
- The Deendayal Antyodaya Yojana National Urban Livelihoods Mission is the urban livelihoods programme of the Ministry of Housing and Urban Affairs, and the owners record it as covering livelihood, shelter and social-mobilisation components. On the livelihood side the owners record three instruments: a self-employment programme providing interest subsidy on bank loans for micro-enterprise, skill training that links the urban poor to certified vocational courses, and self-help-group-based urban livelihood support that mirrors the rural mission's model. They record the frequently tested contrast that this urban mission belongs to the housing and urban affairs ministry while the similarly branded rural livelihoods mission belongs to the rural development ministry, so the branding resemblance is itself the trap.
- The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served.

- The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as the response to eviction has confused a financing instrument with a legal protection.
- The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable.

**Qualified conclusion:** Claim: the three deprivations have different units, a place, an occupation and a person in motion, so a single-instrument answer necessarily leaves two of them unaddressed. Named evidence: the spectrum from houseless and roofless persons through inadequate housing to slum dwelling with tenure insecurity; the urban livelihoods mission with its self-employment, skill-training and self-help-group components and its shelter component with round-the-clock access, bedding, water and sanitation and referral linkages; the street-vending statute of 2014 with Town Vending Committees, surveys and certificates, vending plans and eviction safeguards alongside the collateral-free credit scheme of 2020; and the ration-portability mechanism operating on the existing card with electronic point-of-sale authentication. Analysis: a shelter answers rooflessness but not tenure, a loan answers working capital but not eviction, and portability answers movement but not housing, so the instruments are complements rather than substitutes and the diagnosis must name which deprivation the question engages. Qualification: the answer should record that the categories are analytically distinct while the same household often experiences all three at once, which is precisely why convergence at the urban local body matters.

## ORIGINAL MAINS 2 - 10 MARKS

**Question:** Distinguish the legal protection available to a street vendor from the credit available to one, and explain why the distinction is decisive. Answer in about 150 words.

**Model thesis:** Claim: credit and legal recognition solve different problems, and the credit route is in fact conditional on the legal route having been implemented by the State. Named evidence: the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 with Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction; the credit scheme of 2020 with collateral-free tranches of ten thousand, twenty thousand and fifty thousand rupees contingent on repayment, a seven per cent interest subsidy and a digital-payment cashback, administered through banks with urban local bodies issuing certificates and letters of recommendation; and the scheme's own official portal recording that it is available only for beneficiaries in States and Union Territories that have notified rules and scheme under the 2014 Act. Analysis: a vendor evicted during a municipal clearance drive loses the livelihood that the loan was financing, so credit without vending rights transfers risk to the borrower, and the notification condition means that a State's failure to implement the statute also closes the credit route. Qualification: the answer should treat the credit scheme as a genuine liquidity instrument whose value depends on statutory implementation rather than dismissing it as irrelevant.

**Claim -> named evidence -> analysis -> qualification:**

- The owners record the street-vendor credit scheme launched in 2020 during the pandemic recovery as providing collateral-free working-capital micro-loans in escalating tranches, an initial loan of ten thousand rupees, a second tranche of twenty thousand rupees and a third of fifty thousand rupees, each higher tranche contingent on timely repayment, with an interest subsidy of seven per cent and a digital-payment cashback incentive delivered through banks and lending institutions with urban local bodies issuing vendor certificates and letters of recommendation. They record the trap explicitly: these are loans and not grants, and credit is not a legal right to vend.
- The owners record the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 as recognising vending as a regulated livelihood and providing Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction. They state the relationship between the two instruments precisely: the statute supplies the legal livelihood layer that the credit scheme does not supply, so a vendor holding a loan can still be evicted during a municipal clearance drive, and an answer that offers credit as

the response to eviction has confused a financing instrument with a legal protection.

- The official portal of the street-vendor credit scheme, read on 2 September 2026, records under the heading of notified States and Union Territories that the scheme is available for beneficiaries belonging only to those States and Union Territories which have notified rules and scheme under the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014. That verified statement converts the relationship between statute and credit from an analytical observation into an eligibility condition, because a vendor in a State that has not notified rules and scheme under the 2014 Act is outside the credit route by the scheme's own terms, which makes statutory implementation a precondition for financial inclusion rather than a parallel track.

**Qualified conclusion:** Claim: credit and legal recognition solve different problems, and the credit route is in fact conditional on the legal route having been implemented by the State. Named evidence: the Street Vendors (Protection of Livelihood and Regulation of Street Vending) Act, 2014 with Town Vending Committees, surveys and certificates of vending, vending plans and procedural safeguards against eviction; the credit scheme of 2020 with collateral-free tranches of ten thousand, twenty thousand and fifty thousand rupees contingent on repayment, a seven per cent interest subsidy and a digital-payment cashback, administered through banks with urban local bodies issuing certificates and letters of recommendation; and the scheme's own official portal recording that it is available only for beneficiaries in States and Union Territories that have notified rules and scheme under the 2014 Act. Analysis: a vendor evicted during a municipal clearance drive loses the livelihood that the loan was financing, so credit without vending rights transfers risk to the borrower, and the notification condition means that a State's failure to implement the statute also closes the credit route. Qualification: the answer should treat the credit scheme as a genuine liquidity instrument whose value depends on statutory implementation rather than dismissing it as irrelevant.

### ORIGINAL MAINS 3 - 15 MARKS

**Question:** Critically examine the implementation gaps in India's welfare architecture for the urban homeless and for migrant workers. Answer in about 250 words.

**Model thesis:** Claim: the gaps are locatable rather than general, sitting in land and matching finance for shelter and in authentication and infrastructure for portability, and each requires a different corrective authority. Named evidence: the shelter component with its norm of one facility per one hundred thousand urban population; the failure chain of absent central land, unmatched allocations and State matching-share delay, and shelters lacking health, skill and livelihood linkage; the sixty to forty Centre-State cost share with ninety to ten for north-eastern and special-category States and implementation by urban local bodies under State urban livelihoods missions; the portability mechanism operating on seeded existing cards with electronic point-of-sale authentication; and its friction chain of unseeded or un-updated cards, low awareness, non-functional machines in remote destination areas and historical State resistance arising from a feared fiscal burden from inward migration. Analysis: shelter fails upstream at land and finance while portability fails downstream at the counter, so raising shelter allocation does not fix authentication and expanding machine coverage does not build shelters, and the boundary cases of an underused distant shelter and an unseeded card at a destination shop show the same scheme succeeding and failing for different reasons. Qualification: the examination should record that both instruments work where the missing input is supplied, so the finding is of specific administrative failure rather than of policy absence.

**Claim -> named evidence -> analysis -> qualification:**

- The owners record the Shelter for Urban Homeless component as providing permanent all-weather shelters with round-the-clock access, bedding, water and sanitation and referral linkages to health, skill and livelihood services, operated by urban local bodies. They record the guideline norm as one shelter for every one hundred thousand of urban population, and they immediately qualify it, recording that location, capacity and service linkage determine whether a shelter is used, so the norm measures provision rather than utilisation and cannot by itself establish that the homeless population is served.
- The owners set out the shelter failure chain in three steps: urban local bodies lack land for permanent shelters in central locations, so distant shelters are underused because homeless populations concentrate near work sites; allocations may not match the urban-homeless population and State matching-share delays slow construction; and shelters may exist without the health-referral, skill-training and livelihood-linkage services that convert shelter into capability. The chain locates the failure in land, finance and service linkage separately, which is what allows an answer to prescribe a specific correction rather than a general demand for more shelters.

- The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable.
- The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration. They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress.
- The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone.

**Qualified conclusion:** Claim: the gaps are locatable rather than general, sitting in land and matching finance for shelter and in authentication and infrastructure for portability, and each requires a different corrective authority. Named evidence: the shelter component with its norm of one facility per one hundred thousand urban population; the failure chain of absent central land, unmatched allocations and State matching-share delay, and shelters lacking health, skill and livelihood linkage; the sixty to forty Centre-State cost share with ninety to ten for north-eastern and special-category States and implementation by urban local bodies under State urban livelihoods missions; the portability mechanism operating on seeded existing cards with electronic point-of-sale authentication; and its friction chain of unseeded or un-updated cards, low awareness, non-functional machines in remote destination areas and historical State resistance arising from a feared fiscal burden from inward migration. Analysis: shelter fails upstream at land and finance while portability fails downstream at the counter, so raising shelter allocation does not fix authentication and expanding machine coverage does not build shelters, and the boundary cases of an underused distant shelter and an unseeded card at a destination shop show the same scheme succeeding and failing for different reasons. Qualification: the examination should record that both instruments work where the missing input is supplied, so the finding is of specific administrative failure rather than of policy absence.

## ORIGINAL MAINS 4 - 15 MARKS

**Question:** Assess how far the smart-cities approach addresses urban poverty and distributive justice. Answer in about 250 words.

**Model thesis:** Claim: the approach improves urban infrastructure quality while leaving distributive outcomes to a selection rule that systematically disadvantages the poorest, so its record on distributive justice depends on screening that is not built into the model. Named evidence: the special-purpose-vehicle-based area development model emphasising technology-enabled infrastructure, mobility, sanitation and electronic governance; the critique that area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations, that investment flows to showcase projects rather than basic services, and that slum and homeless populations have limited voice in the vehicle's decisions; the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access including for street vendors and shelter users; and the recommended integration of investment appraisal with slum mapping and shelter inventory. Analysis: the model concentrates capital where returns are visible and measurable, which is efficient for infrastructure and regressive for deprivation, so the corrective is a screening requirement at project approval rather than an additional scheme. Qualification: the assessment should record that pan-city components genuinely broaden benefit and should avoid asserting any project, expenditure or coverage figure, since the owners supply none.

**Claim -> named evidence -> analysis -> qualification:**

- The owners record the smart-cities model as special-purpose-vehicle-based area development emphasising information-and-communication-technology-enabled infrastructure, mobility, sanitation and electronic governance, and they record the critique in three parts: area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations; investment flows to visible showcase projects rather than to basic services in underserved areas; and slum-dwellers and homeless populations have limited voice in the vehicle's decision-making. They record the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access, and they conclude that distributive justice requires explicit targeting of slums, shelters and migrant services within smart-city plans.
- The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question.
- The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval.
- The owners state the core proposition as a nexus: homeless and slum-dwelling populations lack secure shelter, street vendors and migrant workers face livelihood precarity, and migrant workers additionally face entitlement-portability barriers, so the shelter component of the urban livelihoods mission, the street-vending statute paired with the vendor credit scheme, and ration portability address distinct but intersecting vulnerabilities. The examinable consequence is that an urban-poverty answer addressing only housing, or only credit, has answered one third of the problem and will read as a scheme list rather than as a diagnosis.

**Qualified conclusion:** Claim: the approach improves urban infrastructure quality while leaving distributive outcomes to a selection rule that systematically disadvantages the poorest, so its record on distributive justice depends on screening that is not built into the model. Named evidence: the special-purpose-vehicle-based area development model emphasising technology-enabled infrastructure, mobility, sanitation and electronic governance; the critique that area-based selection favours zones with existing infrastructure potential and can exclude peripheral slums and homeless concentrations, that investment flows to showcase projects rather than basic services, and that slum and homeless populations have limited voice in the vehicle's decisions; the counter-argument that pan-city components in transport, water and waste management benefit wider populations and that digital platforms can improve service access including for street vendors and shelter users; and the recommended integration of investment appraisal with slum mapping and shelter inventory. Analysis: the model concentrates capital where returns are visible and measurable, which is efficient for infrastructure and regressive for deprivation, so the corrective is a screening requirement at project approval rather than an additional scheme. Qualification: the assessment should record that pan-city components genuinely broaden benefit and should avoid asserting any project, expenditure or coverage figure, since the owners supply none.

## ORIGINAL MAINS 5 - 20 MARKS

**Question:** Analyse why large cities attract migrants more strongly than small towns, and evaluate what that pattern requires of urban welfare policy. Answer in about 300 words.

**Model thesis:** Claim: migration to large cities is a rational response to spatial concentration of opportunity rather than a failure of urban management, so welfare policy must follow the migrant's circuit instead of penalising the destination. Named evidence: push factors of agricultural underemployment and distress from drought and debt with limited non-farm opportunity; pull factors of agglomeration economies generating productivity gains through knowledge spillovers, labour-market pooling and input sharing; higher availability of informal work in construction, domestic service and street vending in metropolitan centres; better public services; the wage premium available despite informal housing; migrant networks that lower entry barriers; the inability of smaller towns to absorb surplus labour; the distinction between circular or seasonal and permanent migration; and the portability mechanism, the shelter component and the vendor credit route as the destination-side instruments. Analysis: because the migration is circular for a large share of workers, an entitlement attached to a fixed shop or a fixed address fails structurally rather than administratively, so the policy requirement is person-attached portability, destination-side shelter near work sites and vending rights that survive a clearance drive, while decentralised industrialisation is a structural remedy that requires investment beyond the metropolitan centres. Qualification: the analysis must record that the audited ledger routes the migration question to the Geography owner, must not assert migration volumes or urban population shares beyond the Census 2011 slum anchor with its exclusions, and must concede that decentralisation is a long-horizon answer that does not relieve present destination-side deprivation.

**Claim -> named evidence -> analysis -> qualification:**

- This owner holds urban deprivation as a nexus of three linked failures rather than as a housing problem alone: shelter for those with no roof, livelihood security for those who work on the street, and portability of entitlements for those who move. The owners reproduce two General Studies Paper I questions as cross-paper anchors, one on why large cities attract more migrants than smaller towns and one on how smart cities address urban poverty and distributive justice, and the audited 2024-2025 Mains routing ledger routes the first to the Geography migration owner and the second to the Indian Society urbanisation owner. Neither is routed to this owner, so this package claims neither as its own previous-year ownership and solves neither as a demand card, while continuing to teach the underlying analysis the owners carry.
- The owners distinguish circular or seasonal migration, in which workers move repeatedly between an origin that is often rural and a destination that is often urban in response to seasonal labour demand, from permanent migration, which is a one-way relocation. They record the design implication directly: a fixed ration-shop model matches permanent settlement while a portability model matches repeated movement, so policy fails not because it is under-funded but because its unit of entitlement is attached to a place while the worker is attached to a circuit.
- The owners record the explanation as a push-and-pull structure with a developing-country specificity. Agricultural underemployment and distress from drought and debt, together with limited non-farm opportunity, push workers out of rural origins; agglomeration economies concentrate industry and services and generate productivity gains from the spatial concentration of firms and workers through knowledge spillovers, labour-market pooling and input sharing; informal-sector work in construction, domestic service and street vending is more available in metropolitan centres than in small towns; and better public services attract migrants. They add that large cities offer a wage premium despite informal housing, that networks of earlier migrants lower entry barriers, and that smaller towns lack the economic density to absorb surplus labour.
- The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable.
- The owners set out the portability friction chain in three steps: migrants whose cards are not seeded with the national identity number or not updated cannot use the mechanism, and awareness of portability is low; fair price shops in remote destination areas may lack functional electronic point-of-sale machines so transaction failures block access; and some States have historically resisted portability, fearing a fiscal burden from inward migration.

They add the boundary case of a worker holding a home-State card without seeding who cannot draw an entitlement at the destination shop, and they record that authentication failure and documentation risk require assisted alternatives and grievance redress.

- The owners record one quantitative anchor for urban housing deprivation: Census 2011 counted about 65.5 million people in slums, around 17.4 per cent of the urban population. They immediately bound it, recording that the count does not include every informal renter, every homeless person or every unnotified settlement, so the figure understates the population living in insecure housing and must be cited with its year and its exclusions rather than offered as a current measure of urban housing deprivation.

**Qualified conclusion:** Claim: migration to large cities is a rational response to spatial concentration of opportunity rather than a failure of urban management, so welfare policy must follow the migrant's circuit instead of penalising the destination. Named evidence: push factors of agricultural underemployment and distress from drought and debt with limited non-farm opportunity; pull factors of agglomeration economies generating productivity gains through knowledge spillovers, labour-market pooling and input sharing; higher availability of informal work in construction, domestic service and street vending in metropolitan centres; better public services; the wage premium available despite informal housing; migrant networks that lower entry barriers; the inability of smaller towns to absorb surplus labour; the distinction between circular or seasonal and permanent migration; and the portability mechanism, the shelter component and the vendor credit route as the destination-side instruments. Analysis: because the migration is circular for a large share of workers, an entitlement attached to a fixed shop or a fixed address fails structurally rather than administratively, so the policy requirement is person-attached portability, destination-side shelter near work sites and vending rights that survive a clearance drive, while decentralised industrialisation is a structural remedy that requires investment beyond the metropolitan centres. Qualification: the analysis must record that the audited ledger routes the migration question to the Geography owner, must not assert migration volumes or urban population shares beyond the Census 2011 slum anchor with its exclusions, and must concede that decentralisation is a long-horizon answer that does not relieve present destination-side deprivation.

## ORIGINAL MAINS 6 - 20 MARKS

**Question:** Evaluate the proposition that urban inclusion requires portable person-based entitlements alongside place-based housing, services and livelihood rights. Answer in about 300 words.

**Model thesis:** Claim: the proposition is correct because the two families of instrument fail in opposite directions, portability without place leaves a person with food and no shelter while place without portability leaves a person with an address they cannot occupy for most of the year. Named evidence: the portability mechanism using the existing seeded card with electronic point-of-sale authentication and pan-India rollout, together with its friction chain and the need for assisted alternatives and grievance redress; the shelter component with its norm, its land, finance and service-linkage failures; the housing mission of 2024 with beneficiary-led construction, partnership, rental and interest-subsidy verticals, the four per cent subsidy on the first eight lakh rupees capped at one lakh eighty thousand rupees, and the rule that a sanction is not an occupied house; the 2014 vending statute and its notification condition for credit; the commenced occupational safety Code that repealed the 1979 migrant statute with Central Rules of May 2026 and continuing State-rule relevance; and the distinctions between in-situ upgrading and resettlement and between tenure security and title. Analysis: rental housing and tenure security are the instruments that bridge the two families, because they attach to a place while tolerating impermanence, which is why the housing mission's rental vertical and intermediate tenure instruments matter more for circular migrants than ownership-based subsidy does. Qualification: the evaluation should record that neither upgrading nor resettlement is first-best, that authentication and documentation create exclusion and privacy risks that require assisted routes, and that the two General Studies Paper I questions the owners reproduce belong to other owners and are used here only as analysis.

**Claim -> named evidence -> analysis -> qualification:**

- The owners record the second-generation urban housing mission of 2024 as covering beneficiary-led construction, affordable housing in partnership, affordable rental housing and an interest-subsidy scheme, and they record the subsidy detail that eligible economically weaker section, lower income group and middle income group households can receive a four per cent subsidy on the first eight lakh rupees of a qualifying loan with a maximum actual subsidy of one lakh eighty thousand rupees subject to conditions. They then record the evaluative rule: a sanction is not a completed and occupied house, and land, beneficiary contribution, tenure documents, location and occupancy determine whether a sanctioned unit reduces deprivation.

- The owners record the one-nation-one-ration-card mechanism as enabling portability of food-security entitlements across States using ration cards seeded with the national identity number and electronic point-of-sale machines at fair price shops, with pan-India rollout achieved and transaction data published on the departmental portal. They record two corrections that objective questions target: it is a portability mechanism within the existing food-security framework rather than a separate entitlement or scheme, and it uses the existing ration card rather than issuing a new one, so a migrant does not apply for a fresh card to become portable.
- The owners record that the Code on Occupational Safety, Health and Working Conditions, 2020 commenced on 21 November 2025 and repealed the Inter-State Migrant Workmen Act, 1979, with final Central Rules following in May 2026, and they record that State rules and enforcement remain material because labour is a concurrent subject. They instruct that the commenced Code be used for the registration, journey-allowance and equal-treatment architecture and that applicable Central and State rules and actual enforcement then be tested separately, so that central legal commencement is not presented as completed protection on the ground.
- The owners record two paired distinctions that decide a housing answer. In-situ upgrading improves water, sanitation and electricity within the existing settlement and preserves livelihoods and social networks, while resettlement relocates residents to distant sites and frees central land but disrupts employment, so neither is a first-best solution. Tenure security is assurance against eviction while title is formal ownership, and intermediate instruments such as occupancy certificates and slum notification can supply security without full ownership, which is what allows a policy to reduce eviction risk without resolving the land question.
- The owners record the financing and administrative architecture of the urban livelihoods mission: it is centrally sponsored with a cost share of sixty to forty between the Centre and the States, and ninety to ten for the north-eastern and special-category States, with urban local bodies implementing and State urban livelihoods missions coordinating. The examinable point is that the State matching share and urban-local-body capacity are the two places where a centrally announced norm becomes a locally delivered shelter or fails to, which is why the owners locate shelter-construction delay in matching-share delay rather than in central allocation alone.
- The audited 2024-2025 Mains routing ledger routes the 2024 General Studies Paper I question numbered 5 on why large cities attract more migrants than smaller towns to the Geography migration owner and the 2025 General Studies Paper I question numbered 8 on smart cities and urban poverty to the Indian Society urbanisation owner, and it routes the 2024 General Studies Paper I question numbered 19 on globalisation and the urban migration of skilled young unmarried women to a further Indian Society owner; the audited General Studies Paper IV ledgers route the case studies involving migrant workers to the Ethics case-study owners. None is claimed here. In place of a claimed demand the owners record two institutional corrections, shelter-space targets per urban local body linked to the census homeless count with time-bound land identification and construction, and integration of smart-city investment appraisal with slum mapping and shelter inventory so that distributive-justice screening becomes part of project approval.

**Qualified conclusion:** Claim: the proposition is correct because the two families of instrument fail in opposite directions, portability without place leaves a person with food and no shelter while place without portability leaves a person with an address they cannot occupy for most of the year. Named evidence: the portability mechanism using the existing seeded card with electronic point-of-sale authentication and pan-India rollout, together with its friction chain and the need for assisted alternatives and grievance redress; the shelter component with its norm, its land, finance and service-linkage failures; the housing mission of 2024 with beneficiary-led construction, partnership, rental and interest-subsidy verticals, the four per cent subsidy on the first eight lakh rupees capped at one lakh eighty thousand rupees, and the rule that a sanction is not an occupied house; the 2014 vending statute and its notification condition for credit; the commenced occupational safety Code that repealed the 1979 migrant statute with Central Rules of May 2026 and continuing State-rule relevance; and the distinctions between in-situ upgrading and resettlement and between tenure security and title. Analysis: rental housing and tenure security are the instruments that bridge the two families, because they attach to a place while tolerating impermanence, which is why the housing mission's rental vertical and intermediate tenure instruments matter more for circular migrants than ownership-based subsidy does. Qualification: the evaluation should record that neither upgrading nor resettlement is first-best, that authentication and documentation create exclusion and privacy risks that require assisted routes, and that the two General Studies Paper I questions the owners reproduce belong to other owners and are used here only as analysis.
