

Number-Systems-and-Number-Sense — ASCII Master

PANEL 01 – NUMBER UNIVERSE Natural, whole, integer, rational, irrational and real numbers.
↓
PANEL 02 – DIVISIBILITY Use prime-factor and digit tests only within their valid base-ten conditions.
↓
PANEL 03 – PRIMES AND FACTORS Factorise before counting divisors or comparing powers.
↓
PANEL 04 – HCF AND LCM Use gcd-lcm relations with integer and positivity checks.
↓
PANEL 05 – REMAINDERS Reduce early and preserve the modulus.
↓
PANEL 06 – UNIT DIGITS Use cyclicity and treat exponent-zero cases separately.
↓
PANEL 07 – DIGITS AND PLACE VALUE Translate reversal and digit count into base-ten equations.
↓
PANEL 08 – POWERS AND FACTORIALS Use repeated division for prime exponents and trailing zeros.
↓
PANEL 09 – FRACTIONS AND DECIMALS Convert recurring forms through algebra, not memorised guesses.
↓
PANEL 10 – SERIES Test differences, ratios, alternation and position rules.
↓
PANEL 11 – MAGNITUDE AND ESTIMATION Bound before calculating exactly.
↓
PANEL 12 – VERIFICATION Plug back, check parity, digit count, remainder and order of magnitude.
