

COMPLETE LEARNING SESSION

Reading-Comprehension - CSAT Learner-v2 Semantic Successor

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

LEARNING PATH

Deterministic fallback visual: move from precise concepts through argument and critique to exam application.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / SESSION INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

The canonical Basic owner is taught first. Optional Advanced material is isolated after practice. All official-PYQ references preserve the repository's supplied/provisional key labels; no unavailable wording, official explanation or official key is invented.

BASIC LEARNING SESSION

Twelve-panel ASCII master flow

PANEL 01 - PASSAGE CONTRACT	
Use only the text and the exact stem.	
v	
PANEL 02 - STEM TAXONOMY	
Classify detail, main idea, inference, assumption, tone or statement-set.	
v	
PANEL 03 - CLAIM MAP	
Separate claim, reason, example, qualifier and contrast.	
v	
PANEL 04 - CENTRAL IDEA	
Cover the whole passage without importing a policy leap.	
v	
PANEL 05 - INFERENCE	
Choose the least extended conclusion licensed by the words.	
v	
PANEL 06 - ASSUMPTION	
Negate the hidden bridge and test whether the argument collapses.	
v	
PANEL 07 - TONE AND PURPOSE	
Read attitude from wording, not from subject matter.	
v	
PANEL 08 - QUANTIFIERS	
Preserve some, many, can, must, only, unless and necessary/sufficient.	
v	
PANEL 09 - DISTRACTORS	
Reject scope creep, reversal, half-truth and outside knowledge.	
v	
PANEL 10 - PAIRED PASSAGES	
Map each claim to passage 1, passage 2, both or neither.	
v	
PANEL 11 - TIMED EXECUTION	
Predict, match, eliminate, discriminate and park at the ceiling.	
v	
PANEL 12 - AUDIT AND RETRY	
Quote the supporting phrase and code every miss before retry.	

Reading Comprehension - MUST-DO

Subject: CSAT | **Tier:** Must-Do (foundation) | **Family:** Comprehension (largest three-year family). **Core skill:** answer strictly from the passage - central idea, inference, assumption, tone/scope. **Grounded in:** audited UPSC CSAT PYQ sets 2024-2026 (Set A) - the largest family in each audited year, including the provisional 2026 classification. **FACT:** = method fact / source-grounded | **ANALYSIS:** = analytical guidance | ☐ = original example (not a UPSC item). *Companion: Advanced Drill.*

1. Visual foundation

```

STEM FIRST  ->  what is asked?
                |
                (idea / inference / assumption / tone / detail)
                v
READ PASSAGE ONCE  ->  mark: claim, scope words, contrast words
                |
JUDGE EACH OPTION AGAINST THE TEXT ONLY
                |
+--> stated & on-scope?      keep
+--> true but not stated?    reject (outside knowledge)
+--> too broad / too narrow? reject
+--> distorts the passage?  reject
                v
CHOOSE the option the passage can DEFEND
    
```

Core proposition: in a passage-only paper the winning option is the one **entailed by the text**, not the one that is true in the real world.

2. The four question types and their tests

Type	The stem sounds like	The correct option must...
FACT: Central idea / main message	"best summarises / crux / the author mainly says"	cover the whole passage, not one sentence.
FACT: Inference / implication	"can be inferred / most logical inference / implies"	be stated, entailed, or the most defensible reading with no new premise.
FACT: Assumption	"the argument assumes / rests on"	be an unstated premise the argument needs.
FACT: Tone / attitude / scope	"the author's tone / attitude / this passage is about"	match the wording and range of the text.
FACT: Which statement(s) follow / are correct	"which of the statements given above is/are correct"	be judged one statement at a time , then combined into the option code.

MEMORY: Trap: many wrong options are **factually correct** yet not supported by the passage. In a passage-only item, "true" is irrelevant; only "stated or entailed" wins.

2.1 Three word-pairs that decide RC options

Pair	The difference
FACT: Inference vs assumption	An inference comes out of the passage (a conclusion). An assumption sits under it (an unstated premise the argument needs).
FACT: Implication vs equivalence	If the passage says "A leads to B", it has not said "B leads to A". An option that reverses the direction is a distortion, however plausible.
FACT: Necessary vs sufficient	"Forecasting is necessary but not sufficient " means good forecasts cannot be skipped and cannot finish the job alone. An option that treats a necessary condition as enough - or as useless - fails.

- ANALYSIS: Passages in this paper regularly use "necessary but not sufficient", "only if", and "unless".

Translate each into an arrow before reading the options: "only if B" means A → B; "unless B" means not B → not A.

3. Method (step by step)

1. **Read the stem first.** Knowing the type tells you what to hunt for.
2. **Read the passage once, actively.** Underline the author's **main claim**, **scope words** (some, most, all, only), and **contrast words** (but, however, although) - answers hide near these.
3. **Predict** the answer in your own words before looking at options.
4. **Test each option** against the text with the four filters (stated / scope / distortion / outside-knowledge).
5. **If two survive**, pick the **better-supported** one. A modest option often wins, but an absolute option is correct when the passage itself is absolute.

4. Distractor families (learn to name them)

Distractor	How to spot it
FACT: Out-of-passage truth	A real fact the passage never states.
FACT: Over-generalisation	Turns "some/many" into "all/always/only/solely".
FACT: Scope creep	Adds a topic the passage did not discuss.
FACT: Distortion	Reverses cause-effect, or swaps a qualifier.
FACT: Half-right	One clause is supported, another is not - still wrong.

5. Original solved examples

□ Example A (inference)

Passage. "When a city widens its roads to cut congestion, the extra capacity often fills with new car trips that people previously avoided. Within a few years travel times return to their old levels, while the city has spent heavily and lost green space. Planners increasingly argue that managing demand - through public transport and pricing - addresses congestion more durably than adding lanes."

Q. Which inference is best supported? (a) Widening roads always makes congestion worse. (b) Added road capacity can be offset by newly generated car trips. (c) Cities should ban private cars. (d) Public transport is cheaper than road building.

Answer: (b). The passage says extra capacity "often fills with new car trips", which is exactly (b). (a) over-generalises ("always"); the passage says "often". (c) is never stated - a policy leap. (d) is plausible in reality but the passage compares durability, not cost - out-of-passage.

□ Example B (assumption)

Passage. "The district should shift its midday-meal supply to nearby farmer groups. Local sourcing will cut transport delays and put money into the village economy."

Q. The argument assumes that: (a) nearby farmer groups can supply food of adequate quantity and reliability. (b) transport costs are the largest expense of the scheme. (c) villagers currently oppose the midday-meal scheme. (d) distant suppliers are dishonest.

Answer: (a). For "shift supply to nearby farmer groups" to work, the argument must silently rely on those groups being able to supply reliably - remove (a) and the plan collapses, so it is the assumption. (b) is an unstated ranking; (c) and (d) are not needed by the argument and are not stated.

□ Example C (central idea)

Passage. "Early weather warnings save lives only if the last mile works: the alert must reach a fisherman without a smartphone, in a language he reads, in time to act. Sophisticated forecasting is necessary but not sufficient; delivery decides the outcome."

Q. The central idea is that: (a) forecasting technology is useless. (b) fishermen should buy smartphones. (c) an early warning helps only if it reaches people in a usable, timely form. (d) India has the best forecasting systems.

Answer: (c). It captures the whole passage - forecasting plus last-mile delivery. (a) contradicts "necessary"; (b) fixes on one detail; (d) is out-of-passage.

MEMORY: Note how Example C turns on **necessary vs sufficient**: the passage calls forecasting "necessary but not sufficient". Option (a) reads that as "useless" and option (c) reads it correctly. One word-pair decided the item.

6. Must-Know habits

- FACT: Read the **stem before** the passage.
- FACT: "Best supported", not "true": choose what the passage **defends**.
- FACT: Watch quantifiers - **some/most/all/only** decide most inference items.
- FACT: Watch **direction**: "A causes B" never licenses "B causes A".
- FACT: Watch **strength**: "necessary" is not "sufficient", and neither is "the only thing that matters".
- FACT: For assumptions, use the **negation test**: if negating the option breaks the argument, it is the assumption.
- FACT: For central idea, reject options that are **only one sentence** of a multi-point passage.

7. Common traps

- WRONG: Picking a **true** statement that the passage never makes. -> Ask "which line proves this?"
- WRONG: Turning a qualified claim ("often", "many") into an **absolute** ("always", "all"). -> Reject.
- WRONG: **Reversing** a stated relation (treating A -> B as B -> A). -> Check the arrow direction.
- WRONG: Reading "necessary" as "sufficient" (or as "unimportant"). -> Keep the two apart.
- WRONG: Importing **subject knowledge** (economics, science) into a passage-only item. -> Text only.
- WRONG: Choosing the **longest / most sophisticated** option by reflex. -> Length is not correctness.
- WRONG: Answering the **wrong question type** (giving a detail when the stem wants the main idea). -> Re-read the stem.

8. Quick checks

- FACT: Can you name the question type from the stem alone? (idea / inference / assumption / tone)
- FACT: For any option you keep, can you point to the **exact phrase** that supports it?
- FACT: Did you reject at least one option specifically for being **out-of-passage**?
- FACT: Did you check that no kept option **reverses** a relation the passage stated one way?

9. Mini-drill (with answers and explanations)

□ **Passage.** "Rooftop solar lets a household generate its own electricity and sell surplus power back to the grid. But adoption is slow: the upfront cost is high, and many tenants cannot install panels on a roof they do not own. Subsidies help with cost, yet they do nothing for the tenant who has no roof to use."

1. **The main point of the passage is that:**

(a) rooftop solar has both a cost barrier and an ownership barrier, and subsidies address only the first. (b) rooftop solar is a failure. (c) all households should install solar panels. (d) subsidies are a waste of money.

2. **It can be inferred that:**

(a) tenants are the main users of rooftop solar. (b) a subsidy alone will not make rooftop solar reach every household. (c) selling power to the grid is illegal. (d) rooftop solar produces no surplus power.

3. The argument assumes that:

(a) installing panels normally requires control over the roof. (b) electricity from the grid is free. (c) landlords always refuse permission. (d) subsidies are unavailable in India.

Answers.

1. **(a)**. It states both barriers and the limit of subsidies. (b)/(d) are over-negative and unstated; (c) is a policy leap.
2. **(b)**. The passage explicitly says subsidies "do nothing for the tenant who has no roof", so a subsidy alone leaves some households out - a forced inference. (a) reverses the passage (tenants often **cannot** install); (c)/(d) contradict the text.
3. **(a)**. "Cannot install panels on a roof they do not own" only bites if installation **needs** roof control - the unstated premise. (b)/(c)/(d) are not required by the argument.

10. Core coverage, timed execution and retry gate

10.1 Stem-to-method map

If the stem asks for...	Do this first	Reject immediately
a stated detail	Locate the named sentence and paraphrase it narrowly.	A general opinion or a fact not in that sentence.
main idea/title/purpose	Write a six-to-ten-word summary covering claim and qualification.	A supporting detail, an example, or a new policy.
inference/conclusion	Ask: "What follows with no new premise?" For "most logical," allow the smallest bridge the wording makes natural.	A stronger "must/only/all" claim than the passage licenses.
assumption	State the evidence-to-conclusion link, then negate a candidate precisely.	A conclusion, a desirable consequence, or a merely helpful fact.
tone/attitude	Circle evaluative words, irony and certainty words.	A tone inferred from the topic rather than the author's language.
statement code	Mark each statement T/F from the passage before looking at codes.	Treating a mixed bundle as one statement.

MEMORY: Inference safety rule: "forced" is appropriate for a strict *must-follow* stem. For "best" or "most logical" inference, choose the option with the least unsupported extension, not a fact that is merely true outside the passage.

10.2 Timed core drill - 12 minutes, 6 marks

Use one read per passage. Mark an item **P** (out-of-passage), **S** (scope/strength), **D** (direction), **A** (assumption) or **T** (time) beside every miss; do not read the solutions until the timer ends.

Passage 1. "A city that publishes bus-arrival data makes waiting less uncertain only when the data are reliable. A late but accurate update can still help a traveller choose to walk or wait; a confidently wrong update can make the service less usable than no update at all." 1. Which inference is best supported? (a) Reliability matters to the usefulness of arrival information. (b) Every late update is useless. (c) Travellers always prefer walking. (d) Publishing data guarantees better bus service. 2. The passage assumes, in calling a wrong update harmful, that travellers may act on the update. (a) No; this is a stated detail. (b) Yes. (c) Only if buses are privately run. (d) Only for late updates.

Passage 2. "A soil test does not tell a farmer what crop to grow. It identifies nutrient constraints; the choice also depends on water, price risk and the farmer's objective. Treating the test as a crop prescription therefore mistakes one input for the whole decision." 3. The central idea is that: (a) soil tests are inaccurate. (b) farmers should ignore prices. (c) soil tests inform, but do not by themselves determine, crop choice. (d) water never affects farming. 4. Which statement is supported? 1. Nutrient information can matter to crop choice. 2. A soil test alone settles every relevant farming decision. (a) 2 only (b) neither (c) 1 and 2 (d) 1 only

Passage 3. "The committee praises the pilot's ambition but notes that its reported success comes from three well-staffed districts. Before nationwide adoption, it asks whether the result persists where staff and connectivity are scarce." 5. The tone is: (a) wholly dismissive. (b) cautiously qualified. (c) celebratory. (d) indifferent. 6. Which close option is better supported? (a) The pilot has failed outside the three districts. (b) Staffing is irrelevant to the pilot. (c) National adoption is impossible. (d) Evidence from well-staffed districts may not generalise automatically.

Answers and diagnosis. 1-a (**S** if "late" or "guarantees" attracted you); 2-b (**A**); 3-c (**S**); 4-d (**T** for statement-by-statement failure); 5-b (**S**); 6-d (**S/P**). A score of **5/6 or 6/6 within 12 minutes** clears this Core gate. At 4/6 or below, sort misses by code, redo only the failed passage untimed, then take a fresh six-item set on another day. Do not use Advanced work to compensate for an uncleared Core gate.

10.3 Qualifying-safe RC log

Date / set	Time	Score	P	S	D	A	T	One repair rule for next set

For a full paper, follow the Master Framework's three-pass and risk rules; this file's non-negotiable local rule is to park an RC item when its allotted ceiling expires rather than reread the whole passage. Return only when a text-based discriminator is available.

11. Study links

- FACT: Advanced companion - two-passage sets, tone/scope, and the negation test under time pressure.
- FACT: Algebra, Inequalities and Data Sufficiency - the "is it sufficient?" mindset mirrors "is it supported?" here.
- FACT: Master Framework - the passage workflow and the passage-only error code (P).

2026 PYQ Integration

Status: 2026 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-CSAT-2026.md. **Answer-key rule:** The 2026 Prelims and CSAT Set-A keys held locally are **provisional**; no option or answer is recorded or inferred in this integration.

- Literary-passage incorrect statement

This block integrates the 2026 examinable demand and paper metadata. It is kept separate from the 2018-2023 and 2024-2025 blocks and does not convert a provisionally-keyed, answer-free objective question into a solved answer.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-CSAT-2024-2025.md. **Answer-key rule:** The official 2024-2025 Prelims Set-A keys are present in the repository and CSAT Set-A keys are supplied; even so, no option or answer is recorded or inferred in this integration.

- **Years represented:** 2024, 2025
- **Paper(s):** CSAT
- **Routed question demands:** 56

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2024	CSAT	1	Passage inference	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	2	Passage assumption	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	3	Passage inference	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	4	Passage assumption	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	11	Passage inference	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	12	Passage assumption	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	13	Passage central idea	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2024	CSAT	14	Passage assumption	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	21	Passage inference	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	22	Passage central idea	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	23	Passage viewpoint	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	31	Passage message	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	32	Passage assumption	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	33	Passage interpretation	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.
2024	CSAT	34	Passage assumption	Objective question; official Set-A key available locally, answer not inferred	Key supplied locally (Set-A scan; recorded as supplied, not certified final); family and neutral type per CSAT/00_Question-Audit-L edger; answer not recorded here	Practise this exact skill form under timed elimination; no answer is inferred here.

- Passage logical implication
- Passage rational inference
- Passage assumption check
- Passage practical message
- Passage multi-assumption validity
- Passage solution implication
- Passage implied message
- Passage rational message
- Passage goal inference

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

Semantic-completeness closure - 2026-09-06

Literal syllabus and canonical ownership

- **Literal clause:** Comprehension.
- **Canonical scope:** Owns passage-only reading, central idea, stated detail, inference, assumption, conclusion, tone, purpose, scope, statement sets and paired passages.
- **Cross-topic boundary:** Formal syllogisms belong to Topic 06; Topic 01 uses only the logic needed to test what a passage states, entails or assumes.

Complete learner route

1. **Passage contract:** Use only the text and the exact stem.
2. **Stem taxonomy:** Classify detail, main idea, inference, assumption, tone or statement-set.
3. **Claim map:** Separate claim, reason, example, qualifier and contrast.
4. **Central idea:** Cover the whole passage without importing a policy leap.
5. **Inference:** Choose the least extended conclusion licensed by the words.
6. **Assumption:** Negate the hidden bridge and test whether the argument collapses.
7. **Tone and purpose:** Read attitude from wording, not from subject matter.
8. **Quantifiers:** Preserve some, many, can, must, only, unless and necessary/sufficient.
9. **Distractors:** Reject scope creep, reversal, half-truth and outside knowledge.
10. **Paired passages:** Map each claim to passage 1, passage 2, both or neither.
11. **Timed execution:** Predict, match, eliminate, discriminate and park at the ceiling.
12. **Audit and retry:** Quote the supporting phrase and code every miss before retry.

Verification and hostile-query gate

Every correct option must be supported by the supplied passage. External knowledge cannot rescue an unsupported option; assumptions must pass a precise negation test.

The hostile absence search explicitly tested these families and close-option terms: **central idea; inference; assumption; tone; scope; quantifier; negation test; passage-only**. A shortcut is usable only when its stated condition survives; otherwise return to the first-principles representation. Every worked answer must finish with an independent check: passage support, substitution, enumeration, units, bounds, reverse operation or option elimination.

Difficulty and timed progression

1. Foundation: recognise the family and state the governing definition or relation.
2. Core: solve a direct item with a visible representation and one verification.
3. Advanced: combine two mechanisms, test edge cases and reject close distractors.
4. Timed: use classify -> extract -> represent -> execute -> verify -> decide.
5. Remediation: log the error as concept, application, calculation, reading, passage, time or guess; return to the owning subtopic before retesting.

BASIC MCQS / REMEDIATION

Diagnostic and core set

Q1. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which option best states the central idea?

A. Appointment tokens help only when their information remains reliable. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: trusted stale estimates.

Q2. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which inference is best supported?

A. The opposite result must always occur. B. Stale estimates can worsen citizens' waiting decisions. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'trusted stale estimates' without external knowledge.

Q3. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Citizens use displayed estimates when deciding whether to wait. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q4. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. qualified and cautionary

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q5. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which option best states the central idea?

A. Recharge and demand management must be combined for water security. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: wells nearby recovered sooner.

Q6. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which inference is best supported?

A. The opposite result must always occur. B. Slowing runoff can improve groundwater recovery near the pond. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'wells nearby recovered sooner' without external knowledge.

Q7. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. The nearer and farther wells were meaningfully comparable for the observation. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q8. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. measured and qualified

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q9. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which option best states the central idea?

A. Frequent assessment can aid learning but increases teachers' workload. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: could correct misunderstandings.

Q10. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which inference is best supported?

A. The opposite result must always occur. B. Earlier feedback gives students time to correct errors. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'could correct misunderstandings' without external knowledge.

Q11. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Students can act on feedback before later assessments. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q12. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. balanced

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q13. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which option best states the central idea?

A. More buses do not ensure reliable service without better scheduling. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: long gaps followed by several buses.

Q14. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which inference is best supported?

A. The opposite result must always occur. B. Increasing capacity alone may leave long waiting gaps. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'long gaps followed by several buses' without external knowledge.

Q15. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Passengers value evenly spaced service rather than only total daily capacity. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q16. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. diagnostic

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Remediation protocol

1. Recompute without options.
2. Name the failed rule or passage phrase.
3. Reject every distractor for a specific reason.
4. Retry with altered numbers, wording or constraints.
5. Advance only after two consecutive correct answers under the time ceiling.

PYQS AND ANSWER PRACTICE

Verified 2024-2026 Set-A demand and key ledger

Year	Q	Neutral verified demand	Key status	Solution architecture

The table is a non-verbatim routing audit. It records the locally checked Set-A key letter and a valid solving route, but does not pretend that UPSC publishes model solutions. The separate workbook supplies original solved equivalents for every mechanism.

Timed mixed transfer

Q33. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which option best states the central idea?

A. Digital service gains should be paired with an accessible non-digital route. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: excluded some residents.

Q34. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which inference is best supported?

A. The opposite result must always occur. B. A faster online process can coexist with exclusion for some users. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'excluded some residents' without external knowledge.

Q35. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Public service access should not depend entirely on owning reliable digital resources. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q36. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. qualified and inclusion-oriented

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q37. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which option best states the central idea?

A. Drought policy should reduce risk before loss while retaining post-shock support. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: reduced exposure before loss.

Q38. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which inference is best supported?

A. The opposite result must always occur. B. Relief after failure and prevention before failure can complement each other. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'reduced exposure before loss' without external knowledge.

Q39. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Conservation and diversification can reduce at least part of drought exposure. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q40. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. analytical and preventive

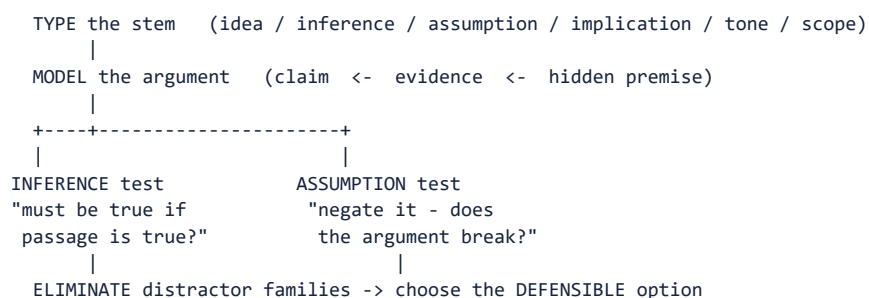

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

OPTIONAL ADVANCED DEPTH - NOT REQUIRED FOR A CORE ANSWER

Reading Comprehension - ADVANCED

Subject: CSAT | **Tier:** Advanced Drill | **Family:** Comprehension. **Core skill:** high-accuracy passage-only reasoning under time pressure - inference vs assumption vs implication, tone/scope, two-passage sets, and disciplined elimination. **Grounded in:** audited UPSC CSAT PYQ sets 2024-2026 (Set A). **FACT:** = method fact | **ANALYSIS:** = guidance | □ = original example. *Companion: Foundation.*

1. Architecture

Analytical claim: every hard RC item is decided by two precise operations - **typing the stem** and **stress-testing the option against the text** - never by outside knowledge.

2. Precise distinctions (the ones UPSC exploits)

Pair	The difference that decides the answer
FACT: Inference vs Assumption	Inference = a new statement forced by the text (a <i>conclusion</i>). Assumption = an unstated premise the argument already needs (a <i>foundation</i>).
FACT: Inference vs Implication	Both must be text-defensible. For a strict "must follow" stem, it must be entailed; for "best/most logical", prefer the conclusion requiring the fewest extra assumptions.
FACT: Implication vs Equivalence	A passage that says A $\rightarrow$ B has not said B $\rightarrow$ A. Only an "if and only if" (or an explicit definition) licenses the reverse. A reversed option is a distortion , not an inference.
FACT: Necessary vs Sufficient	"Necessary" = the claim fails without it; "sufficient" = it settles the claim. A passage saying "X is necessary but not enough" rules out both "X is useless" and "X guarantees the outcome".
FACT: Central idea vs Detail	Central idea spans the whole passage; a detail is one supporting sentence. A detail option is a classic main-idea distractor.
FACT: Tone vs Content	Tone is the author's attitude (neutral, critical, cautionary, optimistic), read from word choice , independent of the facts stated.
FACT: Stated vs Entailed	"Stated" = literally in the text. "Entailed" = must be true even if not literal. Both are acceptable; "merely true in the world" is not.

3. Techniques with conditions

- ANALYSIS: **Negation test (for assumptions)**. Negate the option; if the argument **collapses**, it is the assumption. *Condition:* use only on assumption stems - negating an inference option proves nothing.
- ANALYSIS: **Scope-matching (for central idea/tone)**. The answer's breadth must equal the passage's breadth. *Condition:* reject options that add a topic the passage never raised, however sensible.
- ANALYSIS: **Quantifier audit**. Rank options by strength; passage-only answers are usually the ****most modest**** claim consistent with the text. *Condition:* if the passage itself is absolute ("no", "never"), the answer may be strong too - match the text, not a reflex.
- ANALYSIS: **Two-survivor rule**. When two options remain, find the **single word** that makes one unsupported (an added "only", "all", "because"). *Condition:* the discriminator must be a text-vs-option mismatch, not your preference.

3.1 Time-saving decision ladder (RC is where the clock is won or lost)

ANALYSIS: Comprehension is the largest audited family, so its **time policy** matters more than any single technique. Climb only as far as you need:

Rung	Spend	Do this	Exit when
1. Type	~5 s	Name the stem type (idea / inference / assumption / tone / statement-set).	Always do this.
2. Predict	~10 s	Answer in your own words before reading options.	A prediction exists.
3. Match	~20 s	Scan for the option closest to the prediction.	One clear match -> mark and leave .
4. Eliminate	~30 s	Kill options by out-of-passage / over-generalisation / reversal / half-right.	Two or fewer survive.
5. Discriminate	~20 s	Find the one word that breaks a survivor; apply the negation test on assumption stems.	One survivor.
6. Escalate or park	-	If two still survive, take the more modest claim; if none does, park it and move on.	The per-item ceiling is hit.

- MEMORY: **Escalation rule**: never re-read a whole passage for one option. Re-read only ****the sentence the option points at****. If the option points at no sentence, it is already wrong.

- ANALYSIS: **Statement-set items** ("which of the statements given above is/are correct") are the exception worth extra time: each statement is a **separate** true/false decision, and settling even two of three usually eliminates every option but one. Judge statements individually, never as a bundle.

4. Two-passage compare sets (a recurring PYQ format)

ANALYSIS: **PYQ-pattern note**: the papers frequently pair **two short passages** and ask which statement/inference is supported by **one, both, or neither**. Read each passage's **claim** separately, then map each option to "P1 only / P2 only / both / neither" **before** choosing.

□ Example (two-passage inference)

Passage 1. "Free public data - maps, weather, transport timings - lets small firms build useful apps without collecting the data themselves. The public investment is repaid many times over in private innovation." **Passage 2.** "When public data is released without privacy safeguards, individuals can be re-identified by combining datasets. Openness must be paired with careful anonymisation."

Q. Which inference is supported by the passages? (a) Public data should never be released. (P2 distortion) (b) Open public data can spur innovation but needs privacy safeguards. (both) (c) Small firms should collect their own data. (contradicts P1) (d) Anonymisation makes data useless. (unstated)

Answer: (b) - it is the only statement each passage supports (P1 -> innovation; P2 -> safeguards). Each distractor fails against at least one passage.

5. Harder solved examples

□ Example A (implication under a qualifier)

Passage. "Micro-irrigation raises yields per litre, so states subsidise drip kits. Yet where water is nearly free, farmers who save water often expand their cropped area, and total water use can stay flat or even rise."

Q. Which is the most logical implication? (a) Micro-irrigation always reduces total water use. (b) Efficiency gains may not cut total water use when water is under-priced. (c) Subsidising drip kits is pointless. (d) Farmers dislike micro-irrigation.

Answer: (b). The passage's own qualifier ("where water is nearly free ... total water use can stay flat or even rise") forces (b). (a) is contradicted; (c) over-reaches; (d) is unstated.

□ Example B (tone/attitude)

Passage. "The report's glossy targets are admirable on paper. One only wishes it had spared a single line for how, with what money, and by whom they will be met."

Q. The author's tone is best described as: (a) enthusiastic and congratulatory. (b) neutral and descriptive. (c) sceptical about implementation. (d) hostile and dismissive.

Answer: (c). "admirable on paper" plus the wish for a line on "how, with what money" signals doubt about implementation, not the goals - sceptical, not hostile. (a)/(b) miss the irony; (d) overshoots ("hostile/dismissive").

6. Limitations and boundary cases

- ANALYSIS: A passage can support a claim you personally think is **false** - support it anyway; the test is the text, not the truth.
- ANALYSIS: "Most logical inference" can have **two defensible options**; choose the one needing ****fewer added assumptions****.
- ANALYSIS: Central-idea options that are **individually true details** are the hardest distractors - always ask "does this cover the whole passage?"

7. Advanced traps

- WRONG: Treating an **assumption** stem like an inference (choosing a conclusion). -> Use the negation test.
- WRONG: Rewarding an option for **sophistication** or length. -> Support beats style.
- WRONG: Turning a passage's **"can"** into **"must"**, or its A -> B into B -> A. -> That is an equivalence the text never granted.
- WRONG: Reading "necessary" as "sufficient" (or as "irrelevant"). -> Keep the two words apart.
- WRONG: Letting a **single distorted word** slip through ("because", "only", "all"). -> Two-survivor rule.
- WRONG: In two-passage sets, crediting an option supported by **one** passage when the stem needs **both**. -> Map to P1/P2/both/neither first.
- WRONG: Judging a statement-set item as one bundle. -> Decide each numbered statement separately, then read the code.
- WRONG: Reading **tone** from the facts instead of the **wording**. -> Tone lives in adjectives and irony.

8. Error analysis (log with Master-Framework codes)

If you keep missing...	Likely code	Corrective drill
Out-of-passage "true" options	P	Force "quote the line" before selecting.
Assumption items	C/A	Do 10 negation-test reps until automatic.
Reversed relations / "can" read as "must"	R	Draw the arrow in the margin before reading options.
Central-idea vs detail	R	Summarise each passage in one line before options.
Statement-set items	A	Mark each numbered statement T/F in the margin, then read the code.
Tone/scope	C	Build a tone word-bank (neutral/critical/cautionary/optimistic).

If you keep missing...	Likely code	Corrective drill
Slow reading	T	One read only; stem-first; predict before options; obey the Section 3.1 ladder.

9. Advanced drill (with full solutions)

□ **Passage.** "Ranking schools purely by average board marks pushes them to court strong students and quietly discourage weak ones, because a struggling child lowers the average. A fairer gauge is how much a school **improves** each child from where they started - its value added - though this is harder to measure."

1. The central idea is that:

(a) board exams should be abolished. (b) ranking schools by average marks can create perverse incentives, and value-added is a fairer though harder measure. (c) weak students should change schools. (d) all schools game their rankings.

2. The argument assumes that:

(a) a school's average mark can be raised by changing which students it admits or retains. (b) board marks are always inaccurate. (c) value-added is easy to compute. (d) parents ignore school rankings.

3. Which inference is best supported?

(a) A school can score well on average marks yet add little value to its students. (b) Value-added measurement is impossible. (c) Strong students never need improvement. (d) Average marks and value added always agree.

4. Which of the statements given below is/are supported by the passage?

1. A fairer measure can also be a harder one to compute.
2. Any school with a high average mark must be adding little value.
3. Discouraging weak students would tend to raise a school's average.

(a) 1 only (b) 1 and 3 only (c) 2 and 3 only (d) 1, 2 and 3

Solutions.

1. **(b).** Captures both the problem (perverse incentive) and the proposed fairer gauge. (a)/(c) are leaps; (d) over-generalises ("all").

2. **(a).** The claim that averages push schools to court strong and discourage weak students ****only works**** if admitting/retaining different students moves the average - negate it and the argument fails. (b)/(c) contradict the text ("harder to measure"); (d) is unstated.

3. **(a).** If average marks reward student selection while value-added measures improvement, a selective school can look good on averages yet add little - a forced inference. (b) contradicts "harder", not "impossible"; (c)/(d) are unsupported absolutes.

4. **(b).** Judge each statement separately.

- **1 - supported.** The passage calls value-added "a fairer gauge ... though this is harder to measure": fairer **and** harder, exactly as stated.

- **2 - not supported.** The passage says a selective school **can** look good on averages while adding little; it never says every high-average school does. Turning "can" into "must" reverses a one-way claim into an equivalence - the classic **implication-vs-equivalence** distortion.

- **3 - supported.** "A struggling child lowers the average" entails that removing or discouraging such children raises it. That is a **direct average consequence**, not a contrapositive: a contrapositive of A → B would be not B → not A.

ANALYSIS: Note the economy of this format: settling statement 2 alone kills options (c) and (d), and settling statement 3 then decides between (a) and (b). **You rarely need all three.**

10. PYQ-pattern notes (2024-2026, Set A)

- ANALYSIS: Comprehension is the **largest three-year family** and the largest family in each audited year, including the provisional 2026 classification. Treat it as a major bank of marks without assuming the same annual distribution.
- ANALYSIS: The dominant stems are **inference** and **assumption**, plus **central idea** and occasional **tone/practical-message**; pure vocabulary items are rare.
- ANALYSIS: The provisional 2026 paper leans noticeably on the **numbered-statement format** - "Which of the following statements is/are correct?" followed by two or three statements and a code - alongside "conclusions", "inferences" and "assumptions" stems. Practise deciding statements **individually**.
- ANALYSIS: **Two-passage** sets recur - practise the "P1/P2/both/neither" mapping.
- ANALYSIS: Passages span economics, science, environment and governance, but ****no outside knowledge is ever required**** - which is exactly why passage-only discipline is the decisive habit.

11. Study links

- FACT: Foundation companion.
- FACT: Algebra, Inequalities and Data Sufficiency - the sufficiency decision shares this file's "is it enough to conclude?" logic.
- FACT: Master Framework - passage workflow, elimination toolkit, error taxonomy.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-CSAT-2018-2023.md. **Answer-key rule:** The official 2018-2023 Prelims/CSAT keys are not held locally; no option or answer has been inferred.

2022	CSAT	51	Passage tone	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2022	CSAT	52	Passage statement accuracy	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2022	CSAT	53	Passage author stance	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2022	CSAT	61	Passage implication	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2022	CSAT	62	Passage central idea	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2022	CSAT	63	Passage statement accuracy	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2022	CSAT	71	Passage author assumption	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2022	CSAT	72	Passage inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2022	CSAT	73	Passage solution inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	1	Passage best-action inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	2	Passage implied statement	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	3	Passage logical message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	11	Passage crucial message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	12	Passage rational assumption	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	13	Passage crux inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	21	Passage logical implication	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	22	Passage logical inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2023	CSAT	23	Passage rational inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	31	Passage assumption check	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	32	Passage crux inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	33	Passage assumption check	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	34	Passage practical message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	35	Passage multi-assumption validity	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	41	Passage assumption check	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	42	Passage crucial message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	43	Passage logical message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	51	Passage logical message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	52	Passage practical message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	53	Passage crux inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	61	Passage central message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	62	Passage solution implication	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	63	Passage assumption validity	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	64	Passage assumption validity	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	71	Passage implied message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2023	CSAT	72	Passage rational message	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.
2023	CSAT	73	Passage goal inference	Objective question; official key unavailable locally	Routed; key unavailable locally	Practise this exact skill form under timed elimination; no answer is inferred here.

What this owner must now support

- Passage inference
- Passage corollary
- Passage author's intent
- Passage detail inference
- Passage assumption validity
- Passage critical factor
- Passage central idea
- Passage consequence inference
- Passage inference validity
- Passage author's view
- Passage implication
- Passage central message
- Passage assumption
- Passage critical inference
- Passage crux identification
- Passage compatibility inference
- Passage critical message
- Passage logical assumption
- Passage logical inference
- Passage implication selection
- Passage logical suggestion
- Passage idea identification
- Passage habit inference
- Passage cause inference
- Passage statement validity
- Passage phrase meaning
- Passage author argument
- Passage tone
- Passage statement accuracy
- Passage author stance
- Passage author assumption
- Passage solution inference
- Passage best-action inference
- Passage implied statement
- Passage logical message
- Passage crucial message

- Passage rational assumption
- Passage crux inference
- Passage logical implication
- Passage rational inference
- Passage assumption check
- Passage practical message
- Passage multi-assumption validity
- Passage solution implication
- Passage implied message
- Passage rational message
- Passage goal inference

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

CONSOLIDATED REGISTER NOTES

Complete revision spine

- **Passage contract:** Use only the text and the exact stem.
- **Stem taxonomy:** Classify detail, main idea, inference, assumption, tone or statement-set.
- **Claim map:** Separate claim, reason, example, qualifier and contrast.
- **Central idea:** Cover the whole passage without importing a policy leap.
- **Inference:** Choose the least extended conclusion licensed by the words.
- **Assumption:** Negate the hidden bridge and test whether the argument collapses.
- **Tone and purpose:** Read attitude from wording, not from subject matter.
- **Quantifiers:** Preserve some, many, can, must, only, unless and necessary/sufficient.
- **Distractors:** Reject scope creep, reversal, half-truth and outside knowledge.
- **Paired passages:** Map each claim to passage 1, passage 2, both or neither.
- **Timed execution:** Predict, match, eliminate, discriminate and park at the ceiling.
- **Audit and retry:** Quote the supporting phrase and code every miss before retry.

Ownership and close-option firewall

- **Own here:** Owns passage-only reading, central idea, stated detail, inference, assumption, conclusion, tone, purpose, scope, statement sets and paired passages.
- **Do not duplicate:** Formal syllogisms belong to Topic 06; Topic 01 uses only the logic needed to test what a passage states, entails or assumes.
- **Verification:** Every correct option must be supported by the supplied passage. External knowledge cannot rescue an unsupported option; assumptions must pass a precise negation test.

Timed answer route

CLASSIFY -> EXTRACT -> REPRESENT -> EXECUTE -> VERIFY -> DECIDE

- Use estimation or option elimination only after preserving the governing condition.
- A blank costs zero; a rushed unsupported answer also consumes time and may attract negative marks.
- For every error, record concept/application/calculation/reading/passage/time/guess, repair the owner, and retry a new item rather than memorising the old option.
