

SOLVED PRACTICE WORKBOOK

Reading-Comprehension - CSAT Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

LEARNING PATH

Deterministic fallback visual: move from precise concepts through argument and critique to exam application.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Reading-Comprehension - Solved Practice Workbook 9

BASIC MCQS / REMEDIATION 9

Diagnostic set - Questions 1-16 9

Q1. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness. 9

Q2. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness. 9

Q3. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness. 9

Q4. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness. 9

Q5. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management. 9

Q6. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management. 10

Q7. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management. 10

Q8. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management. 10

Q9. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden. 10

Q10. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden. 10

Q11. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden. 10

Q12. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden. 11

Q13. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem. 11

Q14. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.	11
Q15. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.	11
Q16. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.	11
Graded set - Questions 17-32	11
Q17. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.	11
Q18. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.	12
Q19. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.	12
Q20. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.	12
Q21. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.	12
Q22. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.	12
Q23. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.	12
Q24. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.	13
Q25. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.	13
Q26. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.	13
Q27. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.	13
Q28. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.	13
Q29. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.	13

Q30. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.	14
Q31. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.	14
Q32. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.	14
Remedial and timed set - Questions 33-48	14
Q33. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.	14
Q34. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.	14
Q35. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.	14
Q36. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.	15
Q37. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.	15
Q38. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.	15
Q39. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.	15
Q40. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.	15
Q41. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.	15
Q42. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.	16
Q43. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.	16
Q44. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.	16
Q45. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.	16
Q46. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.	16

Q47. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.	16
Q48. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.	16

PYQS AND ANSWER PRACTICE 17

Complete step-by-step solutions	17
Q1. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.	17
Q2. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.	17
Q3. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.	17
Q4. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.	17
Q5. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.	18
Q6. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.	18
Q7. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.	18
Q8. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.	18
Q9. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.	18
Q10. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.	19
Q11. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.	19
Q12. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.	19
Q13. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.	19
Q14. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.	19

Q15. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.	20
Q16. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.	20
Q17. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.	20
Q18. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.	20
Q19. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.	20
Q20. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.	21
Q21. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.	21
Q22. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.	21
Q23. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.	21
Q24. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.	21
Q25. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.	22
Q26. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.	22
Q27. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.	22
Q28. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.	22
Q29. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.	22
Q30. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.	23

Q31. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.	23
Q32. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.	23
Q33. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.	23
Q34. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.	23
Q35. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.	24
Q36. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.	24
Q37. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.	24
Q38. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.	24
Q39. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.	24
Q40. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.	25
Q41. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.	25
Q42. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.	25
Q43. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.	25
Q44. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.	25
Q45. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.	26
Q46. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.	26
Q47. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.	26
Q48. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.	26

Identity: csat-01: learner-v2:g2 | Approval: false

BASIC MCQS / REMEDIATION

Diagnostic set - Questions 1-16

Q1. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which option best states the central idea?

A. Appointment tokens help only when their information remains reliable. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q2. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which inference is best supported?

A. The opposite result must always occur. B. Stale estimates can worsen citizens' waiting decisions. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q3. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Citizens use displayed estimates when deciding whether to wait. D. No alternative explanation can ever exist.

Q4. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. qualified and cautionary

Q5. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which option best states the central idea?

A. Recharge and demand management must be combined for water security. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q6. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which inference is best supported?

- A. The opposite result must always occur. B. Slowing runoff can improve groundwater recovery near the pond. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q7. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which assumption is necessary for the stated reasoning?

- A. The intervention has no cost. B. All stakeholders share identical preferences. C. The nearer and farther wells were meaningfully comparable for the observation. D. No alternative explanation can ever exist.

Q8. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

The author's tone is best described as:

- A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. measured and qualified

Q9. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which option best states the central idea?

- A. Frequent assessment can aid learning but increases teachers' workload. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q10. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which inference is best supported?

- A. The opposite result must always occur. B. Earlier feedback gives students time to correct errors. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q11. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which assumption is necessary for the stated reasoning?

- A. The intervention has no cost. B. All stakeholders share identical preferences. C. Students can act on feedback before later assessments. D. No alternative explanation can ever exist.

Q12. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. balanced

Q13. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which option best states the central idea?

A. More buses do not ensure reliable service without better scheduling. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q14. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which inference is best supported?

A. The opposite result must always occur. B. Increasing capacity alone may leave long waiting gaps. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q15. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Passengers value evenly spaced service rather than only total daily capacity. D. No alternative explanation can ever exist.

Q16. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. diagnostic

Graded set - Questions 17-32

Q17. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.

Which option best states the central idea?

A. Price transparency can constrain arbitrary discrimination without erasing genuine quality differences. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q18. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.

Which inference is best supported?

A. The opposite result must always occur. B. Visible transaction prices improve farmers' ability to question inconsistent treatment. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q19. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Farmers can access and understand the published comparisons. D. No alternative explanation can ever exist.

Q20. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. cautiously favourable

Q21. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.

Which option best states the central idea?

A. Accessible language and two-way contact can make reminders more effective. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q22. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.

Which inference is best supported?

A. The opposite result must always occur. B. Having a communication channel is insufficient if the message is hard to understand. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q23. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. At least some recipients wanted to attend but needed clearer information or clarification. D. No alternative explanation can ever exist.

Q24. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. explanatory

Q25. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.

Which option best states the central idea?

A. Remote work can reduce cost while weakening tacit learning, making hybrid design worth considering. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q26. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.

Which inference is best supported?

A. The opposite result must always occur. B. Cost savings do not prove that every organisational outcome improved. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q27. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Informal interaction contributes to learning workplace routines. D. No alternative explanation can ever exist.

Q28. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. balanced and pragmatic

Q29. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.

Which option best states the central idea?

A. Programme success should track survival, not planting counts alone. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q30. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.

Which inference is best supported?

A. The opposite result must always occur. B. Maintenance planning affects whether planted saplings endure. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q31. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. The programme aims at lasting tree cover rather than a one-time planting event. D. No alternative explanation can ever exist.

Q32. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. critical but constructive

Remedial and timed set - Questions 33-48

Q33. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which option best states the central idea?

A. Digital service gains should be paired with an accessible non-digital route. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q34. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which inference is best supported?

A. The opposite result must always occur. B. A faster online process can coexist with exclusion for some users. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q35. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Public service access should not depend entirely on owning reliable digital resources. D. No alternative explanation can ever exist.

Q36. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. qualified and inclusion-oriented

Q37. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which option best states the central idea?

A. Drought policy should reduce risk before loss while retaining post-shock support. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q38. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which inference is best supported?

A. The opposite result must always occur. B. Relief after failure and prevention before failure can complement each other. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q39. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Conservation and diversification can reduce at least part of drought exposure. D. No alternative explanation can ever exist.

Q40. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. analytical and preventive

Q41. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.

Which option best states the central idea?

A. Longer opening hours do not improve access when transport constraints remain. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q42. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.

Which inference is best supported?

A. The opposite result must always occur. B. Formal availability and practical accessibility are not identical. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q43. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. A significant group of potential evening users depends on the bus. D. No alternative explanation can ever exist.

Q44. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. concise and diagnostic

Q45. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.

Which option best states the central idea?

A. Course completion alone does not establish transferable learning. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Q46. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.

Which inference is best supported?

A. The opposite result must always occur. B. Recall and application are distinct outcomes. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Q47. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. The programme seeks usable competence, not attendance alone. D. No alternative explanation can ever exist.

Q48. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. evaluative

PYQS AND ANSWER PRACTICE

Complete step-by-step solutions

Q1. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which option best states the central idea?

A. Appointment tokens help only when their information remains reliable. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: trusted stale estimates.

Q2. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which inference is best supported?

A. The opposite result must always occur. B. Stale estimates can worsen citizens' waiting decisions. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'trusted stale estimates' without external knowledge.

Q3. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Citizens use displayed estimates when deciding whether to wait. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q4. A district office introduced appointment tokens. The pilot reduced queues only where counters updated delay information. Where displays froze, citizens waited longer because they trusted stale estimates. The lesson is not that tokens fail, but that reliable information determines their usefulness.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. qualified and cautionary

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q5. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which option best states the central idea?

A. Recharge and demand management must be combined for water security. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: wells nearby recovered sooner.

Q6. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which inference is best supported?

A. The opposite result must always occur. B. Slowing runoff can improve groundwater recovery near the pond. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'wells nearby recovered sooner' without external knowledge.

Q7. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. The nearer and farther wells were meaningfully comparable for the observation. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q8. A village repaired its pond before drilling new borewells. The pond did not create rain, but it slowed runoff and allowed more water to seep underground. Wells nearby recovered sooner after the monsoon than wells farther away. The result supports recharge as one part of water security, not as a substitute for demand management.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. measured and qualified

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q9. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which option best states the central idea?

A. Frequent assessment can aid learning but increases teachers' workload. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: could correct misunderstandings.

Q10. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which inference is best supported?

A. The opposite result must always occur. B. Earlier feedback gives students time to correct errors. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'could correct misunderstandings' without external knowledge.

Q11. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Students can act on feedback before later assessments. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q12. A school replaced a single final examination with several smaller assessments. Students received feedback earlier and could correct misunderstandings before the term ended. Yet teachers also reported extra marking work. The reform improved learning opportunities while creating an implementation burden.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. balanced

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q13. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which option best states the central idea?

A. More buses do not ensure reliable service without better scheduling. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: long gaps followed by several buses.

Q14. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which inference is best supported?

A. The opposite result must always occur. B. Increasing capacity alone may leave long waiting gaps. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'long gaps followed by several buses' without external knowledge.

Q15. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Passengers value evenly spaced service rather than only total daily capacity. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q16. The bus service added more vehicles but did not revise a timetable that clustered departures together. Passengers still faced long gaps followed by several buses at once. Capacity increased, yet reliability did not. Scheduling, not fleet size alone, was the binding problem.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. diagnostic

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q17. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.

Which option best states the central idea?

A. Price transparency can constrain arbitrary discrimination without erasing genuine quality differences. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: challenge unexplained differences.

Q18. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.

Which inference is best supported?

A. The opposite result must always occur. B. Visible transaction prices improve farmers' ability to question inconsistent treatment. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'challenge unexplained differences' without external knowledge.

Q19. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Farmers can access and understand the published comparisons. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q20. A cooperative published the price paid for every grade of produce. Farmers could compare transactions and challenge unexplained differences. Transparency did not remove quality variation, but it made arbitrary discrimination harder to hide.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. cautiously favourable

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q21. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.

Which option best states the central idea?

A. Accessible language and two-way contact can make reminders more effective. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: comprehensibility and response access.

Q22. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.

Which inference is best supported?

A. The opposite result must always occur. B. Having a communication channel is insufficient if the message is hard to understand. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'comprehensibility and response access' without external knowledge.

Q23. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. At least some recipients wanted to attend but needed clearer information or clarification. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q24. A health camp sent reminders in technical language. Attendance barely changed. When the same dates were sent in simple local-language messages with a call-back number, more people confirmed appointments. The channel had existed earlier; comprehensibility and response access changed the outcome.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. explanatory

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q25. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.

Which option best states the central idea?

A. Remote work can reduce cost while weakening tacit learning, making hybrid design worth considering. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: saved money but weakened.

Q26. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.

Which inference is best supported?

A. The opposite result must always occur. B. Cost savings do not prove that every organisational outcome improved. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'saved money but weakened' without external knowledge.

Q27. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Informal interaction contributes to learning workplace routines. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q28. A firm praised remote work because office costs fell. Employees, however, reported that new recruits struggled to learn informal routines and ask quick questions. The arrangement saved money but weakened some forms of tacit learning. A hybrid design may preserve both gains.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. balanced and pragmatic

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q29. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.

Which option best states the central idea?

A. Programme success should track survival, not planting counts alone. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: survival differed sharply.

Q30. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.

Which inference is best supported?

A. The opposite result must always occur. B. Maintenance planning affects whether planted saplings endure. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'survival differed sharply' without external knowledge.

Q31. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. The programme aims at lasting tree cover rather than a one-time planting event. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q32. The city planted saplings along a highway and reported the number planted as success. Two summers later, survival differed sharply between stretches with watering plans and those without them. Counting installation was easier than measuring durability, but the latter better reflected the programme's purpose.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. critical but constructive

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q33. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which option best states the central idea?

A. Digital service gains should be paired with an accessible non-digital route. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: excluded some residents.

Q34. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which inference is best supported?

A. The opposite result must always occur. B. A faster online process can coexist with exclusion for some users. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'excluded some residents' without external knowledge.

Q35. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Public service access should not depend entirely on owning reliable digital resources. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q36. An online portal shortened application time for users with stable internet. It also excluded some residents who relied on shared devices or assistance at a counter. Digitisation improved one route to service, but fairness required retaining an accessible alternative.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. qualified and inclusion-oriented

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q37. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which option best states the central idea?

A. Drought policy should reduce risk before loss while retaining post-shock support. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: reduced exposure before loss.

Q38. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which inference is best supported?

A. The opposite result must always occur. B. Relief after failure and prevention before failure can complement each other. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'reduced exposure before loss' without external knowledge.

Q39. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. Conservation and diversification can reduce at least part of drought exposure. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q40. A committee compared two drought plans. One promised large relief payments after crop failure; the other combined smaller relief with soil-moisture conservation and crop diversification. The committee preferred the second because it reduced exposure before loss occurred, while still retaining support after severe shocks.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. analytical and preventive

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q41. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.

Which option best states the central idea?

A. Longer opening hours do not improve access when transport constraints remain. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: last bus left before.

Q42. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.

Which inference is best supported?

A. The opposite result must always occur. B. Formal availability and practical accessibility are not identical. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'last bus left before' without external knowledge.

Q43. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. A significant group of potential evening users depends on the bus. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q44. A library extended opening hours, yet evening attendance stayed low. Interviews showed that the last bus left before the new closing time. The library had increased formal availability without increasing practical accessibility.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. concise and diagnostic

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Q45. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.

Which option best states the central idea?

A. Course completion alone does not establish transferable learning. B. The passage rejects the entire intervention. C. The passage proves that cost is irrelevant. D. The passage recommends a universal ban.

Correct answer: A. The answer covers the whole passage and preserves its qualification: could repeat definitions but could not apply.

Q46. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.

Which inference is best supported?

A. The opposite result must always occur. B. Recall and application are distinct outcomes. C. Every person in the setting behaves identically. D. A policy not mentioned in the passage is compulsory.

Correct answer: B. The inference follows from the passage phrase 'could repeat definitions but could not apply' without external knowledge.

Q47. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.

Which assumption is necessary for the stated reasoning?

A. The intervention has no cost. B. All stakeholders share identical preferences. C. The programme seeks usable competence, not attendance alone. D. No alternative explanation can ever exist.

Correct answer: C. Negating the correct option breaks the passage's evidence-to-conclusion bridge; the other options are not required.

Q48. The training programme reported that nearly everyone completed the course. A follow-up test found that many could repeat definitions but could not apply them to unfamiliar cases. Completion measured participation; transfer measured learning.

The author's tone is best described as:

A. unreservedly celebratory B. hostile and dismissive C. unrelated and indifferent D. evaluative

Correct answer: D. The descriptive words acknowledge both the benefit and its limit; the answer matches attitude without exaggeration.

Final error-log checklist

- Was the family classified correctly?
- Were units, domains, quantifiers and constraints copied correctly?
- Was the first-principles relation written before a shortcut?
- Was the selected option independently recomputed or supported by the passage?
- Was the mistake logged and followed by a fresh remedial item?
