

Nyāya–Vaiśeṣika (combined logic-and-category realist system)

Complete Multi-Page Flowchart Companion

Realist ontology, valid cognition, theism, causation and liberation

Every Indic technical term carries an immediate English meaning on first use in each visual box.

Definitions are continued onto additional cards whenever required; no text is clipped or truncated.

REALIST SYSTEM

Nyāya (school of logic and valid knowledge): pramāṇa (means of valid knowledge) + debate
 Vaiśeṣika (school of categories and atomism): padārtha (category or knowable referent) + atomism
 Later synthesis; Navya-Nyāya (New Logic school) refinement

PADĀRTHA (category or knowable referent)

7 categories 9 substances; 24 qualities; 5 motions universal, particularity, inherence, absence

PRAMĀṆA (means of valid knowledge)

perception → inference → comparison → testimony vyāpti (invariable concomitance), upādhi (hidden limiting condition), tarka (hypothetical reductive reasoning), parāmarśa (apprehension that the subject has a pervaded reason)

ERROR, SELF, RELEASE

anyathākhyāti (misapprehension of a real item as elsewhere) → enduring ātman (enduring self) → apavarga (final cessation of suffering) consciousness is an adventitious quality

ĪŚVARA (omniscient Lord)

efficient cause + moral governor Udayana's cumulative proofs

CAUSATION + ATOMS

asatkāryavāda (theory that the effect does not pre-exist in its cause) / ārambhavāda (theory of a genuinely new beginning) three causes → atoms → compounds → cosmic cycles

EVALUATE + WRITE

rival objections → replies → graded verdict PYQ routing + 10/15/20-mark spine

Seven padārthas (categories or knowable referents)

dravya (substance) • guṇa (quality) • karma (motion or action) • sāmānya (real universal) • viśeṣa (ultimate particularity) • samavāya (inherence) • abhāva (absence or non-existence)

Nine dravyas

earth • water • fire • air • ether • time • space • self • mind

Four pramāṇas (means of valid knowledge)

pratyakṣa (perception) • anumāna (inference) • upamāna (comparison) • śabda (reliable verbal testimony)

Four abhāvas (types of absence)

prior • posterior • absolute • mutual absence

Perception

ordinary: 6 contacts extraordinary: universal-mediated • cognition-mediated • yogic

Inference

5-member syllogism 5 marks of valid hetu (reason or middle term) vyāpti (invariable concomitance) secured by observation, counterexample-removal, upādhi (hidden limiting condition)-removal and tarka (hypothetical reductive reasoning)

Causation

samavāyi (inherent cause) • asamavāyi (non-inherent cause) • nimitta (efficient cause)
ananyathāsiddha (causally indispensable antecedent) relevance excludes accidental antecedents

Atomism

eternal partless atoms → dyads → larger compounds adṛṣṭa (unseen karmic potency) + divine volition initiate motion

Universal realism

common predication → objective commonness → real sāmānya (real universal) Reply to apoha (exclusion of what is other): exclusion presupposes stable classes.

Inference

repeated agreement + no counter-instance + no upādhi (hidden limiting condition) + tarka (hypothetical reductive reasoning) → vyāpti (invariable concomitance) Cārvāka (materialist school) pressure: finite observation; Nyāya (school of logic and valid knowledge): warranted, defeasible realism.

Self

desire • aversion • effort • pleasure • pain • cognition + memory/recognition → enduring locus.

God

effect + atomic arrangement + sustenance + language/testimony + karma (motion or action)-order → intelligent efficient cause.

Asatkāryavāda (theory that the effect does not pre-exist in its cause)

prior absence + genuine production + causal specificity → new effect, not manifest pre-existence.

Viśeṣa (ultimate particularity)

qualitatively identical eternal substances remain numerically many → ultimate self-differentiators.

Sāmānya (real universal)

Buddhist (Buddhist philosophical tradition): one universal cannot be wholly in many; causally inert.
Reply: non-spatial instantiation through samavāya (inherence); determinate perception discloses it.

Samavāya (inherence)

Regress: what relates inherence to relata? Reply: samavāya (inherence) is self-linking, one sui-generis inseparable relation. Residual: stopping point may be stipulated.

Anyathākhyāti (misapprehension of a real item as elsewhere)

How can absent silver become perceptually present? Reply: real memory-content enters present cognition through jñānalakṣaṇa (cognition-mediated awareness). Residual: mechanism may look ad hoc.

Apavarga (final cessation of suffering)

Critic: cognitionless release is stone-like. Reply: total cessation of suffering is rationally sufficient. Residual: austerity remains.

Īśvara (omniscient Lord)

Sāṃkhya (enumerative dualist school)/Mīmāṃsā (Vedic exegesis school)/Buddhist (Buddhist philosophical tradition): order needs no divine maker; evil challenges omniscience. Reply: cumulative explanatory need + beginningless karma (motion or action). Residual: God may seem constrained by karma.

Atomism

Imperceptible atoms, first motion and divine direction multiply commitments. Reply: they secure continuity plus novelty without effect pre-existence.

Nyāya (school of logic and valid knowledge) vs Vaiśeṣika (school of categories and atomism)

method, pramāṇa (means of valid knowledge), dialectic ↔ ontology, relations, atomism

Samavāya (inherence) vs saṃyoga (conjunction)

inseparable / eternal / constitutive ↔ separable / produced / destructible

Causation

Nyāya (school of logic and valid knowledge): new effect Sāṃkhya (enumerative dualist school): latent effect transforms Advaita (non-dual Vedānta): appearance

God

Nyāya (school of logic and valid knowledge): creator-orderer efficient cause Yoga (discipline-and-meditation school): special puruṣa (pure conscious witness) and meditative object

Self

Nyāya (school of logic and valid knowledge): enduring substance; consciousness episodic Advaita (non-dual Vedānta): consciousness as essence Buddhism: no enduring owner

Universals

Nyāya (school of logic and valid knowledge) realism Buddhist (Buddhist philosophical tradition) apoha (exclusion of what is other)/exclusion superficial Platonic parallel only

Trap cluster 1

Nyāya (school of logic and valid knowledge) and Vaiśeṣika (school of categories and atomism) were allied, not historically identical from the outset. Karma (motion or action) as a padārtha (category or knowable referent) means physical motion, not moral karma. Ākāśa (ether or sound-bearing space), kāla (time) and dik (directional space) are substances. Saṃyoga (conjunction) is a guṇa (quality); samavāya (inherence) is a distinct category.

Trap cluster 2

Ayutasiddhatva (inseparable establishment) needs qualification; it is not by itself a sufficient definition. Every absence has a locus and counterpositive. Memory is not a fresh pramāṇa (means of valid knowledge). Tarka (hypothetical reductive reasoning) assists inference; it is not an independent pramāṇa.

Trap cluster 3

Anyathākhyāti (misapprehension of a real item as elsewhere) mislocates real content; it does not create wholly unreal silver. Consciousness is a quality of ātman (enduring self), not its eternal essence. Īśvara (omniscient Lord) is efficient, not material, cause. Asatkāryavāda (theory that the effect does not pre-exist in its cause) does not mean causal production from sheer nothing.

Source-complete coverage ledger and answer-worthiness labels

Source corpus Final location Retention decision Layered Simple/Core/Exam/Rapid material Basic Learning Session Complete nine-subtopic teaching sequence retained Layered Advanced material Optional Advanced Every advanced synthesis retained after practice Canonical owner Reconciled through layered session Categories, pramāṇa (means of valid knowledge), appearance, self, liberation, God, causation and atomism retained Legacy solved workbook PYQs and Answer Practice All twenty-two solved PYQs preserved and improved Premium diagnostic replacement MCQs / Remediation Legacy 24+8 set expanded to genuine 40+8 with strict rotation Original practice PYQs and Answer Practice Six solved non-PYQ models replace the legacy three-model set Consolidated register Final section A–L retrieval framework covers every printed syllabus limb

Source-complete coverage ledger and answer-worthiness labels (cont. 2)

Answer-worthiness. The seven categories, four pramāṇas (means of valid knowledge), perception and inference, anyathākhyāti (misapprehension of a real item as elsewhere), self, apavarga (final cessation of suffering), Īśvara (omniscient Lord), Udayana's proofs, asatkāryavāda (theory that the effect does not pre-exist in its cause) and atomism are CORE SYLLABUS. Navya-Nyāya (New Logic school) refinements, the pramāṇa–pramāṇaphala (means-of-knowledge and resulting-cognition relation) debate and detailed rival objections are CORE SUPPORTING DEPTH when tied to the question. Broad IKS revival is context only, not evidence for doctrine.

Contemporary-anchor discipline

FACT: Search finding: A live August 2026 search located broad educational and academic discussion of Indian Knowledge Systems and classical Indian logic, but no sufficiently direct official doctrinal development specific to Nyāya–Vaiśeṣika (combined logic-and-category realist system). ANALYSIS: Inference: Mention renewed interest in Indian logical traditions only as a bounded introduction or conclusion. Do not turn curriculum discussion into proof of a metaphysical or epistemological claim.

Learner-v2 roadmap

WHAT EXISTS? -> PADĀRTHA (category or knowable referent) HOW IS IT KNOWN? -> PRAMĀṆA (means of valid knowledge) HOW DOES ERROR OCCUR? -> ANYATHĀKHYĀTĪ (misapprehension of a real item as elsewhere) WHO KNOWS AND ACTS? -> ĀTMAN (enduring self) HOW DOES BONDAGE END? -> APAVARGA (final cessation of suffering) WHO ORDERS COSMOS? -> ĪŚVARA (omniscient Lord) HOW DO EFFECTS BEGIN? -> ASATKĀRYAVĀDA (theory that the effect does not pre-exist in its cause) + ATOMISM

Master distinction gateway

Axis Nyāya (school of logic and valid knowledge) emphasis Vaiśeṣika (school of categories and atomism) emphasis Primary task valid knowledge, inference and debate categories, relations and atomism Founder text Gautama's Nyāya-sūtra (aphoristic foundational text) Kaṇāda's Vaiśeṣika-sūtra (foundational aphorisms of Vaiśeṣika) Core question how is reality known? what kinds of reality exist? Later synthesis epistemic method ontological inventory Master verdict: Nyāya–Vaiśeṣika (combined logic-and-category realist system) is a realist system in which a detailed ontology is disclosed through valid cognition, error is a misrelation among real factors, and liberation follows removal of false knowledge.

How to use this layered session

Every logical subtopic follows the Philosophy five-layer sequence: Layer Purpose 1. SIMPLE START Plain-language visual gateway 2. CORE UPSC Complete retained doctrine, terminology, arguments and examples 3. ADVANCED Objections, replies, comparisons and qualified evaluation 4. EXAM APPLICATION Verified PYQ routing and marks-wise answer structure 5. RAPID REVISION Traps, recall spines and mastery preparation Source audit: the canonical Nyaya-Vaisesika (combined logic-and-category realist system) knowledge file and the complete 2018-2025 Indian Philosophy PYQ bank were checked. The source session's direct OCR anchors to Chatterjee-Datta and C. D. Sharma are retained. A fresh August 2026 search found broad Indian Knowledge Systems educational discussion but no sufficiently direct new doctrinal development; no decorative current-affairs claim has been added. Qdrant was not required. Preservation note: every substantive section of the previous complete session is retained. The new material adds simple visual gateways and explicit learning layers without replacing or compressing the original depth. Progress: 1 / 9 Philosophy Layered Session Subtopic: The Realist System: Nyaya (school of logic and valid knowledge), Vaisesika (school of categories and atomism) and Their Convergence

Plain-language visual - two allied jobs, one later system

NYAYA (school of logic and valid knowledge) VAISESIKA (school of categories and atomism) How do we know? What exists? proof, debate, pramana categories, relations, atoms \ / \ / LATER SYNTHESIS realist knowledge of a realist world In simple words: Nyaya supplies the methods for knowing and arguing; Vaisesika supplies the inventory of reality. Their later convergence explains the world, knowledge, error, self, causation, God and liberation as parts of one realist system. First anchor Easy meaning Nyaya Logic, epistemology and debate Vaisesika Ontology, categories and atomism Navya-Nyaya Later technical refinement Shared goal Remove error through true knowledge and end suffering Memory line: Nyaya gives the method; Vaisesika gives the map.

0. ONE-SCREEN MAP

NYĀYA (school of logic and valid knowledge) = pramāṇa-śāstra (systematic study of valid knowledge), logic, debate, proof, validity VAISĒSIKA (school of categories and atomism) = padārtha (category or knowable referent) ontology, realism, atomism | └ later convergence → Nyāya-Vaiśeṣika (combined logic-and-category realist system) synthesis → Navya-Nyāya (New Logic school) refinement CORE AXES Padārtha → what exists Pramāṇa (means of valid knowledge) → how it is known Khyāti (theory of appearance or error) → how error occurs Ātman (enduring self) → enduring self, consciousness as quality Apavarga (final cessation of suffering) → cessation of suffering Īśvara (omniscient Lord) → efficient cause, moral governor Asatkāryavāda (theory that the effect does not pre-exist in its cause) → effect is a new beginning Atomism → world built from eternal atoms under God's direction ANALYSIS: Exam key: Nyāya-Vaiśeṣika is best mastered as a system: padārtha gives ontology, pramāṇa gives epistemology, anyathākhyāti (misapprehension of a real item as elsewhere) handles error, ātman (enduring self) secures continuity, God secures cosmic and moral order, and asatkāryavāda plus atomism explain production.

1.1 Nyāya (school of logic and valid knowledge)

• FACT: Nyāya (school of logic and valid knowledge) is the school of logic, epistemology and critical debate, classically associated with Gautama's Nyāya-sūtra (aphoristic foundational text). • FACT: Its concern is not logic in an abstract formalist sense alone, but valid cognition as a means to the removal of error and finally liberation.

1.2 Vaiśeṣika (school of categories and atomism)

• FACT: Vaiśeṣika (school of categories and atomism), associated with Kaṇāda's Vaiśeṣika-sūtra (aphoristic foundational text), is primarily an ontological school. • FACT: It classifies reality into padārthas (categories or knowable referents) and develops atomism.

1.3 Their convergence

• FACT: Over time the two schools converge into a synthetic Nyāya-Vaiśeṣika (combined logic-and-category realist system) system. • FACT: Later Navya-Nyāya (New Logic school), especially through Gaṅgeśa, sharpens the analytic and technical vocabulary of the tradition. • ANALYSIS: In UPSC, it is usually best to treat them together while still noting where a point is distinctly Nyāya (school of logic and valid knowledge) (e.g. pramāṇa (means of valid knowledge), anyathākhyāti (misapprehension of a real item as elsewhere)) or distinctly Vaiśeṣika (school of categories and atomism) (e.g. padārtha (category or knowable referent), atomism).

Exam route

• Open broad answers with the division of labour: Nyaya (school of logic and valid knowledge) = pramana and dialectic; Vaisesika (school of categories and atomism) = padartha and atomism. • State that they are historically two allied schools but doctrinally fused in later exposition. • Use the one-screen map to connect ontology, epistemology, self, theism, causation and liberation rather than writing isolated chapters. • For evaluation, test whether explanatory coverage justifies the system's ontological cost.

Rapid recall

• Gautama: Nyaya (school of logic and valid knowledge)-sutra. • Kanada: Vaisesika (school of categories and atomism)-sutra. • Gangesa: major Navya-Nyaya refinement. • Realist spine: padārtha -> pramana -> atman -> Isvara -> apavarga (final cessation of suffering). • Trap: do not say Nyaya and Vaisesika were identical from the beginning. Progress: 2 / 9 Philosophy Layered Session Subtopic: Padārtha Ontology: Substance, Universal, Inherence and Absence

Plain-language visual - the seven-category inventory

WHAT IS THERE? +-- things that support features -> DRAVYA (substance) +-- their qualities -> GUNA +-- their movements -> KARMA (motion or action) +-- what many individuals share -> SAMANYA +-- what makes eternal reals distinct -> VISESA +-- inseparable dependence -> SAMAVAYA +-- determinate absence -> ABHAVA In simple words: Vaisesika (school of categories and atomism) classifies not only objects but also qualities, motions, commonness, individuality, dependence and absence. Each category answers a different explanatory question. Relation Easy example Samavaya Brown colour in a table Samyoga A book resting on the table Samanya Cow-ness in many cows Visesa What finally distinguishes otherwise similar eternal atoms Abhava The jar's absence on the table Memory line: seven categories prevent unlike kinds of reality from being confused.

2.1 Statement

• FACT: Padārtha (category or knowable referent) means what is nameable and knowable. • FACT: Classical Vaiśeṣika (school of categories and atomism) finally recognizes seven padārthas (categories or knowable referents). • OBJECTION: Historically, Kaṇāda's older list is often taken as six, with abhāva (absence or non-existence) added later. UPSC answers should note this when relevant.

2.2 The seven padārthas (categories or knowable referents) at a glance

Padārtha (category or knowable referent) Basic sense Why it matters dravya (substance) substance locus of qualities and actions guṇa (quality) quality cannot exist independently of substance karma (motion or action) motion/action produces conjunction and disjunction sāmānya (real universal) universal common feature grounding classification viśeṣa (ultimate particularity) ultimate particularity differentiates eternal reals samavāya (inherence) inherence inseparable relation abhāva (absence or non-existence) absence/non-existence explains negation and non-being judgments

Statement

• FACT: Dravya (substance) is that in which qualities and actions inhere and which can serve as a material or ontological base. • FACT: There are nine dravyas: 1. pṛthivī (earth) — earth 2. ap (water) — water 3. tejas (fire) — fire 4. vāyu (air) — air 5. ākāśa (ether or sound-bearing space) — ether 6. kāla (time) — time 7. dik (directional space) — space/direction 8. ātman (enduring self) — self 9. manas (coordinating mind) — mind

Distinction

• ANALYSIS: A common trap is to forget that ākāśa (ether or sound-bearing space), kāla (time) and dik (directional space) are themselves substances, not merely abstract conditions.

Example

• FACT: A pot is a substance because colour, number, conjunction and motion can inhere in it.

Statement

• FACT: Guṇa (quality) is a dependent ontological feature that inheres in a substance but does not itself possess further qualities or actions in the same way. • FACT: The traditional list gives twenty-four qualities: • rūpa (colour) (colour) • rasa (taste) (taste) • gandha (smell) (smell) • sparśa (touch) (touch) • saṃkhyā (number) (number) • parimāṇa (magnitude) (magnitude) • pṛthaktva (distinctness) (distinctness) • saṃyoga (conjunction) (conjunction) • vibhāga (disjunction) (disjunction) • paratva (priority or remoteness) (priority/remoteness) • aparatva (posteriority or nearness) (posteriority/nearness) • buddhi (determinative intellect) (cognition) • sukha (pleasure) (pleasure) • duḥkha (pain) (pain) • icchā (desire) (desire) • dveṣa (aversion) (aversion)

Statement (cont. 2)

• prayatna (effort) (effort) • gurutva (heaviness) (heaviness) • dravatva (fluidity) (fluidity) • sneha (viscosity) (viscosity) • saṃskāra (disposition or momentum) (dispositional tendency/momentum) • dharma (merit or duty) • adharma (demerit) • śabda (reliable verbal testimony) (sound)

Philosophical significance

• ANALYSIS: The list is notable because mental items like cognition, desire and pleasure are treated as qualities, not as the essence of self.

2.5 Karma (motion or action) (motion/action)

• FACT: Karma (motion or action) here means physical motion/action, not moral karma. • FACT: Vaiśeṣika (school of categories and atomism) recognizes five kinds: 1. upward movement 2. downward movement 3. contraction 4. expansion 5. locomotion/general movement • FACT: Motion is important because it generates conjunction and disjunction, central to causation.

Statement

• FACT: Sāmānya (real universal) is the real universal, one-in-many, eternal and present in multiple particulars. • FACT: Universals may be discussed through higher and lower ordering, often expressed as para (higher or more general) and apara (lower or more specific) distinctions.

Argument

1. FACT: We genuinely classify many individuals under one concept: "cow", "pot", "substance". 2. FACT: Mere resemblance is insufficient unless some objective commonness grounds the classification. 3. FACT: Therefore a universal must be real.

Presupposition

- ANALYSIS: The argument presupposes realist semantics: common predication reflects objective common structure in the world.

Distinction

- FACT: Vaiśeṣika (school of categories and atomism) realism here opposes the Buddhist (Buddhist philosophical tradition) apoha (exclusion of what is other) theory, which explains universals through exclusion rather than real common entities.

Example

- FACT: "Cow-ness" is one universal present in many cows.

Objection

- OBJECTION: If the universal is one, how can it be wholly present in many places?

Reply

- FACT: The universal is not spatially divided like a physical thing; it is a single eternal entity instantiated in many particulars through samavāya (inherence) (inherence).

2.7 Jāti-bādhaka (obstructor of universalhood): six impediments to universalhood

• FACT: Statement. Not every general term names a real universal (jāti (class-universal), class-universal); where a proposed jāti is blocked, Nyāya-Vaiśeṣika (combined logic-and-category realist system) treats it as an imposed property or limiting condition (upādhi (hidden limiting condition), adjunct), not as a new padārtha (category or knowable referent). • ANALYSIS: Philosophical function. The six jāti-bādhakas (obstructors of universalhood) (obstructors of universalhood) are the school's internal discipline against a bloated ontology of universals. Jāti-bādhaka (obstructor of universalhood) Rule Exam example / payoff FACT: vyakter abhedah (absence of plurality of instances) FACT: A universal cannot have only one instance, because jāti requires plurality of loci. FACT: ākāśatva (ether-hood) (ether-ness) is blocked if there is only one ākāśa (ether or sound-bearing space). FACT: tulyatvam (exact co-extension) FACT: Two exactly co-extensive putative universals should not both be admitted. FACT: If ghaṭatva (pot-hood) and kalaśatva (jar-hood) both mean pot-ness over the same class, there is no ground for two universals. FACT: saṅkaraḥ (improper cross-classification) FACT: Two universals cannot partially overlap without either being included in the other; they must be nested or disjoint. FACT: The standard case is bhūtatva (element-hood) and mūrtatva (corporeality), where cross-connection would confuse the hierarchy of kinds. FACT: anavasthā (infinite regress) FACT: Universalhood itself cannot be a further universal in universals, because that would demand another universal of universalhood without end. FACT: jātītva (universal-hood) as a jāti over jātis (class-universals) is blocked by infinite regress.

2.7 Jāti-bādhaka (obstructor of universalhood): six impediments to universalhood (cont. 2)

FACT: rūpahāniḥ (loss of defining nature) FACT: A universal is blocked where admitting it destroys the very form or function of the entity concerned. FACT: A universal residing in viśeṣas (ultimate particularizers) would defeat viśeṣa (ultimate particularity)'s function of ultimate individuation. FACT: asambandhaḥ (absence of a possible relation) FACT: A universal must inhere in its instances by samavāya (inherence), but samavāya itself has no further samavāya to connect it with a universal. FACT: samavāyatva (inherence-hood) cannot be admitted as a real jāti (class-universal) without relation-regress. • FACT: Buddhist (Buddhist philosophical tradition) objection. Dignāga and Dharmakīrti-style (in the manner of Buddhist logician Dharmakīrti) apoha (exclusion of what is other) theory argues that universals are unperceived, causally inert, and cannot be wholly present in many places at once. • FACT: Nyāya (school of logic and valid knowledge) reply. Universals are perceived in determinate perception (savikalpaka-pratyakṣa (determinate perception)) such as "this is a cow"; their presence is by samavāya, not by spatial containment; and apoha is circular because exclusion of non-cows presupposes a stable cow-class or at least stable exclusion-domains. • ANALYSIS: Exam payoff. Jāti-bādhaka (obstructor of universalhood) lets Nyāya answer the Buddhist charge of ontological excess: realism about universals is not indiscriminate multiplication.

2.8 Viśeṣa (ultimate particularity) (particularity)

• **FACT: Statement.** Viśeṣa (ultimate particularity) is the ultimate individuator residing only in eternal substances: the paramāṇus (eternal partless atoms) of earth, water, fire and air, and the eternal instances of ākāśa (ether or sound-bearing space), kāla (time), dik (directional space), ātman (enduring self) and manas (coordinating mind). • **FACT: Function.** Two atoms of earth may be alike in all universals and ordinary qualities; without viśeṣa they would be indistinguishable and, by the identity of indiscernibles, would collapse into one. • **FACT: School-name significance.** Viśeṣa gives the Vaiśeṣika (school of categories and atomism) school its name because the system explains plurality through irreducible particularity.

Objection: regress of differentiators

• **FACT: Objection.** If viśeṣa (ultimate particularity) differentiates one atom from another, what differentiates one viśeṣa from another? A further viśeṣa would be needed, and so on without end. • **FACT: Reply.** Viśeṣas (ultimate particularizers) are svato-vyāvartaka (self-differentiating) (self-differentiating): they distinguish both their loci and themselves by their own nature. • **ANALYSIS: Residual force.** Critics argue that "self-differentiating" names the stopping point rather than proving it; viśeṣa is a stipulated terminus of individuation.

Objection: imperceptible ontological IOU

• **FACT: Objection.** Viśeṣa (ultimate particularity) is imperceptible and appears to be posited solely to do the explanatory job of individuating exactly similar eternal substances. • **FACT: Reply.** Nyāya-Vaiśeṣika (combined logic-and-category realist system) frames the posit inferentially: plurality of exactly similar eternal substances is otherwise inexplicable, and Nyāya (school of logic and valid knowledge) reduces arthāpatti (explanatory postulation) (postulation) to inference rather than making it a separate pramāṇa (means of valid knowledge). • **ANALYSIS: Comparative note.** Jaina (many-sided realist tradition), Buddhist (Buddhist philosophical tradition) and Advaita (non-dual Vedānta) critiques often target viśeṣa and samavāya (inherence) as the weakest joints of the system; Śrīharṣa's Khaṇḍanakhaṇḍakhādyā (Delicacy of Refutations) attacks Nyāya definitions systematically.

2.9 Samavāya (inherence) (inherence)

• **FACT: Statement.** Samavāya (inherence) is the eternal, single, imperceptible-yet-inferred inseparable relation (ayutasiddha-sambandha (relation of inseparably established entities)) that holds where relata cannot be established as separable in the relevant ontological mode. • **FACT: Scope.** It holds between five standard pairs: part-whole, substance-quality, substance-motion, universal-particular, and eternal substance–its viśeṣa (ultimate particularity). • **ANALYSIS: All-pervading sense.** Later exposition calls samavāya one and not locally multiplied; "all-pervading" should be read as one relation operating wherever the required relata obtain, not as a tenth spatial substance.

Distinction from saṃyoga (conjunction)

Relation Status Relata Production/destruction Example FACT: samavāya (inherence) FACT: Inseparable relation FACT: Ayutasiddha (inseparably established) relata FACT: Eternal as a relation FACT: Colour in cloth; whole in parts FACT: saṃyoga (conjunction) FACT: A guṇa (quality) (quality) FACT: Separable relata FACT: Produced and destructible FACT: Book on table; two pots in contact • FACT: Ayutasiddhatva (inseparable establishment) issue. Inseparability is necessary for samavāya, but ANALYSIS: not by itself sufficient unless the specific ontological dependence relation is shown; mere closeness is not inherence.

Objection: relation-regress

• FACT: Objection. If samavāya (inherence) relates A and B, a further relation seems needed to relate samavāya to A and to B, generating anavasthā (infinite regress) (infinite regress). • FACT: Reply. Samavāya is svarūpa-sambandha (identity-based relation) (self-linking relation): it relates by its own nature and needs no further relator. • ANALYSIS: Residual force. This is a stipulated terminus; every relational ontology must stop somewhere, and critics such as Buddhists and Śrīharaṣa press the charge that Nyāya (school of logic and valid knowledge) stops regress here while using regress against opponents. • ANALYSIS: Controlled comparison flag. The issue resembles Bradley's regress in Western metaphysics, but that comparison belongs only after the Indian argument is complete.

Objection: one or many samavāyas (relations of inherence)?

• FACT: Nyāya-Vaiśeṣika (combined logic-and-category realist system) position. Samavāya (inherence) is one and eternal; parsimony is the Vaiśeṣika (school of categories and atomism) reason for not multiplying inherence-relations. • ANALYSIS: Internal difficulty. If samavāya is one, it is hard to explain why it relates this quality to this substance rather than to all substances. • ANALYSIS: Reply. The relata themselves determine the relation's operation: samavāya is not a free-floating glue but the inseparable tie manifest only where the relevant terms exist.

Statement

• FACT: Abhāva (absence or non-existence) is the category of absence or non-existence. • FACT: Four kinds are recognized: 1. prāgabhāva (prior non-existence) — prior non-existence 2. pradhvaṃsābhāva (posterior non-existence) — posterior non-existence/destruction 3. atyantābhāva (absolute non-existence) — absolute non-existence 4. anyonyābhāva (mutual non-existence or difference) — mutual non-existence/difference

(a) Prāgabdhāva (prior non-existence)

• FACT: The non-existence of an effect before its production. • FACT: It has no beginning, but ends when the effect is produced.

(b) Pradhvaṃsābhāva (posterior non-existence)

• FACT: The non-existence of a thing after its destruction. • FACT: It begins with destruction and has no end.

(c) Atyantābhāva (absolute non-existence)

• FACT: Absolute non-existence: a thing is absent in a locus for all times. • FACT: Standard example: a hare's horn.

(d) Anyonyābhāva (mutual non-existence or difference)

• FACT: Mutual non-existence or reciprocal difference. • FACT: "A pot is not a cloth" means pot and cloth are different entities.

2024 distinction: air does not have heat vs air is not fire

• FACT: "Air does not have heat" is best treated as *atyantābhāva* (absolute non-existence) with respect to heat in air. • FACT: "Air is not fire" is *anyonyābhāva* (mutual non-existence or difference), because it expresses difference between two entities. • ANALYSIS: Therefore they are not the same kind of absence.

2023 issue: counterpositive (*pratiyogin* (counterpositive of an absence))

• FACT: Every absence is the absence of something; that absent positive term is the *pratiyogin* (counterpositive of an absence) or counterpositive. • ANALYSIS: This shows *abhāva* (absence or non-existence) is not sheer blankness; it has structured intentional content.

Exam route

• 2018 Q5(a): distinguish *samavaya* from *samyoga* using brown table and book-on-table. • 2018 Q5(d), 2019 Q5(a), 2023 Q5(d), 2024 Q5(c): define absence through locus, counterpositive and fourfold classification. • 2020 Q8(b): give *visesa*'s function, regress objection, self-differentiating reply and residual force. • 2021 Q5(c): say inseparability is necessary but not by itself sufficient for *samavaya*. • 2022 Q5(b): defend real universals, then confront *apoha* (exclusion of what is other) and one-in-many objections.

Rapid recall

• Seven *padarthas*; Kanada's earlier list is commonly treated as six. • Nine *dravyas*; twenty-four *gunas*; five physical *karmas*. • *Samavaya* = inseparable relation; *samyoga* = contingent conjunction. • Four *abhavas*: prior, posterior, absolute and mutual. • Trap: cognition, pleasure and desire are qualities of self, not self's essence. Progress: 3 / 9 Philosophy Layered Session Subtopic: *Pramana*: Perception, Inference, Testimony and the Defence of *Vyapti*

Plain-language visual - four routes to valid knowledge

OBJECT CONTACT -> PERCEPTION SIGN + RULE -> INFERENCE RESEMBLANCE -> COMPARISON TRUSTWORTHY WORD -> TESTIMONY Inference engine: smoke on hill + smoke pervaded by fire -> fire on hill In simple words: Nyaya (school of logic and valid knowledge) accepts four independent ways of gaining fresh true knowledge. Its most elaborate achievement is inference: a sign must be present in the subject and reliably connected with what is to be proved. Technical term Easy meaning Vyapti Unconditional invariable relation Upadhi Hidden condition that makes a generalization defective Tarka (hypothetical reductive reasoning) Reasoning that removes a rival possibility Paramarsa (apprehension that the subject has a pervaded reason) Applying the known universal relation to this case Memory line: observation suggests the rule; removal of hidden conditions warrants it; paramarsa applies it.

3.1 The four pramāṇas (means of valid knowledge)

• FACT: Nyāya (school of logic and valid knowledge) recognizes four pramāṇas (means of valid knowledge): 1. pratyakṣa (perception) — perception 2. anumāna (inference) — inference 3. upamāna (comparison) — comparison/analogy 4. śabda (reliable verbal testimony) — testimony

Gautama's definition (2025)

• FACT: The classical Nyāya (school of logic and valid knowledge) definition states in substance: "indriyārtha-sannikarṣa-utpannam (produced by sense-object contact) jñānam avyapadeśyam (non-verbal) avyabhicāri (non-errant) vyavasāyātmakam (determinate) pratyakṣam (perception)". • FACT: UPSC expects clause-by-clause unpacking.

Clause-by-clause analysis

1. indriyārtha-sannikarṣa (sense-object contact) — sense-object contact • FACT: Perception begins with a relation between sense organ and object. • ANALYSIS: This marks perception as causally immediate relative to the relevant sense relation. 2. utpannam — produced • FACT: The cognition must be produced from that contact. • ANALYSIS: This excludes merely remembered or verbally derived knowledge. 3. avyapadeśyam (non-verbal) — non-verbal / not dependent on testimony • FACT: Perception is not constituted by words as words. • ANALYSIS: This distinguishes it from śabda (reliable verbal testimony). 4. avyabhicāri (non-errant) — non-errant • FACT: Genuine perception is unerring. • ANALYSIS: Illusion is excluded from valid perception in the final sense. 5. vyavasāyātmakam (determinate) — determinate • FACT: It is definite, not doubtful. • ANALYSIS: This clause creates discussion because later Naiyāyikas (Nyāya philosophers) also admit a prior indeterminate phase.

Nirvikalpaka (indeterminate) and savikalpaka (determinate) perception

• **FACT:** Nirvikalpaka (indeterminate) perception is indeterminate, pre-predicative awareness. • **FACT:** Savikalpaka (determinate) perception is determinate: qualified, nameable awareness such as "this is a blue pot". • **ANALYSIS:** The tradition often uses nirvikalpaka to explain how raw awareness can ground determinate judgment.

The six sannikarṣas (forms of sense-object contact)

• **FACT:** Nyāya (school of logic and valid knowledge) elaborates six sense-object relations: 1. saṃyoga (conjunction) — conjunction 2. saṃyukta-samavāya (inherence in a conjoined object) — inherence in what is conjoined 3. saṃyukta-samaveta-samavāya (inherence in what inheres in a conjoined object) — inherence in what inheres in what is conjoined 4. samavāya (inherence) — inherence 5. samaveta-samavāya (inherence in what already inheres) — inherence in what inheres 6. viśeṣaṇa-viśeṣya-bhāva (qualifier-qualified relation) — qualifier-qualified relation • **ANALYSIS:** These are technical tools for explaining how the senses can apprehend not just substances, but also qualities, universals and absences.

Extraordinary perception (alaukika (extraordinary)) (2023, 2019)

1. **FACT:** Sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception) • perception through the universal; by apprehending a universal one can perceptually relate to all its instances in a distinctive way. • **ANALYSIS:** This supports Nyāya (school of logic and valid knowledge) realism about universals: universals are perceived, not merely inferred. 2. **FACT:** Jñānalakṣaṇa-pratyakṣa (cognition-mediated extraordinary perception) • a case where prior cognition mediates present perception; e.g. one may in a derivative sense "see" sandalwood as fragrant. • **ANALYSIS:** This becomes crucial in Nyāya's theory of error. 3. **FACT:** Yogaja-pratyakṣa (yogically generated extraordinary perception) • yogic perception of subtle, distant, past or future objects.

Statement

• **FACT:** Anumāna (inference) is knowledge arising through a sign (liṅga (inferential sign)/hetu (reason or middle term), probans) known to be invariably related to the probandum (sādhya (property to be proved)).

Five members of inference

Using the hill-fire example: 1. FACT: pratijñā (proposition) — The hill has fire. 2. FACT: hetu (reason or middle term) — because it has smoke. 3. FACT: udāharaṇa (example with universal rule) — wherever there is smoke, there is fire, as in a kitchen. 4. FACT: upanaya (application of the rule) — this hill has smoke of that kind. 5. FACT: nigamana (conclusion) — therefore the hill has fire. • FACT: Purpose. The pañcāvayava (five-membered syllogism) is the form of proof for another (parārthānumāna (demonstrative inference for another person)); it makes explicit the vyāpti (invariable concomitance) and the application to the pakṣa (subject of inference).

Five characteristics of a valid hetu (reason or middle term)

1. FACT: pakṣadharmatā (presence of the reason in the subject) — the hetu (reason or middle term) is present in the subject under consideration. 2. FACT: sapakṣa-sattva (presence in similar positive instances) — the hetu is present in similar positive instances. 3. FACT: vipakṣa-asattva (absence from negative instances) — the hetu is absent in dissimilar negative instances. 4. FACT: abādhitā (uncontradicted) — the sādhyā (property to be proved) is not contradicted by stronger knowledge. 5. FACT: asatpratipakṣa (absence of an equally strong counter-reason) — the hetu is not opposed by an equally strong counter-reason. • ANALYSIS: Exam link. These five marks are the positive side of the same test that appears negatively as hetvābhāsa (fallacious reason) (fallacy of the probans) in §3.4.

3.4 Vyāpti-grahaṇa (apprehension of invariable concomitance): grasping invariable concomitance

• FACT: Statement. Vyāpti-grahaṇa (apprehension of invariable concomitance) is the chain by which Nyāya (school of logic and valid knowledge) claims to know the universal relation required for inference; it is the core reply to Cārvāka (materialist school) scepticism about anumāna (inference).

1. Vyāpti (invariable concomitance) defined

• FACT: Definition. Vyāpti (invariable concomitance) is invariable, unconditional concomitance (avinābhāva-niyama (rule of inseparable concomitance)) between the hetu (reason or middle term)/liṅga (inferential sign) (probans, e.g. smoke) and the sādhyā (property to be proved) (probandum, e.g. fire). • FACT: Distinction. Samavyāpti (coextensive pervasion) is equal extension or convertibility: two terms pervade each other. • FACT: Distinction. Viśamavyāpti (non-coextensive pervasion) / asamavyāpti (failed pervasion) is unequal extension: all smoke is pervaded by fire, but not all fire is pervaded by smoke. • FACT: Condition. Nyāya (school of logic and valid knowledge) requires niyata (fixed) and anaupādhika (free from a hidden limiting condition) (unconditioned by an upādhi (hidden limiting condition)) concomitance, not mere frequency.

2. Bhūyodarśana (repeated observation): repeated positive and negative observation

• **FACT:** Argument. The knower observes co-presence (anvaya) in many positive instances: smoke with fire in kitchens, hearths and similar cases. • **FACT:** Argument. The knower also observes co-absence (vyatireka) in negative instances: where fire is absent, smoke is absent. • **ANALYSIS:** Limit. Bhūyodarśana (repeated observation) alone is not sufficient, because repeated observation remains a finite sample and cannot by itself yield an unrestricted universal.

3. Vyabhicāra-adarśana (non-observation of a counter-instance): absence of counter-instance

• **FACT:** Argument. The investigator searches for deviation (vyabhicāra (deviation or counter-instance)) and does not find a case where the hetu (reason or middle term) occurs without the sādhya (property to be proved). • **ANALYSIS:** Limit. This strengthens the universal but still needs the removal of hidden conditions.

4. Upādhi-nirāsa (elimination of a hidden limiting condition): removal of conditioning adjunct

• **FACT:** Definition. Upādhi (hidden limiting condition) is a conditioning adjunct: sādhya (property to be proved)-vyāpakatve (in being pervasive) sati sādhana-avyāpakah — that which pervades the sādhya but does not pervade the hetu (reason or middle term). • **FACT:** Example. In the bad inference "the hill has smoke because it has fire", wet fuel (ārdra-indhana (wet fuel)) is the upādhi: wherever there is smoke there is wet fuel, but not wherever there is fire is there wet fuel. • **FACT:** Argument. Therefore fire does not unconditionally pervade smoke; the fire-to-smoke inference is conditional and fails. • **FACT:** Nyāya (school of logic and valid knowledge) reply to Cārvāka (materialist school). The Cārvāka says a hidden condition may always lurk; Nyāya replies that systematic upādhi-nirāsa (elimination of a hidden limiting condition) and upādhi-śaṅkā-nivṛtti (removal of doubt about a hidden limiting condition) (removal of the suspicion of an adjunct), supported by tarka (hypothetical reductive reasoning), converts observation into warranted universal cognition.

5. Tarka (hypothetical reductive reasoning): reductive doubt-removal

• **FACT:** Statement. Tarka (hypothetical reductive reasoning) is hypothetical or counterfactual reasoning that removes residual doubt by showing the unacceptable consequence of the contrary supposition. • **FACT:** Example. If smoke were not pervaded by fire, smoke could occur without fire; this contradicts uniform experience and would make the causal order unintelligible. • **FACT:** Status. Tarka is pramāṇa-anugrahaka (auxiliary to a means of knowledge) (an aid to pramāṇas (means of valid knowledge)), not an independent pramāṇa (means of valid knowledge); it supports perception and inference by eliminating the rival supposition. • **ANALYSIS:** Forms. Common exam-ready forms of unacceptable consequence include ātmāśraya (self-dependence) (self-dependence), anyonyāśraya (mutual dependence) (mutual dependence), cakraka (circularity), anavasthā (infinite regress) (infinite regress), and contradiction of perception or inference (pratyakṣa (perception)/anumāna-virodha (conflict with inference)).

6. Sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception): universal-mediated perception

• **FACT:** Cross-reference. As noted in §3.2, sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception) is extraordinary (alaukika (extraordinary)) perception through the universal.
 • **FACT:** Role in vyāpti (invariable concomitance). On perceiving an instance of smokeness, the cognizer is perceptually related to smoke as a universal, so all smoke as such can be presented without an infinite survey of every smoke-instance.
 • **ANALYSIS:** Induction payoff. This is the specifically Nyāya (school of logic and valid knowledge) move against the problem of induction: because jāti (class-universal) is real, the universal can be cognitively grasped, not merely guessed from samples.

7. Pakṣadharmatā (presence of the reason in the subject) and parāmarśa (apprehension that the subject has a pervaded reason)

• **FACT:** Pakṣadharmatā (presence of the reason in the subject). The hetu (reason or middle term) must be known to exist in the pakṣa (subject of inference): this hill has smoke.
 • **FACT:** Parāmarśa (apprehension that the subject has a pervaded reason). The immediate cause (karaṇa (instrument or operative cause)) of inferential cognition is the subsumptive reflection: "this hill possesses smoke which is pervaded by fire".
 • **FACT:** Connection to pañcāvayava (five-membered syllogism). The five-membered syllogism makes parāmarśa communicable: pratijñā (proposition) states the thesis, hetu states the sign, udāharaṇa (example with universal rule) states vyāpti (invariable concomitance) with example, upanaya (application of the rule) applies it to the pakṣa, and nigamana (conclusion) states the conclusion.

8. Hetvābhāsa (fallacious reason) as the negative test of vyāpti (invariable concomitance)

Hetvābhāsa (fallacious reason) What fails Subtypes / examples
FACT: savyabhicāra (inconclusive irregular reason) / anaikāntika (inconclusive reason) (irregular)
FACT: The hetu (reason or middle term) is not invariably tied to the sādhyā (property to be proved).
FACT: sādharmaṇa (over-common reason) occurs in both sapakṣa (positive similar instance) and vipakṣa (negative dissimilar instance);
 asādhāraṇa (over-exclusive reason) is confined to the pakṣa (subject of inference);
 anupasaṃhārin (non-classifiable reason) is too wide to allow contrast.
FACT: viruddha (contradictory)
FACT: The hetu proves the opposite of the intended sādhyā.
FACT: A reason meant to prove permanence instead proves impermanence.
FACT: satpratipakṣa (counterbalanced reason) / prakaraṇasama (counterbalanced reason) (counterbalanced)
FACT: An equally strong counter-hetu proves the contrary.
FACT: The debate remains balanced because each side has a reason of comparable force.
FACT: asiddha / sādhyasama (reason as unproved as the conclusion) (unproved)
FACT: The hetu itself is not established.
FACT: āśrayāsiddha (reason resting on an unreal subject): the pakṣa-locus is unreal; svarūpāsiddha (reason absent by its very nature): the hetu is absent in the pakṣa;
 vyāpyatvāsiddha (reason whose pervasion is unproved): pervasion is unproved, often due to upādhi (hidden limiting condition).
FACT: bādhita (contradicted reason) / kālātīta (mistimed reason) (stultified)
FACT: The conclusion is contradicted by a stronger pramāṇa (means of valid knowledge).
FACT: Fire cannot be inferred as cold because perception defeats the sādhyā.
 • **ANALYSIS:** Linking rule.

8. Hetvābhāsa (fallacious reason) as the negative test of vyāpti (invariable concomitance) (continued 2)

Savyabhicāra (inconclusive irregular reason) violates vipakṣa-asattva (absence from negative instances), asiddha violates pakṣadharmatā (presence of the reason in the subject), bādhita (contradicted reason) violates abādhita (uncontradicted), satpratipakṣa (counterbalanced reason) violates asatpratipakṣa (absence of an equally strong counter-reason), and viruddha reverses the direction of vyāpti (invariable concomitance) itself.

Objection: Cārvāka (materialist school) and the Humean parallel

• FACT: Objection. No finite observation licenses a universal; upādhi (hidden limiting condition)-elimination can never be completed; tarka (hypothetical reductive reasoning) presupposes inference and is circular; and sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception) looks like an ad hoc posit. • ANALYSIS: Humean parallel. The parallel is that observed regularity alone does not logically entail future or universal necessity.

Reply: Nyāya (school of logic and valid knowledge) answer

• FACT: Reply. The demand for mathematical certainty from empirical universals is misplaced; Nyāya (school of logic and valid knowledge) claims warranted cognition, not omniscient enumeration by ordinary knowers. • FACT: Reply. Tarka (hypothetical reductive reasoning) is not an independent proof of vyāpti (invariable concomitance), so it does not circularly infer what it must prove; it removes the contrary supposition so that perception and inference can function. • FACT: Reply. Sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception) is not ad hoc within Nyāya ontology, because universals are real padārthas (categories or knowable referents) and can be presented in cognition. • FACT: Reply. The sceptic's denial of all inference is itself a universal claim about inference and so invites svavacana-virodha (self-contradiction in one's own speech). • ANALYSIS: Residual force. The Nyāya answer is strongest if one accepts realism about universals; if jāti (class-universal) is denied, the induction solution becomes contested.

3.5 Upamāna (comparison) (comparison)

• FACT: Upamāna (comparison) gives knowledge of the relation between a word and its referent through resemblance. • FACT: If one is told that a gavaya resembles a cow, later encountering such an animal yields knowledge that this is what the word denotes. • ANALYSIS: The point is semantic acquisition via similarity.

Statement

• FACT: Śabda (reliable verbal testimony) is valid verbal testimony, classically understood as āptavākya (statement of a reliable speaker), the statement of an āpta (competent reliable speaker) — a trustworthy competent person.

Argument

1. FACT: Many things cannot be directly perceived by each knower. 2. FACT: Human life depends on reliable communication. 3. FACT: Therefore testimony must be recognized as an independent pramāṇa (means of valid knowledge) when it comes from a trustworthy source.

Vedic testimony

• FACT: Nyāya (school of logic and valid knowledge) accepts the Veda as valid testimony. • FACT: In later Nyāya, its authority is often connected with God as omniscient author.

3.7 Why memory (smṛti (memory)) is not a pramāṇa (means of valid knowledge) (2024)

• FACT: Memory reproduces a past cognition; it does not generate novel knowledge. • FACT: A pramāṇa (means of valid knowledge) must produce fresh, true cognition of what is not already known in that mode. • ANALYSIS: Therefore memory may be psychologically useful but is not epistemically pramāṇa in the technical sense.

3.8 Svataḥ (intrinsically) and parataḥ (extrinsically) prāmāṇya (validity of cognition) (2025)

• FACT: Nyāya (school of logic and valid knowledge) defends parataḥ-prāmāṇya (extrinsic validity of cognition) and parataḥ-aprāmāṇya (extrinsically known invalidity). • FACT: That means both validity and invalidity of cognition are known through external conditions or later confirmation/disconfirmation. • ANALYSIS: This is a standard UPSC trap: Nyāya is not merely parataḥ (extrinsically) for invalidity; it is parataḥ for both. • FACT: Contrast: Mīmāṃsā (Vedic exegesis school) generally takes validity to be self-manifest (svataḥ (intrinsically)) while invalidity is known later.

3.9 Naiyāyika (Nyāya philosopher)-Buddhist (Buddhist philosophical tradition) debate on pramāṇa (means of valid knowledge) and

Exam route

• 2022 Q7(c): reconstruct Carvaka's vyapti objection before giving Nyaya (school of logic and valid knowledge)'s multi-stage reply. • 2023 Q6(c): distinguish ordinary and extraordinary perception and evaluate perception of universals. • 2023 Q7(a): connect five valid hetu (reason or middle term)-marks to the five hetvabhasas. • 2021 Q5(b): explain sabda as aptavakya and why testimony is independent. • 2025 Q5(b): contrast Nyaya's instrument-result distinction with Buddhist (Buddhist philosophical tradition) cognition-centred theory. • 2025 Q6(a): unpack every clause of Gautama's perception definition.

Rapid recall

• Four pramanas: perception, inference, comparison, testimony. • Five inference members: thesis, reason, example, application, conclusion. • Five hetu (reason or middle term) tests: paksa presence, positive presence, negative absence, undefeated, no counter-reason. • Tarka (hypothetical reductive reasoning) is an aid, not an independent pramana. • Trap: Nyaya (school of logic and valid knowledge) is paratah for both validity and invalidity. Progress: 4 / 9 Philosophy Layered Session Subtopic: Appearance, Self and Liberation: Realism from Error to Apavarga (final cessation of suffering)

Plain-language visual - error, ownership and release

SHELL SEEN NOW + SILVER REMEMBERED wrongly combined v "THIS IS SILVER" Enduring self owns cognition and action true knowledge removes error and defects v APAVARGA (final cessation of suffering) = final cessation of suffering In simple words: illusion does not prove that reality is unreal. A real remembered object is wrongly placed in a real present locus. The same realist system posits an enduring self as owner of mental qualities and liberation as freedom from all suffering-producing conditions. Memory line: error is wrong placement, self is the enduring locus, liberation is removal.

4.1 Anyathākhyāti (misapprehension of a real item as elsewhere) stated precisely

• FACT: Nyāya (school of logic and valid knowledge) explains illusion through anyathākhyāti (misapprehension of a real item as elsewhere). • FACT: In the classic shell-silver case, both the presented "this" and silver are real; the error lies in taking silver, which exists elsewhere, as here. • ANALYSIS: Error is therefore misplacement or wrong synthesis, not apprehension of a non-entity.

4.2 Mechanism

1. FACT: A present perceptual base exists — e.g. shell. 2. FACT: A past impression of silver is activated. 3. FACT: Through jñānalakṣaṇa-pratyakṣa (cognition-mediated extraordinary perception), the silver becomes present to consciousness in a derivative extraordinary perceptual way. 4. FACT: Due to non-discrimination, the mind synthesizes the present locus and remembered object wrongly. 5. FACT: The erroneous cognition "this is silver" results.

4.3 Presupposition

• ANALYSIS: Nyāya (school of logic and valid knowledge) preserves realism even in illusion: cognition goes wrong, but the world is not ontologically downgraded into dream-stuff.

4.4 Distinction from rival khyātivādas

Theory School Error explained as anyathākhyāti (misapprehension of a real item as elsewhere) Nyāya (school of logic and valid knowledge) real object known elsewhere, mislocated here ātmakhyāti (theory that mental content appears externally) Yogācāra (ZZGLOSS7ZZ mind-only school) internal cognition projected outward asatkhyāti (theory that the illusory object is unreal) Mādhyamika (Middle Way Buddhist school) reading in standard doxography apprehension of the non-existent akhyāti (non-discrimination theory of error) Prābhākara (Prabhākara branch of Mīmāṃsā) Mīmāṃsā (Vedic exegesis school) failure to discriminate two valid cognitions anirvacanīya-khyāti (theory of indeterminable appearance) Advaita Vedānta (non-dual Vedānta) error-object neither real nor unreal

4.5 Jñānalakṣaṇa-pratyakṣa (cognition-mediated extraordinary perception) and anyathākhyāti (misapprehension of a real item as elsewhere) (2019)

• FACT: Nyāya (school of logic and valid knowledge) uses jñānalakṣaṇa-pratyakṣa (cognition-mediated extraordinary perception) to explain how the silver can be experientially present without being physically present in that location. • ANALYSIS: It bridges memory and presentative awareness while preserving realism.

4.6 Naiyāyika (Nyāya philosopher) response to anirvacanīya-khyāti (theory of indeterminable appearance) (2021)

• FACT: Nyāya (school of logic and valid knowledge) objects that the Advaitin's "neither real nor unreal" status is obscure and violates classical logical alternatives. • FACT: For Nyāya, the error-object must be explainable using real entities and cognitive misrelation; no third ontological status is needed.

5.1 Statement

• FACT: The self (ātman (enduring self)) is a real enduring substance distinct from body, senses and mind. • FACT: Consciousness is not its essence but an adventitious quality arising under proper conditions.

5.2 Six Nyāya (school of logic and valid knowledge) arguments for the self (2024)

OBJECTION: Secondary sources sometimes present the grouping slightly differently. The following six-track presentation is the standard exam-ready arrangement. 1. FACT: From desire (icchā (desire)) and aversion (dveṣa (aversion)) • these states require a subject to whom they belong. 2. FACT: From effort (prayatna (effort)) • purposive striving implies an agent. 3. FACT: From pleasure (sukha (pleasure)) and pain (duḥkha (pain)) • experiences require an experiencer. 4. FACT: From cognition (buddhi (determinative intellect) / jñāna) • cognition is a quality and must inhere in a substance; that substance is self. 5. FACT: From recognition and memory • "I who saw before now remember" implies an enduring substrate connecting experiences. 6. FACT: From the body-mind-sense complex as instrument • an organized instrumentality suggests a user/owner distinct from the instrument.

5.3 Manas (coordinating mind) (mind)

• FACT: Manas (coordinating mind) is an atomic internal organ. • FACT: It mediates between ātman (enduring self) and the external senses. • FACT: Because mind is atomic, the self attends to one sense-cognition at a time.

5.4 Distinction from Advaita (non-dual Vedānta)

• FACT: Nyāya (school of logic and valid knowledge): consciousness is a quality of self. • FACT: Advaita (non-dual Vedānta): consciousness is the very nature of the self. • ANALYSIS: This is one of the most examinable contrasts in Indian philosophy.

5.5 Objection

• OBJECTION: If self without cognition can still exist, does it become an empty abstraction?

5.6 Reply

• FACT: Nyāya (school of logic and valid knowledge) accepts that the self can exist without manifest cognition, as in deep sleep or liberation, because cognition depends on conjunction with mind, senses and objects.

6.1 Statement

• FACT: Apavarga (final cessation of suffering) is absolute cessation of pain: duḥkha-atyanta-nivṛtti (complete cessation of suffering). • FACT: It is not primarily a positive bliss-state in Nyāya (school of logic and valid knowledge)'s standard formulation.

6.2 Ladder to liberation

- FACT: The classic Nyāya (school of logic and valid knowledge) chain runs: • tattva (fundamental principle)-jñāna -> removal of mithyā-jñāna (false knowledge) -> cessation of doṣa (defect or afflictive disposition) (rāga (attachment), dveṣa (aversion), moha) -> cessation of pravṛtti (action-producing activity) -> cessation of janma -> cessation of duḥkha (pain) -> apavarga (final cessation of suffering)
- ANALYSIS: Knowledge matters not because it reveals identity with Brahman, but because it removes error that sustains bondage-producing activity.

6.3 Nature of the liberated self

- FACT: In mokṣa (liberation) the self remains as a pure substance without pleasure, pain, desire, aversion or even ordinary cognition. • FACT: Consciousness ceases because the required conjunction of self, mind, senses and objects ceases.

6.4 The stone-like liberation objection

- FACT: Critics object that such liberation is "stone-like": why seek a state devoid of consciousness or bliss?

6.5 Nyāya (school of logic and valid knowledge) reply

- FACT: The aim is freedom from suffering, not acquisition of bliss. • ANALYSIS: Bliss may itself be relational and capable of engendering attachment; apavarga (final cessation of suffering) is secure because it is sheer release from all suffering-conditions.

Exam route

• 2019 Q6(b): explain why jñanalaksana is necessary to anyathakhyati. • For comparison, distinguish Nyaya (school of logic and valid knowledge)'s mislocation from Prabhakara non-discrimination and Advaita (non-dual Vedānta)'s indefinable appearance. • 2024 Q5(b): present six arguments for self as convergent evidence, not a loose list. • In liberation answers, show the causal ladder from true knowledge to the end of birth and suffering. • Always state that consciousness is an adventitious quality, not the essence of Nyaya self.

Rapid recall

• Anyathakhyati: real object known elsewhere is mislocated here. • Jñanalaksana bridges memory and presentative awareness. • Atman is an enduring substance; manas (coordinating mind) is an atomic internal organ. • Consciousness ceases when its producing conjunctions cease. • Trap: apavarga (final cessation of suffering) is not union with Brahman or positive eternal pleasure. Progress: 5 / 9 Philosophy Layered Session Subtopic: Isvara and Udayana's Cumulative Natural Theology

Plain-language visual - what God explains in Nyaya (school of logic and valid knowledge)

ETERNAL ATOMS + ETERNAL SOULS + KARMA (motion or action) require intelligent ordering v ISVARA efficient cause, arranger, governor and apta Material cause = atoms, not God In simple words: Nyaya (school of logic and valid knowledge) does not say God creates matter from nothing. Atoms and souls are eternal. God intelligently arranges atoms, sustains order, allocates karmic results and grounds authoritative revelation. Proof Easy movement Karyat World-effect -> intelligent maker Ayojanat First atomic combination -> arranger Dhṛtyadeh Sustained order -> governor Sruteh Authoritative Veda -> omniscient source Memory line: God coordinates an eternal realist plurality; he does not replace it.

7.1 Statement

• FACT: Nyāya-Vaiśeṣika (combined logic-and-category realist system) affirms Īśvara (omniscient Lord) as an eternal, omniscient, omnipotent being. • FACT: God is the nimitta-kāraṇa (efficient cause) (efficient cause), not the material cause of the world. • FACT: The material cause remains atoms.

7.2 Nature of God

- **FACT:** God is often characterized as a special self never bound by karma (motion or action).
- **FACT:** He orders atoms at creation, dispenses karmic fruits, and in later Nyāya (school of logic and valid knowledge) authors the Veda.

7.3 Distinction

- **ANALYSIS:** Nyāya (school of logic and valid knowledge) God is not Advaita (non-dual Vedānta)'s non-dual Brahman and not Sāṃkhya (enumerative dualist school)'s rejected superfluity. He is a real personal-intelligent governor within a pluralist realist metaphysics.

8.1 Udayana's project

- **FACT:** Udayana, especially in Nyāyakusumāñjali (Bouquet of Nyāya arguments for God), develops systematic arguments for God.
- **OBJECTION:** The exact naming and count vary somewhat across secondary presentations. UPSC usually expects the major four and may reward mention of the extended list.

(a) Kāryāt (from the world as an effect) — from effect

- **FACT:** The world is an effect because it is composite and made of parts.
- **FACT:** Effects require an intelligent efficient cause.
- **FACT:** Therefore the world requires God.
- **ANALYSIS:** This is Nyāya (school of logic and valid knowledge)'s strongest cosmological-teleological bridge.

(b) Āyojanāt (from the arrangement of atoms) — from combination/arrangement

• FACT: At the beginning of creation, atoms must first combine. • FACT: Unintelligent atoms cannot purposively initiate ordered combination. • FACT: Therefore an intelligent arranger is required: God.

(c) Dhṛtyādeḥ (from support and sustenance) — from support/sustenance

• FACT: The order, maintenance and dissolution of the cosmos suggest sustaining intelligence. • ANALYSIS: This moves from bare origination to continuing governance.

(d) Śruteḥ (from revealed scripture) — from scripture

• FACT: The Veda is authoritative knowledge. • FACT: Such authoritative revelation implies an omniscient source. • FACT: Therefore God.

8.3 Additional arguments often cited

5. FACT: Padāt (from word-meaning convention) — from words / linguistic convention 6. FACT: Pratyayataḥ (from authoritative cognition) — from cognition/authoritative knowledge structure 7. FACT: Vākyāt (from sentences) — from meaningful sentences, especially Vedic sentences 8. FACT: Saṅkhyāviśeṣāt (from numerical difference) — from determinate numerical modes of atomic combination

8.4 Presuppositions

• ANALYSIS: These proofs presuppose that order, meaningfulness and purposiveness require intelligence rather than being emergent or brute.

Objection 1: Sāṃkhya (enumerative dualist school)

• FACT: Prakṛti (primordial material nature) can explain the world; God is unnecessary. • FACT: Nyāya (school of logic and valid knowledge) reply: unconscious prakṛti (primordial material nature) or atoms cannot account for purposive order and karmic allocation unaided.

Objection 2: Mīmāṃsā (Vedic exegesis school)

• FACT: The Veda is authorless; scriptural authority does not imply God. • FACT: Nyāya (school of logic and valid knowledge) reply: intelligible authoritative sentences point better to omniscient authorship.

Objection 3: Problem of evil

• FACT: If God is omnipotent and benevolent, why suffering? • FACT: Nyāya (school of logic and valid knowledge) reply: karmic order distributes fruits; God is dispenser, not arbitrary tyrant.

8.6 Udayana's cumulative structure: not one isolated proof

• **FACT: Statement.** Udayana's Nyāyakusumāñjali (Bouquet of Nyāya arguments for God) is best read as a reply to successive objections, not as one solitary proof mechanically added to Nyāya (school of logic and valid knowledge) metaphysics. • **FACT: Structure.** The work removes obstacles to theism step by step: that there is no unseen cause, that an unseen cause needs no intelligent controller, that Vedic authority can stand without an author, and that karma (motion or action) or atoms can function without governance. • **ANALYSIS: 20-mark payoff.** A strong answer presents Udayana's proofs as a converging or cumulative-case argument: each strand alone can be challenged, but together they are said to converge on one explanatory hypothesis.

The explanatory hypothesis

• **FACT: Thesis.** Īśvara (omniscient Lord) is an omniscient, eternal, bodiless agent who is the efficient (nimitta (efficient cause)) but not material cause of the world. • **FACT: Cosmic role.** Īśvara (omniscient Lord) conjoins atoms at the beginning of a creative cycle through volition operating with the adrṣṭa (unseen karmic potency) of souls. • **FACT: Moral role.** Īśvara dispenses karmic fruits because unconscious adrṣṭa cannot intelligently allot results by itself. • **FACT: Scriptural role.** Īśvara is the āpta (competent reliable speaker) (trustworthy authority) author or source of the Veda in later Nyāya (school of logic and valid knowledge) theism.

Inferential forms of the main proofs

Proof Pakṣa (subject of inference) Hetu (reason or middle term) Sādhya (property to be proved) Drṣṭānta (illustrative example) **FACT:** kāryāt (from the world as an effect) (from effect) **FACT:** The world **FACT:** It is an effect, composite and ordered. **FACT:** It has an intelligent maker. **FACT:** Pot and potter. **FACT:** āyojanāt (from the arrangement of atoms) (from combination) **FACT:** Primordial atomic conjunction **FACT:** Unconscious atoms and unconscious adrṣṭa (unseen karmic potency) cannot initiate ordered first motion. **FACT:** It requires an intelligent impeller. **FACT:** Ordered arrangement produced by an agent. **FACT:** dhṛtyādeḥ (from support and sustenance) (from support/sustenance and destruction) **FACT:** The ordered cosmos **FACT:** It is sustained, regulated and dissolved. **FACT:** It requires governing intelligence. **FACT:** A maintained artefact or polity requires a regulator. **FACT:** padāt (from word-meaning convention) / śruteḥ (from revealed scripture) / vākyāt (from sentences) (from words, Veda and sentences) **FACT:** Vedic and meaningful sentences **FACT:** Sentences require competent authorship, and Vedic scope exceeds ordinary knowledge. **FACT:** The Veda has an omniscient source. **FACT:** Ordinary meaningful instruction from a competent speaker. **ANALYSIS:** adrṣṭa/karma (motion or action)-administration argument **FACT:** Karmic distribution **FACT:** Unconscious adrṣṭa cannot allot fruits with moral precision. **FACT:** An intelligent administrator is required. **FACT:** A just allocation system requires a conscious allocator. • **OBJECTION:** Count caution. The proofs are commonly enumerated in different lists; where the exact traditional label is uncertain, write "commonly enumerated as" rather than inventing a fixed count.

Objections and replies

Opponent Objection Nyāya (school of logic and valid knowledge) reply Residual force **FACT:** Mīmāṃsā (Vedic exegesis school) / Kumāṛila **FACT:** The Veda is authorless, and apūrva (unseen ritual potency) can link ritual action to fruit without God. **FACT:** Meaningful authoritative sentences and moral dispensation are better explained by an omniscient āpta (competent reliable speaker); unconscious apūrva cannot administer fruits. **ANALYSIS:** If Vedic authorlessness is accepted, the śruteḥ (from revealed scripture) proof loses force. **FACT:** Sāṃkhya (enumerative dualist school) **FACT:** Prakṛti (primordial material nature)'s own teleology explains the world, and a perfect God has no motive to create. **FACT:** Unconscious prakṛti (primordial material nature) cannot purposively allocate karma (motion or action) or initiate ordered atomic motion; God's action follows souls' adrṣṭa (unseen karmic potency), not desire-based lack. **ANALYSIS:** The motive problem remains if divine action is modelled too anthropomorphically. **FACT:** Buddhist (Buddhist philosophical tradition) / Dharmakīrti and Śāntarakṣita-style (in the manner of Buddhist thinker Śāntarakṣita) critique **FACT:** The world is not observed as an effect in the relevant sense, and the pot–potter analogy fails (vaiśamya (inequality or partiality)) because a potter has a body, hands and external material. **FACT:** Nyāya treats composite, ordered, dependent wholes as inferable effects and allows a bodiless omniscient agent because embodiment is not essential to agency. **ANALYSIS:** The analogy is strained because worldly makers are always embodied.

Objections and replies (cont. 2)

FACT: Cārvāka (materialist school) FACT: God is never perceived, and inference itself is unreliable. FACT: Nyāya (school of logic and valid knowledge) first defends vyāpti (invariable concomitance) and inference; once anumāna (inference) is secured, imperceptibility alone does not disprove a cause. ANALYSIS: The proof works only for someone who grants Nyāya pramāṇa (means of valid knowledge) theory. FACT: Advaita (non-dual Vedānta) FACT: Īśvara (omniscient Lord) is real only at the vyāvahārika (empirical level) level, not ultimately non-dual reality. FACT: Nyāya rejects the two-level downgrade and insists on plural realist ontology. ANALYSIS: The disagreement is rooted in incompatible metaphysical starting-points. FACT: Problem of evil FACT: If God is good and omnipotent, why is there suffering? FACT: God dispenses fruits according to beginningless karma (motion or action); evil is traceable to souls' karma, not divine arbitrariness. ANALYSIS: This saves goodness at the cost of independence, because God appears constrained by karma he did not create.

Exam route

• 2018 Q6(a): distinguish Nyaya (school of logic and valid knowledge) creator inference from Yoga (discipline-and-meditation school)'s special purusa and meditative function. • 2019 Q7(a): present karyat, ayojanat, dhṛtyadeh and sruteh separately, then show cumulative convergence. • State paksa, hetu (reason or middle term), sadhya and example where space permits. • Add one named rival, Nyaya's reply and the residual force. • Never say Nyaya God is the material cause or creates atoms and souls ex nihilo.

Rapid recall

• Isvara: omniscient efficient cause and moral governor. • Atoms remain material causes. • Udayana: effect, arrangement, sustenance and scripture. • Strong reading: converging explanatory arguments. • Trap: karma (motion or action) mitigates evil but limits divine independence. Progress: 6 / 9
Philosophy Layered Session Subtopic: Causation and Atomistic Creation: Novel Effects from Eternal Atoms

Plain-language visual - a new whole begins

THREADS + CONJUNCTION + WEAVER material non-inherent efficient cause causal factor cause v
NEW CLOTH The cloth did not already exist as cloth in the threads. In simple words:
Nyaya-Vaisesika (combined logic-and-category realist system) says an effect is genuinely produced rather than merely uncovered. Eternal atoms combine into new wholes under appropriate conditions and intelligent direction. Term Easy meaning Asatkaryavada Effect does not pre-exist as effect
Arambhavada Production is a new beginning Pragabhava Effect's prior absence Paramanu Eternal, partless atom Memory line: causes exist before production; the effect as a whole does not.

Statement

- FACT: Nyāya-Vaiśeṣika (combined logic-and-category realist system) defends asatkāryavāda (theory that the effect does not pre-exist in its cause), also called ārambhavāda (theory of a genuinely new beginning).
- FACT: The effect does not pre-exist in its cause; it is a genuinely new beginning.

Argument

1. FACT: Before production, the effect is absent.
2. FACT: If it already existed fully in the cause, production would be meaningless.
3. FACT: Production therefore brings forth a new entity.
4. FACT: Cloth is not simply threads under another description; it is a new whole produced from them.

Presupposition

- ANALYSIS: The argument assumes that causal production should explain novelty, not merely manifestation.

Distinction

- FACT: Contrast Sāṃkhya (enumerative dualist school)'s satkāryavāda (theory that the effect pre-exists potentially in its cause), where the effect pre-exists in the cause in latent form.

9.2 Three kinds of cause

1. FACT: Samavāyi-kāraṇa (inherent or material cause) — inherent/material cause • e.g. threads for cloth. 2. FACT: Asamavāyi-kāraṇa (non-inherent cause) — non-inherent cause • e.g. qualities or conjunctions in the material cause that help produce the effect. 3. FACT: Nimitta-kāraṇa (efficient cause) — efficient cause • e.g. the weaver.

9.3 Seed and tree (2021)

• FACT: Asked whether the seed contains the tree, Nyāya (school of logic and valid knowledge) says no in the satkāryavāda (theory that the effect pre-exists potentially in its cause) sense. • FACT: The tree is a new effect produced from the seed under appropriate conditions. • ANALYSIS: So the seed is causal ground, not a concealed miniature tree in metaphysical latency.

9.4 Prāgabhāva (prior non-existence) against Sāṃkhya (enumerative dualist school) (2023)

• FACT: Before the effect arises, it has prāgabhāva (prior non-existence) — prior non-existence. • FACT: This prior absence shows the effect is genuinely absent before production. • ANALYSIS: Therefore prāgabhāva becomes a sharp weapon against satkāryavāda (theory that the effect pre-exists potentially in its cause).

10.1 Paramāṇu (eternal partless atom)

• FACT: The basic physical unit is the paramāṇu (eternal partless atom) — atom. • FACT: It is eternal, partless, indivisible, imperceptible, and often described as minute/spherical (parimāṇḍalya (spherical atomic minuteness)).

Argument

1. FACT: If every part had further parts without end, no ultimate physical unit would remain. 2. FACT: Infinite regress would undermine stable explanation of finite compounds. 3. FACT: Therefore atoms must be indivisible. • ANALYSIS: Traditional absurdity arguments compare tiny and huge objects: if division had no ultimate stop, a mustard seed and a mountain would become equally analyzable without foundation.

10.3 Combination sequence

• FACT: Atoms combine into dvyaṇuka (dyad of two atoms) (dyads). • FACT: Dyads combine into larger units such as tryaṇuka (triad-based larger aggregate) / trasareṇu (visible dust-mote aggregate), marking the threshold toward perceptibility in standard textbook exposition. • FACT: Gross objects arise from increasingly complex combinations.

10.4 Initiation of motion

• FACT: At dissolution, atoms remain but compounds break apart. • FACT: At creation, first motion must begin again. • FACT: Nyāya-Vaiśeṣika (combined logic-and-category realist system) often invokes adṛṣṭa (unseen karmic potency) (unseen moral force) and the will of God as the initiator of this first motion.

10.5 Cycles of creation and dissolution

• FACT: Creation (sṛṣṭi (cosmic creation)) and dissolution (pralaya) occur cyclically. • FACT: God wills; atoms combine; the world appears. • FACT: God wills or cosmic conditions reverse; compounds disintegrate; dissolution occurs. • FACT: Atoms persist through pralaya.

Exam route

• 2020 Q6(c): distinguish causally relevant *ananyathasiddha* conditions from accidental *ananyathasiddha* antecedents. • 2021 Q5(a): say the tree is not metaphysically contained in the seed; it is newly produced under conditions. • 2023 Q8(b): use *pragabhava* as the direct argument against *satkāryavāda*, then assess continuity. • 2025 Q5(e): integrate effect-novelty, three cause-types, relevance and atomism. • In comparisons, do not equate *asatkāryavāda* with production from absolute nothing.

Rapid recall

• Effect is new, not pre-existent. • Three causes: *samavayi*, *asamavayi* and *nimitta* (efficient cause). • Cause must be *ananyathasiddha*, not merely earlier. • Atoms are eternal, partless, imperceptible and element-specific. • Trap: God begins combination; he is not the atomic material. Progress: 7 / 9
Philosophy Layered Session Subtopic: Debates, Criticisms and High-Risk UPSC Distinctions

Plain-language visual - where rivals apply pressure

CARVAKA -> inference cannot secure universal relations BUDDHISM -> no need for universals, enduring self or whole SAMKHYA (enumerative dualist school) -> effect pre-exists; God is unnecessary MIMAMSA -> validity is intrinsic; Veda is authorless ADVAITA (non-dual Vedānta) -> Nyaya (school of logic and valid knowledge) relations and liberation are inadequate NYAYA -> determinate knowledge requires determinate realities In simple words: Nyaya-Vaisesika (combined logic-and-category realist system) defends common-sense realism against scepticism, nominalism, idealism and rival causal theories. A high-scoring answer names the exact disputed joint rather than saying only that schools disagree. Memory line: every Nyaya reply asks what stable reality must exist for knowledge, language and responsibility to work.

11. INTER-THINKER / INTER-SCHOOL DEBATES

Axis Nyāya-Vaiśeṣika (combined logic-and-category realist system) Rival contrast Universals real *sāmānya* (real universal) Buddhist (Buddhist philosophical tradition) *apoha* (exclusion of what is other) / nominalist tendency Error *anyathākhyāti* (misapprehension of a real item as elsewhere) Advaita (non-dual Vedānta) *anirvacanīya-khyāti* (theory of indeterminable appearance); *Prābhākara* (*Prabhākara* branch of *Mīmāṃsā*) *akhyāti* (non-discrimination theory of error) Validity *parataḥ* (extrinsically) for truth and falsity *Mīmāṃsā* (Vedic exegesis school) *svataḥ* (intrinsically) for validity Self enduring substance; consciousness quality Buddhism no-self; Advaita self as consciousness Liberation cessation of pain, not bliss Vedānta (ZZGLOSS2ZZ concluding Vedic philosophy) blissful *mokṣa* (liberation) Causation *asatkāryavāda* (theory that the effect does not pre-exist in its cause) *Sāṃkhya* (enumerative dualist school) *satkāryavāda* (theory that the effect pre-exists potentially in its cause) God efficient creator and governor Buddhism/*Mīmāṃsā*/*Sāṃkhya* critiques

11.1 Words signify universals or particulars? (2023)

• FACT: Nyāya (school of logic and valid knowledge) generally leans toward words signifying objects through universals and qualificative structures, not bare particulars alone. • FACT: Mīmāṃsā (Vedic exegesis school) develops a different semantic sensitivity, often giving stronger independent weight to word-meaning relations in sentence-use. • ANALYSIS: In UPSC, answer by showing Nyāya's realist semantics: universals are objective and hence linguistically significant.

11.2 Naiyāyika (Nyāya philosopher) response to Cārvāka (materialist school) objections against anumāna (inference) (2022)

• FACT: Cārvāka (materialist school) attacks inference by doubting universal relation. • FACT: Nyāya (school of logic and valid knowledge) replies that ordinary and scientific life depend on reliable inferential regularities established through observation, elimination of upādhi (hidden limiting condition), and tarka (hypothetical reductive reasoning). • ANALYSIS: The Nyāya point is not infallibilism but disciplined justificatory practice.

12.1 Against universals

• FACT: Buddhist (Buddhist philosophical tradition) objection: universals are unnecessary; exclusion explains classification. • FACT: Nyāya–Vaiśeṣika (combined logic-and-category realist system) reply: exclusion presupposes stable classes; real commonness is required.

12.2 Against samavāya (inherence)

• FACT: Objection: inherence multiplies entities unnecessarily. • FACT: Reply: without a distinct inseparable relation, whole-part and quality-substance relations remain unexplained.

12.3 Against stone-like mokṣa (liberation)

- FACT: Objection: desire for unconscious liberation is incoherent.
- FACT: Reply: complete removal of pain is a sufficient rational goal.

12.4 Against God proofs

- FACT: Objection: order can be explained without God.
- FACT: Reply: Nyāya (school of logic and valid knowledge) insists purposive order, moral dispensation and linguistic normativity are not adequately explained by blind atoms alone.

13. COMMON UPSC TRAPS

- ANALYSIS: Trap 1: saying Nyāya (school of logic and valid knowledge) is parataḥ-prāmāṇya (extrinsic validity of cognition) only for invalidity. It is parataḥ (extrinsically) for both validity and invalidity.
- ANALYSIS: Trap 2: saying asatkāryavāda (theory that the effect does not pre-exist in its cause) denies causation. It denies pre-existent effect, not causal production.
- ANALYSIS: Trap 3: confusing anyathākhyāti (misapprehension of a real item as elsewhere) with anirvacanīya-khyāti (theory of indeterminable appearance).
- ANALYSIS: Trap 4: forgetting that Kaṇāda's earlier list is six categories; abhāva (absence or non-existence) is added later as the seventh.
- ANALYSIS: Trap 5: writing that consciousness is the essence of self in Nyāya. It is an adventitious quality.
- ANALYSIS: Trap 6: treating apavarga (final cessation of suffering) as bliss. Standard Nyāya emphasizes cessation of pain.
- ANALYSIS: Trap 7: listing only seven dravyas. There are nine.
- ANALYSIS: Trap 8: saying "air does not have heat" and "air is not fire" are the same abhāva. They are different.
- ANALYSIS: Trap 9: saying universals are not perceived. Nyāya allows their perception through sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception).

14. KEYWORD & STATEMENT BANK

- FACT: Padārtha (category or knowable referent): knowable/nameable category.
- FACT: Dravya (substance): substance, locus of guṇa (quality) and karma (motion or action).
- FACT: Sāmānya (real universal): real universal, one in many.
- FACT: Viśeṣa (ultimate particularity): ultimate differentiator.
- FACT: Samavāya (inherence): inseparable inherence relation.
- FACT: Abhāva (absence or non-existence): non-existence/absence.
- FACT: Pratyakṣa (perception): perceptual cognition from sense-object contact.
- FACT: Anumāna (inference): inferential knowledge based on vyāpti (invariable concomitance).
- FACT: Āptavākya (statement of a reliable speaker): trustworthy testimony.
- FACT: Anyathākhyāti (misapprehension of a real item as elsewhere): error as misplacement of a real object.
- FACT: Parataḥ-prāmāṇya (extrinsic validity of cognition): extrinsic ascertainment of validity.
- FACT: Asatkāryavāda (theory that the effect does not pre-exist in its cause) / ārambhavāda (theory of a genuinely new beginning): effect is a new beginning.
- FACT: Apavarga (final cessation of suffering): absolute cessation of suffering.
- FACT: Paramāṇu (eternal partless atom): eternal atom.

Quick examinable statements

• ANALYSIS: "Nyāya (school of logic and valid knowledge) realism extends even to error: illusion is not contact with nothing, but misrelation among reals." • ANALYSIS: "Vaiśeṣika (school of categories and atomism) multiplies categories only where explanatory need demands them." • ANALYSIS: "Nyāya self is enduring, but consciousness in it is episodic and conditioned." • ANALYSIS: "Asatkāryavāda (theory that the effect does not pre-exist in its cause) protects novelty in production." <!-- restored-2018-2020-doctrine:start -->

Brown table and book on table: samavāya (inherence) versus saṃyoga (conjunction)

• FACT: Brown colour inheres in the table through samavāya (inherence), an inseparable relation of quality and substance; the book stands on the table through saṃyoga (conjunction), a contingent conjunction whose relata can exist separately. • □ Spatial closeness is not the criterion of inherence; ontological inseparability and the relata's category relation are decisive.

Anyathāsiddha (accidental or causally irrelevant antecedent) and ananyathāsiddha (causally indispensable antecedent)

• FACT: A causal condition is ananyathāsiddha (causally indispensable antecedent) when its relevance to the effect is not established otherwise; an anyathāsiddha (accidental or causally irrelevant antecedent) condition is accidental, remote or already explained through another causal factor and is excluded from the definition of cause. • ANALYSIS: The distinction prevents over-inclusion in asatkāryavāda (theory that the effect does not pre-exist in its cause): not everything preceding or accompanying an effect is its cause.

Viśeṣa (ultimate particularity) and comparative theism

• FACT: Viśeṣa (ultimate particularity) individuates eternal atoms and selves of the same class; without it numerical plurality would collapse. Critics object to a regress of differentiators; Vaiśeṣika (school of categories and atomism) treats viśeṣa as self-differentiating. • FACT: Nyāya (school of logic and valid knowledge) infers an intelligent maker/orderer from effects, atomic conjunction and governance. Classical Yoga (discipline-and-meditation school)'s Īśvara (omniscient Lord) is a special puruṣa (pure conscious witness) and an object/support of practice; it is not established by exactly the same creator inference. <!-- restored-2018-2020-doctrine:end --> <!-- expanded-pyq-depth:start -->

CORPUS-DRIVEN DEPTH DELTA (complete 2018–2025 audit)

• ANALYSIS: Priority: Primary ownership rises to 22 of 112 parts, the largest Indian owner. • FACT: Required doctrinal depth: The restored papers add samavāya (inherence) versus samyoga (conjunction) through table examples, Buddhist (Buddhist philosophical tradition)/Nyāya (school of logic and valid knowledge) absence-cognition, Nyāya versus Yoga (discipline-and-meditation school) proofs of God, anyathāsiddha (accidental or causally irrelevant antecedent)/ananyathāsiddha (causally indispensable antecedent) and the logical/metaphysical role of viśeṣa (ultimate particularity). • □ Trap / answer consequence: Do not treat every relation as inherence, every absence as a separate pramāṇa (means of valid knowledge) in Nyāya, or Yoga's Īśvara (omniscient Lord) as established by the full Nyāya creator inference. <!-- expanded-pyq-depth:end -->

Exam route

Use a four-column structure: opponent -> exact objection -> Nyaya (school of logic and valid knowledge) reply -> residual force. Before concluding, run the retained trap checklist: 1. Have I distinguished samavaya from samyoga? 2. Have I stated whether the issue concerns a universal, particular or absence? 3. Have I separated validity from its later ascertainment? 4. Have I avoided making consciousness the self's essence? 5. Have I identified God as efficient rather than material cause?

Rapid recall

• Carvaka pressure: vyapti. • Buddhist (Buddhist philosophical tradition) pressure: universals, whole and enduring self. • Samkhya (enumerative dualist school) pressure: satkaryavada and non-theistic order. • Mimamsa pressure: intrinsic validity and authorless Veda. • Trap: rigorous realism is the system's achievement and its ontological cost. Progress: 8 / 9 Philosophy Layered Session Subtopic: Advanced Ledgers, Comparative Positioning and the Graded Verdict

Plain-language visual - how to evaluate the system

DOCTRINE hidden presupposition named objection Nyaya (school of logic and valid knowledge) reply what pressure still remains? GRADED VERDICT In simple words: critical philosophy is not a list of complaints. Identify what a doctrine assumes, show what fails if that assumption is denied, give the best reply and then judge what remains unsettled. Strongest area Main pressure Logic and inference Universal cognition is contested Realist ontology Too many primitive entities Natural theology Analogy and problem of evil Liberation Stone-like final state

Plain-language visual - how to evaluate the system (cont. 2)

Memory line: explain, challenge, reply, retain the residual force.

14A. PRESUPPOSITION LEDGER

Doctrine Presupposition What collapses if denied FACT: Padārtha (category or knowable referent) scheme ANALYSIS: Reality is classifiable into stable knowable/nameable kinds. ANALYSIS: Vaiśeṣika (school of categories and atomism) ontology loses its map of dravya (substance), guṇa (quality), karma (motion or action), sāmānya (real universal), viśeṣa (ultimate particularity), samavāya (inherence) and abhāva (absence or non-existence). FACT: Pramāṇa (means of valid knowledge) realism / parataḥ-prāmānya (extrinsic validity of cognition) ANALYSIS: Cognitions are about real objects, and validity is ascertained through external confirmation or causal conditions. ANALYSIS: Nyāya (school of logic and valid knowledge) cannot distinguish valid cognition from mere appearance in its realist way. FACT: Vyāpti (invariable concomitance) and induction ANALYSIS: Universal concomitance can be warranted through observation, upādhi (hidden limiting condition)-elimination, tarka (hypothetical reductive reasoning) and universal-mediated perception. ANALYSIS: Anumāna (inference) falls to Cārvāka (materialist school) scepticism and ordinary proof collapses. FACT: Sāmānya as real ANALYSIS: Common predication is grounded in real universals. ANALYSIS: Classification, word-meaning, sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception) and vyāpti-grahaṇa (apprehension of invariable concomitance) lose their ontological base. FACT: Samavāya ANALYSIS: Inseparable relations need a sui generis relation distinct from conjunction. ANALYSIS: Whole–part, quality–substance and universal–particular relations become unexplained. FACT: Viśeṣa ANALYSIS: Exactly similar eternal substances need ultimate individuators. ANALYSIS: Atoms and selves of the same class risk collapsing into one.

14A. PRESUPPOSITION LEDGER (cont. 2)

FACT: Asatkāryavāda (theory that the effect does not pre-exist in its cause) / ārambhavāda (theory of a genuinely new beginning) ANALYSIS: Production can generate a genuinely new effect. ANALYSIS: Nyāya (school of logic and valid knowledge) cannot oppose Sāṃkhya (enumerative dualist school) satkāryavāda (theory that the effect pre-exists potentially in its cause) or use prāgabhāva (prior non-existence) as a causal weapon. FACT: Paramāṇuvāda (atomism) ANALYSIS: Gross physical objects require eternal, partless, imperceptible atoms as ultimate material causes. ANALYSIS: Atomistic creation and dissolution lose their metaphysical foundation. FACT: Self as substance with adventitious consciousness ANALYSIS: Cognition is a quality requiring an enduring ātman (enduring self)-locus and manas (coordinating mind)-mediated conditions. ANALYSIS: Memory, recognition, moral agency and liberation of the same subject become hard to explain. FACT: Apavarga (final cessation of suffering) ANALYSIS: The highest goal is total cessation of suffering, not necessarily positive bliss. ANALYSIS: Nyāya soteriology is absorbed into Vedāntic (relating to Vedānta) or Buddhist (Buddhist philosophical tradition) models and loses its distinctiveness. FACT: Īśvara (omniscient Lord) ANALYSIS: Cosmic order, atomic initiation, karmic dispensation and Vedic authority require omniscient efficient governance. ANALYSIS: Later Nyāya natural theology and moral cosmology lose their converging centre.

14B. PŪRVAPAKṢA–SIDDHĀNTA (objector's case and established reply) LEDGER

Objector Objection Nyāya-Vaiśeṣika (combined logic-and-category realist system) reply Residual force ANALYSIS: FACT: Cārvāka (materialist school) on vyāpti (invariable concomitance) FACT: No finite observation proves a universal, and hidden upādhis (hidden limiting conditions) may always remain. FACT: Bhūyodarśana (repeated observation), vyabhicāra-adarśana (non-observation of a counter-instance), upādhi-nirāsa (elimination of a hidden limiting condition), tarka (hypothetical reductive reasoning) and sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception) together warrant inference. ANALYSIS: The reply depends on accepting real universals and extraordinary perception. FACT: Buddhist (Buddhist philosophical tradition) Dignāga/Dharmakīrti on universals and apoha (exclusion of what is other) FACT: Universals are unperceived, causally inert and reducible to exclusion of the other. FACT: Universals are perceived in savikalpaka (determinate cognition, inhere by samavāya (inherence), and apoha presupposes stable exclusion-classes. ANALYSIS: Buddhist nominalism remains powerful against reified jāti (class-universal). FACT: Buddhist momentariness and no-self FACT: Only momentary cognitions exist; no enduring substance-self is needed. FACT: Memory, recognition, agency and moral responsibility require an enduring ātman (enduring self) distinct from the cognition-series. ANALYSIS: Nyāya (school of logic and valid knowledge) must explain why a permanent self has episodic consciousness. FACT: Buddhist critique of avayavin (whole) FACT: The whole over and above parts is either identical with parts or different and unintelligible.

14B. PŪRVAPAKṢA–SIDDHĀNTA (objector's case and established reply) LEDGER (continued 2)

FACT: Nyāya (school of logic and valid knowledge) infers a real whole because practical cognition and new properties of wholes cannot be reduced to loose aggregates. ANALYSIS: The whole–part relation leans heavily on samavāya (inherence).

14B. PŪRVAPAKṢA–SIDDHĀNTA (objector's case and established reply) LEDGER (cont. 2)

FACT: Advaita (non-dual Vedānta) / Śrīharṣa FACT: Nyāya (school of logic and valid knowledge) definitions invite counterexamples and regress; samavāya (inherence) and viśeṣa (ultimate particularity) are vulnerable stipulations. FACT: Nyāya accepts primitive termini where explanation must stop and defends definitions through refined Navya-Nyāya (New Logic school) analysis. ANALYSIS: The dialectical attack exposes the cost of realist precision. FACT: Advaita on mokṣa (liberation) FACT: Liberation without consciousness or bliss is not worth attaining. FACT: Apavarga (final cessation of suffering) is rational because complete cessation of suffering is intrinsically desirable. ANALYSIS: The "stone-like liberation" objection remains emotionally and philosophically forceful. FACT: Sāṃkhya (enumerative dualist school) FACT: Satkāryavāda (theory that the effect pre-exists potentially in its cause) explains causation better because the effect pre-exists in the cause. FACT: Prāgabdhāva (prior non-existence) shows the effect is absent before production, so production is a new beginning. ANALYSIS: Nyāya must still explain continuity between cause and effect without latent pre-existence. FACT: Mīmāṃsā (Vedic exegesis school) FACT: Validity is self-known (svataḥ-prāmāṇya (intrinsic validity of cognition)) and Veda needs no divine author. FACT: Validity and invalidity are known through external checks; meaningful authoritative testimony points to a competent āpta (competent reliable speaker). ANALYSIS: If authorless Veda is accepted, Nyāya's scriptural God-proof weakens.

14B. PŪRVAPAKṢA–SIDDHĀNTA (objector's case and established reply) LEDGER (cont. 3)

FACT: Jaina (many-sided realist tradition) anekānta (many-sidedness) FACT: A rigid category scheme ignores many-sidedness and conditional predication. FACT: Nyāya (school of logic and valid knowledge) replies that debate and inference require determinate categories and non-contradictory predication. ANALYSIS: Jaina logic highlights contextual limits in Nyāya's fixed classifications.

14C. INTER-SCHOOL POSITIONING

School Pramāṇas (means of valid knowledge) Validity theory Error theory Universals Causation / atomism God Self and liberation FACT: Nyāya-Vaiśeṣika (combined logic-and-category realist system) FACT: Four for Nyāya (school of logic and valid knowledge): pratyakṣa (perception), anumāna (inference), upamāna (comparison), śabda (reliable verbal testimony). FACT: Parataḥ (extrinsically) for validity and invalidity. FACT: Anyathākhyāti (misapprehension of a real item as elsewhere): misplacement of a real object. FACT: Real jāti (class-universal), disciplined by jāti-bādhaka (obstructor of universalhood). FACT: Asatkāryavāda (theory that the effect does not pre-exist in its cause), ārambhavāda (theory of a genuinely new beginning), eternal atoms. FACT: Īśvara (omniscient Lord) as efficient cause and karmic governor. FACT: Enduring ātman (enduring self); apavarga (final cessation of suffering) as cessation of suffering. FACT: Sāṃkhya (enumerative dualist school)-Yoga (discipline-and-meditation school) FACT: Usually three: pratyakṣa, anumāna, śabda. ANALYSIS: Validity is not framed in Nyāya's parataḥ manner. ANALYSIS: Error tied to misidentification of puruṣa (pure conscious witness) and prakṛti (primordial material nature). ANALYSIS: Less central than tattva (fundamental principle)-evolution. FACT: Satkāryavāda (theory that the effect pre-exists potentially in its cause); no Vaiśeṣika (school of categories and atomism) atomism. FACT: Sāṃkhya does not require creator God; Yoga accepts special puruṣa (pure conscious witness) Īśvara (omniscient Lord). FACT: Many puruṣas (pure conscious witnesses); kaivalya (liberating isolation of consciousness) as isolation. FACT: Mīmāṃsā (Vedic exegesis school)

14C. INTER-SCHOOL POSITIONING (continued 2)

FACT: More expansive lists, classically including arthāpatti (explanatory postulation) and anupalabdhi (non-apprehension) in major sub-schools. FACT: Svataḥ-prāmāṇya (intrinsic validity of cognition) for validity. FACT: Prābhākara (Prābhākara branch of Mīmāṃsā) akhyāti (non-discrimination theory of error); Bhāṭṭa (Kumārila branch of ZZGLOSS4ZZ) accounts differ. FACT: Generally realist about word-meaning but not Nyāya (school of logic and valid knowledge)-style theistic semantics. ANALYSIS: Ritual causal potency through apūrva (unseen ritual potency), not atomistic creation-centred. FACT: No divine author needed for Veda. FACT: Self accepted; liberation varies by sub-school presentation.

14C. INTER-SCHOOL POSITIONING (cont. 2)

FACT: Advaita (non-dual Vedānta) FACT: Six in standard later account. ANALYSIS: Valid cognition works within vyavahāra (empirical practice) but ultimate knowledge sublates duality. FACT: Anirvacanīya-khyāti (theory of indeterminable appearance). ANALYSIS: Empirical universals are not ultimately real. ANALYSIS: Vivarta-style appearance rather than Nyāya (school of logic and valid knowledge) ārambha (new beginning). FACT: Īśvara (omniscient Lord) is vyāvahārika (empirical level), Brahman ultimately non-dual. FACT: Ātman-Brahman (individual self and absolute reality) identity; mokṣa (liberation) as liberating knowledge. FACT: Viśiṣṭādvaita (qualified non-dualism) FACT: Generally accepts perception, inference and scripture. ANALYSIS: Validity is theistic-realist, not Nyāya parataḥ (extrinsically) in the same technical sense. ANALYSIS: Error does not require Advaita's indefinable object. FACT: Real plurality as modes of Brahman. ANALYSIS: Real transformation/qualified non-dual dependence, not atomism as final. FACT: Nārāyaṇa/Brahman as material and efficient cause. FACT: Selves are real modes; liberation retains conscious service. FACT: Buddhism FACT: Dignāga-Dharmakīrti (Buddhist logical tradition of Dignāga and Dharmakīrti): two, perception and inference. ANALYSIS: Often cognition-centred and self-luminosity-friendly. FACT: Ātmakhyāti (theory that mental content appears externally)/asatkhyāti (theory that the illusory object is unreal) labels vary in doxography. FACT: Apoha (exclusion of what is other), not real jāti (class-universal). FACT: Momentariness; rejects permanent atoms/self in Nyāya sense. FACT: No creator God. FACT: No eternal ātman (enduring self); nirvāṇa (cessation and liberation) not Nyāya apavarga (final cessation of suffering).

14C. INTER-SCHOOL POSITIONING (cont. 3)

FACT: Jainism FACT: Multiple pramāṇas (means of valid knowledge) with naya-based standpoints. ANALYSIS: Validity is conditioned by standpoint and non-one-sidedness. ANALYSIS: Error arises from partial absolutisation. ANALYSIS: Realism is filtered by anekānta (many-sidedness). ANALYSIS: Atomism exists in a different pluralist framework. FACT: No creator God in Nyāya (school of logic and valid knowledge) sense. FACT: Jīvas are many; liberation retains perfected consciousness. FACT: Cārvāka (materialist school) FACT: Perception alone in the strict formulation. FACT: Validity tied to perceptibility. ANALYSIS: Error exposes unreliability beyond perception. FACT: Rejects real universals as metaphysical excess. FACT: Materialism without Nyāya inference-based atomism. FACT: Rejects God. FACT: Rejects enduring non-material self and mokṣa (liberation). • FACT: Nyāya vs Vaiśeṣika (school of categories and atomism) division of labour. Nyāya is primarily epistemology, logic and debate, organized around sixteen topics of inquiry and proof; Vaiśeṣika is primarily ontology, organized around padārthas (categories or knowable referents) of being. Their later fusion is not identity from the start but a division of labour: Nyāya supplies pramāṇa (means of valid knowledge) and dialectic, Vaiśeṣika supplies categories, atomism and viśeṣa (ultimate particularity)-samavāya (inherence) ontology, and Navya-Nyāya (New Logic school) refines both into a highly technical analytic idiom. • ANALYSIS: Answer to "one system or two?" Say: historically two allied systems, doctrinally fused in later Nyāya-Vaiśeṣika (combined logic-and-category realist system) for UPSC purposes, with distinguishable emphases.

14D. CONTROLLED WESTERN COMPARISON

Point of contact Similarity Disanalogy ANALYSIS: Vyāpti (invariable concomitance) and Hume's problem of induction ANALYSIS: Both notice that observed regularity does not by itself entail universal necessity. FACT: Hume treats the belief as habit of imagination; Nyāya (school of logic and valid knowledge) claims warranted universal cognition through upādhi (hidden limiting condition)-elimination, tarka (hypothetical reductive reasoning) and sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception), because universals are real. ANALYSIS: Samavāya (inherence) and Bradley's regress ANALYSIS: Both see that relations may require further relations and threaten regress. FACT: Bradley moves toward the unreality of relations in an Absolute; Nyāya stops regress by treating samavāya as self-linking svarūpa-sambandha (identity-based relation). ANALYSIS: Pañcāvayava (five-membered syllogism) and Aristotelian syllogism ANALYSIS: Both offer patterns of valid reasoning. FACT: Nyāya includes udāharaṇa (example with universal rule) as an essential empirical example and is primarily a schema of proof to another (parārthānumāna (demonstrative inference for another person)), not a purely formal validity calculus. ANALYSIS: Nyāya universals and Platonic Forms ANALYSIS: Both treat universals as real and shareable. FACT: Nyāya jāti (class-universal) inheres in particulars by samavāya and has no separate transcendent realm; there is no Platonic chorismos.

14D. CONTROLLED WESTERN COMPARISON (cont. 2)

ANALYSIS: Udayana and design/cosmological arguments or Aquinas' Five Ways ANALYSIS: Both infer intelligent first cause or ordering intelligence from effects and order. FACT: Nyāya (school of logic and valid knowledge) God is efficient cause only, not creator of matter; atoms and souls are eternal, and God works with karma (motion or action) rather than creation ex nihilo. ANALYSIS: Apavarga (final cessation of suffering) and Epicurean ataraxia / negative good ANALYSIS: Both can define the goal as absence of disturbance or suffering. FACT: Nyāya apavarga may involve absence of ordinary consciousness itself, which Western eudaimonism generally does not accept as the highest human good. • ANALYSIS: Rubric. Western parallels are illustrative only, never a substitute for the Indian argument; use at most one or two lines after the Nyāya case is complete.

14E. DIRECTIVE DECODER

Directive What the examiner is testing Structural move for a Nyāya-Vaiśeṣika (combined logic-and-category realist system) answer How the closing verdict must be phrased ANALYSIS: Discuss ANALYSIS: Breadth plus balanced explanation. FACT: Define the doctrine, give parts, add one rival and reply. ANALYSIS: "Thus the doctrine is central because..., though it presupposes..." ANALYSIS: Examine ANALYSIS: Internal logic and assumptions. FACT: State thesis, unpack inferential structure, expose presupposition ledger. ANALYSIS: "The argument works if its realist presupposition is granted." ANALYSIS: Critically examine ANALYSIS: Doctrine plus serious objection. FACT: Present Nyāya (school of logic and valid knowledge), then named pūrvapakṣa (objector's position), reply and residual force. ANALYSIS: "Nyāya answers X, but Y remains the pressure point." ANALYSIS: Analyse ANALYSIS: Decomposition into elements and relations. FACT: Break into padārtha (category or knowable referent)/pramāṇa (means of valid knowledge)/khyāti (theory of appearance or error)/causal components. ANALYSIS: "The strength lies in systematic linkage, not isolated claims." ANALYSIS: Evaluate ANALYSIS: Normative judgement after evidence. FACT: Give strengths, weaknesses and final graded judgement. ANALYSIS: "On balance, it is strong as ..., weaker as ..."

14E. DIRECTIVE DECODER (cont. 2)

ANALYSIS: Compare ANALYSIS: Similarity and difference. FACT: Use a two-column school comparison with exact Sanskrit terms. ANALYSIS: "The overlap is limited because the metaphysical bases differ." ANALYSIS: Distinguish ANALYSIS: Precision between nearby terms. FACT: Define each term, state locus, relation and example. ANALYSIS: "Therefore the two are not interchangeable because..." ANALYSIS: Elucidate ANALYSIS: Clear exposition with examples. FACT: Give statement, mechanism, example and exam trap. ANALYSIS: "This clarifies why Nyāya (school of logic and valid knowledge) needs the doctrine in the system." ANALYSIS: Comment ANALYSIS: Focused interpretive judgement on a quotation or claim. FACT: Decode the claim, accept its core, qualify its limits. ANALYSIS: "The comment is justified in X sense, not in Y sense." ANALYSIS: Bring out ANALYSIS: Extraction of significance or implications. FACT: Show function: what problem the doctrine solves. ANALYSIS: "Its significance is explanatory rather than merely classificatory." ANALYSIS: Do you agree? ANALYSIS: Reasoned stance, not opinion. FACT: State qualified agreement, then evidence, objection and reply. ANALYSIS: "I agree only to the extent that..., because..."

Strong points

- FACT: Logic and inference. Nyāya (school of logic and valid knowledge) offers the most developed Indian account of inference, debate, hetu (reason or middle term)-testing and fallacy-analysis.
- FACT: Answer to scepticism. Its account of vyāpti-grahaṇa (apprehension of invariable concomitance) is a serious realist reply to Cārvāka (materialist school)-style and induction-style scepticism.
- FACT: Disciplined ontology. Vaiśeṣika (school of categories and atomism) does not merely multiply entities; checks such as jāti-bādhaka (obstructor of universalhood) show an internal economy of universals.
- FACT: Natural theology. Udayana gives the most rigorous Indian cumulative case for God as efficient cause, karmic governor and Vedic āpta (competent reliable speaker).

Weak points

- ANALYSIS: Samavāya (inherence) and viśeṣa (ultimate particularity). Both function as stipulated termini against regress, so critics can call them explanatory placeholders.
- ANALYSIS: Liberation. Apavarga (final cessation of suffering) as absence of pleasure, pain and ordinary cognition invites the stone-like liberation objection.
- ANALYSIS: God and karma (motion or action). Making God dispense fruits according to beginningless karma protects justice but limits divine independence.
- ANALYSIS: Ontological proliferation. Abhāva (absence or non-existence), samavāya, viśeṣa and multiple categories can look excessive to Buddhist (Buddhist philosophical tradition), Advaitin and Cārvāka (materialist school) critics.

Genuinely contested points

- OBJECTION: Sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception). It is contested whether universal-mediated perception is genuine perception or an ad hoc device for induction.
- OBJECTION: One system or two. Nyāya (school of logic and valid knowledge) and Vaiśeṣika (school of categories and atomism) are historically distinct but later fused; UPSC answers must preserve both facts.
- OBJECTION: Pot–potter analogy. It is contested whether an embodied artisan analogy can bear the weight of proving a bodiless cosmic maker.

Ready verdict lines

• ANALYSIS: 10 marks. "Nyāya-Vaiśeṣika (combined logic-and-category realist system) is strongest as a realist logic-ontology, but its primitive relations and particularizers remain vulnerable." • ANALYSIS: 15 marks. "Its achievement is systematic: pramāṇa (means of valid knowledge) secures knowledge, padārtha (category or knowable referent) secures being and Īśvara (omniscient Lord) secures order; its weakness is that samavāya (inherence), viśeṣa (ultimate particularity) and unconscious mokṣa (liberation) are asserted as much as proved." • ANALYSIS: 20 marks. "A fair verdict is graded: Nyāya (school of logic and valid knowledge)-Vaiśeṣika (school of categories and atomism) gives Indian philosophy its most rigorous realism, inference-theory and natural theology, yet the very devices that make the system complete—samavāya, viśeṣa, sāmānyalakṣaṇa (universal-mediated awareness) and karma (motion or action)-bound Īśvara (omniscient Lord)—are also its deepest contested points."

Exam route

• Match the directive: "examine" exposes assumptions; "critically examine" adds objection and residual force; "evaluate" requires a criterion-based verdict. • Use one inter-school contrast at a time: pramanas, validity, error, universals, causation, God, self or liberation. • Western comparisons are optional and must follow the Indian argument. • Ready 20-mark criterion: explanatory coverage versus ontological economy.

Rapid recall

• Strengths: inference, debate, error diagnostics, systematic realism. • Weaknesses: samavaya, visesa, extraordinary perception, stone-like moksa. • Contested: universal perception, one-system/two-schools, pot-potter analogy. • Best verdict: comprehensive and rigorous, but metaphysically expensive. Progress: 9 / 9 Philosophy Layered Session Subtopic: PYQ Routing, Answer Architecture and Complete Exam Deployment

Plain-language visual - the answer-writing pipeline

READ DIRECTIVE identify exact doctrine and distinction state technical thesis + mechanism/example add named objection and best reply give residual pressure and graded verdict In simple words: Nyaya-Vaisesika (combined logic-and-category realist system) is a high-volume topic, but each question has a centre of gravity. Route it first—to category, pramana, error, self, God or causation—before adding comparisons. Marks Minimum architecture 10 Define -> classify/explain -> one distinction -> significance 15 Doctrine -> argument -> objection/reply -> verdict 20 Full derivation -> rival comparison -> residual force -> assessment Memory line: precision first, system-link second, criticism third.

15. PYQ ROUTING (2018–2025)

ANALYSIS: Corpus signal: 22 primary-owned question-parts out of 112. The local Paper I corpus is continuous from 2018 through 2025. Cross-links do not create duplicate ownership. Year Question Marks Exact demand 2018 Q5(a) 10 marks How do the Vaiśeṣika (school of categories and atomism) philosophers explain the difference of the relationships in the two cases—(i) the brown colour of the table and (ii) the book on the table? Discuss. 2018 Q5(d) 10 marks How do the Buddhists and the Nyāya (school of logic and valid knowledge) philosophers explain our knowledge of 'the absence of the jar on the table'? Answer in detail. 2018 Q6(a) 20 marks How do the Naiyāyikas (Nyāya philosophers) prove the existence of God? Do the Yoga (discipline-and-meditation school) philosophers prove God in the same way? If yes, how? And if no, why? Give reasons for your answer. 2019 Q5(a) 10 marks Justify the status of Abhāva (absence or non-existence) as a category in Vaiśeṣika philosophy. 2019 Q6(b) 15 marks What is the role of Jñānalakṣaṇa-pratyakṣa (cognition-mediated extraordinary perception) in explaining Anyathākhyāti (misapprehension of a real item as elsewhere)? 2019 Q7(a) 20 marks How does Udayana prove the existence of God through Kāryāt (from the world as an effect), Āyojanāt (from the arrangement of atoms), Dhrtyādeh (from support and sustenance) and Śruteh (from revealed scripture)? Discuss. 2020 Q6(c) 15 marks Explain the concepts of 'Anyathāsiddha (accidental or causally irrelevant antecedent)' and 'Ananyathāsiddha (causally indispensable antecedent)' in the context of Asatkāryavāda (theory that the effect does not pre-exist in its cause).

15. PYQ ROUTING (2018–2025) (cont. 2)

2020 Q8(b) 15 marks Critically evaluate the logical and metaphysical status of Viśeṣa (ultimate particularity) in the context of Vaiśeṣika (school of categories and atomism) Philosophy. 2021 Q5(a) 10 marks Does the seed contain the tree? Discuss with reference to Nyāya-Vaiśeṣika (combined logic-and-category realist system) Philosophy. 2021 Q5(b) 10 marks Explain with reference to Nyāya (school of logic and valid knowledge) Philosophy, the nature of śabda (reliable verbal testimony) as the advice of āpta (competent reliable speaker) (a reliable person). 2021 Q5(c) 10 marks Is 'inseparability' (ayuta-siddhatva) a necessary condition or a sufficient condition for defining characteristics (lakṣaṇa (defining characteristic)) of samavāya (inherence) (inherence)? Explain with reference to Vaiśeṣika Philosophy. 2022 Q5(b) 10 marks What is the ontological status of Sāmānya (real universal), according to Vaiśeṣika Philosophy? Critically examine. 2022 Q7(c) 15 marks How do Naiyāyikas (Nyāya philosophers) respond to Cārvāka (materialist school)'s objections against inference (anumāna (inference)) and establish inference as an independent means of knowledge? Critically discuss. 2023 Q5(d) 10 marks Present an account of Vaiśeṣika's view of negation in the light of their statement — "Negation always has a counterpositive and absolute negation is an impossibility." 2023 Q6(c) 15 marks Elucidate Naiyāyikas view of ordinary and extraordinary perception. Are they justified in accepting that universals are perceived? Discuss.

15. PYQ ROUTING (2018–2025) (cont. 3)

2023 Q7(a) 20 marks Elucidate Naiyāyikas (Nyāya philosophers) account of fallacies of the middle term in relation to five characteristics of valid middle term. 2023 Q8(b) 15 marks Write a note on Nyāya (school of logic and valid knowledge) notion of Prāgabdhāva (prior non-existence) (prior non-existence). How does this notion help Naiyāyikas in defending their position on causation against the Sāṃkhya (enumerative dualist school) view of causation? Critically discuss. 2024 Q5(b) 10 marks Explain the six reasons offered by the Naiyāyikas to prove the existence of the self. 2024 Q5(c) 10 marks Do these two sentences "Air does not have heat" and "Air is not fire" refer to the same type of absence or abhāva (absence or non-existence), according to the Vaiśeṣikas? Discuss. 2025 Q5(b) 10 marks Present an exposition of the debate between Naiyāyikas and Buddhists with reference to the notion of Pramāṇa (means of valid knowledge) and Pramāṇaphala (resulting valid cognition). 2025 Q5(e) 10 marks Present an exposition of Nyāya-Vaiśeṣika (combined logic-and-category realist system)'s theory of causation. 2025 Q6(a) 20 marks Present a detailed account of Gautama's definition of Perception. See the Indian Philosophy PYQ Bank, 2018–2025.

16.1 For a 10-marker

Define the term technically. List its parts/classification. Add one contrast or one objection. Close with one line of significance.

16.2 For a 15-marker

Intro: state the problem Nyāya-Vaiśeṣika (combined logic-and-category realist system) solves. Body A: doctrine with technical vocabulary. Body B: argument or classification. Body C: one objection and reply / one comparison. Conclusion: precise evaluative line.

16.3 For a 20-marker

Frame: locate the doctrine in the Nyāya-Vaiśeṣika (combined logic-and-category realist system) system. Exposition: full statement with subdivisions. Analysis: argument structure and presuppositions. Debate: rival view plus criticism and response. Verdict: what remains philosophically strong and where difficulty persists.

17. LINK-OUTS

• Buddhism.md — contrast on self, momentariness and pramāṇa (means of valid knowledge). • Samkhya (enumerative dualist school).md — satkāryavāda (theory that the effect pre-exists potentially in its cause) contrast. • Mimamsa.md — svataḥ-prāmāṇya (intrinsic validity of cognition), śabda (reliable verbal testimony) and akhyāti (non-discrimination theory of error) comparison. • Vedanta.md — anirvacanīya-khyāti (theory of indeterminable appearance) and self-consciousness contrast. • ../_themes/Pramana-across-schools.md — comparative pramāṇa map. • ../_themes/Causation-across-schools.md — ārambhavāda (theory of a genuinely new beginning) in context. • ../_themes/Self-and-liberation-across-schools.md — ātman (enduring self) and mokṣa (liberation) contrasts. • ../_PYQ-Indian-Philosophy-2018-2025.md — Indian Philosophy PYQ bank. • ../paper-2/philosophy-of-religion/Proofs-for-God.md — cross-paper theism and critique.

SOURCES

• Gautama, Nyāya (school of logic and valid knowledge)-sūtra (aphoristic foundational text), in standard textbook exposition and paraphrase where exact wording is uncertain. • Kaṇāda, Vaiśeṣika (school of categories and atomism)-sūtra, in standard textbook exposition. • Udayana, Nyāyakusumāñjali (Bouquet of Nyāya arguments for God), for theistic proofs as commonly transmitted in Indian philosophy surveys. • Chatterjee & Datta, An Introduction to Indian Philosophy. • C.D. Sharma, A Critical Survey of Indian Philosophy. • S. Radhakrishnan, Indian Philosophy, especially discussion of Nyāya-Vaiśeṣika (combined logic-and-category realist system) realism and theism.

CURRENT LINKAGE STATUS

FACT: Search result, 16 August 2026: No fresh official India-wide development specifically concerning Nyaya (school of logic and valid knowledge), Vaisesika (school of categories and atomism), or classical Indian logic was verifiable for February-August 2026. Ongoing Indian Knowledge Systems activity remains a broad educational context, not evidence for any doctrine. This package therefore uses no decorative current-affairs claim. Direct local source anchors • FACT: Chatterjee and Datta, local OCR edition, especially file pages 136-170 for Nyaya realism, pramana, perception, inference and testimony. • FACT: C. D. Sharma, local OCR edition, especially file pages 173-186 for Vaisesika categories, atomism, God and critical evaluation. • FACT: The repository PYQ bank controls wording, marks and ownership for all 22 questions below.

Exam route

The complete practice section contains: • 22 verified solved PYQs from 2018-2025. • 24 integrated MCQs and 8 remedial MCQs. • Original 10-, 15- and 20-mark questions with model solutions. • Final consolidated register notes placed after all teaching and practice. Attempt each PYQ before reading the model solution. Use the routing table and marks-wise architecture immediately before timed writing.

Rapid recall - master route

Prompt Recall spine Categories seven padarthas and their explanatory jobs Relations samavaya versus samyoga Absence locus, counterpositive and four kinds Perception Gautama definition plus ordinary/extraordinary Inference vyapti, upadhi, tarka (hypothetical reductive reasoning), paramarsa (apprehension that the subject has a pervaded reason) and fallacies Self enduring locus of mental qualities God cumulative efficient-cause arguments Causation new effect, three causes and prior absence Atomism eternal atoms, new compounds and first motion

Diagnostic route 1–4

1. Which statement best captures the historical division and later convergence of Nyāya (school of logic and valid knowledge) and Vaiśeṣika (school of categories and atomism)? 2. Which is the complete later Vaiśeṣika list of padārthas (categories or knowable referents)? 3. Which set contains only the nine Vaiśeṣika dravyas? 4. In Nyāya–Vaiśeṣika (combined logic-and-category realist system), cognition, pleasure and desire are best classified as

Diagnostic route 5–8

5. What is karma (motion or action) as a Vaiśeṣika (school of categories and atomism) padārtha (category or knowable referent)? 6. Why does Vaiśeṣika admit sāmānya (real universal) as real? 7. What work does viśeṣa (ultimate particularity) perform in the system? 8. Which description of samavāya (inherence) is most accurate?

Diagnostic route 9–12

9. A book resting on a table and brown colour in the table illustrate respectively 10. Which sequence correctly describes the four abhāvas (types of absence)? 11. In “There is no jar on the floor,” what is the pratiyogin (counterpositive of an absence)? 12. Which list gives Nyāya (school of logic and valid knowledge)’s four pramāṇas (means of valid knowledge)?

Diagnostic route 13–16

13. In Gautama’s definition, which combination is correct? 14. Which statement correctly distinguishes ordinary and extraordinary perception? 15. Sāmānyalakṣaṇa-pratyakṣa (universal-mediated extraordinary perception) is invoked chiefly to explain 16. In the shell–silver illusion, jñānalakṣaṇa-pratyakṣa (cognition-mediated extraordinary perception) supplies

Diagnostic route 17–20

17. Yogaja-pratyakṣa (yogically generated extraordinary perception) is 18. What is the correct order of the five-member Nyāya (school of logic and valid knowledge) syllogism? 19. Which best defines an upādhi (hidden limiting condition) in vyāpti (invariable concomitance)-analysis? 20. Which is NOT among the five characteristics of a valid hetu (reason or middle term)?

Diagnostic route 21–24

21. A hetu (reason or middle term) absent from the pakṣa (subject of inference) is primarily which hetvābhāsa (fallacious reason)? 22. What is the strongest Cārvāka (materialist school) challenge to inference? 23. Upamāna (comparison) yields knowledge when 24. Śabda (reliable verbal testimony) is valid, in the central Nyāya (school of logic and valid knowledge) formulation, when it is

Diagnostic route 25–28

25. Anyathākhyāti (misapprehension of a real item as elsewhere) explains illusion as 26. Which inference most directly supports Nyāya (school of logic and valid knowledge)'s enduring self? 27. Apavarga (final cessation of suffering) in standard Nyāya is primarily 28. Which statement about Nyāya Īśvara (omniscient Lord) is correct?

Diagnostic route 29–32

29. Udayana's kāryāt (from the world as an effect) argument proceeds from 30. Āyojanāt (from the arrangement of atoms) argues that God is required chiefly to explain 31. Dhṛtyādeḥ (from support and sustenance) moves from which explanandum to God? 32. What is the core of the śruteḥ (from revealed scripture) proof?

Diagnostic route 33–36

33. Which pairing is correct? 34. How does classical Yoga (discipline-and-meditation school)'s Īśvara (omniscient Lord) differ most importantly from Nyāya (school of logic and valid knowledge)'s God? 35. Asatkāryavāda/ārambhavāda (theory that production begins a previously non-existent effect) means that 36. An anyathāsiddha (accidental or causally irrelevant antecedent) antecedent is

Diagnostic route 37–40

37. How does the seed–tree example support Nyāya (school of logic and valid knowledge) causation? 38. Which account matches Vaiśeṣika (school of categories and atomism) atomism? 39. In the pramāṇa–pramāṇaphala (means-of-knowledge and resulting-cognition relation) debate, the central contrast is that 40. Which answer-writing move best satisfies the directive “critically discuss” in a Nyāya–Vaiśeṣika (combined logic-and-category realist system) question?

Diagnostic route 41–44

41. Why is ayutasiddhatva (inseparable establishment) not, by itself, a sufficient definition of samavāya (inherence)? 42. Which classification is correct? 43. Which claim about the Nyāya (school of logic and valid knowledge) self is false? 44. Which statement is a serious factual error in an answer on Nyāya theism?

Diagnostic route 45–48

45. Which pairing of extraordinary perception and function is accurate? 46. Which mapping from hetu (reason or middle term)-defect to positive condition is correct? 47. Which is the best coordinated causal account of a cloth? 48. A high-quality response to a printed PYQ should first

2018 · Q5(a) · 10 marks

How do the Vaiśeṣika (school of categories and atomism) philosophers explain the difference of the relationships in the two cases—(i) the brown colour of the table and (ii) the book on the table? Discuss.

2018 · Q5(d) · 10 marks

How do the Buddhists and the Nyāya (school of logic and valid knowledge) philosophers explain our knowledge of 'the absence of the jar on the table'? Answer in detail.

2018 · Q6(a) · 20 marks

How do the Naiyāyikas (Nyāya philosophers) prove the existence of God? Do the Yoga (discipline-and-meditation school) philosophers prove God in the same way? If yes, how? And if no, why? Give reasons for your answer.

2019 · Q5(a) · 10 marks

Justify the status of Abhāva (absence or non-existence) as a category in Vaiśeṣika (school of categories and atomism) philosophy.

2019 · Q6(b) · 15 marks

What is the role of Jñānalakṣaṇa-pratyakṣa (cognition-mediated extraordinary perception) in explaining Anyathākhyāti (misapprehension of a real item as elsewhere)?

2019 · Q7(a) · 20 marks

How does Udayana prove the existence of God through Kāryāt (from the world as an effect), Āyojanāt (from the arrangement of atoms), Dhṛtyādeḥ (from support and sustenance) and Śruteḥ (from revealed scripture)? Discuss.

2020 · Q6(c) · 15 marks

Explain the concepts of 'Anyathāsiddha (accidental or causally irrelevant antecedent)' and 'Ananyathāsiddha (causally indispensable antecedent)' in the context of Asatkāryavāda (theory that the effect does not pre-exist in its cause).

2020 · Q8(b) · 15 marks

Critically evaluate the logical and metaphysical status of Viśeṣa (ultimate particularity) in the context of Vaiśeṣika (school of categories and atomism) Philosophy.

2021 · Q5(a) · 10 marks

Does the seed contain the tree? Discuss with reference to Nyāya-Vaiśeṣika (combined logic-and-category realist system) Philosophy.

2021 · Q5(b) · 10 marks

Explain with reference to Nyāya (school of logic and valid knowledge) Philosophy, the nature of śabda (reliable verbal testimony) as the advice of āpta (competent reliable speaker) (a reliable person).

2021 · Q5(c) · 10 marks

Is 'inseparability' (ayuta-siddhatva) a necessary condition or a sufficient condition for defining characteristics (lakṣaṇa (defining characteristic)) of samavāya (inherence) (inherence)? Explain with reference to Vaiśeṣika (school of categories and atomism) Philosophy.

2022 · Q5(b) · 10 marks

What is the ontological status of Sāmānya (real universal), according to Vaiśeṣika (school of categories and atomism) Philosophy? Critically examine.

2022 · Q7(c) · 15 marks

How do Naiyāyikas (Nyāya philosophers) respond to Cārvāka (materialist school)'s objections against inference (anumāna (inference)) and establish inference as an independent means of knowledge? Critically discuss.

2023 · Q5(d) · 10 marks

Present an account of Vaiśeṣika (school of categories and atomism)'s view of negation in the light of their statement — “Negation always has a counterpositive and absolute negation is an impossibility.”

2023 · Q6(c) · 15 marks

Elucidate Naiyāyikas (Nyāya philosophers) view of ordinary and extraordinary perception. Are they justified in accepting that universals are perceived? Discuss.

2023 · Q7(a) · 20 marks

Elucidate Naiyāyikas (Nyāya philosophers) account of fallacies of the middle term in relation to five characteristics of valid middle term.

2023 · Q8(b) · 15 marks

Write a note on Nyāya (school of logic and valid knowledge) notion of Prāgabhāva (prior non-existence) (prior non-existence). How does this notion help Naiyāyikas (Nyāya philosophers) in defending their position on causation against the Sāṃkhya (enumerative dualist school) view of causation? Critically discuss.

2024 · Q5(b) · 10 marks

Explain the six reasons offered by the Naiyāyikas (Nyāya philosophers) to prove the existence of the self.

2024 · Q5(c) · 10 marks

Do these two sentences “Air does not have heat” and “Air is not fire” refer to the same type of absence or abhāva (absence or non-existence), according to the Vaiśeṣikas? Discuss.

2025 · Q5(b) · 10 marks

Present an exposition of the debate between Naiyāyikas (Nyāya philosophers) and Buddhists with reference to the notion of Pramāṇa (means of valid knowledge) and Pramāṇaphala (resulting valid cognition).

2025 · Q5(e) · 10 marks

Present an exposition of Nyāya–Vaiśeṣika (combined logic-and-category realist system)’s theory of causation.

2025 · Q6(a) · 20 marks

Present a detailed account of Gautama’s definition of Perception.

Original 1 · 10 marks

Why does Nyāya–Vaiśeṣika (combined logic-and-category realist system) require both samavāya (inherence) and saṃyoga (conjunction) to explain relations? Discuss with suitable examples.

Original 2 · 10 marks

Explain why upamāna (comparison) and śabda (reliable verbal testimony) cannot be treated as mere forms of perception in Nyāya (school of logic and valid knowledge).

Original 3 • 15 marks

“Nyāya (school of logic and valid knowledge)’s defence of inference is a disciplined answer to scepticism, not a proof of infallible induction.” Examine.

Original 4 • 15 marks

Can a self whose consciousness is adventitious meaningfully seek apavarga (final cessation of suffering)? Critically discuss the Nyāya (school of logic and valid knowledge) position.

Original 5 • 20 marks

Critically examine whether Nyāya–Vaiśeṣika (combined logic-and-category realist system) atomism can explain both material novelty and cosmic order without compromising its realism.

Original 6 • 20 marks

“Nyāya–Vaiśeṣika (combined logic-and-category realist system)’s greatest strength and deepest vulnerability are both its commitment to realist explanation.” Critically evaluate.

OPTIONAL ADVANCED DEPTH

— NOT REQUIRED FOR A CORE ANSWER

Layer-placement note

All Layer 3 material from the legacy complete session is retained here after practice. It should refine a core answer, not displace the printed syllabus.

Advanced unity and historical qualification

Historically, Nyaya (school of logic and valid knowledge) and Vaisesika (school of categories and atomism) begin as distinguishable schools rather than one undifferentiated doctrine. Their later synthesis is a division of labour: Nyaya contributes pramana theory, inference and dialectic, while Vaisesika contributes padarthas, atomism, visesa and samavaya. Navya-Nyaya then sharpens the shared analytic vocabulary. This system is realist in three linked senses. Objects exist independently of cognition; valid cognition can disclose them; and even error is explained through misrelation among real factors rather than by reducing the world to appearance. The main philosophical cost is ontological commitment. To preserve common-sense distinctions, the system admits universals, inherence, ultimate particularizers and absence as real categories. Its strength and vulnerability therefore arise from the same refusal to leave distinctions unexplained.

Advanced pressure points

The category scheme is disciplined rather than indiscriminately expansive. The six jati-badhakas prevent every general expression from becoming a new universal. Yet realism about samanya remains contested by Buddhist (Buddhist philosophical tradition) apoha (exclusion of what is other), which explains classification through exclusion. Visesa stops the collapse of qualitatively identical eternal substances into one, but its description as self-differentiating can look like a stipulated terminus. Samavaya unifies part-whole, quality-substance and universal-particular dependence, yet its self-linking status attracts a relation-regress objection. Abhava is not blank nothingness. Every absence has a locus and a counterpositive. This structured account explains why "air lacks heat" and "air is not fire" express different kinds of negation.

Advanced induction problem

Nyaya (school of logic and valid knowledge) does not rely on repeated observation alone. It combines positive and negative instances, absence of counterexamples, removal of upadhi, tarka (hypothetical reductive reasoning) and universal-mediated perception. The inference culminates in paramarsa (apprehension that the subject has a pervaded reason): this hill has smoke qualified by fire-pervasion. Carvaka pressure remains serious: finite observations cannot enumerate every case, hidden conditions may remain and samanyalaksana-pratyaksa may look ad hoc. Nyaya replies that empirical warrant need not be omniscient certainty, that tarka assists rather than independently proves, and that real universals make class-wide cognition intelligible. The broader epistemology is fallibilist realism. Cognitions concern external objects, but validity and invalidity are ascertained extrinsically through confirming conditions, successful action and defeaters.

Advanced objections and replies

Anyathakhyati preserves realism by using a real shell, real silver and faulty synthesis. Its vulnerable step is jñanalaksana-pratyaksa, which must make the absent silver present without reducing the event to ordinary memory. Nyaya (school of logic and valid knowledge) infers self from cognition, desire, effort, pleasure, pain, memory, recognition and instrumentality. Buddhism challenges the enduring owner; Nyaya responds that a series may transmit states but cannot easily explain first-person recognition and responsibility. The system must then explain why a permanent self possesses consciousness only episodically: atomic manas (coordinating mind) and bodily-sensory conjunction supply the conditions. Apavarga (final cessation of suffering) is complete cessation of pain, not Vedantic bliss. Critics call a cognitionless liberated self stone-like. Nyaya replies that total absence of suffering is rationally sufficient, though the objection remains a major evaluative pressure.

Advanced cumulative-case assessment

Udayana is strongest when read cumulatively. The arguments converge on one explanatory hypothesis: an eternal bodiless intelligent agent who initiates atomic order, administers karma (motion or action) and serves as Vedic apta. No single pot-potter analogy bears the whole burden. Mimamsa challenges divine authorship through authorless Veda and apurva. Samkhya (enumerative dualist school) invokes unconscious prakṛti, while Buddhists attack the inference from an embodied artisan to a bodiless maker. The problem of evil is answered through beginningless karma, but that solution makes God appear constrained by an order he did not create. The central evaluative question is explanatory necessity. Nyaya (school of logic and valid knowledge) sees unconscious atoms, adrsta and meaningful testimony as incomplete without intelligence; rivals regard God as a costly addition to processes already explained.

Advanced causal continuity problem

Nyaya (school of logic and valid knowledge) uses pragabhava to oppose Samkhya (enumerative dualist school): if cloth already existed in threads, production would add nothing. Yet Nyaya must still explain why this effect arises from these causes rather than from anything. Its threefold causal scheme and the requirement of ananyathasiddha relevance prevent mere temporal antecedence from counting as causation. Atomism supplies material continuity without effect pre-existence. Partless element-specific atoms combine into dyads and larger bodies; compounds dissolve while atoms persist. Adrsta and divine volition initiate motion in a new cosmic cycle. The explanatory trade-off is clear. Eternal atoms secure continuity and novelty, but imperceptible atoms, first motion and divine governance add inferential commitments that Buddhist (Buddhist philosophical tradition), Samkhya and materialist rivals contest.

Advanced dialectical verdict

Nyaya (school of logic and valid knowledge)'s defence is strongest where rivals must themselves reason, classify or identify counterexamples. Its response to total inference-scepticism exposes practical and performative tensions. Its accounts of recognition, testimony and wholes also preserve ordinary explanatory practice. The weaker joints are primitive termini. Samavaya and visesa stop regress by being self-linking or self-differentiating; critics can reply that the problem has been named rather than solved. Extraordinary perception may similarly appear designed to secure universals and induction. The restored doctrine dossier matters because UPSC repeatedly tests nearby distinctions: inherence versus conjunction, relevant versus accidental causes, Nyaya versus Yoga (discipline-and-meditation school) theism and the role of visesa. Precision here is more valuable than decorative breadth.

Advanced comparative control

The presupposition ledger reveals the system's architecture. Real universals support classification and induction; inherence supports dependence; ultimate particularity supports plural eternalists; self supports memory and responsibility; God supports order and karmic allocation. Deny one premise and several doctrines fall together. Comparisons must remain controlled. Nyaya (school of logic and valid knowledge) universals resemble Platonic realism only superficially because they inhere in particulars rather than occupying a separate realm. Vyapti and Hume both expose induction pressure, but Nyaya claims warranted universal cognition. Udayana resembles design and cosmological arguments while retaining eternal matter and souls. A balanced final verdict is graded: Nyaya-Vaisesika (combined logic-and-category realist system) offers Indian philosophy's most elaborate realist logic-ontology and natural theology, while its completion-devices are also its deepest contested points.

Advanced corpus strategy

The 2018-2025 corpus assigns 22 primary-owned question-parts to this topic, making selective preparation risky. The recurrence is structured: categories and absence, perception and inference, self, theism, causation and relation theory repeatedly return through new distinctions. The correct study strategy is therefore modular mastery rather than memorising 22 isolated essays. Build reusable blocks for samavaya, abhava, vyapti, extraordinary perception, self, Udayana, asatkaryavada and visesa; then adapt them to the directive and marks. The current-affairs search found only broad 2026 Indian Knowledge Systems and education discussion, not a reliable doctrinal development specific to Nyaya-Vaisesika (combined logic-and-category realist system). It is therefore excluded from argument and retained only as broad pedagogical context.

A. System identity

• Nyāya (school of logic and valid knowledge): logic, epistemology and debate. • Vaiśeṣika (school of categories and atomism): ontology, relations and atomism. • Later synthesis joins pramāṇa (means of valid knowledge) method to padārtha (category or knowable referent) realism. • Navya-Nyāya (New Logic school) sharpens technical analysis without erasing the realist base.

B. Seven categories

1. Dravya (substance) — substance. 2. Guṇa (quality) — quality. 3. Karma (motion or action) — motion/action. 4. Sāmānya (real universal) — universal. 5. Viśeṣa (ultimate particularity) — ultimate particularity. 6. Samavāya (inherence) — inherence. 7. Abhāva (absence or non-existence) — absence. • Nine substances: earth, water, fire, air, ether, time, space, self and mind.

C. Relations and individuation

• Saṃyoga (conjunction): produced, destructible conjunction of separable substances. • Samavāya (inherence): one eternal relation among inseparably connected relata. • Ayatasiddhatva (inseparable establishment) is necessary but requires exact qualification; it is not a loose synonym for inherence. • Viśeṣa (ultimate particularity) individuates eternal substances, especially atoms.

D. Universal and absence

• Sāmānya (real universal) is one, eternal and present in many individuals. • Four absences: prior, posterior, mutual and absolute. • Every absence has a locus and counterpositive. • “Air lacks heat” and “air is not fire” instantiate different absence structures.

E. Four pramāṇas (means of valid knowledge)

• Perception, inference, comparison and testimony. • Valid cognition corresponds to an independently existing object. • Testimony depends on the statement of a competent reliable person, āpta (competent reliable speaker). • Upamāna (comparison) yields knowledge through similarity-mediated word–object connection.

F. Perception

• Gautama: cognition produced by sense–object contact, non-verbal, non-errant and determinate. • Ordinary perception uses standard sense–object relations. • Extraordinary perception: universal-character, cognition-mediated and yogic. • Jñānalakṣaṇa (cognition-mediated awareness) helps explain how a remembered property enters error.

G. Inference

PRATIJÑĀ (proposition) -> HETU (reason or middle term) -> UDĀHARAṆA (example with universal rule) -> UPANAYA (application of the rule) -> NIGAMANA (conclusion) • Vyāpti (invariable concomitance) is invariable concomitance; upādhi (hidden limiting condition) blocks false universalisation. • Valid middle must satisfy presence in subject, positive instances and absence in negative instances, and avoid contradiction and counterbalancing. • Hetvābhāsas (fallacies of the reason) arise when these conditions fail.

H. Appearance and self

• Anyathākhyāti (misapprehension of a real item as elsewhere): a real remembered object/property is mislocated in a present locus. • Error is neither wholly unreal nor correct perception. • Self is an enduring substance inferred from desire, aversion, effort, pleasure, pain and cognition. • Consciousness is an adventitious quality of self, not its eternal essence.

I. Liberation

• Apavarga (final cessation of suffering) is final cessation of suffering and its causal chain. • True knowledge removes error, defect, activity, rebirth and pain. • Classical Nyāya (school of logic and valid knowledge) liberation is not blissful cognition in the Vedāntic (relating to Vedānta) sense. • The austere account raises the objection that liberation resembles blank existence.

J. God

• Īśvara (omniscient Lord) is omniscient, eternal and the efficient—not material—cause. • Udayana's routes include kāryāt (from the world as an effect), āyojanāt (from the arrangement of atoms), dhṛtyādeḥ (from support and sustenance), padāt (from word-meaning convention), pratyayataḥ (from authoritative cognition) and śruteḥ (from revealed scripture). • God arranges atoms and administers karmic fruits. • Nyāya (school of logic and valid knowledge) natural theology differs from Yoga (discipline-and-meditation school)'s special puruṣa (pure conscious witness) and meditative role.

K. Causation and atomism

• Asatkāryavāda/ārambhavāda (theory that production begins a previously non-existent effect): the effect is a new beginning. • Material, non-inherent and efficient causes cooperate. • Ananyathāsiddha (causally indispensable antecedent) conditions are causally indispensable; irrelevant antecedents are anyathāsiddha (accidental or causally irrelevant antecedent). • Eternal atoms combine into dyads and larger wholes under unseen merit and divine direction.

L. Final answer discipline

1. Identify whether the question is Nyāya (school of logic and valid knowledge), Vaiśeṣika (school of categories and atomism) or later synthesis. 2. Define the technical term and distinguish its nearest rival. 3. Use the exact example in the question. 4. State the argument or ordered classification before evaluation. 5. Add one named rival pressure and Nyāya–Vaiśeṣika (combined logic-and-category realist system)'s reply. 6. Preserve key limits: God is efficient cause; consciousness is a quality; inherence is not mere conjunction. 7. Conclude by balancing explanatory reach against ontological cost. Final judgement: Nyāya–Vaiśeṣika offers India's most systematic realist union of ontology and epistemology. Its strength is explanatory precision; its cost is a crowded ontology and contested transitions from order, language and moral law to an omniscient governor.

Last-minute check

Correct school ownership? Exact Sanskrit term? Ordered proof/sequence? One comparison? One objection-reply? No overclaim about current affairs?

System definition and convergence

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (RECOMMENDED OPENING DEFINITION):

Nyāya (the school of logic and valid knowledge) supplies the method of warranted cognition, while Vaiśeṣika (the school of categories and atomism) supplies the realist inventory that the later synthesis explains as one liberation-oriented system.

Category ontology

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (RECOMMENDED OPENING DEFINITION):

A padārtha (category or knowable referent) is a distinct kind of reality required to classify what exists, what qualifies or moves it, how it is related, and how its absence is known.

Valid knowledge and inference

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (RECOMMENDED OPENING DEFINITION):

A pramāṇa (means of valid knowledge) is a reliable causal route to true cognition, and Nyāya defends inference by grounding vyāpti (invariable concomitance) through observation, removal of hidden conditions and tarka (hypothetical reductive reasoning).

Error, self and liberation

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (CORE ARGUMENT):

Anyathākhyāti (misapprehension of a real item as elsewhere) preserves realism by treating error as a faulty synthesis of real factors, while ātman (the enduring self) explains ownership and apavarga (final cessation of suffering) ends their painful causal chain.

God and natural theology

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (CORE ARGUMENT):

Udayana's case is strongest cumulatively: the world as effect, atomic arrangement, cosmic support, linguistic convention and moral order converge upon Īśvara (the omniscient Lord) as intelligent efficient—not material—cause.

Causation and atomism

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (RECOMMENDED OPENING DEFINITION):

Asatkāryavāda or ārambhavāda (the theory that production begins a previously non-existent effect) preserves novelty, while eternal atoms preserve material continuity through ordered combination.

Major criticisms

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (CRITICISM):

Nyāya–Vaiśeṣika (the combined logic-and-category realist system) gains explanatory precision by positing universals, inherence, ultimate particularizers and God, but these completion-devices are also its principal targets of regress, redundancy and explanatory-cost objections.

Graded final verdict

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (FINAL VERDICT):

Nyāya–Vaiśeṣika (the combined logic-and-category realist system) is philosophically strongest as a coordinated realist architecture, yet its explanatory reach must be balanced against the ontological cost of primitive relations, imperceptible entities and an omniscient governor.

Answer deployment

ANSWER-GRABBING LINE — WRITE/ADAPT IN THE EXAM (ANSWER TRANSITION):

A high-scoring answer should move from exact definition to ordered argument, then test the doctrine against its strongest named rival before giving a graded verdict on explanatory gain and residual difficulty.
