

PANEL 1/12 - CORE CONCEPT: GROWTH IS A MEANS, DEVELOPMENT THE TEST

+-----+
| REAL GROWTH = sustained increase in inflation-adjusted output or income |
| DEVELOPMENT = growth + structural change + distribution + capabilities |
| + agency + resilience + environmental sustainability |
| REAL GDP -> aggregate quantity; REAL GDP PER CAPITA -> average quantity |
| Neither alone proves decent jobs, equal access, security or future welfare. |
+-----+

|
v

PANEL 2/12 - GROWTH ENGINE AND CONVERSION CHAIN

PANEL 3/12 - HDI TIMELINE, PURPOSE AND FOUR INDICATORS

+-----+	
1990: first UNDP Human Development Report	
PURPOSE: average achievement, not complete welfare	
HEALTH: life expectancy at birth	
EDUCATION: expected years schooling + mean years schooling (age 25+)	
LIVING STANDARD: GNI per capita in PPP terms	
Three dimensions; four indicators; publisher = UNDP.	
+-----+	

|
v

PANEL 4/12 - HDI DECODER, 2025 TECHNICAL NOTE

+-----+	
Linear index = (actual - minimum)/(maximum - minimum)	
LE goalposts 20-85; EYS 0-18; MYS 0-15	
GNIPC goalposts 100-75,000 constant 2021 PPP dollars	
Education index = arithmetic mean of EYS and MYS indices	
Income index uses ln values: diminishing capability return to income	
HDI = (Health x Education x Income)^(1/3): geometric mean	
+-----+	

|
v

PANEL 5/12 - HDI INTERPRETATION FIREWALL

+-----+
| VALUE = composite achievement; RANK = relative order in a stated release |
| REPORT YEAR != DATA YEAR; components may have different source vintages |
| Rank can move because peers, coverage or revisions change. |
| Limits: average hides inequality; only 3 dimensions; omits poverty, voice, |
| security, service quality, unpaid care and environmental pressure. |
| GDI/GII are bounded gender complements, not fourth HDI dimensions. |
+-----+

|
v

PANEL 6/12 - IHDI: SAME DIMENSIONS, DISTRIBUTION DISCOUNT

```
+-----+
| Atkinson-type inequality Ax for health, education and income           |
| Adjusted dimension I-adjusted = (1 - Ax) x I                           |
| IHDI = (Health-adjusted x Education-adjusted x Income-adjusted)^(1/3)  |
| Loss = 1 - IHDI/HDI; perfect equality -> IHDI = HDI; always IHDI <= HDI |
| Not a fourth dimension; gap is not a poverty rate.                     |
| UNDP limit: not association-sensitive across the same individuals.      |
+-----+
```

|
v

PANEL 7/12 - GLOBAL MPI: 3 DIMENSIONS, 10 INDICATORS

+-----+
| OPHI + UNDP; acute household-level overlapping deprivation |
| Health 1/3: nutrition 1/6; child mortality 1/6 |
| Education 1/3: years schooling 1/6; attendance 1/6 |
| Living standards 1/3: fuel, sanitation, water, electricity, housing, assets |
| each 1/18 |
| Equal dimension weights do not mean equal weights for all 10 indicators. |
+-----+

|
v

PANEL 8/12 - DUAL CUTOFF AND $MPI = H \times A$

```
+-----+
| 1st cutoff: indicator-specific deprivation; sum weights -> score c |
| 2nd cutoff:  $c \geq 1/3$  -> MPI poor |
| Current global bands: vulnerable  $1/5$  to  $<1/3$ ; severe  $c \geq 1/2$  |
|  $H$  = poor population / total population |
|  $A$  = average weighted deprivation score among the poor |
|  $MPI = H \times A$ ;  $H$  and  $A$  can move in opposite directions. |
+-----+
```

|
v

PANEL 9/12 - INDIA'S NATIONAL MPI IS AN ADAPTATION

+-----+
| Publisher/nodal institution: NITI Aayog; source: NFHS household microdata |
| 12 indicators: global spine + maternal health + bank account |
| Health: nutrition 1/6; mortality 1/12; maternal health 1/12 |
| Education: MYS 1/6; attendance 1/6 |
| Living standards: 7 indicators, each 1/21 |
| Used at national, State/UT and district levels; not interchangeable globally. |
+-----+

|
v

PANEL 10/12 - DATED INDIA EVIDENCE AND DATA-LAG RULE

+-----+
| NITI Progress Review released 17 July 2023 |
| compares NFHS-4 (2015-16) with NFHS-5 (2019-21) |
| headcount ratio: 24.85% -> 14.96%; report estimate: 13.5 crore exited |
| These are survey-period comparisons, not observations made in 2023. |
| Limits: periodic survey, repeated cross-section, household assignment, |
| district/social-group averages and indicator/cutoff sensitivity. |
+-----+

|
v

PANEL 11/12 - COMPARISON, LIMITS AND PRELIMS TRAPS

```
+-----+
| Income poverty: monetary command below line; MPI: direct overlapping deficits|
| HDI: average achievement; IHDI: inequality-adjusted achievement              |
| Global MPI: 10 indicators; India national MPI: 12 indicators                 |
| H != A; IHDI loss != MPI; GNIPC != GDPpc; rank != value                    |
| Household MPI can hide intra-household gender/age/disability inequality.     |
| Expenditure != access != quality != utilisation != outcome.                 |
+-----+
```

|
v

PANEL 12/12 - ANSWER SPINE AND QUALIFIED VERDICT

```
+-----+
| DEFINE -> select metric -> decode institution/unit/formula/threshold |
| -> attach report year + data year -> calculate/compare components |
| -> explain productivity/jobs/services/distribution/environment mechanism |
| -> qualify averages, cutoff sensitivity, household unit, lag and causation |
| -> prescribe productive inclusion + quality capabilities + resilience |
| VERDICT: use a dated, disaggregated dashboard; no single index is development. |
+-----+
```
