AGRICULTURAL TECHNOLOGY MISSIONS

Mission-mode policy | status map | diffusion | evaluation

Economy Topic 29 | Current-status cutoff: 10 September 2026

01 MISSION-MODE TEST

DEFINED BOTTLENECK -> TIME-BOUND OUTCOME
|
COORDINATED INSTITUTIONS + COMPLEMENTS
|
ADOPTION -> OUTCOME -> FEEDBACK
|
CONTINUE / SCALE / REDESIGN / SUNSET

Trap: a mission title does not prove mission-mode design.
Mission != scheme != programme.

02 RESULTS CHAIN AND GAMING

INPUT -> ACTIVITY -> OUTPUT -> ADOPTION
-> OUTCOME -> IMPACT

Allocation != expenditure
Reach != repeated use
Yield != net income
National trend != attributable impact

Guardrail: pair area, kits and assets with persistence, returns, inclusion and ecological indicators.

03 LAB-TO-LAND-TO-MARKET

DARE / ICAR: research, varieties, breeder material
v
KVK: on-farm testing, FLD/CFLD, diagnostics
v
ATMA / STATE: SREP, extension, seasonal delivery
v
SEED / NURSERY / CHC / CREDIT / INSURANCE
v
FARMER -> FPO -> PROCESSOR / MARKET -> FEEDBACK

Weakest complement can defeat a strong technology.

04 DIFFUSION AND ADOPTION

Demonstration -> lowers information and trust costs
SRR -> replacement with quality/certified seed
VRR -> movement towards newer varieties
Cluster -> extension + aggregation economies
Value chain -> input, service, buyer and price links

ADOPT WHEN:
expected additional return
> finance + learning + transition + failure + market risk

Test repeated use beyond subsidised demonstration plots.

05 OILSEEDS AND OIL PALM

TMO May 1986 [HISTORICAL]
-> ISOPOM 2004 [SUBSUMED]
-> NMOOP 2014-15 [SUBSUMED]
-> NFSM-Oilseeds [SUBSUMED]
-> NMEO-OS [CURRENT 2024-25–2030-31]

NMEO-OS: Rs 10,103.38 cr; clusters, seed hubs, specialised stores, demonstrations and processors.

NMEO-OP approved phase: 2021-22–2025-26.
FY 2026-27 OOMF retains targets; separate extension order was not located. Annual oilseed != oil palm.

06 FOOD, PULSES AND MILLETS

NFSM launch, October 2007:
rice +10 MT | wheat +8 MT | pulses +2 MT by 2011-12

NFSNM [CURRENT FY 2026-27] - seven components:
rice | wheat | pulses | maize/barley | Shree Anna
commercial crops | seed components (former SMSP)

Pulses Mission [CURRENT 2025-26–2030-31]:
Rs 11,440 cr; 350 lakh t; 310 lakh ha; 1,130 kg/ha.

Millets: current Union mission label is NFSNM Sub-Mission on Nutri-Cereals.

07 SUSTAINABILITY MISSIONS

NMSA under NAPCC [MISSION CONTINUES]
Original: RAD | OFWM | SHM

Current delivery is distributed through PM-RKVY:
RAD | PDMC | SH&F | PKVY | agroforestry | SMAM | CDP

NMNF first approval: 25 Nov 2024
Rs 2,481 cr | 15,000 clusters | 7.5 lakh ha
| 1 crore farmers | first phase to March 2026

Later FY 2026-27 / 2030-31 expansion targets were tentative and approval-qualified at the cutoff.

08 HORTICULTURE AND ALLIED

NHM 2005-06 -> MIDH from 2014-15

MIDH May 2026 [CURRENT]:
NHM | HMNEH | NHB | CDB | NBM | CIH

Mechanism:
planting material -> production -> post-harvest
-> cold chain / processing -> market -> net income

NBM is a current MIDH sub-scheme.
NBHM approved phase was extended only to 2025-26; no later extension was located.

09 NMAET AND EXTENSION STATUS

Classic NMAET, 2014 [HISTORICAL UMBRELLA]:
SMAE | SMSP | SMAM | SMPPQ

CURRENT SUCCESSOR MAP
SMAE / extension -> Krishonnati + revised ATMA
SMSP -> NFSNM Seed Components
SMAM -> PM-RKVY component
plant protection / quarantine -> continuing regulatory-programme system

Do not reproduce the old four-part umbrella as the current administrative map.

10 COTTON, JUTE AND NEW LABELS

Technology Mission on Cotton, Feb 2000 [HISTORICAL]:
research | transfer | markets | ginning/pressing

Mission for Cotton Productivity [CURRENT]:
2026-27–2030-31 | Rs 5,659.22 cr
Kapas Kranti | Kapas Kanti | Navya Fibre

Jute Technology Mission [HISTORICAL/CLOSED]:
research | transfer/retting | raw-jute market | industry

High-Yielding Seeds Mission: Budget 2025-26 announcement; standalone approval/outlay not located.

11 FAILURE AND EVALUATION

FAILURE CHANNELS
fragmentation | target gaming | exclusion
market mismatch | ecological rebound | weak repair

MISSION SCORECARD
1. additionality against a counterfactual
2. adoption persistence and net income
3. regional, gender and smallholder equity
4. convergence and weakest-link ownership
5. public cost and ecological resource cost
6. learning, mainstreaming and sunset decision

12 UPSC ANSWER SPINE

M Map mission / scheme / programme
I Identify bottleneck and dated status
S Specify results chain and institutions
S Show named mission evidence
I Investigate adoption, equity and ecology
O Observe outcomes and additionality
N Name verdict and next institutional step

Cross-links:
Digital Agriculture -> Topic 27
Sustainable inputs / soil / water -> Topic 14

Final verdict: continue | scale | redesign | mainstream | close with transition.
