

ECONOMICS OF ANIMAL REARING

Livestock • Dairy • Poultry • Fisheries

Evidence and status cutoff: 10 September 2026

01

BOUNDARY + DATA

Rearing ≠ processing

Census stock ≠ ISS flow

2019 stock; 2024-25 output

Date source, unit and status

02

HOUSEHOLD PORTFOLIO

1

Recurring cash + asset buffer

2

Nutrition + mixed farming

3

Women: work ≠ control

4

Risk can remain correlated

03

NET-MARGIN ENGINE

01

Revenue + by-products + asset change

02

Minus feed, labour, health, mortality

03

04

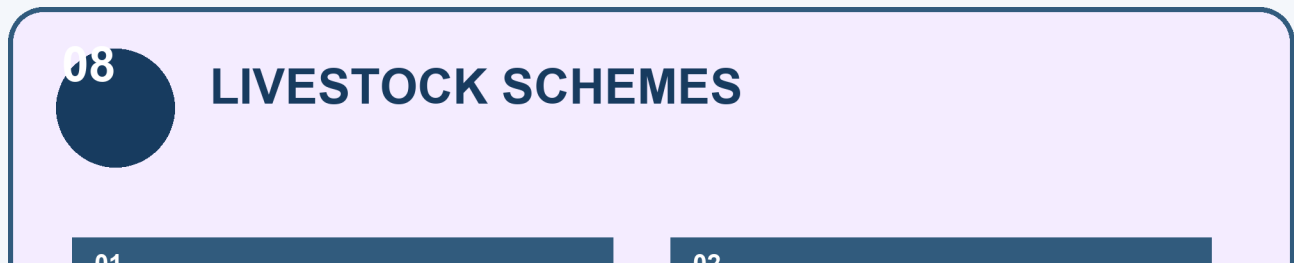

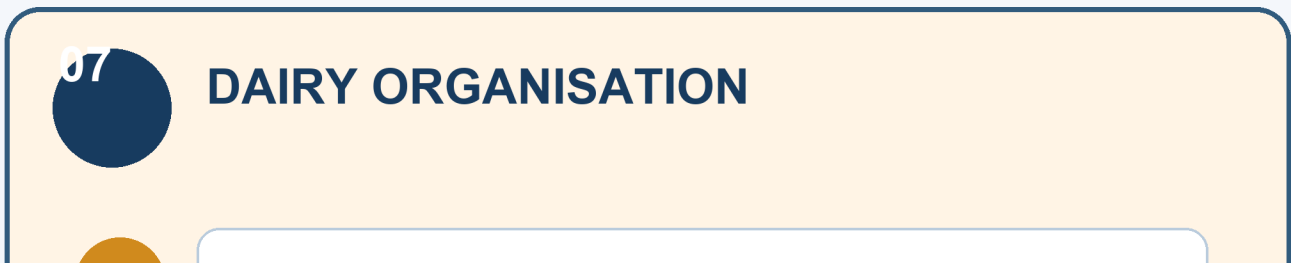

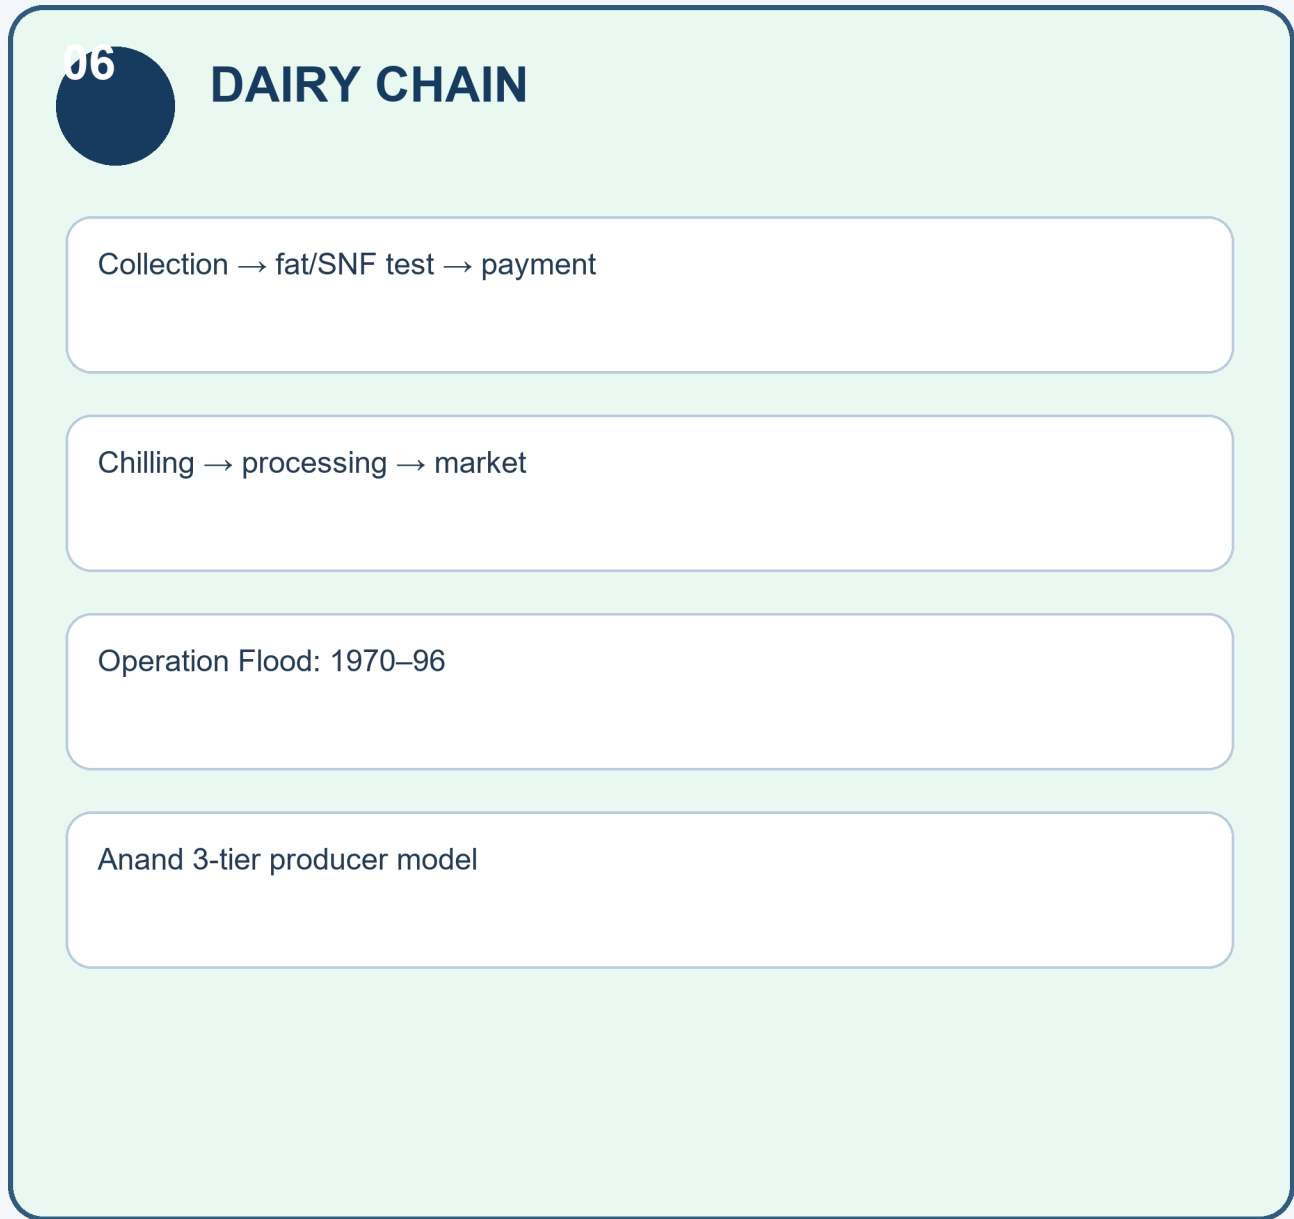

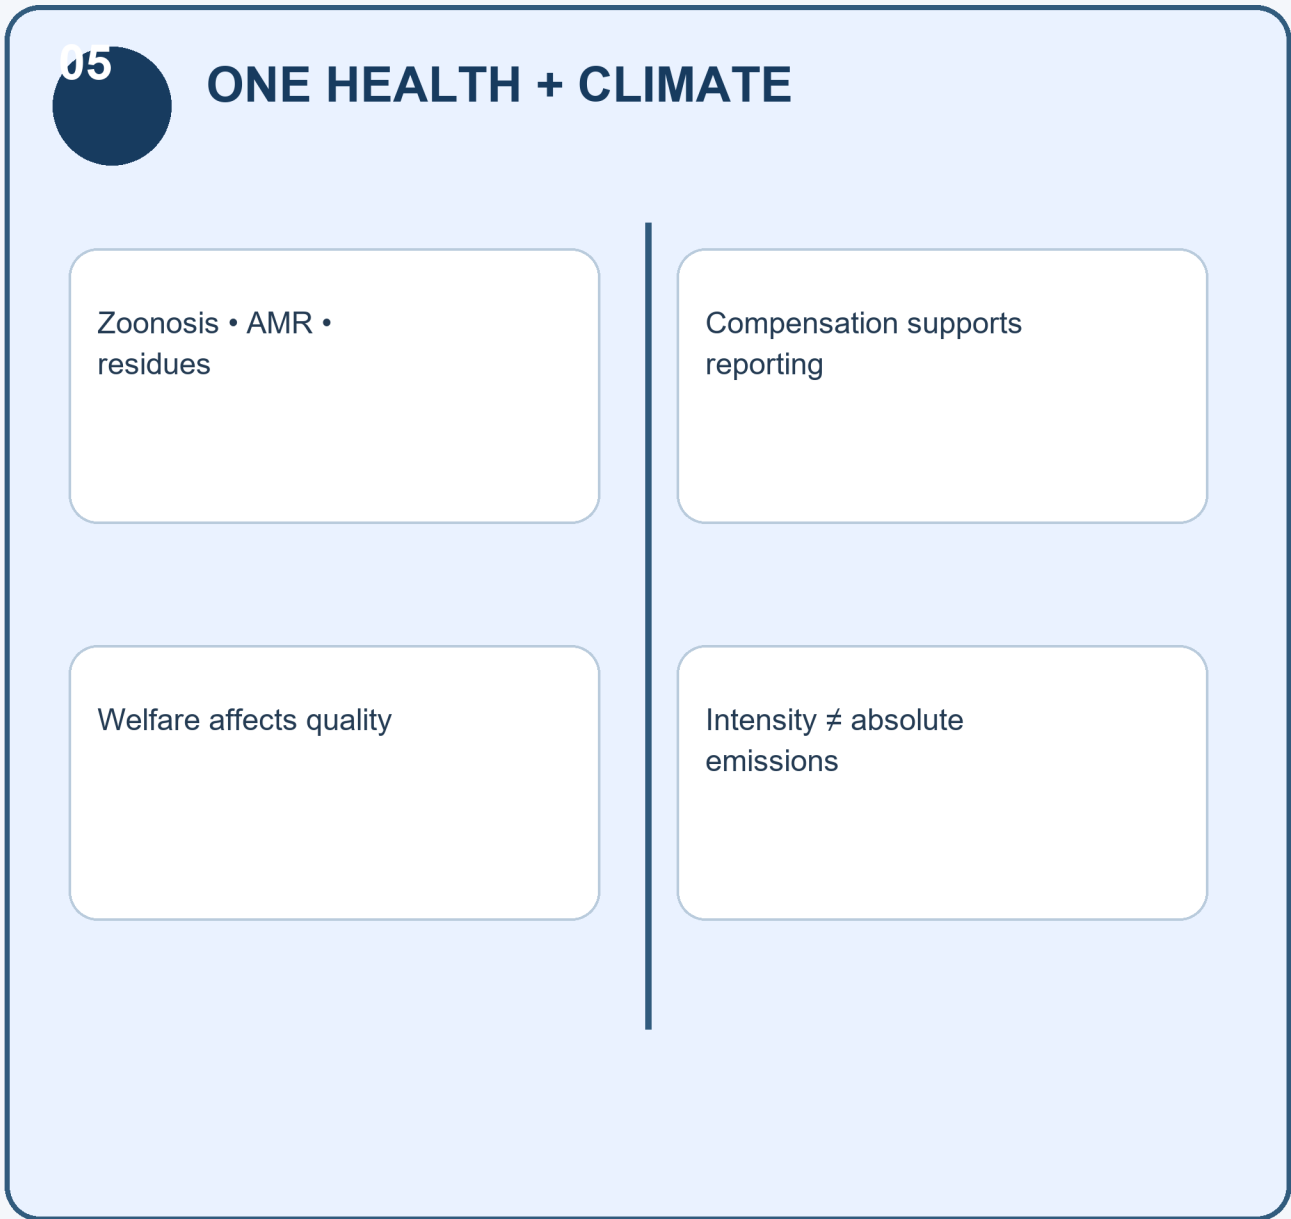

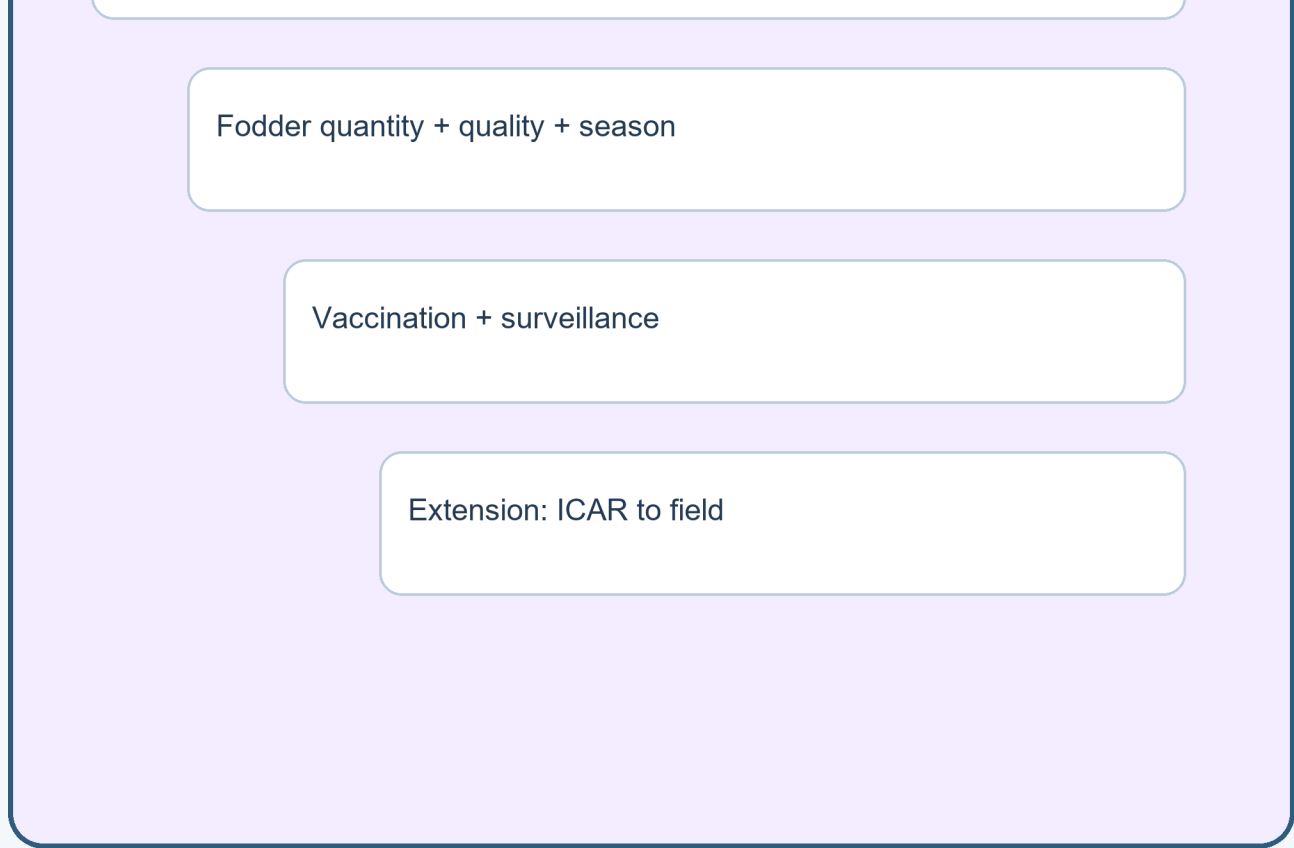

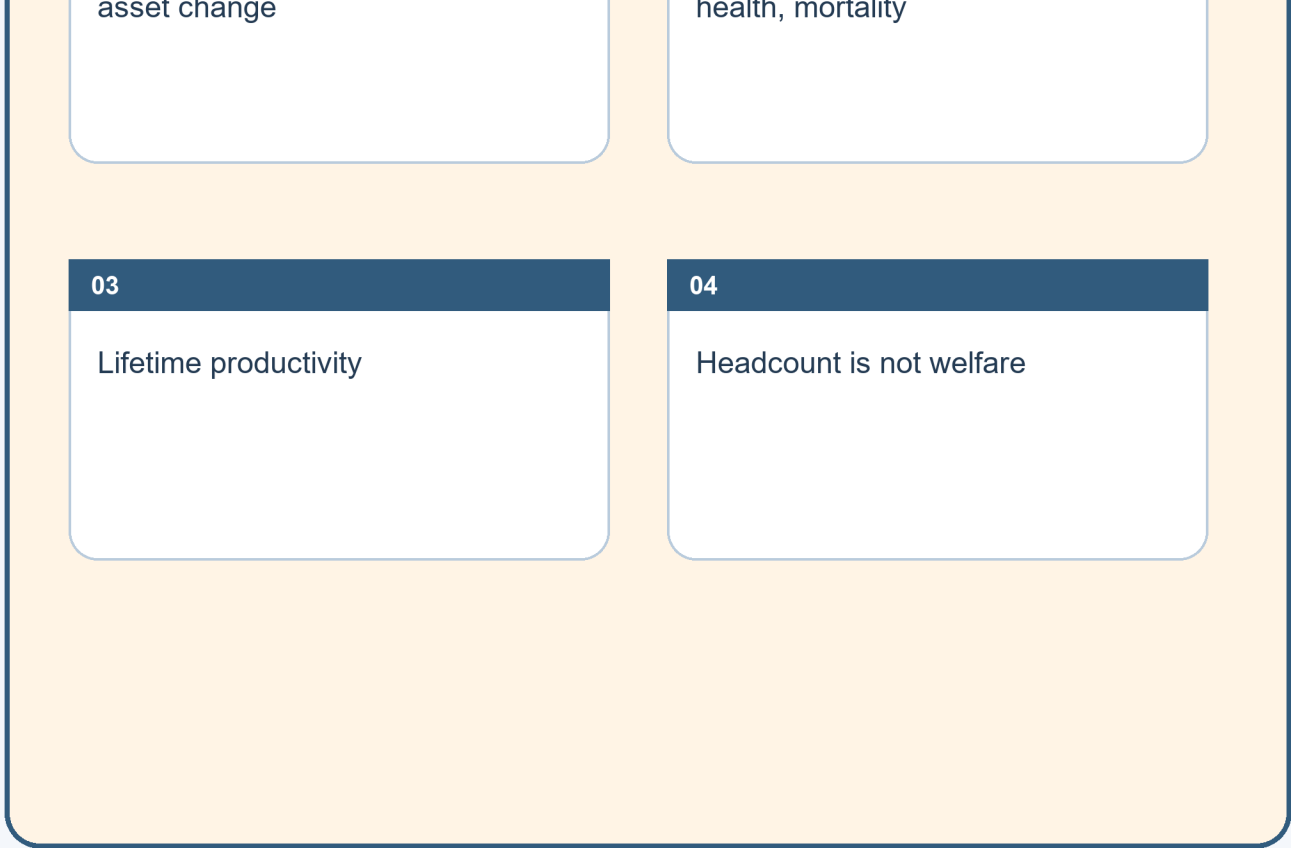

04

INPUT COMPLEMENTS

Suitable genetics × environment

Fodder quantity + quality + season

Vaccination + surveillance

07

DAIRY ORGANISATION

1

Cooperative | producer company

2

Private | informal

3

Market power + buyer choice

4

Producer share, not retail price

08

LIVESTOCK SCHEMES

01

RGM — Rashtriya Gokul Mission

02

NLM — National Livestock Mission

03

LHDCP — health and disease control

04

Dairy Development + IDF/AHIDF

09

POULTRY + OTHER STOCK

Layer ≠ broiler

Integration reallocates risk

Small ruminants + commons

Piggery + biosecurity

10

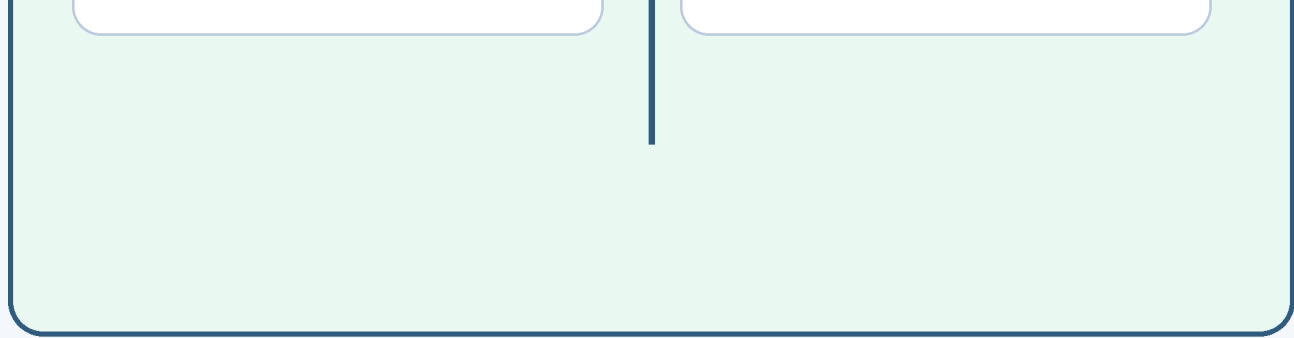

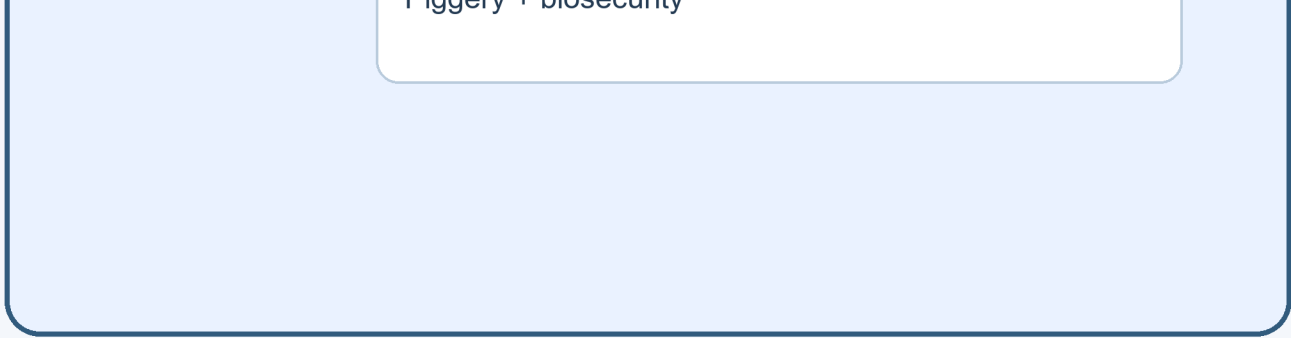

FISHERIES BIOECONOMICS

Capture ≠ culture

Race to fish → rent dissipation

MSY ≠ MEY ≠ equity

RAS biofilter ≠ full purification

11

FISHERIES POLICY + VALUE

DoF | CAA | NABARD/NCDC | MPEDA

PMMSY | FIDF | KCC | PM-MKSSY

Cold chain + SPS + traceability

Exports ≠ fisher income

12

ANSWER SPINE

1

Define → date evidence → margin

2

Institution → delivery → distribution

3

One Health + welfare + ecology

4

Value per healthy animal/stock

FEED + HEALTH + SUITABLE GENETICS + INFRASTRUCTURE + FAIR MARKETS + SUSTAINABILITY

Policy target: net value per healthy animal and sustainable aquatic stock
— not headcount or output alone.
