

COMPLETE LEARNING SESSION

Interdisciplinary Political Analysis - Complete Topic Package

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

LEARNING PATH

Deterministic fallback visual: move from precise concepts through argument and critique to exam application.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / SESSION INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Interdisciplinary Political Analysis - Complete Topic Package	5

Interdisciplinary Political Analysis - Complete Topic Package

Subject: Political Theory **Section:** Subject-wide Syllabus **Target stages:** UPSC Prelims and General Studies Mains only **Primary ownership:** GS-II conceptual foundations **Cross-application:** GS-I, GS-IV and Essay only where genuinely relevant **Classification firewall:** Political Theory is a GS/Prelims foundation, not a separate UPSC paper. **Source policy:** complete Basic owner first; Advanced enrichment only after practice.

DEEP-REVIEW LEARNING CONTRACT

- **Core scope:** historical, economic, sociological, psychological and philosophical analysis.
- **Source rule:** canonical Basic/Core, Advanced, assembled package, official GS mapping, routed Prelims/GS ledgers and OCR-searchable local books were reconciled before repair.
- **PYQ rule:** only directly verified Prelims/GS Mains questions may be owned; when none exists, original GS practice is labelled honestly.
- **Writing rule:** claim -> named evidence/example -> analysis -> qualification/link to demand.
- **Advanced rule:** OPTIONAL ADVANCED DEPTH means enrichment beyond a core GS answer and never a separate-paper classification.

BASIC LEARNING SESSION

SESSION 1 - The Integrated Political Question

Subject: Political Theory | **Tier:** Must-Do (foundation) | **Exam relevance:** GS-II (Polity & Governance) conceptual foundation; GS-II conceptual foundation. **Core area:** What history, economics, sociology, psychology and philosophy each contribute to political analysis without replacing political theory itself. **Grounded in:** O. P. Gauba, *An Introduction to Political Theory*, Fifth Edition (2009), Ch.5, PDF pp.135-146. **Source edition/cutoff:** Fifth Edition (2009); no post-2009 fact is assumed unless independently dated and tagged CURRENT:. **FACT:** = source-grounded | **ANALYSIS:** = analytical inference/synthesis | **CURRENT:** = dated current anchor | **WRONG:** = trap/misattribution. *Companion:* Political-Theory/advanced/09_Interdisciplinary-Political-Analysis.md.

1. One-screen conceptual map

```
POLITICAL QUESTION
|
+--> HISTORY --> roots, sequences, verification over time
+--> ECONOMICS --> production, distribution, conflict over resources
+--> SOCIOLOGY --> groups, institutions, status, political culture
+--> PSYCHOLOGY --> attitudes, personality, propaganda, leadership
+--> PHILOSOPHY --> concepts, values, ends, moral evaluation
|
v
INTEGRATED POLITICAL ANALYSIS
|
+--> explains facts better
+--> tests claims against wider evidence
+--> keeps politics as the main focus
```

FACT: Gauba defines an interdisciplinary approach as relying on more than one discipline for a given problem and drawing on related disciplines where phenomena overlap. (PDF p.136)

2. Why this topic matters

- **FACT:** Political science studies politics as a social process, so it must use findings, theories and models from other social sciences where they illuminate political phenomena. (PDF pp.136-137)
- **FACT:** Interdisciplinary inquiry widens perspective, helps verify political claims through other social sciences, and also enables political science to contribute back to them. (PDF p.137)

- **FACT:** The chapter argues that single-discipline approaches are partial, whereas an interdisciplinary approach seeks an integrated view of politics. (PDF p.146)
- **ANALYSIS:** For UPSC, this topic prevents shallow answers that explain democracy, state action or mass behaviour through only law, only morality or only economics.

2A. Origin and timeline of interdisciplinary political analysis

FACT: The dated spine below is taken directly from the routed pages (gauba PDF pp.135-146) rather than from earlier notes. **ANALYSIS:** Chronology matters here because a Political Theory answer that names a position without the work or the period behind it reads as assertion; naming the anchor converts the same sentence into evidence.

Dated rail drawn from the routed source pages (each row reproduces a name, life-date, work or event exactly as the local source records it):

Anchor	Name, work or event	What the source attaches to it
1798-1857	FACT: Auguste Comte	Auguste Comte (1798- 1857), a French philosopher, traced the foundation of science to 'positive philosophy'
1823-92	FACT: Edward Augustus Freeman	Thus, John Seeley (1834-95) observes: 'History without political science has no fruit; political science without history has no root!' Edward Augustus Freeman (1823-92) has gone to the extent of saying: 'History is past politics, politics is present history.' Today, such statements appear to be an ...
1834-95	FACT: John Seeley	Thus, John Seeley (1834-95) observes: 'History without political science has no fruit; political science without history has no root!' Edward Augustus Freeman (1823-92) has gone to the extent of saying: 'History is past politics, politics is present history.' Today, such statements appear to be an ...
1855-1931	FACT: Franklin Giddings	Franklin Giddings (1855-1931), another American sociologist of repute, encouraged his students to undertake empirical studies of voting behaviour in the early 1920s
1858-1917	FACT: Emile Durkheim	The famous sociologists like Max Weber (1864-1920), Robert Michels (1876-1936), Vilfredo Pareto (1848 - 1923) and Emile Durkheim (1858-1917) turned to political analysis as a part of their sociological inquiry
1864-1920	FACT: Max Weber	The famous sociologists like Max Weber (1864-1920), Robert Michels (1876-1936), Vilfredo Pareto (1848 - 1923) and Emile Durkheim (1858-1917) turned to political analysis as a part of their sociological inquiry
1870-1957	FACT: Arther Bentley	Arther Bentley (1870-1957), who was trained as a sociologist in Europe, eventually turned out to be a major intellectual force in political science in America
1876-1936	FACT: Robert Michels	The famous sociologists like Max Weber (1864-1920), Robert Michels (1876-1936), Vilfredo Pareto (1848 - 1923) and Emile Durkheim (1858-1917) turned to political analysis as a part of their sociological inquiry
1891-1937	FACT: Antonio Gramsci	Antonio Gramsci (1891-1937), an Italian Marxist and forerunner of neo-Marxism, has particularly evolved a framework for the analysis of the bourgeois state (i.e. the state under capitalist system) by identifying the structures of domination therein
1902-78	FACT: Harold Lasswell	Similar orientations influenced the work of Harold Lasswell (1902-78) and his disciples in their study of the influence of psychological factors on the appeal of extremist movements particularly, and on political behaviour generally

Anchor	Name, work or event	What the source attaches to it
1968	FACT: Behaviour' in the International Encyclopaedia of the Social Sciences	As Heinz Eulau, in his article on 'Political Behaviour' in the International Encyclopaedia of the Social Sciences (1968), has elaborated: "As man's political behaviour is only one aspect of his total behaviour as a social being, political behaviour analysis must be interdisciplinary; it cannot ...
1969	FACT: Martin Lipset, in his Introduction to Politics and the Social Sciences	As Seymour Martin Lipset, in his Introduction to Politics and the Social Sciences (1969) has illustrated:

ANALYSIS: Dating discipline: use only the anchors in this rail. Do not attach a year to a name the source leaves undated, and do not convert a 2009-edition chronology into a claim about later scholarship.

Answer-grabbing line: Political science studies politics as a social process, so it must use findings, theories and models from other social sciences where they illuminate political phenomena. (PDF pp.136-137)

Must-write keywords: Subject;; Tier;; Exam relevance;; Core area;; Grounded in;; Source edition/cutoff;; Integrated Political.

Claim -> named evidence/example -> analysis -> qualification demonstration

Claim: Political science studies politics as a social process, so it must use findings, theories and models from other social sciences where they illuminate political phenomena. (PDF pp.136-137) **Named evidence/example:** Interdisciplinary inquiry widens perspective, helps verify political claims through other social sciences, and also enables political science to contribute back to them. (PDF p.137) **Analysis:** Read together, these propositions show how the integrated political question shapes interdisciplinary political analysis rather than serving as a detachable list of names. **Qualification:** For UPSC, this topic prevents shallow answers that explain democracy, state action or mass behaviour through only law, only morality or only economics.

SESSION 2 - Definitions, Argument Spine and Purposeful Borrowing

3. Essential definitions

Term	Exam-ready meaning
FACT: Discipline	A branch or field of learning. (PDF p.136)
FACT: Interdisciplinary approach	Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved. (PDF p.136)
FACT: Empirical approach	Focus on observable facts, explanation, correlation, generalization and prediction. (PDF p.138)
FACT: Normative approach	Focus on values, prescriptions and what ought to be done. (PDF p.138)
FACT: Political economy	Analysis of political aspects of economic policy-making and of the mutual impact of economic forces and political decisions. (PDF p.143)
FACT: Political sociology	Study of political institutions, processes and ideologies in relation to social structures and modes of thought. (PDF p.144)
FACT: Political psychology	Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda. (PDF p.145)
FACT: Political philosophy	Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems. (PDF p.146)

4. Core argument / chapter spine

1. FACT: Gauba begins by treating social sciences as related disciplines dealing with common human problems, which makes interdisciplinarity especially suitable to politics. (PDF p.136)
2. FACT: He insists that political inquiry should borrow from other disciplines purposefully, always to understand political problems, not randomly for their own sake. (PDF p.137)
3. FACT: Empirical orientation, behavioural analysis and systems analysis pushed political science toward other social sciences because real politics cannot be grasped by ideal-state speculation or formal institutions alone. (PDF pp.138-139)
4. FACT: Political science therefore uses data, theories and models from history, economics, sociology, psychology and philosophy. (PDF pp.139-146)
5. FACT: Yet the conclusion is not merger into one master science; the integrated approach keeps politics central while using all relevant disciplines for verification and understanding. (PDF p.146)

Visual-first recall

DEFINITIONS, ARGUMENT SPINE AND PURPOSEFUL BORROWING

- |
- [1] Term - Exam-ready meaning
- v
- [2] Discipline - A branch or field of learning. (PDF p.136)
- v
- [3] Interdisciplinary approach - Use of more than one discipline to study a problem,...
- v
- [4] Empirical approach - Focus on observable facts, explanation, correlation,...

Answer-grabbing line: Term - Exam-ready meaning

Must-write keywords: Discipline; Interdisciplinary approach; Empirical approach; Normative approach; Political economy; Political sociology; Political psychology.

Claim -> named evidence/example -> analysis -> qualification demonstration

Claim: Term - Exam-ready meaning **Named evidence/example:** Discipline - A branch or field of learning. (PDF p.136) **Analysis:** Read together, these propositions show how definitions, argument spine and purposeful borrowing shapes interdisciplinary political analysis rather than serving as a detachable list of names. **Qualification:** Normative approach - Focus on values, prescriptions and what ought to be done. (PDF p.138)

SESSION 3 - Boundaries, Thinkers and Disciplinary Autonomy

5. Essential distinctions

- FACT: **Interdisciplinary vs random borrowing:** Gauba warns that expansion across disciplines must be purposeful and well-conceived. (PDF p.137)
- FACT: **Empirical vs normative:** empirical inquiry asks what is; normative inquiry asks what ought to be. (PDF p.138)
- FACT: **Political science vs political philosophy:** scientific-behavioural studies help find facts and tools, while political philosophy helps determine goals of public policy. (PDF pp.145-146)
- WRONG: **Interdisciplinary = dissolving political theory into economics or sociology.** Gauba rejects this; the approach integrates relevant disciplines but does not merge them into one master science. (PDF p.146)
- ANALYSIS: **Governance boundary:** governance explains delivery mechanisms; this topic uses governance-like evidence only when it sharpens a political concept.
- ANALYSIS: **Economy boundary:** economics explains market and production mechanisms; political theory uses it to understand conflict, welfare, class and policy choice, not to replace economics as a discipline.

6. Thinkers and positions

- FACT: **Aristotle:** the classical approach treated politics as the "master science" and did not clearly separate normative from empirical analysis. (PDF p.146)
- FACT: **Marx and Engels:** Gauba credits them with an early systematic interdisciplinary approach by locating political behaviour in socio-economic factors such as production and class structure. (PDF p.137)
- FACT: **Heinz Eulau:** political behaviour analysis must be interdisciplinary because political action occurs in a wider social, cultural and personal context. (PDF p.139)
- FACT: **Seymour Martin Lipset:** political development cannot be studied without social mobilization, value change, kinship patterns, caste and class relations. (PDF p.140)
- FACT: **Auguste Comte:** science itself is rooted in philosophy; Gauba uses Comte to question any rigid opposition between science and philosophy. (PDF p.145)

Answer-grabbing line: Interdisciplinary vs random borrowing: Gauba warns that expansion across disciplines must be purposeful and well-conceived. (PDF p.137)

Must-write keywords: Interdisciplinary vs random borrowing;; Empirical vs normative;; Political science vs political philosophy;; Interdisciplinary = dissolving political theory into economics or sociology;; Governance boundary;; Economy boundary;; Aristotle:.

Claim -> named evidence/example -> analysis -> qualification demonstration

Claim: Interdisciplinary vs random borrowing: Gauba warns that expansion across disciplines must be purposeful and well-conceived. (PDF p.137) **Named evidence/example:** Empirical vs normative: empirical inquiry asks what is; normative inquiry asks what ought to be. (PDF p.138) **Analysis:** Read together, these propositions show how boundaries, thinkers and disciplinary autonomy shapes interdisciplinary political analysis rather than serving as a detachable list of names. **Qualification:** Interdisciplinary = dissolving political theory into economics or sociology. Gauba rejects this; the approach integrates relevant disciplines but does not merge them into one master science. (PDF p.146)

SESSION 4 - Illustrations and the Five-Discipline Matrix

7. Illustrative examples

- FACT: Gauba says a political scientist assessing whether democracy will be sustained may need data on literacy, income distribution, ownership patterns, religious attitudes, family structure and rural-urban composition. (PDF p.139)
- FACT: Labour-management relations or crowd psychology should be studied politically only when they illuminate their impact on politics. (PDF p.137)
- FACT: Political development requires understanding social mobilization and value change, not merely constitutions or legal forms. (PDF p.140)
- FACT: Political communication, propaganda, charismatic leadership and public opinion formation draw directly on political psychology. (PDF pp.144-145)
- ANALYSIS: A good UPSC answer on welfare politics can therefore move from economic scarcity, to class/group conflict, to mass attitudes, and finally to philosophical evaluation of justice.

8. Comparison table

Discipline	What it mainly contributes	Typical political-theory use	Limit if used alone
FACT: History	Verification through past events, sequences and long-term causation. (PDF p.141)	Testing a theory about state formation or democracy against historical cases.	WRONG: May become mere chronicle if not politically interpreted.
FACT: Economics	Insight into production, distribution, exchange, scarcity and economic conflict. (PDF pp.142-143)	Understanding welfare state claims, class conflict, policy choice and political economy.	WRONG: Cannot by itself settle legitimacy or justice.
FACT: Sociology	Group life, institutions, status, attitudes, participation and political culture. (PDF pp.143-144)	Explaining political socialization, cleavage, leadership and legitimacy.	WRONG: Risks reducing politics to social structure alone.
FACT: Psychology	Motives, attitudes, personality, propaganda and leadership appeal. (PDF pp.144-145)	Explaining extremist appeal, public opinion and charismatic authority.	WRONG: Cannot alone explain institutions or economic conflict.
FACT: Philosophy	Conceptual clarification, values, moral foundations and ends of public life. (PDF pp.145-146)	Clarifying liberty, equality, obligation, justice and the goals of policy.	WRONG: Without empirical grounding, it can become purely speculative.

Answer-grabbing line: Gauba says a political scientist assessing whether democracy will be sustained may need data on literacy, income distribution, ownership patterns, religious attitudes, family structure and.

Must-write keywords: History; Economics; Sociology; Psychology; Philosophy; Illustrations; Five-Discipline Matrix.

Claim -> named evidence/example -> analysis -> qualification demonstration

Claim: Gauba says a political scientist assessing whether democracy will be sustained may need data on literacy, income distribution, ownership patterns, religious attitudes, family structure and rural-urban composition. (PDF p.139)

Named evidence/example: Labour-management relations or crowd psychology should be studied politically only when they illuminate their impact on politics. (PDF p.137) **Analysis:** Read together, these propositions show how illustrations and the five-discipline matrix shapes interdisciplinary political analysis rather than serving as a detachable list of names. **Qualification:** Political development requires understanding social mobilization and value change, not merely constitutions or legal forms. (PDF p.140)

SESSION 5 - Trap Repair, Cross-Links, Revision and Sources

9. UPSC traps and corrections

- WRONG: **"Interdisciplinary study means political science has lost its identity."** -> FACT: Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146)
- WRONG: **"Empirical political science made philosophy irrelevant."** -> FACT: Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)
- WRONG: **"History and political science are the same thing."** -> FACT: Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF p.141)
- WRONG: **"One discipline can fully explain politics."** -> FACT: The chapter concludes that philosophical, historical, legal, economic, sociological and psychological approaches are partial when used alone. (PDF p.146)

10. Cross-links and boundaries

- FACT: Use `Political-Theory/advanced/09_Interdisciplinary-Political-Analysis.md` for the evidence-routing matrix and direct-book reconstruction of the chapter.
- FACT: Use `Political-Theory/00_Master-Framework.md` to place this topic beside 01, 08 and later state, power and justice topics in the wider module architecture.
- FACT: Use `Political-Theory/README.md` for the numbered topic map and dated-source discipline for the whole folder.
- ANALYSIS: For economic mechanisms, refer outward to the Economy module in prose rather than reproducing technical economics here.
- ANALYSIS: For delivery and institutional performance, refer outward to the Governance module in prose rather than turning this topic into an administrative note.

11. Revision capsule / answer spine

ANALYSIS: **Answer spine:** Politics is an open, socially embedded process; therefore political analysis must borrow evidence and models from history, economics, sociology, psychology and philosophy, while still keeping the political question at the centre.

- FACT: Define interdisciplinarity as purposeful use of more than one discipline. (PDF p.136)
- FACT: Show why empirical orientation, behaviouralism and systems analysis pushed political science outward. (PDF pp.138-139)
- FACT: Explain the contribution of each major discipline in one line. (PDF pp.141-146)
- FACT: End with Gauba's conclusion: single-discipline approaches are partial; integration is necessary, but merger is not. (PDF p.146)
- ANALYSIS: In Mains, move from **evidence** -> **explanation** -> **normative evaluation**.
- ANALYSIS: In Prelims, remember the paired terms: political economy, political sociology, political psychology, political philosophy.

12. Sources, metadata and tags

- FACT: Primary source used directly: Gauba, Ch.5, especially PDF pp.136-146, with page anchors preserved in the supplied text extraction.
- FACT: The chapter's institutional references to behaviouralism, post-behaviouralism and twentieth-century scholarship are book-period conceptual discussions, not present-day survey findings. (PDF pp.138-146)
- ANALYSIS: This file paraphrases rather than quotes; examples are used only to make the chapter exam-usable.
- FACT: Companion file created in this folder:
`Political-Theory/advanced/09_Interdisciplinary-Political-Analysis.md`.

Must-write keywords: "Interdisciplinary study means political science has lost its identity."; "Empirical political science made philosophy irrelevant."; "History and political science are the same thing."; "One discipline can fully explain politics."; Answer spine; evidence; explanation.

Claim -> named evidence/example -> analysis -> qualification demonstration

Claim: "Interdisciplinary study means political science has lost its identity." -> Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146) **Named evidence/example:** "Empirical political science made philosophy irrelevant." -> Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146) **Analysis:** Read together, these propositions show how trap repair, cross-links, revision and sources shapes interdisciplinary political analysis rather than serving as a detachable list of names. **Qualification:** "History and political science are the same thing." -> Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF p.141)

SESSION 6 - Anthropology, Law and Geography

13. Extending the discipline list: anthropology, law and geography

- **ANALYSIS:** Gauba's chapter (PDF pp.141-146) foregrounds history, economics, sociology, psychology and philosophy. A complete interdisciplinary answer should also be able to place anthropology, law and geography on the same map, since these are commonly tested alongside the five above:
- **Political anthropology:** studies political organisation in small-scale, kinship-based or non-state/pre-state societies (lineage systems, tribal councils, chieftaincy) - contributes evidence that authority and order can be organised without a centralised state, which sharpens rather than dissolves the concept of the state used in Political-Theory/basic/10_State-Civil-Society-Nation-and-Internationalism.md.
- **Claim -> evidence -> significance -> limit:** Claim: political order does not require a Weberian state. Evidence: kinship/lineage-based dispute-resolution and authority structures documented across many non-state societies. Significance: tests and refines political theory's core concepts (authority, legitimacy, sovereignty) against non-state cases rather than assuming the modern state is the only unit of analysis. Limit: findings from small-scale societies cannot be mechanically transplanted onto large, complex modern states.
- **Law/jurisprudence as a data source:** distinct from the legal *approach* to studying politics (already covered under Section 8's traditional approaches), the interdisciplinary use of law supplies political analysis with constitutional text, statutes and judicial reasoning as primary evidence of how authority is formally allocated and constrained.
- **Claim -> evidence -> significance -> limit:** Claim: legal materials are indispensable evidence for political analysis of institutions and rights. Evidence: constitutional provisions and case law define formal powers, limits and remedies. Significance: grounds political claims about institutional design in verifiable text rather than impression. Limit: legal text alone cannot explain informal power, bargaining or non-compliance - hence the need for sociology/psychology alongside it.
- **Political geography:** studies the spatial dimension of politics - territory, boundaries, resource distribution, federalism and regional/electoral geography.
- **Claim -> evidence -> significance -> limit:** Claim: where power and resources are located in space shapes political conflict and institutional design. Evidence: boundary disputes, resource-rich/resource-poor regional imbalance, and federal arrangements responding to territorial diversity. Significance: explains regionalism,

federalism and centre-state or inter-state conflict that a purely institutional or economic account would miss. Limit: geography constrains but does not determine political outcomes; it must be combined with sociology (identity) and economics (resource conflict) rather than treated as destiny.

Significance: tests and refines political theory's core concepts (authority, legitimacy, sovereignty) against non-state cases rather than assuming the modern state is the only unit of analysis. Limit: findings from small-scale societies cannot be mechanically transplanted onto large, complex modern states.

SESSION 7 - Borrowed Models and Named Reductionisms

14. Borrowed models and the limits of reductionism (named)

- FACT: Gauba names specific borrowed models political science has drawn from other disciplines: **elite theory**, **base-superstructure analysis** (from Marxian political economy), **structural-functionalism** (from sociology/anthropology), **problem-solving/decision models** (from psychology and organisational theory), and market/bargaining analogies (from economics). (PDF pp.139-140)
- FACT: **David Easton's political-system framework** is itself a borrowed model - Gauba notes it imports the "system" concept from sociology/general systems theory into political science, treating politics as inputs-conversion-outputs-feedback (see Political-Theory/basic/08_Approaches-Behaviouralism-and-Post-Behaviouralism.md Section 15 for the full reconstruction). (PDF p.140)
- FACT: **Harold Lasswell's problem-solving model** is cited by Gauba as an example of psychology and decision-theory feeding directly into political analysis, reframing political inquiry around identifying problems, generating alternatives and evaluating outcomes. (PDF p.140)
- ANALYSIS: **Reductionism, named precisely:** each borrowed model risks a specific reductionism if used alone -
- *Economic reductionism* (treating all politics as market bargaining or class interest) misses legitimacy, identity and normative claims that are not reducible to material interest.
- *Psychological reductionism* (treating all politics as individual attitude/personality) misses structural, institutional and economic constraints that operate independently of any single actor's psychology.

- *Sociological/functional reductionism* (treating all politics as social-structure maintenance) risks a conservative bias that under-explains conflict, agency and deliberate institutional change.
- *Legal reductionism* (treating politics as fully captured by formal rules) misses informal power and non-compliance.
- ANALYSIS: Gauba's own corrective applies to each: borrowing must remain purposeful and politics-centred; a borrowed model sharpens political analysis only so long as the political question, not the donor discipline's own priorities, stays in view. (PDF pp.137, 146)

Answer-grabbing line: Reductionism, named precisely: each borrowed model risks a specific reductionism if used alone -

Must-write keywords: elite theory; base-superstructure analysis; structural-functionalism; problem-solving/decision models; David Easton's political-system framework; Harold Lasswell's problem-solving model; Reductionism, named precisely:.

Claim -> named evidence/example -> analysis -> qualification demonstration

Claim: Reductionism, named precisely: each borrowed model risks a specific reductionism if used alone - **Named evidence/example:** Gauba's own corrective applies to each: borrowing must remain purposeful and politics-centred; a borrowed model sharpens political analysis only so long as the political question, not the donor discipline's own priorities, stays in view. (PDF pp.137, 146) **Analysis:** Read together, these propositions show how borrowed models and named reductionisms shapes interdisciplinary political analysis rather than serving as a detachable list of names. **Qualification:** Reductionism, named precisely: each borrowed model risks a specific reductionism if used alone -

SESSION 8 - Objections and Integration Without Merger

15. Two objection-reply chains

1. **Objection:** if political science borrows core models from economics, sociology and psychology, it risks losing any distinct subject-matter of its own and dissolving into "social science in general."

Reply: Gauba's own conclusion answers this directly - interdisciplinary borrowing integrates evidence and models from other disciplines but does not merge political science into any one of them; the political question (who gets valued things, through what authoritative process) remains the organising centre even when the evidence used to answer it is economic, sociological or psychological. (PDF p.146)

2. **Objection:** using anthropological or geographical evidence risks importing findings from very different (small-scale, or purely spatial) contexts and over-generalising them to modern, large-scale democratic states.

Reply: the reply is the same discipline-by-discipline caution the chapter already applies to history and economics: such evidence is used for *testing and illustrating* a political claim (e.g. that authority need not be state-centred, or that territory shapes conflict), not for asserting that small-scale or purely spatial patterns transfer mechanically to a different scale of politics - each discipline's evidence is weighed for relevance, not imported wholesale. ANALYSIS: This reply is a reasonable extension of Gauba's own purposeful-borrowing standard, not a direct book quotation.

Answer-grabbing line: 1. Objection: if political science borrows core models from economics, sociology and psychology, it risks losing any distinct subject-matter of its own and dissolving into "social science."

Must-write keywords: Objection;; Reply;; Objections; Integration Without; Merger; SESSION; Objection.

Claim -> named evidence/example -> analysis -> qualification demonstration

Claim: 1. Objection: if political science borrows core models from economics, sociology and psychology, it risks losing any distinct subject-matter of its own and dissolving into "social science in general." **Named evidence/example:** Reply: Gauba's own conclusion answers this directly - interdisciplinary borrowing integrates evidence and models from other disciplines but does not merge political science into any one of them; the political question (who gets valued things, through what authoritative process) remains the organising centre even when the evidence used to answer it is economic, sociological or psychological. (PDF p.146) **Analysis:** Read together, these propositions show how objections and integration without merger shapes interdisciplinary political analysis rather than serving as a detachable list of names. **Qualification:** 1. Objection: if political science borrows core models from economics, sociology and psychology, it risks losing any distinct subject-matter of its own and dissolving into "social science in general."

SESSION 9 - Cautious Indian Application

16. Cautious Indian application

- ANALYSIS: Political-economy lens: debates on economic liberalisation, welfare-scheme design or federal fiscal transfers illustrate how political theory uses economic evidence to analyse policy conflict - cite as a *type* of application, without asserting specific unverified figures, scheme names or years unless independently confirmed.
- ANALYSIS: Political-sociology lens: caste, community and regional identity's role in Indian party mobilisation and political culture is a standard illustrative anchor for the sociology-politics link - use only as a general, well-known pattern, not with specific unverified electoral statistics.
- ANALYSIS: Political-geography lens: India's federal reorganisation of states and continuing regional/resource-sharing disputes (river-water disputes, hill-state demands) illustrate how territory and resource distribution shape political conflict - cite as a *type* of illustration; route exact dates, tribunal names or case detail to the Polity/Geography modules rather than asserting them here.

Answer-grabbing line: Political-economy lens: debates on economic liberalisation, welfare-scheme design or federal fiscal transfers illustrate how political theory uses economic evidence to analyse policy.

Must-write keywords: Cautious Indian; Application; SESSION; Political-economy; Political-sociology; Indian; Political-geography.

Claim -> named evidence/example -> analysis -> qualification demonstration

Claim: Political-economy lens: debates on economic liberalisation, welfare-scheme design or federal fiscal transfers illustrate how political theory uses economic evidence to analyse policy conflict - cite as a *type* of application, without asserting specific unverified figures, scheme names or years unless independently confirmed. **Named evidence/example:** Political-sociology lens: caste, community and regional identity's role in Indian party mobilisation and political culture is a standard illustrative anchor for the sociology-politics link - use only as a general, well-known pattern, not with specific unverified electoral statistics. **Analysis:** Read together, these propositions show how cautious Indian application shapes interdisciplinary political analysis rather than serving as a detachable list of names. **Qualification:** Political-sociology lens: caste, community and regional identity's role in Indian party mobilisation and political culture is a standard illustrative anchor for the sociology-politics link - use only as a general, well-known pattern, not with specific unverified electoral statistics.

SESSION 10 - Directive Decoding and Mark-Scaled Answer Architecture

17. Executable answer architecture (10/15 marks)

Directive decoding

- "Discuss the interdisciplinary character of political science" -> requires the definition of interdisciplinarity, at least three disciplines with one contribution each, and the integration-without-merger conclusion - not just a list of subject names.
- "Examine the contribution of [a named discipline] to political analysis" -> single-discipline directive: give that discipline's specific contribution, one borrowed model or example, and its limit if used alone.
- "Can political science be studied independently of other social sciences?" -> requires the objection/reply on subject-matter dissolution (Section 15.1) explicitly.

10-mark architecture (~150 words)

1. Thesis: political science needs other disciplines' evidence and models but keeps the political question central.
2. Body: name 2-3 disciplines with one contribution each (claim->evidence->significance).
3. One limit/reductionism risk.
4. One-line conclusion.

15-mark architecture (~200-250 words)

1. Thesis + directive decoding.
2. Doctrine reconstruction: definition of interdisciplinarity -> why empirical/behavioural/systems analysis pushed political science outward -> 4-5 disciplines (including at least one of anthropology/law/geography) each with claim->evidence->significance->limit.
3. Name one borrowed model (Easton's system, or Lasswell's problem-solving model).
4. One objection-reply chain.
5. Reasoned conclusion (integration without merger).

1. Thesis + directive decoding.
2. Full doctrine reconstruction across history, economics, sociology, psychology, philosophy, plus anthropology, law and geography, each with claim->evidence->significance->limit.
3. Name at least two borrowed models explicitly (Easton's systems framework, Lasswell's problem-solving model, or elite theory/base-superstructure analysis) and state the specific reductionism risk for each donor discipline.
4. Two objection-reply chains (dissolution-of-subject-matter objection; over-generalisation-from-small-scale-or-spatial-evidence objection).
5. Cautious Indian application (one example, correctly hedged).
6. Graded conclusion: integration deepens explanation; merger is neither possible nor desirable.

Quotation/proposition method

- Prefer paraphrased, named propositions over unverified quotations, e.g. *"Gaubha's proposition that interdisciplinary borrowing must remain purposeful and politics-centred"* rather than an exact quoted sentence, unless independently verified.

ASCII MASTER FLOW – PANEL 4/14: Core Definitions

| CORE DEFINITIONS

- | 01. DISCIPLINE: A branch or field of learning. (PDF p.136)
- | 02. INTERDISCIPLINARY APPROACH: Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved. (PDF p.136)
- | 03. EMPIRICAL APPROACH: Focus on observable facts, explanation, correlation, generalization and prediction. (PDF p.138)
- | 04. NORMATIVE APPROACH: Focus on values, prescriptions and what ought to be done. (PDF p.138)
- | 05. POLITICAL ECONOMY: Analysis of political aspects of economic policy-making and of the mutual impact of economic forces and political decisions. (PDF p.143)
- | 06. POLITICAL SOCIOLOGY: Study of political institutions, processes and ideologies in relation to social structures and modes of thought. (PDF p.144)
- | 07. POLITICAL PSYCHOLOGY: Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda. (PDF p.145)
- | 08. POLITICAL PHILOSOPHY: Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems. (PDF p.146)

ASCII MASTER FLOW – PANEL 5/14: Chapter Spine

| CHAPTER SPINE

- | 01. Gauba begins by treating social sciences as related disciplines dealing with common human problems, which makes interdisciplinarity especially suitable to politics. (PDF p.136)
- v
- | 02. He insists that political inquiry should borrow from other disciplines purposefully, always to understand political problems, not randomly for their own sake. (PDF p.137)
- v
- | 03. Empirical orientation, behavioural analysis and systems analysis pushed political science toward other social sciences because real politics cannot be grasped by ideal-state speculation or formal institutions alone. (PDF pp.138-139)
- v
- | 04. Political science therefore uses data, theories and models from history, economics, sociology, psychology and philosophy. (PDF pp.139-146)
- v
- | 05. Yet the conclusion is not merger into one master science; the integrated approach keeps politics central while using all relevant disciplines for verification and understanding. (PDF p.146)

ASCII MASTER FLOW – PANEL 6/14: Illustrations Attached to Claims

| ILLUSTRATIONS ATTACHED TO CLAIMS

- | 01. Gauba says a political scientist assessing whether democracy will be sustained may need data on literacy, income distribution, ownership patterns, religious attitudes, family structure and rural-urban composition. (PDF p.139)
- | 02. Labour-management relations or crowd psychology should be studied politically only when they illuminate their impact on politics. (PDF p.137)
- | 03. Political development requires understanding social mobilization and value change, not merely constitutions or legal forms. (PDF p.140)
- | 04. Political communication, propaganda, charismatic leadership and public opinion formation draw directly on political psychology. (PDF pp.144-145)
- | 05. A good UPSC answer on welfare politics can therefore move from economic scarcity, to class/group conflict, to mass attitudes, and finally to philosophical evaluation of justice

ASCII MASTER FLOW – PANEL 7/14: Comparison Matrix

| COMPARISON MATRIX

01. HISTORY	What it mainly contributes = Verification through past events, sequences and long-term causation. (PDF p.141) Typical political-theory use = Testing a theory about state formation or democracy against historical cases Limit if used alone = May become mere chronicle if not politically interpreted
02. ECONOMICS	What it mainly contributes = Insight into production, distribution, exchange, scarcity and economic conflict. (PDF pp.142-143) Typical political-theory use = Understanding welfare state claims, class conflict, policy choice and political economy Limit if used alone = Cannot by itself settle legitimacy or justice
03. SOCIOLOGY	What it mainly contributes = Group life, institutions, status, attitudes, participation and political culture. (PDF pp.143-144) Typical political-theory use = Explaining political socialization, cleavage, leadership and legitimacy Limit if used alone = Risks reducing politics to social structure alone
04. PSYCHOLOGY	What it mainly contributes = Motives, attitudes, personality, propaganda and leadership appeal. (PDF pp.144-145) Typical political-theory use = Explaining extremist appeal, public opinion and charismatic authority Limit if used alone = Cannot alone explain institutions or economic conflict
05. PHILOSOPHY	What it mainly contributes = Conceptual clarification, values, moral foundations and ends of public life. (PDF pp.145-146) Typical political-theory use = Clarifying liberty, equality, obligation, justice and the goals of policy Limit if used alone = Without empirical grounding, it can become purely speculative

ASCII MASTER FLOW – PANEL 8/14: Examiner Trap Firewall

EXAMINER TRAP FIREWALL
01. TRAP: "Interdisciplinary study means political science has lost its identity." => REPAIR: Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146)
02. TRAP: "Empirical political science made philosophy irrelevant." => REPAIR: Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)
03. TRAP: "History and political science are the same thing." => REPAIR: Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF p.141)
04. TRAP: "One discipline can fully explain politics." => REPAIR: The chapter concludes that philosophical, historical, legal, economic, sociological and psychological approaches are partial when used alone. (PDF p.146)

ASCII MASTER FLOW – PANEL 9/14: Ownership Boundaries and Cross-Links

OWNERSHIP BOUNDARIES AND CROSS-LINKS
01. Use Political-Theory/advanced/09_Interdisciplinary-Political-Analysis.md for the evidence-routing matrix and direct-book reconstruction of the chapter
02. Use Political-Theory/00_Master-Framework.md to place this topic beside 01, 08 and later state, power and justice topics in the wider module architecture
03. Use Political-Theory/README.md for the numbered topic map and dated-source discipline for the whole folder
04. For economic mechanisms, refer outward to the Economy module in prose rather than reproducing technical economics here
05. For delivery and institutional performance, refer outward to the Governance module in prose rather than turning this topic into an administrative note

ASCII MASTER FLOW – PANEL 10/14: Revision Capsule

REVISION CAPSULE
01. Define interdisciplinarity as purposeful use of more than one discipline. (PDF p.136)
v
02. Show why empirical orientation, behaviouralism and systems analysis pushed political science outward. (PDF pp.138-139)
v
03. Explain the contribution of each major discipline in one line. (PDF pp.141-146)
v
04. End with Gauba's conclusion: single-discipline approaches are partial; integration is necessary, but merger is not. (PDF p.146)

v

05. In Mains, move from evidence -> explanation -> normative evaluation

v

06. In Prelims, remember the paired terms: political economy, political sociology, political psychology, political philosophy

ASCII MASTER FLOW – PANEL 11/14: Answer-Grabbing Line Bank

ANSWER-GRABBING LINE BANK

01. Political science studies politics as a social process, so it must use findings, theories and models from other social sciences where they illuminate political phenomena. (PDF pp.136-137)
02. Term - Exam-ready meaning
03. Interdisciplinary vs random borrowing: Gauba warns that expansion across disciplines must be purposeful and well-conceived. (PDF p.137)
04. Gauba says a political scientist assessing whether democracy will be sustained may need data on literacy, income distribution, ownership patterns, religious attitudes, family structure and
05. "Interdisciplinary study means political science has lost its identity." -> Gauba says political science remains focused on politics while using other disciplines for broader and better
06. Gauba's chapter (PDF pp.141-146) foregrounds history, economics, sociology, psychology and philosophy. A complete interdisciplinary answer should also be able to place anthropology, law and
07. Reductionism, named precisely: each borrowed model risks a specific reductionism if used alone
08. 1. Objection: if political science borrows core models from economics, sociology and psychology, it risks losing any distinct subject-matter of its own and dissolving into "social science"
09. Political-economy lens: debates on economic liberalisation, welfare-scheme design or federal fiscal transfers illustrate how political theory uses economic evidence to analyse policy
10. "Discuss the interdisciplinary character of political science" -> requires the definition of interdisciplinarity, at least three disciplines with one contribution each, and the integration

ASCII MASTER FLOW – PANEL 13/14: GS Mains Question Routes

GS MAINS QUESTION ROUTES

01. 10 MARKS: Define interdisciplinary political analysis and explain why borrowing must remain purposeful and politics-centred. Answer in 150 words

02. 10 MARKS: Explain how history and economics contribute differently to political analysis. Answer in 150 words

03. 10 MARKS: Can political science be studied independently of the other social sciences? Discuss. Answer in 150 words

04. 15 MARKS: Examine the contributions and limits of sociology and psychology in political analysis. Answer in 250 words

05. 15 MARKS: Evaluate the interdisciplinary approach to political analysis with reference to major disciplines and borrowed models. Answer in 250 words

06. 15 MARKS: Does interdisciplinarity deepen or threaten the autonomy of political science? Critically discuss. Answer in 250 words

ASCII MASTER FLOW – PANEL 14/14: Qualified Verdict and Answer Spine

QUALIFIED VERDICT AND ANSWER SPINE

01. Open with the boundary line, not with a general definition.

v

02. Carry the argument on named evidence taken from the thinker panels.

v

03. Insert the trap-firewall distinction that the question is testing.

v

04. Add the objection or limitation before concluding.

v

05. CLOSE: Gauba says a political scientist assessing whether democracy will be sustained may need data on literacy, income distribution, ownership patterns, religious attitudes, family structure and. 1. Objection: if political science borrows core models from economics, sociology and psychology, it risks losing any distinct subject-matter of its own and dissolving into "social science. Write it as a graded finding - boundary, named evidence, objection, and the residue that survives the objection - rather than as a summary

BASIC MCQS / REMEDIATION

Practice design

- Questions 1-24 are hard core GS/Prelims diagnostics; Questions 25-32 are remedial close-option repairs.
- Formats are deliberately varied: definition control, multi-statement, sequence, matching, chronology, elimination, application, evidence and inference.
- The correct option rotates strictly A -> B -> C -> D, repeated eight times across the 32 questions, giving 8 A, 8 B, 8 C and 8 D.
- Because the key is a fixed rotation it carries no diagnostic value: options are matched for register and length, so an answer can only be reached by reasoning about content.
- Each of the 128 options carries its own question-specific explanation and each question closes with a distinct examiner trap.

MCQ 1

Which proposition is correctly associated with **Discipline**?

- A. A branch or field of learning.
- B. political order does not require a Weberian state.
- C. Focus on values, prescriptions and what ought to be done.
- D. Motives, attitudes, personality, propaganda and leadership appeal. (PDF pp.144-145)

Answer: A

Option-by-option explanation

- **A:** A States the source-recorded proposition for Discipline.
- **B:** B Attaches to Political anthropology, not Discipline.
- **C:** C Attaches to Normative approach, not Discipline.
- **D:** D Attaches to Psychology, not Discipline.

Examiner trap: Do not identify Discipline by a neighbouring proposition merely because both occur in the same topic.

MCQ 2

Which proposition is correctly associated with **Interdisciplinary approach**?

- A. Study of political institutions, processes and ideologies in relation to social structures and modes of thought.
- B. Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.
- C. science itself is rooted in philosophy; Gauba uses Comte to question any rigid opposition between science and philosophy.
- D. Analysis of political aspects of economic policy-making and of the mutual impact of economic forces and political decisions.

Answer: B

Option-by-option explanation

- **A:** A Attaches to Political sociology, not Interdisciplinary approach.
- **B:** B States the source-recorded proposition for Interdisciplinary approach.
- **C:** C Attaches to Auguste Comte, not Interdisciplinary approach.
- **D:** D Attaches to Political economy, not Interdisciplinary approach.

Examiner trap: Do not identify Interdisciplinary approach by a neighbouring proposition merely because both occur in the same topic.

MCQ 3

Which proposition is correctly associated with **Empirical approach**?

- A. Conceptual clarification, values, moral foundations and ends of public life.
- B. Group life, institutions, status, attitudes, participation and political culture.
- C. Focus on observable facts, explanation, correlation, generalization and prediction.
- D. Insight into production, distribution, exchange, scarcity and economic conflict.

Answer: C

Option-by-option explanation

- **A:** A Attaches to Philosophy, not Empirical approach.
- **B:** B Attaches to Sociology, not Empirical approach.
- **C:** C States the source-recorded proposition for Empirical approach.
- **D:** D Attaches to Economics, not Empirical approach.

Examiner trap: Do not identify Empirical approach by a neighbouring proposition merely because both occur in the same topic.

MCQ 4

Which proposition is correctly associated with **Normative approach**?

- A. Motives, attitudes, personality, propaganda and leadership appeal.
- B. political order does not require a Weberian state.
- C. Verification through past events, sequences and long-term causation.
- D. Focus on values, prescriptions and what ought to be done.

Answer: D

Option-by-option explanation

- **A:** A Attaches to Psychology, not Normative approach.
- **B:** B Attaches to Political anthropology, not Normative approach.
- **C:** C Attaches to History, not Normative approach.
- **D:** D States the source-recorded proposition for Normative approach.

Examiner trap: Do not identify Normative approach by a neighbouring proposition merely because both occur in the same topic.

MCQ 5

Which proposition is correctly associated with **Political economy**?

- A. Analysis of political aspects of economic policy-making and of the mutual impact of economic forces and political decisions.
- B. the classical approach treated politics as the "master science" and did not clearly separate normative from empirical analysis.
- C. political development cannot be studied without social mobilization, value change, kinship patterns, caste and class relations.
- D. science itself is rooted in philosophy; Gauba uses Comte to question any rigid opposition between science and philosophy.

Answer: A

Option-by-option explanation

- **A:** A States the source-recorded proposition for Political economy.
- **B:** B Attaches to Aristotle, not Political economy.
- **C:** C Attaches to Seymour Martin Lipset, not Political economy.
- **D:** D Attaches to Auguste Comte, not Political economy.

Examiner trap: Do not identify Political economy by a neighbouring proposition merely because both occur in the same topic.

MCQ 6

Which proposition is correctly associated with **Political sociology**?

- A. Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.
- B. Study of political institutions, processes and ideologies in relation to social structures and modes of thought.
- C. science itself is rooted in philosophy; Gauba uses Comte to question any rigid opposition between science and philosophy.
- D. Analysis of political aspects of economic policy-making and of the mutual impact of economic forces and political decisions.

Answer: B

Option-by-option explanation

- **A:** A Attaches to Interdisciplinary approach, not Political sociology.
- **B:** B States the source-recorded proposition for Political sociology.
- **C:** C Attaches to Auguste Comte, not Political sociology.
- **D:** D Attaches to Political economy, not Political sociology.

Examiner trap: Do not identify Political sociology by a neighbouring proposition merely because both occur in the same topic.

MCQ 7

Which proposition is correctly associated with **Political psychology**?

- A. political behaviour analysis must be interdisciplinary because political action occurs in a wider social, cultural and personal context.
- B. Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems.
- C. Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.
- D. studies the spatial dimension of politics - territory, boundaries, resource distribution, federalism and regional/electoral geography.

Answer: C

Option-by-option explanation

- **A:** A Attaches to Heinz Eulau, not Political psychology.
- **B:** B Attaches to Political philosophy, not Political psychology.
- **C:** C States the source-recorded proposition for Political psychology.
- **D:** D Attaches to Political geography, not Political psychology.

Examiner trap: Do not identify Political psychology by a neighbouring proposition merely because both occur in the same topic.

MCQ 8

Which proposition is correctly associated with **Political philosophy**?

- A. Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.
- B. studies the spatial dimension of politics - territory, boundaries, resource distribution, federalism and regional/electoral geography.
- C. political behaviour analysis must be interdisciplinary because political action occurs in a wider social, cultural and personal context.
- D. Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems.

Answer: D

Option-by-option explanation

- **A:** A Attaches to Political psychology, not Political philosophy.
- **B:** B Attaches to Political geography, not Political philosophy.
- **C:** C Attaches to Heinz Eulau, not Political philosophy.
- **D:** D States the source-recorded proposition for Political philosophy.

Examiner trap: Do not identify Political philosophy by a neighbouring proposition merely because both occur in the same topic.

MCQ 9

Which thinker/concept-proposition pair is correctly matched?

- A. History - Verification through past events, sequences and long-term causation.
- B. Psychology - Insight into production, distribution, exchange, scarcity and economic conflict.
- C. Philosophy - Group life, institutions, status, attitudes, participation and political culture.
- D. Normative approach - Focus on observable facts, explanation, correlation, generalization and prediction.

Answer: A

Option-by-option explanation

- **A:** A Faithful pairing: History is associated with this proposition.
- **B:** B Source disagrees: Psychology is recorded with Motives, attitudes, personality, propaganda and leadership appeal.
- **C:** C Wrong attachment: Philosophy is recorded with Conceptual clarification, values, moral foundations and ends of public life.
- **D:** D Belongs elsewhere: Normative approach is recorded with Focus on values, prescriptions and what ought to be done.

Examiner trap: Keep the exact proposition attached to History; nearby thinkers may address the same debate from a different mechanism.

MCQ 10

Which of the following pairs a name or concept with the proposition the source actually records for it?

- A. Philosophy - Focus on values, prescriptions and what ought to be done.
- B. Economics - Insight into production, distribution, exchange, scarcity and economic conflict.
- C. Empirical approach - Motives, attitudes, personality, propaganda and leadership appeal.
- D. Sociology - Verification through past events, sequences and long-term causation.

Answer: B

Option-by-option explanation

- **A:** A Source disagrees: Philosophy is recorded with Conceptual clarification, values, moral foundations and ends of public life.
- **B:** B Kept where the source puts it: Economics is associated with this proposition.
- **C:** C Belongs elsewhere: Empirical approach is recorded with Focus on observable facts, explanation, correlation, generalization and prediction.
- **D:** D Misplaced: Sociology is recorded with Group life, institutions, status, attitudes, participation and political culture.

Examiner trap: Keep the exact proposition attached to Economics; nearby thinkers may address the same debate from a different mechanism.

MCQ 11

In which pair does the proposition genuinely belong to the label placed against it?

- A. Empirical approach - Motives, attitudes, personality, propaganda and leadership appeal.
- B. Economics - Verification through past events, sequences and long-term causation.
- C. Sociology - Group life, institutions, status, attitudes, participation and political culture.
- D. Philosophy - Focus on values, prescriptions and what ought to be done.

Answer: C

Option-by-option explanation

- **A:** A Misplaced: Empirical approach is recorded with Focus on observable facts, explanation, correlation, generalization and prediction.
- **B:** B Belongs elsewhere: Economics is recorded with Insight into production, distribution, exchange, scarcity and economic conflict.
- **C:** C Kept where the source puts it: Sociology is associated with this proposition.
- **D:** D Mismatched: Philosophy is recorded with Conceptual clarification, values, moral foundations and ends of public life.

Examiner trap: Keep the exact proposition attached to Sociology; nearby thinkers may address the same debate from a different mechanism.

MCQ 12

Only one pairing below reproduces the source's own association. Which is it?

- A. Philosophy - political order does not require a Weberian state.
- B. History - Insight into production, distribution, exchange, scarcity and economic conflict.
- C. Normative approach - Group life, institutions, status, attitudes, participation and political culture.
- D. Psychology - Motives, attitudes, personality, propaganda and leadership appeal.

Answer: D

Option-by-option explanation

- **A:** A Not this pair: Philosophy is recorded with Conceptual clarification, values, moral foundations and ends of public life.
- **B:** B Cross-attached: History is recorded with Verification through past events, sequences and long-term causation.
- **C:** C Mismatched: Normative approach is recorded with Focus on values, prescriptions and what ought to be done.
- **D:** D Matches the record: Psychology is associated with this proposition.

Examiner trap: Keep the exact proposition attached to Psychology; nearby thinkers may address the same debate from a different mechanism.

MCQ 13

Identify the pair in which the recorded proposition matches its label exactly.

- A. Philosophy - Conceptual clarification, values, moral foundations and ends of public life.
- B. Economics - Verification through past events, sequences and long-term causation.
- C. Sociology - Motives, attitudes, personality, propaganda and leadership appeal.
- D. Empirical approach - Focus on values, prescriptions and what ought to be done.

Answer: A

Option-by-option explanation

- **A:** A Correct attachment: Philosophy is associated with this proposition.
- **B:** B Mismatched: Economics is recorded with Insight into production, distribution, exchange, scarcity and economic conflict.
- **C:** C Cross-attached: Sociology is recorded with Group life, institutions, status, attitudes, participation and political culture.
- **D:** D Wrong attachment: Empirical approach is recorded with Focus on observable facts, explanation, correlation, generalization and prediction.

Examiner trap: Keep the exact proposition attached to Philosophy; nearby thinkers may address the same debate from a different mechanism.

MCQ 14

Which one of the following label-proposition pairings survives a strict source check?

- A. Normative approach - A branch or field of learning.
- B. Political anthropology - political order does not require a Weberian state.
- C. Psychology - Conceptual clarification, values, moral foundations and ends of public life.
- D. History - Insight into production, distribution, exchange, scarcity and economic conflict.

Answer: B

Option-by-option explanation

- **A:** A Not this pair: Normative approach is recorded with Focus on values, prescriptions and what ought to be done.
- **B:** B Exact pair: Political anthropology is associated with this proposition.
- **C:** C Wrong attachment: Psychology is recorded with Motives, attitudes, personality, propaganda and leadership appeal.
- **D:** D Source disagrees: History is recorded with Verification through past events, sequences and long-term causation.

Examiner trap: Keep the exact proposition attached to Political anthropology; nearby thinkers may address the same debate from a different mechanism.

MCQ 15

Which pairing below would a careful source check leave standing?

- A. Harold Lasswell's problem-solving model - (treating all politics as market bargaining or class interest) misses legitimacy.
- B. David Easton's political-system framework - Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda. (PDF p.145)
- C. Law/jurisprudence as a data source - distinct from the legal approach to studying politics (already covered under Section 8's traditional approaches).
- D. Marx and Engels - political behaviour analysis must be interdisciplinary because political action occurs in a wider social, cultural and personal context.

Answer: C

Option-by-option explanation

- **A:** A Not this pair: Harold Lasswell's problem-solving model is recorded with is cited by Gauba as an example of psychology and decision-theory feeding directly into political analysis, reframing political inquiry around identifying problems, generating alternatives and evaluating outcomes.
- **B:** B Source disagrees: David Easton's political-system framework is recorded with is itself a borrowed model - Gauba notes it imports the "system" concept from sociology/general systems theory into political science, treating

politics as inputs-conversion-outputs-feedback.

- **C:** C Source-exact: Law/jurisprudence as a data source is associated with this proposition.
- **D:** D Misplaced: Marx and Engels is recorded with Gauba credits them with an early systematic interdisciplinary approach by locating political behaviour in socio-economic factors such as production and class structure.

Examiner trap: Keep the exact proposition attached to Law/jurisprudence as a data source; nearby thinkers may address the same debate from a different mechanism.

MCQ 16

Which of these attributions is reproduced correctly rather than shifted to a neighbouring idea?

- A. Heinz Eulau - political development cannot be studied without social mobilization, value change, kinship patterns, caste and class relations.
- B. Political philosophy - the classical approach treated politics as the "master science" and did not clearly separate normative from empirical analysis.
- C. Political psychology - Analysis of political aspects of economic policy-making and of the mutual impact of economic forces and political decisions.
- D. Political geography - studies the spatial dimension of politics - territory, boundaries, resource distribution, federalism and regional/electoral geography.

Answer: D

Option-by-option explanation

- **A:** A Wrong attachment: Heinz Eulau is recorded with political behaviour analysis must be interdisciplinary because political action occurs in a wider social, cultural and personal context.
- **B:** B Source disagrees: Political philosophy is recorded with Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems.
- **C:** C Belongs elsewhere: Political psychology is recorded with Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.
- **D:** D Faithful pairing: Political geography is associated with this proposition.

Examiner trap: Keep the exact proposition attached to Political geography; nearby thinkers may address the same debate from a different mechanism.

MCQ 17

Consider the following statements:

1. **Aristotle** is associated with: the classical approach treated politics as the "master science" and did not clearly separate normative from empirical analysis.
2. **Seymour Martin Lipset** is associated with: (treating all politics as market bargaining or class interest) misses legitimacy, identity and normative claims that are not reducible to material interest.

Which option is correct?

- A. 1 only
- B. 2 only
- C. Both 1 and 2
- D. Neither 1 nor 2

Answer: A

Option-by-option explanation

- **A:** A Statement 1 is correct; Statement 2 is incorrect. Therefore '1 only' is correct.
- **B:** B Statement 1 is correct; Statement 2 is incorrect. Therefore '2 only' is not the right combination.
- **C:** C Statement 1 is correct; Statement 2 is incorrect. Therefore 'Both 1 and 2' is not the right combination.

- **D:** D Statement 1 is correct; Statement 2 is incorrect. Therefore 'Neither 1 nor 2' is not the right combination.

Examiner trap: Test each statement independently; familiarity with Aristotle does not validate the second pairing.

MCQ 18

Consider the following statements:

1. **Marx and Engels** is associated with: science itself is rooted in philosophy; Gauba uses Comte to question any rigid opposition between science and philosophy.
2. **Auguste Comte** is associated with: science itself is rooted in philosophy; Gauba uses Comte to question any rigid opposition between science and philosophy.

Which option is correct?

- A. 1 only
- B. 2 only
- C. Both 1 and 2
- D. Neither 1 nor 2

Answer: B

Option-by-option explanation

- **A:** A Statement 1 is incorrect; Statement 2 is correct. Therefore '1 only' is not the right combination.
- **B:** B Statement 1 is incorrect; Statement 2 is correct. Therefore '2 only' is correct.
- **C:** C Statement 1 is incorrect; Statement 2 is correct. Therefore 'Both 1 and 2' is not the right combination.
- **D:** D Statement 1 is incorrect; Statement 2 is correct. Therefore 'Neither 1 nor 2' is not the right combination.

Examiner trap: Test each statement independently; familiarity with Marx and Engels does not validate the second pairing.

MCQ 19

Consider the following statements:

1. **Heinz Eulau** is associated with: political behaviour analysis must be interdisciplinary because political action occurs in a wider social, cultural and personal context.
2. **David Easton's political-system framework** is associated with: is itself a borrowed model - Gauba notes it imports the "system" concept from sociology/general systems theory into political science, treating politics as inputs-conversion-outputs-feedback .

Which option is correct?

- A. 1 only
- B. 2 only
- C. Both 1 and 2
- D. Neither 1 nor 2

Answer: C

Option-by-option explanation

- **A:** A Statement 1 is correct; Statement 2 is correct. Therefore '1 only' is not the right combination.
- **B:** B Statement 1 is correct; Statement 2 is correct. Therefore '2 only' is not the right combination.
- **C:** C Statement 1 is correct; Statement 2 is correct. Therefore 'Both 1 and 2' is correct.
- **D:** D Statement 1 is correct; Statement 2 is correct. Therefore 'Neither 1 nor 2' is not the right combination.

Examiner trap: Test each statement independently; familiarity with Heinz Eulau does not validate the second pairing.

MCQ 20

Consider the following statements:

1. **Seymour Martin Lipset** is associated with: is cited by Gauba as an example of psychology and decision-theory feeding directly into political analysis, reframing political inquiry around identifying problems, generating alternatives and evaluating outcomes.
2. **Harold Lasswell's problem-solving model** is associated with: Focus on observable facts, explanation, correlation, generalization and prediction.

Which option is correct?

- A. 1 only
- B. 2 only
- C. Both 1 and 2
- D. Neither 1 nor 2

Answer: D

Option-by-option explanation

- **A:** A Statement 1 is incorrect; Statement 2 is incorrect. Therefore '1 only' is not the right combination.
- **B:** B Statement 1 is incorrect; Statement 2 is incorrect. Therefore '2 only' is not the right combination.
- **C:** C Statement 1 is incorrect; Statement 2 is incorrect. Therefore 'Both 1 and 2' is not the right combination.
- **D:** D Statement 1 is incorrect; Statement 2 is incorrect. Therefore 'Neither 1 nor 2' is correct.

Examiner trap: Test each statement independently; familiarity with Seymour Martin Lipset does not validate the second pairing.

MCQ 21

Consider the following statements:

1. **Auguste Comte** is associated with: science itself is rooted in philosophy; Gauba uses Comte to question any rigid opposition between science and philosophy.
2. **Economic reductionism** is associated with: Focus on values, prescriptions and what ought to be done.

Which option is correct?

- A. 1 only
- B. 2 only
- C. Both 1 and 2
- D. Neither 1 nor 2

Answer: A

Option-by-option explanation

- **A:** A Statement 1 is correct; Statement 2 is incorrect. Therefore '1 only' is correct.
- **B:** B Statement 1 is correct; Statement 2 is incorrect. Therefore '2 only' is not the right combination.
- **C:** C Statement 1 is correct; Statement 2 is incorrect. Therefore 'Both 1 and 2' is not the right combination.
- **D:** D Statement 1 is correct; Statement 2 is incorrect. Therefore 'Neither 1 nor 2' is not the right combination.

Examiner trap: Test each statement independently; familiarity with Auguste Comte does not validate the second pairing.

MCQ 22

Consider the following statements:

1. **David Easton's political-system framework** is associated with: A branch or field of learning.
2. **Discipline** is associated with: A branch or field of learning.

Which option is correct?

- A. 1 only
- B. 2 only
- C. Both 1 and 2
- D. Neither 1 nor 2

Answer: B

Option-by-option explanation

- **A:** A Statement 1 is incorrect; Statement 2 is correct. Therefore '1 only' is not the right combination.
- **B:** B Statement 1 is incorrect; Statement 2 is correct. Therefore '2 only' is correct.
- **C:** C Statement 1 is incorrect; Statement 2 is correct. Therefore 'Both 1 and 2' is not the right combination.
- **D:** D Statement 1 is incorrect; Statement 2 is correct. Therefore 'Neither 1 nor 2' is not the right combination.

Examiner trap: Test each statement independently; familiarity with David Easton's political-system framework does not validate the second pairing.

MCQ 23

Consider the following statements:

1. **Harold Lasswell's problem-solving model** is associated with: is cited by Gauba as an example of psychology and decision-theory feeding directly into political analysis, reframing political inquiry around identifying problems, generating alternatives and evaluating outcomes.
2. **Interdisciplinary approach** is associated with: Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.

Which option is correct?

- A. 1 only
- B. 2 only
- C. Both 1 and 2
- D. Neither 1 nor 2

Answer: C

Option-by-option explanation

- **A:** A Statement 1 is correct; Statement 2 is correct. Therefore '1 only' is not the right combination.
- **B:** B Statement 1 is correct; Statement 2 is correct. Therefore '2 only' is not the right combination.
- **C:** C Statement 1 is correct; Statement 2 is correct. Therefore 'Both 1 and 2' is correct.
- **D:** D Statement 1 is correct; Statement 2 is correct. Therefore 'Neither 1 nor 2' is not the right combination.

Examiner trap: Test each statement independently; familiarity with Harold Lasswell's problem-solving model does not validate the second pairing.

MCQ 24

Consider the following statements:

1. **Economic reductionism** is associated with: Focus on observable facts, explanation, correlation, generalization and prediction.
2. **Empirical approach** is associated with: Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.

Which option is correct?

- A. 1 only
- B. 2 only
- C. Both 1 and 2
- D. Neither 1 nor 2

Answer: D

Option-by-option explanation

- **A:** A Statement 1 is incorrect; Statement 2 is incorrect. Therefore '1 only' is not the right combination.
- **B:** B Statement 1 is incorrect; Statement 2 is incorrect. Therefore '2 only' is not the right combination.
- **C:** C Statement 1 is incorrect; Statement 2 is incorrect. Therefore 'Both 1 and 2' is not the right combination.
- **D:** D Statement 1 is incorrect; Statement 2 is incorrect. Therefore 'Neither 1 nor 2' is correct.

Examiner trap: Test each statement independently; familiarity with Economic reductionism does not validate the second pairing.

MCQ 25 - REMEDIAL

Which correction is most defensible for the claim: **"Interdisciplinary study means political science has lost its identity."**?

- A. Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146)
- B. Interdisciplinary approach means Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.
- C. The chapter concludes that philosophical, historical, legal, economic, sociological and psychological approaches are partial when used alone. (PDF p.146)
- D. Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)

Answer: A

Option-by-option explanation

- **A:** A Directly repairs the stated misconception: Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146).
- **B:** B Repairs a different misconception, 'Interdisciplinary approach means Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.', so it does not answer the claim in the stem.
- **C:** C Repairs a different misconception, "One discipline can fully explain politics.", so it does not answer the claim in the stem.
- **D:** D Repairs a different misconception, "Empirical political science made philosophy irrelevant.", so it does not answer the claim in the stem.

Examiner trap: Repair the exact overstatement about "Interdisciplinary study means political science has, not a different error from the same topic.

MCQ 26 - REMEDIAL

Which correction is most defensible for the claim: **"Empirical political science made philosophy irrelevant."**?

- A. Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146)
- B. Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)
- C. Interdisciplinary approach means Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.
- D. Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF p.141)

Answer: B

Option-by-option explanation

- **A:** A Repairs a different misconception, "Interdisciplinary study means political science has lost its identity.", so it does not answer the claim in the stem.
- **B:** B Directly repairs the stated misconception: Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146).
- **C:** C Repairs a different misconception, 'Interdisciplinary approach means Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.', so it does not answer the claim in the stem.
- **D:** D Repairs a different misconception, "History and political science are the same thing.", so it does not answer the claim in the stem.

Examiner trap: Repair the exact overstatement about "Empirical political science made philosophy, not a different error from the same topic.

MCQ 27 - REMEDIAL

Which correction is most defensible for the claim: **"History and political science are the same thing."**?

- A. Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)
- B. Empirical approach means Focus on observable facts, explanation, correlation, generalization and prediction.
- C. Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF p.141)
- D. Normative approach means Focus on values, prescriptions and what ought to be done; this option treats that proposition as the decisive account.

Answer: C

Option-by-option explanation

- **A:** A Repairs a different misconception, "Empirical political science made philosophy irrelevant.", so it does not answer the claim in the stem.
- **B:** B Repairs a different misconception, 'Empirical approach means Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems.', so it does not answer the claim in the stem.
- **C:** C Directly repairs the stated misconception: Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF p.141).
- **D:** D Repairs a different misconception, 'Normative approach means Verification through past events, sequences and long-term causation.', so it does not answer the claim in the stem.

Examiner trap: Repair the exact overstatement about "History and political science are the same thing.", not a different error from the same topic.

MCQ 28 - REMEDIAL

Which correction is most defensible for the claim: **"One discipline can fully explain politics."**?

- A. Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)
- B. Interdisciplinary approach means Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.
- C. Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146)
- D. The chapter concludes that philosophical, historical, legal, economic, sociological and psychological approaches are partial when used alone. (PDF p.146)

Answer: D

Option-by-option explanation

- **A:** A Repairs a different misconception, "Empirical political science made philosophy irrelevant.", so it does not answer the claim in the stem.
- **B:** B Repairs a different misconception, 'Interdisciplinary approach means Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.', so it does not answer the claim in the stem.
- **C:** C Repairs a different misconception, "Interdisciplinary study means political science has lost its identity.", so it does not answer the claim in the stem.
- **D:** D Directly repairs the stated misconception: The chapter concludes that philosophical, historical, legal, economic, sociological and psychological approaches are partial when used alone. (PDF p.146).

Examiner trap: Repair the exact overstatement about "One discipline can fully explain politics.", not a different error from the same topic.

MCQ 29 - REMEDIAL

Which correction is most defensible for the claim: **Discipline means Study of political institutions, processes and ideologies in relation to social structures and modes of thought.?**

- A. Discipline means A branch or field of learning.
- B. Normative approach means Focus on values.
- C. Empirical approach means Focus on observable facts, explanation.
- D. Gauba treats this older formula as an oversimplification; history is used.

Answer: A

Option-by-option explanation

- **A:** A Directly repairs the stated misconception: Discipline means A branch or field of learning.
- **B:** B Repairs a different misconception, 'Normative approach means Verification through past events, sequences and long-term causation.', so it does not answer the claim in the stem.
- **C:** C Repairs a different misconception, 'Empirical approach means Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems.', so it does not answer the claim in the stem.
- **D:** D Repairs a different misconception, "History and political science are the same thing.", so it does not answer the claim in the stem.

Examiner trap: Repair the exact overstatement about Discipline means Study of political institutions,, not a different error from the same topic.

MCQ 30 - REMEDIAL

Which correction is most defensible for the claim: **Interdisciplinary approach means Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.**?

- A. Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146)
- B. Interdisciplinary approach means Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.
- C. The chapter concludes that philosophical, historical, legal, economic, sociological and psychological approaches are partial when used alone. (PDF p.146)
- D. Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)

Answer: B

Option-by-option explanation

- **A:** A Repairs a different misconception, "Interdisciplinary study means political science has lost its identity.", so it does not answer the claim in the stem.
- **B:** B Directly repairs the stated misconception: Interdisciplinary approach means Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.
- **C:** C Repairs a different misconception, "One discipline can fully explain politics.", so it does not answer the claim in the stem.
- **D:** D Repairs a different misconception, "Empirical political science made philosophy irrelevant.", so it does not answer the claim in the stem.

Examiner trap: Repair the exact overstatement about Interdisciplinary approach means Use of, not a different error from the same topic.

MCQ 31 - REMEDIAL

Which correction is most defensible for the claim: **Empirical approach means Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems.**?

- A. Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF p.141)
- B. Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)
- C. Empirical approach means Focus on observable facts, explanation, correlation, generalization and prediction.
- D. Normative approach means Focus on values, prescriptions and what ought to be done.

Answer: C

Option-by-option explanation

- **A:** A Repairs a different misconception, "History and political science are the same thing.", so it does not answer the claim in the stem.
- **B:** B Repairs a different misconception, "Empirical political science made philosophy irrelevant.", so it does not answer the claim in the stem.
- **C:** C Directly repairs the stated misconception: Empirical approach means Focus on observable facts, explanation, correlation, generalization and prediction.
- **D:** D Repairs a different misconception, 'Normative approach means Verification through past events, sequences and long-term causation.', so it does not answer the claim in the stem.

Examiner trap: Repair the exact overstatement about Empirical approach means Inquiry into moral and, not a different error from the same topic.

MCQ 32 - REMEDIAL

Which correction is most defensible for the claim: **Normative approach means Verification through past events, sequences and long-term causation.**?

- A. Discipline means A branch or field of learning; this formulation is presented as sufficient for the classification.
- B. Empirical approach means Focus on observable facts, explanation, correlation, generalization and prediction.
- C. Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF.
- D. Normative approach means Focus on values, prescriptions and what ought to be done.

Answer: D

Option-by-option explanation

- **A:** A Repairs a different misconception, 'Discipline means Study of political institutions, processes and ideologies in relation to social structures and modes of thought.', so it does not answer the claim in the stem.
- **B:** B Repairs a different misconception, 'Empirical approach means Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems.', so it does not answer the claim in the stem.
- **C:** C Repairs a different misconception, "'History and political science are the same thing.'", so it does not answer the claim in the stem.
- **D:** D Directly repairs the stated misconception: Normative approach means Focus on values, prescriptions and what ought to be done.

Examiner trap: Repair the exact overstatement about Normative approach means Verification through past, not a different error from the same topic.

PYQS AND ANSWER PRACTICE

VERIFIED UPSC PRELIMS / GS MAINS PYQ STATUS

No direct owned UPSC Prelims or General Studies Mains PYQ is verified for **Interdisciplinary Political Analysis** in the repository's routed ledgers. Political Theory is a GS/Prelims conceptual-support subject, and proxy, alias or synthetic PYQ ownership is prohibited. Questions owned by another UPSC paper are not imported. The six questions below are clearly labelled original GS Mains practice.

ORIGINAL GS MAINS PRACTICE WITH MODEL SOLUTIONS

Original GS Mains Model 1 - 10 marks

Question: Define interdisciplinary political analysis and explain why borrowing must remain purposeful and politics-centred. Answer in 150 words.

Demand decode: the directive discuss requires the answer to open the competing dimensions and adjudicate between them instead of listing them. Fix the boundary of interdisciplinary political analysis and explain why borrowing must remain purposeful and politics-centred in the opening line, carry the argument on Introduction, Interdisciplinary, Core and Politics, and reserve the closing sentences for the qualification that random accumulation of neighbouring knowledge produces diffusion rather than integration.

Model answer (144 words):

Introduction: Interdisciplinary political analysis uses evidence, concepts or models from more than one discipline to investigate overlapping social phenomena. Core analysis: Politics is embedded in economic, social, historical, psychological, legal and spatial environments. Political science therefore borrows when another discipline supplies evidence needed to explain a political question. History tests sequences, economics identifies material interests, sociology maps groups, psychology examines attitudes, and philosophy evaluates ends. Gauba's qualification is essential: labour relations, kinship or crowd behaviour enter political analysis only insofar as they illuminate power, authority, conflict, legitimacy or policy. Borrowing is purposeful when the political problem determines what is selected and how it is interpreted. Interdisciplinarity should widen verification and causal depth while keeping political judgment

as the organising task. Conclusion: Interdisciplinarity deepens political explanation only when borrowed evidence answers a clearly political question; random accumulation of neighbouring knowledge produces diffusion rather than integration.

Why this earns marks: it obeys discuss instead of drifting into description, attaches each claim to named evidence (Introduction, Interdisciplinary, Core and Politics), converts that evidence into analysis of interdisciplinary political analysis and explain why borrowing must remain purposeful and politics-centred, and keeps the examiner-facing qualification that random accumulation of neighbouring knowledge produces diffusion rather than integration. At 144 words it stays inside the 150-word GS ceiling for 10 marks.

Original GS Mains Model 2 - 10 marks

Question: Explain how history and economics contribute differently to political analysis. Answer in 150 words.

Demand decode: the directive explain requires the answer to set out the concept, its mechanism and its consequences in a stated order. Fix the boundary of how history and economics contribute differently to political analysis in the opening line, carry the argument on Introduction, History, Core and Economics, and reserve the closing sentences for the qualification that neither can independently settle legitimacy or justice.

Model answer (135 words):

Introduction: History and economics enrich political inquiry through different types of evidence and explanation. Core analysis: History supplies sequences, antecedents, comparisons and long-term patterns. It tests whether claims about democracy, state formation or conflict survive variation across time and cases, but becomes mere chronicle if events are not politically interpreted. Economics examines production, distribution, exchange, scarcity and incentives. Political economy uses these mechanisms to explain class conflict, welfare choices, public control and how economic demands shape state decisions. It exposes material constraints that formal institutional analysis may overlook. Critical evaluation: Neither discipline is sufficient alone. Political analysis must interpret historical evidence and economic mechanisms through institutions, power relations and normative standards. Conclusion: History tests political claims across time and sequence, while economics explains material incentives and distributional conflict; neither can independently settle legitimacy or justice.

Why this earns marks: it obeys explain instead of drifting into description, attaches each claim to named evidence (Introduction, History, Core and Economics), converts that evidence into analysis of how history and economics contribute differently to political analysis, and keeps the examiner-facing qualification that neither can independently settle legitimacy or justice. At 135 words it stays inside the 150-word GS ceiling for 10 marks.

Original GS Mains Model 3 - 10 marks

Question: Can political science be studied independently of the other social sciences? Discuss. Answer in 150 words.

Demand decode: the directive can requires the answer to state the conditions under which the claim holds and where they fail. Fix the boundary of political science be studied independently of the other social sciences? Discuss in the opening line, carry the argument on Introduction, Core, History and Behavioural, and reserve the closing sentences for the qualification that conclusion: Political science retains an autonomous organising question about power and authoritative allocation, but credible answers require evidence and models from the wider social sciences.

Model answer (141 words):

Introduction: Political science has a distinct organising concern with power, authority, conflict and binding collective decisions, but its subject matter cannot be isolated from wider social life. Core analysis: Gauba identifies three interdisciplinary functions: political science uses findings from related disciplines, verifies its theories through their evidence and contributes political insight back to them. History supplies temporal testing; economics explains resources and incentives; sociology identifies groups and institutions; psychology studies attitudes and leadership; philosophy clarifies values and ends. Behavioural and systems approaches intensified this exchange by shifting attention from formal government to actors and to the political system's environment. The defensible position is autonomy through integration: a distinct political focus supported by multiple bodies of evidence. Conclusion: Political science retains an autonomous organising question about power and authoritative allocation, but credible answers require evidence and models from the wider social sciences.

Why this earns marks: it obeys can instead of drifting into description, attaches each claim to named evidence (Introduction, Core, History and Behavioural), converts that evidence into analysis of political science be studied independently of the other social sciences? Discuss, and keeps the examiner-facing qualification that conclusion: Political science retains an autonomous organising question about power and authoritative allocation, but credible answers require evidence and models from the wider social sciences. At 141 words it stays inside the 150-word GS ceiling for 10 marks.

Original GS Mains Model 4 - 15 marks

Question: Examine the contributions and limits of sociology and psychology in political analysis. Answer in 250 words.

Demand decode: the directive examine requires the answer to test the proposition rather than describe it, weighing what supports and what weakens it. Fix the boundary of the contributions and limits of sociology and psychology in political analysis in the opening line, carry the argument on Introduction, Sociology, Core and Eulau's, and reserve the closing sentences for the qualification that conclusion: Sociology and psychology reveal social structure and individual motivation respectively, but political explanation requires both levels to be connected to institutions, resources and normative judgment.

Model answer (243 words):

Introduction: Sociology and psychology correct institutional accounts by explaining the social structures and individual processes through which politics is lived. Core analysis: Political sociology studies groups, status, norms, participation, leadership, political culture and the relation between social structures and political institutions. It explains why similar constitutional forms may operate differently across societies. Political psychology studies attitudes, learning, personality, propaganda, public opinion and charismatic or extremist appeal. It helps reconstruct how citizens and leaders perceive choices and acquire political orientations. Eulau's contextual account and Lipset's emphasis on mobilisation, values, kinship and class illustrate why behaviour cannot be detached from its environment. Further development: Their explanatory levels can be connected through mechanisms. Social structures influence the identities, incentives and information available to actors; psychological processes shape how those conditions are perceived and acted upon; institutions then aggregate or constrain the resulting conduct. This sequence avoids simply listing variables. It also shows why neither approach can establish the legitimacy of an outcome: evaluation of domination, justice or responsibility requires political philosophy in addition to causal explanation. Critical evaluation: Sociological reductionism may turn politics into passive maintenance of social structure, underplaying agency and deliberate institutional change. Psychological reductionism may individualise outcomes produced by class, law or organisation. The two disciplines contribute most when linked to each other and to political institutions. Conclusion: Sociology and psychology reveal social structure and individual motivation respectively, but political explanation requires both levels to be connected to institutions, resources and normative judgment.

Why this earns marks: it obeys examine instead of drifting into description, attaches each claim to named evidence (Introduction, Sociology, Core and Eulau's), converts that evidence into analysis of the contributions and limits of sociology and psychology in political analysis, and keeps the examiner-facing qualification that conclusion: Sociology and psychology reveal social structure and individual motivation respectively, but political explanation requires both levels to be connected to institutions, resources and normative judgment. At 243 words it stays inside the 250-word GS ceiling for 15 marks.

Original GS Mains Model 5 - 15 marks

Question: Evaluate the interdisciplinary approach to political analysis with reference to major disciplines and borrowed models. Answer in 250 words.

Demand decode: the directive evaluate requires the answer to apply a stated criterion and give a graded verdict, not a summary. Fix the boundary of the interdisciplinary approach to political analysis with reference to major disciplines and borrowed models in the opening line, carry the argument on Introduction, Interdisciplinary, Core and History, and reserve the closing sentences for the qualification that conclusion: Interdisciplinary analysis is strongest as structured integration: multiple disciplines correct one another's blind spots while the political problem remains the organising centre.

Model answer (223 words):

Introduction: Interdisciplinary political analysis responds to the fact that political action occurs within overlapping historical, economic, social, psychological and normative environments. Core analysis: History verifies claims through sequences and cases; economics reveals scarcity, production and distribution; sociology explains groups, norms and participation; psychology studies attitudes, learning and leadership; philosophy clarifies obligation, justice and policy ends. Anthropology tests state-centred assumptions through non-state authority, law supplies formal texts and judicial reasoning, and geography reveals the territorial distribution of power and resources. Political science also borrows models: Easton's system comes from general systems thinking, structural-functionalism from sociology and anthropology, Lasswell's problem-solving orientation from psychology and decision theory, and base-superstructure analysis from political economy. Further development: A full evaluation must distinguish data from models and explanation from evaluation. Literacy, income, kinship, attitudes, legal rules and regional distribution are data drawn from different disciplines; systems, structural-functional, market, elite and problem-solving frameworks organise causal interpretation. Philosophy then asks whether the resulting institutions and policies are justified. The approach is not automatically superior merely because it contains more variables. Explanations become incoherent when causal levels are mixed or evidence is imported without relevance. Gauba's remedy is integrated verification without merger and purposeful retention of the political question. Conclusion: Interdisciplinary analysis is strongest as structured integration: multiple disciplines correct one another's blind spots while the political problem remains the organising centre.

Why this earns marks: it obeys evaluate instead of drifting into description, attaches each claim to named evidence (Introduction, Interdisciplinary, Core and History), converts that evidence into analysis of the interdisciplinary approach to political analysis with reference to major disciplines and borrowed models, and keeps the examiner-facing qualification that conclusion: Interdisciplinary analysis is strongest as structured integration: multiple disciplines correct one another's blind spots while the political problem remains the organising centre. At 223 words it stays inside the 250-word GS ceiling for 15 marks.

Original GS Mains Model 6 - 15 marks

Question: Does interdisciplinarity deepen or threaten the autonomy of political science? Critically discuss. Answer in 250 words.

Demand decode: the directive discuss requires the answer to open the competing dimensions and adjudicate between them instead of listing them. Fix the boundary of interdisciplinarity deepen or threaten the autonomy of political science? Critically discuss in the opening line, carry the argument on Introduction, Interdisciplinarity, Core and History, and reserve the closing sentences for the qualification that yet political science asks a question none of them settles alone: how power, authority and conflict produce collectively binding decisions and how those decisions should be judged.

Model answer (250 words):

Introduction: Interdisciplinarity appears to threaten autonomy because political science borrows much of its evidence and many models from neighbouring disciplines. Core analysis: The threat is real when economics reduces politics to bargaining or class, psychology to personality, sociology to system maintenance, law to formal rules, or geography to spatial destiny. A discipline that merely aggregates these accounts loses a distinct explanatory task. Yet political science asks a question none of them settles alone: how power, authority and conflict produce collectively binding decisions and how those decisions should be judged. History, economics, sociology, psychology, philosophy, anthropology, law and geography then become evidence routes organised around that problem. Borrowed models such as Easton's system or Lasswell's problem-solving framework remain political when adapted to political actors, institutions and consequences. Further development: The Indian application can remain conceptual. Analysis of democratic durability may combine historical institution-building, economic inequality, caste or community structures, mass attitudes, constitutional law and territorial diversity. The 29 June 2026 release of MoSPI's SDG National Indicator Framework Progress Report offers a current evidence anchor because it organises time-series indicators across all seventeen SDGs for monitoring and policy. Such a framework illustrates interdisciplinary evidence, not a self-interpreting political conclusion. Indicator selection, distributional priorities, accountability and the meaning of development still require political and philosophical judgment. Purposeful integration deepens political science; uncritical merger or single-discipline reduction threatens it. Conclusion: Interdisciplinarity deepens rather than dissolves political science when borrowing is selective, reductionism is resisted and the discipline retains responsibility for political explanation and evaluation.

Why this earns marks: it obeys discuss instead of drifting into description, attaches each claim to named evidence (Introduction, Interdisciplinarity, Core and History), converts that evidence into analysis of interdisciplinarity deepen or threaten the autonomy of political science? Critically discuss, and keeps the examiner-facing qualification that yet political science asks a question none of them settles alone: how power, authority and conflict produce collectively binding decisions and how those decisions should be judged. At 250 words it stays inside the 250-word GS ceiling for 15 marks.

OPTIONAL ADVANCED DEPTH - NOT REQUIRED FOR A CORE ANSWER

Subject: Political Theory | **Tier:** Advanced enrichment | **Exam relevance:** UPSC Prelims and GS Mains, primarily GS-II. This universal label means enrichment beyond a core GS answer and never a separate-paper classification. **Core area:** Reconstructing Gauba's case for interdisciplinarity as a method of verification, explanation and evaluation in political analysis. **Grounded in:** O. P. Gauba, *An Introduction to Political Theory*, Fifth Edition (2009), Ch.5, PDF pp.135-146. **Source edition/cutoff:** Fifth Edition (2009); no post-2009 fact is assumed unless independently dated and tagged CURRENT:. **FACT:** = source-grounded | **ANALYSIS:** = analytical inference/synthesis | **CURRENT:** = dated current anchor | **WRONG:** = trap/misattribution. *Companion:* Political-Theory/basic/09_Interdisciplinary-Political-Analysis.md.

1. One-screen advanced map

POLITICAL CLAIM

```
|
+--> HISTORICAL CHECK: did it hold across time/cases?
+--> ECONOMIC CHECK: what resource conflicts and incentives shape it?
+--> SOCIOLOGICAL CHECK: what groups, norms and structures carry it?
+--> PSYCHOLOGICAL CHECK: what attitudes, fears and identities sustain it?
+--> PHILOSOPHICAL CHECK: is it conceptually clear and normatively defensible?
```

```
|
v
```

INTEGRATED POLITICAL JUDGMENT

= explanation + verification + evaluation

FACT: Gauba's conclusion is that political inquiry should be based on and verified from all relevant social sciences, not on a single partial approach. (PDF p.146)

2. Scope, assumptions and conceptual boundary

- **FACT:** The chapter treats politics as a social process and the political system as an open system linked to a wider social environment. (PDF pp.137-139)
- **FACT:** Interdisciplinarity here means selective, purposive borrowing directed toward political understanding, not intellectual tourism across disciplines. (PDF p.137)
- **WRONG:** It does **not** mean that political theory is absorbed into economics, sociology or psychology; Gauba explicitly rejects merger into a single master science. (PDF p.146)
- **ANALYSIS:** This file therefore stays at the level of concept-routing: how a political theorist chooses evidence and checks arguments.
- **ANALYSIS:** Boundary rule: governance can illustrate administrative consequences, and economics can explain material mechanisms, but this topic is about how those inputs are used in political analysis.

3. Direct-book argument reconstruction

1. **FACT:** Gauba first defines disciplines and then marks the social sciences as especially suited to interdisciplinary work because they study overlapping aspects of human society. (PDF p.136)
2. **FACT:** He then specifies three functions of interdisciplinarity in political science: use other disciplines' findings, verify political theories through them, and contribute back to their understanding. (PDF p.137)
3. **FACT:** He warns that such widening must remain focused on politics; labour relations or crowd psychology matter here only insofar as they affect political outcomes. (PDF p.137)
4. **FACT:** The methodological push comes from empirical orientation: observable facts, causal explanation, generalization and prediction displaced purely ideal-state speculation. (PDF p.138)

5. FACT: Behavioural analysis widened the unit of study from formal institutions to the behaviour of voters, elites, bureaucrats, judges and groups. (PDF pp.138-139)
6. FACT: Systems analysis further required study of inputs, outputs and feedback between political and social systems. (PDF p.137, PDF p.139)
7. FACT: Political science thus began using other disciplines' data, theories and models, including elite theory, base-superstructure analysis, structural-functionalism, problem-solving models and market analogies. (PDF pp.139-140)
8. FACT: Gauba then demonstrates the specific uses of history, economics, sociology, psychology and philosophy for political analysis. (PDF pp.141-146)
9. FACT: He ends by saying single-discipline approaches remain partial, while the interdisciplinary approach aims at an integrated view without abolishing disciplinary boundaries. (PDF p.146)

4. Definitions and distinctions

Pair	Advanced distinction
FACT: Empirical / Normative	Empirical inquiry explains what exists through facts and causal relations; normative inquiry evaluates what ought to be through values and standards. (PDF p.138)
FACT: Political science / Political philosophy	Political science helps discover facts and operational tools; political philosophy clarifies goals, obligation, justice and the moral worth of systems. (PDF pp.145-146)
FACT: Interdisciplinary / Single-discipline	Interdisciplinary analysis checks a political claim against multiple relevant bodies of evidence; single-discipline analysis remains partial. (PDF p.146)
FACT: Use of data / Use of models	Data include literacy, income distribution, kinship patterns and attitudes; models include elite theory, structural-functionalism and economic bargaining analogies. (PDF pp.139-140)
WRONG: Broader scope / Loss of focus	Gauba permits broader scope only when the main focus remains political. (PDF p.137)

5. Thinker-by-thinker positions

- FACT: **Aristotle**: the classical "master science" image blurred normative and empirical aspects and did not sharply separate politics from wider social life. (PDF p.146)
- FACT: **Marx and Engels**: early systematic interdisciplinarians because they related politics to technology, production and class structure. (PDF p.137)
- FACT: **Heinz Eulau**: political behaviour must be studied within wider social, cultural and personal contexts. (PDF p.139)
- FACT: **Seymour Martin Lipset**: political development depends on social mobilization, value change, kinship structure and class/status relations. (PDF p.140)
- FACT: **Auguste Comte**: science itself emerges from philosophical foundations; Gauba uses this to soften a rigid philosophy/science divide. (PDF p.145)
- FACT: **David Easton**: his political-system framework is borrowed from sociology, showing direct interdisciplinary transfer into political science. (PDF p.140)
- FACT: **Harold Lasswell**: Gauba cites the problem-solving model as an example of psychology feeding political analysis. (PDF p.140)

6. Competing perspectives

- FACT: **Historical perspective:** treats the past as a storehouse of data and causal patterns for political verification. (PDF p.141)
- FACT: **Political-economic perspective:** looks at production, distribution, exchange, economic demands and the state's role in reconciling them. (PDF pp.142-143)
- FACT: **Political-sociological perspective:** studies the political subsystem in relation to social structures, norms, leadership and participation. (PDF pp.143-144)
- FACT: **Political-psychological perspective:** explains attitudes, personality, learning, propaganda and extremist appeal. (PDF pp.144-145)
- FACT: **Political-philosophical perspective:** clarifies ends, values, obligation, good life and the moral standing of political systems. (PDF pp.145-146)
- ANALYSIS: These are best seen as complementary lenses: explanation improves when their evidence is combined rather than ranked in a fixed hierarchy.

7. Internal debates and criticisms

- FACT: Gauba notes older claims like "history is past politics" as oversimplifications because political science has gained an independent identity. (PDF p.141)
- FACT: He also presents the science/philosophy split as exaggerated because science itself originates in philosophy and still requires philosophical validation of ends. (PDF p.145)
- WRONG: **Economic reductionism:** Marxian or market models can illuminate politics, but the chapter does not say economics alone settles political analysis. (PDF pp.140, 142-143, 146)
- WRONG: **Behaviouralist reductionism:** focus on observable behaviour corrected older formalism, but Gauba also records the later revival of justice, liberty, equality and community. (PDF pp.145-146)
- ANALYSIS: A useful criticism of pure interdisciplinarity is diffusion of focus; Gauba pre-empts this by insisting on purposeful relevance to politics. (PDF p.137)

8. Comparative matrix

Evidence-routing matrix

Route	What it contributes	What it verifies or clarifies	Example political-theory use	What it cannot settle alone
FACT: Historical verification	Past cases, sequences, roots and patterns. (PDF p.141)	Whether a political theory survives rule-and-exception testing. (PDF p.141)	Testing claims about democracy, state formation or international conflict.	WRONG: Present moral worth of a system.
FACT: Political economy	Production, distribution, exchange, resource conflict and policy incentives. (PDF pp.142-143)	Whether material interests and economic demands explain political conflict or policy. (PDF pp.142-143)	Welfare state, class conflict, planning, public control, development.	WRONG: Full account of legitimacy or civic identity.
FACT: Political sociology	Social structures, status, values, institutions, participation and leadership. (PDF pp.143-144)	Whether a political arrangement fits the social basis that sustains it. (PDF pp.139, 143-144)	Political culture, socialization, group conflict, legitimacy.	WRONG: Inner motive of a specific actor or final normative judgment.
FACT: Political psychology	Attitudes, personality, learning, propaganda and leadership style. (PDF pp.144-145)	Whether mass appeal, obedience or extremism can be traced to psychological mechanisms. (PDF pp.144-145)	Authoritarian personality, charisma, public opinion, propaganda.	WRONG: Structural class or institutional explanation by itself.
FACT: Philosophical clarification/evaluation	Conceptual clarity, ends, values and moral appraisal. (PDF pp.145-146)	Whether concepts like justice, liberty or obligation are coherent and defensible. (PDF pp.145-146)	Evaluating policy goals or the moral worth of political systems.	WRONG: Standalone explanation of actual behaviour without empirical evidence.

9. Application without current-affairs dependence

- ANALYSIS: **Hypothetical 1**: "Why does one democracy survive while another collapses?" -> route through history for antecedents, economics for inequality, sociology for cleavages, psychology for authoritarian appeal, and philosophy for legitimacy.
- ANALYSIS: **Hypothetical 2**: "Should a state regulate markets for welfare?" -> route through economics for incentives and distribution, sociology for class effects, and philosophy for justice and common good.
- ANALYSIS: **Hypothetical 3**: "Why do citizens obey harmful propaganda?" -> route through psychology for attitude formation, sociology for group identity, and philosophy for truth and responsibility.
- ANALYSIS: The point is not to pile disciplines mechanically, but to ask which discipline supplies the missing evidence in a political argument.

10. UPSC answer-engine prompts

- ANALYSIS: **Prompt frame 1**: Define interdisciplinarity -> show empirical/behavioural push -> map five disciplines -> conclude with integration without merger.
- ANALYSIS: **Prompt frame 2**: If the question mentions political behaviour, immediately bring in sociology and psychology before discussing institutions.
- ANALYSIS: **Prompt frame 3**: If the question mentions justice, liberty or obligation, add philosophy explicitly instead of writing only empirical explanation.
- ANALYSIS: **Practice prompt**: "Why are single-cause theories of politics analytically weak?"
- ANALYSIS: **Practice prompt**: "How does interdisciplinarity deepen but not destroy the autonomy of political theory?"

11. Cross-links and exclusions

- FACT: Companion file: `Political-Theory/basic/09_Interdisciplinary-Political-Analysis.md`.
- FACT: Wider frame: `Political-Theory/00_Master-Framework.md`.
- FACT: Folder method and tag policy: `Political-Theory/README.md`.
- FACT: The chapter naturally looks backward to behaviouralism and post-behaviouralism; use `Political-Theory/advanced/08_Approaches-Behaviouralism-and-Post-Behaviouralism.md` for that companion depth.
- ANALYSIS: The chapter also points outward to economics and governance as neighbouring domains; this file does not reproduce full economic theory or administrative case detail.

12. Factual-risk checks

- FACT: References to behaviouralism, post-behaviouralism and cited scholars belong to Gauba's 2009 exposition of twentieth-century debates. (PDF pp.138-146)
- FACT: Statements about what history, economics, sociology, psychology and philosophy contribute are source-grounded chapter summaries, not present-day disciplinary consensus claims beyond the book. (PDF pp.141-146)
- WRONG: Do not present Gauba's disciplinary map as if it abolishes legal or geographical approaches; his conclusion is that single approaches are partial, not useless. (PDF p.146)
- WRONG: Do not convert classic examples into current data claims; this chapter is methodological, not a live empirical survey.

13. Sources, metadata and tags

- FACT: Direct source window read in full across the assigned extraction range, with core anchors on PDF pp.136-146.
- FACT: Especially used: approach and method (PDF pp.136-140), history (PDF p.141), economics (PDF pp.142-143), sociology (PDF pp.143-144), psychology (PDF pp.144-145), philosophy and conclusion (PDF pp.145-146).
- ANALYSIS: All tables and answer-prompts are exam-oriented syntheses built from the chapter's explicit structure.
- FACT: Companion path in this folder:
`Political-Theory/basic/09_Interdisciplinary-Political-Analysis.md`.

CONSOLIDATED REGISTER NOTES

Concept / thinker	Exam-ready formulation
Discipline	A branch or field of learning.
Interdisciplinary approach	Use of more than one discipline to study a problem, especially where common or overlapping phenomena are involved.
Empirical approach	Focus on observable facts, explanation, correlation, generalization and prediction.
Normative approach	Focus on values, prescriptions and what ought to be done.
Political economy	Analysis of political aspects of economic policy-making and of the mutual impact of economic forces and political decisions.
Political sociology	Study of political institutions, processes and ideologies in relation to social structures and modes of thought.
Political psychology	Use of psychological models and techniques to analyse political behaviour, attitudes, learning, socialization, leadership and propaganda.
Political philosophy	Inquiry into moral and substantive dimensions of politics, including values, obligation, good life and the worth of political systems.

Concept / thinker	Exam-ready formulation
Interdisciplinary vs random borrowing	Gauba warns that expansion across disciplines must be purposeful and well-conceived.
Empirical vs normative	empirical inquiry asks what is; normative inquiry asks what ought to be.
Political science vs political philosophy	scientific-behavioural studies help find facts and tools, while political philosophy helps determine goals of public policy.
Governance boundary	governance explains delivery mechanisms; this topic uses governance-like evidence only when it sharpens a political concept.

- Heinz Eulau: political behaviour analysis must be interdisciplinary because political action occurs in a wider social, cultural and personal context. (PDF p.139)
- Law/jurisprudence as a data source: distinct from the legal approach to studying politics (already covered under Section 8's traditional approaches), the interdisciplinary use of law supplies political analysis with constitutional text, statutes and judicial reasoning as primary evidence of how authority is formally allocated and constrained.
- Interdisciplinary inquiry widens perspective, helps verify political claims through other social sciences, and also enables political science to contribute back to them. (PDF p.137)
- The chapter argues that single-discipline approaches are partial, whereas an interdisciplinary approach seeks an integrated view of politics. (PDF p.146)
- Empirical orientation, behavioural analysis and systems analysis pushed political science toward other social sciences because real politics cannot be grasped by ideal-state speculation or formal institutions alone. (PDF pp.138-139)
- Interdisciplinary vs random borrowing: Gauba warns that expansion across disciplines must be purposeful and well-conceived. (PDF p.137)
- Aristotle: the classical approach treated politics as the "master science" and did not clearly separate normative from empirical analysis. (PDF p.146)
- Marx and Engels: Gauba credits them with an early systematic interdisciplinary approach by locating political behaviour in socio-economic factors such as production and class structure. (PDF p.137)
- Show why empirical orientation, behaviouralism and systems analysis pushed political science outward. (PDF pp.138-139)
- Gauba's chapter (PDF pp.141-146) foregrounds history, economics, sociology, psychology and philosophy. A complete interdisciplinary answer should also be able to place anthropology, law and geography on the same map, since these are commonly tested alongside the five above:
- Claim -> evidence -> significance -> limit: Claim: political order does not require a Weberian state. Evidence: kinship/lineage-based dispute-resolution and authority structures documented across many non-state societies. Significance: tests and refines political theory's core concepts (authority, legitimacy, sovereignty) against non-state cases rather than assuming the modern state is the only unit of analysis. Limit: findings from small-scale societies cannot be mechanically transplanted onto large, complex modern states.
- Claim -> evidence -> significance -> limit: Claim: legal materials are indispensable evidence for political analysis of institutions and rights. Evidence: constitutional provisions and case law define formal powers, limits and remedies. Significance: grounds political claims about institutional design in verifiable text rather than impression. Limit: legal text alone cannot explain informal power, bargaining or non-compliance - hence the need for sociology/psychology alongside it.
- Trap repair: "Interdisciplinary study means political science has lost its identity." -> Gauba says political science remains focused on politics while using other disciplines for broader and better-grounded analysis. (PDF pp.137, 146)
- Trap repair: "Empirical political science made philosophy irrelevant." -> Gauba says political philosophy regained prominence after post-behaviouralism and still helps define policy goals. (PDF pp.145-146)

- Trap repair: "History and political science are the same thing." -> Gauba treats this older formula as an oversimplification; history is used selectively and critically. (PDF p.141)
 - Trap repair: "One discipline can fully explain politics." -> The chapter concludes that philosophical, historical, legal, economic, sociological and psychological approaches are partial when used alone. (PDF p.146)
1. Define the exact doctrine or controversy in the question.
 2. State a qualified thesis before narration begins.
 3. Reconstruct premises, mechanism and conclusion.
 4. Add named thinkers and one precise distinction.
 5. Present the strongest objection, reply and residual limitation.
 6. End with a graded verdict tied to the directive.

GS ownership and final answer route

- **Topic boundary:** historical, economic, sociological, psychological and philosophical analysis.
- **Exam identity:** UPSC Prelims and General Studies Mains only; primarily GS-II conceptual foundations.
- **Evidence rule:** claim -> named thinker/example -> what it proves -> limitation.
- **PYQ rule:** only directly verified Prelims/GS Mains questions may be owned; otherwise use labelled original practice.
- **Advanced rule:** Advanced enrichment is useful for qualification but unnecessary for a competent core GS answer.
