Reading Comprehension → The four question types and their tests

HIGH

Foundation · 2.1 Three word-pairs that decide RC options

CSAT CSAT

INTRO & ORIGIN

Structured comparison from the foundation source layer.

KEY DATA

Pair	The difference
☐ Inference vs assumption	An inference comes out of the passage (a conclusion). An assumption sits under it (an unstated premise the argument needs).
☐ Implication vs equivalence	If the passage says "A leads to B", it has not said "B leads to A". An option that reverses the direction is a distortion, however plausible.
☐ Necessary vs sufficient	"Forecasting is necessary but not sufficient " means good forecasts cannot be skipped and cannot finish the job alone. An option that treats a necessary condition as enough - or as useless - fails.

MAINS ANGLE

STUDY LINK

Reading Comprehension → 2.1 Three word-pairs that decide RC options

HIGH

Foundation · 2.1 Three word-pairs that decide RC options

CSAT CSAT

INTRO & ORIGIN

☐ Passages in this paper regularly use "necessary but not sufficient", "only if", and "unless".

Foundation learning layer: concepts → constitutional detail → UPSC application.

STATIC THEORY

- Translate each into an arrow before reading the options: "only if B" means $A \rightarrow B$; "unless B" means $not\ B \rightarrow not\ A$.

MAINS ANGLE

STUDY LINK

Reading Comprehension → 2.1 Three word-pairs that decide RC options

HIGH

Foundation · Method (step by step)

CSAT CSAT

INTRO & ORIGIN

Read the stem first. Knowing the type tells you what to hunt for.

Foundation learning layer: concepts → constitutional detail → UPSC application.

METHOD (STEP BY STEP): RECALL MAP

Method (step by step)

V

Dimension 1 Read the stem first. Knowing the type tells you what to hunt for.	Dimension 2 Read the passage once, actively. Underline the author's main claim, scope words
Dimension 3 (some, most, all, only), and contrast words (but, however, although) - answers hide near these.	Dimension 4 Predict the answer in your own words before looking at options.

STATIC THEORY

- **Read the passage once, actively.** Underline the author's **main claim**, **scope words**
- (some, most, all, only), and **contrast words** (but, however, although) - answers hide near these.
- **Predict** the answer in your own words before looking at options.
- **Test each option** against the text with the four filters (stated / scope / distortion / outside-knowledge).
- **If two survive**, pick the **more modest, better-supported** one; extreme wording usually loses.

MAINS ANGLE

STUDY LINK

Reading Comprehension → Method (step by step)

HIGH

Foundation · Distractor families (learn to name them)

CSAT CSAT

INTRO & ORIGIN

Structured comparison from the foundation source layer.

KEY DATA

Distractor	How to spot it
☐ Out-of-passage truth	A real fact the passage never states.
☐ Over-generalisation	Turns "some/many" into "all/always/only/solely".
☐ Scope creep	Adds a topic the passage did not discuss.
☐ Distortion	Reverses cause-effect, or swaps a qualifier.
☐ Half-right	One clause is supported, another is not - still wrong.

Re-read the stem.

Foundation learning layer: concepts → constitutional detail → UPSC application.

UPSC TRAPS

WRONG: Picking a **true** statement that the passage never makes.

CORRECT: Ask "which line proves this?"

WRONG: Turning a qualified claim ("often", "many") into an **absolute** ("always", "all").

CORRECT: Reject.

WRONG: **Reversing** a stated relation (treating A

CORRECT: B as $B \rightarrow A$). → Check the arrow direction.

WRONG: Reading "necessary" as "sufficient" (or as "unimportant").

CORRECT: Keep the two apart.

WRONG: Importing **subject knowledge** (economics, science) into a passage-only item.

CORRECT: Text only.

WRONG: Choosing the **longest / most sophisticated** option by reflex.

CORRECT: Length is not correctness.

WRONG: Answering the **wrong question type** (giving a detail when the stem wants the main idea).

CORRECT:

MAINS ANGLE**STUDY LINK**

HIGH**Foundation · Mini-drill (with answers and explanations)**

CSAT CSAT

INTRO & ORIGIN

Exam-ready treatment of Mini-drill (with answers and explanations).

*Foundation learning layer: concepts → constitutional detail → UPSC application.***MAINS ANGLE**

□ **Passage.** "Rooftop solar lets a household generate its own electricity and sell surplus power back to the grid. But adoption is slow: the upfront cost is high, and many tenants cannot install panels on a roof they do not own. Subsidies help with cost, yet they do nothing for the tenant who has no roof to use." **The main point of the passage is that:** (a) rooftop solar has both a cost barrier and an ownership barrier, and subsidies address only the first. (b) rooftop solar is a failure. (c) all households should install solar panels. (d) subsidies are a waste of money. **It can be inferred that:** (a) tenants are the main users of rooftop solar. (b) a subsidy alone will not make rooftop solar reach every household. (c) selling power to the grid is illegal. (d) rooftop solar produces no surplus power. **The argument assumes that:** (a) installing panels normally requires control over the roof. (b) electricity from the grid is free. (c) landlords always refuse permission. (d) subsidies are unavailable in India. **Answers. (a).** It states both barriers and the limit of subsidies. (b)/(d) are over-negative and unstated; (c) is a policy leap. **(b).** The passage explicitly says subsidies "do nothing for the tenant who has no roof", so a subsidy alone leaves some households out - a forced inference. (a) reverses the passage (tenants often **cannot** install); (c)/(d) contradict the text. **(a).** "Cannot install panels on a roof they do not own" only bites if installation **needs** roof control - the unstated premise. (b)/(c)/(d) are not required by the argument.

Reading Comprehension → Architecture

HIGH

Advanced · Precise distinctions (the ones UPSC exploits)

CSAT CSAT

INTRO & ORIGIN

Structured comparison from the advanced source layer.

KEY DATA

Pair	The difference that decides the answer
□ Inference vs Assumption	Inference = a new statement forced by the text (a *conclusion*). Assumption = an unstated premise the argument already needs (a *foundation*).
□ Inference vs Implication	Both follow from the text; UPSC often uses them interchangeably. Test both the same way: must it be true given the passage?
□ Implication vs Equivalence	A passage that says $A \rightarrow B$ has not said $B \rightarrow A$. Only an "if and only if" (or an explicit definition) licenses the reverse. A reversed option is a distortion , not an inference.
□ Necessary vs Sufficient	"Necessary" = the claim fails without it; "sufficient" = it settles the claim. A passage saying "X is necessary but not enough" rules out both "X is useless" and "X guarantees the outcome".
□ Central idea vs Detail	Central idea spans the whole passage; a detail is one supporting sentence. A detail option is a classic main-idea distractor.
□ Tone vs Content	Tone is the author's attitude (neutral, critical, cautionary, optimistic), read from word choice , independent of the facts stated.
□ Stated vs Entailed	"Stated" = literally in the text. "Entailed" = must be true even if not literal. Both are acceptable; "merely true in the world" is not.

Advanced drill (with full solutions)

V

Dimension 1 □ Passage. "Ranking schools purely by average board marks pushes them to court strong students"	Dimension 2 and quietly discourage weak ones, because a struggling child lowers the average. A fairer gauge is
Dimension 3 how much a school improves each child from where they started - its value added - though this is	Dimension 4 harder to measure."

STATIC THEORY

- and quietly discourage weak ones, because a struggling child lowers the average. A fairer gauge is
- how much a school **improves** each child from where they started - its value added - though this is
- harder to measure."
- **The central idea is that:**
- (a) board exams should be abolished. (b) ranking schools by average marks can create perverse incentives, and value-added is a fairer though harder measure. (c) weak students should change schools. (d) all schools game their rankings.
- **The argument assumes that:**

MAINS ANGLE**STUDY LINK**

Reading Comprehension → Advanced drill
(with full solutions)

HIGH**Advanced · Advanced drill (with full solutions) · Part 2****CSAT CSAT****INTRO & ORIGIN**

(a) a school's average mark can be raised by changing which students it admits or retains. (b) board marks are always inaccurate. (c) value-added is easy to compute. (d) parents ignore school rankings.

Advanced learning layer: concepts → constitutional detail → UPSC application.

STATIC THEORY

- **Which inference is best supported?**
- (a) A school can score well on average marks yet add little value to its students. (b) Value-added measurement is impossible. (c) Strong students never need improvement. (d) Average marks and value added always agree.
- **Which of the statements given below is/are supported by the passage?**
- A fairer measure can also be a harder one to compute.
- Any school with a high average mark must be adding little value.
- Discouraging weak students would tend to raise a school's average.
