Justice**INTRO & ORIGIN**

Structured comparison from the foundation source layer.

KEY DATA

Concept	Exam-ready meaning
□ Distributive justice	Concerned with the fair allocation of resources, opportunities and services; asks "who receives what?" — implemented through transfers, reservation, public services and social security.
□ Corrective justice	Concerned with remedying a specific wrong; asks "how is harm undone?" — implemented through compensation, rehabilitation, penalty and restoration.
□ Recognitive justice	Concerned with affirming denied identities, dignity and voice; asks "whose personhood is marginalised?" — implemented through anti-discrimination law, representation and identity recognition.
□ Welfare state	A state that assumes responsibility for citizens' minimum standard of living through public provision of health, education, housing, social security and poverty relief — India's Preamble ("socialist") and DPSP (Part IV) establish this normative foundation without making it directly justiciable.
□ Capability approach (Sen/Nussbaum)	Evaluates well-being not by income or utility alone but by functionings (achieved states such as being healthy) and capabilities (real freedoms to achieve functionings); shifts the policy question from "what do people have?" to "what can people actually do and be?"
□ Social protection floor (ILO R202)	A globally endorsed baseline guaranteeing (a) basic income security through the life cycle and (b) access to essential health care — a floor beneath which no one should fall.
□ □ Universalism vs targeting	Universalism provides the same entitlement to all (reduces stigma, avoids exclusion errors) while targeting concentrates resources on identified beneficiaries (efficiency, but risks inclusion/exclusion errors and documentation barriers).
□ □ Rights-based vs charity-based welfare	Rights-based welfare frames the citizen as an entitlement-holder with a statutory/constitutional claim and a remedy where the law provides one; charity-based welfare treats support as state beneficence that may be withdrawn at discretion. A statutory label alone does not guarantee delivery.

HIGH

Foundation · Mains angles

GS-II Social
Justice

INTRO & ORIGIN

Exam-ready treatment of Mains angles.

Foundation learning layer: concepts → constitutional detail → UPSC application.

MAINS ANGLE

□□ Use the three-dimension framework (distributive, corrective, recognitive) to structure any answer on social justice, vulnerable groups or welfare schemes. □□ Frame evaluation in capability terms: ask whether a scheme converts inputs (food, healthcare, schooling) into functionings (being healthy, educated) and capabilities (freedom to choose a life one values). □□ Distinguish universalism vs targeting as a policy design choice, not a binary good/bad — note inclusion/exclusion error trade-offs. □□ Highlight the rights-based framing: NFSA, RTE and RPwD convert discretionary schemes into enforceable or quasi-enforceable entitlements. **Answer thesis:** Social justice requires moving beyond formal equality to substantive capability through distributive support, corrective remedy and recognitive dignity; the welfare state institutionalises this commitment, and the capability approach provides the evaluative standard — a scheme succeeds not when it disburses funds but when it expands what people can actually do and be.

HIGH

Advanced · Concepts and distinctions

GS-II Social
Justice

INTRO & ORIGIN

Structured comparison from the advanced source layer.

KEY DATA

Concept	Precise meaning
□ Functionings vs capabilities (Sen)	Functionings are achieved states (being nourished, being literate); capabilities are the real freedoms to achieve those states — policy should expand the capability set, not merely provide inputs.
□ Central capabilities (Nussbaum list)	A threshold set of capabilities (life; bodily health; bodily integrity; senses, imagination and thought; emotions; practical reason; affiliation; relation to other species; play; control over one's environment) that a just society must secure for all citizens — a more prescriptive version of Sen's open-ended approach.
□ Rawls's difference principle	Inequalities are just only if they benefit the least-advantaged members of society — a distributive-justice standard occasionally referenced in UPSC Mains answers alongside the capability approach.
□ Inclusion error vs exclusion error	Inclusion error: non-eligible persons receive a benefit (leakage); exclusion error: eligible persons do not receive a benefit (under-coverage) — targeting reduces inclusion error but increases exclusion risk; universalism reduces exclusion error but increases cost and inclusion error.
□ Horizontal vs vertical equity	Horizontal equity: equals treated equally; vertical equity: unequals treated unequally in proportion to their disadvantage — affirmative action operationalises vertical equity.
□ Residual vs institutional welfare state	Residual model: state intervenes only when family/market fails (means-tested, stigmatised); institutional model: state provides universal services as a citizenship right (de-stigmatised, but costlier) — India's trajectory is a hybrid, with some universal entitlements (RTE, NFSA) layered on targeted schemes.

GS-II Social Justice

INTRO & ORIGIN

Exam-ready treatment of PYQ-based analytical application.

Advanced learning layer: concepts → constitutional detail → UPSC application.

MAINS ANGLE

□ **2024 GS-I Q18 (250 words)** asks why underprivileged sections have not received the full benefits of constitutionally envisaged affirmative action. It is the clearest cross-paper route to this framework. The closest GS-II question is 2024 Q7 (poverty-malnutrition-human-capital), which implicitly tests capability conversion. A strong answer to either social-justice/inclusive-development framing should: Define the three dimensions (distributive, corrective, recognitive). Apply the capability lens (does the intervention expand what people can do?). Acknowledge universalism/targeting trade-offs. Cite a concrete Indian example with dated evidence.

Advanced · Mains-ready framework

GS-II Social
Justice

INTRO & ORIGIN

Exam-ready treatment of Mains-ready framework.

Advanced learning layer: concepts → constitutional detail → UPSC application.

MAINS ANGLE

Central thesis: Social justice is not achieved by formal legal equality or scheme announcement alone; it requires distributive support, corrective remedy and recognitive dignity, evaluated by whether people's capabilities — not merely their inputs — expand. The welfare state institutionalises this commitment; universalism vs targeting is a design choice, not a moral absolute; and the rights-based framing converts discretionary charity into enforceable entitlement. **Define the evaluative standard:** capability (functionings + freedoms), not income or utility alone. **Apply the three-dimension test:** distributive (who receives?), corrective (is the harm remedied?), recognitive (is dignity affirmed?). **Assess policy design:** universalism vs targeting, rights-based vs discretionary. **Identify the gap:** identification, enforcement, delivery, quality or outcome-learning (see 00_Master-Framework.md Section 4). **Recommend with measurable safeguard:** a specific improvement tied to a capability outcome, not just a coverage number. **Cite dated evidence:** survey (NFHS, PLFS), administrative data or social audit finding with the reporting year retained.
