

## SOLVED PRACTICE WORKBOOK

# Border Management and Border Area Development - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

# CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

## Border Management and Border Area Development - Solved Practice Workbook . . . . . 5

### BASIC MCQS / REMEDIATION . . . . . 5

|                                                                                                                            |    |
|----------------------------------------------------------------------------------------------------------------------------|----|
| Q1. Which statement correctly identifies Security-management distinction? . . . . .                                        | 5  |
| Q2. Which option preserves the legal or institutional boundary of Security-management distinction? . . . . .               | 5  |
| Q3. Which statement uses Security-management distinction without changing its institution, law or status? . . . . .        | 5  |
| Q4. Which option avoids the standard UPSC close-option trap about Security-management distinction? . . . . .               | 6  |
| Q5. Which statement correctly identifies Boundary vocabulary? . . . . .                                                    | 6  |
| Q6. Which option preserves the legal or institutional boundary of Boundary vocabulary? . . . . .                           | 6  |
| Q7. Which statement uses Boundary vocabulary without changing its institution, law or status? . . . . .                    | 7  |
| Q8. Which option avoids the standard UPSC close-option trap about Boundary vocabulary? . . . . .                           | 7  |
| Q9. Which statement correctly identifies China-border character? . . . . .                                                 | 7  |
| Q10. Which option preserves the legal or institutional boundary of China-border character? . . . . .                       | 7  |
| Q11. Which statement uses China-border character without changing its institution, law or status? . . . . .                | 8  |
| Q12. Which option avoids the standard UPSC close-option trap about China-border character? . . . . .                       | 8  |
| Q13. Which statement correctly identifies Pakistan-border segmentation? . . . . .                                          | 8  |
| Q14. Which option preserves the legal or institutional boundary of Pakistan-border segmentation? . . . . .                 | 9  |
| Q15. Which statement uses Pakistan-border segmentation without changing its institution, law or status? . . . . .          | 9  |
| Q16. Which option avoids the standard UPSC close-option trap about Pakistan-border segmentation? . . . . .                 | 9  |
| Q17. Which statement correctly identifies Bangladesh settled-by-instrument case? . . . . .                                 | 9  |
| Q18. Which option preserves the legal or institutional boundary of Bangladesh settled-by-instrument case? . . . . .        | 10 |
| Q19. Which statement uses Bangladesh settled-by-instrument case without changing its institution, law or status? . . . . . | 10 |
| Q20. Which option avoids the standard UPSC close-option trap about Bangladesh settled-by-instrument case? . . . . .        | 10 |
| Q21. Which statement correctly identifies Nepal open-border case? . . . . .                                                | 11 |
| Q22. Which option preserves the legal or institutional boundary of Nepal open-border case? . . . . .                       | 11 |
| Q23. Which statement uses Nepal open-border case without changing its institution, law or status? . . . . .                | 11 |
| Q24. Which option avoids the standard UPSC close-option trap about Nepal open-border case? . . . . .                       | 11 |
| Q25. Which statement correctly identifies Myanmar FMR status rule? . . . . .                                               | 12 |
| Q26. Which option preserves the legal or institutional boundary of Myanmar FMR status rule? . . . . .                      | 12 |
| Q27. Which statement uses Myanmar FMR status rule without changing its institution, law or status? . . . . .               | 12 |

|                                                                                                                    |    |
|--------------------------------------------------------------------------------------------------------------------|----|
| Q28. Which option avoids the standard UPSC close-option trap about Myanmar FMR status rule? . . . . .              | 13 |
| Q29. Which statement correctly identifies Border-specific force map? . . . . .                                     | 13 |
| Q30. Which option preserves the legal or institutional boundary of Border-specific force map? . . . . .            | 13 |
| Q31. Which statement uses Border-specific force map without changing its institution, law or status? . . . . .     | 13 |
| Q32. Which option avoids the standard UPSC close-option trap about Border-specific force map? . . . . .            | 14 |
| Q33. Which statement correctly identifies One-border-one-force boundary? . . . . .                                 | 14 |
| Q34. Which option preserves the legal or institutional boundary of One-border-one-force boundary? . . . . .        | 14 |
| Q35. Which statement uses One-border-one-force boundary without changing its institution, law or status? . . . . . | 15 |
| Q36. Which option avoids the standard UPSC close-option trap about One-border-one-force boundary? . . . . .        | 15 |
| Q37. Which statement correctly identifies Four-element framework? . . . . .                                        | 15 |
| Q38. Which option preserves the legal or institutional boundary of Four-element framework? . . . . .               | 15 |
| Q39. Which statement uses Four-element framework without changing its institution, law or status? . . . . .        | 16 |
| Q40. Which option avoids the standard UPSC close-option trap about Four-element framework? . . . . .               | 16 |
| Q41. Which statement correctly identifies BADP purpose? . . . . .                                                  | 16 |
| Q42. Which option preserves the legal or institutional boundary of BADP purpose? . . . . .                         | 17 |
| Q43. Which statement uses BADP purpose without changing its institution, law or status? . . . . .                  | 17 |
| Q44. Which option avoids the standard UPSC close-option trap about BADP purpose? . . . . .                         | 17 |
| Q45. Which statement correctly identifies BIM purpose? . . . . .                                                   | 17 |
| Q46. Which option preserves the legal or institutional boundary of BIM purpose? . . . . .                          | 18 |
| Q47. Which statement uses BIM purpose without changing its institution, law or status? . . . . .                   | 18 |
| Q48. Which option avoids the standard UPSC close-option trap about BIM purpose? . . . . .                          | 18 |
| Q49. Which statement correctly identifies BADP-BIM distinction? . . . . .                                          | 19 |
| Q50. Which option preserves the legal or institutional boundary of BADP-BIM distinction? . . . . .                 | 19 |
| Q51. Which statement uses BADP-BIM distinction without changing its institution, law or status? . . . . .          | 19 |
| Q52. Which option avoids the standard UPSC close-option trap about BADP-BIM distinction? . . . . .                 | 19 |
| Q53. Which statement correctly identifies CIBMS role? . . . . .                                                    | 20 |
| Q54. Which option preserves the legal or institutional boundary of CIBMS role? . . . . .                           | 20 |
| Q55. Which statement uses CIBMS role without changing its institution, law or status? . . . . .                    | 20 |
| Q56. Which option avoids the standard UPSC close-option trap about CIBMS role? . . . . .                           | 20 |
| Q57. Which statement correctly identifies ICP-LPAI role? . . . . .                                                 | 21 |
| Q58. Which option preserves the legal or institutional boundary of ICP-LPAI role? . . . . .                        | 21 |
| Q59. Which statement uses ICP-LPAI role without changing its institution, law or status? . . . . .                 | 21 |

|                                                                                                                     |    |
|---------------------------------------------------------------------------------------------------------------------|----|
| Q60. Which option avoids the standard UPSC close-option trap about ICP-LPAI role? . . . . .                         | 22 |
| Q61. Which statement correctly identifies Vibrant Villages boundary? . . . . .                                      | 22 |
| Q62. Which option preserves the legal or institutional boundary of Vibrant Villages boundary? . . . . .             | 22 |
| Q63. Which statement uses Vibrant Villages boundary without changing its institution, law or status? . . . . .      | 22 |
| Q64. Which option avoids the standard UPSC close-option trap about Vibrant Villages boundary? . . . . .             | 23 |
| Q65. Which statement correctly identifies Community-security link? . . . . .                                        | 23 |
| Q66. Which option preserves the legal or institutional boundary of Community-security link? . . . . .               | 23 |
| Q67. Which statement uses Community-security link without changing its institution, law or status? . . . . .        | 23 |
| Q68. Which option avoids the standard UPSC close-option trap about Community-security link? . . . . .               | 24 |
| Q69. Which statement correctly identifies Adversarial-UAV classification? . . . . .                                 | 24 |
| Q70. Which option preserves the legal or institutional boundary of Adversarial-UAV classification? . . . . .        | 24 |
| Q71. Which statement uses Adversarial-UAV classification without changing its institution, law or status? . . . . . | 25 |
| Q72. Which option avoids the standard UPSC close-option trap about Adversarial-UAV classification? . . . . .        | 25 |
| Q73. Which statement correctly identifies Input-outcome firewall? . . . . .                                         | 25 |
| Q74. Which option preserves the legal or institutional boundary of Input-outcome firewall? . . . . .                | 25 |
| Q75. Which statement uses Input-outcome firewall without changing its institution, law or status? . . . . .         | 26 |
| Q76. Which option avoids the standard UPSC close-option trap about Input-outcome firewall? . . . . .                | 26 |
| Q77. Which statement correctly identifies Differentiated end-state? . . . . .                                       | 26 |
| Q78. Which option preserves the legal or institutional boundary of Differentiated end-state? . . . . .              | 27 |
| Q79. Which statement uses Differentiated end-state without changing its institution, law or status? . . . . .       | 27 |
| Q80. Which option avoids the standard UPSC close-option trap about Differentiated end-state? . . . . .              | 27 |

# Border Management and Border Area Development - Solved Practice Workbook

## BASIC MCQS / REMEDIATION

### Q1. Which statement correctly identifies Security-management distinction?

A. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. B. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. C. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. D. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ.

**Answer: A. Explanation: Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q2. Which option preserves the legal or institutional boundary of Security-management distinction?

A. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. B. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. C. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. D. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award.

**Answer: B. Explanation: Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q3. Which statement uses Security-management distinction without changing its institution, law or status?

A. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. B. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. C. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. D. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.

**Answer: C. Explanation: Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q4. Which option avoids the standard UPSC close-option trap about Security-management distinction?

A. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. B. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. C. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. D. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms.

**Answer: D. Explanation: Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q5. Which statement correctly identifies Boundary vocabulary?

A. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. B. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. C. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. D. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award.

**Answer: A. Explanation: An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q6. Which option preserves the legal or institutional boundary of Boundary vocabulary?

A. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. B. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. C. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. D. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.

**Answer: B. Explanation: An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q7. Which statement uses Boundary vocabulary without changing its institution, law or status?

A. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. B. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. C. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. D. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award.

**Answer: C. Explanation: An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q8. Which option avoids the standard UPSC close-option trap about Boundary vocabulary?

A. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. B. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. C. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. D. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector.

**Answer: D. Explanation: An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q9. Which statement correctly identifies China-border character?

A. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. B. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. C. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. D. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.

**Answer: A. Explanation: The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q10. Which option preserves the legal or institutional boundary of China-border character?

A. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. B. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. C. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. D. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.

**Answer: B. Explanation: The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q11. Which statement uses China-border character without changing its institution, law or status?**

A. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. B. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. C. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. D. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap.

**Answer: C. Explanation: The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q12. Which option avoids the standard UPSC close-option trap about China-border character?**

A. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. B. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. C. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. D. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues.

**Answer: D. Explanation: The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q13. Which statement correctly identifies Pakistan-border segmentation?**

A. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. B. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. C. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. D. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.

**Answer: A. Explanation: The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q14. Which option preserves the legal or institutional boundary of Pakistan-border segmentation?**

A. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. B. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. C. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. D. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.

**Answer: B. Explanation: The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q15. Which statement uses Pakistan-border segmentation without changing its institution, law or status?**

A. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. B. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. C. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. D. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command.

**Answer: C. Explanation: The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q16. Which option avoids the standard UPSC close-option trap about Pakistan-border segmentation?**

A. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. B. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. C. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. D. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ.

**Answer: D. Explanation: The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q17. Which statement correctly identifies Bangladesh settled-by-instrument case?**

A. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. B. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. C. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. D. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed.

**Answer: A. Explanation: The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q18. Which option preserves the legal or institutional boundary of Bangladesh settled-by-instrument case?**

A. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. B. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. C. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. D. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap.

**Answer: B. Explanation: The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q19. Which statement uses Bangladesh settled-by-instrument case without changing its institution, law or status?**

A. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. B. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. C. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. D. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.

**Answer: C. Explanation: The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q20. Which option avoids the standard UPSC close-option trap about Bangladesh settled-by-instrument case?**

A. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. B. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. C. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. D. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award.

**Answer: D. Explanation: The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q21. Which statement correctly identifies Nepal open-border case?

A. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. B. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. C. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. D. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command.

**Answer: A. Explanation: The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q22. Which option preserves the legal or institutional boundary of Nepal open-border case?

A. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. B. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. C. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. D. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command.

**Answer: B. Explanation: The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q23. Which statement uses Nepal open-border case without changing its institution, law or status?

A. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. B. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. C. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. D. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes.

**Answer: C. Explanation: The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q24. Which option avoids the standard UPSC close-option trap about Nepal open-border case?

A. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. B. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. C. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. D. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.

**Answer: D. Explanation: The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement**

together. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.

**Q25. Which statement correctly identifies Myanmar FMR status rule?**

A. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. B. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. C. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. D. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap.

**Answer: A. Explanation: MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q26. Which option preserves the legal or institutional boundary of Myanmar FMR status rule?**

A. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. B. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. C. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. D. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command.

**Answer: B. Explanation: MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q27. Which statement uses Myanmar FMR status rule without changing its institution, law or status?**

A. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. B. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. C. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. D. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.

**Answer: C. Explanation: MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q28. Which option avoids the standard UPSC close-option trap about Myanmar FMR status rule?**

A. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. B. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. C. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. D. MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed.

**Answer: D. Explanation: MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q29. Which statement correctly identifies Border-specific force map?**

A. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. B. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. C. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. D. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.

**Answer: A. Explanation: The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q30. Which option preserves the legal or institutional boundary of Border-specific force map?**

A. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. B. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. C. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. D. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.

**Answer: B. Explanation: The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q31. Which statement uses Border-specific force map without changing its institution, law or status?**

A. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. B. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. C. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. D. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source.

**Answer: C. Explanation: The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q32. Which option avoids the standard UPSC close-option trap about Border-specific force map?**

A. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. B. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. C. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. D. The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap.

**Answer: D. Explanation: The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q33. Which statement correctly identifies One-border-one-force boundary?**

A. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. B. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. C. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. D. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes.

**Answer: A. Explanation: The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q34. Which option preserves the legal or institutional boundary of One-border-one-force boundary?**

A. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. B. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. C. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. D. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source.

**Answer: B. Explanation: The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q35. Which statement uses One-border-one-force boundary without changing its institution, law or status?**

A. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. B. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. C. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. D. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source.

**Answer: C. Explanation: The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q36. Which option avoids the standard UPSC close-option trap about One-border-one-force boundary?**

A. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. B. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. C. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. D. The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command.

**Answer: D. Explanation: The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q37. Which statement correctly identifies Four-element framework?**

A. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. B. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. C. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. D. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes.

**Answer: A. Explanation: A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q38. Which option preserves the legal or institutional boundary of Four-element framework?**

A. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. B. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. C. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. D. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes.

**Answer: B. Explanation: A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.**

**The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q39. Which statement uses Four-element framework without changing its institution, law or status?**

A. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. B. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. C. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. D. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction.

**Answer: C. Explanation: A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q40. Which option avoids the standard UPSC close-option trap about Four-element framework?**

A. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. B. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. C. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. D. A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.

**Answer: D. Explanation: A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q41. Which statement correctly identifies BADP purpose?**

A. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. B. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. C. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. D. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction.

**Answer: A. Explanation: The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q42. Which option preserves the legal or institutional boundary of BADP purpose?

A. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. B. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. C. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. D. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction.

**Answer: B. Explanation: The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q43. Which statement uses BADP purpose without changing its institution, law or status?

A. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. B. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. C. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. D. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction.

**Answer: C. Explanation: The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q44. Which option avoids the standard UPSC close-option trap about BADP purpose?

A. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. B. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. C. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. D. The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes.

**Answer: D. Explanation: The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q45. Which statement correctly identifies BIM purpose?

A. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. B. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. C. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. D. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes.

**Answer: A. Explanation: The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q46. Which option preserves the legal or institutional boundary of BIM purpose?**

A. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. B. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. C. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. D. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction.

**Answer: B. Explanation: The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q47. Which statement uses BIM purpose without changing its institution, law or status?**

A. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. B. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. C. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. D. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect.

**Answer: C. Explanation: The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q48. Which option avoids the standard UPSC close-option trap about BIM purpose?**

A. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. B. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. C. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. D. The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source.

**Answer: D. Explanation: The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q49. Which statement correctly identifies BADP-BIM distinction?

A. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. B. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. C. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. D. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP.

**Answer: A. Explanation: BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q50. Which option preserves the legal or institutional boundary of BADP-BIM distinction?

A. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. B. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. C. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. D. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP.

**Answer: B. Explanation: BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q51. Which statement uses BADP-BIM distinction without changing its institution, law or status?

A. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. B. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. C. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. D. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP.

**Answer: C. Explanation: BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

#### Q52. Which option avoids the standard UPSC close-option trap about BADP-BIM distinction?

A. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. B. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. C. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. D. BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes.

**Answer: D. Explanation: BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

status.

**Q53. Which statement correctly identifies CIBMS role?**

A. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. B. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. C. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. D. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP.

**Answer: A. Explanation: The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q54. Which option preserves the legal or institutional boundary of CIBMS role?**

A. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. B. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. C. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. D. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect.

**Answer: B. Explanation: The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q55. Which statement uses CIBMS role without changing its institution, law or status?**

A. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. B. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. C. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. D. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution.

**Answer: C. Explanation: The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q56. Which option avoids the standard UPSC close-option trap about CIBMS role?**

A. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. B. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. C. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. D. The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction.

**Answer: D. Explanation: The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q57. Which statement correctly identifies ICP-LPAI role?**

A. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. B. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. C. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. D. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution.

**Answer: A. Explanation: Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q58. Which option preserves the legal or institutional boundary of ICP-LPAI role?**

A. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. B. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. C. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. D. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution.

**Answer: B. Explanation: Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q59. Which statement uses ICP-LPAI role without changing its institution, law or status?**

A. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. B. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. C. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. D. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.

**Answer: C. Explanation: Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q60. Which option avoids the standard UPSC close-option trap about ICP-LPAI role?**

A. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. B. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. C. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. D. Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management.

**Answer: D. Explanation: Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q61. Which statement correctly identifies Vibrant Villages boundary?**

A. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. B. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. C. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. D. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution.

**Answer: A. Explanation: The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q62. Which option preserves the legal or institutional boundary of Vibrant Villages boundary?**

A. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. B. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. C. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. D. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Answer: B. Explanation: The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q63. Which statement uses Vibrant Villages boundary without changing its institution, law or status?**

A. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. B. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. C. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. D. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Answer: C. Explanation: The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with**

**BADP. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q64. Which option avoids the standard UPSC close-option trap about Vibrant Villages boundary?**

A. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. B. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. C. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. D. The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP.

**Answer: D. Explanation: The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q65. Which statement correctly identifies Community-security link?**

A. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. B. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. C. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. D. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.

**Answer: A. Explanation: Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q66. Which option preserves the legal or institutional boundary of Community-security link?**

A. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. B. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. C. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. D. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Answer: B. Explanation: Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q67. Which statement uses Community-security link without changing its institution, law or status?**

A. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. B. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. C. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. D. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility,

resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Answer: C. Explanation: Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q68. Which option avoids the standard UPSC close-option trap about Community-security link?**

A. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. B. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. C. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. D. Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect.

**Answer: D. Explanation: Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q69. Which statement correctly identifies Adversarial-UAV classification?**

A. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. B. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. C. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. D. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.

**Answer: A. Explanation: A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q70. Which option preserves the legal or institutional boundary of Adversarial-UAV classification?**

A. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. B. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. C. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. D. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Answer: B. Explanation: A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q71. Which statement uses Adversarial-UAV classification without changing its institution, law or status?**

A. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. B. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. C. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. D. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues.

**Answer: C. Explanation: A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q72. Which option avoids the standard UPSC close-option trap about Adversarial-UAV classification?**

A. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. B. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. C. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. D. A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution.

**Answer: D. Explanation: A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q73. Which statement correctly identifies Input-outcome firewall?**

A. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. B. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. C. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. D. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms.

**Answer: A. Explanation: A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q74. Which option preserves the legal or institutional boundary of Input-outcome firewall?**

A. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. B. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. C. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. D. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms.

**Answer: B. Explanation: A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q75. Which statement uses Input-outcome firewall without changing its institution, law or status?**

A. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. B. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. C. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. D. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues.

**Answer: C. Explanation: A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q76. Which option avoids the standard UPSC close-option trap about Input-outcome firewall?**

A. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. B. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. C. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. D. A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.

**Answer: D. Explanation: A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

**Q77. Which statement correctly identifies Differentiated end-state?**

A. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. B. Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. C. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. D. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector.

**Answer: A. Explanation: Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q78. Which option preserves the legal or institutional boundary of Differentiated end-state?

A. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. B. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. C. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. D. An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector.

**Answer: B. Explanation: Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q79. Which statement uses Differentiated end-state without changing its institution, law or status?

A. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. B. The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. C. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. D. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ.

**Answer: C. Explanation: Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

### Q80. Which option avoids the standard UPSC close-option trap about Differentiated end-state?

A. The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. B. The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. C. The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. D. Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Answer: D. Explanation: Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. The other options change the threat category, institutional owner, legal instrument, evidentiary rung or implementation status.**

## PYQS AND ANSWER PRACTICE

## AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

The audited ledgers route the 2020 Myanmar-Bangladesh-LoC comparison, the 2023 adversarial-UAV demand and the 2024 China-Pakistan-BADP-BIM demand here. OCR inspection confirmed the 2023 and 2024 printed stems; no operational detail or official model answer is inferred.

### PYQ DEMAND CARD 1 - 2020 GS-III

**Demand:** Security challenges along the Myanmar and Bangladesh borders and the Pakistan Line of Control.

**Status:** Audited routed demand; Analyse · 15 marks · 250 words. The routing ledger records official-scan verification.

**Model solution: Boundary vocabulary:** An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. **Pakistan-border segmentation:** The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. **Bangladesh settled-by-instrument case:** The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. **Nepal open-border case:** The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. **Myanmar FMR status rule:** MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. **Border-specific force map:** The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. **Four-element framework:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Community-security link:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Differentiated end-state:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

### PYQ DEMAND CARD 2 - 2023 GS-III

**Demand:** Use of unmanned aerial vehicles by adversaries across borders to ferry arms, ammunition and drugs, and measures to tackle the threat.

**Status:** Printed stem inspected in the OCR-searchable official paper; Comment · 10 marks · 150 words.

**Model solution: Border-specific force map:** The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. **Four-element framework:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **CIBMS role:** The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. **Community-security link:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Adversarial-UAV classification:** A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. **Input-outcome firewall:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Differentiated end-state:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

### PYQ DEMAND CARD 3 - 2024 GS-III

**Demand:** China-Pakistan border issues and security challenges, together with BADP and the Border Infrastructure and Management scheme.

**Status:** Printed stem inspected in the OCR-searchable official paper; Examine · 15 marks · 250 words. The scan renders BIM as BM, while the audited owner supplies the official scheme name.

**Model solution: Boundary vocabulary:** An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. **China-border character:** The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. **Pakistan-border segmentation:** The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. **Bangladesh settled-by-instrument case:** The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. **One-border-one-force boundary:** The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. **Four-element framework:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **BADP purpose:** The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. **BIM purpose:** The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. **BADP-BIM distinction:** BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. **Community-security link:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Input-outcome firewall:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Differentiated end-state:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

### ORIGINAL MAINS 1 - 10 MARKS

**Question:** Distinguish border security from border management and explain the four-element management framework. Answer in about 150 words.

**Model thesis: Claim:** Security-management distinction. **Named evidence/example:** Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** One-border-one-force boundary. **Named evidence/example:** The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Community-security link. **Named evidence/example:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Analysis:** This fixes the threat category, legal instrument, institutional

mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

**Claim -> named evidence -> analysis -> qualification:**

- Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms.
- The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command.
- A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.
- Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect.
- Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Qualified conclusion:** **Claim:** Security-management distinction. **Named evidence/example:** Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** One-border-one-force boundary. **Named evidence/example:** The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Community-security link. **Named evidence/example:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

## ORIGINAL MAINS 2 - 10 MARKS

**Question:** Explain why BADP, BIM and the Vibrant Villages Programme must not be treated as one scheme. Answer in about 150 words.

**Model thesis:** **Claim:** BADP purpose. **Named evidence/example:** The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BIM purpose. **Named evidence/example:** The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BADP-BIM distinction. **Named evidence/example:** BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Vibrant Villages boundary. **Named evidence/example:** The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Input-outcome firewall. **Named evidence/example:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

**Claim -> named evidence -> analysis -> qualification:**

- The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes.
- The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source.
- BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes.
- The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP.
- A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.

**Qualified conclusion:** **Claim:** BADP purpose. **Named evidence/example:** The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BIM purpose. **Named evidence/example:** The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BADP-BIM distinction. **Named evidence/example:** BADP is

primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Vibrant Villages boundary. **Named evidence/example:** The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Input-outcome firewall. **Named evidence/example:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

### ORIGINAL MAINS 3 - 15 MARKS

**Question:** Analyse security challenges along the Myanmar and Bangladesh borders and the Pakistan Line of Control. Answer in about 250 words.

**Model thesis:** **Claim:** Boundary vocabulary. **Named evidence/example:** An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Pakistan-border segmentation. **Named evidence/example:** The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Bangladesh settled-by-instrument case. **Named evidence/example:** The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Nepal open-border case. **Named evidence/example:** The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Myanmar FMR status rule. **Named evidence/example:** MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Border-specific force map. **Named evidence/example:** The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Community-security link. **Named evidence/example:** Border residents are rights-bearing

citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

**Claim -> named evidence -> analysis -> qualification:**

- An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector.
- The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ.
- The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award.
- The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.
- MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed.
- The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap.
- A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.
- Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect.
- Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Qualified conclusion:** **Claim:** Boundary vocabulary. **Named evidence/example:** An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Pakistan-border segmentation. **Named evidence/example:** The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Bangladesh settled-by-instrument case. **Named evidence/example:** The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Nepal open-border case. **Named evidence/example:** The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal

character and notification-to-implementation status boundary. **Claim:** Myanmar FMR status rule. **Named evidence/example:** MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Border-specific force map. **Named evidence/example:** The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Community-security link. **Named evidence/example:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

## ORIGINAL MAINS 4 - 15 MARKS

**Question:** Examine conflicting issues along the China and Pakistan borders and assess BADP and BIM as distinct responses. Answer in about 250 words.

**Model thesis:** **Claim:** Boundary vocabulary. **Named evidence/example:** An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** China-border character. **Named evidence/example:** The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Pakistan-border segmentation. **Named evidence/example:** The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** One-border-one-force boundary. **Named evidence/example:** The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BADP purpose. **Named**

**evidence/example:** The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BIM purpose. **Named evidence/example:** The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BADP-BIM distinction. **Named evidence/example:** BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Input-outcome firewall. **Named evidence/example:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

**Claim -> named evidence -> analysis -> qualification:**

- An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector.
- The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues.
- The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ.
- The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command.
- A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.
- The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes.
- The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source.
- BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes.
- A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.
- Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Qualified conclusion:** **Claim:** Boundary vocabulary. **Named evidence/example:** An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently

perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** China-border character. **Named evidence/example:** The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Pakistan-border segmentation. **Named evidence/example:** The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** One-border-one-force boundary. **Named evidence/example:** The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BADP purpose. **Named evidence/example:** The Border Area Development Programme addresses development gaps in eligible border villages through local infrastructure, services and livelihood support; sanction or expenditure does not prove security or welfare outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BIM purpose. **Named evidence/example:** The Border Infrastructure and Management scheme is the infrastructure umbrella for assets such as roads, fencing, floodlighting, outposts, communications and technology; its current period and outlay require a dated MHA source. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** BADP-BIM distinction. **Named evidence/example:** BADP is primarily area and community development, while BIM primarily builds border-management infrastructure; they are complementary but not interchangeable schemes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Input-outcome firewall. **Named evidence/example:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

## ORIGINAL MAINS 5 - 20 MARKS

**Question:** Critically evaluate the one border, one force principle alongside technology and community participation. Answer in about 300 words.

**Model thesis:** **Claim:** Border-specific force map. **Named evidence/example:** The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** One-border-one-force boundary. **Named evidence/example:** The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** CIBMS role. **Named evidence/example:** The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Community-security link. **Named evidence/example:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Input-outcome firewall. **Named evidence/example:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

**Claim -> named evidence -> analysis -> qualification:**

- The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap.
- The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command.
- A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.
- The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction.
- Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect.
- A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.

- Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Qualified conclusion: Claim:** Border-specific force map. **Named evidence/example:** The owner maps BSF to the Pakistan and Bangladesh borders, ITBP to the China border, SSB to Nepal and Bhutan, and Assam Rifles to Myanmar, while recognising border-specific operational overlap. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** One-border-one-force boundary. **Named evidence/example:** The post-Kargil one border, one force principle is a coordination objective, not proof that every sector is presently under one exclusive command. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** CIBMS role. **Named evidence/example:** The Comprehensive Integrated Border Management System integrates sensors, communications, intelligence and command-and-control to cover difficult gaps; detection and track generation are not the same as interdiction. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Community-security link. **Named evidence/example:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Input-outcome firewall. **Named evidence/example:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

## ORIGINAL MAINS 6 - 20 MARKS

**Question:** Design a differentiated border-management strategy that balances security, legal mobility, infrastructure, area development and bilateral mechanisms. Answer in about 300 words.

**Model thesis: Claim:** Security-management distinction. **Named evidence/example:** Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Boundary vocabulary. **Named evidence/example:** An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** China-border character. **Named evidence/example:** The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management

issues. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Pakistan-border segmentation. **Named evidence/example:** The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Bangladesh settled-by-instrument case. **Named evidence/example:** The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Nepal open-border case. **Named evidence/example:** The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Myanmar FMR status rule. **Named evidence/example:** MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** ICP-LPAI role. **Named evidence/example:** Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Vibrant Villages boundary. **Named evidence/example:** The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Community-security link. **Named evidence/example:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Adversarial-UAV classification. **Named evidence/example:** A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Input-outcome firewall. **Named evidence/example:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient

infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication.

**Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.

**Claim -> named evidence -> analysis -> qualification:**

- Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms.
- An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector.
- The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues.
- The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ.
- The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award.
- The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together.
- MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed.
- A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility.
- Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management.
- The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP.
- Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect.
- A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution.
- A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence.
- Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes.

**Qualified conclusion: Claim:** Security-management distinction. **Named evidence/example:** Border security concerns defence and guarding, while border management also includes regulation, infrastructure and area development, legal mobility or trade, and bilateral mechanisms.

**Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:**

The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Boundary vocabulary. **Named evidence/example:** An International Boundary is mutually recognised and demarcated; the LoC is a military control line in the J&K context, the LAC is the differently perceived

India-China alignment, and the AGPL runs north of NJ 9842 in the Siachen sector. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:**

The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** China-border character. **Named evidence/example:** The India-China frontier is disputed and lacks a mutually agreed LAC in stretches, making perception, patrol protocols, infrastructure and diplomatic-military mechanisms central management issues. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the

owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Pakistan-border segmentation. **Named evidence/example:** The Pakistan-facing boundary must be separated into the Radcliffe International Boundary, the Line of Control and the Actual Ground Position Line because terrain, legal status, lead forces and threat vectors differ. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Bangladesh settled-by-instrument case. **Named evidence/example:** The India-Bangladesh land-enclave and adverse-possession questions were resolved through the 2015 Land Boundary Agreement and the Constitution (One Hundredth Amendment) Act, while the maritime boundary was settled by a 2014 arbitral award. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Nepal open-border case. **Named evidence/example:** The India-Nepal open border facilitates legitimate movement under the bilateral treaty framework but can also be misused for transit, requiring facilitation and risk-based enforcement together. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Myanmar FMR status rule. **Named evidence/example:** MHA announced on 8 February 2024 a decision to scrap the India-Myanmar Free Movement Regime; announcement, formal notification and field implementation must not be collapsed. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Four-element framework. **Named evidence/example:** A complete border-management answer combines guarding, regulation, development of border areas and bilateral institutional mechanisms, calibrated to terrain and legal mobility. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** ICP-LPAI role. **Named evidence/example:** Integrated Check Posts consolidate customs, immigration and regulatory services at legal crossings, while the Land Ports Authority of India is the statutory body responsible for their development and management. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Vibrant Villages boundary. **Named evidence/example:** The official VVP page describes a Centrally Sponsored Scheme for selected northern-border villages, using district and Gram Panchayat action plans and expressly avoiding overlap with BADP. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Community-security link. **Named evidence/example:** Border residents are rights-bearing citizens and security partners; livelihoods, legal trade, grievance channels and protected reporting strengthen state presence without treating mobility as inherently suspect. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Adversarial-UAV classification. **Named evidence/example:** A hostile unmanned aerial vehicle is a vector that may carry surveillance, weapons or contraband; the response must separate detection, lawful counter-action, recovery, forensics and prosecution. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Input-outcome firewall. **Named evidence/example:** A fence, road, outpost, sensor, village plan or interception is an input or output at a specific rung; border security outcomes require separately verified evidence. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary. **Claim:** Differentiated end-state. **Named evidence/example:** Effective border management is neighbour-, terrain- and community-specific: clear mandates, interoperable awareness and response, lawful mobility, resilient infrastructure, bilateral mechanisms and audited development outcomes. **Analysis:** This fixes the threat category, legal instrument, institutional mandate and verified evidentiary rung before drawing the policy implication.

**Qualification:** The conclusion retains the owner's date, institution, legal character and notification-to-implementation status boundary.
