CSAT Hard Revision Folder 2: Number systems, arithmetic, rates, geometry and table-based data interpretation

Date: 2026-10-04 | Maximum Marks: 100 | Time: 75 minutes (revision drill)

Topics: Number systems, arithmetic, rates, geometry and table-based data interpretation

INSTRUCTIONS:

- This is an original practice set; no answer or solution appears in the question-paper source.
- Use a strict 75-minute revision clock and record category-wise accuracy.
- Mark only one option per question; apply +2.5 / –5/6 / 0 scoring.

REVISION COMPREHENSION — PASSAGE 1 (4 questions × 2.5 marks)

Passage 1. Discussions of technology adoption in small enterprises often begin with a choice between a uniform rule and complete decentralisation. That choice is misleading. Uniform standards can protect minimum entitlements, while local experimentation can reveal constraints invisible in a central design. The difficult part is the feedback loop: information from implementation must reach the decision-maker, and the decision-maker must be willing to revise an attractive but ineffective design. Evidence therefore does not replace values; it helps test whether chosen means are compatible with stated ends. A policy that reports activity without measuring access, distribution and unintended effects may look busy while learning very little. The prudent approach is neither blind uniformity nor romantic localism, but accountable adaptation.

Q1. Which interpretation most accurately states the main proposition of Passage 1? Use the hostel attendance sheet as the complete information set for this question.

Q2. Which conclusion follows most securely from Passage 1? Use the river-route log as the complete information set for this question.

Q3. Which presupposition is required by the argument in Passage 1? Use the border-connectivity map as the complete information set for this question.

Q4. Passage 1 adopts which overall rhetorical posture? Use the vending-permit register as the complete information set for this question.

REVISION COMPREHENSION — PASSAGE 2 (4 questions × 2.5 marks)

Passage 2. Discussions of community-based forest governance often begin with a choice between a uniform rule and complete decentralisation. That choice is misleading. Uniform standards can protect minimum entitlements, while local experimentation can reveal constraints invisible in a central design. The difficult part is the feedback loop: information from implementation must reach the decision-maker, and the decision-maker must be willing to revise an attractive but ineffective design. Evidence therefore does not replace values; it helps test whether chosen means are compatible with stated ends. A policy that reports activity without measuring access, distribution and unintended effects may look busy while learning very little. The prudent approach is neither blind uniformity nor romantic localism, but accountable adaptation.

Q5. The central contention developed in Passage 2 is that: Use the safety-inspection file as the complete information set for this question.

Q6. Reading Passage 2 closely, which inference is justified? Use the forest-response dashboard as the complete information set for this question.

Q7. Passage 2 would be weakened most directly if which assumption failed? Use the school-recovery ledger as the complete information set for this question.

Q8. The authorial stance in Passage 2 is: Use the municipal works map as the complete information set for this question.

REVISION COMPREHENSION — PASSAGE 3 (2 questions × 2.5 marks)

Passage 3. Discussions of the use of evidence in welfare delivery often begin with a choice between a uniform rule and complete decentralisation. That choice is misleading. Uniform standards can protect minimum entitlements, while local experimentation can reveal constraints invisible in a central design. The difficult part is the feedback loop: information from implementation must reach the decision-maker, and the decision-maker must be willing to revise an attractive but ineffective design. Evidence therefore does not replace values; it helps test whether chosen means are compatible with stated ends. A policy that reports activity without measuring access, distribution and unintended effects may look busy while learning very little. The prudent approach is neither blind uniformity nor romantic localism, but accountable adaptation.

Q9. With reference to Passage 3, which one of the following best captures its central claim? Use the clinic-referral diary as the complete information set for this question.

Q10. Which one of the following is most directly inferable from Passage 3? Use the market-access survey as the complete information set for this question.

REVISION NUMERACY AND DATA INTERPRETATION (10 questions × 2.5 marks)

Choose the most appropriate answer. Only one option is correct.

Q11. If r is the remainder when 7^20 + 8^18 is divided by 13, what is r? Use the ward-grievance register as the complete information set for this question.

Q12. How many integers from 4 through 105, inclusive, are divisible by 7 or 14, but not by both? Use the coastal-service ledger as the complete information set for this question.

Q13. Solution A contains 29% solute and solution B contains 13% solute. If A and B are mixed in the volume ratio 5:1, what is the resulting concentration? Use the hill-health register as the complete information set for this question.

Q14. Three independent teams complete a task in 18, 20 and 32 days respectively. Working together at constant rates, how many days are required? Use the ration audit as the complete information set for this question.

Q15. The average score of 25 candidates is 55. One score of 44 is replaced by 71. What is the new average? Use the tank-restoration file as the complete information set for this question.

Q16. A quantity rises by 17%, falls by 23%, and then rises by 29%. What is the net percentage change? Use the hostel attendance sheet as the complete information set for this question.

Q17. A rectangle of dimensions 12 m by 10 m has squares of side 2 m removed from its four corners. What area remains? Use the river-route log as the complete information set for this question.

Q18. A five-period index has values [4, 6, 8, 10, 3]; corresponding weights are [2, 3, 4, 5, 6]. What is the remainder when the weighted total is divided by 17? Use the border-connectivity map as the complete information set for this question.

Q19. How many multiples of lcm(9, 10) lie in the inclusive interval [93, 367]? Use the vending-permit register as the complete information set for this question.

Q20. A sequence begins [5, 11, 16, 22]. Its successive increments are 6, 5, 6, 5, ... What is the next term? Use the safety-inspection file as the complete information set for this question.

REVISION LOGICAL AND ANALYTICAL REASONING (10 questions × 2.5 marks)

Choose the most appropriate answer. Only one option is correct.

Q21. Seven people A, B, C, D, E, F and G sit in a row. C is third from the left; A is left of D; B and F are non-adjacent; G is not at an end. Which person cannot occupy fifth position? Use the forest-response dashboard as the complete information set for this question.

Q22. Six candidates P, Q, R, S, T and U are ranked first to sixth. P is above R, R above U, S above R, Q below S, and T is not first. Which candidate cannot be third? Use the school-recovery ledger as the complete information set for this question.

Q23. In a coding rule, each letter is replaced by its position multiplied by 6, then 3 is added and the result is reduced modulo 26 (A=0). What code is assigned to the letter whose position is 7? Use the municipal works map as the complete information set for this question.

Q24. All members of set X are in Y; no member of Y is in Z; exactly 5 members are in X, 5 additional members are in Y but not X, and 7 members are outside Y. How many members are in Y? Use the clinic-referral diary as the complete information set for this question.

Q25. A field worker moves 7 km east and then 5 km north. What is the straight-line distance from the starting point, ignoring the path taken? Use the market-access survey as the complete information set for this question.

Q26. M is the sister of N. N is the father of P. P is the daughter of Q. Relative to P, what is M? Use the ward-grievance register as the complete information set for this question.

Q27. Exactly one of A, B and C is guilty and exactly one statement is true. A says B is guilty; B says A and C are innocent; C says B is innocent. Who is guilty? Use the coastal-service ledger as the complete information set for this question.

Q28. From 11 proposals, 4 are selected. Two specified proposals cannot be selected together. How many selections are possible? Use the hill-health register as the complete information set for this question.

Q29. A team records 5 wins, 4 draws and 1 losses. With 3 points for a win, 1 for a draw and 0 for a loss, what is its points total? Use the ration audit as the complete information set for this question.

Q30. A committee must choose an ordered pair of distinct coordinators from 6 eligible members. How many ordered pairs are possible? Use the tank-restoration file as the complete information set for this question.

REVISION DECISION-MAKING AND PROBLEM SOLVING (10 questions × 2.5 marks)

Choose the most appropriate answer. Only one option is correct.

Q31. In a coastal district, a file concerning cyclone shelter access is being reviewed by ward officers; the available evidence includes travel-time logs. A pilot produces mixed results across neighbourhoods. How should the administrator respond? Use the hostel attendance sheet as the complete information set for this question.

Q32. In a coastal district, a file concerning cyclone shelter access is being reviewed by ward officers; the available evidence includes travel-time logs. A grievance channel receives fewer complaints after a redesign. What is the most careful interpretation? Use the river-route log as the complete information set for this question.

Q33. In a coastal district, a file concerning cyclone shelter access is being reviewed by ward officers; the available evidence includes travel-time logs. A contractor asks to relax a safety condition to meet a deadline. What should the officer do? Use the border-connectivity map as the complete information set for this question.

Q34. In a coastal district, a file concerning cyclone shelter access is being reviewed by ward officers; the available evidence includes travel-time logs. A beneficiary list contains duplicate names and some genuine exclusions. What is the right sequence? Use the vending-permit register as the complete information set for this question.

Q35. In a coastal district, a file concerning cyclone shelter access is being reviewed by ward officers; the available evidence includes travel-time logs. A local leader requests an exception for one influential applicant. What is defensible? Use the safety-inspection file as the complete information set for this question.

Q36. In a hill block, a file concerning primary-health referrals is being reviewed by clinic managers; the available evidence includes referral registers. A new digital process excludes some intended users. What should the officer do first? Use the forest-response dashboard as the complete information set for this question.

Q37. In a hill block, a file concerning primary-health referrals is being reviewed by clinic managers; the available evidence includes referral registers. Two agencies submit conflicting records before a time-sensitive public intervention. What is the soundest next step? Use the school-recovery ledger as the complete information set for this question.

Q38. In a hill block, a file concerning primary-health referrals is being reviewed by clinic managers; the available evidence includes referral registers. A service reports high activity, but users say their underlying problems remain unresolved. Which measure should follow? Use the municipal works map as the complete information set for this question.

Q39. In a hill block, a file concerning primary-health referrals is being reviewed by clinic managers; the available evidence includes referral registers. A fund can support a visible ceremony or a tested low-cost intervention. Which decision is stronger? Use the clinic-referral diary as the complete information set for this question.

Q40. In a hill block, a file concerning primary-health referrals is being reviewed by clinic managers; the available evidence includes referral registers. A lowest bid has a minor clerical error but no evidence of material advantage. What is fairest? Use the market-access survey as the complete information set for this question.

— END OF QUESTION PAPER —
