CSAT Hard Revision Folder 5: Mixed hard sweep across all four CSAT practice families

Date: 2026-10-04 | Maximum Marks: 100 | Time: 75 minutes (revision drill)

Topics: Mixed hard sweep across all four CSAT practice families

INSTRUCTIONS:

- This is an original practice set; no answer or solution appears in the question-paper source.
- Use a strict 75-minute revision clock and record category-wise accuracy.
- Mark only one option per question; apply +2.5 / –5/6 / 0 scoring.

REVISION COMPREHENSION — PASSAGE 1 (4 questions × 2.5 marks)

Passage 1. Discussions of school learning recovery often begin with a choice between a uniform rule and complete decentralisation. That choice is misleading. Uniform standards can protect minimum entitlements, while local experimentation can reveal constraints invisible in a central design. The difficult part is the feedback loop: information from implementation must reach the decision-maker, and the decision-maker must be willing to revise an attractive but ineffective design. Evidence therefore does not replace values; it helps test whether chosen means are compatible with stated ends. A policy that reports activity without measuring access, distribution and unintended effects may look busy while learning very little. The prudent approach is neither blind uniformity nor romantic localism, but accountable adaptation.

Q1. Passage 1 is principally arguing that: Use the school-recovery ledger as the complete information set for this question.

Q2. Passage 1 most clearly permits which inference? Use the municipal works map as the complete information set for this question.

Q3. The reasoning in Passage 1 depends on which assumption? Use the clinic-referral diary as the complete information set for this question.

Q4. Which description most accurately characterises the tone of Passage 1? Use the market-access survey as the complete information set for this question.

REVISION COMPREHENSION — PASSAGE 2 (4 questions × 2.5 marks)

Passage 2. Discussions of last-mile public health often begin with a choice between a uniform rule and complete decentralisation. That choice is misleading. Uniform standards can protect minimum entitlements, while local experimentation can reveal constraints invisible in a central design. The difficult part is the feedback loop: information from implementation must reach the decision-maker, and the decision-maker must be willing to revise an attractive but ineffective design. Evidence therefore does not replace values; it helps test whether chosen means are compatible with stated ends. A policy that reports activity without measuring access, distribution and unintended effects may look busy while learning very little. The prudent approach is neither blind uniformity nor romantic localism, but accountable adaptation.

Q5. Which interpretation most accurately states the main proposition of Passage 2? Use the ward-grievance register as the complete information set for this question.

Q6. Which conclusion follows most securely from Passage 2? Use the coastal-service ledger as the complete information set for this question.

Q7. Which presupposition is required by the argument in Passage 2? Use the hill-health register as the complete information set for this question.

Q8. Passage 2 adopts which overall rhetorical posture? Use the ration audit as the complete information set for this question.

REVISION COMPREHENSION — PASSAGE 3 (2 questions × 2.5 marks)

Passage 3. Discussions of transport planning and accessibility often begin with a choice between a uniform rule and complete decentralisation. That choice is misleading. Uniform standards can protect minimum entitlements, while local experimentation can reveal constraints invisible in a central design. The difficult part is the feedback loop: information from implementation must reach the decision-maker, and the decision-maker must be willing to revise an attractive but ineffective design. Evidence therefore does not replace values; it helps test whether chosen means are compatible with stated ends. A policy that reports activity without measuring access, distribution and unintended effects may look busy while learning very little. The prudent approach is neither blind uniformity nor romantic localism, but accountable adaptation.

Q9. The central contention developed in Passage 3 is that: Use the tank-restoration file as the complete information set for this question.

Q10. Reading Passage 3 closely, which inference is justified? Use the hostel attendance sheet as the complete information set for this question.

REVISION NUMERACY AND DATA INTERPRETATION (10 questions × 2.5 marks)

Choose the most appropriate answer. Only one option is correct.

Q11. If r is the remainder when 3^23 + 4^21 is divided by 18, what is r? Use the river-route log as the complete information set for this question.

Q12. How many integers from 1 through 106, inclusive, are divisible by 7 or 17, but not by both? Use the border-connectivity map as the complete information set for this question.

Q13. Solution A contains 20% solute and solution B contains 21% solute. If A and B are mixed in the volume ratio 6:1, what is the resulting concentration? Use the vending-permit register as the complete information set for this question.

Q14. Three independent teams complete a task in 12, 19 and 40 days respectively. Working together at constant rates, how many days are required? Use the safety-inspection file as the complete information set for this question.

Q15. The average score of 19 candidates is 54. One score of 52 is replaced by 75. What is the new average? Use the forest-response dashboard as the complete information set for this question.

Q16. A quantity rises by 14%, falls by 17%, and then rises by 20%. What is the net percentage change? Use the school-recovery ledger as the complete information set for this question.

Q17. A rectangle of dimensions 17 m by 13 m has squares of side 2 m removed from its four corners. What area remains? Use the municipal works map as the complete information set for this question.

Q18. A five-period index has values [7, 9, 11, 4, 6]; corresponding weights are [2, 3, 4, 5, 6]. What is the remainder when the weighted total is divided by 17? Use the clinic-referral diary as the complete information set for this question.

Q19. How many multiples of lcm(12, 10) lie in the inclusive interval [63, 247]? Use the market-access survey as the complete information set for this question.

Q20. A sequence begins [2, 9, 11, 18]. Its successive increments are 7, 2, 7, 2, ... What is the next term? Use the ward-grievance register as the complete information set for this question.

REVISION LOGICAL AND ANALYTICAL REASONING (10 questions × 2.5 marks)

Choose the most appropriate answer. Only one option is correct.

Q21. Seven people A, B, C, D, E, F and G sit in a row. C is third from the left; A is left of D; B and F are non-adjacent; G is not at an end. Which person cannot occupy fifth position? Use the coastal-service ledger as the complete information set for this question.

Q22. Six candidates P, Q, R, S, T and U are ranked first to sixth. P is above R, R above U, S above R, Q below S, and T is not first. Which candidate cannot be third? Use the hill-health register as the complete information set for this question.

Q23. In a coding rule, each letter is replaced by its position multiplied by 6, then 3 is added and the result is reduced modulo 26 (A=0). What code is assigned to the letter whose position is 7? Use the ration audit as the complete information set for this question.

Q24. All members of set X are in Y; no member of Y is in Z; exactly 6 members are in X, 8 additional members are in Y but not X, and 8 members are outside Y. How many members are in Y? Use the tank-restoration file as the complete information set for this question.

Q25. A field worker moves 4 km east and then 8 km north. What is the straight-line distance from the starting point, ignoring the path taken? Use the hostel attendance sheet as the complete information set for this question.

Q26. M is the sister of N. N is the father of P. P is the daughter of Q. Relative to P, what is M? Use the river-route log as the complete information set for this question.

Q27. Exactly one of A, B and C is guilty and exactly one statement is true. A says B is guilty; B says A and C are innocent; C says B is innocent. Who is guilty? Use the border-connectivity map as the complete information set for this question.

Q28. From 9 proposals, 4 are selected. Two specified proposals cannot be selected together. How many selections are possible? Use the vending-permit register as the complete information set for this question.

Q29. A team records 6 wins, 4 draws and 2 losses. With 3 points for a win, 1 for a draw and 0 for a loss, what is its points total? Use the safety-inspection file as the complete information set for this question.

Q30. A committee must choose an ordered pair of distinct coordinators from 9 eligible members. How many ordered pairs are possible? Use the forest-response dashboard as the complete information set for this question.

REVISION DECISION-MAKING AND PROBLEM SOLVING (10 questions × 2.5 marks)

Choose the most appropriate answer. Only one option is correct.

Q31. In a peri-urban ward, a file concerning ration-shop authentication is being reviewed by supply inspectors; the available evidence includes transaction records. A pilot produces mixed results across neighbourhoods. How should the administrator respond? Use the school-recovery ledger as the complete information set for this question.

Q32. In a peri-urban ward, a file concerning ration-shop authentication is being reviewed by supply inspectors; the available evidence includes transaction records. A grievance channel receives fewer complaints after a redesign. What is the most careful interpretation? Use the municipal works map as the complete information set for this question.

Q33. In a peri-urban ward, a file concerning ration-shop authentication is being reviewed by supply inspectors; the available evidence includes transaction records. A contractor asks to relax a safety condition to meet a deadline. What should the officer do? Use the clinic-referral diary as the complete information set for this question.

Q34. In a peri-urban ward, a file concerning ration-shop authentication is being reviewed by supply inspectors; the available evidence includes transaction records. A beneficiary list contains duplicate names and some genuine exclusions. What is the right sequence? Use the market-access survey as the complete information set for this question.

Q35. In a peri-urban ward, a file concerning ration-shop authentication is being reviewed by supply inspectors; the available evidence includes transaction records. A local leader requests an exception for one influential applicant. What is defensible? Use the ward-grievance register as the complete information set for this question.

Q36. In a drought-prone taluk, a file concerning tank-restoration grants is being reviewed by panchayat engineers; the available evidence includes worksite measurements. A new digital process excludes some intended users. What should the officer do first? Use the coastal-service ledger as the complete information set for this question.

Q37. In a drought-prone taluk, a file concerning tank-restoration grants is being reviewed by panchayat engineers; the available evidence includes worksite measurements. Two agencies submit conflicting records before a time-sensitive public intervention. What is the soundest next step? Use the hill-health register as the complete information set for this question.

Q38. In a drought-prone taluk, a file concerning tank-restoration grants is being reviewed by panchayat engineers; the available evidence includes worksite measurements. A service reports high activity, but users say their underlying problems remain unresolved. Which measure should follow? Use the ration audit as the complete information set for this question.

Q39. In a drought-prone taluk, a file concerning tank-restoration grants is being reviewed by panchayat engineers; the available evidence includes worksite measurements. A fund can support a visible ceremony or a tested low-cost intervention. Which decision is stronger? Use the tank-restoration file as the complete information set for this question.

Q40. In a drought-prone taluk, a file concerning tank-restoration grants is being reviewed by panchayat engineers; the available evidence includes worksite measurements. A lowest bid has a minor clerical error but no evidence of material advantage. What is fairest? Use the hostel attendance sheet as the complete information set for this question.
