

COMPLETE LEARNING SESSION

Concepts, Risk, Resilience and Sendai - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / SESSION INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Concepts, Risk, Resilience and Sendai - Learner-v2 Complete Learning Session	6

BASIC MCQS / REMEDIATION	35
Q1. Which statement correctly identifies Hazard?	35
Q2. Which option preserves the risk or institutional boundary of Hazard?	35
Q3. Which statement uses Hazard without changing its hazard, mandate or status?	35
Q4. Which option avoids the standard UPSC close-option trap about Hazard?	36
Q5. Which statement correctly identifies Exposure?	36
Q6. Which option preserves the risk or institutional boundary of Exposure?	36
Q7. Which statement uses Exposure without changing its hazard, mandate or status?	36
Q8. Which option avoids the standard UPSC close-option trap about Exposure?	36
Q9. Which statement correctly identifies Vulnerability?	37

Q10. Which option preserves the risk or institutional boundary of Vulnerability?	37
Q11. Which statement uses Vulnerability without changing its hazard, mandate or status?	37
Q12. Which option avoids the standard UPSC close-option trap about Vulnerability?	37
Q13. Which statement correctly identifies Capacity?	37
Q14. Which option preserves the risk or institutional boundary of Capacity?	38
Q15. Which statement uses Capacity without changing its hazard, mandate or status?	38
Q16. Which option avoids the standard UPSC close-option trap about Capacity?	38
Q17. Which statement correctly identifies Risk heuristic?	38
Q18. Which option preserves the risk or institutional boundary of Risk heuristic?	39
Q19. Which statement uses Risk heuristic without changing its hazard, mandate or status?	39
Q20. Which option avoids the standard UPSC close-option trap about Risk heuristic?	39
Q21. Which statement correctly identifies Disaster threshold?	39
Q22. Which option preserves the risk or institutional boundary of Disaster threshold?	40
Q23. Which statement uses Disaster threshold without changing its hazard, mandate or status?	40
Q24. Which option avoids the standard UPSC close-option trap about Disaster threshold?	40
Q25. Which statement correctly identifies Resilience?	40
Q26. Which option preserves the risk or institutional boundary of Resilience?	41
Q27. Which statement uses Resilience without changing its hazard, mandate or status?	41
Q28. Which option avoids the standard UPSC close-option trap about Resilience?	41
Q29. Which statement correctly identifies Prevention?	41
Q30. Which option preserves the risk or institutional boundary of Prevention?	41
Q31. Which statement uses Prevention without changing its hazard, mandate or status?	42
Q32. Which option avoids the standard UPSC close-option trap about Prevention?	42
Q33. Which statement correctly identifies Mitigation?	42
Q34. Which option preserves the risk or institutional boundary of Mitigation?	42
Q35. Which statement uses Mitigation without changing its hazard, mandate or status?	42
Q36. Which option avoids the standard UPSC close-option trap about Mitigation?	43
Q37. Which statement correctly identifies Preparedness?	43
Q38. Which option preserves the risk or institutional boundary of Preparedness?	43
Q39. Which statement uses Preparedness without changing its hazard, mandate or status?	43
Q40. Which option avoids the standard UPSC close-option trap about Preparedness?	43
Q41. Which statement correctly identifies Response?	44

Q42. Which option preserves the risk or institutional boundary of Response?	44
Q43. Which statement uses Response without changing its hazard, mandate or status?	44
Q44. Which option avoids the standard UPSC close-option trap about Response?	44
Q45. Which statement correctly identifies Recovery?	44
Q46. Which option preserves the risk or institutional boundary of Recovery?	45
Q47. Which statement uses Recovery without changing its hazard, mandate or status?	45
Q48. Which option avoids the standard UPSC close-option trap about Recovery?	45
Q49. Which statement correctly identifies DRR scope?	45
Q50. Which option preserves the risk or institutional boundary of DRR scope?	46
Q51. Which statement uses DRR scope without changing its hazard, mandate or status?	46
Q52. Which option avoids the standard UPSC close-option trap about DRR scope?	46
Q53. Which statement correctly identifies Risk creation?	46
Q54. Which option preserves the risk or institutional boundary of Risk creation?	47
Q55. Which statement uses Risk creation without changing its hazard, mandate or status?	47
Q56. Which option avoids the standard UPSC close-option trap about Risk creation?	47
Q57. Which statement correctly identifies Sendai status?	47
Q58. Which option preserves the risk or institutional boundary of Sendai status?	48
Q59. Which statement uses Sendai status without changing its hazard, mandate or status?	48
Q60. Which option avoids the standard UPSC close-option trap about Sendai status?	48
Q61. Which statement correctly identifies Sendai priorities?	48
Q62. Which option preserves the risk or institutional boundary of Sendai priorities?	49
Q63. Which statement uses Sendai priorities without changing its hazard, mandate or status?	49
Q64. Which option avoids the standard UPSC close-option trap about Sendai priorities?	49
Q65. Which statement correctly identifies Targets A-D?	49
Q66. Which option preserves the risk or institutional boundary of Targets A-D?	50
Q67. Which statement uses Targets A-D without changing its hazard, mandate or status?	50
Q68. Which option avoids the standard UPSC close-option trap about Targets A-D?	50
Q69. Which statement correctly identifies Targets E-G?	50
Q70. Which option preserves the risk or institutional boundary of Targets E-G?	51
Q71. Which statement uses Targets E-G without changing its hazard, mandate or status?	51
Q72. Which option avoids the standard UPSC close-option trap about Targets E-G?	51
Q73. Which statement correctly identifies Framework linkage?	51

Q74. Which option preserves the risk or institutional boundary of Framework linkage?	52
Q75. Which statement uses Framework linkage without changing its hazard, mandate or status?	52
Q76. Which option avoids the standard UPSC close-option trap about Framework linkage?	52
Q77. Which statement correctly identifies Evidence boundary?	52
Q78. Which option preserves the risk or institutional boundary of Evidence boundary?	53
Q79. Which statement uses Evidence boundary without changing its hazard, mandate or status?	53

Concepts, Risk, Resilience and Sendai - Learner-v2

Complete Learning Session

Authoring-only generation: 2026-09-04. No PDF was rendered and no tracker or index was mutated.

SOURCE, PROGRESSION AND CURRENT-LINKAGE AUDIT

- **Generation date:** 2026-09-04.
- **Repository-first evidence:** the Basic owner is taught first and preserved in full; the Advanced owner is retained only in the optional final teaching block.
- **OCR evidence:** Repository Markdown was primary. OCR-searchable official UPSC papers were supplementary only for printed routed demands. No answer key, warning performance, notification effect, implementation outcome, casualty reduction or disaster metric was inferred.
- **Qdrant:** not used; repository Markdown and available OCR context were sufficient.
- **PYQ integrity:** The three conservative cards are the direct 2018, 2019 and 2024 GS-III routes preserved in the audited ledgers and owner. Directive, marks and word limit are stated only where verified.
- **Live-link boundary:** UNDRR's adopted Sendai text is the framework anchor; WMO's EW4All page is a current Target-G implementation anchor. Neither source is used to fabricate country performance, avoided losses or universal coverage.
- **Fact/inference discipline:** no current-affairs item, PYQ wording, figure or quotation is invented.

LIVE OFFICIAL-SOURCE ATTEMPT LOG

The checks below were made on 2026-09-04. Substantive official text is used only for the proposition it supports; title-only, blocked or thin pages are recorded and supply no factual claim.

- <https://www.undrr.org/publication/sendai-framework-disaster-risk-reduction-2015-2030> - fetched 2026-09-04; the official page confirms adoption on 18 March 2015, four priorities and seven targets. It was not used as a current scoreboard for country-level progress.
- <https://wmo.int/all-activities/build-resilience/early-warnings-all> - fetched 2026-09-04; WMO confirms the end-of-2027 universal-warning aim, the four end-to-end pillars and WMO-UNDRR co-leadership. No unverified India coverage percentage was imported.
- <https://www.undrr.org/implementing-sendai-framework/sendai-framework-action> - searched 2026-09-04; the official UNDRR implementation domain was used only to cross-check framework terminology, not to invent target progress or disaster-loss statistics.

BASIC LEARNING SESSION

Refreshed teaching navigation

Distinct embedded teaching-navigation image. The separate continuous Cārvāka-style flowchart package remains an independent at-a-glance artifact.

SESSION 1 - FOUNDATION - HAZARD EXPOSURE VULNERABILITY AND CAPACITY

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster.

Technical definition: Read Hazard exposure vulnerability and capacity as a sequence: identify Hazard, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Hazard exposure vulnerability and capacity as a sequence: identify Hazard, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- FOUNDATION
- Hazard exposure vulnerability
- capacity
- Mechanism chain
- Qualified use
- A hazard

How to use them: Frame the answer through FOUNDATION; define Hazard exposure vulnerability, connect capacity with Mechanism chain to explain the mechanism, and use Qualified use for the decisive comparison or qualification.

VISUAL FIRST

HAZARD EXPOSURE VULNERABILITY AND CAPACITY

01. Hazard

|
v

02. Exposure

STATUS / CATEGORY FIREWALL -> Do not equate a hazard with a disaster.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings.

SIMPLE SYSTEM EXAMPLE

Read Hazard exposure vulnerability and capacity as a sequence: identify Hazard, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not equate a hazard with a disaster. This keeps Hazard and Exposure in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster.
- Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings.

EXAMINER CAUTION

- Do not equate a hazard with a disaster.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Define each risk component before proposing measures.

MINI RECAP

- **Mechanism chain:** Hazard -> Exposure
- **Qualified use:** Define each risk component before proposing measures.

CLOSING RECALL FLOW - FOUNDATION - HAZARD EXPOSURE VULNERABILITY AND CAPACITY

START / CONCEPT: FOUNDATION - Hazard exposure vulnerability and capacity

|
v

EXACT TERMS: FOUNDATION · Hazard exposure vulnerability · capacity · Mechanism chain · Qualified use · A hazard

|
v

MECHANISM / ARGUMENT: Mechanism chain: Hazard - Exposure Qualified use: Define each risk component before proposing measures.

|
v

CONSEQUENCE / CONTRAST: A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster.

|
v

UPSC TRAP / ANSWER-USE: The decisive boundary is Do not equate a hazard with a disaster.

|
v

ANSWER-GRABBING FORMULATION: Read Hazard exposure vulnerability and capacity as a sequence: identify Hazard, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 2 - FOUNDATION - RISK EQUATION AS A DISCIPLINED HEURISTIC

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Risk equation as a disciplined heuristic as a sequence: identify Vulnerability, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Vulnerability Qualified use: Use the heuristic to organise causation without claiming false precision.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Risk equation as a disciplined heuristic as a sequence: identify Vulnerability, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- FOUNDATION
- Risk equation as a disciplined heuristic
- Mechanism chain
- Qualified use
- Vulnerability
- Read Risk

How to use them: Frame the answer through FOUNDATION; define Risk equation as a disciplined heuristic, connect Mechanism chain with Qualified use to explain the mechanism, and use Vulnerability for the decisive comparison or qualification.

VISUAL FIRST

RISK EQUATION AS A DISCIPLINED HEURISTIC

01. Vulnerability

STATUS / CATEGORY FIREWALL -> Do not omit exposure when explaining why identical hazards produce unequal losses.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.

SIMPLE SYSTEM EXAMPLE

Read Risk equation as a disciplined heuristic as a sequence: identify Vulnerability, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not omit exposure when explaining why identical hazards produce unequal losses. This keeps Vulnerability in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.

EXAMINER CAUTION

- Do not omit exposure when explaining why identical hazards produce unequal losses.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.

- **Mains:** Use the heuristic to organise causation without claiming false precision.

MINI RECAP

- **Mechanism chain:** Vulnerability
- **Qualified use:** Use the heuristic to organise causation without claiming false precision.

CLOSING RECALL FLOW - FOUNDATION - RISK EQUATION AS A DISCIPLINED HEURISTIC

START / CONCEPT: FOUNDATION - Risk equation as a disciplined heuristic

|

v

EXACT TERMS: FOUNDATION • Risk equation as a disciplined heuristic • Mechanism chain • Qualified use • Vulnerability • Read Risk

|

v

MECHANISM / ARGUMENT: Mechanism chain: Vulnerability Qualified use: Use the heuristic to organise causation without claiming false precision.

|

v

CONSEQUENCE / CONTRAST: The decisive boundary is Do not omit exposure when explaining why identical hazards produce unequal losses.

|

v

UPSC TRAP / ANSWER-USE: Do not omit exposure when explaining why identical hazards produce unequal losses.

|

v

ANSWER-GRABBING FORMULATION: Read Risk equation as a disciplined heuristic as a sequence: identify Vulnerability, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 3 - FOUNDATION - DISASTER THRESHOLD AND SERIOUS DISRUPTION

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.

Technical definition: Read Disaster threshold and serious disruption as a sequence: identify Capacity, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Disaster threshold and serious disruption as a sequence: identify Capacity, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- **FOUNDATION**
- **Disaster threshold**
- **serious disruption**
- **Mechanism chain**
- **Qualified use**
- **Capacity**

How to use them: Frame the answer through FOUNDATION; define Disaster threshold, connect serious disruption with Mechanism chain to explain the mechanism, and use Qualified use for the decisive comparison or qualification.

VISUAL FIRST

DISASTER THRESHOLD AND SERIOUS DISRUPTION

01. Capacity

STATUS / CATEGORY FIREWALL -> Do not present the risk equation as a precise universal formula.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.

SIMPLE SYSTEM EXAMPLE

Read Disaster threshold and serious disruption as a sequence: identify Capacity, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not present the risk equation as a precise universal formula. This keeps Capacity in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.

EXAMINER CAUTION

- Do not present the risk equation as a precise universal formula.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Show how disruption exceeds coping capacity.

MINI RECAP

- **Mechanism chain:** Capacity
- **Qualified use:** Show how disruption exceeds coping capacity.

CLOSING RECALL FLOW - FOUNDATION - DISASTER THRESHOLD AND SERIOUS DISRUPTION

START / CONCEPT: FOUNDATION - Disaster threshold and serious disruption

|

v

EXACT TERMS: FOUNDATION • Disaster threshold • serious disruption • Mechanism chain • Qualified use
• Capacity

|

v

MECHANISM / ARGUMENT: Mechanism chain: Capacity Qualified use: Show how disruption exceeds coping capacity.

|

v

CONSEQUENCE / CONTRAST: The decisive boundary is Do not present the risk equation as a precise universal formula.

|

v

UPSC TRAP / ANSWER-USE: Do not present the risk equation as a precise universal formula.

|

v

ANSWER-GRABBING FORMULATION: Read Disaster threshold and serious disruption as a sequence: identify Capacity, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 4 - CORE - RESILIENCE BEYOND BOUNCE BACK

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Resilience beyond bounce back as a sequence: identify Risk heuristic, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Risk heuristic Qualified use: Link robustness, redundancy, resourcefulness and adaptive recovery.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Resilience beyond bounce back as a sequence: identify Risk heuristic, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- Resilience beyond bounce back
- Mechanism chain
- Qualified use
- Risk
- Read Resilience
- The decisive boundary

How to use them: Frame the answer through Resilience beyond bounce back; define Mechanism chain, connect Qualified use with Risk to explain the mechanism, and use Read Resilience for the decisive comparison or qualification.

VISUAL FIRST

RESILIENCE BEYOND BOUNCE BACK

01. Risk heuristic

STATUS / CATEGORY FIREWALL -> Do not merge prevention, mitigation and preparedness.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

SIMPLE SYSTEM EXAMPLE

Read Resilience beyond bounce back as a sequence: identify Risk heuristic, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not merge prevention, mitigation and preparedness. This keeps Risk heuristic in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

EXAMINER CAUTION

- Do not merge prevention, mitigation and preparedness.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Link robustness, redundancy, resourcefulness and adaptive recovery.

MINI RECAP

- **Mechanism chain:** Risk heuristic
- **Qualified use:** Link robustness, redundancy, resourcefulness and adaptive recovery.

CLOSING RECALL FLOW - CORE - RESILIENCE BEYOND BOUNCE BACK

START / CONCEPT: CORE - Resilience beyond bounce back

|
v

EXACT TERMS: Resilience beyond bounce back · Mechanism chain · Qualified use · Risk · Read
Resilience · The decisive boundary

|
v

MECHANISM / ARGUMENT: Mechanism chain: Risk heuristic Qualified use: Link robustness, redundancy,
resourcefulness and adaptive recovery.

|
v

CONSEQUENCE / CONTRAST: Risk is commonly organised as hazard interacting with exposure and
vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

|
v

UPSC TRAP / ANSWER-USE: The decisive boundary is Do not merge prevention, mitigation and
preparedness.

|
v

ANSWER-GRABBING FORMULATION: Read Resilience beyond bounce back as a sequence: identify Risk
heuristic, follow the named mechanism to its institutional response, and stop at the last verified
status rather than assuming the next stage.

SESSION 5 - CORE - PREVENTION AND MITIGATION BOUNDARY

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: The decisive boundary is Do not reduce resilience to restoring the pre-disaster condition.

Technical definition: Read Prevention and mitigation boundary as a sequence: identify Disaster threshold, follow the
named mechanism to its institutional response, and stop at the last verified status rather than assuming the next
stage.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Prevention and mitigation boundary as a sequence: identify Disaster threshold, follow the named mechanism
to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- **Prevention**
- **mitigation boundary**
- **Mechanism chain**
- **Qualified use**
- **A disaster**
- **Read Prevention**

How to use them: Frame the answer through Prevention; define mitigation boundary, connect Mechanism chain with
Qualified use to explain the mechanism, and use A disaster for the decisive comparison or qualification.

VISUAL FIRST

PREVENTION AND MITIGATION BOUNDARY

01. Disaster threshold

STATUS / CATEGORY FIREWALL -> Do not reduce resilience to restoring the pre-disaster condition.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.

SIMPLE SYSTEM EXAMPLE

Read Prevention and mitigation boundary as a sequence: identify Disaster threshold, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not reduce resilience to restoring the pre-disaster condition. This keeps Disaster threshold in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.

EXAMINER CAUTION

- Do not reduce resilience to restoring the pre-disaster condition.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Classify the measure by the risk it avoids or reduces.

MINI RECAP

- **Mechanism chain:** Disaster threshold
- **Qualified use:** Classify the measure by the risk it avoids or reduces.

CLOSING RECALL FLOW - CORE - PREVENTION AND MITIGATION BOUNDARY

START / CONCEPT: CORE - Prevention and mitigation boundary

|

v

EXACT TERMS: Prevention · mitigation boundary · Mechanism chain · Qualified use · A disaster · Read Prevention

|

v

MECHANISM / ARGUMENT: Mechanism chain: Disaster threshold Qualified use: Classify the measure by the risk it avoids or reduces.

|

v

CONSEQUENCE / CONTRAST: The decisive boundary is Do not reduce resilience to restoring the pre-disaster condition.

|

v

UPSC TRAP / ANSWER-USE: A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.

|

v

ANSWER-GRABBING FORMULATION: Read Prevention and mitigation boundary as a sequence: identify Disaster threshold, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 6 - CORE - PREPAREDNESS RESPONSE AND RECOVERY SEQUENCE

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Preparedness response and recovery sequence as a sequence: identify Resilience, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Resilience - Prevention Qualified use: Place every intervention in the correct management-cycle phase.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Preparedness response and recovery sequence as a sequence: identify Resilience, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- Preparedness response
- recovery sequence
- Mechanism chain
- Qualified use
- Resilience
- Prevention

How to use them: Frame the answer through Preparedness response; define recovery sequence, connect Mechanism chain with Qualified use to explain the mechanism, and use Resilience for the decisive comparison or qualification.

VISUAL FIRST

PREPAREDNESS RESPONSE AND RECOVERY SEQUENCE

01. Resilience

|
v

02. Prevention

STATUS / CATEGORY FIREWALL -> Do not describe Sendai as a binding treaty.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.

SIMPLE SYSTEM EXAMPLE

Read Preparedness response and recovery sequence as a sequence: identify Resilience, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not describe Sendai as a binding treaty. This keeps Resilience and Prevention in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions.
- Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.

EXAMINER CAUTION

- Do not describe Sendai as a binding treaty.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Place every intervention in the correct management-cycle phase.

MINI RECAP

- **Mechanism chain:** Resilience -> Prevention
- **Qualified use:** Place every intervention in the correct management-cycle phase.

CLOSING RECALL FLOW - CORE - PREPAREDNESS RESPONSE AND RECOVERY SEQUENCE

START / CONCEPT: CORE - Preparedness response and recovery sequence

|

v

EXACT TERMS: Preparedness response · recovery sequence · Mechanism chain · Qualified use · Resilience · Prevention

|

v

MECHANISM / ARGUMENT: Mechanism chain: Resilience - Prevention Qualified use: Place every intervention in the correct management-cycle phase.

|

v

CONSEQUENCE / CONTRAST: Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions.

|

v

UPSC TRAP / ANSWER-USE: The decisive boundary is Do not describe Sendai as a binding treaty.

|

v

ANSWER-GRABBING FORMULATION: Read Preparedness response and recovery sequence as a sequence: identify Resilience, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 7 - CORE - DRR AND RESIDUAL RISK

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read DRR and residual risk as a sequence: identify Mitigation, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Mitigation Qualified use: Identify residual risk after prevention and mitigation.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read DRR and residual risk as a sequence: identify Mitigation, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- **DRR**
- **residual risk**
- **Mechanism chain**
- **Qualified use**
- **Mitigation**
- **Read DRR**

How to use them: Frame the answer through DRR; define residual risk, connect Mechanism chain with Qualified use to explain the mechanism, and use Mitigation for the decisive comparison or qualification.

VISUAL FIRST

DRR AND RESIDUAL RISK

01. Mitigation

STATUS / CATEGORY FIREWALL -> Do not confuse Sendai priorities with its lettered targets.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures.

SIMPLE SYSTEM EXAMPLE

Read DRR and residual risk as a sequence: identify Mitigation, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not confuse Sendai priorities with its lettered targets. This keeps Mitigation in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures.

EXAMINER CAUTION

- Do not confuse Sendai priorities with its lettered targets.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Identify residual risk after prevention and mitigation.

MINI RECAP

- **Mechanism chain:** Mitigation
- **Qualified use:** Identify residual risk after prevention and mitigation.

CLOSING RECALL FLOW - CORE - DRR AND RESIDUAL RISK

START / CONCEPT: CORE - DRR and residual risk

|

v

EXACT TERMS: DRR · residual risk · Mechanism chain · Qualified use · Mitigation · Read DRR

|

v

MECHANISM / ARGUMENT: Mechanism chain: Mitigation Qualified use: Identify residual risk after prevention and mitigation.

|

v

CONSEQUENCE / CONTRAST: The decisive boundary is Do not confuse Sendai priorities with its lettered targets.

|

v

UPSC TRAP / ANSWER-USE: Do not confuse Sendai priorities with its lettered targets.

|

v

ANSWER-GRABBING FORMULATION: Read DRR and residual risk as a sequence: identify Mitigation, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 8 - CORE - RISK CREATION THROUGH DEVELOPMENT CHOICES

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Risk creation through development choices as a sequence: identify Preparedness, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Preparedness Qualified use: Explain how planning choices can increase exposure or vulnerability.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Risk creation through development choices as a sequence: identify Preparedness, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- Risk creation through development choices
- Mechanism chain
- Qualified use
- Read Risk
- Preparedness
- The decisive boundary

How to use them: Frame the answer through Risk creation through development choices; define Mechanism chain, connect Qualified use with Read Risk to explain the mechanism, and use Preparedness for the decisive comparison or qualification.

VISUAL FIRST

RISK CREATION THROUGH DEVELOPMENT CHOICES

01. Preparedness

STATUS / CATEGORY FIREWALL -> Do not turn Target G or EW4All into proof of universal warning coverage.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills.

SIMPLE SYSTEM EXAMPLE

Read Risk creation through development choices as a sequence: identify Preparedness, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not turn Target G or EW4All into proof of universal warning coverage. This keeps Preparedness in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills.

EXAMINER CAUTION

- Do not turn Target G or EW4All into proof of universal warning coverage.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.

- **Mains:** Explain how planning choices can increase exposure or vulnerability.

MINI RECAP

- **Mechanism chain:** Preparedness
- **Qualified use:** Explain how planning choices can increase exposure or vulnerability.

CLOSING RECALL FLOW - CORE - RISK CREATION THROUGH DEVELOPMENT CHOICES

START / CONCEPT: CORE - Risk creation through development choices

|

v

EXACT TERMS: Risk creation through development choices • Mechanism chain • Qualified use • Read Risk • Preparedness • The decisive boundary

|

v

MECHANISM / ARGUMENT: Mechanism chain: Preparedness Qualified use: Explain how planning choices can increase exposure or vulnerability.

|

v

CONSEQUENCE / CONTRAST: The decisive boundary is Do not turn Target G or EW4All into proof of universal warning coverage.

|

v

UPSC TRAP / ANSWER-USE: Do not turn Target G or EW4All into proof of universal warning coverage.

|

v

ANSWER-GRABBING FORMULATION: Read Risk creation through development choices as a sequence: identify Preparedness, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 9 - CORE - SENDAI STATUS AND ARCHITECTURE

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Sendai status and architecture as a sequence: identify Response, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Response Qualified use: State Sendai's voluntary character before using its priorities.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Sendai status and architecture as a sequence: identify Response, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- Sendai status
- architecture
- Mechanism chain
- Qualified use
- Response
- Read Sendai

How to use them: Frame the answer through Sendai status; define architecture, connect Mechanism chain with Qualified use to explain the mechanism, and use Response for the decisive comparison or qualification.

VISUAL FIRST

SENDAI STATUS AND ARCHITECTURE

01. Response

STATUS / CATEGORY FIREWALL -> Do not collapse climate adaptation, DRR and sustainable development into one framework.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs.

SIMPLE SYSTEM EXAMPLE

Read Sendai status and architecture as a sequence: identify Response, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not collapse climate adaptation, DRR and sustainable development into one framework. This keeps Response in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs.

EXAMINER CAUTION

- Do not collapse climate adaptation, DRR and sustainable development into one framework.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** State Sendai's voluntary character before using its priorities.

MINI RECAP

- **Mechanism chain:** Response
- **Qualified use:** State Sendai's voluntary character before using its priorities.

CLOSING RECALL FLOW - CORE - SENDAI STATUS AND ARCHITECTURE

START / CONCEPT: CORE - Sendai status and architecture

|

v

EXACT TERMS: Sendai status • architecture • Mechanism chain • Qualified use • Response • Read Sendai

|

v

MECHANISM / ARGUMENT: Mechanism chain: Response Qualified use: State Sendai's voluntary character before using its priorities.

|

v

CONSEQUENCE / CONTRAST: The decisive boundary is Do not collapse climate adaptation, DRR and sustainable development into one framework.

|

v

UPSC TRAP / ANSWER-USE: Do not collapse climate adaptation, DRR and sustainable development into one framework.

|

v

ANSWER-GRABBING FORMULATION: Read Sendai status and architecture as a sequence: identify Response, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 10 - CORE - FOUR SENDAI PRIORITIES

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Four Sendai priorities as a sequence: identify Recovery, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Recovery Qualified use: Diagnose the weakest priority for the case rather than reciting all four.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Four Sendai priorities as a sequence: identify Recovery, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- Four Sendai priorities
- Mechanism chain
- Qualified use
- Read Four Sendai
- Recovery
- The decisive boundary

How to use them: Frame the answer through Four Sendai priorities; define Mechanism chain, connect Qualified use with Read Four Sendai to explain the mechanism, and use Recovery for the decisive comparison or qualification.

VISUAL FIRST

FOUR SENDAI PRIORITIES

01. Recovery

STATUS / CATEGORY FIREWALL -> Do not infer current target progress without a dated official source.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.

SIMPLE SYSTEM EXAMPLE

Read Four Sendai priorities as a sequence: identify Recovery, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not infer current target progress without a dated official source. This keeps Recovery in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.

EXAMINER CAUTION

- Do not infer current target progress without a dated official source.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Diagnose the weakest priority for the case rather than reciting all four.

MINI RECAP

- **Mechanism chain:** Recovery
- **Qualified use:** Diagnose the weakest priority for the case rather than reciting all four.

CLOSING RECALL FLOW - CORE - FOUR SENDAI PRIORITIES

START / CONCEPT: CORE - Four Sendai priorities

|

v

EXACT TERMS: Four Sendai priorities · Mechanism chain · Qualified use · Read Four Sendai · Recovery
· The decisive boundary

|

v

MECHANISM / ARGUMENT: Mechanism chain: Recovery Qualified use: Diagnose the weakest priority for the case rather than reciting all four.

|

v

CONSEQUENCE / CONTRAST: The decisive boundary is Do not infer current target progress without a dated official source.

|

v

UPSC TRAP / ANSWER-USE: Do not infer current target progress without a dated official source.

|

v

ANSWER-GRABBING FORMULATION: Read Four Sendai priorities as a sequence: identify Recovery, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 11 - CORE - SEVEN GLOBAL TARGETS

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Seven global targets as a sequence: identify DRR scope, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: DRR scope - Risk creation Qualified use: Name all targets compactly when the directive says mention.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Seven global targets as a sequence: identify DRR scope, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- Seven global targets
- Mechanism chain
- Qualified use
- Land-use
- Read Seven
- DRR

How to use them: Frame the answer through Seven global targets; define Mechanism chain, connect Qualified use with Land-use to explain the mechanism, and use Read Seven for the decisive comparison or qualification.

VISUAL FIRST

SEVEN GLOBAL TARGETS

01. DRR scope

|
v

02. Risk creation

STATUS / CATEGORY FIREWALL -> Do not equate a hazard with a disaster.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.

SIMPLE SYSTEM EXAMPLE

Read Seven global targets as a sequence: identify DRR scope, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not equate a hazard with a disaster. This keeps DRR scope and Risk creation in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development.
- Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.

EXAMINER CAUTION

- Do not equate a hazard with a disaster.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Name all targets compactly when the directive says mention.

MINI RECAP

- **Mechanism chain:** DRR scope -> Risk creation
- **Qualified use:** Name all targets compactly when the directive says mention.

CLOSING RECALL FLOW - CORE - SEVEN GLOBAL TARGETS

EXACT TERMS: Seven global targets • Mechanism chain • Qualified use • Land-use • Read Seven • DRR

|
v

MECHANISM / ARGUMENT: Mechanism chain: DRR scope - Risk creation Qualified use: Name all targets compactly when the directive says mention.

|
v

CONSEQUENCE / CONTRAST: Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.

|
v

UPSC TRAP / ANSWER-USE: The decisive boundary is Do not equate a hazard with a disaster.

|
v

ANSWER-GRABBING FORMULATION: Read Seven global targets as a sequence: identify DRR scope, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 12 - CORE - LOSS TARGETS AND MEANS TARGETS

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Loss targets and means targets as a sequence: identify Sendai status, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Sendai status Qualified use: Separate outcome reduction from means of implementation.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Loss targets and means targets as a sequence: identify Sendai status, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- Loss targets
- means targets
- Mechanism chain
- Qualified use
- The Sendai Framework for Disaster Risk Reduction 2015-2030
- 2015-2030

How to use them: Frame the answer through Loss targets; define means targets, connect Mechanism chain with Qualified use to explain the mechanism, and use The Sendai Framework for Disaster Risk Reduction 2015-2030 for the decisive comparison or qualification.

VISUAL FIRST

LOSS TARGETS AND MEANS TARGETS

01. Sendai status

STATUS / CATEGORY FIREWALL -> Do not omit exposure when explaining why identical hazards produce unequal losses.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.

SIMPLE SYSTEM EXAMPLE

Read Loss targets and means targets as a sequence: identify Sendai status, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not omit exposure when explaining why identical hazards produce unequal losses. This keeps Sendai status in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.

EXAMINER CAUTION

- Do not omit exposure when explaining why identical hazards produce unequal losses.

EXAM LINK

SESSION 13 - CORE SYNTHESIS - BUILD BACK BETTER AND RECOVERY CHOICES

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

Technical definition: Read Build Back Better and recovery choices as a sequence: identify Sendai priorities, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

MUST-WRITE KEYWORDS

- **CORE SYNTHESIS**
- **Build Back Better**
- **recovery choices**
- **Mechanism chain**
- **Qualified use**
- **Sendai's four priorities**

How to use them: Frame the answer through CORE SYNTHESIS; define Build Back Better, connect recovery choices with Mechanism chain to explain the mechanism, and use Qualified use for the decisive comparison or qualification.

VISUAL FIRST

BUILD BACK BETTER AND RECOVERY CHOICES

01. Sendai priorities

STATUS / CATEGORY FIREWALL -> Do not present the risk equation as a precise universal formula.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

SIMPLE SYSTEM EXAMPLE

Read Build Back Better and recovery choices as a sequence: identify Sendai priorities, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not present the risk equation as a precise universal formula. This keeps Sendai priorities in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

EXAMINER CAUTION

- Do not present the risk equation as a precise universal formula.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Test whether recovery removes or recreates the original risk.

MINI RECAP

- **Mechanism chain:** Sendai priorities
- **Qualified use:** Test whether recovery removes or recreates the original risk.

CLOSING RECALL FLOW - CORE SYNTHESIS - BUILD BACK BETTER AND RECOVERY CHOICES

|

v

EXACT TERMS: CORE SYNTHESIS · Build Back Better · recovery choices · Mechanism chain · Qualified use · Sendai's four priorities

|

v

MECHANISM / ARGUMENT: Read Build Back Better and recovery choices as a sequence: identify Sendai priorities, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

|

v

CONSEQUENCE / CONTRAST: The decisive boundary is Do not present the risk equation as a precise universal formula.

|

v

UPSC TRAP / ANSWER-USE: Do not present the risk equation as a precise universal formula.

|

v

ANSWER-GRABBING FORMULATION: Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

SESSION 14 - CORE SYNTHESIS - CLIMATE ADAPTATION AND SUSTAINABLE DEVELOPMENT LINKAGE

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: Read Climate adaptation and sustainable development linkage as a sequence: identify Targets A-D, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

Technical definition: Mechanism chain: Targets A-D - Targets E-G Qualified use: Show complementarity while preserving framework boundaries.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

Read Climate adaptation and sustainable development linkage as a sequence: identify Targets A-D, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

MUST-WRITE KEYWORDS

- CORE SYNTHESIS
- Climate adaptation
- sustainable development linkage
- Mechanism chain
- Qualified use
- Read Climate

How to use them: Frame the answer through CORE SYNTHESIS; define Climate adaptation, connect sustainable development linkage with Mechanism chain to explain the mechanism, and use Qualified use for the decisive comparison or qualification.

VISUAL FIRST

CLIMATE ADAPTATION AND SUSTAINABLE DEVELOPMENT LINKAGE

01. Targets A-D

|
v

02. Targets E-G

STATUS / CATEGORY FIREWALL -> Do not merge prevention, mitigation and preparedness.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

SIMPLE SYSTEM EXAMPLE

Read Climate adaptation and sustainable development linkage as a sequence: identify Targets A-D, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not merge prevention, mitigation and preparedness. This keeps Targets A-D and Targets E-G in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services.
- Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

EXAMINER CAUTION

- Do not merge prevention, mitigation and preparedness.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Show complementarity while preserving framework boundaries.

MINI RECAP

- **Mechanism chain:** Targets A-D -> Targets E-G
- **Qualified use:** Show complementarity while preserving framework boundaries.

CLOSING RECALL FLOW - CORE SYNTHESIS - CLIMATE ADAPTATION AND SUSTAINABLE DEVELOPMENT LINKAGE

START / CONCEPT: CORE SYNTHESIS - Climate adaptation and sustainable development linkage
|
v
EXACT TERMS: CORE SYNTHESIS · Climate adaptation · sustainable development linkage · Mechanism chain · Qualified use · Read Climate
|
v
MECHANISM / ARGUMENT: Mechanism chain: Targets A-D - Targets E-G Qualified use: Show complementarity while preserving framework boundaries.
|
v
CONSEQUENCE / CONTRAST: The decisive boundary is Do not merge prevention, mitigation and preparedness.
|
v
UPSC TRAP / ANSWER-USE: Do not merge prevention, mitigation and preparedness.
|
v
ANSWER-GRABBING FORMULATION: Read Climate adaptation and sustainable development linkage as a sequence: identify Targets A-D, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

SESSION 15 - CORE SYNTHESIS - PYQ SYNTHESIS AND EVIDENCE BOUNDARY

DEFINITION / WHAT THIS IS CALLED

Plain-language definition: The decisive boundary is Do not reduce resilience to restoring the pre-disaster condition.

Technical definition: Read PYQ synthesis and evidence boundary as a sequence: identify Framework linkage, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

ANSWER-GRABBING OPENING - WRITE/ADAPT IN THE EXAM

The decisive boundary is Do not reduce resilience to restoring the pre-disaster condition.

MUST-WRITE KEYWORDS

- CORE SYNTHESIS
- PYQ synthesis
- evidence boundary
- Mechanism chain
- Qualified use
- Subject

How to use them: Frame the answer through CORE SYNTHESIS; define PYQ synthesis, connect evidence boundary with Mechanism chain to explain the mechanism, and use Qualified use for the decisive comparison or qualification.

VISUAL FIRST

PYQ SYNTHESIS AND EVIDENCE BOUNDARY

01. Framework linkage

|
v

02. Evidence boundary

STATUS / CATEGORY FIREWALL -> Do not reduce resilience to restoring the pre-disaster condition.

The rail fixes the institutional sequence and claim boundary before explanation.

CORE EXPLANATION

Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

SIMPLE SYSTEM EXAMPLE

Read PYQ synthesis and evidence boundary as a sequence: identify Framework linkage, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

TECHNICAL DISTINCTION

The decisive boundary is Do not reduce resilience to restoring the pre-disaster condition. This keeps Framework linkage and Evidence boundary in the correct risk category, institutional mandate and evidence status.

NAMED EVIDENCE AND MECHANISM

- Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures.
- A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

EXAMINER CAUTION

- Do not reduce resilience to restoring the pre-disaster condition.

EXAM LINK

- **Prelims:** Keep hazard, forecast, warning, institution, law, plan, force, fund, scheme and outcome in their exact category.
- **Mains:** Answer only the verified demand and qualify current-status claims.

MINI RECAP

- **Mechanism chain:** Framework linkage -> Evidence boundary
- **Qualified use:** Answer only the verified demand and qualify current-status claims.

COMPLETE BASIC OWNER EVIDENCE BANK

Subject: Disaster Management | **Tier:** Must-Do (foundation) | **GS Paper:** GS-III. **Core area:** Disaster, hazard, exposure, vulnerability, capacity and risk; the disaster management cycle; the Sendai Framework's priorities and targets. **Grounded in:** *VisionIAS Value Added Material Disaster Management*, PDF pp. 4-8 (definitions, risk, cycle, DRR), pp. 61-62 (Sendai); 00_Master-Framework.md Sections 1-2, 6. **FACT:** = source-grounded | **ANALYSIS:** = analytical inference | **CURRENT:** = current anchor | **WRONG:** = boundary/trap. *Companion:* advanced/01_Concepts-Risk-Resilience-and-Sendai.md.

1. Visual foundation

Core proposition: FACT: VisionIAS, citing UNDRR, defines a disaster as "a serious disruption to the functioning of a community, which causes human, material, economic and environmental losses beyond a community's ability to cope," resulting from "the combination of hazards, conditions of vulnerability and insufficient capacity or measures to reduce the potential negative consequences of risk" (PDF p. 4).

2. Essential definitions

Concept	Exam-ready meaning
FACT: Hazard	"A dangerous condition or event, that threat or have the potential for causing injury to life or damage to property or the environment" - natural (geophysical, hydrological, climatological, meteorological, biological) or anthropogenic (PDF p. 4).
FACT: Vulnerability	"Conditions determined by physical, social, economic, and environmental factors or processes, which increase the susceptibility of a community to the impact of hazards" - economic, physical, social, environmental and attitudinal forms (PDF pp. 4-5).
FACT: Risk	"A measure of the expected losses due to a hazard event occurring in a given area over a specific time period"; working relation "Risk = Probability of Hazard x Degree of Vulnerability" (PDF p. 5).
FACT: Risk acceptance/avoidance/reduction/transfer	Four distinct ways of dealing with risk - informed acceptance of consequences; avoiding risk-generating activity; applying techniques to reduce likelihood/consequence; and shifting the burden (e.g. insurance) to another party (PDF p. 5).
FACT: Rapid-onset vs. slow-onset disaster	Rapid onset (earthquake, cyclone, flood, tsunami) has sudden, acute impact; slow onset - "Creeping Emergencies" (climate change, desertification, soil degradation, drought) - unfolds over months or years and must be reflected in preparedness planning (PDF p. 6).
ANALYSIS: Resilience	Not source-defined in a single VisionIAS line but built from its cycle/DRR material as the capacity of a system to resist, absorb, accommodate to and recover from a hazard's effects in a timely and efficient manner - the concept directly asked in 2024 Q17.

3. Risk/problem mechanism

- Hazard occurs** - natural (geophysical, hydrological, climatological, meteorological, biological) or anthropogenic (pollution, deforestation, chemical spillage) (PDF p. 4).
- Exposure and vulnerability determine impact** - FACT: VisionIAS distinguishes economic (income diversity, access to production means), physical (proximity, construction type), social (poor, pregnant/ lactating women, disabled, children, elderly), environmental (ecosystem sensitivity) and attitudinal (community response to change) vulnerability (PDF pp. 4-5).
- **Capacity determines whether hazard + vulnerability becomes a disaster**** - insufficient capacity or risk-reduction measures convert a hazard event into "a serious disruption... beyond a community's ability to cope" (PDF p. 4).
- Classification routes the response** - FACT: by source (natural,

socio-natural, anthropogenic) and by duration (rapid onset vs. slow onset) (PDF pp. 5-6); each classification is developed hazard-by-hazard in topics 05-13.

4. Disaster-management cycle application

FACT: VisionIAS structures the cycle into a pre-disaster **Risk Management Phase** (prevention, mitigation, preparedness) and post-disaster **Crisis Management Phase** (relief, response, rehabilitation, reconstruction, recovery) (PDF p. 6), replacing the traditional "3 Rs" (Rescue, Relief, Restoration) with "3 Ps" (Prevention, Preparedness, Proofing) (PDF p. 6). FACT: Disaster Risk Reduction (DRR) is "the concept and practice of reducing disaster risks through reduced exposure to hazards, lessened vulnerability of people and property, wise management of land and the environment, and improved preparedness" and comprises a policy framework, risk assessment, risk awareness, plan implementation, early warning systems and use of knowledge (PDF p. 8). See 00_Master - Framework .md Section 2 for the full cycle table reused across every hazard topic.

5. Institutions and policy tools

- FACT: **Ten-point PM agenda on DRR (AMCDRR, New Delhi, November 2016):**

each point is explicitly aligned with one or more Sendai priorities of action (PDF p. 8) - the Indian policy bridge between the DM cycle and the global framework.

- FACT: **Sendai Framework for Disaster Risk Reduction 2015-2030:** adopted

at the Third UN World Conference on DRR, Sendai, Japan, 2015; successor to the Hyogo Framework for Action (2005-2015); "first major agreement of the post-2015 development agenda," with **four priorities** and **seven global targets** (PDF p. 62).

- CURRENT: **The seven global targets (A-G)** - VisionIAS shows them only as a figure (PDF p. 62); the substance below is from the adopted Sendai Framework text (UNDRR, 18 March 2015) and is what 2024 Q17 asks for: **A** substantially reduce global disaster **mortality** by 2030; **B** substantially reduce the number of **affected people** globally by 2030 (both A and B measured as per-100,000 decadal averages, 2020-2030 against 2005-2015); **C** reduce direct disaster **economic loss relative to global GDP** by 2030; **D** substantially reduce disaster damage to **critical infrastructure** and disruption of basic services, including health and education, by developing their resilience by 2030; **E** substantially increase the number of countries with **national and local DRR strategies** by 2020; **F** substantially enhance **international cooperation** to developing countries by 2030; **G** substantially increase availability of and access to **multi-hazard early warning systems** and disaster risk information and assessments by 2030. ANALYSIS: Structure to remember: **A-D reduce losses; E-G build means of implementation; E alone has a 2020 deadline.**

- CURRENT: **Early Warnings for All (EW4All)** - the UN Secretary-General's

March 2022 call, launched as an initiative at COP27 in November 2022, to protect every person on earth by an early warning system by **2027**; it is the operational vehicle for Sendai **Target G**. Its four pillars and lead agencies are: disaster-risk knowledge (**UNDRR**); detection, observations, monitoring, analysis and forecasting (**WMO**); warning dissemination and communication (**ITU**); and preparedness and response (**IFRC**), with WMO and UNDRR co-leading overall. Applied to India in topic 04.

- FACT: **National Disaster Management Plan, 2016** incorporates the four

Sendai priorities into five Thematic Areas for Action - Understanding Risk, Inter-Agency Coordination, Investing in DRR (structural), Investing in DRR (non-structural), and Capacity Development (PDF p.

14. - developed fully in topic 02.

6. India applications and examples

- FACT: VisionIAS flags the NDMP 2016's own shortcomings: it is "too generic,"

lacks a precise time frame, does not project fund requirements, and - unlike Sendai or the SDGs - "does not set any goals or targets" (PDF p. 14, cross-referenced PDF p. 16). CURRENT: NDMP 2016 was India's first edition; the **revised NDMP, 2019** is the latest published National Disaster Management Plan and should be cited as the operative plan, not the 2016 edition. ANALYSIS: This is the direct evidentiary basis for a Mains answer contrasting India's domestic plan with Sendai's own quantified targets.

- ANALYSIS: **PYQ mapping:** 2024 Q17 directly asks "What is disaster

resilience? How is it determined? Describe various elements of a resilience framework. Also mention the global targets of Sendai Framework for Disaster Risk Reduction (2015-2030)" (local paper text reproduced verbatim, 250 words, 15 marks) - the single most directly relevant PYQ in this entire folder.

7. Must-Know Facts for Prelims

- FACT: Risk = Probability of Hazard x Degree of Vulnerability (VisionIAS working relation, PDF p. 5).
- FACT: Four ways of dealing with risk: acceptance, avoidance, reduction, transfer (PDF p. 5).
- FACT: Sendai Framework (2015-2030) has four priorities and seven global targets; it succeeded the Hyogo Framework for Action (2005-2015), which had five priorities (PDF pp. 61-62).
- CURRENT: The seven targets are lettered **A-G**: mortality (A), affected people (B), economic loss/GDP (C), critical-infrastructure damage (D), national and local DRR strategies (E), international cooperation (F), multi-hazard early warning and risk information (G). **Only Target E carries a 2020 deadline; the rest are 2030.**
- CURRENT: **Early Warnings for All (EW4All)** - UN Secretary-General's call of March 2022, launched at COP27 (November 2022), target year **2027**; four pillars led by UNDRR (risk knowledge), WMO (observation and forecasting), ITU (dissemination) and IFRC (preparedness and response).
- CURRENT: The Sendai Midterm Review High-Level Meeting was held **17-19 May 2023**; its **Political Declaration was adopted as UN General Assembly resolution 77/289** on 18 May 2023.
- FACT: The PM's ten-point DRR agenda was announced at AMCDRR, New Delhi, November 2016 (PDF p. 8).
- ANALYSIS: Rapid-onset disasters (earthquake, cyclone, flood, tsunami) versus slow-onset/"creeping emergencies" (drought, desertification, climate change) is a repeatedly tested classification (PDF p. 6).

8. WRONG: Traps and stale-claim cautions

- WRONG: Sendai Framework is a binding international treaty. -> It is a voluntary, non-binding framework agreed at a UN World Conference; do not describe it as creating enforceable legal obligations.
- WRONG: Resilience simply means "bouncing back" to the pre-disaster state.
-> A complete resilience framework (asked directly in 2024 Q17) requires naming specific elements - risk knowledge, robustness, redundancy, resourcefulness, rapid recovery and the capacity to adapt/ transform, not identical restoration of the prior (possibly risk-generating) state.
- WRONG: The NDMP 2016 is still the latest or only National Disaster Management Plan. -> NDMP 2016 was only the first edition; the **revised NDMP, 2019** is the latest published National Disaster Management Plan and is the correct plan to cite as operative.
- WRONG: "Risk reduction" and "risk transfer" are interchangeable. -> The source explicitly separates risk reduction (lowering likelihood/ consequence) from risk transfer (shifting the burden, e.g. insurance) as distinct strategies (PDF p. 5) - developed fully in topic 16.

9. CURRENT: Current official anchor

- CURRENT: The Sendai Framework's implementation status is authoritatively tracked by **UNDRR**. The **High-Level Meeting on the Midterm Review** was held **17-19 May 2023** and adopted a **Political Declaration**, subsequently issued as **UN General Assembly resolution 77/289** (18 May 2023) - this is the correct dated anchor for any claim about global progress against the seven targets. Do not cite VisionIAS's 2015-era description of the targets as a current-progress statement.
- CURRENT: For **Target G** specifically, the current operational anchor is the

Early Warnings for All initiative (UN Secretary-General, March 2022; launched at COP27, November 2022; target year **2027**), co-led by **WMO and UNDRR** across four pillars - the correct reference point for any statement about how the early-warning target is being pursued rather than merely stated.

11. Mains framework

1. Define the specific risk in hazard-exposure-vulnerability-capacity terms (Section 3), never as a generic "disasters are increasing" statement.
2. Route the answer through the disaster management cycle (Section 4), naming the specific phase engaged by the question.
3. Where the question invokes global commitments, name Sendai's four priorities precisely, not a vague "international cooperation."
4. Where "resilience" is asked, name specific framework elements (knowledge, robustness, redundancy, resourcefulness, rapid recovery), not a one-line definition alone.
5. Close by relating the specific hazard/answer back to India's own plan (NDMP) and its acknowledged gaps (Section 6), showing awareness of both the global standard and the domestic shortfall.

12. Study links

- FACT: Advanced companion: `advanced/01_Concepts-Risk-Resilience-and-Sendai.md`.
- FACT: `00_Master-Framework.md` Sections 1, 2 and 6 - the risk equation, DM cycle and Sendai quick reference reused by every later topic.
- ANALYSIS: **Downstream topics in this folder:** Topic 02 applies the institutional plan (NDMP/DM Act) in full legal detail; topic 03 applies the vulnerability typology to inclusive protection; topic 16 develops risk transfer; topic 18 develops the Sendai-to-international- cooperation architecture.

13. Core-only answer architecture - risk, resilience and Sendai

Core firewall: this section is sufficient for the 2018/2019 concept routes and the 2024 resilience route. `advanced/01` may deepen an evaluation; it is never required to supply a thesis, a named example, a limitation or a conclusion.

13.1 Claim-to-evidence bank

Claim	Named evidence/example	Why it earns the analytical point	Qualification
A hazard becomes a disaster through socially produced risk, not merely through its physical force.	VisionIAS's hazard-vulnerability-capacity definition and its economic, physical, social, environmental and attitudinal vulnerability categories (PDF pp. 4-5).	It lets an answer explain <i>why the same event harms groups differently</i> and identify a reduction lever.	Use the source's probability × vulnerability relation as a working relation; do not pretend it is a complete measured formula for every event.
Resilience is a capability across time, not a synonym for restoration.	The DM cycle: prevention/mitigation/preparedness before impact and response/rehabilitation/reconstruction after it (PDF p. 6).	It shows that robust infrastructure, redundancy, preparedness and recovery are connected rather than a list of slogans.	"Bounce back" to the previous unsafe condition is not resilience; recovery must avoid recreating risk.
Sendai converts the DRR cycle into a global accountability vocabulary.	Sendai's four priorities and Targets A-G, with A-D addressing losses and E-G means of implementation.	A response can move from a domestic measure to the relevant global outcome/means target.	Sendai is voluntary and non-binding; Target E's 2020 deadline is not evidence that every country achieved it.
India's DRR approach can be compared before and after Sendai without inventing outcomes.	Before: DM Act 2005 and NPDM 2009 institutionalised the national framework. After: NDMP 2016 (revised 2019) aligned planning with Sendai, and the PM's ten-point DRR agenda was announced at AMCDRR 2016.	It answers the 2018 before/after limb with dated policy anchors rather than a generic "India adopted Sendai" line.	These are framework/adoption facts; do not claim they prove measured target achievement or uniform State implementation.
India needs a current, measurable domestic implementation layer.	NDMP 2019 is the latest published NDMP; the 2016 first edition's lack of targets/timelines/funding projections is document-period critique.	It permits a reasoned verdict on the gap between a framework and implementation.	Do not assert that the 2016 critique remains unchanged in NDMP 2019 without a dated comparison.

13.2 Executable spines

- **10 marks - vulnerability or risk:** define the term -> map physical,

social, economic, environmental and attitudinal vulnerability -> show hazard/exposure/capacity interaction -> use one local-risk example (unsafe siting, weak construction or excluded warning recipient) -> conclude that risk reduction changes exposure/vulnerability/capacity, not the hazard alone.

- **15 marks - 2018 Hyogo-Sendai or 2024 resilience demand:** open with

the proposition that resilience is the ability to resist, absorb, adapt and recover without recreating risk. For the 2024 demand, use **determination** (risk knowledge plus exposure, vulnerability and capacity), then **framework elements** (robustness, redundancy, resourcefulness, inclusive preparedness, rapid recovery/adaptation), then compactly name all seven Sendai targets: A mortality, B affected people, C economic loss/GDP, D critical infrastructure/basic services, E national/local strategies, F international cooperation, G multi-hazard warning/risk information. For a Hyogo comparison, state Hyogo's five priorities versus Sendai's four priorities plus seven targets, then use DM Act 2005/NPDM 2009 as pre-Sendai and NDMP 2016/2019 plus the 2016 ten-point agenda as post-Sendai Indian measures; do not invent a numerical performance comparison.

- **20 marks - evaluate resilience policy:** thesis: resilience is

credible only where risk knowledge, institutions, finance, warning, inclusion and safer recovery reinforce one another. Organise by prevention/mitigation, preparedness/warning, response and Build Back Better; attach one evidence unit in each part; test results separately from plans/targets; close with a qualified verdict on risk-informed development.

13.3 Direct-PYQ route rule

The historical 2018/2019 and 2024 central-ledger routes terminate in this Core owner. An older advanced/01 pointer is retained only as optional enrichment and is superseded for answer-writing by this section.

CLOSING RECALL FLOW - CORE SYNTHESIS - PYQ SYNTHESIS AND EVIDENCE BOUNDARY

START / CONCEPT: CORE SYNTHESIS - PYQ synthesis and evidence boundary

|
v

EXACT TERMS: CORE SYNTHESIS · PYQ synthesis · evidence boundary · Mechanism chain · Qualified use · Subject

|
v

MECHANISM / ARGUMENT: Read PYQ synthesis and evidence boundary as a sequence: identify Framework linkage, follow the named mechanism to its institutional response, and stop at the last verified status rather than assuming the next stage.

|
v

CONSEQUENCE / CONTRAST: Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures.

|
v

UPSC TRAP / ANSWER-USE: Where the question invokes global commitments, name Sendai's four priorities precisely, not a vague "international cooperation." Where "resilience" is asked, name specific framework elements (knowledge, robustness, redundancy, resourcefulness, rapid recovery), not a one-line definition alone.

|
v

ANSWER-GRABBING FORMULATION: The decisive boundary is Do not reduce resilience to restoring the pre-disaster condition.

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Hazard?

A. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. B. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. C. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. D. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.

Answer: A. Explanation: A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q2. Which option preserves the risk or institutional boundary of Hazard?

A. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. B. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. C. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. D. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.

Answer: B. Explanation: A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q3. Which statement uses Hazard without changing its hazard, mandate or status?

A. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. B. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. C. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. D. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.

Answer: C. Explanation: A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q4. Which option avoids the standard UPSC close-option trap about Hazard?

A. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. B. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. C. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. D. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster.

Answer: D. Explanation: A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q5. Which statement correctly identifies Exposure?

A. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. B. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. C. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. D. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

Answer: A. Explanation: Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q6. Which option preserves the risk or institutional boundary of Exposure?

A. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. B. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. C. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. D. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.

Answer: B. Explanation: Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q7. Which statement uses Exposure without changing its hazard, mandate or status?

A. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. B. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. C. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. D. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.

Answer: C. Explanation: Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q8. Which option avoids the standard UPSC close-option trap about Exposure?

A. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. B. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. C. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. D. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings.

Answer: D. Explanation: Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q9. Which statement correctly identifies Vulnerability?

A. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. B. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. C. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. D. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

Answer: A. Explanation: Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q10. Which option preserves the risk or institutional boundary of Vulnerability?

A. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. B. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. C. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. D. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

Answer: B. Explanation: Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q11. Which statement uses Vulnerability without changing its hazard, mandate or status?

A. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. B. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. C. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. D. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions.

Answer: C. Explanation: Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q12. Which option avoids the standard UPSC close-option trap about Vulnerability?

A. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. B. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. C. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. D. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.

Answer: D. Explanation: Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q13. Which statement correctly identifies Capacity?

A. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. B. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. C. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. D. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

Answer: A. Explanation: Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. The other options change the hazard or risk

category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q14. Which option preserves the risk or institutional boundary of Capacity?

A. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. B. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. C. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. D. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.

Answer: B. Explanation: Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q15. Which statement uses Capacity without changing its hazard, mandate or status?

A. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. B. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. C. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. D. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.

Answer: C. Explanation: Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q16. Which option avoids the standard UPSC close-option trap about Capacity?

A. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. B. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. C. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. D. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.

Answer: D. Explanation: Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q17. Which statement correctly identifies Risk heuristic?

A. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. B. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. C. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. D. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.

Answer: A. Explanation: Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q18. Which option preserves the risk or institutional boundary of Risk heuristic?

A. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. B. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. C. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. D. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures.

Answer: B. Explanation: Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q19. Which statement uses Risk heuristic without changing its hazard, mandate or status?

A. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. B. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. C. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. D. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.

Answer: C. Explanation: Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q20. Which option avoids the standard UPSC close-option trap about Risk heuristic?

A. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. B. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. C. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. D. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

Answer: D. Explanation: Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q21. Which statement correctly identifies Disaster threshold?

A. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. B. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. C. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. D. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.

Answer: A. Explanation: A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q22. Which option preserves the risk or institutional boundary of Disaster threshold?

A. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. B. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. C. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. D. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills.

Answer: B. Explanation: A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q23. Which statement uses Disaster threshold without changing its hazard, mandate or status?

A. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. B. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. C. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. D. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures.

Answer: C. Explanation: A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q24. Which option avoids the standard UPSC close-option trap about Disaster threshold?

A. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. B. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. C. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. D. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.

Answer: D. Explanation: A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q25. Which statement correctly identifies Resilience?

A. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. B. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. C. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. D. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.

Answer: A. Explanation: Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q26. Which option preserves the risk or institutional boundary of Resilience?

A. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. B. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. C. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. D. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs.

Answer: B. Explanation: Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q27. Which statement uses Resilience without changing its hazard, mandate or status?

A. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. B. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. C. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. D. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs.

Answer: C. Explanation: Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q28. Which option avoids the standard UPSC close-option trap about Resilience?

A. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. B. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. C. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. D. Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions.

Answer: D. Explanation: Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q29. Which statement correctly identifies Prevention?

A. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. B. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. C. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. D. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills.

Answer: A. Explanation: Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q30. Which option preserves the risk or institutional boundary of Prevention?

A. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. B. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. C. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. D. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.

Answer: B. Explanation: Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q31. Which statement uses Prevention without changing its hazard, mandate or status?

A. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. B. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. C. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. D. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.

Answer: C. Explanation: Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q32. Which option avoids the standard UPSC close-option trap about Prevention?

A. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. B. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. C. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. D. Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.

Answer: D. Explanation: Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q33. Which statement correctly identifies Mitigation?

A. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. B. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. C. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. D. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.

Answer: A. Explanation: Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q34. Which option preserves the risk or institutional boundary of Mitigation?

A. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. B. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. C. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. D. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development.

Answer: B. Explanation: Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q35. Which statement uses Mitigation without changing its hazard, mandate or status?

A. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. B. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. C. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. D. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.

Answer: C. Explanation: Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q36. Which option avoids the standard UPSC close-option trap about Mitigation?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. B. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. C. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. D. Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures.

Answer: D. Explanation: Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q37. Which statement correctly identifies Preparedness?

A. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. B. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. C. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. D. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.

Answer: A. Explanation: Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q38. Which option preserves the risk or institutional boundary of Preparedness?

A. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. B. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. C. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. D. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.

Answer: B. Explanation: Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q39. Which statement uses Preparedness without changing its hazard, mandate or status?

A. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. C. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. D. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.

Answer: C. Explanation: Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q40. Which option avoids the standard UPSC close-option trap about Preparedness?

A. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. B. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. C. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. D. Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills.

Answer: D. Explanation: Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q41. Which statement correctly identifies Response?

A. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. B. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. C. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. D. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development.

Answer: A. Explanation: Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q42. Which option preserves the risk or institutional boundary of Response?

A. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. B. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. C. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. D. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.

Answer: B. Explanation: Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q43. Which statement uses Response without changing its hazard, mandate or status?

A. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. C. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. D. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

Answer: C. Explanation: Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q44. Which option avoids the standard UPSC close-option trap about Response?

A. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. B. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. C. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. D. Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs.

Answer: D. Explanation: Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q45. Which statement correctly identifies Recovery?

A. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. B. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. C. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. D. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.

Answer: A. Explanation: Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q46. Which option preserves the risk or institutional boundary of Recovery?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. B. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. C. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. D. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

Answer: B. Explanation: Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q47. Which statement uses Recovery without changing its hazard, mandate or status?

A. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. B. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. C. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. D. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.

Answer: C. Explanation: Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q48. Which option avoids the standard UPSC close-option trap about Recovery?

A. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. B. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. C. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. D. Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.

Answer: D. Explanation: Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q49. Which statement correctly identifies DRR scope?

A. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. C. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. D. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

Answer: A. Explanation: Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q50. Which option preserves the risk or institutional boundary of DRR scope?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. B. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. C. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. D. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services.

Answer: B. Explanation: Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q51. Which statement uses DRR scope without changing its hazard, mandate or status?

A. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. B. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. C. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. D. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

Answer: C. Explanation: Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q52. Which option avoids the standard UPSC close-option trap about DRR scope?

A. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. B. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. C. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. D. Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development.

Answer: D. Explanation: Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q53. Which statement correctly identifies Risk creation?

A. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. B. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. C. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. D. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.

Answer: A. Explanation: Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q54. Which option preserves the risk or institutional boundary of Risk creation?

A. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. B. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. C. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. D. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

Answer: B. Explanation: Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q55. Which statement uses Risk creation without changing its hazard, mandate or status?

A. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. B. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. C. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. D. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

Answer: C. Explanation: Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q56. Which option avoids the standard UPSC close-option trap about Risk creation?

A. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. B. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. C. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. D. Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.

Answer: D. Explanation: Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q57. Which statement correctly identifies Sendai status?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. B. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. C. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. D. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

Answer: A. Explanation: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q58. Which option preserves the risk or institutional boundary of Sendai status?

A. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. C. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. D. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

Answer: B. Explanation: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q59. Which statement uses Sendai status without changing its hazard, mandate or status?

A. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. B. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. C. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. D. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures.

Answer: C. Explanation: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q60. Which option avoids the standard UPSC close-option trap about Sendai status?

A. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. B. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. C. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. D. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.

Answer: D. Explanation: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q61. Which statement correctly identifies Sendai priorities?

A. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. B. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. C. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. D. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

Answer: A. Explanation: Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q62. Which option preserves the risk or institutional boundary of Sendai priorities?

A. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. B. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. C. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. D. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

Answer: B. Explanation: Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q63. Which statement uses Sendai priorities without changing its hazard, mandate or status?

A. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. B. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. C. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. D. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster.

Answer: C. Explanation: Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q64. Which option avoids the standard UPSC close-option trap about Sendai priorities?

A. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. B. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. C. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. D. Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.

Answer: D. Explanation: Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q65. Which statement correctly identifies Targets A-D?

A. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. B. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. C. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. D. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

Answer: A. Explanation: Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q66. Which option preserves the risk or institutional boundary of Targets A-D?

A. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. B. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. C. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. D. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures.

Answer: B. Explanation: Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q67. Which statement uses Targets A-D without changing its hazard, mandate or status?

A. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. B. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. C. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. D. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

Answer: C. Explanation: Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q68. Which option avoids the standard UPSC close-option trap about Targets A-D?

A. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. B. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. C. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. D. Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services.

Answer: D. Explanation: Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q69. Which statement correctly identifies Targets E-G?

A. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. B. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. C. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. D. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures.

Answer: A. Explanation: Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q70. Which option preserves the risk or institutional boundary of Targets E-G?

A. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. B. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. C. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. D. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

Answer: B. Explanation: Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q71. Which statement uses Targets E-G without changing its hazard, mandate or status?

A. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. B. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. C. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. D. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.

Answer: C. Explanation: Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q72. Which option avoids the standard UPSC close-option trap about Targets E-G?

A. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. B. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. C. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. D. Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

Answer: D. Explanation: Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q73. Which statement correctly identifies Framework linkage?

A. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. B. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. C. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. D. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

Answer: A. Explanation: Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q74. Which option preserves the risk or institutional boundary of Framework linkage?

A. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. B. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. C. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. D. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings.

Answer: B. Explanation: Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q75. Which statement uses Framework linkage without changing its hazard, mandate or status?

A. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. B. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. C. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. D. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.

Answer: C. Explanation: Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q76. Which option avoids the standard UPSC close-option trap about Framework linkage?

A. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. B. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. C. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. D. Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures.

Answer: D. Explanation: Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q77. Which statement correctly identifies Evidence boundary?

A. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. B. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. C. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. D. A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster.

Answer: A. Explanation: A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q78. Which option preserves the risk or institutional boundary of Evidence boundary?

A. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. B. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. C. Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. D. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.

Answer: B. Explanation: A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q79. Which statement uses Evidence boundary without changing its hazard, mandate or status?

A. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. B. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. C. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. D. Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.

Answer: C. Explanation: A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q80. Which option avoids the standard UPSC close-option trap about Evidence boundary?

A. A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. B. Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. C. Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. D. A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

Answer: D. Explanation: A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

PYQS AND ANSWER PRACTICE

AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

The three conservative cards are the direct 2018, 2019 and 2024 GS-III routes preserved in the audited ledgers and owner. Directive, marks and word limit are stated only where verified.

PYQ DEMAND CARD 1 - 2018 GS-III

Demand: Describe disaster-risk-reduction measures and compare the Sendai Framework with the Hyogo Framework.

Status: Verified routing ledger: Describe · 15 marks · 250 words; no official model answer is claimed.

Model solution: Prevention: Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. **Mitigation:** Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. **Preparedness:** Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. **DRR scope:** Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. **Sendai status:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. **Sendai priorities:** Sendai's four priorities are understanding risk, strengthening risk

governance, investing in DRR for resilience, and preparedness with Build Back Better. **Targets A-D:** Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. **Targets E-G:** Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

PYQ DEMAND CARD 2 - 2019 GS-III

Demand: Discuss vulnerability as a concept for defining disaster impacts and explain its types.

Status: Verified routing ledger: Discuss · 10 marks · 150 words.

Model solution: **Hazard:** A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. **Exposure:** Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. **Vulnerability:** Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. **Capacity:** Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. **Risk heuristic:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. **Disaster threshold:** A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

PYQ DEMAND CARD 3 - 2024 GS-III

Demand: Define disaster resilience, explain how it is determined and its framework elements, and mention Sendai's global targets.

Status: Exact local official-paper demand audited in the owner: Describe · 15 marks · 250 words.

Model solution: **Risk heuristic:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. **Resilience:** Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. **Sendai status:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. **Sendai priorities:** Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. **Targets A-D:** Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. **Targets E-G:** Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. **Evidence boundary:** A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish hazard, exposure, vulnerability, capacity, risk and disaster. Answer in about 150 words.

Model thesis: **Claim:** Hazard. **Named evidence/example:** A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Exposure. **Named evidence/example:** Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Vulnerability. **Named evidence/example:** Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:**

Capacity. **Named evidence/example:** Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk heuristic. **Named evidence/example:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Disaster threshold. **Named evidence/example:** A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster.
- Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings.
- Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.
- Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.
- Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.
- A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.

Qualified conclusion: Claim: Hazard. **Named evidence/example:** A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Exposure. **Named evidence/example:** Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Vulnerability. **Named evidence/example:** Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Capacity. **Named evidence/example:** Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk heuristic. **Named evidence/example:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Disaster threshold. **Named evidence/example:** A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 2 - 10 MARKS

Question: Differentiate prevention, mitigation and preparedness in disaster management. Answer in about 150 words.

Model thesis: **Claim:** Prevention. **Named evidence/example:** Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Mitigation. **Named evidence/example:** Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness. **Named evidence/example:** Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.
- Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures.
- Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills.

Qualified conclusion: **Claim:** Prevention. **Named evidence/example:** Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Mitigation. **Named evidence/example:** Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness. **Named evidence/example:** Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 3 - 15 MARKS

Question: Explain disaster resilience and the elements that determine it. Answer in about 250 words.

Model thesis: **Claim:** Risk heuristic. **Named evidence/example:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.

Analysis: This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Resilience. **Named evidence/example:** Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Recovery. **Named evidence/example:** Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk

creation. **Named evidence/example:** Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.
- Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions.
- Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.
- Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.

Qualified conclusion: Claim: Risk heuristic. **Named evidence/example:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Resilience. **Named evidence/example:** Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Recovery. **Named evidence/example:** Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk creation. **Named evidence/example:** Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 4 - 15 MARKS

Question: Describe the four priorities and seven global targets of the Sendai Framework. Answer in about 250 words.

Model thesis: Claim: Sendai status. **Named evidence/example:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sendai priorities. **Named evidence/example:** Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Targets A-D. **Named evidence/example:** Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Targets E-G. **Named evidence/example:** Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before

drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.
- Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.
- Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services.
- Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.

Qualified conclusion: **Claim:** Sendai status. **Named evidence/example:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sendai priorities. **Named evidence/example:** Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Targets A-D. **Named evidence/example:** Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Targets E-G. **Named evidence/example:** Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 5 - 20 MARKS

Question: Analyse how development choices create disaster risk and how Build Back Better can interrupt that cycle. Answer in about 300 words.

Model thesis: **Claim:** Risk heuristic. **Named evidence/example:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Resilience. **Named evidence/example:** Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Recovery. **Named evidence/example:** Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** DRR scope. **Named evidence/example:** Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk creation. **Named evidence/example:** Land-use, construction, infrastructure and environmental choices can

create or accumulate risk even when the underlying hazard does not change. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sendai priorities. **Named evidence/example:** Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Evidence boundary. **Named evidence/example:** A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.
- Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions.
- Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.
- Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development.
- Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.
- Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.
- A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

Qualified conclusion: **Claim:** Risk heuristic. **Named evidence/example:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Resilience. **Named evidence/example:** Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Recovery. **Named evidence/example:** Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** DRR scope. **Named evidence/example:** Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk creation. **Named evidence/example:** Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sendai priorities. **Named evidence/example:** Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness

with Build Back Better. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Evidence boundary. **Named evidence/example:** A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 6 - 20 MARKS

Question: Examine the relationship among DRR, climate adaptation and sustainable development without collapsing their distinct frameworks. Answer in about 300 words.

Model thesis: **Claim:** Resilience. **Named evidence/example:** Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** DRR scope. **Named evidence/example:** Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk creation. **Named evidence/example:** Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sendai status. **Named evidence/example:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Framework linkage. **Named evidence/example:** Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Evidence boundary. **Named evidence/example:** A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions.
- Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development.
- Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.
- The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.
- Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures.

- A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

Qualified conclusion: Claim: Resilience. **Named evidence/example:** Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** DRR scope. **Named evidence/example:** Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk creation. **Named evidence/example:** Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sendai status. **Named evidence/example:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Framework linkage. **Named evidence/example:** Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Evidence boundary. **Named evidence/example:** A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

OPTIONAL ADVANCED DEPTH - NOT REQUIRED FOR A CORE ANSWER

Subject: Disaster Management | **Tier:** Advanced | **GS Paper:** GS-III. **Core area:** Risk-governance lens; measuring resilience rigorously; risk creation through development choices; Sendai's accountability gap and the 2023 Midterm Review. **Grounded in:** *VisionIAS Value Added Material Disaster Management*, PDF pp. 4-8, 14, 16, 61-62; 00_Master-Framework.md Sections 1-2, 6, 8. **FACT:** = source-grounded | **ANALYSIS:** = inference/analysis | **CURRENT:** = current anchor | **WRONG:** = boundary/trap. *Companion:* basic/01_Concepts-Risk-Resilience-and-Sendai.md.

1. Advanced proposition

Thesis: ANALYSIS: Disaster risk in India is not merely a natural given - it is substantially co-produced by development choices (unregulated construction, floodplain encroachment, deforestation), so "resilience" cannot be answered as a static defensive quality; it must be measured, governed and continuously reinvested in, and the Sendai Framework's own architecture - priorities without binding force, targets without automatic enforcement - is itself a case study in the limits of global risk governance. **Boundary:** WRONG: this topic does not itself analyse any named hazard (earthquake, flood, cyclone) in operational detail - it supplies the risk-governance and measurement layer that topics 05-13 apply hazard-by-hazard.

2. Risk-system analysis

Analytical claim: ANALYSIS: VisionIAS's own account of urban flooding - "most of the urban areas have been built with little to no regard to the natural topography" (developed fully in topic 08) - and of landslides - roads and settlements built without regard to slope stability (PDF pp. 29-32) - are both instances of the same underlying phenomenon: risk is frequently *created* by development decisions made without risk information, not simply inherited from nature. A resilience answer that only discusses response capacity, without addressing this risk-creation loop, is analytically incomplete.

3. Legal/institutional depth

- FACT: **DRR field of action, precisely sequenced:** policy/legal

framework -> risk assessment -> risk awareness -> plan implementation -> early warning -> use of knowledge (PDF p. 8) - an advanced answer should note this is a *sequence with feedback*, not a menu of independent options; skipping risk assessment undermines every downstream stage.

- FACT: **NDMP 2016's self-acknowledged limitation** - VisionIAS records it

as "too generic," without a "precise time frame," without a costed fund requirement, and, unlike Sendai/SDGs, without its own goals or targets (PDF p. 16) - a textbook illustration of a governance framework that names priorities without an accountability mechanism. CURRENT: NDMP 2016 was only the first edition; the **revised NDMP, 2019** is the latest published National Disaster Management Plan, and any current-status claim should verify whether the 2019 revision has addressed these 2016-edition gaps.

- ANALYSIS: This is structurally identical to the Sendai Framework's own

weakness: Sendai sets seven *global* targets but, being non-binding, has no enforcement mechanism against any single member state's performance - the same accountability gap recurs at both the domestic and global level.

ANALYSIS: Note the sharper internal asymmetry: **Targets A-D** measure loss outcomes, which no state controls unilaterally, while **Targets E-G** measure means of implementation - strategies, cooperation, warning coverage - which states *do* control. Target E (national and local DRR strategies) alone carried a **2020** deadline and is the only target on which a country can be straightforwardly held to account; an advanced answer should note that the framework's measurable commitments are also its least demanding ones.

- CURRENT: **The 2023 Midterm Review is the point at which this weakness became

official. **The High-Level Meeting of 17-19 May 2023 adopted a Political Declaration, issued as UN General Assembly resolution 77/289 - a renewed political commitment rather than a binding correction, which is exactly the evidence an answer needs to argue that Sendai's accountability deficit was acknowledged rather than remedied.** CURRENT: The concrete operational response was Early Warnings for All (**2022; target 2027; UNDRR/WMO/ITU/IFRC pillars**), i.e. progress was pursued on Target G** - a means target - rather than on the loss-reduction targets.

4. Evidence and Indian applications

- ANALYSIS: **Attitudinal vulnerability as a frequently under-used concept:**

VisionIAS's own vulnerability typology names "attitudinal vulnerability" - a community's negative disposition toward change, producing dependence on external support (PDF p. 5) - a dimension rarely used in Mains answers, which typically stop at economic/ physical/social vulnerability; citing it signals deeper source engagement.

- ANALYSIS: **Slow-onset disasters as an under-tested category relative to their stated importance:** VisionIAS explicitly states slow-onset disasters "must find adequate reflection in disaster preparedness" because "societies lose their ability to derive sustenance... over a period of time" even without an immediately visible shock (PDF p. 6) - yet India's institutional response (topic 02) is historically built around rapid-onset events; this gap is a legitimate analytical point for a "critically examine" question.

5. Technology/data and warning limits

- ANALYSIS: Measuring resilience requires *data on capacity*, not merely hazard and vulnerability data - a distinction VisionIAS's own vocabulary implies ($\text{risk} = \text{hazard} \times \text{vulnerability}$, with capacity as the denominator, Section 1 of the basic file) but does not operationalise with named indicators. An advanced answer should note this measurement gap explicitly rather than assert resilience is "high" or "low" without a stated metric.

- CURRENT: **Current-anchor discipline:** any claim about India's or the world's *current* progress against Sendai's seven targets must cite **UNDRR's Sendai Framework Midterm Review Political Declaration (2023)** - not the 2015-era description of the targets - because target progress is time-variant and VisionIAS's material pre-dates the Midterm Review.

6. Vulnerability, equity and community lens

- FACT: VisionIAS's five-fold vulnerability typology (economic, physical, social, environmental, attitudinal, PDF pp. 4-5) is the analytical base for equity-sensitive risk assessment: the same hazard produces systematically unequal harm depending on which vulnerability dimensions coincide in a given population (e.g. an economically poor, socially marginal, physically exposed household bears compounding, not merely additive, risk). Developed operationally in topic 03.

7. Prevention/mitigation/response/recovery trade-offs

- ANALYSIS: **Prevention/mitigation investment versus response readiness is a genuine resource trade-off**, not a sequencing question alone: funds spent on structural risk-reduction (embankments, retrofitting) compete with funds spent on response capacity (NDRF strength, shelters) within the same disaster-finance envelope (developed fully in topic 16). ANALYSIS: Sendai Priority 3 ("Investing in disaster risk reduction for resilience") is an explicit call to shift this balance toward prevention, but VisionIAS's own critique of NDMP 2016 (no costed fund requirement) shows India's domestic plan has not operationalised this shift with a specific investment target.

8. Governance and implementation gaps

- WRONG: **The "framework exists, therefore risk is managed" fallacy.**

Having a DM cycle, a DRR field of action and a National Policy on Disaster Management (2009) does not itself reduce risk; VisionIAS's own critique of NDMP 2016 shows a framework can exist while lacking the specificity (timelines, funding, targets) needed for accountability. An advanced Mains answer should distinguish framework *existence* from framework *effectiveness*.

- ANALYSIS: **Sendai's four priorities are diagnostic categories, not a checklist to recite.** An answer that lists all four priorities generically, without identifying which one is weakest for the specific hazard/context asked about, under-performs one that diagnoses the binding constraint.

9. Financing/monitoring/accountability

- ANALYSIS: Monitoring Sendai's seven targets requires standardised national data (mortality, affected persons, economic loss, critical infrastructure damage, national/local DRR strategies, international cooperation, early-warning access) - a data-architecture requirement VisionIAS does not detail; this is developed with current status in topic 18's governance/monitoring discussion and topic 16's finance discussion.

- CURRENT: Any numeric claim about India's own progress against a specific

Sendai target (e.g. mortality reduction) requires a dated NDMA/MHA or UNDRR source; VisionIAS's 2015-period description of the targets cannot itself support a current-progress claim.

10. CURRENT: Current official anchor and freshness protocol

- CURRENT: **UNDRR Sendai Framework Midterm Review Political Declaration

(2023)** is the authoritative dated anchor for Sendai implementation status, including any claim about how close the world or India is to its 2030 targets - verify before using in any current-progress statement.

- WRONG: Do not carry forward the NDMP 2016 as "the" current National

Disaster Management Plan. -> NDMP 2016 was only the first edition; the **revised NDMP, 2019** is the latest published plan and is the correct citation for current NDMP content/status.

12. Mains-ready framework

Central thesis: Disaster resilience is best analysed as the outcome of a continuous risk-governance cycle - understand risk, invest in reducing it, prepare and warn, respond, and recover in a way that does not recreate the same risk - and India's own National Disaster Management Plan illustrates, in its self-acknowledged lack of targets and timelines, the same accountability gap that limits the (voluntary) Sendai Framework at the global level.

1. **Define resilience precisely** - the capacity to resist, absorb, accommodate and recover, not "returning to normal."
2. **Name the resilience-framework elements** examiners expect: risk knowledge, robustness, redundancy, resourcefulness, rapid recovery and adaptive capacity.
3. **Show the risk-creation loop** (Section 2) - resilience must contend with risk actively produced by development choices, not only natural hazard frequency.
4. **Cite Sendai's four priorities and seven targets** (Section 5 of the Master Framework), and its status per the 2023 Midterm Review.
5. **Diagnose India's domestic accountability gap** using NDMP 2016's self-acknowledged shortcomings (Section 3) as evidence.
6. **Recommend measurable, financed, time-bound targets** as the corrective - directly answering the gap identified in Section 3.
7. **Close by tying resilience back to risk-informed development** (Section 2's feedback loop), not ending on relief/response alone.

13. Study links

- FACT: Foundation companion: basic/01_Concepts-Risk-Resilience-and-Sendai.md.
- FACT: 00_Master-Framework.md Sections 1, 2, 6 and 8 - the risk equation, DM cycle, Sendai reference and recurring analytical gaps reused across this folder.
- ANALYSIS: **Downstream topics in this folder:** Topic 02 develops the DM Act/NDMP institutional detail; topic 16 develops disaster-finance/risk- transfer trade-offs; topic 18 develops Sendai's international- cooperation and monitoring architecture in full.

CONSOLIDATED REGISTER NOTES

Concepts, Risk, Resilience and Sendai: RISK VOCABULARY AND DISASTER THRESHOLD

1. **Hazard:** A hazard is a dangerous process, phenomenon or condition with the potential to cause loss; it is not itself a disaster.
2. **Exposure:** Exposure identifies people, livelihoods, infrastructure and other assets located in hazard-prone settings.
3. **Vulnerability:** Vulnerability comprises physical, social, economic and environmental conditions that increase susceptibility to hazard impacts.
4. **Capacity:** Capacity is the combination of strengths, attributes and resources available to manage and reduce disaster risks and strengthen resilience.
5. **Risk heuristic:** Risk is commonly organised as hazard interacting with exposure and vulnerability, moderated by capacity; the equation is a heuristic, not a universal numerical law.
6. **Disaster threshold:** A disaster is serious disruption produced by hazardous events interacting with exposure, vulnerability and capacity, not a synonym for the triggering hazard.
7. **Resilience:** Resilience includes resisting, absorbing, accommodating, adapting, transforming and recovering while preserving or restoring essential functions.
8. **Prevention:** Prevention seeks to avoid existing and new disaster risk where avoidance is feasible; it is distinct from reducing unavoidable risk.
9. **Mitigation:** Mitigation lessens the adverse impacts of a hazardous event through structural or non-structural measures.
10. **Preparedness:** Preparedness develops knowledge and capacities for anticipation, response and recovery through plans, training, warning and drills.
11. **Response:** Response consists of actions taken directly before, during or immediately after a disaster to save life, reduce impacts and meet basic needs.
12. **Recovery:** Recovery restores or improves livelihoods, health, systems and assets while reducing future risk rather than reproducing prior vulnerability.
13. **DRR scope:** Disaster risk reduction prevents new risk, reduces existing risk and manages residual risk as part of sustainable development.
14. **Risk creation:** Land-use, construction, infrastructure and environmental choices can create or accumulate risk even when the underlying hazard does not change.
15. **Sendai status:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary, non-binding global framework adopted on 18 March 2015.
16. **Sendai priorities:** Sendai's four priorities are understanding risk, strengthening risk governance, investing in DRR for resilience, and preparedness with Build Back Better.
17. **Targets A-D:** Sendai Targets A-D concern mortality, affected people, direct economic loss relative to global GDP, and damage to critical infrastructure and basic services.
18. **Targets E-G:** Targets E-G concern national and local DRR strategies, international cooperation, and multi-hazard early warning plus risk information; Target E used a 2020 deadline.
19. **Framework linkage:** Sendai, climate adaptation, the Paris Agreement and the Sustainable Development Goals overlap in risk-informed development but retain different legal and policy architectures.
20. **Evidence boundary:** A framework, strategy, investment or warning platform proves an input or mandate; avoided loss and resilience improvement require separate outcome evidence.

Concepts, Risk, Resilience and Sendai: MANAGEMENT-CYCLE AND SENDAI FIREWALLS

- Do not equate a hazard with a disaster.
- Do not omit exposure when explaining why identical hazards produce unequal losses.
- Do not present the risk equation as a precise universal formula.
- Do not merge prevention, mitigation and preparedness.
- Do not reduce resilience to restoring the pre-disaster condition.
- Do not describe Sendai as a binding treaty.
- Do not confuse Sendai priorities with its lettered targets.
- Do not turn Target G or EW4All into proof of universal warning coverage.
- Do not collapse climate adaptation, DRR and sustainable development into one framework.
- Do not infer current target progress without a dated official source.

Concepts, Risk, Resilience and Sendai: RISK-CREATION AND RESILIENCE ANSWER SPINE

DEFINE HAZARD EXPOSURE VULNERABILITY CAPACITY RISK AND DISASTER

- > USE THE RISK EQUATION ONLY AS A HEURISTIC
- > LOCATE PREVENTION MITIGATION PREPAREDNESS RESPONSE AND RECOVERY
- > DEFINE RESILIENCE BEYOND BOUNCE BACK
- > MAP THE FOUR SENDAI PRIORITIES AND SEVEN TARGETS
- > LINK DRR CLIMATE ADAPTATION AND SUSTAINABLE DEVELOPMENT
- > CONCLUDE AT THE LAST VERIFIED OUTCOME RUNG

Concepts, Risk, Resilience and Sendai: CURRENT FRAMEWORK AND OUTCOME-EVIDENCE BOUNDARY

UNDRR's adopted Sendai text is the framework anchor; WMO's EW4All page is a current Target-G implementation anchor. Neither source is used to fabricate country performance, avoided losses or universal coverage.

COMPLETE TOPIC ASCII MASTER FLOW DIAGRAM

High-yield use: Follow the panels as one topic-specific conceptual atlas: root question, classifications, processes or arguments, comparisons, objections and a final answer-writing spine. This text-native master is separate from both graphical flowchart artifacts.

ASCII MASTER FLOW - PANEL 1/12: Risk grammar

HAZARD -> potential damaging event or process
EXPOSURE -> people and assets in harm's way
VULNERABILITY -> susceptibility
CAPACITY -> strengths and resources
INTERACTION -> disaster risk

ASCII MASTER FLOW - PANEL 2/12: Hazard-to-disaster threshold

HAZARDOUS EVENT + EXPOSURE + VULNERABILITY
| moderated by capacity
v
SERIOUS DISRUPTION BEYOND COPING -> DISASTER

ASCII MASTER FLOW - PANEL 3/12: Risk equation firewall

USE -> organise relationships and policy levers
DO NOT USE -> universal arithmetic prediction
REDUCE -> exposure / vulnerability
BUILD -> capacity

ASCII MASTER FLOW - PANEL 4/12: Resilience capabilities

RESIST + ABSORB + ACCOMMODATE
ADAPT + TRANSFORM + RECOVER
PRESERVE ESSENTIAL FUNCTIONS
TRAP -> recovery is not automatic restoration of old risk

ASCII MASTER FLOW - PANEL 5/12: Pre-disaster distinctions

PREVENTION -> avoid risk where feasible
MITIGATION -> lessen adverse impact
PREPAREDNESS -> readiness to anticipate and act
QUESTION -> what changes before impact?

ASCII MASTER FLOW - PANEL 6/12: Response-to-recovery bridge

IMMEDIATE RESPONSE -> life safety and basic needs
EARLY RECOVERY -> restore access and services
RECONSTRUCTION -> reduce future risk
BUILD BACK BETTER -> do not reproduce vulnerability

ASCII MASTER FLOW - PANEL 7/12: DRR operating scope

PREVENT NEW RISK
REDUCE EXISTING RISK
MANAGE RESIDUAL RISK
LINK -> risk-informed sustainable development

ASCII MASTER FLOW - PANEL 8/12: Risk-creation loop

DEVELOPMENT CHOICE -> exposure / vulnerability
HAZARD INTERACTION -> loss
RECOVERY CHOICE -> recreate or reduce risk
FEEDBACK -> future resilience

ASCII MASTER FLOW - PANEL 9/12: Sendai architecture

2015-2030 | voluntary and non-binding
4 PRIORITIES -> governance pathway
7 TARGETS -> global monitoring frame
OUTCOME -> substantial reduction of disaster risk and losses

ASCII MASTER FLOW - PANEL 10/12: Four-priority rail

1 UNDERSTAND DISASTER RISK
2 STRENGTHEN RISK GOVERNANCE
3 INVEST IN DRR FOR RESILIENCE
4 PREPARE + BUILD BACK BETTER

ASCII MASTER FLOW - PANEL 11/12: Seven-target matrix

A mortality | B affected people
C economic loss/GDP | D critical systems
E national/local strategies | F cooperation
G multi-hazard warning and risk information

ASCII MASTER FLOW - PANEL 12/12: Answer and framework boundary

DEFINE -> MAP RISK COMPONENTS -> LOCATE CYCLE PHASE
APPLY SENDAI PRIORITY / TARGET
LINK ADAPTATION + SDG WITHOUT MERGER
QUALIFY -> INPUT IS NOT OUTCOME
