

## SOLVED PRACTICE WORKBOOK

# Community-Based DRR and Inclusive Protection - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

# CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

## Community-Based DRR and Inclusive Protection - Solved Practice Workbook . . . . . 5

### BASIC MCQS / REMEDIATION . . . . . 5

|                                                                                                              |    |
|--------------------------------------------------------------------------------------------------------------|----|
| Q1. Which statement correctly identifies CBDRR? . . . . .                                                    | 5  |
| Q2. Which option preserves the risk or institutional boundary of CBDRR? . . . . .                            | 5  |
| Q3. Which statement uses CBDRR without changing its hazard, mandate or status? . . . . .                     | 5  |
| Q4. Which option avoids the standard UPSC close-option trap about CBDRR? . . . . .                           | 5  |
| Q5. Which statement correctly identifies Local knowledge? . . . . .                                          | 6  |
| Q6. Which option preserves the risk or institutional boundary of Local knowledge? . . . . .                  | 6  |
| Q7. Which statement uses Local knowledge without changing its hazard, mandate or status? . . . . .           | 6  |
| Q8. Which option avoids the standard UPSC close-option trap about Local knowledge? . . . . .                 | 6  |
| Q9. Which statement correctly identifies Community first response? . . . . .                                 | 7  |
| Q10. Which option preserves the risk or institutional boundary of Community first response? . . . . .        | 7  |
| Q11. Which statement uses Community first response without changing its hazard, mandate or status? . . . . . | 7  |
| Q12. Which option avoids the standard UPSC close-option trap about Community first response? . . . . .       | 7  |
| Q13. Which statement correctly identifies Panchayats and ULBs? . . . . .                                     | 8  |
| Q14. Which option preserves the risk or institutional boundary of Panchayats and ULBs? . . . . .             | 8  |
| Q15. Which statement uses Panchayats and ULBs without changing its hazard, mandate or status? . . . . .      | 8  |
| Q16. Which option avoids the standard UPSC close-option trap about Panchayats and ULBs? . . . . .            | 8  |
| Q17. Which statement correctly identifies Community institutions? . . . . .                                  | 9  |
| Q18. Which option preserves the risk or institutional boundary of Community institutions? . . . . .          | 9  |
| Q19. Which statement uses Community institutions without changing its hazard, mandate or status? . . . . .   | 9  |
| Q20. Which option avoids the standard UPSC close-option trap about Community institutions? . . . . .         | 9  |
| Q21. Which statement correctly identifies Volunteer boundary? . . . . .                                      | 10 |
| Q22. Which option preserves the risk or institutional boundary of Volunteer boundary? . . . . .              | 10 |
| Q23. Which statement uses Volunteer boundary without changing its hazard, mandate or status? . . . . .       | 10 |
| Q24. Which option avoids the standard UPSC close-option trap about Volunteer boundary? . . . . .             | 10 |
| Q25. Which statement correctly identifies Social vulnerability? . . . . .                                    | 11 |
| Q26. Which option preserves the risk or institutional boundary of Social vulnerability? . . . . .            | 11 |
| Q27. Which statement uses Social vulnerability without changing its hazard, mandate or status? . . . . .     | 11 |

|                                                                                                                    |    |
|--------------------------------------------------------------------------------------------------------------------|----|
| Q28. Which option avoids the standard UPSC close-option trap about Social vulnerability? . . . . .                 | 11 |
| Q29. Which statement correctly identifies Intersectionality? . . . . .                                             | 12 |
| Q30. Which option preserves the risk or institutional boundary of Intersectionality? . . . . .                     | 12 |
| Q31. Which statement uses Intersectionality without changing its hazard, mandate or status? . . . . .              | 12 |
| Q32. Which option avoids the standard UPSC close-option trap about Intersectionality? . . . . .                    | 12 |
| Q33. Which statement correctly identifies Gender-responsive protection? . . . . .                                  | 13 |
| Q34. Which option preserves the risk or institutional boundary of Gender-responsive protection? . . . . .          | 13 |
| Q35. Which statement uses Gender-responsive protection without changing its hazard, mandate or status? . . . . .   | 13 |
| Q36. Which option avoids the standard UPSC close-option trap about Gender-responsive protection? . . . . .         | 13 |
| Q37. Which statement correctly identifies Children? . . . . .                                                      | 14 |
| Q38. Which option preserves the risk or institutional boundary of Children? . . . . .                              | 14 |
| Q39. Which statement uses Children without changing its hazard, mandate or status? . . . . .                       | 14 |
| Q40. Which option avoids the standard UPSC close-option trap about Children? . . . . .                             | 14 |
| Q41. Which statement correctly identifies Older persons? . . . . .                                                 | 15 |
| Q42. Which option preserves the risk or institutional boundary of Older persons? . . . . .                         | 15 |
| Q43. Which statement uses Older persons without changing its hazard, mandate or status? . . . . .                  | 15 |
| Q44. Which option avoids the standard UPSC close-option trap about Older persons? . . . . .                        | 15 |
| Q45. Which statement correctly identifies Persons with disabilities? . . . . .                                     | 16 |
| Q46. Which option preserves the risk or institutional boundary of Persons with disabilities? . . . . .             | 16 |
| Q47. Which statement uses Persons with disabilities without changing its hazard, mandate or status? . . . . .      | 16 |
| Q48. Which option avoids the standard UPSC close-option trap about Persons with disabilities? . . . . .            | 16 |
| Q49. Which statement correctly identifies Migrants and displaced persons? . . . . .                                | 17 |
| Q50. Which option preserves the risk or institutional boundary of Migrants and displaced persons? . . . . .        | 17 |
| Q51. Which statement uses Migrants and displaced persons without changing its hazard, mandate or status? . . . . . | 17 |
| Q52. Which option avoids the standard UPSC close-option trap about Migrants and displaced persons? . . . . .       | 17 |
| Q53. Which statement correctly identifies Accessible warnings? . . . . .                                           | 18 |
| Q54. Which option preserves the risk or institutional boundary of Accessible warnings? . . . . .                   | 18 |
| Q55. Which statement uses Accessible warnings without changing its hazard, mandate or status? . . . . .            | 18 |
| Q56. Which option avoids the standard UPSC close-option trap about Accessible warnings? . . . . .                  | 18 |
| Q57. Which statement correctly identifies Inclusive evacuation? . . . . .                                          | 19 |
| Q58. Which option preserves the risk or institutional boundary of Inclusive evacuation? . . . . .                  | 19 |
| Q59. Which statement uses Inclusive evacuation without changing its hazard, mandate or status? . . . . .           | 19 |

|                                                                                                                         |    |
|-------------------------------------------------------------------------------------------------------------------------|----|
| Q60. Which option avoids the standard UPSC close-option trap about Inclusive evacuation? . . . . .                      | 19 |
| Q61. Which statement correctly identifies Dignified shelters? . . . . .                                                 | 20 |
| Q62. Which option preserves the risk or institutional boundary of Dignified shelters? . . . . .                         | 20 |
| Q63. Which statement uses Dignified shelters without changing its hazard, mandate or status? . . . . .                  | 20 |
| Q64. Which option avoids the standard UPSC close-option trap about Dignified shelters? . . . . .                        | 20 |
| Q65. Which statement correctly identifies Accountable relief? . . . . .                                                 | 21 |
| Q66. Which option preserves the risk or institutional boundary of Accountable relief? . . . . .                         | 21 |
| Q67. Which statement uses Accountable relief without changing its hazard, mandate or status? . . . . .                  | 21 |
| Q68. Which option avoids the standard UPSC close-option trap about Accountable relief? . . . . .                        | 21 |
| Q69. Which statement correctly identifies Protection and psychosocial support? . . . . .                                | 22 |
| Q70. Which option preserves the risk or institutional boundary of Protection and psychosocial support? . . . . .        | 22 |
| Q71. Which statement uses Protection and psychosocial support without changing its hazard, mandate or status? . . . . . | 22 |
| Q72. Which option avoids the standard UPSC close-option trap about Protection and psychosocial support? . . . . .       | 22 |
| Q73. Which statement correctly identifies Community-led recovery? . . . . .                                             | 23 |
| Q74. Which option preserves the risk or institutional boundary of Community-led recovery? . . . . .                     | 23 |
| Q75. Which statement uses Community-led recovery without changing its hazard, mandate or status? . . . . .              | 23 |
| Q76. Which option avoids the standard UPSC close-option trap about Community-led recovery? . . . . .                    | 23 |
| Q77. Which statement correctly identifies Participation-outcome firewall? . . . . .                                     | 24 |
| Q78. Which option preserves the risk or institutional boundary of Participation-outcome firewall? . . . . .             | 24 |
| Q79. Which statement uses Participation-outcome firewall without changing its hazard, mandate or status? . . . . .      | 24 |
| Q80. Which option avoids the standard UPSC close-option trap about Participation-outcome firewall? . . . . .            | 24 |

# Community-Based DRR and Inclusive Protection - Solved Practice Workbook

## BASIC MCQS / REMEDIATION

### Q1. Which statement correctly identifies CBDRR?

A. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. B. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. C. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. D. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information.

**Answer: A. Explanation: Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q2. Which option preserves the risk or institutional boundary of CBDRR?

A. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. B. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. C. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. D. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.

**Answer: B. Explanation: Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q3. Which statement uses CBDRR without changing its hazard, mandate or status?

A. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. B. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. C. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. D. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach.

**Answer: C. Explanation: Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q4. Which option avoids the standard UPSC close-option trap about CBDRR?

A. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. B. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. C. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. D. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents.

**Answer: D. Explanation: Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. The other**

options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

**Q5. Which statement correctly identifies Local knowledge?**

A. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. B. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. C. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. D. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.

**Answer: A. Explanation: Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q6. Which option preserves the risk or institutional boundary of Local knowledge?**

A. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. B. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. C. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. D. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA.

**Answer: B. Explanation: Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q7. Which statement uses Local knowledge without changing its hazard, mandate or status?**

A. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. B. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. C. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. D. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard.

**Answer: C. Explanation: Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q8. Which option avoids the standard UPSC close-option trap about Local knowledge?**

A. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. B. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. C. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. D. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information.

**Answer: D. Explanation: Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q9. Which statement correctly identifies Community first response?

A. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. B. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. C. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. D. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA.

**Answer: A. Explanation: Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q10. Which option preserves the risk or institutional boundary of Community first response?

A. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. B. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. C. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. D. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach.

**Answer: B. Explanation: Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q11. Which statement uses Community first response without changing its hazard, mandate or status?

A. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. B. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. C. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. D. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient.

**Answer: C. Explanation: Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q12. Which option avoids the standard UPSC close-option trap about Community first response?

A. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. B. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. C. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. D. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.

**Answer: D. Explanation: Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q13. Which statement correctly identifies Panchayats and ULBs?

A. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. B. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. C. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. D. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach.

**Answer: A. Explanation: Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q14. Which option preserves the risk or institutional boundary of Panchayats and ULBs?

A. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. B. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. C. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. D. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient.

**Answer: B. Explanation: Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q15. Which statement uses Panchayats and ULBs without changing its hazard, mandate or status?

A. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. B. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. C. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. D. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.

**Answer: C. Explanation: Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q16. Which option avoids the standard UPSC close-option trap about Panchayats and ULBs?

A. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. B. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. C. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. D. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA.

**Answer: D. Explanation: Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q17. Which statement correctly identifies Community institutions?

A. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. B. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. C. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. D. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach.

**Answer: A. Explanation: Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q18. Which option preserves the risk or institutional boundary of Community institutions?

A. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. B. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. C. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. D. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.

**Answer: B. Explanation: Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q19. Which statement uses Community institutions without changing its hazard, mandate or status?

A. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. B. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. C. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. D. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.

**Answer: C. Explanation: Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q20. Which option avoids the standard UPSC close-option trap about Community institutions?

A. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. B. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. C. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. D. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery.

**Answer: D. Explanation: Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q21. Which statement correctly identifies Volunteer boundary?

A. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. B. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. C. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. D. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient.

**Answer: A. Explanation: A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q22. Which option preserves the risk or institutional boundary of Volunteer boundary?

A. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. B. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. C. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. D. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.

**Answer: B. Explanation: A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q23. Which statement uses Volunteer boundary without changing its hazard, mandate or status?

A. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. B. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. C. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. D. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.

**Answer: C. Explanation: A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q24. Which option avoids the standard UPSC close-option trap about Volunteer boundary?

A. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. B. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. C. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. D. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach.

**Answer: D. Explanation: A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q25. Which statement correctly identifies Social vulnerability?

A. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. B. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. C. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. D. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.

**Answer: A. Explanation: Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q26. Which option preserves the risk or institutional boundary of Social vulnerability?

A. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. B. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. C. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. D. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers.

**Answer: B. Explanation: Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q27. Which statement uses Social vulnerability without changing its hazard, mandate or status?

A. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. B. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. C. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. D. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking.

**Answer: C. Explanation: Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q28. Which option avoids the standard UPSC close-option trap about Social vulnerability?

A. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. B. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. C. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. D. Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard.

**Answer: D. Explanation: Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q29. Which statement correctly identifies Intersectionality?

A. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. B. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. C. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. D. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers.

**Answer: A. Explanation: Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q30. Which option preserves the risk or institutional boundary of Intersectionality?

A. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. B. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. C. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. D. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers.

**Answer: B. Explanation: Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q31. Which statement uses Intersectionality without changing its hazard, mandate or status?

A. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. B. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. C. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. D. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions.

**Answer: C. Explanation: Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q32. Which option avoids the standard UPSC close-option trap about Intersectionality?

A. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. B. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. C. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. D. Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient.

**Answer: D. Explanation: Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q33. Which statement correctly identifies Gender-responsive protection?

A. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. B. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. C. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. D. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking.

**Answer: A. Explanation: Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q34. Which option preserves the risk or institutional boundary of Gender-responsive protection?

A. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. B. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. C. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. D. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers.

**Answer: B. Explanation: Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q35. Which statement uses Gender-responsive protection without changing its hazard, mandate or status?

A. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. B. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. C. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. D. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status.

**Answer: C. Explanation: Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q36. Which option avoids the standard UPSC close-option trap about Gender-responsive protection?

A. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. B. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. C. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. D. Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.

**Answer: D. Explanation: Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q37. Which statement correctly identifies Children?

A. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. B. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. C. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. D. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions.

**Answer: A. Explanation: Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q38. Which option preserves the risk or institutional boundary of Children?

A. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. B. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. C. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. D. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions.

**Answer: B. Explanation: Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q39. Which statement uses Children without changing its hazard, mandate or status?

A. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. B. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. C. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. D. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users.

**Answer: C. Explanation: Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q40. Which option avoids the standard UPSC close-option trap about Children?

A. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. B. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. C. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. D. Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking.

**Answer: D. Explanation: Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q41. Which statement correctly identifies Older persons?

A. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. B. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. C. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. D. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users.

**Answer: A. Explanation: Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q42. Which option preserves the risk or institutional boundary of Older persons?

A. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. B. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. C. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. D. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status.

**Answer: B. Explanation: Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q43. Which statement uses Older persons without changing its hazard, mandate or status?

A. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. B. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. C. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. D. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels.

**Answer: C. Explanation: Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q44. Which option avoids the standard UPSC close-option trap about Older persons?

A. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. B. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. C. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. D. Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers.

**Answer: D. Explanation: Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q45. Which statement correctly identifies Persons with disabilities?

A. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. B. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. C. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. D. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate.

**Answer: A. Explanation: Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q46. Which option preserves the risk or institutional boundary of Persons with disabilities?

A. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. B. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. C. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. D. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels.

**Answer: B. Explanation: Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q47. Which statement uses Persons with disabilities without changing its hazard, mandate or status?

A. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. B. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. C. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. D. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution.

**Answer: C. Explanation: Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q48. Which option avoids the standard UPSC close-option trap about Persons with disabilities?

A. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. B. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. C. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. D. Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions.

**Answer: D. Explanation: Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q49. Which statement correctly identifies Migrants and displaced persons?

A. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. B. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. C. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. D. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users.

**Answer: A. Explanation: Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q50. Which option preserves the risk or institutional boundary of Migrants and displaced persons?

A. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. B. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. C. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. D. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels.

**Answer: B. Explanation: Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q51. Which statement uses Migrants and displaced persons without changing its hazard, mandate or status?

A. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. B. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. C. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. D. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution.

**Answer: C. Explanation: Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

#### Q52. Which option avoids the standard UPSC close-option trap about Migrants and displaced persons?

A. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. B. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. C. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. D. Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status.

**Answer: D. Explanation: Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage,**

evidence rung or implementation status.

**Q53. Which statement correctly identifies Accessible warnings?**

A. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. B. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. C. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. D. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate.

**Answer: A. Explanation: Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q54. Which option preserves the risk or institutional boundary of Accessible warnings?**

A. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. B. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. C. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. D. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support.

**Answer: B. Explanation: Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q55. Which statement uses Accessible warnings without changing its hazard, mandate or status?**

A. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. B. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. C. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. D. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.

**Answer: C. Explanation: Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q56. Which option avoids the standard UPSC close-option trap about Accessible warnings?**

A. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. B. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. C. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. D. Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users.

**Answer: D. Explanation: Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q57. Which statement correctly identifies Inclusive evacuation?

A. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. B. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. C. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. D. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution.

**Answer: A. Explanation: Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q58. Which option preserves the risk or institutional boundary of Inclusive evacuation?

A. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. B. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. C. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. D. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.

**Answer: B. Explanation: Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q59. Which statement uses Inclusive evacuation without changing its hazard, mandate or status?

A. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. B. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. C. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. D. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence.

**Answer: C. Explanation: Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q60. Which option avoids the standard UPSC close-option trap about Inclusive evacuation?

A. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. B. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. C. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. D. Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate.

**Answer: D. Explanation: Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q61. Which statement correctly identifies Dignified shelters?

A. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. B. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. C. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. D. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.

**Answer: A. Explanation: Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q62. Which option preserves the risk or institutional boundary of Dignified shelters?

A. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. B. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. C. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. D. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence.

**Answer: B. Explanation: Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q63. Which statement uses Dignified shelters without changing its hazard, mandate or status?

A. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. B. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. C. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. D. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.

**Answer: C. Explanation: Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q64. Which option avoids the standard UPSC close-option trap about Dignified shelters?

A. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. B. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. C. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. D. Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels.

**Answer: D. Explanation: Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q65. Which statement correctly identifies Accountable relief?**

A. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. B. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. C. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. D. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.

**Answer: A. Explanation: Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q66. Which option preserves the risk or institutional boundary of Accountable relief?**

A. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. B. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. C. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. D. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.

**Answer: B. Explanation: Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q67. Which statement uses Accountable relief without changing its hazard, mandate or status?**

A. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. B. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. C. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. D. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents.

**Answer: C. Explanation: Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q68. Which option avoids the standard UPSC close-option trap about Accountable relief?**

A. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. B. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. C. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. D. Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution.

**Answer: D. Explanation: Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q69. Which statement correctly identifies Protection and psychosocial support?**

A. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. B. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. C. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. D. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.

**Answer: A. Explanation: Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q70. Which option preserves the risk or institutional boundary of Protection and psychosocial support?**

A. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. B. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. C. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. D. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence.

**Answer: B. Explanation: Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q71. Which statement uses Protection and psychosocial support without changing its hazard, mandate or status?**

A. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. B. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. C. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. D. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.

**Answer: C. Explanation: Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

**Q72. Which option avoids the standard UPSC close-option trap about Protection and psychosocial support?**

A. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. B. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. C. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. D. Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support.

**Answer: D. Explanation: Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q73. Which statement correctly identifies Community-led recovery?

A. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. B. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. C. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. D. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information.

**Answer: A. Explanation: Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q74. Which option preserves the risk or institutional boundary of Community-led recovery?

A. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. B. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. C. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. D. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.

**Answer: B. Explanation: Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q75. Which statement uses Community-led recovery without changing its hazard, mandate or status?

A. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. B. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. C. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. D. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.

**Answer: C. Explanation: Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q76. Which option avoids the standard UPSC close-option trap about Community-led recovery?

A. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. B. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. C. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. D. Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.

**Answer: D. Explanation: Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q77. Which statement correctly identifies Participation-outcome firewall?

A. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. B. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. C. Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. D. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information.

**Answer: A. Explanation: A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q78. Which option preserves the risk or institutional boundary of Participation-outcome firewall?

A. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. B. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. C. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. D. Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information.

**Answer: B. Explanation: A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q79. Which statement uses Participation-outcome firewall without changing its hazard, mandate or status?

A. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. B. Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. C. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. D. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA.

**Answer: C. Explanation: A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

### Q80. Which option avoids the standard UPSC close-option trap about Participation-outcome firewall?

A. Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. B. Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. C. A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. D. A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence.

**Answer: D. Explanation: A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.**

## PYQS AND ANSWER PRACTICE

### AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

No audited GS-III PYQ directly and solely owns CBDRR or inclusive protection. These three cards are explicitly marked as conservative dimensions of verified questions owned by Topics 01 and 02.

### PYQ DEMAND CARD 1 - 2019 GS-III

**Demand:** Discuss vulnerability as a concept for defining disaster impacts and explain its types.

**Status:** Verified direct routing belongs to Topic 01; this conservative card supplies the social and inclusive-protection dimension.

**Model solution:** **Social vulnerability:** Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. **Intersectionality:** Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. **Gender-responsive protection:** Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. **Children:** Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. **Older persons:** Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. **Persons with disabilities:** Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. **Migrants and displaced persons:** Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

### PYQ DEMAND CARD 2 - 2020 GS-III

**Demand:** Discuss the shift from reactive to proactive disaster management.

**Status:** Verified direct routing belongs to Topic 02; this card shows how local planning, trained volunteers and inclusive preparedness operationalise the shift.

**Model solution:** **CBDRR:** Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. **Community first response:** Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. **Panchayats and ULBs:** Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. **Community institutions:** Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. **Volunteer boundary:** A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. **Accessible warnings:** Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. **Inclusive evacuation:** Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

### PYQ DEMAND CARD 3 - 2024 GS-III

**Demand:** Describe the elements that determine disaster resilience.

**Status:** Verified direct routing belongs to Topic 01; this card conservatively routes local knowledge, social capacity and inclusive protection as resilience elements.

**Model solution:** **CBDRR:** Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. **Local knowledge:** Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. **Community first response:** Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.

**Social vulnerability:** Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. **Intersectionality:** Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. **Community-led recovery:** Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. **Participation-outcome firewall:** A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

## ORIGINAL MAINS 1 - 10 MARKS

**Question:** Explain the role of community institutions in disaster risk reduction. Answer in about 150 words.

**Model thesis: Claim:** CBDRR. **Named evidence/example:** Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents.

**Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Local knowledge. **Named evidence/example:** Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community first response. **Named evidence/example:** Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Panchayats and ULBs. **Named evidence/example:** Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community institutions. **Named evidence/example:** Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

**Claim -> named evidence -> analysis -> qualification:**

- Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents.
- Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information.
- Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.
- Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA.
- Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery.

**Qualified conclusion: Claim:** CBDRR. **Named evidence/example:** Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Local knowledge. **Named evidence/example:** Local knowledge can identify routes, seasonal patterns, social networks and hidden

vulnerabilities, but it should be combined with scientific and administrative information. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community first response. **Named evidence/example:** Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Panchayats and ULBs. **Named evidence/example:** Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community institutions. **Named evidence/example:** Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

## ORIGINAL MAINS 2 - 10 MARKS

**Question:** Why must volunteer numbers be distinguished from community-response readiness? Answer in about 150 words.

**Model thesis:** **Claim:** Community first response. **Named evidence/example:** Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community institutions. **Named evidence/example:** Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Volunteer boundary. **Named evidence/example:** A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Participation-outcome firewall. **Named evidence/example:** A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

**Claim -> named evidence -> analysis -> qualification:**

- Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.
- Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery.
- A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach.
- A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence.

**Qualified conclusion:** **Claim:** Community first response. **Named evidence/example:** Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before

drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community institutions. **Named evidence/example:** Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Volunteer boundary. **Named evidence/example:** A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Participation-outcome firewall. **Named evidence/example:** A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

### ORIGINAL MAINS 3 - 15 MARKS

**Question:** Analyse social vulnerability through gender, age, disability and displacement. Answer in about 250 words.

**Model thesis: Claim:** Social vulnerability. **Named evidence/example:** Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard.

**Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Intersectionality. **Named evidence/example:** Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient.

**Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Gender-responsive protection. **Named evidence/example:** Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Children. **Named evidence/example:** Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Older persons. **Named evidence/example:** Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Persons with disabilities. **Named evidence/example:** Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

**Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Migrants and displaced persons. **Named evidence/example:** Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

**Claim -> named evidence -> analysis -> qualification:**

- Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard.
- Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient.
- Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.
- Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking.
- Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers.
- Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions.
- Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status.

**Qualified conclusion: Claim:** Social vulnerability. **Named evidence/example:** Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Intersectionality. **Named evidence/example:** Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Gender-responsive protection. **Named evidence/example:** Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Children. **Named evidence/example:** Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Older persons. **Named evidence/example:** Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Persons with disabilities. **Named evidence/example:** Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Migrants and displaced persons. **Named evidence/example:** Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

## ORIGINAL MAINS 4 - 15 MARKS

**Question:** Design an accessible warning, evacuation and shelter chain for at-risk groups. Answer in about 250 words.

**Model thesis:** **Claim:** Persons with disabilities. **Named evidence/example:** Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions.

**Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accessible warnings. **Named evidence/example:** Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Inclusive evacuation. **Named evidence/example:** Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Dignified shelters. **Named evidence/example:** Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountable relief. **Named evidence/example:** Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

**Claim -> named evidence -> analysis -> qualification:**

- Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions.
- Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users.
- Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate.
- Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels.
- Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution.

**Qualified conclusion:** **Claim:** Persons with disabilities. **Named evidence/example:** Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accessible warnings. **Named evidence/example:** Warnings should be understandable, multilingual and available through visual, audio, text and trusted-person channels, with feedback from at-risk users. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Inclusive evacuation. **Named evidence/example:** Evacuation plans need mapped assistance, accessible vehicles and routes, accountable buddy or support arrangements, and alternatives when households cannot self-evacuate. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Dignified shelters. **Named evidence/example:** Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces

and grievance channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountable relief. **Named evidence/example:** Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

## ORIGINAL MAINS 5 - 20 MARKS

**Question:** Critically examine the claim that communities are the first responders in disasters. Answer in about 300 words.

**Model thesis: Claim:** CBDRR. **Named evidence/example:** Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Local knowledge. **Named evidence/example:** Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community first response. **Named evidence/example:** Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Panchayats and ULBs. **Named evidence/example:** Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community institutions. **Named evidence/example:** Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Volunteer boundary. **Named evidence/example:** A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Participation-outcome firewall. **Named evidence/example:** A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

**Claim -> named evidence -> analysis -> qualification:**

- Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents.
- Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information.
- Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination.

- Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA.
- Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery.
- A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach.
- A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence.

**Qualified conclusion: Claim:** CBDRR. **Named evidence/example:** Community-based disaster risk reduction is participatory risk assessment, planning and action with affected communities, not transfer of the State's duty to untrained residents. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Local knowledge.

**Named evidence/example:** Local knowledge can identify routes, seasonal patterns, social networks and hidden vulnerabilities, but it should be combined with scientific and administrative information. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community first response. **Named evidence/example:** Communities often act before external services arrive; effectiveness depends on assigned roles, training, equipment, safety and coordination. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Panchayats and ULBs.

**Named evidence/example:** Panchayats and urban local bodies connect household-level risk information, local plans, shelters, volunteers, services and grievance redress to the DDMA. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community institutions. **Named evidence/example:** Self-help groups, community-based organisations, youth groups, civil society and local leaders can support warning relay, evacuation, relief verification and recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Volunteer boundary. **Named evidence/example:** A trained volunteer programme is a capacity input; headcount alone does not prove retention, equipment, activation, safe practice or last-mile reach. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Participation-outcome firewall. **Named evidence/example:** A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

## ORIGINAL MAINS 6 - 20 MARKS

**Question:** Propose an inclusive protection and community-led recovery framework that preserves dignity, accountability and agency. Answer in about 300 words.

**Model thesis: Claim:** Social vulnerability. **Named evidence/example:** Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Intersectionality. **Named evidence/example:** Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and

the mandate-to-implementation-to-outcome boundary. **Claim:** Gender-responsive protection. **Named evidence/example:** Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Children. **Named evidence/example:** Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Older persons. **Named evidence/example:** Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Persons with disabilities. **Named evidence/example:** Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Migrants and displaced persons. **Named evidence/example:** Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Dignified shelters. **Named evidence/example:** Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountable relief. **Named evidence/example:** Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Protection and psychosocial support. **Named evidence/example:** Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community-led recovery. **Named evidence/example:** Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Participation-outcome firewall. **Named evidence/example:** A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

**Claim -> named evidence -> analysis -> qualification:**

- Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard.
- Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient.

- Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence.
- Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking.
- Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers.
- Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions.
- Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status.
- Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels.
- Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution.
- Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support.
- Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries.
- A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence.

**Qualified conclusion: Claim:** Social vulnerability. **Named evidence/example:** Poverty, gender, age, disability, health, livelihood, housing, documentation and displacement can produce differentiated impacts from the same hazard. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Intersectionality. **Named evidence/example:** Risk can compound when vulnerabilities intersect, so a single label such as vulnerable sections is analytically insufficient. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Gender-responsive protection. **Named evidence/example:** Gender-responsive DRR requires participation in planning and attention to privacy, sanitation, safety, health, livelihoods, unpaid care and protection from violence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Children. **Named evidence/example:** Children need age-appropriate warnings, family tracing, safe learning continuity, nutrition, health care and protection from separation, abuse and trafficking. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Older persons. **Named evidence/example:** Older persons may require medication continuity, mobility assistance, accessible transport, caregiver support and inclusion in household and shelter registers. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Persons with disabilities. **Named evidence/example:** Disability-inclusive DRR requires accessible information, assisted evacuation, barrier-free shelters, continuity of support and participation in decisions. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Migrants and displaced persons. **Named evidence/example:** Migrants and displaced people may face language, documentation, rental, livelihood and exclusion barriers; disaster displacement does not automatically create 1951 Refugee Convention status. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date,

institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Dignified shelters.

**Named evidence/example:** Shelters require physical accessibility, privacy, lighting, sanitation, protection, medication, assistive devices, child-safe spaces and grievance channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

**Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountable relief. **Named evidence/example:**

Transparent eligibility, public information, disaggregated lists, appeal and correction mechanisms reduce exclusion and elite capture in relief distribution. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Protection and psychosocial support. **Named evidence/example:** Protection includes safeguarding from violence, exploitation, family separation and discrimination, alongside mental-health and psychosocial support. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

**Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Community-led recovery. **Named evidence/example:**

Recovery should restore livelihoods, services, social networks and local agency while reducing future risk, rather than treating affected people as passive beneficiaries. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Participation-outcome firewall. **Named evidence/example:** A consultation, guideline, volunteer count or committee proves an input; inclusive receipt, safe evacuation, dignified shelter and equitable recovery need separate evidence.

**Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.
