

SOLVED PRACTICE WORKBOOK

Disaster Finance, Risk Transfer and Build Back Better - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Disaster Finance, Risk Transfer and Build Back Better - Solved Practice Workbook 5

BASIC MCQS / REMEDIATION 5

Q1. Which statement correctly identifies Ex-ante finance?	5
Q2. Which option preserves the risk or institutional boundary of Ex-ante finance?	5
Q3. Which statement uses Ex-ante finance without changing its hazard, mandate or status?	5
Q4. Which option avoids the standard UPSC close-option trap about Ex-ante finance?	6
Q5. Which statement correctly identifies Ex-post finance?	6
Q6. Which option preserves the risk or institutional boundary of Ex-post finance?	6
Q7. Which statement uses Ex-post finance without changing its hazard, mandate or status?	6
Q8. Which option avoids the standard UPSC close-option trap about Ex-post finance?	7
Q9. Which statement correctly identifies Four-fund statutory grid?	7
Q10. Which option preserves the risk or institutional boundary of Four-fund statutory grid?	7
Q11. Which statement uses Four-fund statutory grid without changing its hazard, mandate or status?	8
Q12. Which option avoids the standard UPSC close-option trap about Four-fund statutory grid?	8
Q13. Which statement correctly identifies Response versus mitigation funds?	8
Q14. Which option preserves the risk or institutional boundary of Response versus mitigation funds?	8
Q15. Which statement uses Response versus mitigation funds without changing its hazard, mandate or status?	9
Q16. Which option avoids the standard UPSC close-option trap about Response versus mitigation funds?	9
Q17. Which statement correctly identifies Budgetary and contingency reserves?	9
Q18. Which option preserves the risk or institutional boundary of Budgetary and contingency reserves?	10
Q19. Which statement uses Budgetary and contingency reserves without changing its hazard, mandate or status?	10
Q20. Which option avoids the standard UPSC close-option trap about Budgetary and contingency reserves?	10
Q21. Which statement correctly identifies Pre-arranged finance?	10
Q22. Which option preserves the risk or institutional boundary of Pre-arranged finance?	11
Q23. Which statement uses Pre-arranged finance without changing its hazard, mandate or status?	11
Q24. Which option avoids the standard UPSC close-option trap about Pre-arranged finance?	11
Q25. Which statement correctly identifies Risk layering?	12
Q26. Which option preserves the risk or institutional boundary of Risk layering?	12
Q27. Which statement uses Risk layering without changing its hazard, mandate or status?	12

Q28. Which option avoids the standard UPSC close-option trap about Risk layering?	12
Q29. Which statement correctly identifies Sovereign subnational household layers?	13
Q30. Which option preserves the risk or institutional boundary of Sovereign subnational household layers?	13
Q31. Which statement uses Sovereign subnational household layers without changing its hazard, mandate or status?	13
Q32. Which option avoids the standard UPSC close-option trap about Sovereign subnational household layers?	13
Q33. Which statement correctly identifies Indemnity insurance?	14
Q34. Which option preserves the risk or institutional boundary of Indemnity insurance?	14
Q35. Which statement uses Indemnity insurance without changing its hazard, mandate or status?	14
Q36. Which option avoids the standard UPSC close-option trap about Indemnity insurance?	15
Q37. Which statement correctly identifies Parametric insurance?	15
Q38. Which option preserves the risk or institutional boundary of Parametric insurance?	15
Q39. Which statement uses Parametric insurance without changing its hazard, mandate or status?	15
Q40. Which option avoids the standard UPSC close-option trap about Parametric insurance?	16
Q41. Which statement correctly identifies Basis risk?	16
Q42. Which option preserves the risk or institutional boundary of Basis risk?	16
Q43. Which statement uses Basis risk without changing its hazard, mandate or status?	17
Q44. Which option avoids the standard UPSC close-option trap about Basis risk?	17
Q45. Which statement correctly identifies Risk pools?	17
Q46. Which option preserves the risk or institutional boundary of Risk pools?	17
Q47. Which statement uses Risk pools without changing its hazard, mandate or status?	18
Q48. Which option avoids the standard UPSC close-option trap about Risk pools?	18
Q49. Which statement correctly identifies Catastrophe bonds?	18
Q50. Which option preserves the risk or institutional boundary of Catastrophe bonds?	19
Q51. Which statement uses Catastrophe bonds without changing its hazard, mandate or status?	19
Q52. Which option avoids the standard UPSC close-option trap about Catastrophe bonds?	19
Q53. Which statement correctly identifies Moral hazard and adverse selection?	19
Q54. Which option preserves the risk or institutional boundary of Moral hazard and adverse selection?	20
Q55. Which statement uses Moral hazard and adverse selection without changing its hazard, mandate or status?	20
Q56. Which option avoids the standard UPSC close-option trap about Moral hazard and adverse selection?	20
Q57. Which statement correctly identifies Fiscal protection?	21
Q58. Which option preserves the risk or institutional boundary of Fiscal protection?	21
Q59. Which statement uses Fiscal protection without changing its hazard, mandate or status?	21

Q60. Which option avoids the standard UPSC close-option trap about Fiscal protection?	21
Q61. Which statement correctly identifies Damage loss and needs assessment?	22
Q62. Which option preserves the risk or institutional boundary of Damage loss and needs assessment?	22
Q63. Which statement uses Damage loss and needs assessment without changing its hazard, mandate or status?	22
Q64. Which option avoids the standard UPSC close-option trap about Damage loss and needs assessment?	23
Q65. Which statement correctly identifies Build Back Better?	23
Q66. Which option preserves the risk or institutional boundary of Build Back Better?	23
Q67. Which statement uses Build Back Better without changing its hazard, mandate or status?	23
Q68. Which option avoids the standard UPSC close-option trap about Build Back Better?	24
Q69. Which statement correctly identifies BBB safeguards?	24
Q70. Which option preserves the risk or institutional boundary of BBB safeguards?	24
Q71. Which statement uses BBB safeguards without changing its hazard, mandate or status?	25
Q72. Which option avoids the standard UPSC close-option trap about BBB safeguards?	25
Q73. Which statement correctly identifies Incentive and affordability balance?	25
Q74. Which option preserves the risk or institutional boundary of Incentive and affordability balance?	25
Q75. Which statement uses Incentive and affordability balance without changing its hazard, mandate or status?	26
Q76. Which option avoids the standard UPSC close-option trap about Incentive and affordability balance?	26
Q77. Which statement correctly identifies Finance-outcome firewall?	26
Q78. Which option preserves the risk or institutional boundary of Finance-outcome firewall?	27
Q79. Which statement uses Finance-outcome firewall without changing its hazard, mandate or status?	27
Q80. Which option avoids the standard UPSC close-option trap about Finance-outcome firewall?	27

Disaster Finance, Risk Transfer and Build Back Better - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Ex-ante finance?

A. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. B. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. C. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. D. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced.

Answer: A. Explanation: Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q2. Which option preserves the risk or institutional boundary of Ex-ante finance?

A. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. B. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. C. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. D. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss.

Answer: B. Explanation: Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q3. Which statement uses Ex-ante finance without changing its hazard, mandate or status?

A. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. B. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. C. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. D. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction.

Answer: C. Explanation: Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q4. Which option avoids the standard UPSC close-option trap about Ex-ante finance?

A. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. B. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. C. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. D. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

Answer: D. Explanation: Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q5. Which statement correctly identifies Ex-post finance?

A. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. B. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. C. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. D. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced.

Answer: A. Explanation: Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q6. Which option preserves the risk or institutional boundary of Ex-post finance?

A. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. B. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. C. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. D. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss.

Answer: B. Explanation: Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q7. Which statement uses Ex-post finance without changing its hazard, mandate or status?

A. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. B. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. C. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. D. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.

Answer: C. Explanation: Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be

slow and fiscally disruptive. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q8. Which option avoids the standard UPSC close-option trap about Ex-post finance?

A. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. B. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. C. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. D. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive.

Answer: D. Explanation: Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q9. Which statement correctly identifies Four-fund statutory grid?

A. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. B. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. C. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. D. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction.

Answer: A. Explanation: The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q10. Which option preserves the risk or institutional boundary of Four-fund statutory grid?

A. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. B. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. C. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. D. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss.

Answer: B. Explanation: The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q11. Which statement uses Four-fund statutory grid without changing its hazard, mandate or status?

A. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. B. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. C. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. D. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction.

Answer: C. Explanation: The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q12. Which option avoids the standard UPSC close-option trap about Four-fund statutory grid?

A. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. B. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. C. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. D. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused.

Answer: D. Explanation: The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q13. Which statement correctly identifies Response versus mitigation funds?

A. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. B. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. C. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. D. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.

Answer: A. Explanation: Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q14. Which option preserves the risk or institutional boundary of Response versus mitigation funds?

A. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. B. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. C. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. D. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services.

Answer: B. Explanation: Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q15. Which statement uses Response versus mitigation funds without changing its hazard, mandate or status?

A. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. B. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. C. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. D. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.

Answer: C. Explanation: Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q16. Which option avoids the standard UPSC close-option trap about Response versus mitigation funds?

A. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. B. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. C. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. D. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced.

Answer: D. Explanation: Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q17. Which statement correctly identifies Budgetary and contingency reserves?

A. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. B. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. C. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. D. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction.

Answer: A. Explanation: Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q18. Which option preserves the risk or institutional boundary of Budgetary and contingency reserves?

A. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. B. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. C. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. D. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.

Answer: B. Explanation: Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q19. Which statement uses Budgetary and contingency reserves without changing its hazard, mandate or status?

A. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. B. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. C. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. D. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services.

Answer: C. Explanation: Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q20. Which option avoids the standard UPSC close-option trap about Budgetary and contingency reserves?

A. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. B. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. C. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. D. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss.

Answer: D. Explanation: Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q21. Which statement correctly identifies Pre-arranged finance?

A. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. B. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. C. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. D. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.

Answer: A. Explanation: Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q22. Which option preserves the risk or institutional boundary of Pre-arranged finance?

A. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. B. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. C. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. D. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services.

Answer: B. Explanation: Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q23. Which statement uses Pre-arranged finance without changing its hazard, mandate or status?

A. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. B. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. C. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. D. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement.

Answer: C. Explanation: Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q24. Which option avoids the standard UPSC close-option trap about Pre-arranged finance?

A. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. B. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. C. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. D. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction.

Answer: D. Explanation: Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q25. Which statement correctly identifies Risk layering?

A. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. B. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. C. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. D. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk.

Answer: A. Explanation: Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q26. Which option preserves the risk or institutional boundary of Risk layering?

A. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. B. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. C. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. D. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited.

Answer: B. Explanation: Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q27. Which statement uses Risk layering without changing its hazard, mandate or status?

A. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. B. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. C. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. D. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk.

Answer: C. Explanation: Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q28. Which option avoids the standard UPSC close-option trap about Risk layering?

A. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. B. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. C. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. D. Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.

Answer: D. Explanation: Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q29. Which statement correctly identifies Sovereign subnational household layers?

A. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. B. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. C. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. D. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk.

Answer: A. Explanation: The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q30. Which option preserves the risk or institutional boundary of Sovereign subnational household layers?

A. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. B. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. C. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. D. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk.

Answer: B. Explanation: The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q31. Which statement uses Sovereign subnational household layers without changing its hazard, mandate or status?

A. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. B. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. C. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. D. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited.

Answer: C. Explanation: The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q32. Which option avoids the standard UPSC close-option trap about Sovereign subnational household layers?

A. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. B. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. C. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. D. The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services.

Answer: D. Explanation: The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q33. Which statement correctly identifies Indemnity insurance?

A. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. B. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. C. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. D. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited.

Answer: A. Explanation: Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q34. Which option preserves the risk or institutional boundary of Indemnity insurance?

A. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. B. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. C. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. D. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real.

Answer: B. Explanation: Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q35. Which statement uses Indemnity insurance without changing its hazard, mandate or status?

A. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. B. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. C. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. D. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified.

Answer: C. Explanation: Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q36. Which option avoids the standard UPSC close-option trap about Indemnity insurance?

A. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. B. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. C. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. D. Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement.

Answer: D. Explanation: Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q37. Which statement correctly identifies Parametric insurance?

A. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. B. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. C. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. D. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited.

Answer: A. Explanation: Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q38. Which option preserves the risk or institutional boundary of Parametric insurance?

A. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. B. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. C. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. D. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems.

Answer: B. Explanation: Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q39. Which statement uses Parametric insurance without changing its hazard, mandate or status?

A. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. B. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. C. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. D. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems.

Answer: C. Explanation: Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q40. Which option avoids the standard UPSC close-option trap about Parametric insurance?

A. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. B. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. C. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. D. Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk.

Answer: D. Explanation: Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q41. Which statement correctly identifies Basis risk?

A. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. B. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. C. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. D. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems.

Answer: A. Explanation: Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q42. Which option preserves the risk or institutional boundary of Basis risk?

A. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. B. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. C. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. D. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified.

Answer: B. Explanation: Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q43. Which statement uses Basis risk without changing its hazard, mandate or status?

A. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. B. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. C. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. D. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems.

Answer: C. Explanation: Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q44. Which option avoids the standard UPSC close-option trap about Basis risk?

A. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. B. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. C. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. D. Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited.

Answer: D. Explanation: Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q45. Which statement correctly identifies Risk pools?

A. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. B. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. C. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. D. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified.

Answer: A. Explanation: A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q46. Which option preserves the risk or institutional boundary of Risk pools?

A. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. B. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. C. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. D. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems.

Answer: B. Explanation: A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether

diversification is real. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q47. Which statement uses Risk pools without changing its hazard, mandate or status?

A. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. B. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. C. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. D. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability.

Answer: C. Explanation: A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q48. Which option avoids the standard UPSC close-option trap about Risk pools?

A. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. B. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. C. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. D. A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real.

Answer: D. Explanation: A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q49. Which statement correctly identifies Catastrophe bonds?

A. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. B. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. C. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. D. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards.

Answer: A. Explanation: A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q50. Which option preserves the risk or institutional boundary of Catastrophe bonds?

A. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. B. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. C. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. D. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability.

Answer: B. Explanation: A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q51. Which statement uses Catastrophe bonds without changing its hazard, mandate or status?

A. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. B. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. C. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. D. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability.

Answer: C. Explanation: A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q52. Which option avoids the standard UPSC close-option trap about Catastrophe bonds?

A. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. B. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. C. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. D. A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified.

Answer: D. Explanation: A catastrophe bond transfers a defined layer of catastrophe risk to capital-market investors through specified triggers and loss of principal or interest; it should be used conceptually unless a dated official deployment is verified. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q53. Which statement correctly identifies Moral hazard and adverse selection?

A. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. B. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. C. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. D. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards.

Answer: A. Explanation: Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q54. Which option preserves the risk or institutional boundary of Moral hazard and adverse selection?

A. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. B. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. C. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. D. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations.

Answer: B. Explanation: Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q55. Which statement uses Moral hazard and adverse selection without changing its hazard, mandate or status?

A. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. B. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. C. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. D. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies.

Answer: C. Explanation: Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q56. Which option avoids the standard UPSC close-option trap about Moral hazard and adverse selection?

A. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. B. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. C. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. D. Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems.

Answer: D. Explanation: Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q57. Which statement correctly identifies Fiscal protection?

A. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. B. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. C. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. D. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability.

Answer: A. Explanation: Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q58. Which option preserves the risk or institutional boundary of Fiscal protection?

A. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. B. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. C. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. D. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability.

Answer: B. Explanation: Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q59. Which statement uses Fiscal protection without changing its hazard, mandate or status?

A. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. B. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. C. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. D. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence.

Answer: C. Explanation: Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q60. Which option avoids the standard UPSC close-option trap about Fiscal protection?

A. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. B. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. C. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. D. Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards.

Answer: D. Explanation: Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q61. Which statement correctly identifies Damage loss and needs assessment?

A. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. B. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. C. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. D. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability.

Answer: A. Explanation: Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q62. Which option preserves the risk or institutional boundary of Damage loss and needs assessment?

A. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. B. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. C. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. D. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies.

Answer: B. Explanation: Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q63. Which statement uses Damage loss and needs assessment without changing its hazard, mandate or status?

A. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. B. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. C. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. D. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

Answer: C. Explanation: Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q64. Which option avoids the standard UPSC close-option trap about Damage loss and needs assessment?

A. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. B. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. C. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. D. Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate.

Answer: D. Explanation: Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q65. Which statement correctly identifies Build Back Better?

A. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. B. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. C. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. D. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations.

Answer: A. Explanation: Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q66. Which option preserves the risk or institutional boundary of Build Back Better?

A. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. B. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. C. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. D. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

Answer: B. Explanation: Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q67. Which statement uses Build Back Better without changing its hazard, mandate or status?

A. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. B. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. C. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. D. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence.

Answer: C. Explanation: Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q68. Which option avoids the standard UPSC close-option trap about Build Back Better?

A. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. B. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. C. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. D. Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability.

Answer: D. Explanation: Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q69. Which statement correctly identifies BBB safeguards?

A. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. B. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. C. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. D. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

Answer: A. Explanation: Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q70. Which option preserves the risk or institutional boundary of BBB safeguards?

A. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. B. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. C. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. D. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive.

Answer: B. Explanation: Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q71. Which statement uses BBB safeguards without changing its hazard, mandate or status?

A. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. B. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. C. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. D. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

Answer: C. Explanation: Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q72. Which option avoids the standard UPSC close-option trap about BBB safeguards?

A. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. B. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. C. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. D. Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations.

Answer: D. Explanation: Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q73. Which statement correctly identifies Incentive and affordability balance?

A. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. B. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. C. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. D. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive.

Answer: A. Explanation: Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q74. Which option preserves the risk or institutional boundary of Incentive and affordability balance?

A. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. B. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. C. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. D. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused.

Answer: B. Explanation: Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q75. Which statement uses Incentive and affordability balance without changing its hazard, mandate or status?

A. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. B. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. C. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. D. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused.

Answer: C. Explanation: Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q76. Which option avoids the standard UPSC close-option trap about Incentive and affordability balance?

A. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. B. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. C. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. D. Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies.

Answer: D. Explanation: Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q77. Which statement correctly identifies Finance-outcome firewall?

A. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. B. Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. C. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. D. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive.

Answer: A. Explanation: A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q78. Which option preserves the risk or institutional boundary of Finance-outcome firewall?

A. Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. B. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. C. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. D. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced.

Answer: B. Explanation: A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q79. Which statement uses Finance-outcome firewall without changing its hazard, mandate or status?

A. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. B. The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. C. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. D. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced.

Answer: C. Explanation: A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q80. Which option avoids the standard UPSC close-option trap about Finance-outcome firewall?

A. Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. B. Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. C. Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. D. A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence.

Answer: D. Explanation: A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

PYQS AND ANSWER PRACTICE

AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

No audited 2024-2025 GS-III question directly owns disaster finance. The 2024 resilience question is the closest conceptual route; the 2020 proactive-management and 2024 urban-flood cards are bounded adjacent applications.

PYQ DEMAND CARD 1 - 2024 GS-III

Demand: Describe disaster resilience, how it is determined and the elements of the Sendai Framework.

Status: Verified support route: disaster finance contributes investment, fiscal protection, continuity and Build Back Better but is not itself the complete resilience definition.

Model solution: Ex-ante finance: Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

Response versus mitigation funds: Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced.

Budgetary and contingency reserves: Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. **Risk layering:** Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.

Fiscal protection: Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Build Back Better:** Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. **BBB safeguards:** Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. **Finance-outcome firewall:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

PYQ DEMAND CARD 2 - 2020 GS-III

Demand: Discuss the shift from reactive to proactive disaster management in India.

Status: Verified adjacent governance route; ex-ante mitigation, reserves, pre-arranged finance and risk transfer illustrate proactivity without claiming adequacy or outcome.

Model solution: Ex-ante finance: Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

Ex-post finance: Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive.

Four-fund statutory grid: The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. **Response versus mitigation funds:** Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. **Budgetary and contingency reserves:** Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. **Pre-arranged finance:** Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. **Fiscal protection:** Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Finance-outcome firewall:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

PYQ DEMAND CARD 3 - 2024 GS-III

Demand: Discuss urban flooding as a climate-induced disaster and the policies and frameworks in India that aim at tackling it.

Status: Verified cross-owned route led by Topic 08; this card contributes only mitigation finance, fiscal layering and BBB safeguards for urban assets.

Model solution: Ex-ante finance: Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

Four-fund statutory grid: The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. **Response versus mitigation funds:** Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. **Budgetary and contingency reserves:** Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. **Fiscal protection:** Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Build Back Better:** Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. **BBB safeguards:** Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. **Finance-outcome firewall:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish ex-ante finance, ex-post finance, response funds and mitigation funds. Answer in about 150 words.

Model thesis: Claim: Ex-ante finance. **Named evidence/example:** Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Ex-post finance. **Named evidence/example:** Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Four-fund statutory grid. **Named evidence/example:** The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Response versus mitigation funds. **Named evidence/example:** Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.

- Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive.
- The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused.
- Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced.

Qualified conclusion: **Claim:** Ex-ante finance. **Named evidence/example:** Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Ex-post finance. **Named evidence/example:** Ex-post finance is mobilised after impact through budget reallocation, supplementary grants, borrowing, relief funds, appeals or other measures; it can be necessary but may be slow and fiscally disruptive. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Four-fund statutory grid. **Named evidence/example:** The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Response versus mitigation funds. **Named evidence/example:** Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 2 - 10 MARKS

Question: Differentiate indemnity and parametric insurance and explain basis risk. Answer in about 150 words.

Model thesis: **Claim:** Indemnity insurance. **Named evidence/example:** Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Parametric insurance. **Named evidence/example:** Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Basis risk. **Named evidence/example:** Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement.
- Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk.
- Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited.

Qualified conclusion: Claim: Indemnity insurance. **Named evidence/example:** Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Parametric insurance. **Named evidence/example:** Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Basis risk. **Named evidence/example:** Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 3 - 15 MARKS

Question: Explain disaster-risk layering across sovereign, subnational, utility and household levels. Answer in about 250 words.

Model thesis: Claim: Budgetary and contingency reserves. **Named evidence/example:** Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Pre-arranged finance. **Named evidence/example:** Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk layering. **Named evidence/example:** Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sovereign subnational household layers. **Named evidence/example:** The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk pools. **Named evidence/example:** A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss.
- Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction.
- Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.
- The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services.

- A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real.

Qualified conclusion: Claim: Budgetary and contingency reserves. **Named evidence/example:** Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Pre-arranged finance. **Named evidence/example:** Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk layering. **Named evidence/example:** Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sovereign subnational household layers. **Named evidence/example:** The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services.

Analysis: This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk pools. **Named evidence/example:** A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 4 - 15 MARKS

Question: Analyse moral hazard, adverse selection, affordability and fiscal-protection safeguards. Answer in about 250 words.

Model thesis: Claim: Moral hazard and adverse selection. **Named evidence/example:** Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Fiscal protection. **Named evidence/example:** Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incentive and affordability balance. **Named evidence/example:** Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Finance-outcome firewall. **Named evidence/example:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence.

Analysis: This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems.
- Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards.
- Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies.
- A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence.

Qualified conclusion: Claim: Moral hazard and adverse selection. **Named evidence/example:** Moral hazard is changed behaviour after protection reduces the perceived cost of loss, while adverse selection arises when higher-risk participants are more likely to seek cover; design, pricing and safeguards address different problems. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Fiscal protection. **Named evidence/example:** Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incentive and affordability balance. **Named evidence/example:** Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Finance-outcome firewall. **Named evidence/example:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 5 - 20 MARKS

Question: Design a pre-arranged disaster-finance strategy combining reserves, contingent finance, insurance and transparent assessment. Answer in about 300 words.

Model thesis: Claim: Ex-ante finance. **Named evidence/example:** Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Budgetary and contingency reserves. **Named evidence/example:** Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Pre-arranged finance. **Named evidence/example:** Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk layering. **Named evidence/example:** Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different

combinations of retention, reserves, contingent credit, insurance and external support. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sovereign subnational household layers. **Named evidence/example:** The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services.

Analysis: This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Indemnity insurance. **Named evidence/example:** Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Parametric insurance. **Named evidence/example:** Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Basis risk. **Named evidence/example:** Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk pools. **Named evidence/example:** A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Fiscal protection. **Named evidence/example:** Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Damage loss and needs assessment. **Named evidence/example:** Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Finance-outcome firewall. **Named evidence/example:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing.
- Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss.
- Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction.
- Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support.

- The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services.
- Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement.
- Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk.
- Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a payout where losses are limited.
- A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real.
- Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards.
- Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate.
- A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence.

Qualified conclusion: Claim: Ex-ante finance. **Named evidence/example:** Ex-ante disaster finance is arranged before an event for prevention, mitigation, preparedness, contingent response or pre-agreed recovery; timing alone does not make an instrument risk reducing. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Budgetary and contingency reserves. **Named evidence/example:** Annual budget provisions and contingency reserves retain risk on the public balance sheet but improve liquidity; adequacy depends on rules, replenishment, accessibility and the scale and timing of loss. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Pre-arranged finance. **Named evidence/example:** Pre-arranged finance fixes eligibility, trigger, amount or drawdown procedure before a disaster so funds can arrive faster; speed does not ensure good targeting, sufficient volume or risk reduction. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk layering. **Named evidence/example:** Risk layering matches frequent lower-severity losses, less frequent medium losses and rare severe losses with different combinations of retention, reserves, contingent credit, insurance and external support. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sovereign subnational household layers. **Named evidence/example:** The Union, States, local bodies, utilities, firms and households face different fiscal capacities and loss types; transferring sovereign risk does not automatically protect uninsured households or municipal services. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Indemnity insurance. **Named evidence/example:** Indemnity insurance pays for verified covered loss subject to policy terms, exclusions, deductibles and limits; loss assessment supports alignment but may delay settlement. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Parametric insurance. **Named evidence/example:** Parametric insurance pays when a pre-agreed measurable index crosses a threshold, regardless of exact realised loss; it can be rapid but creates basis risk. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Basis risk. **Named evidence/example:** Basis risk is the mismatch between a parametric payout and actual loss, including no or low payout despite severe local harm or a

payout where losses are limited. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Risk pools. **Named evidence/example:** A risk pool combines diversified participants or exposures and common financing arrangements to spread volatility; correlation, governance, pricing and entry rules determine whether diversification is real. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Fiscal protection. **Named evidence/example:** Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Damage loss and needs assessment. **Named evidence/example:** Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Finance-outcome firewall. **Named evidence/example:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 6 - 20 MARKS

Question: Critically evaluate Build Back Better as a financial and governance principle rather than a reconstruction slogan. Answer in about 300 words.

Model thesis: **Claim:** Four-fund statutory grid. **Named evidence/example:** The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Response versus mitigation funds. **Named evidence/example:** Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Fiscal protection. **Named evidence/example:** Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Damage loss and needs assessment. **Named evidence/example:** Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Build Back Better. **Named evidence/example:** Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** BBB safeguards. **Named evidence/example:** Build Back

Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incentive and affordability balance. **Named evidence/example:** Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Finance-outcome firewall. **Named evidence/example:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused.
- Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced.
- Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards.
- Transparent damage, economic-loss and recovery-needs assessments serve different purposes and baselines; none should be substituted for another merely because each produces a monetary estimate.
- Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability.
- Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations.
- Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies.
- A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence.

Qualified conclusion: **Claim:** Four-fund statutory grid. **Named evidence/example:** The Disaster Management Act separates the National Disaster Response Fund under section 46, National Disaster Mitigation Fund under section 47, and State response and mitigation funds under section 48; fund and force must never be confused. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Response versus mitigation funds. **Named evidence/example:** Response funds meet eligible post-event response and relief needs, whereas mitigation funds finance ex-ante risk reduction; a response payment is not proof that future risk was reduced. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Fiscal protection. **Named evidence/example:** Fiscal protection aims to preserve timely government financing and essential public services after shocks through risk assessment, layered instruments, transparent rules and debt or budget safeguards. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Damage loss and needs assessment. **Named evidence/example:** Transparent damage, economic-loss and recovery-needs assessments serve different purposes

and baselines; none should be substituted for another merely because each produces a monetary estimate.

Analysis: This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Build Back Better. **Named evidence/example:** Build Back Better uses recovery, rehabilitation and reconstruction to reduce future risk through safer location, standards, services, institutions and livelihoods rather than recreating pre-disaster vulnerability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** BBB safeguards. **Named evidence/example:** Build Back Better requires participation, tenure and livelihood safeguards, environmental assessment, accessibility, maintenance finance and avoidance of rushed rebuilding in hazardous locations. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incentive and affordability balance. **Named evidence/example:** Deductibles, co-financing, risk-based signals and mitigation conditions can reduce moral hazard, but unaffordable pricing can exclude high-risk low-income households and local bodies. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Finance-outcome firewall. **Named evidence/example:** A fund corpus, allocation rule, policy, premium, bond, pool, payout, sanction or reconstruction budget proves finance or transfer only; coverage, timeliness, equity, safer rebuilding and reduced fiscal loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.
