

SOLVED PRACTICE WORKBOOK

Humanitarian Logistics, Relief, Rehabilitation and Recovery - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Humanitarian Logistics, Relief, Rehabilitation and Recovery - Solved Practice Workbook 6

BASIC MCQS / REMEDIATION 6

Q1. Which statement correctly identifies Response relief rehabilitation reconstruction recovery?	6
Q2. Which option preserves the risk or institutional boundary of Response relief rehabilitation reconstruction recovery?	6
Q3. Which statement uses Response relief rehabilitation reconstruction recovery without changing its hazard, mandate or status?	6
Q4. Which option avoids the standard UPSC close-option trap about Response relief rehabilitation reconstruction recovery?	7
Q5. Which statement correctly identifies Needs assessment?	7
Q6. Which option preserves the risk or institutional boundary of Needs assessment?	7
Q7. Which statement uses Needs assessment without changing its hazard, mandate or status?	7
Q8. Which option avoids the standard UPSC close-option trap about Needs assessment?	8
Q9. Which statement correctly identifies Humanitarian principles?	8
Q10. Which option preserves the risk or institutional boundary of Humanitarian principles?	8
Q11. Which statement uses Humanitarian principles without changing its hazard, mandate or status?	8
Q12. Which option avoids the standard UPSC close-option trap about Humanitarian principles?	9
Q13. Which statement correctly identifies Preparedness and pre-positioning?	9
Q14. Which option preserves the risk or institutional boundary of Preparedness and pre-positioning?	9
Q15. Which statement uses Preparedness and pre-positioning without changing its hazard, mandate or status?	10
Q16. Which option avoids the standard UPSC close-option trap about Preparedness and pre-positioning?	10
Q17. Which statement correctly identifies Procurement?	10
Q18. Which option preserves the risk or institutional boundary of Procurement?	10
Q19. Which statement uses Procurement without changing its hazard, mandate or status?	11
Q20. Which option avoids the standard UPSC close-option trap about Procurement?	11
Q21. Which statement correctly identifies Warehousing and inventory?	11
Q22. Which option preserves the risk or institutional boundary of Warehousing and inventory?	12
Q23. Which statement uses Warehousing and inventory without changing its hazard, mandate or status?	12
Q24. Which option avoids the standard UPSC close-option trap about Warehousing and inventory?	12
Q25. Which statement correctly identifies Transport and routing?	12
Q26. Which option preserves the risk or institutional boundary of Transport and routing?	13

Q27. Which statement uses Transport and routing without changing its hazard, mandate or status?	13
Q28. Which option avoids the standard UPSC close-option trap about Transport and routing?	13
Q29. Which statement correctly identifies Last-mile distribution?	14
Q30. Which option preserves the risk or institutional boundary of Last-mile distribution?	14
Q31. Which statement uses Last-mile distribution without changing its hazard, mandate or status?	14
Q32. Which option avoids the standard UPSC close-option trap about Last-mile distribution?	14
Q33. Which statement correctly identifies Information and coordination?	15
Q34. Which option preserves the risk or institutional boundary of Information and coordination?	15
Q35. Which statement uses Information and coordination without changing its hazard, mandate or status?	15
Q36. Which option avoids the standard UPSC close-option trap about Information and coordination?	16
Q37. Which statement correctly identifies Cash versus in-kind?	16
Q38. Which option preserves the risk or institutional boundary of Cash versus in-kind?	16
Q39. Which statement uses Cash versus in-kind without changing its hazard, mandate or status?	16
Q40. Which option avoids the standard UPSC close-option trap about Cash versus in-kind?	17
Q41. Which statement correctly identifies Shelter WASH health and protection?	17
Q42. Which option preserves the risk or institutional boundary of Shelter WASH health and protection?	17
Q43. Which statement uses Shelter WASH health and protection without changing its hazard, mandate or status?	18
Q44. Which option avoids the standard UPSC close-option trap about Shelter WASH health and protection?	18
Q45. Which statement correctly identifies Protection and inclusion?	18
Q46. Which option preserves the risk or institutional boundary of Protection and inclusion?	18
Q47. Which statement uses Protection and inclusion without changing its hazard, mandate or status?	19
Q48. Which option avoids the standard UPSC close-option trap about Protection and inclusion?	19
Q49. Which statement correctly identifies Grievance and anti-diversion controls?	19
Q50. Which option preserves the risk or institutional boundary of Grievance and anti-diversion controls?	20
Q51. Which statement uses Grievance and anti-diversion controls without changing its hazard, mandate or status?	20
Q52. Which option avoids the standard UPSC close-option trap about Grievance and anti-diversion controls?	20
Q53. Which statement correctly identifies Livelihood restoration?	21
Q54. Which option preserves the risk or institutional boundary of Livelihood restoration?	21
Q55. Which statement uses Livelihood restoration without changing its hazard, mandate or status?	21
Q56. Which option avoids the standard UPSC close-option trap about Livelihood restoration?	21
Q57. Which statement correctly identifies Displacement and durable solutions?	22
Q58. Which option preserves the risk or institutional boundary of Displacement and durable solutions?	22

Q59. Which statement uses Displacement and durable solutions without changing its hazard, mandate or status?	22
Q60. Which option avoids the standard UPSC close-option trap about Displacement and durable solutions?	23
Q61. Which statement correctly identifies Debris and environmental recovery?	23
Q62. Which option preserves the risk or institutional boundary of Debris and environmental recovery?	23
Q63. Which statement uses Debris and environmental recovery without changing its hazard, mandate or status?	24
Q64. Which option avoids the standard UPSC close-option trap about Debris and environmental recovery?	24
Q65. Which statement correctly identifies Recovery sequencing?	24
Q66. Which option preserves the risk or institutional boundary of Recovery sequencing?	25
Q67. Which statement uses Recovery sequencing without changing its hazard, mandate or status?	25
Q68. Which option avoids the standard UPSC close-option trap about Recovery sequencing?	25
Q69. Which statement correctly identifies Incident coordination and handover?	26
Q70. Which option preserves the risk or institutional boundary of Incident coordination and handover?	26
Q71. Which statement uses Incident coordination and handover without changing its hazard, mandate or status?	26
Q72. Which option avoids the standard UPSC close-option trap about Incident coordination and handover?	27
Q73. Which statement correctly identifies Build Back Better?	27
Q74. Which option preserves the risk or institutional boundary of Build Back Better?	27
Q75. Which statement uses Build Back Better without changing its hazard, mandate or status?	28
Q76. Which option avoids the standard UPSC close-option trap about Build Back Better?	28
Q77. Which statement correctly identifies Delivery-outcome firewall?	28
Q78. Which option preserves the risk or institutional boundary of Delivery-outcome firewall?	28
Q79. Which statement uses Delivery-outcome firewall without changing its hazard, mandate or status?	29
Q80. Which option avoids the standard UPSC close-option trap about Delivery-outcome firewall?	29

Humanitarian Logistics, Relief, Rehabilitation and Recovery - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Response relief rehabilitation reconstruction recovery?

A. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. B. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. C. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. D. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.

Answer: A. Explanation: Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q2. Which option preserves the risk or institutional boundary of Response relief rehabilitation reconstruction recovery?

A. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. B. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. C. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. D. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks.

Answer: B. Explanation: Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q3. Which statement uses Response relief rehabilitation reconstruction recovery without changing its hazard, mandate or status?

A. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. B. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. C. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. D. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment.

Answer: C. Explanation: Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q4. Which option avoids the standard UPSC close-option trap about Response relief rehabilitation reconstruction recovery?

A. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. B. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. C. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. D. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases.

Answer: D. Explanation: Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q5. Which statement correctly identifies Needs assessment?

A. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. B. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. C. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. D. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks.

Answer: A. Explanation: A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q6. Which option preserves the risk or institutional boundary of Needs assessment?

A. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. B. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. C. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. D. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability.

Answer: B. Explanation: A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q7. Which statement uses Needs assessment without changing its hazard, mandate or status?

A. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. B. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. C. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. D. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable.

Answer: C. Explanation: A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. The

other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q8. Which option avoids the standard UPSC close-option trap about Needs assessment?

A. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. B. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. C. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. D. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.

Answer: D. Explanation: A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q9. Which statement correctly identifies Humanitarian principles?

A. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. B. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. C. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. D. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment.

Answer: A. Explanation: Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q10. Which option preserves the risk or institutional boundary of Humanitarian principles?

A. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. B. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. C. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. D. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment.

Answer: B. Explanation: Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q11. Which statement uses Humanitarian principles without changing its hazard, mandate or status?

A. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. B. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. C. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. D. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most

reliable.

Answer: C. Explanation: Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q12. Which option avoids the standard UPSC close-option trap about Humanitarian principles?

A. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. B. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. C. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. D. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision.

Answer: D. Explanation: Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q13. Which statement correctly identifies Preparedness and pre-positioning?

A. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. B. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. C. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. D. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable.

Answer: A. Explanation: Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q14. Which option preserves the risk or institutional boundary of Preparedness and pre-positioning?

A. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. B. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. C. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. D. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable.

Answer: B. Explanation: Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q15. Which statement uses Preparedness and pre-positioning without changing its hazard, mandate or status?

A. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. B. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. C. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. D. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback.

Answer: C. Explanation: Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q16. Which option avoids the standard UPSC close-option trap about Preparedness and pre-positioning?

A. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. B. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. C. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. D. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks.

Answer: D. Explanation: Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q17. Which statement correctly identifies Procurement?

A. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. B. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. C. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. D. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable.

Answer: A. Explanation: Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q18. Which option preserves the risk or institutional boundary of Procurement?

A. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. B. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. C. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. D. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback.

Answer: B. Explanation: Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q19. Which statement uses Procurement without changing its hazard, mandate or status?

A. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. B. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. C. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. D. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured.

Answer: C. Explanation: Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q20. Which option avoids the standard UPSC close-option trap about Procurement?

A. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. B. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. C. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. D. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability.

Answer: D. Explanation: Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q21. Which statement correctly identifies Warehousing and inventory?

A. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. B. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. C. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. D. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback.

Answer: A. Explanation: Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q22. Which option preserves the risk or institutional boundary of Warehousing and inventory?

A. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. B. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. C. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. D. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured.

Answer: B. Explanation: Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q23. Which statement uses Warehousing and inventory without changing its hazard, mandate or status?

A. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. B. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. C. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. D. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance.

Answer: C. Explanation: Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q24. Which option avoids the standard UPSC close-option trap about Warehousing and inventory?

A. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. B. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. C. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. D. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment.

Answer: D. Explanation: Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q25. Which statement correctly identifies Transport and routing?

A. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. B. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. C. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. D. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback.

Answer: A. Explanation: Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q26. Which option preserves the risk or institutional boundary of Transport and routing?

A. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. B. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. C. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. D. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance.

Answer: B. Explanation: Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q27. Which statement uses Transport and routing without changing its hazard, mandate or status?

A. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. B. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. C. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. D. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.

Answer: C. Explanation: Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q28. Which option avoids the standard UPSC close-option trap about Transport and routing?

A. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. B. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. C. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. D. Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable.

Answer: D. Explanation: Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q29. Which statement correctly identifies Last-mile distribution?

A. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. B. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. C. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. D. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured.

Answer: A. Explanation: Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q30. Which option preserves the risk or institutional boundary of Last-mile distribution?

A. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. B. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. C. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. D. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured.

Answer: B. Explanation: Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q31. Which statement uses Last-mile distribution without changing its hazard, mandate or status?

A. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. B. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. C. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. D. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.

Answer: C. Explanation: Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q32. Which option avoids the standard UPSC close-option trap about Last-mile distribution?

A. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. B. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. C. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. D. Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback.

Answer: D. Explanation: Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q33. Which statement correctly identifies Information and coordination?

A. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. B. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. C. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. D. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.

Answer: A. Explanation: A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q34. Which option preserves the risk or institutional boundary of Information and coordination?

A. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. B. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. C. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. D. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion.

Answer: B. Explanation: A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q35. Which statement uses Information and coordination without changing its hazard, mandate or status?

A. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. B. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. C. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. D. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.

Answer: C. Explanation: A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q36. Which option avoids the standard UPSC close-option trap about Information and coordination?

A. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. B. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. C. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. D. A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance.

Answer: D. Explanation: A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q37. Which statement correctly identifies Cash versus in-kind?

A. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. B. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. C. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. D. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.

Answer: A. Explanation: Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q38. Which option preserves the risk or institutional boundary of Cash versus in-kind?

A. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. B. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. C. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. D. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion.

Answer: B. Explanation: Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q39. Which statement uses Cash versus in-kind without changing its hazard, mandate or status?

A. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. B. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. C. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. D. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure.

Answer: C. Explanation: Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q40. Which option avoids the standard UPSC close-option trap about Cash versus in-kind?

A. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. B. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. C. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. D. Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured.

Answer: D. Explanation: Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q41. Which statement correctly identifies Shelter WASH health and protection?

A. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. B. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. C. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. D. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion.

Answer: A. Explanation: Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q42. Which option preserves the risk or institutional boundary of Shelter WASH health and protection?

A. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. B. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. C. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. D. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure.

Answer: B. Explanation: Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q43. Which statement uses Shelter WASH health and protection without changing its hazard, mandate or status?

A. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. B. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. C. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. D. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk.

Answer: C. Explanation: Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q44. Which option avoids the standard UPSC close-option trap about Shelter WASH health and protection?

A. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. B. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. C. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. D. Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context.

Answer: D. Explanation: Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q45. Which statement correctly identifies Protection and inclusion?

A. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. B. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. C. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. D. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion.

Answer: A. Explanation: Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q46. Which option preserves the risk or institutional boundary of Protection and inclusion?

A. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. B. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. C. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. D. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure.

Answer: B. Explanation: Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q47. Which statement uses Protection and inclusion without changing its hazard, mandate or status?

A. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. B. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. C. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. D. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk.

Answer: C. Explanation: Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q48. Which option avoids the standard UPSC close-option trap about Protection and inclusion?

A. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. B. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. C. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. D. Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.

Answer: D. Explanation: Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q49. Which statement correctly identifies Grievance and anti-diversion controls?

A. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. B. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. C. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. D. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution.

Answer: A. Explanation: Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q50. Which option preserves the risk or institutional boundary of Grievance and anti-diversion controls?

A. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. B. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. C. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. D. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints.

Answer: B. Explanation: Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q51. Which statement uses Grievance and anti-diversion controls without changing its hazard, mandate or status?

A. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. B. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. C. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. D. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery.

Answer: C. Explanation: Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q52. Which option avoids the standard UPSC close-option trap about Grievance and anti-diversion controls?

A. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. B. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. C. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. D. Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion.

Answer: D. Explanation: Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q53. Which statement correctly identifies Livelihood restoration?

A. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. B. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. C. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. D. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints.

Answer: A. Explanation: Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q54. Which option preserves the risk or institutional boundary of Livelihood restoration?

A. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. B. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. C. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. D. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery.

Answer: B. Explanation: Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q55. Which statement uses Livelihood restoration without changing its hazard, mandate or status?

A. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. B. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. C. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. D. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints.

Answer: C. Explanation: Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q56. Which option avoids the standard UPSC close-option trap about Livelihood restoration?

A. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. B. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. C. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. D. Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure.

Answer: D. Explanation: Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q57. Which statement correctly identifies Displacement and durable solutions?

A. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. B. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. C. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. D. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk.

Answer: A. Explanation: Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q58. Which option preserves the risk or institutional boundary of Displacement and durable solutions?

A. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. B. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. C. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. D. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints.

Answer: B. Explanation: Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q59. Which statement uses Displacement and durable solutions without changing its hazard, mandate or status?

A. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. B. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. C. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. D. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery.

Answer: C. Explanation: Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q60. Which option avoids the standard UPSC close-option trap about Displacement and durable solutions?

A. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. B. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. C. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. D. Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution.

Answer: D. Explanation: Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q61. Which statement correctly identifies Debris and environmental recovery?

A. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. B. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. C. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. D. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery.

Answer: A. Explanation: Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q62. Which option preserves the risk or institutional boundary of Debris and environmental recovery?

A. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. B. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. C. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. D. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster.

Answer: B. Explanation: Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q63. Which statement uses Debris and environmental recovery without changing its hazard, mandate or status?

A. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. B. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. C. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. D. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence.

Answer: C. Explanation: Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q64. Which option avoids the standard UPSC close-option trap about Debris and environmental recovery?

A. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. B. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. C. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. D. Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk.

Answer: D. Explanation: Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q65. Which statement correctly identifies Recovery sequencing?

A. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. B. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. C. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. D. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery.

Answer: A. Explanation: Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q66. Which option preserves the risk or institutional boundary of Recovery sequencing?

A. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. B. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. C. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. D. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence.

Answer: B. Explanation: Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q67. Which statement uses Recovery sequencing without changing its hazard, mandate or status?

A. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. B. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. C. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. D. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases.

Answer: C. Explanation: Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q68. Which option avoids the standard UPSC close-option trap about Recovery sequencing?

A. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. B. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. C. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. D. Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints.

Answer: D. Explanation: Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q69. Which statement correctly identifies Incident coordination and handover?

A. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. B. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. C. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. D. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster.

Answer: A. Explanation: India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q70. Which option preserves the risk or institutional boundary of Incident coordination and handover?

A. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. B. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. C. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. D. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence.

Answer: B. Explanation: India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q71. Which statement uses Incident coordination and handover without changing its hazard, mandate or status?

A. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. B. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. C. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. D. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.

Answer: C. Explanation: India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q72. Which option avoids the standard UPSC close-option trap about Incident coordination and handover?

A. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. B. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. C. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. D. India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery.

Answer: D. Explanation: India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q73. Which statement correctly identifies Build Back Better?

A. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. B. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. C. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. D. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases.

Answer: A. Explanation: Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q74. Which option preserves the risk or institutional boundary of Build Back Better?

A. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. B. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. C. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. D. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.

Answer: B. Explanation: Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q75. Which statement uses Build Back Better without changing its hazard, mandate or status?

A. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. B. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. C. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. D. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.

Answer: C. Explanation: Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q76. Which option avoids the standard UPSC close-option trap about Build Back Better?

A. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. B. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. C. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. D. Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster.

Answer: D. Explanation: Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q77. Which statement correctly identifies Delivery-outcome firewall?

A. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. B. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. C. Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. D. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.

Answer: A. Explanation: A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q78. Which option preserves the risk or institutional boundary of Delivery-outcome firewall?

A. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. B. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. C. A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. D. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks.

Answer: B. Explanation: A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q79. Which statement uses Delivery-outcome firewall without changing its hazard, mandate or status?

A. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. B. Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. C. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. D. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks.

Answer: C. Explanation: A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q80. Which option avoids the standard UPSC close-option trap about Delivery-outcome firewall?

A. Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. B. Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. C. Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. D. A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence.

Answer: D. Explanation: A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

PYQS AND ANSWER PRACTICE

AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

No audited 2024-2025 GS-III question directly owns humanitarian logistics. The 2020 proactive-management and 2024 resilience questions are bounded support routes; the 2024 urban-flood card is a hazard-specific application.

PYQ DEMAND CARD 1 - 2020 GS-III

Demand: Discuss the shift from reactive to proactive disaster management in India.

Status: Verified adjacent route: pre-positioning, preparedness, supply planning and accountable handover demonstrate proactivity without claiming that response outcomes are assured.

Model solution: Needs assessment: A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.

Preparedness and pre-positioning: Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. **Procurement:** Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive

accountability. **Warehousing and inventory:** Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. **Transport and routing:** Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. **Last-mile distribution:** Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. **Information and coordination:** A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. **Incident coordination and handover:** India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. **Delivery-outcome firewall:** A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

PYQ DEMAND CARD 2 - 2024 GS-III

Demand: Describe disaster resilience, how it is determined and the elements of the Sendai Framework.

Status: Verified support route: continuity, inclusive relief, livelihood recovery and Build Back Better illustrate resilience across response and recovery.

Model solution: Response relief rehabilitation reconstruction recovery: Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. **Needs assessment:** A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. **Shelter WASH health and protection:** Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. **Protection and inclusion:** Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. **Livelihood restoration:** Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. **Displacement and durable solutions:** Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. **Recovery sequencing:** Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. **Build Back Better:** Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. **Delivery-outcome firewall:** A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

PYQ DEMAND CARD 3 - 2024 GS-III

Demand: Discuss urban flooding as a climate-induced disaster and the policies and frameworks in India that aim at tackling it.

Status: Verified cross-owned route led by Topic 08; this card contributes anticipatory logistics, shelters, WASH, last-mile access, debris and recovery sequencing.

Model solution: Needs assessment: A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. **Preparedness and pre-positioning:** Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. **Transport and routing:** Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may

not be the most reliable. **Last-mile distribution:** Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. **Information and coordination:** A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. **Shelter WASH health and protection:** Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. **Debris and environmental recovery:** Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. **Recovery sequencing:** Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. **Build Back Better:** Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. **Delivery-outcome firewall:** A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish response, relief, rehabilitation, reconstruction and recovery. Answer in about 150 words.

Model thesis: Claim: Response relief rehabilitation reconstruction recovery. **Named evidence/example:** Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases.

Analysis: This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Recovery sequencing. **Named evidence/example:** Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints.

Analysis: This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident coordination and handover. **Named evidence/example:** India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Build Back Better. **Named evidence/example:** Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases.
- Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints.
- India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery.
- Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster.

Qualified conclusion: Claim: Response relief rehabilitation reconstruction recovery. **Named evidence/example:** Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Recovery sequencing. **Named evidence/example:** Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident coordination and handover. **Named evidence/example:** India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Build Back Better. **Named evidence/example:** Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain humanitarian principles and grievance safeguards in relief distribution. Answer in about 150 words.

Model thesis: Claim: Humanitarian principles. **Named evidence/example:** Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Last-mile distribution. **Named evidence/example:** Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Protection and inclusion. **Named evidence/example:** Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Grievance and anti-diversion controls. **Named evidence/example:** Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision.
- Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback.

- Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.
- Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion.

Qualified conclusion: Claim: Humanitarian principles. **Named evidence/example:** Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Last-mile distribution. **Named evidence/example:** Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Protection and inclusion. **Named evidence/example:** Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Grievance and anti-diversion controls. **Named evidence/example:** Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 3 - 15 MARKS

Question: Analyse the humanitarian supply chain from needs assessment to last-mile receipt. Answer in about 250 words.

Model thesis: Claim: Needs assessment. **Named evidence/example:** A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness and pre-positioning. **Named evidence/example:** Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Procurement. **Named evidence/example:** Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Warehousing and inventory. **Named evidence/example:** Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Transport and routing. **Named evidence/example:** Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the

mandate-to-implementation-to-outcome boundary. **Claim:** Last-mile distribution. **Named evidence/example:** Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Information and coordination. **Named evidence/example:** A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.
- Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks.
- Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability.
- Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment.
- Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable.
- Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback.
- A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance.

Qualified conclusion: **Claim:** Needs assessment. **Named evidence/example:** A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness and pre-positioning. **Named evidence/example:** Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Procurement. **Named evidence/example:** Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Warehousing and inventory. **Named evidence/example:** Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Transport and routing. **Named evidence/example:** Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the

mandate-to-implementation-to-outcome boundary. **Claim:** Last-mile distribution. **Named evidence/example:** Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Information and coordination. **Named evidence/example:** A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 4 - 15 MARKS

Question: Evaluate cash and in-kind assistance across shelter, WASH, health and protection needs. Answer in about 250 words.

Model thesis: **Claim:** Cash versus in-kind. **Named evidence/example:** Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Shelter WASH health and protection. **Named evidence/example:** Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Protection and inclusion. **Named evidence/example:** Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Grievance and anti-diversion controls. **Named evidence/example:** Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured.
- Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context.
- Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.
- Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion.

Qualified conclusion: **Claim:** Cash versus in-kind. **Named evidence/example:** Cash can support choice and local markets where goods, access, prices, payments and protection conditions permit; in-kind aid is preferable where markets or payment systems fail or specific commodities must be assured. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Shelter WASH health and protection. **Named evidence/example:** Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent

minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Protection and inclusion. **Named evidence/example:** Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Grievance and anti-diversion controls. **Named evidence/example:** Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 5 - 20 MARKS

Question: Design an accountable humanitarian-logistics framework for a large multi-district disaster. Answer in about 300 words.

Model thesis: **Claim:** Needs assessment. **Named evidence/example:** A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Humanitarian principles. **Named evidence/example:** Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness and pre-positioning. **Named evidence/example:** Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Procurement. **Named evidence/example:** Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Warehousing and inventory. **Named evidence/example:** Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Transport and routing. **Named evidence/example:** Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Last-mile distribution. **Named evidence/example:** Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Information and coordination. **Named evidence/example:**

A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Shelter WASH health and protection. **Named evidence/example:** Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Protection and inclusion. **Named evidence/example:** Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Grievance and anti-diversion controls. **Named evidence/example:** Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Delivery-outcome firewall. **Named evidence/example:** A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete.
- Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision.
- Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks.
- Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability.
- Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment.
- Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable.
- Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback.
- A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance.
- Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context.
- Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels.
- Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion.

- A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence.

Qualified conclusion: **Claim:** Needs assessment. **Named evidence/example:** A rapid needs assessment identifies affected people, severity, priority needs, access constraints, local capacity and uncertainty; it must be updated because the first picture is incomplete. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Humanitarian principles. **Named evidence/example:** Humanity prioritises life and dignity, impartiality allocates by need without adverse distinction, neutrality avoids taking sides, and operational independence protects humanitarian objectives; each principle addresses a different decision. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness and pre-positioning. **Named evidence/example:** Forecast-based pre-positioning of trained teams, stocks, transport, shelters and communications can shorten response where lead time exists; readiness for sudden-onset hazards relies more on standing capacity and distributed stocks. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Procurement. **Named evidence/example:** Emergency procurement must balance speed, quality, price, local-market effects, conflict of interest, traceability and supplier reliability; waiving ordinary timelines does not waive accountability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Warehousing and inventory. **Named evidence/example:** Warehousing requires suitable location, hazard safety, stock rotation, batch and expiry control, inventory visibility, handling capacity, security and planned replenishment. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Transport and routing. **Named evidence/example:** Transport planning selects modes, hubs, routes and alternates using access, capacity, fuel, weather, security and infrastructure status; the fastest nominal route may not be the most reliable. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Last-mile distribution. **Named evidence/example:** Last-mile distribution converts bulk supply into safe, timely and accessible delivery through verified beneficiary information, transparent schedules, queue management, outreach and feedback. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Information and coordination. **Named evidence/example:** A common operating picture should distinguish verified needs, requests, commitments, dispatch, receipt and distribution while protecting personal data and preventing duplicate or uncovered assistance. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Shelter WASH health and protection. **Named evidence/example:** Shelter, water, sanitation and hygiene, health, nutrition and protection are interdependent minimum service domains; numerical standards should be cited only from the applicable verified guideline and context. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Protection and inclusion. **Named evidence/example:** Relief design must address gender-based violence, child protection, disability access, older people, separated families, documentation loss, trafficking risk, privacy and safe complaint channels. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Grievance and anti-diversion controls. **Named**

evidence/example: Public criteria, receipt and stock records, segregation of duties, spot checks, community monitoring, confidential complaints and corrective action reduce exclusion, duplication, theft and diversion. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Delivery-outcome firewall. **Named evidence/example:** A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 6 - 20 MARKS

Question: Critically examine recovery sequencing, livelihoods, displacement, debris and Build Back Better. Answer in about 300 words.

Model thesis: **Claim:** Response relief rehabilitation reconstruction recovery. **Named evidence/example:** Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Livelihood restoration. **Named evidence/example:** Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Displacement and durable solutions. **Named evidence/example:** Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Debris and environmental recovery. **Named evidence/example:** Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Recovery sequencing. **Named evidence/example:** Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident coordination and handover. **Named evidence/example:** India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Build Back Better. **Named evidence/example:** Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Delivery-outcome firewall. **Named evidence/example:** A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. **Analysis:** This fixes the hazard, risk or protection category,

institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases.
- Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure.
- Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution.
- Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk.
- Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints.
- India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery.
- Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster.
- A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence.

Qualified conclusion: Claim: Response relief rehabilitation reconstruction recovery. **Named evidence/example:**

Response is the immediate operational effort, relief meets urgent survival needs, rehabilitation restores basic functioning, reconstruction restores or replaces systems more fully, and recovery is the wider process across these phases. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Livelihood restoration. **Named evidence/example:** Livelihood recovery moves beyond consumption relief to restore assets, skills, credit, market access, public works, social protection and ecosystem dependence without recreating unsafe exposure. **Analysis:**

This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Displacement and durable solutions. **Named evidence/example:** Displaced people require protection and informed choice among safe return, local integration or relocation where applicable; a camp closure or physical return is not proof of a durable solution. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Debris and environmental recovery. **Named evidence/example:** Debris management should classify hazardous and reusable material, protect workers and communities, clear priority access, identify lawful sites and avoid shifting contamination or flood risk. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Recovery sequencing. **Named evidence/example:**

Recovery sequencing first protects life and continuity, then restores temporary services and livelihoods, and finally undertakes risk-informed reconstruction while resolving land, finance, environmental and institutional constraints. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident coordination and handover. **Named evidence/example:** India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident coordination and handover. **Named evidence/example:**

India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident coordination and handover. **Named evidence/example:**

India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident coordination and handover. **Named evidence/example:**

India's Incident Response System supports defined response roles and coordination, while the generic Incident Command System supplies a management model; emergency arrangements must hand over transparently to normal administration for longer recovery. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident coordination and handover. **Named evidence/example:**

institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Build Back Better. **Named evidence/example:** Build Back Better integrates risk reduction into recovery, rehabilitation and reconstruction through safer siting, standards, redundancy, livelihoods, ecosystems and governance rather than merely rebuilding faster. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Delivery-outcome firewall. **Named evidence/example:** A warehouse stock, dispatched truck, cash transfer, camp, guideline, team deployment or reconstruction sanction proves an input or transaction; receipt, adequacy, safety, inclusion, livelihood recovery and lower future risk need separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.
