

SOLVED PRACTICE WORKBOOK

Governance, Capacity and International Cooperation - Learner-v2 Refreshed

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Governance, Capacity and International Cooperation - Solved Practice Workbook 6

BASIC MCQS / REMEDIATION 6

Q1. Which statement correctly identifies Policy governance capacity coordination accountability?	6
Q2. Which option preserves the risk or institutional boundary of Policy governance capacity coordination accountability?	6
Q3. Which statement uses Policy governance capacity coordination accountability without changing its hazard, mandate or status?	6
Q4. Which option avoids the standard UPSC close-option trap about Policy governance capacity coordination accountability?	7
Q5. Which statement correctly identifies Centre State local architecture?	7
Q6. Which option preserves the risk or institutional boundary of Centre State local architecture?	7
Q7. Which statement uses Centre State local architecture without changing its hazard, mandate or status?	7
Q8. Which option avoids the standard UPSC close-option trap about Centre State local architecture?	8
Q9. Which statement correctly identifies Whole-of-society?	8
Q10. Which option preserves the risk or institutional boundary of Whole-of-society?	8
Q11. Which statement uses Whole-of-society without changing its hazard, mandate or status?	9
Q12. Which option avoids the standard UPSC close-option trap about Whole-of-society?	9
Q13. Which statement correctly identifies Plan-to-capability gap?	9
Q14. Which option preserves the risk or institutional boundary of Plan-to-capability gap?	9
Q15. Which statement uses Plan-to-capability gap without changing its hazard, mandate or status?	10
Q16. Which option avoids the standard UPSC close-option trap about Plan-to-capability gap?	10
Q17. Which statement correctly identifies Preparedness exercises?	10
Q18. Which option preserves the risk or institutional boundary of Preparedness exercises?	11
Q19. Which statement uses Preparedness exercises without changing its hazard, mandate or status?	11
Q20. Which option avoids the standard UPSC close-option trap about Preparedness exercises?	11
Q21. Which statement correctly identifies Training and capacity development?	11
Q22. Which option preserves the risk or institutional boundary of Training and capacity development?	12
Q23. Which statement uses Training and capacity development without changing its hazard, mandate or status?	12
Q24. Which option avoids the standard UPSC close-option trap about Training and capacity development?	12
Q25. Which statement correctly identifies Incident command governance?	13
Q26. Which option preserves the risk or institutional boundary of Incident command governance?	13

Q27. Which statement uses Incident command governance without changing its hazard, mandate or status?	13
Q28. Which option avoids the standard UPSC close-option trap about Incident command governance?	13
Q29. Which statement correctly identifies Coordination and interoperability?	14
Q30. Which option preserves the risk or institutional boundary of Coordination and interoperability?	14
Q31. Which statement uses Coordination and interoperability without changing its hazard, mandate or status?	14
Q32. Which option avoids the standard UPSC close-option trap about Coordination and interoperability?	15
Q33. Which statement correctly identifies Data learning and audit?	15
Q34. Which option preserves the risk or institutional boundary of Data learning and audit?	15
Q35. Which statement uses Data learning and audit without changing its hazard, mandate or status?	15
Q36. Which option avoids the standard UPSC close-option trap about Data learning and audit?	16
Q37. Which statement correctly identifies Accountability chain?	16
Q38. Which option preserves the risk or institutional boundary of Accountability chain?	16
Q39. Which statement uses Accountability chain without changing its hazard, mandate or status?	17
Q40. Which option avoids the standard UPSC close-option trap about Accountability chain?	17
Q41. Which statement correctly identifies Sendai Framework?	17
Q42. Which option preserves the risk or institutional boundary of Sendai Framework?	17
Q43. Which statement uses Sendai Framework without changing its hazard, mandate or status?	18
Q44. Which option avoids the standard UPSC close-option trap about Sendai Framework?	18
Q45. Which statement correctly identifies UNDRR and GPDRR?	18
Q46. Which option preserves the risk or institutional boundary of UNDRR and GPDRR?	19
Q47. Which statement uses UNDRR and GPDRR without changing its hazard, mandate or status?	19
Q48. Which option avoids the standard UPSC close-option trap about UNDRR and GPDRR?	19
Q49. Which statement correctly identifies CDRI?	19
Q50. Which option preserves the risk or institutional boundary of CDRI?	20
Q51. Which statement uses CDRI without changing its hazard, mandate or status?	20
Q52. Which option avoids the standard UPSC close-option trap about CDRI?	20
Q53. Which statement correctly identifies Regional cooperation?	21
Q54. Which option preserves the risk or institutional boundary of Regional cooperation?	21
Q55. Which statement uses Regional cooperation without changing its hazard, mandate or status?	21
Q56. Which option avoids the standard UPSC close-option trap about Regional cooperation?	21
Q57. Which statement correctly identifies International assistance legal status?	22
Q58. Which option preserves the risk or institutional boundary of International assistance legal status?	22

Q59. Which statement uses International assistance legal status without changing its hazard, mandate or status?	22
Q60. Which option avoids the standard UPSC close-option trap about International assistance legal status?	23
Q61. Which statement correctly identifies Sovereignty and humanitarian diplomacy?	23
Q62. Which option preserves the risk or institutional boundary of Sovereignty and humanitarian diplomacy?	23
Q63. Which statement uses Sovereignty and humanitarian diplomacy without changing its hazard, mandate or status?	24
Q64. Which option avoids the standard UPSC close-option trap about Sovereignty and humanitarian diplomacy?	24
Q65. Which statement correctly identifies Localisation?	24
Q66. Which option preserves the risk or institutional boundary of Localisation?	25
Q67. Which statement uses Localisation without changing its hazard, mandate or status?	25
Q68. Which option avoids the standard UPSC close-option trap about Localisation?	25
Q69. Which statement correctly identifies Knowledge and technology cooperation?	25
Q70. Which option preserves the risk or institutional boundary of Knowledge and technology cooperation?	26
Q71. Which statement uses Knowledge and technology cooperation without changing its hazard, mandate or status?	26
Q72. Which option avoids the standard UPSC close-option trap about Knowledge and technology cooperation?	26
Q73. Which statement correctly identifies Agreement implementation outcome ladder?	27
Q74. Which option preserves the risk or institutional boundary of Agreement implementation outcome ladder?	27
Q75. Which statement uses Agreement implementation outcome ladder without changing its hazard, mandate or status? . . .	27
Q76. Which option avoids the standard UPSC close-option trap about Agreement implementation outcome ladder?	28
Q77. Which statement correctly identifies Governance-outcome firewall?	28
Q78. Which option preserves the risk or institutional boundary of Governance-outcome firewall?	28
Q79. Which statement uses Governance-outcome firewall without changing its hazard, mandate or status?	28
Q80. Which option avoids the standard UPSC close-option trap about Governance-outcome firewall?	29

Governance, Capacity and International Cooperation - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Policy governance capacity coordination accountability?

A. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. B. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. C. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. D. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning.

Answer: A. Explanation: Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q2. Which option preserves the risk or institutional boundary of Policy governance capacity coordination accountability?

A. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. B. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. C. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. D. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Answer: B. Explanation: Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q3. Which statement uses Policy governance capacity coordination accountability without changing its hazard, mandate or status?

A. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. B. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. C. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. D. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected.

Answer: C. Explanation: Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q4. Which option avoids the standard UPSC close-option trap about Policy governance capacity coordination accountability?

A. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. B. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. C. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. D. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable.

Answer: D. Explanation: Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q5. Which statement correctly identifies Centre State local architecture?

A. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. B. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. C. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. D. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Answer: A. Explanation: The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q6. Which option preserves the risk or institutional boundary of Centre State local architecture?

A. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. B. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. C. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. D. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention.

Answer: B. Explanation: The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q7. Which statement uses Centre State local architecture without changing its hazard, mandate or status?

A. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. B. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. C. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. D. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention.

Answer: C. Explanation: The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q8. Which option avoids the standard UPSC close-option trap about Centre State local architecture?

A. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. B. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. C. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. D. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards.

Answer: D. Explanation: The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q9. Which statement correctly identifies Whole-of-society?

A. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. B. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. C. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. D. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention.

Answer: A. Explanation: Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q10. Which option preserves the risk or institutional boundary of Whole-of-society?

A. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. B. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. C. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. D. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific.

Answer: B. Explanation: Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q11. Which statement uses Whole-of-society without changing its hazard, mandate or status?

A. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. B. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. C. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. D. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.

Answer: C. Explanation: Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q12. Which option avoids the standard UPSC close-option trap about Whole-of-society?

A. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. B. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. C. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. D. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Answer: D. Explanation: Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q13. Which statement correctly identifies Plan-to-capability gap?

A. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. B. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. C. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. D. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected.

Answer: A. Explanation: A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q14. Which option preserves the risk or institutional boundary of Plan-to-capability gap?

A. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. B. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. C. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. D. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention.

Answer: B. Explanation: A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. The other options change the hazard or risk category, institutional

owner, legal instrument, warning stage, evidence rung or implementation status.

Q15. Which statement uses Plan-to-capability gap without changing its hazard, mandate or status?

A. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. B. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. C. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. D. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific.

Answer: C. Explanation: A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q16. Which option avoids the standard UPSC close-option trap about Plan-to-capability gap?

A. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. B. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. C. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. D. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning.

Answer: D. Explanation: A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q17. Which statement correctly identifies Preparedness exercises?

A. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. B. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. C. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. D. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.

Answer: A. Explanation: Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q18. Which option preserves the risk or institutional boundary of Preparedness exercises?

A. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. B. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. C. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. D. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented.

Answer: B. Explanation: Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q19. Which statement uses Preparedness exercises without changing its hazard, mandate or status?

A. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. B. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. C. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. D. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Answer: C. Explanation: Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q20. Which option avoids the standard UPSC close-option trap about Preparedness exercises?

A. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. C. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. D. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected.

Answer: D. Explanation: Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q21. Which statement correctly identifies Training and capacity development?

A. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. B. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. C. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. D. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.

Answer: A. Explanation: Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. The other

options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q22. Which option preserves the risk or institutional boundary of Training and capacity development?

A. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. B. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. C. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. D. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.

Answer: B. Explanation: Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q23. Which statement uses Training and capacity development without changing its hazard, mandate or status?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. B. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. C. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. D. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Answer: C. Explanation: Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q24. Which option avoids the standard UPSC close-option trap about Training and capacity development?

A. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. B. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. C. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. D. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention.

Answer: D. Explanation: Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q25. Which statement correctly identifies Incident command governance?

A. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. B. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. C. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. D. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented.

Answer: A. Explanation: Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q26. Which option preserves the risk or institutional boundary of Incident command governance?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. B. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. C. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. D. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Answer: B. Explanation: Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q27. Which statement uses Incident command governance without changing its hazard, mandate or status?

A. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. C. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. D. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body.

Answer: C. Explanation: Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q28. Which option avoids the standard UPSC close-option trap about Incident command governance?

A. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. C. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. D. Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level;

tactical details remain context-specific.

Answer: D. Explanation: Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q29. Which statement correctly identifies Coordination and interoperability?

A. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. C. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. D. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented.

Answer: A. Explanation: Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q30. Which option preserves the risk or institutional boundary of Coordination and interoperability?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. B. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. C. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. D. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Answer: B. Explanation: Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q31. Which statement uses Coordination and interoperability without changing its hazard, mandate or status?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. B. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. C. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. D. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body.

Answer: C. Explanation: Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q32. Which option avoids the standard UPSC close-option trap about Coordination and interoperability?

A. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. B. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. C. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. D. Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.

Answer: D. Explanation: Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q33. Which statement correctly identifies Data learning and audit?

A. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. B. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. C. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. D. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body.

Answer: A. Explanation: Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q34. Which option preserves the risk or institutional boundary of Data learning and audit?

A. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. B. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. C. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. D. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations.

Answer: B. Explanation: Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q35. Which statement uses Data learning and audit without changing its hazard, mandate or status?

A. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. B. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. C. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. D. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or

membership demonstrates a cooperation platform, not resilient assets or reduced losses.

Answer: C. Explanation: Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q36. Which option avoids the standard UPSC close-option trap about Data learning and audit?

A. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. B. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. C. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. D. Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented.

Answer: D. Explanation: Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q37. Which statement correctly identifies Accountability chain?

A. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. B. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. C. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. D. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations.

Answer: A. Explanation: Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q38. Which option preserves the risk or institutional boundary of Accountability chain?

A. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. B. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. C. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. D. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence.

Answer: B. Explanation: Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q39. Which statement uses Accountability chain without changing its hazard, mandate or status?

A. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. B. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. C. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. D. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses.

Answer: C. Explanation: Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q40. Which option avoids the standard UPSC close-option trap about Accountability chain?

A. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. B. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. C. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. D. Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Answer: D. Explanation: Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q41. Which statement correctly identifies Sendai Framework?

A. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. B. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. C. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. D. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body.

Answer: A. Explanation: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q42. Which option preserves the risk or institutional boundary of Sendai Framework?

A. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. B. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. C. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. D. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses.

Answer: B. Explanation: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q43. Which statement uses Sendai Framework without changing its hazard, mandate or status?

A. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. B. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. C. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. D. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access.

Answer: C. Explanation: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q44. Which option avoids the standard UPSC close-option trap about Sendai Framework?

A. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. B. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. C. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. D. The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations.

Answer: D. Explanation: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q45. Which statement correctly identifies UNDRR and GPDRR?

A. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. B. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. C. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. D. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence.

Answer: A. Explanation: UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q46. Which option preserves the risk or institutional boundary of UNDRR and GPDRR?

A. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. B. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. C. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. D. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access.

Answer: B. Explanation: UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q47. Which statement uses UNDRR and GPDRR without changing its hazard, mandate or status?

A. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. B. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. C. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. D. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access.

Answer: C. Explanation: UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q48. Which option avoids the standard UPSC close-option trap about UNDRR and GPDRR?

A. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. B. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. C. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. D. UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body.

Answer: D. Explanation: UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q49. Which statement correctly identifies CDRI?

A. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. B. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. C. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. D. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence.

Answer: A. Explanation: The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q50. Which option preserves the risk or institutional boundary of CDRI?

A. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. B. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. C. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. D. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access.

Answer: B. Explanation: The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q51. Which statement uses CDRI without changing its hazard, mandate or status?

A. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. B. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. C. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. D. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites.

Answer: C. Explanation: The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q52. Which option avoids the standard UPSC close-option trap about CDRI?

A. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. B. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. C. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. D. The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses.

Answer: D. Explanation: The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q53. Which statement correctly identifies Regional cooperation?

A. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. B. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. C. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. D. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access.

Answer: A. Explanation: SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q54. Which option preserves the risk or institutional boundary of Regional cooperation?

A. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. B. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. C. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. D. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites.

Answer: B. Explanation: SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q55. Which statement uses Regional cooperation without changing its hazard, mandate or status?

A. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. B. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. C. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. D. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung.

Answer: C. Explanation: SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q56. Which option avoids the standard UPSC close-option trap about Regional cooperation?

A. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. B. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. C. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. D. SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence.

Answer: D. Explanation: SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q57. Which statement correctly identifies International assistance legal status?

A. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. B. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. C. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. D. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability.

Answer: A. Explanation: International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q58. Which option preserves the risk or institutional boundary of International assistance legal status?

A. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. B. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. C. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. D. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity.

Answer: B. Explanation: International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q59. Which statement uses International assistance legal status without changing its hazard, mandate or status?

A. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. B. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. C. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. D. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence.

Answer: C. Explanation: International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q60. Which option avoids the standard UPSC close-option trap about International assistance legal status?

A. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. B. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. C. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. D. International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access.

Answer: D. Explanation: International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q61. Which statement correctly identifies Sovereignty and humanitarian diplomacy?

A. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. B. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. C. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. D. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability.

Answer: A. Explanation: Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q62. Which option preserves the risk or institutional boundary of Sovereignty and humanitarian diplomacy?

A. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. B. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. C. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. D. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung.

Answer: B. Explanation: Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q63. Which statement uses Sovereignty and humanitarian diplomacy without changing its hazard, mandate or status?

A. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. B. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. C. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. D. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable.

Answer: C. Explanation: Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q64. Which option avoids the standard UPSC close-option trap about Sovereignty and humanitarian diplomacy?

A. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. B. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. C. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. D. Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites.

Answer: D. Explanation: Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q65. Which statement correctly identifies Localisation?

A. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. B. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. C. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. D. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung.

Answer: A. Explanation: Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q66. Which option preserves the risk or institutional boundary of Localisation?

A. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. B. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. C. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. D. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung.

Answer: B. Explanation: Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q67. Which statement uses Localisation without changing its hazard, mandate or status?

A. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. B. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. C. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. D. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence.

Answer: C. Explanation: Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q68. Which option avoids the standard UPSC close-option trap about Localisation?

A. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. B. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. C. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. D. Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity.

Answer: D. Explanation: Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q69. Which statement correctly identifies Knowledge and technology cooperation?

A. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. B. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. C. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. D. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable.

Answer: A. Explanation: Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q70. Which option preserves the risk or institutional boundary of Knowledge and technology cooperation?

A. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. B. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. C. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. D. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable.

Answer: B. Explanation: Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q71. Which statement uses Knowledge and technology cooperation without changing its hazard, mandate or status?

A. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. B. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. C. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. D. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Answer: C. Explanation: Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q72. Which option avoids the standard UPSC close-option trap about Knowledge and technology cooperation?

A. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. B. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. C. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. D. Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability.

Answer: D. Explanation: Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q73. Which statement correctly identifies Agreement implementation outcome ladder?

A. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. B. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. C. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. D. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence.

Answer: A. Explanation: Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q74. Which option preserves the risk or institutional boundary of Agreement implementation outcome ladder?

A. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. B. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. C. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. D. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Answer: B. Explanation: Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q75. Which statement uses Agreement implementation outcome ladder without changing its hazard, mandate or status?

A. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. B. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. C. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. D. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Answer: C. Explanation: Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q76. Which option avoids the standard UPSC close-option trap about Agreement implementation outcome ladder?

A. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. B. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. C. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. D. Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung.

Answer: D. Explanation: Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q77. Which statement correctly identifies Governance-outcome firewall?

A. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. B. Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. C. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. D. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Answer: A. Explanation: A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q78. Which option preserves the risk or institutional boundary of Governance-outcome firewall?

A. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. B. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. C. The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. D. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Answer: B. Explanation: A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q79. Which statement uses Governance-outcome firewall without changing its hazard, mandate or status?

A. Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. B. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. C. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. D. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an

exercise validates only what was actually tested and corrected.

Answer: C. Explanation: A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

Q80. Which option avoids the standard UPSC close-option trap about Governance-outcome firewall?

A. Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. B. Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. C. A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. D. A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence.

Answer: D. Explanation: A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. The other options change the hazard or risk category, institutional owner, legal instrument, warning stage, evidence rung or implementation status.

PYQS AND ANSWER PRACTICE

AUDITED TOPIC-SPECIFIC PYQ OWNERSHIP

The 2018 Hyogo-Sendai question and 2024 resilience question are verified direct framework routes, with Topic 01 retaining primary ownership. The 2020 reactive-to-proactive question is a bounded domestic-governance application.

PYQ DEMAND CARD 1 - 2018 GS-III

Demand: Describe measures taken in India for disaster risk reduction before and after the Sendai Framework and explain how Sendai differs from Hyogo.

Status: Verified direct framework route owned by Topic 01 but central to this governance topic; preserve the comparative demand and voluntary-framework boundary.

Model solution: Policy governance capacity coordination accountability: Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. **Centre State local architecture:** The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards.

Plan-to-capability gap: A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Data learning and audit:** Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. **Accountability chain:** Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. **Sendai Framework:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. **UNDRR and GPDRR:** UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. **Agreement implementation outcome ladder:** Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. **Governance-outcome firewall:** A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity;

preparedness, coordination quality, local capability and reduced loss require separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

PYQ DEMAND CARD 2 - 2024 GS-III

Demand: Describe disaster resilience, how it is determined and the elements of the Sendai Framework.

Status: Verified direct support route: governance, capacity, accountability and international cooperation operationalise resilience while all seven targets remain Topic 01-owned.

Model solution: Policy governance capacity coordination accountability: Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. **Centre State local architecture:** The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards.

Plan-to-capability gap: A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Preparedness exercises:** Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected.

Training and capacity development: Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention.

Data learning and audit: Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented.

Accountability chain: Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Sendai Framework: The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations.

Agreement implementation outcome ladder: Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. **Governance-outcome firewall:** A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

PYQ DEMAND CARD 3 - 2020 GS-III

Demand: Discuss the shift from reactive to proactive disaster management in India.

Status: Verified adjacent governance route: plans, capacity, exercises, data, accountability and local roles demonstrate proactivity without inferring implementation outcomes.

Model solution: Policy governance capacity coordination accountability: Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. **Centre State local architecture:** The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards.

Whole-of-society: Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. **Plan-to-capability gap:** A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Preparedness exercises:** Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. **Training and capacity development:** Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. **Coordination and interoperability:** Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.

Data learning and audit: Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented.

Accountability chain: Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Governance-outcome firewall: A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. The solution therefore answers the routed demand without inventing an official model answer or an objective answer key.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish policy, governance, capacity, coordination and accountability in disaster management. Answer in about 150 words.

Model thesis: Claim: Policy governance capacity coordination accountability. **Named evidence/example:** Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Plan-to-capability gap. **Named evidence/example:** A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Coordination and interoperability. **Named evidence/example:** Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountability chain. **Named evidence/example:** Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable.
- A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning.
- Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.
- Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Qualified conclusion: Claim: Policy governance capacity coordination accountability. **Named evidence/example:** Policy sets direction, governance allocates authority and rules, capacity enables performance, coordination aligns actors, and accountability tests duty and results; the five terms are related but not interchangeable. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Plan-to-capability gap. **Named evidence/example:** A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Coordination and interoperability. **Named**

evidence/example: Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountability chain. **Named evidence/example:** Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 2 - 10 MARKS

Question: Explain the plan-to-capability gap and the role of exercises and training. Answer in about 150 words.

Model thesis: Claim: Plan-to-capability gap. **Named evidence/example:** A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness exercises. **Named evidence/example:** Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Training and capacity development. **Named evidence/example:** Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident command governance. **Named evidence/example:** Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning.
- Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected.
- Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention.
- Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific.

Qualified conclusion: Claim: Plan-to-capability gap. **Named evidence/example:** A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness exercises. **Named evidence/example:** Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. **Analysis:** This fixes the hazard, risk or

protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Training and capacity development. **Named**

evidence/example: Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident command governance. **Named**

evidence/example: Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 3 - 15 MARKS

Question: Analyse Centre-State-local and whole-of-society roles in disaster governance. Answer in about 250 words.

Model thesis: Claim: Centre State local architecture. **Named evidence/example:** The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Whole-of-society. **Named evidence/example:**

Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.

Analysis: This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Coordination and interoperability. **Named**

evidence/example: Coordination requires shared terminology, contact routes, data standards, mutual-aid

procedures, interoperable communications and clear lead/support roles before an incident. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Data learning and audit. **Named evidence/example:** Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountability chain. **Named evidence/example:**

Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards.
- Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability.
- Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.
- Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented.

- Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.

Qualified conclusion: Claim: Centre State local architecture. **Named evidence/example:** The Union, States, districts, urban and rural local bodies and line departments hold differentiated legal, fiscal and operational responsibilities; subsidiarity should place action close to risk while preserving support and standards. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Whole-of-society. **Named evidence/example:** Whole-of-society disaster management includes government, communities, civil society, volunteers, academia, media, private operators and critical-service providers, but participation does not dilute public accountability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Coordination and interoperability. **Named evidence/example:** Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Data learning and audit. **Named evidence/example:** Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountability chain. **Named evidence/example:** Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 4 - 15 MARKS

Question: Examine Sendai, UNDRR, GPDRR and CDRI through their distinct governance functions. Answer in about 250 words.

Model thesis: Claim: Sendai Framework. **Named evidence/example:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** UNDRR and GPDRR. **Named evidence/example:** UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** CDRI. **Named evidence/example:** The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Agreement implementation outcome ladder. **Named evidence/example:** Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations.
- UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body.
- The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses.
- Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung.

Qualified conclusion: **Claim:** Sendai Framework. **Named evidence/example:** The Sendai Framework for Disaster Risk Reduction 2015-2030 is a voluntary non-binding framework with four priorities and seven global targets; it does not itself create enforceable treaty obligations. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** UNDRR and GPDRR. **Named evidence/example:** UNDRR coordinates the UN disaster-risk-reduction agenda, while the Global Platform supports review and knowledge exchange; neither substitutes for national law or acts as a binding enforcement body. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** CDRI. **Named evidence/example:** The Coalition for Disaster Resilient Infrastructure supports cooperation on infrastructure risk, standards, finance and recovery; participation or membership demonstrates a cooperation platform, not resilient assets or reduced losses. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Agreement implementation outcome ladder. **Named evidence/example:** Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 5 - 20 MARKS

Question: Design an accountable capacity-development system using interoperability, exercises, data, audit and corrective learning. Answer in about 300 words.

Model thesis: **Claim:** Plan-to-capability gap. **Named evidence/example:** A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness exercises. **Named evidence/example:** Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Training and capacity development. **Named evidence/example:** Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident command governance. **Named evidence/example:** Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. **Analysis:**

This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Coordination and interoperability. **Named evidence/example:** Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Data learning and audit. **Named evidence/example:** Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountability chain. **Named evidence/example:** Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Governance-outcome firewall. **Named evidence/example:** A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning.
- Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected.
- Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention.
- Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific.
- Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident.
- Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented.
- Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame.
- A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence.

Qualified conclusion: Claim: Plan-to-capability gap. **Named evidence/example:** A plan proves documented intent; capability additionally requires trained people, usable procedures, equipment, interoperable communications, finance, authority, exercises, maintenance and evidence of corrective learning. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Preparedness exercises. **Named evidence/example:** Exercises test assumptions, roles, communications, resource mobilisation and decision thresholds in a controlled setting; an exercise validates only what was actually tested and corrected. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the

mandate-to-implementation-to-outcome boundary. **Claim:** Training and capacity development. **Named evidence/example:** Training builds knowledge and skill, but capability requires appropriate selection, refresher cycles, supervision, equipment, deployment opportunity and institutional retention. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Incident command governance. **Named evidence/example:** Incident command or response arrangements should define leadership, operations, planning, logistics, finance and information at an exam-safe governance level; tactical details remain context-specific. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Coordination and interoperability. **Named evidence/example:** Coordination requires shared terminology, contact routes, data standards, mutual-aid procedures, interoperable communications and clear lead/support roles before an incident. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Data learning and audit. **Named evidence/example:** Risk, loss, expenditure, exercise and after-action data should support transparent review, correction and institutional memory; a database or report is not proof that recommendations were implemented. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Accountability chain. **Named evidence/example:** Accountability links assigned duty, resources, standards, reporting, independent or legislative review, grievance and corrective action; coordination without identifiable responsibility can create diffusion of blame. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Governance-outcome firewall. **Named evidence/example:** A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

ORIGINAL MAINS 6 - 20 MARKS

Question: Critically evaluate regional and international disaster cooperation through sovereignty, localisation and the agreement-to-outcome ladder. Answer in about 300 words.

Model thesis: **Claim:** Regional cooperation. **Named evidence/example:** SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** International assistance legal status. **Named evidence/example:** International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sovereignty and humanitarian diplomacy. **Named evidence/example:** Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Localisation. **Named evidence/example:** Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. **Analysis:**

This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Knowledge and technology cooperation. **Named evidence/example:** Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Agreement implementation outcome ladder. **Named evidence/example:** Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Governance-outcome firewall. **Named evidence/example:** A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.

Claim -> named evidence -> analysis -> qualification:

- SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence.
- International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access.
- Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites.
- Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity.
- Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability.
- Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung.
- A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence.

Qualified conclusion: Claim: Regional cooperation. **Named evidence/example:** SAARC, BIMSTEC and other regional routes can support exercises, knowledge, warning, mutual assistance and common procedures, but an agreement, meeting or exercise is not implementation or outcome evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication.

Qualification: The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** International assistance legal status. **Named evidence/example:** International assistance is governed by the affected State's consent, domestic law, entry and customs arrangements, coordination structures and applicable agreements; a humanitarian offer does not create automatic access. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Sovereignty and humanitarian diplomacy. **Named evidence/example:** Humanitarian diplomacy seeks timely access, cooperation and protection while respecting sovereignty, consent and national leadership; these principles must be balanced rather than presented as opposites. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date,

institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Localisation. **Named evidence/example:** Localisation gives national and local responders meaningful leadership, resources, information and voice, while international actors provide requested surge, expertise or finance; proximity alone does not prove inclusion or capacity. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Knowledge and technology cooperation. **Named evidence/example:** Shared hazard data, standards, research, training and warning can be cooperation outputs, but interoperability, access, maintenance and local decision use determine whether they become capability. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Agreement implementation outcome ladder. **Named evidence/example:** Signing an agreement establishes a formal commitment, implementation shows operational action, outputs show delivered activities, and outcomes show changed capacity or risk; evidence must stop at the verified rung. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary. **Claim:** Governance-outcome firewall. **Named evidence/example:** A law, institution, plan, training, drill, summit, agreement, platform, database or membership proves its own existence or activity; preparedness, coordination quality, local capability and reduced loss require separate evidence. **Analysis:** This fixes the hazard, risk or protection category, institutional mandate and verified evidence rung before drawing the policy implication. **Qualification:** The conclusion retains the owner's date, institution, legal character and the mandate-to-implementation-to-outcome boundary.
