

SOLVED PRACTICE WORKBOOK

Growth, Development, HDI, IHDI and MPI - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Growth, Development, HDI, IHDI and MPI - Solved Practice Workbook 6

BASIC MCQS / REMEDIATION 6

Q1. Which statement correctly identifies Growth versus development?	6
Q2. Which option preserves the accounting or regulatory boundary of Growth versus development?	6
Q3. Which statement uses Growth versus development without losing its vintage, basket or legal status?	6
Q4. Which option avoids the standard UPSC close-option trap about Growth versus development?	6
Q5. Which statement correctly identifies Capability approach?	7
Q6. Which option preserves the accounting or regulatory boundary of Capability approach?	7
Q7. Which statement uses Capability approach without losing its vintage, basket or legal status?	7
Q8. Which option avoids the standard UPSC close-option trap about Capability approach?	7
Q9. Which statement correctly identifies HDI architecture?	8
Q10. Which option preserves the accounting or regulatory boundary of HDI architecture?	8
Q11. Which statement uses HDI architecture without losing its vintage, basket or legal status?	8
Q12. Which option avoids the standard UPSC close-option trap about HDI architecture?	8
Q13. Which statement correctly identifies IHDI inequality adjustment?	9
Q14. Which option preserves the accounting or regulatory boundary of IHDI inequality adjustment?	9
Q15. Which statement uses IHDI inequality adjustment without losing its vintage, basket or legal status?	9
Q16. Which option avoids the standard UPSC close-option trap about IHDI inequality adjustment?	9
Q17. Which statement correctly identifies MPI purpose?	10
Q18. Which option preserves the accounting or regulatory boundary of MPI purpose?	10
Q19. Which statement uses MPI purpose without losing its vintage, basket or legal status?	10
Q20. Which option avoids the standard UPSC close-option trap about MPI purpose?	10
Q21. Which statement correctly identifies Social capital?	11
Q22. Which option preserves the accounting or regulatory boundary of Social capital?	11
Q23. Which statement uses Social capital without losing its vintage, basket or legal status?	11
Q24. Which option avoids the standard UPSC close-option trap about Social capital?	11
Q25. Which statement correctly identifies Growth-resource channel?	12
Q26. Which option preserves the accounting or regulatory boundary of Growth-resource channel?	12
Q27. Which statement uses Growth-resource channel without losing its vintage, basket or legal status?	12

Q28. Which option avoids the standard UPSC close-option trap about Growth-resource channel?	12
Q29. Which statement correctly identifies Composition of growth?	13
Q30. Which option preserves the accounting or regulatory boundary of Composition of growth?	13
Q31. Which statement uses Composition of growth without losing its vintage, basket or legal status?	13
Q32. Which option avoids the standard UPSC close-option trap about Composition of growth?	13
Q33. Which statement correctly identifies Public-service conversion?	14
Q34. Which option preserves the accounting or regulatory boundary of Public-service conversion?	14
Q35. Which statement uses Public-service conversion without losing its vintage, basket or legal status?	14
Q36. Which option avoids the standard UPSC close-option trap about Public-service conversion?	14
Q37. Which statement correctly identifies Institutional division?	15
Q38. Which option preserves the accounting or regulatory boundary of Institutional division?	15
Q39. Which statement uses Institutional division without losing its vintage, basket or legal status?	15
Q40. Which option avoids the standard UPSC close-option trap about Institutional division?	15
Q41. Which statement correctly identifies Kerala-Bihar comparison?	16
Q42. Which option preserves the accounting or regulatory boundary of Kerala-Bihar comparison?	16
Q43. Which statement uses Kerala-Bihar comparison without losing its vintage, basket or legal status?	16
Q44. Which option avoids the standard UPSC close-option trap about Kerala-Bihar comparison?	16
Q45. Which statement correctly identifies National MPI targeting?	17
Q46. Which option preserves the accounting or regulatory boundary of National MPI targeting?	17
Q47. Which statement uses National MPI targeting without losing its vintage, basket or legal status?	17
Q48. Which option avoids the standard UPSC close-option trap about National MPI targeting?	17
Q49. Which statement correctly identifies Aspirational Districts lesson?	18
Q50. Which option preserves the accounting or regulatory boundary of Aspirational Districts lesson?	18
Q51. Which statement uses Aspirational Districts lesson without losing its vintage, basket or legal status?	18
Q52. Which option avoids the standard UPSC close-option trap about Aspirational Districts lesson?	18
Q53. Which statement correctly identifies MGNREGA conversion role?	19
Q54. Which option preserves the accounting or regulatory boundary of MGNREGA conversion role?	19
Q55. Which statement uses MGNREGA conversion role without losing its vintage, basket or legal status?	19
Q56. Which option avoids the standard UPSC close-option trap about MGNREGA conversion role?	19
Q57. Which statement correctly identifies Nutrition and schooling interventions?	20
Q58. Which option preserves the accounting or regulatory boundary of Nutrition and schooling interventions?	20
Q59. Which statement uses Nutrition and schooling interventions without losing its vintage, basket or legal status?	20

Q60. Which option avoids the standard UPSC close-option trap about Nutrition and schooling interventions?	21
Q61. Which statement correctly identifies Kudumbashree and SHGs?	21
Q62. Which option preserves the accounting or regulatory boundary of Kudumbashree and SHGs?	21
Q63. Which statement uses Kudumbashree and SHGs without losing its vintage, basket or legal status?	21
Q64. Which option avoids the standard UPSC close-option trap about Kudumbashree and SHGs?	22
Q65. Which statement correctly identifies MPI incidence?	22
Q66. Which option preserves the accounting or regulatory boundary of MPI incidence?	22
Q67. Which statement uses MPI incidence without losing its vintage, basket or legal status?	23
Q68. Which option avoids the standard UPSC close-option trap about MPI incidence?	23
Q69. Which statement correctly identifies MPI intensity?	23
Q70. Which option preserves the accounting or regulatory boundary of MPI intensity?	23
Q71. Which statement uses MPI intensity without losing its vintage, basket or legal status?	24
Q72. Which option avoids the standard UPSC close-option trap about MPI intensity?	24
Q73. Which statement correctly identifies Income-poverty contrast?	24
Q74. Which option preserves the accounting or regulatory boundary of Income-poverty contrast?	24
Q75. Which statement uses Income-poverty contrast without losing its vintage, basket or legal status?	25
Q76. Which option avoids the standard UPSC close-option trap about Income-poverty contrast?	25
Q77. Which statement correctly identifies Composite and benchmark caution?	25
Q78. Which option preserves the accounting or regulatory boundary of Composite and benchmark caution?	25
Q79. Which statement uses Composite and benchmark caution without losing its vintage, basket or legal status?	26
Q80. Which option avoids the standard UPSC close-option trap about Composite and benchmark caution?	26

Growth, Development, HDI, IHDI and MPI - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Growth versus development?

A. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.

Answer: A. Explanation: Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q2. Which option preserves the accounting or regulatory boundary of Growth versus development?

A. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

Answer: B. Explanation: Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q3. Which statement uses Growth versus development without losing its vintage, basket or legal status?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. C. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. D. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

Answer: C. Explanation: Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q4. Which option avoids the standard UPSC close-option trap about Growth versus development?

A. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. B. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. C. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. D. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

Answer: D. Explanation: Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. The other options

belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q5. Which statement correctly identifies Capability approach?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: A. Explanation: Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q6. Which option preserves the accounting or regulatory boundary of Capability approach?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. C. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: B. Explanation: Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q7. Which statement uses Capability approach without losing its vintage, basket or legal status?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

Answer: C. Explanation: Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q8. Which option avoids the standard UPSC close-option trap about Capability approach?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. D. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.

Answer: D. Explanation: Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q9. Which statement correctly identifies HDI architecture?

A. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. D. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

Answer: A. Explanation: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q10. Which option preserves the accounting or regulatory boundary of HDI architecture?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. C. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. D. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Answer: B. Explanation: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q11. Which statement uses HDI architecture without losing its vintage, basket or legal status?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: C. Explanation: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q12. Which option avoids the standard UPSC close-option trap about HDI architecture?

A. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: D. Explanation: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q13. Which statement correctly identifies IHDI inequality adjustment?

A. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. B. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. C. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: A. Explanation: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q14. Which option preserves the accounting or regulatory boundary of IHDI inequality adjustment?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. D. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

Answer: B. Explanation: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q15. Which statement uses IHDI inequality adjustment without losing its vintage, basket or legal status?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. D. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

Answer: C. Explanation: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q16. Which option avoids the standard UPSC close-option trap about IHDI inequality adjustment?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

Answer: D. Explanation: IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q17. Which statement correctly identifies MPI purpose?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. C. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: A. Explanation: MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q18. Which option preserves the accounting or regulatory boundary of MPI purpose?

A. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. B. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

Answer: B. Explanation: MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q19. Which statement uses MPI purpose without losing its vintage, basket or legal status?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. C. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. D. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

Answer: C. Explanation: MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q20. Which option avoids the standard UPSC close-option trap about MPI purpose?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.

Answer: D. Explanation: MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q21. Which statement correctly identifies Social capital?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

Answer: A. Explanation: Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q22. Which option preserves the accounting or regulatory boundary of Social capital?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. C. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. D. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

Answer: B. Explanation: Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q23. Which statement uses Social capital without losing its vintage, basket or legal status?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. C. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. D. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.

Answer: C. Explanation: Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q24. Which option avoids the standard UPSC close-option trap about Social capital?

A. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. B. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income.

Answer: D. Explanation: Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q25. Which statement correctly identifies Growth-resource channel?

A. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. B. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: A. Explanation: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q26. Which option preserves the accounting or regulatory boundary of Growth-resource channel?

A. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. B. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: B. Explanation: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q27. Which statement uses Growth-resource channel without losing its vintage, basket or legal status?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. C. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: C. Explanation: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q28. Which option avoids the standard UPSC close-option trap about Growth-resource channel?

A. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Answer: D. Explanation: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q29. Which statement correctly identifies Composition of growth?

A. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. B. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.

Answer: A. Explanation: Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q30. Which option preserves the accounting or regulatory boundary of Composition of growth?

A. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. B. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: B. Explanation: Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q31. Which statement uses Composition of growth without losing its vintage, basket or legal status?

A. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. B. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. C. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: C. Explanation: Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q32. Which option avoids the standard UPSC close-option trap about Composition of growth?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. D. Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.

Answer: D. Explanation: Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q33. Which statement correctly identifies Public-service conversion?

A. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: A. Explanation: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q34. Which option preserves the accounting or regulatory boundary of Public-service conversion?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: B. Explanation: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q35. Which statement uses Public-service conversion without losing its vintage, basket or legal status?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

Answer: C. Explanation: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q36. Which option avoids the standard UPSC close-option trap about Public-service conversion?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.

Answer: D. Explanation: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q37. Which statement correctly identifies Institutional division?

A. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. B. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. C. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. D. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.

Answer: A. Explanation: UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q38. Which option preserves the accounting or regulatory boundary of Institutional division?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: B. Explanation: UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q39. Which statement uses Institutional division without losing its vintage, basket or legal status?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. C. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. D. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

Answer: C. Explanation: UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q40. Which option avoids the standard UPSC close-option trap about Institutional division?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Answer: D. Explanation: UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q41. Which statement correctly identifies Kerala-Bihar comparison?

A. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. D. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.

Answer: A. Explanation: The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q42. Which option preserves the accounting or regulatory boundary of Kerala-Bihar comparison?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. C. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

Answer: B. Explanation: The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q43. Which statement uses Kerala-Bihar comparison without losing its vintage, basket or legal status?

A. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. B. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. C. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: C. Explanation: The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q44. Which option avoids the standard UPSC close-option trap about Kerala-Bihar comparison?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.

Answer: D. Explanation: The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity

matter. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q45. Which statement correctly identifies National MPI targeting?

A. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

Answer: A. Explanation: NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q46. Which option preserves the accounting or regulatory boundary of National MPI targeting?

A. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. B. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.

Answer: B. Explanation: NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q47. Which statement uses National MPI targeting without losing its vintage, basket or legal status?

A. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. B. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. C. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: C. Explanation: NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q48. Which option avoids the standard UPSC close-option trap about National MPI targeting?

A. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. B. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. C. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. D. NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy.

Answer: D. Explanation: NITI Aayog's national MPI uses household evidence to identify simultaneous deficits such as nutrition, schooling, sanitation, housing and amenities for targeted policy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q49. Which statement correctly identifies Aspirational Districts lesson?

A. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. B. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. C. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. D. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

Answer: A. Explanation: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q50. Which option preserves the accounting or regulatory boundary of Aspirational Districts lesson?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. C. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: B. Explanation: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q51. Which statement uses Aspirational Districts lesson without losing its vintage, basket or legal status?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. C. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: C. Explanation: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q52. Which option avoids the standard UPSC close-option trap about Aspirational Districts lesson?

A. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. B. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. C. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. D. The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.

Answer: D. Explanation: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q53. Which statement correctly identifies MGNREGA conversion role?

A. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: A. Explanation: MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q54. Which option preserves the accounting or regulatory boundary of MGNREGA conversion role?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. C. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: B. Explanation: MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q55. Which statement uses MGNREGA conversion role without losing its vintage, basket or legal status?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. C. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. D. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.

Answer: C. Explanation: MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q56. Which option avoids the standard UPSC close-option trap about MGNREGA conversion role?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. D. MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or

formal jobs.

Answer: D. Explanation: MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q57. Which statement correctly identifies Nutrition and schooling interventions?

A. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. B. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: A. Explanation: ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q58. Which option preserves the accounting or regulatory boundary of Nutrition and schooling interventions?

A. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. B. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.

Answer: B. Explanation: ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q59. Which statement uses Nutrition and schooling interventions without losing its vintage, basket or legal status?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: C. Explanation: ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q60. Which option avoids the standard UPSC close-option trap about Nutrition and schooling interventions?

A. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. B. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

Answer: D. Explanation: ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q61. Which statement correctly identifies Kudumbashree and SHGs?

A. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. B. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.

Answer: A. Explanation: Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q62. Which option preserves the accounting or regulatory boundary of Kudumbashree and SHGs?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: B. Explanation: Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q63. Which statement uses Kudumbashree and SHGs without losing its vintage, basket or legal status?

A. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: C. Explanation: Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q64. Which option avoids the standard UPSC close-option trap about Kudumbashree and SHGs?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. D. Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity.

Answer: D. Explanation: Kudumbashree and the wider self-help-group model show how organised women's networks can support savings, credit, agency and local problem-solving while remaining complements to formal capacity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q65. Which statement correctly identifies MPI incidence?

A. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: A. Explanation: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q66. Which option preserves the accounting or regulatory boundary of MPI incidence?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

Answer: B. Explanation: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q67. Which statement uses MPI incidence without losing its vintage, basket or legal status?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: C. Explanation: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q68. Which option avoids the standard UPSC close-option trap about MPI incidence?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. C. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. D. In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.

Answer: D. Explanation: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q69. Which statement correctly identifies MPI intensity?

A. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: A. Explanation: In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q70. Which option preserves the accounting or regulatory boundary of MPI intensity?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

Answer: B. Explanation: In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q71. Which statement uses MPI intensity without losing its vintage, basket or legal status?

A. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. B. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. C. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: C. Explanation: In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q72. Which option avoids the standard UPSC close-option trap about MPI intensity?

A. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. B. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

Answer: D. Explanation: In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q73. Which statement correctly identifies Income-poverty contrast?

A. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. B. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. C. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: A. Explanation: An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q74. Which option preserves the accounting or regulatory boundary of Income-poverty contrast?

A. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. B. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: B. Explanation: An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q75. Which statement uses Income-poverty contrast without losing its vintage, basket or legal status?

A. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. B. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. C. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: C. Explanation: An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q76. Which option avoids the standard UPSC close-option trap about Income-poverty contrast?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.

Answer: D. Explanation: An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q77. Which statement correctly identifies Composite and benchmark caution?

A. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. B. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. C. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. D. Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.

Answer: A. Explanation: HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q78. Which option preserves the accounting or regulatory boundary of Composite and benchmark caution?

A. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. B. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. C. Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. D. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

Answer: B. Explanation: HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The other options belong to different measures, vintages,

baskets, instruments, institutions or legal perimeters.

Q79. Which statement uses Composite and benchmark caution without losing its vintage, basket or legal status?

A. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. D. UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.

Answer: C. Explanation: HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q80. Which option avoids the standard UPSC close-option trap about Composite and benchmark caution?

A. Trust, norms and networks can improve cooperation, collective action and scheme effectiveness, making social capital a development resource beyond private income. B. IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. C. MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. D. HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Answer: D. Explanation: HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

The audited ledgers route 2020 GS-II on incidence and intensity of poverty, 2024 GS-III on social-service expenditure and inclusive growth, and 2025 GS-III on HDI versus IHDI here. Objective routes on GNP per capita, Ease of Doing Business, social capital and 2026 MPI methodology remain answer-letter free.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: 2025 GS-III: Distinguish HDI and IHDI and explain why IHDI better reflects inclusive growth.
- ANALYSIS: 2024 GS-III: Examine whether post-reform social-service expenditure has supported inclusive growth.
- ANALYSIS: 2020 GS-II: Analyse the incidence and intensity of poverty against income-based measurement - answer with the $MPI = H \times A$ decomposition in **5A** and the reasoning why income-only measurement cannot separate how many are poor from how deeply they are poor.

2026 PYQ Integration

Status: 2026 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2026.md. **Answer-key rule:** The 2026 Prelims and CSAT Set-A keys held locally are **provisional**; no option or answer is recorded or inferred in this integration.

- **Year represented:** 2026
- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2026	Prelims GS-I	100	Multidimensional Poverty Index methodology, indicators, and institutional comparison	Objective question; provisional 2026 Set-A key present locally, answer not inferred	Provisional 2026 Set-A key present locally (Ans-2026-GS1-Provisional); key is provisional - no answer letter recorded or inferred here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Multidimensional Poverty Index methodology, indicators, and institutional comparison

This block integrates the 2026 examinable demand and paper metadata. It is kept separate from the 2018-2023 and 2024-2025 blocks and does not convert a provisionally-keyed, answer-free objective question into a solved answer.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS3-GS4-2024-2025.md.

- **Years represented:** 2025
- **Paper(s):** GS-III
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2025	GS-III	1	HDI versus IHDI as an indicator of inclusive growth	Distinguish · 10 marks · 150 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- HDI versus IHDI as an indicator of inclusive growth

This block integrates the 2024-2025 examinable demand and paper metadata. It is kept separate from the 2018-2023 block and does not convert an unkeyed/answer-free objective question into a solved answer.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md, _PYQ-ROUTING-PRELIMS-2018-2023.md. **Answer-key rule:** The official 2018-2023 Prelims/CSAT keys are not held locally; no option or answer has been inferred.

- **Years represented:** 2018, 2019, 2020
- **Paper(s):** GS-II, Prelims GS-I
- **Routed question demands:** 4

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2018	Prelims GS-I	48	GNP per capita not connoting economic development conditions	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2019	Prelims GS-I	77	World Bank Ease of Doing Business Index components	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2019	Prelims GS-I	80	Social capital concept in national development economics	Objective question; official key unavailable locally	Routed; key unavailable locally	Cover the named fact/concept and its likely statement-level distinctions.
2020	GS-II	16	Incidence and intensity of poverty against income-based measurement	Analyse · 15 marks · 250 words	Economy route terminates in answer-complete Core	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- GNP per capita not connoting economic development conditions
- World Bank Ease of Doing Business Index components
- Social capital concept in national development economics
- Incidence and intensity of poverty against income-based measurement

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

10. PYQ-based analytical application

- ANALYSIS: 2025 GS-III: Distinguish HDI and IHDI and explain why IHDI better reflects inclusive growth.
- ANALYSIS: 2024 GS-III: Examine whether post-reform social-service expenditure has supported inclusive growth.

Historical PYQ Integration (2018-2023)

Status: Question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS1-GS2-ESSAY-2018-2023.md.

- **Years represented:** 2020
- **Paper(s):** GS-II
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2020	GS-II	16	Incidence and intensity of poverty against income-based measurement	Analyse · 15 marks · 250 words	Routed to owning topic	Prepare context, core dimensions, evidence/examples, counterpoint and a concise conclusion.

What this owner must now support

- Incidence and intensity of poverty against income-based measurement

The table integrates the examinable demand and paper metadata. It does not turn an unkeyed objective question into a solved answer, and it does not claim that lexical presence alone proves full conceptual sufficiency.

PYQ DEMAND CARD 1 - 2020 GS-II

Demand: Analyse incidence and intensity of poverty against income-based measurement.

Status: Verified routed Mains demand; original model solution.

Model solution: MPI incidence: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **MPI intensity:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Income-poverty contrast:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 1 - 2020 GS-II”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: MPI incidence: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **MPI intensity:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Income-poverty contrast:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Analytical body:

1. **Claim and named evidence:** Demand: Analyse incidence and intensity of poverty against income-based measurement. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Status: Verified routed Mains demand; original model solution. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: MPI incidence: In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **MPI intensity:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Income-poverty contrast:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For “PYQ DEMAND CARD 1 - 2020 GS-II”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

PYQ DEMAND CARD 2 - 2024 GS-III

Demand: Examine whether social-service expenditure has supported inclusive growth.

Status: Verified routed Mains demand; original model solution.

Model solution: Growth-resource channel: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Public-service conversion: Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **MGNREGA conversion role:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Nutrition and schooling interventions:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 2 - 2024 GS-III”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Growth-resource channel: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Public-service conversion:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **MGNREGA conversion role:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Nutrition and schooling interventions:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Analytical body:

1. **Claim and named evidence:** Demand: Examine whether social-service expenditure has supported inclusive growth. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Status: Verified routed Mains demand; original model solution. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Growth-resource channel: Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Public-service conversion: Nutrition, health, education, housing and risk protection convert public revenue and

household income into capabilities, employability and intergenerational mobility. **MGNREGA conversion role:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Nutrition and schooling interventions:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For “PYQ DEMAND CARD 2 - 2024 GS-III”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

PYQ DEMAND CARD 3 - 2025 GS-III

Demand: Distinguish HDI and IHDI and explain why IHDI better indicates inclusive growth.

Status: Verified routed Mains demand; original model solution.

Model solution: HDI architecture: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **IHDI inequality adjustment:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Composite and benchmark caution:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on “PYQ DEMAND CARD 3 - 2025 GS-III”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: HDI architecture: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **IHDI inequality adjustment:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Composite and benchmark caution:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Analytical body:

1. **Claim and named evidence:** Demand: Distinguish HDI and IHDI and explain why IHDI better indicates inclusive growth. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Status: Verified routed Mains demand; original model solution. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: HDI architecture: UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **IHDI inequality adjustment:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Composite and benchmark caution:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "PYQ DEMAND CARD 3 - 2025 GS-III", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish economic growth from economic development. Answer in about 150 words.

Model thesis: Claim: Growth versus development. **Named evidence/example:** Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Capability approach. **Named evidence/example:** Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution.
- Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone.

- Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.

Qualified conclusion: Claim: Growth versus development. **Named evidence/example:** Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Capability approach. **Named evidence/example:** Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **answer** requires a direct position on "Distinguish economic growth from economic development. Answer in about 150 words.", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Growth versus development. **Named evidence/example:** Economic growth is a sustained quantitative increase in real output or income, whereas development adds structural change, capability expansion and better distribution. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Capability approach. **Named evidence/example:** Amartya Sen's capability approach judges development by substantive freedoms and real opportunities to lead valued lives, not by income or commodity possession alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For “Why does IHDI reveal dimensions of inclusive growth that HDI misses? Answer in about 150...”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 3 - 15 MARKS

Question: Explain the MPI incidence-intensity framework and its advantage over an income headcount. Answer in about 250 words.

Model thesis: **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI incidence. **Named evidence/example:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI intensity. **Named evidence/example:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.
- In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators.
- In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity.

- An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.

Qualified conclusion: **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI incidence. **Named evidence/example:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI intensity. **Named evidence/example:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **explain** requires a direct position on “Explain the MPI incidence-intensity framework and its advantage over an income headcount....”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI incidence. **Named evidence/example:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI intensity. **Named evidence/example:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Claim: MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI incidence. **Named evidence/example:** In MPI, H is the proportion of people identified as multidimensionally poor at the chosen weighted-deprivation cutoff; standard global methodology uses at least one-third of weighted indicators. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI intensity. **Named evidence/example:** In MPI, A is the average share of weighted indicators in which multidimensionally poor people are deprived, so MPI equals H multiplied by A and incidence can move differently from intensity. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis ->

qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For “Explain the MPI incidence-intensity framework and its advantage over an income headcount...”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 4 - 15 MARKS

Question: Growth expands resources, but institutions determine human development. Discuss. Answer in about 250 words.

Model thesis: Claim: Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Public-service conversion. **Named evidence/example:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Institutional division. **Named evidence/example:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion.
- Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.
- Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility.
- UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services.

Qualified conclusion: Claim: Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or

accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Public-service conversion. **Named evidence/example:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Institutional division. **Named evidence/example:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **discuss** requires a direct position on “Growth expands resources, but institutions determine human development. Discuss. Answer in...” every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Public-service conversion. **Named evidence/example:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Institutional division. **Named evidence/example:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status,

source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

3. **Claim and named evidence:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

4. **Claim and named evidence:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Claim: Growth-resource channel. **Named evidence/example:** Real productivity and output growth enlarge household income, profits and the tax base, creating resources that can finance capabilities but not guaranteeing their conversion. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Public-service conversion. **Named evidence/example:** Nutrition, health, education, housing and risk protection convert public revenue and household income into capabilities, employability and intergenerational mobility. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Institutional division. **Named evidence/example:** UNDP publishes HDI and IHDI, UNDP and OPHI are associated with the global MPI, NITI Aayog publishes India's national MPI, and governments deliver capability-building services. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "Growth expands resources, but institutions determine human development. Discuss. Answer in...", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 5 - 20 MARKS

Question: Assess India's growth-to-capability conversion using jobs, public services and local variation. Answer in about 300 words.

Model thesis: **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Kerala-Bihar comparison. **Named evidence/example:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Aspirational Districts lesson. **Named evidence/example:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MGNREGA conversion role. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Nutrition and schooling interventions. **Named evidence/example:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups.
- The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter.
- The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation.
- MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs.
- ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability.

Qualified conclusion: **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Kerala-Bihar comparison. **Named evidence/example:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Aspirational Districts lesson. **Named**

evidence/example: The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MGNREGA conversion role. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Nutrition and schooling interventions. **Named evidence/example:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **assess** requires a direct position on “Assess India's growth-to-capability conversion using jobs, public services and local...”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Kerala-Bihar comparison. **Named evidence/example:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Aspirational Districts lesson. **Named evidence/example:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MGNREGA conversion role. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Nutrition and schooling interventions. **Named evidence/example:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel ->

implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

2. **Claim and named evidence:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
5. **Claim and named evidence:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: **Claim:** Composition of growth. **Named evidence/example:** Labour intensity, sectoral composition, regional spread and access to productive jobs determine whether aggregate growth reaches lagging regions and vulnerable groups. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Kerala-Bihar comparison. **Named evidence/example:** The familiar Kerala-Bihar contrast shows that per-capita output does not convert one-for-one into social outcomes because public services, history, migration, demography and state capacity matter. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Aspirational Districts lesson. **Named evidence/example:** The Aspirational Districts Programme illustrates why state averages can hide district-level divergence, while dashboard or rank improvement alone does not prove structural transformation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MGNREGA conversion role. **Named evidence/example:** MGNREGA links public expenditure with wage employment and rural asset creation, supporting minimum protection without substituting for productivity growth or formal jobs. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Nutrition

and schooling interventions. **Named evidence/example:** ICDS and PM POSHAN show that direct nutrition and schooling support can expand capabilities, although access and attendance do not by themselves establish service quality or employability. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For “Assess India's growth-to-capability conversion using jobs, public services and local...”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 6 - 20 MARKS

Question: Critically evaluate composite development indices for inclusive-growth policy. Answer in about 300 words.

Model thesis: Claim: HDI architecture. **Named evidence/example:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: IHDI inequality adjustment. **Named evidence/example:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composite and benchmark caution. **Named evidence/example:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita.
- IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases.

- MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone.
- An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation.
- HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines.

Qualified conclusion: Claim: HDI architecture. **Named evidence/example:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: IHDI inequality adjustment. **Named evidence/example:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: Composite and benchmark caution. **Named evidence/example:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Qualification: The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **evaluate** requires a direct position on “Critically evaluate composite development indices for inclusive-growth policy. Answer in...”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: HDI architecture. **Named evidence/example:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: IHDI inequality adjustment. **Named evidence/example:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Claim: MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument

eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composite and benchmark caution. **Named evidence/example:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
5. **Claim and named evidence:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: **Claim:** HDI architecture. **Named evidence/example:** UNDP's HDI is the geometric mean of normalised health, education and standard-of-living indices, using life expectancy, schooling measures and GNI per capita. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the

effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** IHDI inequality adjustment. **Named evidence/example:** IHDI discounts each HDI dimension for inequality, equals HDI only in the absence of inequality and falls farther below HDI as unequal distribution increases. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** MPI purpose. **Named evidence/example:** MPI identifies overlapping household deprivations in health, education and living standards rather than classifying poverty from income alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Income-poverty contrast. **Named evidence/example:** An income or consumption poverty line records whether a monetary threshold is crossed but cannot show the overlap or composition of nutrition, schooling, sanitation and housing deprivation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source. **Claim:** Composite and benchmark caution. **Named evidence/example:** HDI, IHDI and MPI depend on dimensions, weights and survey timing, while the owner's USD 3-a-day extreme-poverty figure uses 2021 PPP prices and is not India's official domestic poverty line or directly comparable with older lines. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "Critically evaluate composite development indices for inclusive-growth policy. Answer in...", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.
