

SOLVED PRACTICE WORKBOOK

Land Reforms, Green Revolution and Cropping Systems - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

Land Reforms, Green Revolution and Cropping Systems - Solved Practice Workbook 6

BASIC MCQS / REMEDIATION 6

Q1. Which statement correctly identifies Land-reform breadth?	6
Q2. Which option preserves the accounting or regulatory boundary of Land-reform breadth?	6
Q3. Which statement uses Land-reform breadth without losing its vintage, basket or legal status?	6
Q4. Which option avoids the standard UPSC close-option trap about Land-reform breadth?	6
Q5. Which statement correctly identifies State implementation?	7
Q6. Which option preserves the accounting or regulatory boundary of State implementation?	7
Q7. Which statement uses State implementation without losing its vintage, basket or legal status?	7
Q8. Which option avoids the standard UPSC close-option trap about State implementation?	7
Q9. Which statement correctly identifies Intermediary abolition?	8
Q10. Which option preserves the accounting or regulatory boundary of Intermediary abolition?	8
Q11. Which statement uses Intermediary abolition without losing its vintage, basket or legal status?	8
Q12. Which option avoids the standard UPSC close-option trap about Intermediary abolition?	8
Q13. Which statement correctly identifies Tenancy reform?	9
Q14. Which option preserves the accounting or regulatory boundary of Tenancy reform?	9
Q15. Which statement uses Tenancy reform without losing its vintage, basket or legal status?	9
Q16. Which option avoids the standard UPSC close-option trap about Tenancy reform?	9
Q17. Which statement correctly identifies Land ceilings?	10
Q18. Which option preserves the accounting or regulatory boundary of Land ceilings?	10
Q19. Which statement uses Land ceilings without losing its vintage, basket or legal status?	10
Q20. Which option avoids the standard UPSC close-option trap about Land ceilings?	10
Q21. Which statement correctly identifies Consolidation?	11
Q22. Which option preserves the accounting or regulatory boundary of Consolidation?	11
Q23. Which statement uses Consolidation without losing its vintage, basket or legal status?	11
Q24. Which option avoids the standard UPSC close-option trap about Consolidation?	11
Q25. Which statement correctly identifies Land records?	12
Q26. Which option preserves the accounting or regulatory boundary of Land records?	12
Q27. Which statement uses Land records without losing its vintage, basket or legal status?	12

Q28. Which option avoids the standard UPSC close-option trap about Land records?	12
Q29. Which statement correctly identifies Operation Barga?	13
Q30. Which option preserves the accounting or regulatory boundary of Operation Barga?	13
Q31. Which statement uses Operation Barga without losing its vintage, basket or legal status?	13
Q32. Which option avoids the standard UPSC close-option trap about Operation Barga?	13
Q33. Which statement correctly identifies Kerala reform?	14
Q34. Which option preserves the accounting or regulatory boundary of Kerala reform?	14
Q35. Which statement uses Kerala reform without losing its vintage, basket or legal status?	14
Q36. Which option avoids the standard UPSC close-option trap about Kerala reform?	14
Q37. Which statement correctly identifies Early Jammu and Kashmir reform?	15
Q38. Which option preserves the accounting or regulatory boundary of Early Jammu and Kashmir reform?	15
Q39. Which statement uses Early Jammu and Kashmir reform without losing its vintage, basket or legal status?	15
Q40. Which option avoids the standard UPSC close-option trap about Early Jammu and Kashmir reform?	15
Q41. Which statement correctly identifies Green-Revolution package?	16
Q42. Which option preserves the accounting or regulatory boundary of Green-Revolution package?	16
Q43. Which statement uses Green-Revolution package without losing its vintage, basket or legal status?	16
Q44. Which option avoids the standard UPSC close-option trap about Green-Revolution package?	16
Q45. Which statement correctly identifies Regional and crop concentration?	17
Q46. Which option preserves the accounting or regulatory boundary of Regional and crop concentration?	17
Q47. Which statement uses Regional and crop concentration without losing its vintage, basket or legal status?	17
Q48. Which option avoids the standard UPSC close-option trap about Regional and crop concentration?	17
Q49. Which statement correctly identifies Technology and institutions?	18
Q50. Which option preserves the accounting or regulatory boundary of Technology and institutions?	18
Q51. Which statement uses Technology and institutions without losing its vintage, basket or legal status?	18
Q52. Which option avoids the standard UPSC close-option trap about Technology and institutions?	18
Q53. Which statement correctly identifies Cropping pattern?	19
Q54. Which option preserves the accounting or regulatory boundary of Cropping pattern?	19
Q55. Which statement uses Cropping pattern without losing its vintage, basket or legal status?	19
Q56. Which option avoids the standard UPSC close-option trap about Cropping pattern?	19
Q57. Which statement correctly identifies Cropping intensity?	20
Q58. Which option preserves the accounting or regulatory boundary of Cropping intensity?	20
Q59. Which statement uses Cropping intensity without losing its vintage, basket or legal status?	20

Q60. Which option avoids the standard UPSC close-option trap about Cropping intensity?	20
Q61. Which statement correctly identifies Diversification conditions?	21
Q62. Which option preserves the accounting or regulatory boundary of Diversification conditions?	21
Q63. Which statement uses Diversification conditions without losing its vintage, basket or legal status?	21
Q64. Which option avoids the standard UPSC close-option trap about Diversification conditions?	21
Q65. Which statement correctly identifies Water-intensive path dependence?	22
Q66. Which option preserves the accounting or regulatory boundary of Water-intensive path dependence?	22
Q67. Which statement uses Water-intensive path dependence without losing its vintage, basket or legal status?	22
Q68. Which option avoids the standard UPSC close-option trap about Water-intensive path dependence?	22
Q69. Which statement correctly identifies Millet route?	23
Q70. Which option preserves the accounting or regulatory boundary of Millet route?	23
Q71. Which statement uses Millet route without losing its vintage, basket or legal status?	23
Q72. Which option avoids the standard UPSC close-option trap about Millet route?	23
Q73. Which statement correctly identifies Visvesvaraya contribution?	24
Q74. Which option preserves the accounting or regulatory boundary of Visvesvaraya contribution?	24
Q75. Which statement uses Visvesvaraya contribution without losing its vintage, basket or legal status?	24
Q76. Which option avoids the standard UPSC close-option trap about Visvesvaraya contribution?	24
Q77. Which statement correctly identifies Swaminathan contribution?	25
Q78. Which option preserves the accounting or regulatory boundary of Swaminathan contribution?	25
Q79. Which statement uses Swaminathan contribution without losing its vintage, basket or legal status?	25
Q80. Which option avoids the standard UPSC close-option trap about Swaminathan contribution?	25

Land Reforms, Green Revolution and Cropping Systems - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Land-reform breadth?

A. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. B. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. C. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. D. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law.

Answer: A. Explanation: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q2. Which option preserves the accounting or regulatory boundary of Land-reform breadth?

A. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. B. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. C. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. D. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law.

Answer: B. Explanation: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q3. Which statement uses Land-reform breadth without losing its vintage, basket or legal status?

A. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. B. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. C. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. D. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards.

Answer: C. Explanation: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q4. Which option avoids the standard UPSC close-option trap about Land-reform breadth?

A. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. B. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. C. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. D. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone.

Answer: D. Explanation: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. The other options belong to

different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q5. Which statement correctly identifies State implementation?

A. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. B. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. C. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. D. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome.

Answer: A. Explanation: Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q6. Which option preserves the accounting or regulatory boundary of State implementation?

A. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. B. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. C. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. D. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome.

Answer: B. Explanation: Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q7. Which statement uses State implementation without losing its vintage, basket or legal status?

A. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. B. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. C. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. D. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards.

Answer: C. Explanation: Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q8. Which option avoids the standard UPSC close-option trap about State implementation?

A. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. B. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. C. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. D. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations.

Answer: D. Explanation: Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q9. Which statement correctly identifies Intermediary abolition?

A. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. B. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. C. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. D. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law.

Answer: A. Explanation: Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q10. Which option preserves the accounting or regulatory boundary of Intermediary abolition?

A. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. B. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. C. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. D. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Answer: B. Explanation: Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q11. Which statement uses Intermediary abolition without losing its vintage, basket or legal status?

A. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. B. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. C. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. D. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.

Answer: C. Explanation: Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q12. Which option avoids the standard UPSC close-option trap about Intermediary abolition?

A. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. B. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. C. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. D. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes.

Answer: D. Explanation: Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q13. Which statement correctly identifies Tenancy reform?

A. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. B. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. C. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. D. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Answer: A. Explanation: Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q14. Which option preserves the accounting or regulatory boundary of Tenancy reform?

A. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. B. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. C. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. D. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.

Answer: B. Explanation: Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q15. Which statement uses Tenancy reform without losing its vintage, basket or legal status?

A. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. B. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. C. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. D. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.

Answer: C. Explanation: Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q16. Which option avoids the standard UPSC close-option trap about Tenancy reform?

A. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. B. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. C. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. D. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law.

Answer: D. Explanation: Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q17. Which statement correctly identifies Land ceilings?

A. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. B. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. C. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. D. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.

Answer: A. Explanation: Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q18. Which option preserves the accounting or regulatory boundary of Land ceilings?

A. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. B. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. C. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. D. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained.

Answer: B. Explanation: Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q19. Which statement uses Land ceilings without losing its vintage, basket or legal status?

A. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. B. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. C. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. D. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically.

Answer: C. Explanation: Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q20. Which option avoids the standard UPSC close-option trap about Land ceilings?

A. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. B. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. C. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. D. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome.

Answer: D. Explanation: Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

perimeters.

Q21. Which statement correctly identifies Consolidation?

A. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. B. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. C. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. D. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Answer: A. Explanation: Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q22. Which option preserves the accounting or regulatory boundary of Consolidation?

A. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. B. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. C. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. D. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically.

Answer: B. Explanation: Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q23. Which statement uses Consolidation without losing its vintage, basket or legal status?

A. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. B. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. C. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. D. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event.

Answer: C. Explanation: Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q24. Which option avoids the standard UPSC close-option trap about Consolidation?

A. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. B. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. C. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. D. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards.

Answer: D. Explanation: Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under

safeguards. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q25. Which statement correctly identifies Land records?

A. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. B. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. C. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. D. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.

Answer: A. Explanation: Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q26. Which option preserves the accounting or regulatory boundary of Land records?

A. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. B. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. C. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. D. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event.

Answer: B. Explanation: Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q27. Which statement uses Land records without losing its vintage, basket or legal status?

A. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. B. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. C. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. D. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event.

Answer: C. Explanation: Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q28. Which option avoids the standard UPSC close-option trap about Land records?

A. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. B. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. C. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. D. Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Answer: D. Explanation: Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain

inaccurate. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q29. Which statement correctly identifies Operation Barga?

A. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. B. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. C. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. D. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically.

Answer: A. Explanation: Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q30. Which option preserves the accounting or regulatory boundary of Operation Barga?

A. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. B. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. C. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. D. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically.

Answer: B. Explanation: Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q31. Which statement uses Operation Barga without losing its vintage, basket or legal status?

A. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. B. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. C. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. D. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together.

Answer: C. Explanation: Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q32. Which option avoids the standard UPSC close-option trap about Operation Barga?

A. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. B. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. C. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. D. Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.

Answer: D. Explanation: Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to

fragmentation. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q33. Which statement correctly identifies Kerala reform?

A. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. B. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. C. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. D. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance.

Answer: A. Explanation: The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q34. Which option preserves the accounting or regulatory boundary of Kerala reform?

A. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. B. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. C. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. D. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance.

Answer: B. Explanation: The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q35. Which statement uses Kerala reform without losing its vintage, basket or legal status?

A. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. B. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. C. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. D. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless.

Answer: C. Explanation: The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q36. Which option avoids the standard UPSC close-option trap about Kerala reform?

A. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. B. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. C. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. D. The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained.

Answer: D. Explanation: The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. The other options belong to different measures, vintages, baskets, instruments, institutions or legal

perimeters.

Q37. Which statement correctly identifies Early Jammu and Kashmir reform?

A. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. B. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. C. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. D. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event.

Answer: A. Explanation: The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q38. Which option preserves the accounting or regulatory boundary of Early Jammu and Kashmir reform?

A. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. B. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. C. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. D. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance.

Answer: B. Explanation: The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q39. Which statement uses Early Jammu and Kashmir reform without losing its vintage, basket or legal status?

A. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. B. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. C. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. D. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together.

Answer: C. Explanation: The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q40. Which option avoids the standard UPSC close-option trap about Early Jammu and Kashmir reform?

A. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. B. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. C. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. D. The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically.

Answer: D. Explanation: The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q41. Which statement correctly identifies Green-Revolution package?

A. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. B. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. C. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. D. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance.

Answer: A. Explanation: The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q42. Which option preserves the accounting or regulatory boundary of Green-Revolution package?

A. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. B. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. C. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. D. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless.

Answer: B. Explanation: The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q43. Which statement uses Green-Revolution package without losing its vintage, basket or legal status?

A. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. B. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. C. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. D. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land.

Answer: C. Explanation: The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q44. Which option avoids the standard UPSC close-option trap about Green-Revolution package?

A. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. B. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. C. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. D. The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event.

Answer: D. Explanation: The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q45. Which statement correctly identifies Regional and crop concentration?

A. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. B. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. C. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. D. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together.

Answer: A. Explanation: Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q46. Which option preserves the accounting or regulatory boundary of Regional and crop concentration?

A. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. B. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. C. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. D. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land.

Answer: B. Explanation: Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q47. Which statement uses Regional and crop concentration without losing its vintage, basket or legal status?

A. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. B. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. C. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. D. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone.

Answer: C. Explanation: Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q48. Which option avoids the standard UPSC close-option trap about Regional and crop concentration?

A. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. B. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. C. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. D. Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance.

Answer: D. Explanation: Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. The

other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q49. Which statement correctly identifies Technology and institutions?

A. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. B. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. C. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. D. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land.

Answer: A. Explanation: High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q50. Which option preserves the accounting or regulatory boundary of Technology and institutions?

A. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. B. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. C. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. D. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access.

Answer: B. Explanation: High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q51. Which statement uses Technology and institutions without losing its vintage, basket or legal status?

A. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. B. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. C. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. D. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone.

Answer: C. Explanation: High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q52. Which option avoids the standard UPSC close-option trap about Technology and institutions?

A. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. B. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. C. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. D. High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together.

Answer: D. Explanation: High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q53. Which statement correctly identifies Cropping pattern?

A. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. B. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. C. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. D. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land.

Answer: A. Explanation: Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q54. Which option preserves the accounting or regulatory boundary of Cropping pattern?

A. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. B. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. C. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. D. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy.

Answer: B. Explanation: Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q55. Which statement uses Cropping pattern without losing its vintage, basket or legal status?

A. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. B. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. C. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. D. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access.

Answer: C. Explanation: Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q56. Which option avoids the standard UPSC close-option trap about Cropping pattern?

A. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. B. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. C. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. D. Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless.

Answer: D. Explanation: Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q57. Which statement correctly identifies Cropping intensity?

A. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. B. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. C. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. D. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access.

Answer: A. Explanation: Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q58. Which option preserves the accounting or regulatory boundary of Cropping intensity?

A. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. B. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. C. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. D. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy.

Answer: B. Explanation: Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q59. Which statement uses Cropping intensity without losing its vintage, basket or legal status?

A. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. B. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. C. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. D. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements.

Answer: C. Explanation: Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q60. Which option avoids the standard UPSC close-option trap about Cropping intensity?

A. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. B. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. C. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. D. Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land.

Answer: D. Explanation: Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q61. Which statement correctly identifies Diversification conditions?

A. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. B. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. C. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. D. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access.

Answer: A. Explanation: Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q62. Which option preserves the accounting or regulatory boundary of Diversification conditions?

A. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. B. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. C. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. D. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role.

Answer: B. Explanation: Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q63. Which statement uses Diversification conditions without losing its vintage, basket or legal status?

A. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. B. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. C. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. D. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone.

Answer: C. Explanation: Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q64. Which option avoids the standard UPSC close-option trap about Diversification conditions?

A. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. B. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. C. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. D. Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone.

Answer: D. Explanation: Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q65. Which statement correctly identifies Water-intensive path dependence?

A. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. B. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. C. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. D. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role.

Answer: A. Explanation: Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q66. Which option preserves the accounting or regulatory boundary of Water-intensive path dependence?

A. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. B. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. C. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. D. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role.

Answer: B. Explanation: Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q67. Which statement uses Water-intensive path dependence without losing its vintage, basket or legal status?

A. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. B. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. C. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. D. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role.

Answer: C. Explanation: Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q68. Which option avoids the standard UPSC close-option trap about Water-intensive path dependence?

A. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. B. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. C. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. D. Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access.

Answer: D. Explanation: Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q69. Which statement correctly identifies Millet route?

A. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. B. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. C. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. D. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role.

Answer: A. Explanation: Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q70. Which option preserves the accounting or regulatory boundary of Millet route?

A. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. B. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. C. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. D. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations.

Answer: B. Explanation: Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q71. Which statement uses Millet route without losing its vintage, basket or legal status?

A. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. B. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. C. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. D. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations.

Answer: C. Explanation: Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q72. Which option avoids the standard UPSC close-option trap about Millet route?

A. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. B. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. C. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. D. Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy.

Answer: D. Explanation: Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q73. Which statement correctly identifies Visvesvaraya contribution?

A. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. B. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. C. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. D. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone.

Answer: A. Explanation: M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q74. Which option preserves the accounting or regulatory boundary of Visvesvaraya contribution?

A. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. B. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. C. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. D. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone.

Answer: B. Explanation: M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q75. Which statement uses Visvesvaraya contribution without losing its vintage, basket or legal status?

A. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. B. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. C. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. D. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes.

Answer: C. Explanation: M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q76. Which option avoids the standard UPSC close-option trap about Visvesvaraya contribution?

A. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. B. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. C. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. D. M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements.

Answer: D. Explanation: M. Visvesvaraya's named contribution is irrigation engineering, including automatic sluice gates and the block system; it must remain distinct from later crop-breeding achievements. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q77. Which statement correctly identifies Swaminathan contribution?

A. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. B. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. C. Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. D. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations.

Answer: A. Explanation: M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q78. Which option preserves the accounting or regulatory boundary of Swaminathan contribution?

A. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. B. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. C. Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. D. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law.

Answer: B. Explanation: M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q79. Which statement uses Swaminathan contribution without losing its vintage, basket or legal status?

A. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. B. Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. C. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. D. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law.

Answer: C. Explanation: M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

Q80. Which option avoids the standard UPSC close-option trap about Swaminathan contribution?

A. Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. B. Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. C. Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. D. M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role.

Answer: D. Explanation: M.S. Swaminathan's scientific contribution centred on adapting semi-dwarf wheat and rice technologies to Indian conditions, distinct from his later National Commission on Farmers role. The other options belong to different measures, vintages, baskets, instruments, institutions or legal perimeters.

PYQS AND ANSWER PRACTICE

VERIFIED PYQ OWNERSHIP AUDIT

Audited ledgers route Mains demands on land-reform success, marginal farmers, ceilings, cropping-pattern change, rice-wheat consequences, crop diversification and the distinct contributions of Visvesvaraya and Swaminathan. Objective demands on organic certification, crop seasons, household surveys and water-intensive crops remain answer-key neutral.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: 2024 GS-III: Factors responsible for successful land reforms in some regions.
- ANALYSIS: 2025 GS-III: Factors influencing farmer selection of high-value crops.
- ANALYSIS: **Land-reform answer route:** start with abolition of intermediaries, tenancy regulation, ceilings and consolidation; then explain why outcomes improved more in West Bengal, Kerala and early J&K-type episodes where records, political backing and implementation were stronger.
- ANALYSIS: **Cropping-systems answer route:** organise high-value-crop choice under agro-climate and water; expected return and volatility; seed, credit and insurance; storage, processing and buyer access; and tenure plus policy incentives.
- ANALYSIS: **Unfamiliar-question route:** if the paper asks about organic transition or public investment, connect NPOP/APEDA, Sikkim, irrigation and market infrastructure to the broader cropping-system logic rather than treating them as isolated facts.
- ANALYSIS: **2019 GS-III Q5 route (Visvesvaraya and Swaminathan):** answer independently of the millet/cropping-pattern route above - use Section 5A for named evidence, keep the engineering (water) and scientific (crop-breeding) contributions distinct, and close with their shared link to secure, higher foodgrain output.

Demand decoding: The directive **answer** requires a direct position on “9. PYQ application”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The answer must resolve the Economy demand in “9. PYQ application”.

Analytical body:

1. **Claim and named evidence:** ANALYSIS: 2024 GS-III: Factors responsible for successful land reforms in some regions. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** ANALYSIS: 2025 GS-III: Factors influencing farmer selection of high-value crops. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: The answer must resolve the Economy demand in “9. PYQ application”.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag,

causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For “9. PYQ application”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

Recent PYQ Integration (2024-2025)

Status: 2024-2025 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-MAINS-GS3-GS4-2024-2025.md.

PYQ DEMAND CARD 1 - 2021 GS-III

Demand: Explain how land reforms affected the conditions of marginal and small farmers.

Status: Verified routed Mains demand; original model solution, not an official answer.

Model solution: Land-reform breadth: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **State implementation:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Tenancy reform:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Land records:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Operation Barga:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 1 - 2021 GS-III", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Land-reform breadth: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **State implementation:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Tenancy reform:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Land records:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Operation Barga:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Analytical body:

1. **Claim and named evidence:** Demand: Explain how land reforms affected the conditions of marginal and small farmers. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Status: Verified routed Mains demand; original model solution, not an official answer. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Land-reform breadth: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **State implementation:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Tenancy reform:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Land records:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Operation Barga:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution

seed programme or a complete solution to fragmentation. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "PYQ DEMAND CARD 1 - 2021 GS-III", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

PYQ DEMAND CARD 2 - 2023 GS-III

Demand: Discuss land-reform objectives, measures and the role of land ceilings.

Status: Verified routed Mains demand; original model solution, not an official answer.

Model solution: Land-reform breadth: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Intermediary abolition:** Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. **Tenancy reform:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Land ceilings:** Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. **Consolidation:** Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. **Land records:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 2 - 2023 GS-III", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Land-reform breadth: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Intermediary abolition:** Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. **Tenancy reform:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Land ceilings:** Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. **Consolidation:** Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. **Land records:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Analytical body:

1. **Claim and named evidence:** Demand: Discuss land-reform objectives, measures and the role of land ceilings. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status,

source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

2. **Claim and named evidence:** Status: Verified routed Mains demand; original model solution, not an official answer. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Land-reform breadth: Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Intermediary abolition:** Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. **Tenancy reform:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Land ceilings:** Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. **Consolidation:** Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. **Land records:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "PYQ DEMAND CARD 2 - 2023 GS-III", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

PYQ DEMAND CARD 3 - 2024 GS-III

Demand: Elaborate the factors behind successful land reforms in parts of India.

Status: Verified routed Mains demand; original model solution, not an official answer.

Model solution: State implementation: Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Land records:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Operation Barga:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. **Kerala reform:** The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. **Early Jammu and Kashmir reform:** The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. The answer therefore separates definition, mechanism, evidence and limitation, and does not infer an official model answer or objective key.

Demand decoding: The directive **answer** requires a direct position on "PYQ DEMAND CARD 3 - 2024 GS-III", every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with

lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: State implementation: Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Land records:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Operation Barga:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. **Kerala reform:** The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. **Early Jammu and Kashmir reform:** The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. ORIGINAL MAINS 1 - 10 MARKS

Question: Distinguish the major instruments of land reform. Answer in about 150 words.

Model thesis: Claim: Land-reform breadth. **Named evidence/example:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Intermediary abolition. **Named evidence/example:** Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Tenancy reform. **Named evidence/example:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land ceilings. **Named evidence/example:** Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Consolidation. **Named evidence/example:** Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone.
- Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes.
- Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law.
- Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome.
- Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards.
- Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Qualified conclusion: Claim: Land-reform breadth. **Named evidence/example:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Intermediary abolition. **Named evidence/example:** Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Tenancy reform. **Named evidence/example:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land ceilings. **Named evidence/example:** Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Consolidation. **Named evidence/example:** Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **answer** requires a direct position on “Distinguish the major instruments of land reform. Answer in about 150 words.”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Land-reform breadth. **Named evidence/example:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Intermediary abolition. **Named evidence/example:** Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Tenancy reform. **Named evidence/example:** Tenancy reform concerns

rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land ceilings. **Named evidence/example:** Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Consolidation. **Named evidence/example:** Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
5. **Claim and named evidence:** Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability,

sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

6. **Claim and named evidence:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Analysis: Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Claim: Land-reform breadth. **Named evidence/example:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Intermediary abolition.

Named evidence/example: Abolition of zamindari and other intermediary interests sought to connect the cultivator more directly with the state, but did not by itself settle tenancy, fragmentation or title disputes. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Tenancy reform. **Named evidence/example:** Tenancy reform concerns rent regulation, security of tenure, recording of the actual cultivator and ownership or purchase rights under the applicable state law. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land ceilings. **Named evidence/example:** Ceiling laws limit permissible holdings and identify surplus land for redistribution, but exemptions, benami adjustment, litigation and weak detection can separate statutory intent from field outcome.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Consolidation. **Named evidence/example:** Consolidation reorganises fragmented parcels into more workable holdings without necessarily changing aggregate ownership, while secure leasing separates ownership from cultivation under safeguards.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 10 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For “Distinguish the major instruments of land reform. Answer in about 150 words.”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 2 - 10 MARKS

Question: Why did land-reform outcomes differ sharply across states? Answer in about 150 words.

Model thesis: Claim: State implementation. **Named evidence/example:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named**

evidence/example: Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Operation Barga. **Named evidence/example:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability.

Qualification: The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Kerala reform. **Named evidence/example:** The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Early Jammu and Kashmir reform. **Named evidence/example:** The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations.
- Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.
- Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.
- The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained.
- The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically.

Qualified conclusion: Claim: State implementation. **Named evidence/example:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and

local power relations. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Operation Barga. **Named evidence/example:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Kerala reform. **Named evidence/example:** The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Early Jammu and Kashmir reform. **Named evidence/example:** The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **answer** requires a direct position on “Why did land-reform outcomes differ sharply across states? Answer in about 150 words.”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** State implementation. **Named evidence/example:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Operation Barga. **Named evidence/example:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Kerala reform. **Named evidence/example:** The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while

later smallholding and employment constraints remained. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability.

Qualification: The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Early Jammu and Kashmir reform. **Named evidence/example:** The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability.

Qualification: The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
5. **Claim and named evidence:** The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: **Claim:** State implementation. **Named evidence/example:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope,

implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.

Analysis: This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Operation Barga. **Named evidence/example:** Operation Barga in West Bengal recorded sharecroppers and is evidence about tenancy security and implementation, not a Green-Revolution seed programme or a complete solution to fragmentation. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Kerala reform. **Named evidence/example:** The Kerala Land Reforms Act is a named example of comparatively thorough tenancy abolition and ceiling implementation, while later smallholding and employment constraints remained. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Early Jammu and Kashmir reform. **Named evidence/example:** The Big Landed Estates Abolition Act, 1950 in Jammu and Kashmir is a distinct early ceiling and estate-restructuring episode whose political-legal setting should not be generalised mechanically. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 10 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For “Why did land-reform outcomes differ sharply across states? Answer in about 150 words.”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 3 - 15 MARKS

Question: Explain why the Green Revolution was an institutional package rather than a seed revolution. Answer in about 250 words.

Model thesis: **Claim:** Green-Revolution package. **Named evidence/example:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Regional and crop concentration. **Named evidence/example:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Technology and institutions.

Named evidence/example: High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event.
- Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance.
- High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together.

Qualified conclusion: Claim: Green-Revolution package. **Named evidence/example:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Regional and crop concentration. **Named evidence/example:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Technology and institutions. **Named evidence/example:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **explain** requires a direct position on “Explain why the Green Revolution was an institutional package rather than a seed revolution....”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Green-Revolution package. **Named evidence/example:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Regional and crop concentration. **Named evidence/example:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Technology and institutions. **Named evidence/example:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial

stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: **Claim:** Green-Revolution package. **Named evidence/example:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Regional and crop concentration. **Named evidence/example:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Technology and institutions. **Named evidence/example:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal

distinctions.

How to improve this answer: For “Explain why the Green Revolution was an institutional package rather than a seed revolution....”, replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 4 - 15 MARKS

Question: Differentiate cropping pattern, cropping intensity and diversification. Answer in about 250 words.

Model thesis: Claim: Cropping pattern. **Named evidence/example:** Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Cropping intensity. **Named evidence/example:** Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Diversification conditions. **Named evidence/example:** Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless.
- Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land.
- Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone.

Qualified conclusion: Claim: Cropping pattern. **Named evidence/example:** Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Cropping intensity. **Named evidence/example:** Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Diversification conditions. **Named evidence/example:** Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **answer** requires a direct position on “Differentiate cropping pattern, cropping intensity and diversification. Answer in about 250...”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Cropping pattern. **Named evidence/example:** Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Cropping intensity. **Named evidence/example:** Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Diversification conditions. **Named evidence/example:** Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: **Claim:** Cropping pattern. **Named evidence/example:** Cropping pattern is the distribution of cultivated area among crops at a stated time and geography; exact shares are year-specific and cannot be treated as timeless. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage,

stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Cropping intensity. **Named evidence/example:** Cropping intensity compares gross cropped area with net sown area, so multiple cropping raises the ratio without necessarily expanding net cultivated land. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Diversification conditions. **Named evidence/example:** Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "Differentiate cropping pattern, cropping intensity and diversification. Answer in about 250...", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and qualification.

ORIGINAL MAINS 5 - 20 MARKS

Question: Evaluate the production and ecological legacy of India's Green Revolution. Answer in about 300 words.

Model thesis: **Claim:** Green-Revolution package. **Named evidence/example:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Regional and crop concentration. **Named evidence/example:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Technology and institutions. **Named evidence/example:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Water-intensive path dependence. **Named evidence/example:** Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Millet route. **Named evidence/example:** Millets are dryland-oriented, relatively low-water

and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event.
- Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance.
- High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together.
- Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access.
- Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy.

Qualified conclusion: Claim: Green-Revolution package. **Named evidence/example:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Regional and crop concentration. **Named evidence/example:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Technology and institutions. **Named evidence/example:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Water-intensive path dependence. **Named evidence/example:** Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Millet route. **Named evidence/example:** Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **evaluate** requires a direct position on “Evaluate the production and ecological legacy of India's Green Revolution. Answer in about...”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Green-Revolution package. **Named evidence/example:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Regional and crop concentration. **Named evidence/example:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Technology and institutions. **Named evidence/example:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Water-intensive path dependence. **Named evidence/example:** Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Millet route. **Named evidence/example:** Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
4. **Claim and named evidence:** Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

5. **Claim and named evidence:** Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect.

Qualification: State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.

Counter-position / limit: An accounting identity, index movement, allocation, rate change, notification, platform count, WTO notification or chronological association cannot alone establish transmission, utilisation, distributional benefit or attributable outcome; test mechanism, lag, counterfactual, data vintage, implementation and external/federal constraints.

Qualified conclusion: Claim: Green-Revolution package. **Named evidence/example:** The Green Revolution was a complementary package of high-yielding seed, assured water, fertiliser, credit, extension, procurement and price support rather than a seed-only event. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Regional and crop concentration. **Named evidence/example:** Early gains were concentrated in irrigated Punjab, Haryana and western Uttar Pradesh and in wheat and later rice, so national output gains coexisted with regional and crop imbalance. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Technology and institutions. **Named evidence/example:** High-yielding varieties produced durable gains only where research, local adaptation, irrigation, input delivery, extension and market institutions operated together. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Water-intensive path dependence. **Named evidence/example:** Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Millet route. **Named evidence/example:** Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition/identity -> instrument or shock -> transmission -> growth, distribution, stability, sustainability and federal effects; state a thesis; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for unit, denominator, data vintage, legal/programme status, lag, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves formula, stock-flow, institutional, status, data-vintage, distributional and causal distinctions.

How to improve this answer: For "Evaluate the production and ecological legacy of India's Green Revolution. Answer in about...", replace the weakest catalogue point with one exact formula or classification, named institution/instrument, balance-sheet or incentive channel, lag, measurable outcome, distribution/federal effect and

qualification.

ORIGINAL MAINS 6 - 20 MARKS

Question: Design an agrarian transition from secure rights to sustainable crop diversification. Answer in about 300 words.

Model thesis: **Claim:** Land-reform breadth. **Named evidence/example:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** State implementation. **Named evidence/example:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Diversification conditions. **Named evidence/example:** Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Water-intensive path dependence. **Named evidence/example:** Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Millet route. **Named evidence/example:** Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Claim -> named evidence -> analysis -> qualification:

- Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone.
- Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations.
- Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate.
- Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone.
- Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access.

- Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy.

Qualified conclusion: **Claim:** Land-reform breadth. **Named evidence/example:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** State implementation.

Named evidence/example: Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Diversification conditions. **Named evidence/example:** Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Water-intensive path dependence. **Named evidence/example:** Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Millet route. **Named evidence/example:** Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Demand decoding: The directive **answer** requires a direct position on “Design an agrarian transition from secure rights to sustainable crop diversification. Answer...”, every clause, exact formula/category, institution and policy status, a monetary-fiscal-real-external transmission chain with lags, named Indian evidence, distribution/federal effects, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Land-reform breadth. **Named evidence/example:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** State implementation.

Named evidence/example: Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument

eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Land records. **Named evidence/example:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Diversification conditions. **Named evidence/example:** Diversification toward pulses, oilseeds, horticulture, millets or allied activities needs water suitability, risk cover, storage, processing and remunerative demand, not a price slogan alone. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Water-intensive path dependence. **Named evidence/example:** Rice, wheat and sugarcane incentives can reinforce water-intensive regional specialisation; crop choice must be read with irrigation source, energy pricing and procurement access. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source. **Claim:** Millet route. **Named evidence/example:** Millets are dryland-oriented, relatively low-water and nutrient-dense crops, but their revival depends on seed, processing, procurement, consumer demand and region-specific agronomy. **Analysis:** This identifies the economic mechanism, the relevant institution or accounting boundary, and the effect on output, prices, distribution or financial stability. **Qualification:** The conclusion must retain the stated period, estimate vintage, base year, basket, instrument eligibility, crop and geography scope, implementation stage, stock-flow distinction or legal perimeter rather than generalise beyond the source.

Analytical body:

1. **Claim and named evidence:** Land reform covers abolition of intermediaries, tenancy regulation, ceilings, consolidation and land records; it is not synonymous with redistribution alone. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
2. **Claim and named evidence:** Land is principally state-administered, so outcomes vary with state law, political mobilisation, record quality, administrative capacity and local power relations. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
3. **Claim and named evidence:** Survey, settlement and updated land records are rights, credit, planning and dispute-resolution infrastructure; a legal reform cannot reach the actual cultivator if records remain inaccurate. **Analysis:** Connect the identity/category and named Indian evidence -> instrument, price, quantity, balance-sheet or incentive channel -> implementation and lag -> growth, employment, distribution, stability, sustainability and federal effect. **Qualification:** State unit/denominator, stock/flow, nominal/real, authority and programme status, source-date-reference period, causal limit, counterfactual, trade-off or residual risk.
