

SOLVED PRACTICE WORKBOOK

CMS Bonn Convention Migratory Species - Solved Practice Workbook

UPSC complete learning session | Foundation to advanced | Concepts, evidence, practice and answer writing

Original deterministic study visual; labels are explanatory, not textual quotations.

Source order: repository knowledge -> official current linkage -> clearly marked analysis. No fabricated PYQs or statistics.

CONTENTS / WORKBOOK INDEX

Major learning parts and meaningful subtopics are listed in document order. Page numbers are generated from the final PDF layout; PDF bookmarks mirror the same hierarchy.

CMS Bonn Convention Migratory Species - Solved Practice Workbook 5

BASIC MCQS / REMEDIATION 5

Q1. Which statement correctly identifies Migratory-species test?	5
Q2. Which option preserves the ecological boundary of Migratory-species test?	5
Q3. Which statement uses Migratory-species test without changing its scale, parameter or status?	5
Q4. Which option avoids the standard UPSC close-option trap about Migratory-species test?	6
Q5. Which statement correctly identifies Range definition?	6
Q6. Which option preserves the ecological boundary of Range definition?	6
Q7. Which statement uses Range definition without changing its scale, parameter or status?	6
Q8. Which option avoids the standard UPSC close-option trap about Range definition?	7
Q9. Which statement correctly identifies Range State definition?	7
Q10. Which option preserves the ecological boundary of Range State definition?	7
Q11. Which statement uses Range State definition without changing its scale, parameter or status?	8
Q12. Which option avoids the standard UPSC close-option trap about Range State definition?	8
Q13. Which statement correctly identifies Weakest-link logic?	8
Q14. Which option preserves the ecological boundary of Weakest-link logic?	8
Q15. Which statement uses Weakest-link logic without changing its scale, parameter or status?	9
Q16. Which option avoids the standard UPSC close-option trap about Weakest-link logic?	9
Q17. Which statement correctly identifies Appendix I?	9
Q18. Which option preserves the ecological boundary of Appendix I?	10
Q19. Which statement uses Appendix I without changing its scale, parameter or status?	10
Q20. Which option avoids the standard UPSC close-option trap about Appendix I?	10
Q21. Which statement correctly identifies Taking exceptions?	10
Q22. Which option preserves the ecological boundary of Taking exceptions?	11
Q23. Which statement uses Taking exceptions without changing its scale, parameter or status?	11
Q24. Which option avoids the standard UPSC close-option trap about Taking exceptions?	11
Q25. Which statement correctly identifies Appendix II?	11
Q26. Which option preserves the ecological boundary of Appendix II?	12
Q27. Which statement uses Appendix II without changing its scale, parameter or status?	12

Q28. Which option avoids the standard UPSC close-option trap about Appendix II?	12
Q29. Which statement correctly identifies Dual listing?	13
Q30. Which option preserves the ecological boundary of Dual listing?	13
Q31. Which statement uses Dual listing without changing its scale, parameter or status?	13
Q32. Which option avoids the standard UPSC close-option trap about Dual listing?	13
Q33. Which statement correctly identifies AGREEMENT architecture?	14
Q34. Which option preserves the ecological boundary of AGREEMENT architecture?	14
Q35. Which statement uses AGREEMENT architecture without changing its scale, parameter or status?	14
Q36. Which option avoids the standard UPSC close-option trap about AGREEMENT architecture?	14
Q37. Which statement correctly identifies Agreement versus MOU?	15
Q38. Which option preserves the ecological boundary of Agreement versus MOU?	15
Q39. Which statement uses Agreement versus MOU without changing its scale, parameter or status?	15
Q40. Which option avoids the standard UPSC close-option trap about Agreement versus MOU?	16
Q41. Which statement correctly identifies Action Plan boundary?	16
Q42. Which option preserves the ecological boundary of Action Plan boundary?	16
Q43. Which statement uses Action Plan boundary without changing its scale, parameter or status?	16
Q44. Which option avoids the standard UPSC close-option trap about Action Plan boundary?	17
Q45. Which statement correctly identifies Concerted Action boundary?	17
Q46. Which option preserves the ecological boundary of Concerted Action boundary?	17
Q47. Which statement uses Concerted Action boundary without changing its scale, parameter or status?	18
Q48. Which option avoids the standard UPSC close-option trap about Concerted Action boundary?	18
Q49. Which statement correctly identifies Central Asian Flyway?	18
Q50. Which option preserves the ecological boundary of Central Asian Flyway?	18
Q51. Which statement uses Central Asian Flyway without changing its scale, parameter or status?	19
Q52. Which option avoids the standard UPSC close-option trap about Central Asian Flyway?	19
Q53. Which statement correctly identifies COP14 initiative?	19
Q54. Which option preserves the ecological boundary of COP14 initiative?	20
Q55. Which statement uses COP14 initiative without changing its scale, parameter or status?	20
Q56. Which option avoids the standard UPSC close-option trap about COP14 initiative?	20
Q57. Which statement correctly identifies Strategic plan status?	20
Q58. Which option preserves the ecological boundary of Strategic plan status?	21
Q59. Which statement uses Strategic plan status without changing its scale, parameter or status?	21

Q60. Which option avoids the standard UPSC close-option trap about Strategic plan status?	21
Q61. Which statement correctly identifies Threat classification?	22
Q62. Which option preserves the ecological boundary of Threat classification?	22
Q63. Which statement uses Threat classification without changing its scale, parameter or status?	22
Q64. Which option avoids the standard UPSC close-option trap about Threat classification?	22
Q65. Which statement correctly identifies Amur Falcon PYQ anchor?	23
Q66. Which option preserves the ecological boundary of Amur Falcon PYQ anchor?	24
Q67. Which statement uses Amur Falcon PYQ anchor without changing its scale, parameter or status?	25
Q68. Which option avoids the standard UPSC close-option trap about Amur Falcon PYQ anchor?	26
Q69. Which statement correctly identifies Amur Falcon distinction?	27
Q70. Which option preserves the ecological boundary of Amur Falcon distinction?	27
Q71. Which statement uses Amur Falcon distinction without changing its scale, parameter or status?	27
Q72. Which option avoids the standard UPSC close-option trap about Amur Falcon distinction?	28
Q73. Which statement correctly identifies CMS-CITES-Ramsar split?	28
Q74. Which option preserves the ecological boundary of CMS-CITES-Ramsar split?	28
Q75. Which statement uses CMS-CITES-Ramsar split without changing its scale, parameter or status?	28
Q76. Which option avoids the standard UPSC close-option trap about CMS-CITES-Ramsar split?	29
Q77. Which statement correctly identifies Current-listing boundary?	29
Q78. Which option preserves the ecological boundary of Current-listing boundary?	29
Q79. Which statement uses Current-listing boundary without changing its scale, parameter or status?	30
Q80. Which option avoids the standard UPSC close-option trap about Current-listing boundary?	30

CMS Bonn Convention Migratory Species - Solved Practice Workbook

BASIC MCQS / REMEDIATION

Q1. Which statement correctly identifies Migratory-species test?

A. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. B. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. C. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. D. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination.

Answer: A. Explanation: The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q2. Which option preserves the ecological boundary of Migratory-species test?

A. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. B. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. C. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. D. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions.

Answer: B. Explanation: The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q3. Which statement uses Migratory-species test without changing its scale, parameter or status?

A. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. B. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. C. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. D. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions.

Answer: C. Explanation: The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q4. Which option avoids the standard UPSC close-option trap about Migratory-species test?

A. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. B. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. C. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. D. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough.

Answer: D. Explanation: The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q5. Which statement correctly identifies Range definition?

A. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. B. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. C. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. D. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions.

Answer: A. Explanation: A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q6. Which option preserves the ecological boundary of Range definition?

A. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. B. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. C. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. D. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission.

Answer: B. Explanation: A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q7. Which statement uses Range definition without changing its scale, parameter or status?

A. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. B. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. C. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. D. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I.

Answer: C. Explanation: A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q8. Which option avoids the standard UPSC close-option trap about Range definition?

A. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. B. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. C. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. D. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places.

Answer: D. Explanation: A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q9. Which statement correctly identifies Range State definition?

A. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. B. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. C. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. D. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem.

Answer: A. Explanation: A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q10. Which option preserves the ecological boundary of Range State definition?

A. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. B. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. C. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. D. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission.

Answer: B. Explanation: A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q11. Which statement uses Range State definition without changing its scale, parameter or status?

A. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. B. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. C. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. D. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions.

Answer: C. Explanation: A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q12. Which option avoids the standard UPSC close-option trap about Range State definition?

A. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. B. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. C. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. D. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination.

Answer: D. Explanation: A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q13. Which statement correctly identifies Weakest-link logic?

A. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. B. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. C. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. D. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission.

Answer: A. Explanation: Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q14. Which option preserves the ecological boundary of Weakest-link logic?

A. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. B. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. C. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. D. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission.

Answer: B. Explanation: Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q15. Which statement uses Weakest-link logic without changing its scale, parameter or status?

A. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. B. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. C. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. D. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable.

Answer: C. Explanation: Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q16. Which option avoids the standard UPSC close-option trap about Weakest-link logic?

A. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. B. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. C. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. D. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem.

Answer: D. Explanation: Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q17. Which statement correctly identifies Appendix I?

A. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. B. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. C. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. D. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I.

Answer: A. Explanation: Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q18. Which option preserves the ecological boundary of Appendix I?

A. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. B. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. C. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. D. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable.

Answer: B. Explanation: Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q19. Which statement uses Appendix I without changing its scale, parameter or status?

A. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. B. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. C. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. D. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions.

Answer: C. Explanation: Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q20. Which option avoids the standard UPSC close-option trap about Appendix I?

A. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. B. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. C. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. D. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions.

Answer: D. Explanation: Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q21. Which statement correctly identifies Taking exceptions?

A. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. B. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. C. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. D. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable.

Answer: A. Explanation: Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q22. Which option preserves the ecological boundary of Taking exceptions?

A. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. B. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. C. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. D. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable.

Answer: B. Explanation: Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q23. Which statement uses Taking exceptions without changing its scale, parameter or status?

A. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. B. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. C. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. D. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists.

Answer: C. Explanation: Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q24. Which option avoids the standard UPSC close-option trap about Taking exceptions?

A. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. B. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. C. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. D. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission.

Answer: D. Explanation: Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q25. Which statement correctly identifies Appendix II?

A. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. B. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. C. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. D. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists.

Answer: A. Explanation: Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. The other options belong to different ecological levels,

parameters, processes, scales, institutions or status categories.

Q26. Which option preserves the ecological boundary of Appendix II?

A. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. B. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. C. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. D. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome.

Answer: B. Explanation: Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q27. Which statement uses Appendix II without changing its scale, parameter or status?

A. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. B. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. C. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. D. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists.

Answer: C. Explanation: Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q28. Which option avoids the standard UPSC close-option trap about Appendix II?

A. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. B. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. C. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. D. Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I.

Answer: D. Explanation: Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q29. Which statement correctly identifies Dual listing?

A. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. B. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. C. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. D. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists.

Answer: A. Explanation: The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q30. Which option preserves the ecological boundary of Dual listing?

A. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. B. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. C. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. D. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists.

Answer: B. Explanation: The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q31. Which statement uses Dual listing without changing its scale, parameter or status?

A. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. B. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. C. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. D. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument.

Answer: C. Explanation: The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q32. Which option avoids the standard UPSC close-option trap about Dual listing?

A. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. B. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. C. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. D. The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions.

Answer: D. Explanation: The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q33. Which statement correctly identifies AGREEMENT architecture?

A. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. B. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. C. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. D. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome.

Answer: A. Explanation: A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q34. Which option preserves the ecological boundary of AGREEMENT architecture?

A. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. B. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. C. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. D. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection.

Answer: B. Explanation: A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q35. Which statement uses AGREEMENT architecture without changing its scale, parameter or status?

A. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. B. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. C. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. D. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection.

Answer: C. Explanation: A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q36. Which option avoids the standard UPSC close-option trap about AGREEMENT architecture?

A. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. B. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. C. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. D. A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable.

Answer: D. Explanation: A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q37. Which statement correctly identifies Agreement versus MOU?

A. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. B. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. C. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. D. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument.

Answer: A. Explanation: A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q38. Which option preserves the ecological boundary of Agreement versus MOU?

A. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. B. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. C. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. D. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument.

Answer: B. Explanation: A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q39. Which statement uses Agreement versus MOU without changing its scale, parameter or status?

A. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. B. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. C. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. D. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU.

Answer: C. Explanation: A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q40. Which option avoids the standard UPSC close-option trap about Agreement versus MOU?

A. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. B. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. C. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. D. A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists.

Answer: D. Explanation: A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q41. Which statement correctly identifies Action Plan boundary?

A. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. B. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. C. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. D. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument.

Answer: A. Explanation: An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q42. Which option preserves the ecological boundary of Action Plan boundary?

A. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. B. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. C. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. D. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument.

Answer: B. Explanation: An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q43. Which statement uses Action Plan boundary without changing its scale, parameter or status?

A. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. B. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. C. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. D. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU.

Answer: C. Explanation: An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q44. Which option avoids the standard UPSC close-option trap about Action Plan boundary?

A. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. B. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. C. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. D. An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome.

Answer: D. Explanation: An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q45. Which statement correctly identifies Concerted Action boundary?

A. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. B. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. C. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. D. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU.

Answer: A. Explanation: CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q46. Which option preserves the ecological boundary of Concerted Action boundary?

A. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. B. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. C. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. D. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures.

Answer: B. Explanation: CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q47. Which statement uses Concerted Action boundary without changing its scale, parameter or status?

A. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. B. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. C. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. D. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved.

Answer: C. Explanation: CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q48. Which option avoids the standard UPSC close-option trap about Concerted Action boundary?

A. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. B. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. C. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. D. CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection.

Answer: D. Explanation: CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q49. Which statement correctly identifies Central Asian Flyway?

A. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. B. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. C. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. D. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved.

Answer: A. Explanation: The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q50. Which option preserves the ecological boundary of Central Asian Flyway?

A. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. B. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. C. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. D. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key.

Answer: B. Explanation: The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. The other options belong to different ecological levels, parameters, processes, scales,

Q51. Which statement uses Central Asian Flyway without changing its scale, parameter or status?

A. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. B. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. C. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. D. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit.

Answer: C. Explanation: The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q52. Which option avoids the standard UPSC close-option trap about Central Asian Flyway?

A. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. B. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. C. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. D. The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument.

Answer: D. Explanation: The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q53. Which statement correctly identifies COP14 initiative?

A. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. B. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. C. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. D. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved.

Answer: A. Explanation: The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q54. Which option preserves the ecological boundary of COP14 initiative?

A. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. B. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. C. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. D. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures.

Answer: B. Explanation: The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q55. Which statement uses COP14 initiative without changing its scale, parameter or status?

A. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. B. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. C. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. D. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key.

Answer: C. Explanation: The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q56. Which option avoids the standard UPSC close-option trap about COP14 initiative?

A. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. B. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. C. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. D. The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU.

Answer: D. Explanation: The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q57. Which statement correctly identifies Strategic plan status?

A. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. B. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. C. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. D. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures.

Answer: A. Explanation: COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q58. Which option preserves the ecological boundary of Strategic plan status?

A. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. B. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. C. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. D. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key.

Answer: B. Explanation: COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q59. Which statement uses Strategic plan status without changing its scale, parameter or status?

A. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. B. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. C. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. D. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source.

Answer: C. Explanation: COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q60. Which option avoids the standard UPSC close-option trap about Strategic plan status?

A. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. B. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. C. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. D. COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved.

Answer: D. Explanation: COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q61. Which statement correctly identifies Threat classification?

A. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. B. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. C. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. D. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects.

Answer: A. Explanation: Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q62. Which option preserves the ecological boundary of Threat classification?

A. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. B. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. C. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. D. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit.

Answer: B. Explanation: Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q63. Which statement uses Threat classification without changing its scale, parameter or status?

A. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. B. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. C. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. D. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough.

Answer: C. Explanation: Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q64. Which option avoids the standard UPSC close-option trap about Threat classification?

A. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. B. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. C. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. D. Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures.

Answer: D. Explanation: Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q65. Which statement correctly identifies Amur Falcon PYQ anchor?

A. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. B. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. C. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. D. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects.

Answer: A. Explanation: The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Demand decoding: The directive **answer** requires a direct position on “Q65. Which statement correctly identifies Amur Falcon PYQ anchor?”, every clause, exact ecological mechanism and scale, named Indian law or institution, dated treaty/policy status, evidence, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The answer must resolve the Environment and Ecology demand in “Q65. Which statement correctly identifies Amur Falcon PYQ anchor?”.

Analytical body:

- 1. Claim and named evidence:** Q65. Which statement correctly identifies Amur Falcon PYQ anchor? **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
- 2. Claim and named evidence:** A. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
- 3. Claim and named evidence:** B. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
- 4. Claim and named evidence:** C. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
- 5. Claim and named evidence:** D. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. **Analysis:** Connect the defined system/taxon and named evidence -> ecological

mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence.

Qualification: State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: The answer must resolve the Environment and Ecology demand in “Q65. Which statement correctly identifies Amur Falcon PYQ anchor?”.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism/status -> institution/instrument -> implementation -> ecological and social outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for taxon, unit, baseline, date, jurisdiction, exception, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves ecological, species, legal, treaty, institutional, climate-unit, pollution-standard and causal distinctions.

How to improve this answer: For “Q65. Which statement correctly identifies Amur Falcon PYQ anchor?”, replace the weakest catalogue point with one exact mechanism or distinction, named law/institution/treaty/species, dated status, measurable outcome, implementation constraint and answer-specific qualification.

Q66. Which option preserves the ecological boundary of Amur Falcon PYQ anchor?

A. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. B. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. C. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. D. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough.

Answer: B. Explanation: The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Demand decoding: Treat “Q66. Which option preserves the ecological boundary of Amur Falcon PYQ anchor?” as a taxon, ecological mechanism, legal category, institution, treaty/status, parameter, unit, chronology and source-date problem.

Detailed examiner-grade model answer:

Introduction and thesis: The answer must resolve the Environment and Ecology demand in “Q66. Which option preserves the ecological boundary of Amur Falcon PYQ anchor?”.

Analytical body:

- 1. Claim and named evidence:** Q66. Which option preserves the ecological boundary of Amur Falcon PYQ anchor? **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
- 2. Claim and named evidence:** A. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or

residual risk.

3. **Claim and named evidence:** B. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
4. **Claim and named evidence:** C. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: The answer must resolve the Environment and Ecology demand in “Q66. Which option preserves the ecological boundary of Amur Falcon PYQ anchor?”.

Executable exam-length answer / compression plan: Fix the system/taxon and scale; mark stock/flow and unit; identify the competent law, institution or treaty status; test each statement against mechanism, date, jurisdiction and closest exception.

Why this earns marks: It prevents ecological categories, species statuses, legal schedules, treaty appendices, standards and policy stages from being conflated.

How to improve this answer: For “Q66. Which option preserves the ecological boundary of Amur Falcon PYQ anchor?”, explain why the closest distractor fails on mechanism, scale, taxon, unit, mandate, legal/treaty status, date or causation.

Q67. Which statement uses Amur Falcon PYQ anchor without changing its scale, parameter or status?

A. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. B. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. C. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. D. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough.

Answer: C. Explanation: The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Demand decoding: The directive **answer** requires a direct position on “Q67. Which statement uses Amur Falcon PYQ anchor without changing its scale, parameter or...”, every clause, exact ecological mechanism and scale, named Indian law or institution, dated treaty/policy status, evidence, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: The answer must resolve the Environment and Ecology demand in “Q67. Which statement uses Amur Falcon PYQ anchor without changing its scale, parameter or status?”.

Analytical body:

1. **Claim and named evidence:** Q67. Which statement uses Amur Falcon PYQ anchor without changing its scale, parameter or status? **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
2. **Claim and named evidence:** A. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
3. **Claim and named evidence:** B. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
4. **Claim and named evidence:** C. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: The answer must resolve the Environment and Ecology demand in “Q67. Which statement uses Amur Falcon PYQ anchor without changing its scale, parameter or status?”.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism/status -> institution/instrument -> implementation -> ecological and social outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for taxon, unit, baseline, date, jurisdiction, exception, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves ecological, species, legal, treaty, institutional, climate-unit, pollution-standard and causal distinctions.

How to improve this answer: For “Q67. Which statement uses Amur Falcon PYQ anchor without changing its scale, parameter or...”, replace the weakest catalogue point with one exact mechanism or distinction, named law/institution/treaty/species, dated status, measurable outcome, implementation constraint and answer-specific qualification.

Q68. Which option avoids the standard UPSC close-option trap about Amur Falcon PYQ anchor?

A. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. B. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. C. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. D. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key.

Answer: D. Explanation: The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. The other options belong to different ecological levels, parameters, processes, scales,

Q69. Which statement correctly identifies Amur Falcon distinction?

A. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. B. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. C. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. D. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects.

Answer: A. Explanation: The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q70. Which option preserves the ecological boundary of Amur Falcon distinction?

A. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. B. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. C. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. D. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places.

Answer: B. Explanation: The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q71. Which statement uses Amur Falcon distinction without changing its scale, parameter or status?

A. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. B. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. C. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. D. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places.

Answer: C. Explanation: The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q72. Which option avoids the standard UPSC close-option trap about Amur Falcon distinction?

A. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. B. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. C. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. D. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit.

Answer: D. Explanation: The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q73. Which statement correctly identifies CMS-CITES-Ramsar split?

A. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. B. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. C. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. D. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough.

Answer: A. Explanation: CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q74. Which option preserves the ecological boundary of CMS-CITES-Ramsar split?

A. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. B. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. C. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. D. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough.

Answer: B. Explanation: CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q75. Which statement uses CMS-CITES-Ramsar split without changing its scale, parameter or status?

A. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. B. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. C. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. D. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem.

Answer: C. Explanation: CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q76. Which option avoids the standard UPSC close-option trap about CMS-CITES-Ramsar split?

A. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. B. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. C. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. D. CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects.

Answer: D. Explanation: CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q77. Which statement correctly identifies Current-listing boundary?

A. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. B. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. C. The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. D. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places.

Answer: A. Explanation: The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q78. Which option preserves the ecological boundary of Current-listing boundary?

A. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. B. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. C. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. D. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places.

Answer: B. Explanation: The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q79. Which statement uses Current-listing boundary without changing its scale, parameter or status?

A. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. B. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. C. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. D. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination.

Answer: C. Explanation: The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

Q80. Which option avoids the standard UPSC close-option trap about Current-listing boundary?

A. Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. B. Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. C. Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. D. The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source.

Answer: D. Explanation: The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. The other options belong to different ecological levels, parameters, processes, scales, institutions or status categories.

PYQS AND ANSWER PRACTICE

Demand decoding: Treat “Q68. Which option avoids the standard UPSC close-option trap about Amur Falcon PYQ anchor?” as a taxon, ecological mechanism, legal category, institution, treaty/status, parameter, unit, chronology and source-date problem.

Detailed examiner-grade model answer:

Introduction and thesis: The answer must resolve the Environment and Ecology demand in “Q68. Which option avoids the standard UPSC close-option trap about Amur Falcon PYQ anchor?”.

Analytical body:

- 1. Claim and named evidence:** Q68. Which option avoids the standard UPSC close-option trap about Amur Falcon PYQ anchor? **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
- 2. Claim and named evidence:** A. A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
- 3. Claim and named evidence:** C. A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:**

Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

4. **Claim and named evidence:** D. The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
5. **Claim and named evidence:** Q69. Which statement correctly identifies Amur Falcon distinction? **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
6. **Claim and named evidence:** A. The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: The answer must resolve the Environment and Ecology demand in "Q68. Which option avoids the standard UPSC close-option trap about Amur Falcon PYQ anchor?"

Executable exam-length answer / compression plan: Fix the system/taxon and scale; mark stock/flow and unit; identify the competent law, institution or treaty status; test each statement against mechanism, date, jurisdiction and closest exception.

Why this earns marks: It prevents ecological categories, species statuses, legal schedules, treaty appendices, standards and policy stages from being conflated.

How to improve this answer: For "Q68. Which option avoids the standard UPSC close-option trap about Amur Falcon PYQ anchor?", explain why the closest distractor fails on mechanism, scale, taxon, unit, mandate, legal/treaty status, date or causation.

PROVISIONAL OBJECTIVE-ONLY PYQ OWNERSHIP AUDIT

The audited provisional 2026 routing ledger carries one Topic 10 objective demand: Amur Falcon migration to Doyang Lake and community-based conservation. The provisional answer key is not recorded or inferred.

OWNER PYQ LEDGER EXTRACTS

9. PYQ application

- ANALYSIS: Recurring Prelims pattern: identify CMS's distinct focus (range-state, migratory-species cooperation) versus CITES (trade regulation) and Ramsar (wetland-specific).
- ANALYSIS: Mains linkage: the Central Asian Flyway and dugong examples are used to argue for transboundary cooperation as essential to migratory-species conservation.

2026 PYQ Integration

Status: 2026 question-level PYQ demand is integrated into this owner. **Provenance:** Audited local official-paper routing ledgers: _PYQ-ROUTING-PRELIMS-2026.md. **Answer-key rule:** The 2026 Prelims and CSAT Set-A keys held locally are **provisional**; no option or answer is recorded or inferred in this integration.

- **Year represented:** 2026

- **Paper(s):** Prelims GS-I
- **Routed question demands:** 1

Year	Paper	Q	PYQ demand (neutral rendering)	Directive / format	Source status	Owner requirement
2026	Prelims GS-I	27	Amur Falcon migration to Doyang Lake and community-based conservation	Objective question; provisional 2026 Set-A key present locally, answer not inferred	Provisional 2026 Set-A key present locally (Ans - 2026-GS1-Provisional); key is provisional - no answer letter recorded or inferred here	Cover the named fact/concept and its likely statement-level distinctions.

What this owner must now support

- Amur Falcon migration to Doyang Lake and community-based conservation

This block integrates the 2026 examinable demand and paper metadata. It is kept separate from the 2018-2023 and 2024-2025 blocks and does not convert a provisionally-keyed, answer-free objective question into a solved answer.

10. PYQ-based analytical application

- ANALYSIS: Prelims questions distinguishing CMS Appendix I/II obligations from Agreements/MOUs should be solved by applying the graduated binding-versus-voluntary toolkit logic.
- ANALYSIS: Mains answers on migratory-species conservation should explicitly identify whether the cited threat is a range-state-coordination problem (requiring CMS-type cooperation) or a domestic-implementation problem (requiring purely national fixes) to show precise analytical framing.

ORIGINAL MAINS 1 - 10 MARKS

Question: Define a CMS migratory species, its range and a Range State. Answer in about 150 words.

Model thesis: Claim: Migratory-species test. **Named evidence/example:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range definition. **Named evidence/example:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range State definition. **Named evidence/example:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough.
- A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places.
- A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination.

Qualified conclusion: Claim: Migratory-species test. **Named evidence/example:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range definition. **Named evidence/example:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range State definition. **Named evidence/example:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Demand decoding: The directive **answer** requires a direct position on "Define a CMS migratory species, its range and a Range State. Answer in about 150 words.", every clause, exact ecological mechanism and scale, named Indian law or institution, dated treaty/policy status, evidence, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Migratory-species test. **Named evidence/example:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range definition. **Named evidence/example:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range State definition. **Named evidence/example:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Analytical body:

1. **Claim and named evidence:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
2. **Claim and named evidence:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

3. **Claim and named evidence:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: Claim: Migratory-species test. **Named evidence/example:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range definition. **Named evidence/example:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range State definition. **Named evidence/example:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Executable exam-length answer / compression plan: For 10 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism/status -> institution/instrument -> implementation -> ecological and social outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for taxon, unit, baseline, date, jurisdiction, exception, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves ecological, species, legal, treaty, institutional, climate-unit, pollution-standard and causal distinctions.

How to improve this answer: For "Define a CMS migratory species, its range and a Range State. Answer in about 150 words.", replace the weakest catalogue point with one exact mechanism or distinction, named law/institution/treaty/species, dated status, measurable outcome, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 2 - 10 MARKS

Question: Distinguish CMS Appendix I, Appendix II and dual listing. Answer in about 150 words.

Model thesis: Claim: Appendix I. **Named evidence/example:** Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Taking exceptions. **Named evidence/example:** Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Appendix II. **Named evidence/example:** Appendix II covers

migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Dual listing. **Named evidence/example:** The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions.
- Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission.
- Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I.
- The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions.

Qualified conclusion: **Claim:** Appendix I. **Named evidence/example:** Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Taking exceptions. **Named evidence/example:** Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Appendix II. **Named evidence/example:** Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Dual listing. **Named evidence/example:** The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Demand decoding: The directive **answer** requires a direct position on "Distinguish CMS Appendix I, Appendix II and dual listing. Answer in about 150 words.", every clause, exact ecological mechanism and scale, named Indian law or institution, dated treaty/policy status, evidence, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Appendix I. **Named evidence/example:** Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level,

legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Taking exceptions. **Named evidence/example:** Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Appendix II. **Named evidence/example:** Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Dual listing. **Named evidence/example:** The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Analytical body:

1. **Claim and named evidence:** Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
2. **Claim and named evidence:** Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
3. **Claim and named evidence:** Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
4. **Claim and named evidence:** The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: **Claim:** Appendix I. **Named evidence/example:** Appendix I lists endangered migratory species and requires Range States to endeavour to conserve or restore important habitat, address migration obstacles and prohibit taking subject only to precise Convention exceptions. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Taking exceptions. **Named evidence/example:** Appendix I exceptions for taking must fit the Convention grounds and remain precise in content and limited in space and time; an exception is not a general permission. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The

conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Appendix II. **Named evidence/example:** Appendix II covers migratory species with unfavourable conservation status requiring agreements and species that would significantly benefit from international cooperation; it opens a cooperation route rather than duplicating Appendix I. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Dual listing. **Named evidence/example:** The Convention expressly permits a migratory species to be listed in both Appendix I and Appendix II because strict protection and cooperative agreement serve different functions. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Executable exam-length answer / compression plan: For 10 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism/status -> institution/instrument -> implementation -> ecological and social outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for taxon, unit, baseline, date, jurisdiction, exception, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves ecological, species, legal, treaty, institutional, climate-unit, pollution-standard and causal distinctions.

How to improve this answer: For "Distinguish CMS Appendix I, Appendix II and dual listing. Answer in about 150 words.", replace the weakest catalogue point with one exact mechanism or distinction, named law/institution/treaty/species, dated status, measurable outcome, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 3 - 15 MARKS

Question: Explain the legal and functional differences among Agreements, MOUs, Action Plans and Concerted Actions. Answer in about 250 words.

Model thesis: Claim: AGREEMENT architecture. **Named evidence/example:** A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Agreement versus MOU. **Named evidence/example:** A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Action Plan boundary. **Named evidence/example:** An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Concerted Action boundary. **Named evidence/example:** CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable.
- A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists.
- An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome.
- CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection.

Qualified conclusion: Claim: AGREEMENT architecture. **Named evidence/example:** A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Agreement versus MOU. **Named evidence/example:** A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Action Plan boundary. **Named evidence/example:** An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Concerted Action boundary. **Named evidence/example:** CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Demand decoding: The directive **explain** requires a direct position on “Explain the legal and functional differences among Agreements, MOUs, Action Plans and...”, every clause, exact ecological mechanism and scale, named Indian law or institution, dated treaty/policy status, evidence, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: AGREEMENT architecture. **Named evidence/example:** A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Agreement versus MOU. **Named evidence/example:** A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Action Plan boundary. **Named evidence/example:** An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Concerted Action boundary. **Named evidence/example:** CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic

legal protection. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Analytical body:

1. **Claim and named evidence:** A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
2. **Claim and named evidence:** A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
3. **Claim and named evidence:** An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
4. **Claim and named evidence:** CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: Claim: AGREEMENT architecture. **Named evidence/example:** A CMS AGREEMENT should cover the whole range, remain open to Range States and address coordinated conservation, monitoring, information exchange, habitat networks and obstacles as applicable. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Agreement versus MOU. **Named evidence/example:** A binding Agreement and a non-binding Memorandum of Understanding must be identified by the exact instrument; neither an Appendix listing nor an Action Plan proves that one of those instruments exists. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Action Plan boundary. **Named evidence/example:** An Action Plan can organise conservation measures for a species or flyway, but its legal and institutional status must be read from the adopting instrument; plan adoption is not a recovery outcome. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Concerted Action boundary. **Named evidence/example:** CMS Concerted Actions prioritise focused cooperative work between COPs; they do not replace Appendix status, an Agreement, an MOU or domestic legal protection. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Executable exam-length answer / compression plan: For 15 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism/status -> institution/instrument -> implementation -> ecological and social outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for taxon, unit, baseline, date, jurisdiction, exception, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves ecological, species, legal, treaty, institutional, climate-unit, pollution-standard and causal distinctions.

How to improve this answer: For “Explain the legal and functional differences among Agreements, MOUs, Action Plans and...”, replace the weakest catalogue point with one exact mechanism or distinction, named law/institution/treaty/species, dated status, measurable outcome, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 4 - 15 MARKS

Question: Explain the Central Asian Flyway's status after CMS COP14 without overstating the instrument or outcome. Answer in about 250 words.

Model thesis: Claim: Central Asian Flyway. **Named evidence/example:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** COP14 initiative. **Named evidence/example:** The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Strategic plan status. **Named evidence/example:** COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument.
- The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU.
- COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved.

Qualified conclusion: Claim: Central Asian Flyway. **Named evidence/example:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** COP14 initiative. **Named evidence/example:** The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than

generalise beyond the owner. **Claim:** Strategic plan status. **Named evidence/example:** COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Demand decoding: The directive **explain** requires a direct position on "Explain the Central Asian Flyway's status after CMS COP14 without overstating the instrument...", every clause, exact ecological mechanism and scale, named Indian law or institution, dated treaty/policy status, evidence, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Central Asian Flyway. **Named evidence/example:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** COP14 initiative. **Named evidence/example:** The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Strategic plan status. **Named evidence/example:** COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Analytical body:

1. **Claim and named evidence:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
2. **Claim and named evidence:** The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
3. **Claim and named evidence:** COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: **Claim:** Central Asian Flyway. **Named evidence/example:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** This identifies the ecological mechanism, system

boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** COP14 initiative. **Named evidence/example:** The official CMS COP14 release states that Samarkand in February 2024 adopted a Central Asian Flyway initiative including a coordinating unit in India with Indian Government financial support; it must be called an initiative, not silently upgraded to an Agreement or MOU. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Strategic plan status. **Named evidence/example:** COP14 adopted the Samarkand Strategic Plan for Migratory Species 2024-2032; adoption establishes targets and direction, not proof that populations, habitats or route safety improved. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves ecological, species, legal, treaty, institutional, climate-unit, pollution-standard and causal distinctions.

How to improve this answer: For "Explain the Central Asian Flyway's status after CMS COP14 without overstating the instrument...", replace the weakest catalogue point with one exact mechanism or distinction, named law/institution/treaty/species, dated status, measurable outcome, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 5 - 20 MARKS

Question: Assess migratory-species conservation as a weakest-link problem requiring both international and domestic action. Answer in about 300 words.

Model thesis: **Claim:** Range definition. **Named evidence/example:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range State definition. **Named evidence/example:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Weakest-link logic. **Named evidence/example:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Threat classification. **Named evidence/example:** Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon distinction. **Named evidence/example:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove

protection across the species' complete migratory circuit. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places.
- A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination.
- Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem.
- Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures.
- The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit.

Qualified conclusion: Claim: Range definition. **Named evidence/example:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range State definition. **Named evidence/example:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Weakest-link logic. **Named evidence/example:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Threat classification. **Named evidence/example:** Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon distinction. **Named evidence/example:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Demand decoding: The directive **assess** requires a direct position on "Assess migratory-species conservation as a weakest-link problem requiring both international...", every clause, exact ecological mechanism and scale, named Indian law or institution, dated treaty/policy status, evidence, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: Claim: Range definition. **Named evidence/example:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than

generalise beyond the owner. **Claim:** Range State definition. **Named evidence/example:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Weakest-link logic. **Named evidence/example:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Threat classification. **Named evidence/example:** Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon distinction. **Named evidence/example:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Analytical body:

1. **Claim and named evidence:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
2. **Claim and named evidence:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
3. **Claim and named evidence:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
4. **Claim and named evidence:** Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
5. **Claim and named evidence:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: Claim: Range definition. **Named evidence/example:** A migratory range includes land or water inhabited, used temporarily, crossed or overflowed on the normal migration route; breeding and wintering sites are not the only relevant places. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Range State definition. **Named evidence/example:** A Range State exercises jurisdiction over any part of that range, with the Convention text also addressing relevant flag-vessel situations; it is not limited to the breeding State or final destination. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Weakest-link logic. **Named evidence/example:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Threat classification. **Named evidence/example:** Habitat loss, taking, barriers, power lines, light pollution, bycatch and other pressures must be located on the route; some are transboundary coordination failures and others are domestic implementation failures. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon distinction. **Named evidence/example:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism/status -> institution/instrument -> implementation -> ecological and social outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for taxon, unit, baseline, date, jurisdiction, exception, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves ecological, species, legal, treaty, institutional, climate-unit, pollution-standard and causal distinctions.

How to improve this answer: For "Assess migratory-species conservation as a weakest-link problem requiring both international...", replace the weakest catalogue point with one exact mechanism or distinction, named law/institution/treaty/species, dated status, measurable outcome, implementation constraint and answer-specific qualification.

ORIGINAL MAINS 6 - 20 MARKS

Question: Use the Amur Falcon route to build a source-disciplined CMS answer. Answer in about 300 words.

Model thesis: Claim: Migratory-species test. **Named evidence/example:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Weakest-link logic. **Named evidence/example:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary

problem. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Central Asian Flyway. **Named evidence/example:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon PYQ anchor. **Named evidence/example:** The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon distinction. **Named evidence/example:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CMS-CITES-Ramsar split. **Named evidence/example:** CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Current-listing boundary. **Named evidence/example:** The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Claim -> named evidence -> analysis -> qualification:

- The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough.
- Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem.
- The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument.
- The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key.
- The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit.
- CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects.
- The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source.

Qualified conclusion: Claim: Migratory-species test. **Named evidence/example:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage,

taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Weakest-link logic. **Named evidence/example:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Central Asian Flyway. **Named evidence/example:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon PYQ anchor. **Named evidence/example:** The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon distinction. **Named evidence/example:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CMS-CITES-Ramsar split. **Named evidence/example:** CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Current-listing boundary. **Named evidence/example:** The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Demand decoding: The directive **answer** requires a direct position on "Use the Amur Falcon route to build a source-disciplined CMS answer. Answer in about 300 words.", every clause, exact ecological mechanism and scale, named Indian law or institution, dated treaty/policy status, evidence, trade-offs and a qualified conclusion.

Detailed examiner-grade model answer:

Introduction and thesis: **Claim:** Migratory-species test. **Named evidence/example:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Weakest-link logic. **Named evidence/example:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Central Asian Flyway. **Named evidence/example:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must

retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon PYQ anchor. **Named evidence/example:** The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon distinction. **Named evidence/example:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CMS-CITES-Ramsar split. **Named evidence/example:** CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Current-listing boundary. **Named evidence/example:** The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Analytical body:

1. **Claim and named evidence:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
2. **Claim and named evidence:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
3. **Claim and named evidence:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
4. **Claim and named evidence:** The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
5. **Claim and named evidence:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale,

stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

6. **Claim and named evidence:** CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.
7. **Claim and named evidence:** The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. **Analysis:** Connect the defined system/taxon and named evidence -> ecological mechanism or legal/institutional instrument -> implementation pathway -> ecological and social consequence. **Qualification:** State scale, stock/flow, parameter/unit, source/date/status, jurisdiction, uncertainty, causal limit, exception or residual risk.

Counter-position / limit: A designation, schedule, COP decision, policy target, budget, installed capacity, registration, treatment capacity or chronological association cannot alone establish ecological recovery, compliance, attribution or net climate benefit; test mechanism, monitoring, counterfactual and implementation.

Qualified conclusion: Claim: Migratory-species test. **Named evidence/example:** The CMS Convention text defines a migratory species through a significant proportion of members cyclically and predictably crossing one or more national jurisdictional boundaries; merely moving within one landscape is not enough. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Weakest-link logic. **Named evidence/example:** Because the life cycle spans route segments and jurisdictions, loss at one breeding, stopover, wintering or passage site can undermine protection elsewhere; CMS is a coordination response to that transboundary problem. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Central Asian Flyway. **Named evidence/example:** The flyway is an ecological route and cooperation geography, not itself a species, Appendix or treaty; every claim about its institution, Range States or action plan requires the dated official instrument. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon PYQ anchor. **Named evidence/example:** The provisional 2026 routed demand concerns Amur Falcon migration to Doyang Lake and community-based conservation; it is carried as an answer-free concept anchor without inferring the option key.

Analysis: This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Amur Falcon distinction. **Named evidence/example:** The Doyang or Pangti conservation example illustrates protection of a stopover or roost link through local action; it does not by itself prove protection across the species' complete migratory circuit. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** CMS-CITES-Ramsar split. **Named evidence/example:** CMS coordinates migratory-range conservation, CITES regulates international trade and Ramsar concerns wetland wise use and designation; one migratory bird can engage all three without merging their legal effects. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the claim examinable.

Qualification: The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner. **Claim:** Current-listing boundary. **Named evidence/example:** The package does not assert a current species Appendix, Party count, MOU signatory count or post-COP14 action-plan status unless it was substantively retrieved from the dated official source. **Analysis:** This identifies the ecological mechanism, system boundary, state variable and causal link that make the

claim examinable. **Qualification:** The conclusion must retain the source's ecosystem, trophic parameter, spatial scale, temporal stage, taxonomic level, legal status and evidence boundary rather than generalise beyond the owner.

Executable exam-length answer / compression plan: For 20 marks, spend one-sixth of the time decoding the directive and drawing definition -> mechanism/status -> institution/instrument -> implementation -> ecological and social outcome; write four to seven claim -> named evidence -> analysis -> qualification points; reserve the final minute for taxon, unit, baseline, date, jurisdiction, exception, causation and residual-risk checks.

Why this earns marks: The answer obeys the directive, explains mechanisms rather than listing schemes, uses India-centric evidence and preserves ecological, species, legal, treaty, institutional, climate-unit, pollution-standard and causal distinctions.

How to improve this answer: For “Use the Amur Falcon route to build a source-disciplined CMS answer. Answer in about 300 words.”, replace the weakest catalogue point with one exact mechanism or distinction, named law/institution/treaty/species, dated status, measurable outcome, implementation constraint and answer-specific qualification.
